1. An oasis on the southern slopes of the Atlas in Algeria at the exit of a narrow pass through which run the road and railway from Constantine to the desert regions; it is a station on the Constantine-Biskra line, 35 miles north of the latter. This, the most northern oasis in Africa, consists of three villages with about 3,500 inhabitants and possesses a very dense date grove. From its situation it was an important military station and, as Roman inscriptions found there show, settled in ancient times. It is presumably identical with the station *Ad Calcem Herculis* of the Roman itineraries (see Dessau in Pauly-Wissowa, iii, 1345). The name al-Ķanṭara is derived from the Roman bridge, restored in 1862 by the French, which spans in one huge arch the ravine, the 150 feet wide Fumm al-Ṣaḥārā = the mouth of the Ṣaḥārā (so-called by the inhabitants), through which flows the Wād al-Ķanṭara (cf., for example, Vivien de St. Martin, *Dict. de Géographie Universelle*, Paris 1879, i, 66 and Kobelt, *Reiseerinnerungen aus Algerien und Tunis*, 1883, 322).

2. Alcántara, a little town of great antiquity in the province of Cáceres (district of Estremadura) in Spain, near the Portuguese frontier, with 3,200 inhabitants. It receives its name from an imposing granite bridge, built in 105 A.D., which crosses the Tagus in six great arches to the northwest of the town. The place is also famous for the religious knightly order founded there in 1176 to defend the frontier against the Moors, which became called the Order of Alcántara after its headquarters were moved to this town in 1213 (see Baedeker's *Spain and Portugal*[4], Leipzig 1912, 459).

3. A small town with a mosque in Egypt, on the Asiatic side of the Suez canal, half-way between Port Saʿīd and Ismāʿīliyya, a station on the railway connecting these two towns. It lies on a low narrow

tongue of rising ground, which runs out between the large Menzaleh lake in the north and the little Balāḥ lake in the south. It is unlikely to take its name from this "land bridge", however, but from a bridge which already existed here probably in the early Middle Ages.

The Arab geographer Ibn Faḍl Allāh al-ʿUmarī, who wrote *ca.* 741/1340, mentions the arch of a bridge, called Ḳanṭarat al-Djisr, near the old caravan station of al-ʿAḳūla, under which the superfluous water flowed into the desert at the time of the Nile's inundation. There was still a bridge here at the beginning of the 19th century, built over a canal connecting the two lakes already mentioned. The modern al-Ḳanṭara arose on its present site after the making of the Suez Canal. The old settlement was a short half-hour's journey to the east and is marked by the mound of ruins Tell Abū Sēfe (on the maps also called Tell al-Aḥmar). This place may be regarded as the key to Egypt, for it has always been used by conquerors as the gateway to the Nile valley. Its strategical importance led to its being occupied in remote antiquity. Tell Abū Sēfe (with ruins of a temple of Ramses II and remains of the Ptolemaic and Roman period) marks the site of the ancient Egyptian town of Zaru (*T*ʾ, *r w*), the capital of the fourteenth district of Lower Egypt, which was already a fortress in the time of the Middle Kingdom. In the later classical and Byzantine literature it appears as Sile, Sele (Selle); according to a Latin inscription found here, it had a Roman garrison in 288 and was later also the see of a bishop. In the Middle Ages it was called al-ʿAḳūla (on the name al-ʿAḳūla = "the bend", cf. DAYR AL-ʿĀḲŪL), a name which was temporarily supplanted by that of the castle of al-Ḳuṣayr during the Mamlūk period. In World War I al-Ḳanṭara played an important part in the struggle for the Suez Canal. From November 1914 to March 1916 there were frequent encounters there between English and Turkish troops (cf. thereon, for example, Baer, *Der Völkerkrieg, Eine Chronik der Ereignisse seit dem 1. Juli 1914*, Stuttgart 1914-5, iv, 220-24, viii, 367, xi, 318, xvii, 47-8, 128, 130, 132).

In remote antiquity as well as in the late Middle Ages and modern times, al-Ḳanṭara was the point of departure for the caravan road from Egypt to Syria. After World War I a new railway line to Syria branched off there from the Port Saʿīd-Suez line, and ran from al-Ḳanṭara via Ḳaṭya al-ʿArīsh and Ghazza to Ludd, where it linked up with the line from Yāfā to Jerusalem. In the successive wars between Egypt and Israel from 1948 al-Ḳanṭara continued to be a key strategic point, which suffered considerable damage.

Bibliography: Baedeker, *Palästina und Syrien*[7], 1913, 177, 171; C. Küthmann, *Die Ostgrenze Ägyptens*, Berliner Dissert., 1911, 38-49; R. Hartmann in *ZDMG*, lxiv, 688, 691, 696, lxx, 486-7, 511 and in *Petermann's Geogr. Mitteil.*, 1916, lxii, 373-7; Alt in the *Palästinajahrbuch des deutsch. evangel. Instituts*, x, Berlin 1914, 60-3 and Dalman, *op. cit.*, xx, 1924, 44-6. On excavations and finds in the region of al-Ḳanṭara see Clédat in the *Recueil de travaux relatifs à l'archéol. égyptienne et assyrienne*, xxxvii (Paris 1915, 38-9, and xxxviii (1919), 1-2, 70-1.

4. A sanctuary among the ruins of the ancient Petra in the Sinai Peninsula; cf. Savignac, *Le Sanctuaire d'el Kantara* in the *Rev. Biblique*, N.S., iii (1916), 391-2.

5. Ḳanṭarat Zaynab in the valley of the Nahr Bayrūt in Syria, an ancient Roman aqueduct of which considerable remains exist at the present day; according to Arab legend, it was built by Queen Zenobia (Zaynab); cf. Fr. Müller, *Studien über Zenobia und Palmyra* (Diss. Königsberg 1902), 14-15.

6. Ḳanāṭir Firʿawn ("Pharaoh's aqueduct"), a great aqueduct in the south of Syria, which, beginning at Dillī, at the western foot of the lava plateau of Ledjā (west of Ḥawrān), runs in a southwestern direction for some sixty miles as far as Mukēs (Gadara), providing many villages with the necessary drinking-water in the summer months. It is identified by Wetzstein—probably rightly—with the Ḳanāṭir mentioned by Ḥamza al-Iṣfahānī (*Annales*, ed. Gottwaldt, 117). But the Ghassānid Djabala b. al-Ḥārith, who reigned about 500 A.D., can hardly, as Ḥamza says, be the builder of this marvellous piece of work (cf. Nöldeke, *Die ghassan. Fürsten ...* in *Abh. Pr. Ak. W.*, iv, 1887, 50). It certainly dates back to ancient times. For further information see Wetzstein, *Reisebericht über Hauran und die Trachonen*, Berlin 1860, 123-5.

The diminutive Ḳunayṭira (popularly Ḳunēṭra or Ḳenēṭri) is occasionally used as a place name, *e.g.*, a town in Syria in the Djawlān (Golān) district, to the north east of Jordan (see Baedeker, *Palestine and Syria*[5], 1912, 268; R. Dussaud, *Topographie historique de la Syrie antique et médiévale*, Paris 1927, 387), and also a newly established town in Morocco, called Ḳnīṭra, then Port-Lyautey, then Ḳnīṭra again. The town was first a disembarkation area, then a fairly important port, on the River Sebou, some way from its mouth. This port superseded the ancient al-Mahdiyya situated on the mouth of the same river.

(M. STRECK*)

ḲĀNŪN, pl. *ḳawānīn*, Arabic derivative from Greek κανών, which meant firstly "any straight rod", later "a measure or rule", and finally (in the papyri of the 4th and 5th centuries A.D.) "assessment for taxation", "imperial taxes", "tariff" (Liddell and Scott, revised ed., London 1940; for its meanings in religious literature, see G. W. H. Lampe, *A Patristic Greek lexicon*, Oxford 1961). The word was adopted into Arabic presumably with the continuation, after the Muslim conquest of Egypt and Syria, of the pre-Islamic tax system (C. H. Becker, *Islamstudien*, Leipzig 1924, 218-62; F. Løkkegaard, *Islamic taxation*, Copenhagen 1950, 118-20). Whilst the word preserved in Islamic states in general its special meaning as a financial term belonging to the field of land-taxes, it acquired also the sense of "code of regulations" "state-law" (sc. of non-Muslim origin). The two senses must be discussed separately.

i.—LAW

In theory, the *sharīʿa* regulates the whole of the public and private life of the Muslim, but since works of *fiḳh* barely deal with the provisions of common law, and also since it became apparent very early on that the greater part of the Muslim penal system was inapplicable, the guardians of public order (especially the governors) took to issuing regulations (*ḳawānīn*) in these two fields, although they had no such legislative authority. At the time, these developments did not shock even the strictest of the *ʿulamāʾ*, because in administrative matters there was no conflict between the *ḳānūn* and the *sharīʿa*, the latter generally being silent on such matters. Similarly with penal law, the *ḳānūn* did not appear to infringe on the *sharīʿa*, for the governors had the sense to restrict themselves to substituting the discretionary penalty of the *taʿzīr* [*q.v.*], fine or flogging, punishments laid down in works of *fiḳh*, for the seriously mutilating

punishments of the Ḳur'ān (*ḥudūd*, pl. of *ḥadd*), such as cutting off the hand or stoning.

Under the Ottoman sultans, the term *ḳānūn* came to be applied mainly to acts in the domain of administrative and financial law and of penal law. The first *ḳānūn-nāmas* promulgated under Meḥemmed II (855-86/1451-1481) were indeed confined to this restricted field, but a century later, through the impetus of Abu 'l-Suʿūd, grand *muftī* of Istanbul from 952/1545 to 982/1574 [*q.v.*], *ḳānūn-nāmas* began to offer legal solutions to questions which had hitherto been exclusively the province of the *sharīʿa*, particularly property law. Abu 'l-Suʿūd was a jurist of such great ability that this was done without the *ḳānūn* and the *sharīʿa* ever coming into opposition with one another.

Nowadays, in all Middle Eastern countries, the term *ḳānūn* denotes not only those codes and laws which are directly inspired by western legislation, such as civil and commercial law, administrative and penal law, but also those laws and codes which are confined to reproducing, albeit simplifying, the provisions of the *sharīʿa*. To name but a few examples, the Syrian Code (*ḳānūn*) of Personal Status (1953), the ʿIrāḳī Code (*ḳānūn*) of Personal Status (1959) and the proposed Egyptian Family Code (also called *ḳānūn*) fall into this category. The Order in Council is designated by the neologism *marsūm bi-ḳānūn*. However, the word *ḳānūn*, which, as we have noted, originally signified a ruling of the administrative authority, is not used in this sense today, being replaced by *lā'iḥa* (pl. *lawā'iḥ*) in Egypt and by *niẓām* or *tartīb* elsewhere.

Whether it is inspired by western legislation or comprises only provisions adopted from Muslim law, the actual *ḳānūn* is prepared by a commission, passed by it or by the legislative assemblies if need be, and promulgated by the executive, the same procedure being followed in both cases. In addition, in the case of a *ḳānūn* concerning personal status or inheritance laws, and therefore one deriving from Muslim law, the discussions in the Assembly are no more than formalities. In such cases it is the preceding phase, the one developed by the commission, which is the most important.

Born in the East, the word *ḳānūn* as the designation of the superior form of legislation (Law and Code) is current only in the Middle East, or, more precisely, in those countries which came, however partially, under the influence of Istanbul. It was rarely used in Saudi Arabia, which escaped Ottoman domination; there the word preferred to cover the legislative work of the secular authority was *niẓām*.

Chehata, *Droit musulman, applications au Proche Orient*, Paris 1970, 11-21. For the pre-Ottoman *ḳānūn*, see B. Lewis, in *BSOAS* (1954), 599; V. Minorsky, in *ibid.* (1955), 449 ff.

(Y. LINANT DE BELLEFONDS)

ii.—CADASTER

The administration of taxes usually comprised two sections, one dealing with assessment and one with collection. The assessment of taxes was based on various principles and resulted in a basis for calculation, the *aṣl*. *Ḳānūn* is used to refer both to these principles as a whole and to the resulting sum due from the taxpayer, either in the case of a single property or all the properties in one district taken together. The assessed value of the revenue on an estate was known as the *ʿibra*. In those provinces—never the entire Muslim world—where many lands were assessed by the procedure of *ḳānūn*, this word came to mean a kind of fiscal cadaster.

In Egypt, traditionally subject to a special régime in which state control was particularly extensive and which is fairly well documented, the "cadaster" was made by measuring the area of each plot of land, placing it into a category according to its position in the Nile flood and thus determining the most suitable type of crop, and finally assessing the duty which, barring accidents, should result and could be fixed in advance. The general process of the cadaster is known as *rawk* [*q.v.*] (verb *rāka*). These administrative operations give rise to the following documents: a) an original (*aṣlī*) *ḳānūn* establishing the characteristics of a region so as to determine its *ʿibra* on a permanent basis—according to al-Maḳrīzī, in his day this was revised every thirty years; b) an annual *ḳānūn*, established by a local *dalīl*, consisting, on the basis of the foregoing, of a statement of the characteristics of each plot after the flood, by which characteristics the *dalīl* decides which crops should be cultivated; c) a *ḳānūn* establishing the most suitable crops and the resulting fiscal distribution, listed both by holdings and by crops. Finally there was a series of other documents more specifically concerned with tax collection [see KHARĀDJ].

The measurements were made by a *ḳaṣṣāb* (from *ḳaṣaba*, unit of length); the *māsiḥ* (surveyor) calculated the areas on the basis of measurements taken. It would seem that sometimes he cheated in the geometry, and Ibn Mammātī takes great pains to remind his readers of the rules for calculating areas. The various kinds of land were classified according to type, degree of flooding and rotation of crops, and the vocabulary used for such terms appears to be in part non-Arab and pre-Islamic (see JESHO, v (1962), 259-60, from Ibn Mammātī and Makhzūmī).

It would be useful to classify the published papyri in the categories listed above. Al-Nābulusī's description of the Fayyūm (Ayyūbid period) in fact gives a detailed picture of taxes in general, but not precisely, of the cadaster for this province, locality by locality and category by category.

Far less is known of the methods employed in the rest of the Muslim world. However, the main outlines seem clear. There it was impossible to draw up for fiscal purposes a precise survey of crops, nor therefore of the return anticipated from them, since there was neither a regular flood nor a sufficiently close administrative control. It was, however, at least possible to measure area, and even to classify land according to average yield, thus allowing a tabulation of taxes, subject to last-minute modification in the light of the actual harvest. This was done in the majority of regions, where a definite sum in money was levied by area and crop, as against those where a proportion of the crop was levied. There were also, however, regions which followed the Roman tradition. In these the unit was not of area, which gives a variable yield, but one of labour or of exploitation, where a variable area produces a fixed yield. A traditional vocabulary less complex than that of Egypt also designates the different types of land. As in Egypt, the *ʿibra* was determined. Measuring was done by the *māsiḥ* sometimes with the help of a controller (*muʿābir*) or a divider (*ḳassām*). In fact, if not in law, their salary constituted an additional charge. However, even in Egypt, there continued to be many properties which for one reason or another were registered "without *misāḥa*", and thus taxed outright without having been surveyed in

this way. On the documents see the article on DAFTAR and, following the *Taʾrīkh-i Ḳumm*, A. K. S. Lambton (*Landlord and Peasant in Persia*, 1953, ch. 2).
In the West, or at any rate in the Maghrib, cadastral survey seems to have been slower and less precise. It is possible that it was not introduced to Morocco before the time of the Almohads, when it was brought back by Ibn Tūmart from his voyage to the East. Here, even less than in the East, not all estates were covered.

(CL. CAHEN)

iii.—FINANCIAL AND PUBLIC ADMINISTRATION

1. From the earliest days of the conquest onwards, *Ḳānūn* preserved the meanings of "registers and lists recording land-taxes" (*Ḳānūn al-Kharādj*, also *djarāʾid*) and the regulations there laid down (*al-ḳawānīn al-muḳarrara*, cf. al-Māwardī, ed. Cairo 1386/ 1966, 215, tr. Fagnan, 462). This principle of assessment for tax can be traced back to the time of the second caliph ʿUmar, to whom is attributed the measurement of the lands in the Sawād and the imposition of a fixed tax on a specified area of land (Abū Yūsuf, *K. al-Kharādj*, Cairo 1302, 36-8, 48, 60, 85, 218; al-Māwardī, 148-52, 174-6; Løkkegaard, 106-25). This measure was considered to be the continuation of the Sasanian system of assessment for tax (Abū Yūsuf, 38, 57; al-Māwardī, 78, 148, 173-5; Ṭabarī, i, 962); and as in the old Iranian tradition so in the Islamic period strict adherence to the explicit entries and regulations of the official registers (*ḥifẓ al-ḳawānīn*, al-Māwardī, 215) was regarded as the foundation of sound and just administration (al-Māwardī, 151, 215-8). In the period of the classical caliphate the Persian terms *dastūr* and *awāradj* came to be used as synonyms of *ḳānūn* in the sense of "tax-list" (Løkkegaard, 179, 265). *Ḳānūn* also signified the conditions (*shurūṭ*) governing the levying of land-taxes by *muḳātaʿa* [*q.v.*] (Løkkegaard, 107). The term *ḳānūn* must have spread only later into ʿIrāḳ and the eastern provinces, since though it is frequently used by al-Māwardī (d. 450/1058) it is not used by Abū Yūsuf (d. 182/798). After the ʿAbbāsid period *ḳānūn* remained in use as a financial term with the same meanings in Egypt (Ibn Mammātī, *K. Ḳawānīn al-Dawāwīn*, ed. A. S. Atiya, Cairo 1943, 305; ʿUthmān al-Nābulusī, *K. Lumaʿ al-ḳawānīn*, see Brockelmann, *GAL*, S. I, 573); in Persia (Rāwandī, *Rāḥat al-ṣudūr*, ed. M. Iqbal, 356, 381, 398; Naṣīr al-Dīn al-Ṭūsī, *risāla* published in *THITM*, ii (1932-9), and in *BSOAS*, x (1940-2), 759-62; Rashīd al-Dīn, *Taʾrīkh-i Mubārak-i Ghazānī*, ed. Jahn, GMS, 306; ʿAbd Allāh b. Kiyā, *Resālä-ye Falakiyyä*, ed. W. Hinz, Wiesbaden 1953, 23, 172, 182-4; Muḥammad b. Hindūshāh al-Nakhdjuwānī, *Dastūr al-kātib*, i, ed. A. Alizade, Moscow 1964, *faṣl dar ḳānūn wa yasāmishī*), in Anatolia (Karīm al-Dīn al-Aḳsarāyī, *Musāmarat al-akhbār*, ed. O. Turan, Ankara 1944, 257, 298; Ibn Bībī, *al-Awāmir al-ʿAlāʾiyya*, Ankara 1966, 721), and in India (Irfan Habib, *The agrarian system of Mughal India*, London 1963, 186, 202; *ḳānūngo dastūr*, *ẓabṭī*). In the *Resālä-ye Falakiyyä* (p. 182), "*ḳānūn-i mamlakat*" is described as the setting down in advance in a register of the taxes for each area according to clear amounts and proportions, the *taḥṣīldārs* being required to collect the taxes according to this register. Finally, in the Ottoman state, the *taḥrīr* [*q.v.*] registers (*defter*, cf. al-Māwardī, 82: *daftar al-ṣawāfī*), which set out in detail particularly the land taxes and the methods of raising them, and the *ḳānūnnāmes* [*q.v.*] for the individual *sandjaḳs* are to be regarded as a continuation of the same system. The office in which such registers were kept was called in the Īlkhānid state *bayt al-ḳānūn*, and in the Ottoman Empire *defterkhāne*.

2. As a development from the meaning "financial regulations", *ḳānūn* came to mean legal prescriptions independent of the *sharīʿa* laid down by the sultan by virtue of his authority as ruler. This implication is found already in the ʿAbbāsid period (cf. al-Māwardī, 32: *al-ḳawānīn al-siyāsiyya*; and even, more broadly: (p. 33): *al-ḳawānīn al-sharʿiyya*). The following terms are synonymous with *ḳānūn* in this sense: (i) *ḥukm* or (pl.) *aḥkām* (cf. al-Māwardī, 207: *aḥkām al-kharādj*); (ii) *ḳāʾida* or (pl.) *ḳawāʾid* (al-Māwardī, 215; Rāwandī, 166, 260, 382; Niẓām al-Mulk, ed. Darke, 89, 95, 126; Rashīd al-Dīn, *op. cit.*, 304, 323; Muḥammad b. Hindūshāh, 323; *Code de lois coutumières de Meḥmed II*, ed. N. Beldiceanu, Wiesbaden 1967, facs. fol. 1 *v.); (iii) *dastūr* (Hilāl al-Ṣābiʾ, *K. al-Wuzarāʾ*, ed. Amedroz, 78; *Resālä-ye Falakiyyä*, 57; H. Busse, *Untersuchungen zum isl. Kanzleiwesen*, Cairo 1959, 85, 129; *Tadhkirat al-mulūk*, ed. V. Minorsky, 176; Ottoman *destūr*, as in Barkan, *Kanunlar*, i, 259); (iv) *ḍābiṭa* or (pl.) *ḍawābiṭ* (*Resālä-ye Falakiyyä*, 23; Ḍiyāʾ al-Dīn Bārānī, *Fatāwā-yi Djihāndārī*, tr. M. Habib and A. V. Salim Khan, 64-71, 136-43; Ottoman *ḍawābiṭ*, as in *ḍawābiṭ-i mesāʾil-i ʿurfiyye*, Istanbul, Un. Lib. MS 1807, 1); (v) *āʾīn*, more particularly for regulations of non-Muslim origin regarding state-organization and ceremonial, as in the expressions *āʾīn-i shāhān*, *āʾīn-i shahriyārī*, *āʾīn-i djihānbānī* (see F. Wolff, *Glossar zu Firdosis Schahname*, Berlin 1935, 46; cf. Niẓām al-Mulk, ed. Darke, 138, 209), but also more generally, as in *āʾīn-i narkh-i adjnās* (*Āʾīn-i Akbarī*, ed. Blochmann, 60; and cf. *Code de lois . . . , loc. cit.*); (vi) *rasm* or (pl.) *rusūm* (al-Māwardī, 215; Niẓām al-Mulk, 133; Rāwandī, 137). With the spread of Western influence in the 19th century, the word *ḳānūn* was employed for secular laws of all types based on European models (*Tanzimat*, i, Istanbul 1940, 139-209), and the expression *ḳānūn-i esāsī* to express "constitution".

The word *ḳānūn* was employed also for the statutes regulating any organization, *e.g.*, in Ottoman times, those of the guilds, which were drawn up by the guildsmen and registered with the *ḳāḍī* (cf. F. Dalsar, *Bursa'da ipekçilik*, Istanbul 1960, 274-6, 318). Finally, *ḳānūn* might imply "rules of conduct" (as in *ḳānūn al-saʿāda*: *Resālä-ye Falakiyyä*, 2); and also

the general principles or the basic information in one of the non-religious sciences (as in *ḳānūn al-balāgha* or *ḳānūn fi ʾl-ṭibb*).

3. *Ḳānūn* (in the sense of non-religious legal prescription) and its relation to the *sharīʿa*. Even from the time of the first caliphs there are records of legal prescriptions imposed solely at the will of the *ūlu ʾl-amr* [*q.v.*], *e.g.*, ʿUmar's decision regarding the lands of the Sawād (Abū Yūsuf, 47-56, 97). Such prescriptions were usually incorporated into the *sharīʿa* as it took shape. Administrative regulations and practices [see ʿAMAL, AMR] entered the *sharīʿa* just like *ʿurf* and *ʿāda* [*qq.v.*], because of the broad interpretation of the concept of *sunna* [*q.v.*] and thanks to recourse to the principle of *istiḥsān* [*q.v.*] (see J. Schacht, *Origins*, 99-112). But this process was ended after the time of al-Shāfiʿī, and particularly of Ibn Ḥanbal and Dāwūd b. Khalaf [*qq.v.*], with the narrower interpretation put upon *sunna* and the rejection of *istiḥsān*.

Matters of public law were treated within the framework of the *sharīʿa* firstly with regard to regulations concerning land-tax (as by Abū Yūsuf, Yaḥyā b. Ādam, Abu ʾl-Faradj Kudāma), and later (from the 4th/10th century) in connection with more general matters: the source of political authority [see IMĀM], administrative law [see WILĀYA, SIYĀSA, MAẒĀLIM], market regulations [see ḤISBA], and penal law [see TAʿZĪR] (see al-Māwardī, Abū Yaʿlā, Ibn Djamāʿa, Ibn Taymiyya, Ibn Ḳayyim al-Djawziyya, *passim*). After al-Shāfiʿī, the boundaries of the *uṣūl al-fiḳh* were drawn so narrowly that new administrative regulations were left outside them and became the province of a new "state law" or "ruler's law". This process was encouraged also by political developments in the caliphate: in the "sultanates" establishing themselves in Persia (Būyids, Sāmānids, Ghaznavids, Saldjūḳids), the native bureaucracy [see KĀTIB] strove to revive the old Iranian traditions of the state and of state administration in order to strengthen the absolutism of their masters, and won for political authority and state law an independent status vis-à-vis the *sharīʿa*. The conflict between *ḳānūn* and *sharīʿa* in this period reflects the rivalry between *sulṭān* and *khalīfa*. It is in this period that al-Māwardī, 77-8, maintained the necessity of secular power (*Ḳuwwa al-salṭana*, or *amāra*) to ensure the implementation of the *sharīʿa* (*tanfīdh al-aḥkām*) and the protection and survival of the Muslim community (*ḥirāsat al-dīn wa-siyāsat al-dunyā*). In other words, the public interest [see MAṢLAḤA] was recognized as the basic principle justifying an independent political authority and its competence to make laws and issue regulations. This argument was regularly repeated in Muslim sultanates (including the Ottoman, cf. Tursun, *Taʾrīkh-i Abu ʾl-Fetḥ*, 13) as the basis for the sultan's authority as law-giver. In this period too the concepts of *ʿadāla* [*q.v.*] and *ḳānūn*, linked to the Iranian view of the state, began to be treated as a separate subject in works written by *faḳīh*s upon politics (cf. al-Māwardī, 77-95).

As to the matters regulated by this "secular" law, they fell, naturally, within the field of public law—a field distinguished by the *sharīʿa* by the terms *al-aʿmāl al-ʿāmma*, *siyāsa* [*q.v.*], and *ḥuḳūḳ Allāh* [*q.v.*]—and covered such questions as military and governmental organization, taxation, especially land-taxes [see KHARĀDJ] and the closely-related land-law, matters concerning the *bayt al-māl* [*q.v.*], and penal law. The *sharīʿa* conceded to the *imām* authority to promulgate and implement regulations governing the scales of non-Muslim taxes, the use to which conquered land or *mawāt* [*q.v.*] land should be put, the severity of *taʿzīr* [*q.v.*] punishment, and the protection of the community's economic interests [see ḤISBA]. The *sharīʿa* recognized also the authority of the *imām-sulṭān* to decide and to legislate, if the public interest required it, upon any matter not treated by the *sharīʿa*. It came to be agreed that the individual was under a religious obligation to obey the sultan's command in matters not regulated by *naṣṣ* [*q.v.*] (cf. the introduction to the *Ḳānūnnāme*, in Istanbul Un. Lib., MS. T 1807).

Furthermore, some *fuḳahāʾ* regarded decisions taken on the ruler's authority as essential for the solution of various problems which concerned the *sharīʿa* (cf. the *fatwā*s in Abu'l-Suʿūd's *Maʿrūḍāt*, *MTM*, i, 337-48 = P. Horster, *Zur Anwendung des Islamischen Rechts im 16. Jahrhundert*, Stuttgart 1935). In cases where the *sharīʿa* permitted two solutions, the decision of the *ūlu ʾl-amr* was decisive (Abu Yūsuf, tr. Fagnan, 103-4); again, in cases of serious *ikhtilāf* [*q.v.*] among the *fuḳahāʾ*, the ruler might, in public interest, in order to ensure uniformity of practice and avoid rifts within the community, decree that the precepts of one specific *madhhab* [*q.v.*] were to be followed: thus under the ʿAbbāsids [see IBN AL-MUḲAFFAʿ] and later under the Saldjūḳids [see MALIKSHĀH] and the Ottomans (cf. *Maʿrūḍāt*, 347) it was made obligatory for the *ḳāḍī*s to follow the Ḥanafī rules in their courts. Such a decision greatly affected the direction taken by later legal development: thanks to the broad principles characterizing the Ḥanafī *madhhab* [see ABŪ ḤANĪFA], a new stage began, a period when new legal rules could be made in the forms of *fatwā*s [*q.v.*] on the one hand and, on the other, decisions of the *Ḳāḍī*s' courts and regulations promulgated by the sultans.

In the period following the Mongol invasions, the concept of independent state law was greatly strengthened: in the Ottoman Empire, in Central Asia, in India, and in the Tīmūrid dominions, decrees issued by the rulers on matters of state organization, military affairs, taxes, land-tenure and penal law created a rich corpus of state law, entirely independent of the *sharīʿa*.

In the Īlkhānid state, whilst the old Iranian concept of the state of law was making headway thanks to the efforts of Persian bureaucrats, the Mongol aristocracy was endeavouring to assure the supremacy of the legal system of the *yasa* [*q.v.*]. The traditions and beliefs current in the steppe empires of Central Asia encouraged the view that the state subsisted through the maintenance of the *törü* (Arabic *tūrā*, see TÜZÜK) laid down by the *ḳaghan* (see H. İnalcık, *Kutadgu Bilig'de Türk ve İran devlet ve siyaset nazariye ve gelenekleri*, in *Reşit Rahmeti Arat için*, Ankara 1967, 259-71). This view was brought by the Turkish and Mongol ruling houses into the Middle East and survived in the states that they founded there (the Ottoman state included: for the Ottomans, the establishment of their sovereignty over a region was dependent upon the introduction there of the *Ḳānūn-i ʿOthmānī*). It should not be overlooked that some early Ottoman writers (*e.g.*, Aḥmedī, see *TM*, vi (1936-39), 111) praised the *yasa* of Čingiz-Khān as having promoted justice, and that Ottoman state-regulations were often referred to as *yasaḳ* or *yasaḳ-nāme*. In Egypt and Syria, too, *yasa* merged with *siyāsa* (see D. Ayalon, in *St. Isl.*, xxxviii (1973), 115), tended to be accepted as a legitimate source of law.

In these new states the conflict between state law and the *sharīʿa* overlay a politico-social struggle among the bureaucracy, the *ʿulamāʾ*, and the military

class. In Persia and in Anatolia, after the collapse of Mongol rule there was powerful pressure to do away altogether with the Turco-Mongol state law (ʿAzīz Astarābādī, *Bazm u razm*, Istanbul 1928, 223; Z. V. Togan, *Umumî Türk tarihine giriş*, Istanbul 1946, 271, 320, 376; for the reign of S̲h̲āhruk̲h̲, see *MTM*, ii, 357; for Syria and Egypt, see D. Ayalon, in *St. Isl.*, xxxii, 97-140; xxxiv, 151-80, xxxvi, 113-58; for Iran, see Spuler, *Mongolen*, Berlin 1968, 235-44). Some *ʿulamāʾ* in state service attempted to prove the legitimacy of the principle of an independent state law by appeal to such Islamic principles as *istiḥsān*, *maṣlaḥa*, and especially *ʿurf* [*q.v.*].

In later years, the states which, on the basis of these principles, developed furthest the domain of state law were the Ottoman Empire and the Turco-Mongol states of India. Ottoman legists, emphasizing these points, accepted the principle that state law, as having from of old been the concern of independent *yargu* [*q.v.*] courts, should be applied by the *ḳāḍīs*; all the same, the special courts of the political and military authorities continued—the *dīwāns* of the Grand Vizier, of the Ag̲h̲a of the Janissaries, of the Kapudan Pas̲h̲a, of the Defterdār.

In the Ottoman state, the conflict of the *s̲h̲arīʿa* and the ruler's law manifested itself in various stages. Meḥemmed II [*q.v.*], as the promotor of a centralized and absolutist imperial system, strengthened the principles of *ḳānūn* and *ʿurf* and encouraged the independence of "secular" law. He promulgated the Ottoman *Ḳānūnnāme*, and brought the *ʿulamāʾ* more closely into an integrated state-controlled hierarchy of offices. According to a contemporary historian belonging to the bureaucracy (Tursun, 13), the "good order" (*niẓām*) of this world necessarily require the absolute coercive authority of the sultan (*yasāg̲h̲-i pādis̲h̲āhī*) and the sultan's promulgation of decrees of his own single will. The early years of his successor Bāyezīd II saw a strong reaction by the upholders of the *s̲h̲arīʿa* against his untrammeled legislative activity. Selīm I rejected the intervention of the religious authorities in state affairs (cf. ʿAlī D̲j̲emālī, cited in Bibl.). Although Sülaymān I was inclined to assert the *s̲h̲arīʿa*'s control over state law, the latter preserved its independence as being the province of the *nis̲h̲ānd̲j̲ī* [*q.v.*]. It seems that the relative influence accorded to *s̲h̲arīʿa* and *ḳānūn* depended to a degree on distinctions of *madhhab*: thus Abu ʾl-Suʿūd regarded the use of money to establish a *waḳf* as entirely acceptable to the *s̲h̲arīʿa*, on the ground of *istiḥsan*, whereas Meḥmed Birgewī [see BIRGEWĪ] regarded it as utterly illegal; Birgewī and the Ḳāḍīzādelis were no doubt following Ḥanbalī doctrine. From the 11th/17th century onwards the scope of the *ḳānūn* evidently began to contract to the advantage of the *s̲h̲arīʿa*. *Fatwā*s of the *muftī*s progressively restricted the law-making powers of the *nis̲h̲and̲j̲ī*s, and the influence of the S̲h̲ayk̲h̲ al-Islām in state affairs progressively increased—to such a degree that in 1107/1696 the use of the word *ḳānūn* side by side with the word *s̲h̲arīʿa* was forbidden by a firman of the Sultan (ʿO. Nūrī, *Med̲j̲elle-i umūr-i belediyye*, i, Istanbul 1922, 568).

Nevertheless, in the later periods of reform the activity of making *ḳānūn*s, independent of the *s̲h̲arīʿa*, increased once more, and the struggle between *ḳānūn* and *s̲h̲arīʿa*, now exacerbated by social and political factors, revealed itself in overt collisions [see SELĪM III, NIẒĀM-I D̲J̲EDĪD, MAḤMŪD II, IṢLĀḤ]. These *ḳānūn*s were, it is true, always presented as being acceptable, on grounds of *istiḥsān*, to the religious law and essential for the well-being of *dīn* and *umma*, and often received the approbation of *fatwā*s given by the *ʿulamāʾ*; yet the reform measures were introduced by the bureaucrat class, which regarded the interests of the state as ultimately overriding all other considerations, and found their inspiration in sources foreign to Islam (the traditional Irano-Turkish state, or the states of 19th century Europe). The disputations which arose in every Muslim society thus entering upon the path of modernization concentrated upon the question of the relationship between *ḳānūn* and *s̲h̲arīʿa*. In the Ottoman state in the period of the *Tanẓīmāt* [*q.v.*], European laws, either modified or adopted unchanged, were introduced into those fields which had been the preserve of ruler-made law (administration, taxation, penal law, etc.) (see H. Veldet, *Kanunlaştırma hareketleri*, in *Tanzimat*, i, 139-209). As a result of the challenge of Europeanization and modernization, new movements arose in the second half of the century. On the one hand, young intellectuals and *ʿulamāʾ* disputed the question of whether the "door of *id̲j̲tihād*" could be opened [see NĀMIḲ KEMĀL, D̲J̲AMĀL AL-DĪN AL-AFG̲H̲ĀNĪ, MUḤAMMAD ʿABDUH]; on the other, a section of the Ottoman intelligentsia [see YEÑI ʿOT̲H̲MĀNLILAR], influenced by the French school of sociology, maintained that the *s̲h̲arīʿa* in regard to its *muʿāmalāt* [*q.v.*] was a social and historical product of the decrees of *muʿāmalāt* [*q.v.*] and could alter in accordance with the needs of society, and that these changing needs could be satisfied by new legislation within the framework of *naṣṣ* through a national assembly, a *s̲h̲ūrā* [*q.v.*]. These currents of thought facilitated a radical alteration in family law in 1917 and the placing of the *ḳāḍīs*' courts, removed from the control of the S̲h̲ayk̲h̲ al-Islām, under the Minister of Justice. Later still, merging with the agitation for the abolition of the Capitulations [see IMTIYĀZĀT], they produced the uncompromisingly secular legal system of the Turkish Republic. In other Muslim states, however, the desire to maintain the attachment to the Islamic sources of the law has continued into recent times [see IṢLĀḤ].

4. The procedure for making and promulgating *ḳānūn*s in the Ottoman state. The source and justification for *ḳānūn*-legislation was the principle of *ʿurf* [*q.v.*], in the sense of the Sultan's unrestricted executive authority (and its synonym, *yasaḳ*). Hence every sort of *ḳānūn* was issued in the form of a *ḥukm* [*q.v.*] of the sultan, the typical formula being: *Ḳānūn emr edüb buyurdum ki* . . . , "having ordered [the promulgation of a] *ḳānūn*, I have commanded as follows . . ." (cf. *Belleten*, xi/44 (1947), 700, doc. 10). In practice, the procedure was as follows: a clerk attached to the office of the Nis̲h̲ānd̲j̲ī or the Defterdār drew up a *ḥukm* in the form of a firman or a *berāt*. This draft, after being checked by the Nis̲h̲and̲j̲ī or the Defterdār, was confirmed by the Grand Vizier, with the word *ṣaḥḥ* ("correct"). Important *ḳānūn*s were confirmed by receiving the *k̲h̲aṭṭ* (autograph minute) of the sultan. There is evidence that some *ḳānūn*s were dictated personally by the sultan (cf. Istanbul, Süleymaniye Lib., MS. Reisülküttab 1004, fol. 34 a). *Ḳānūn*s relating to *tīmār*s ("fiefs"), agricultural taxes and land law were the province of the *Nis̲h̲and̲j̲ī*; those relating to other financial matters were enregistered in the office of the *bas̲h̲-muḥāsebe*, under the Defterdār. Copies of the *ḳānūn*s were despatched to the officers responsible for their implementation—variously, the *ḳāḍī*s, governors, *mültezim*s, *emīn*s of the customs, etc. *Ḳāḍī*s and governors would register them and make the neces-

sary entries in the appropriate registers, either by a marginal note or by attaching a slip to the page. *Ḳānūns* which affected the populace in general were proclaimed by criers (*münādī*) in such public places as the market or the mosque courtyard or were read and explained by the *ḳāḍī* to the *aʿyān* [*q.v.*] and the *ashrāf*, who had been summoned to the court-room for that purpose. The original document was preserved in the *bedestān* of the city or in a chest under the *ḳāḍī*'s eye (cf. Paris, *Bibl. Nat.*, MS. anc. fonds turc 41, p. 25). Since the *ḳānūn* was a personal edict of the Sultan, to remain in force it required the confirmation of each new ruler; even Meḥemmed II accepted and stated that *ḳānūns* might require improvement and modification. The issuing of *ḳānūns* tended to intensify at such times as the carrying out of a *taḥrīr* [*q.v.*], an accession, the promulgation of an *ʿadāletnāme* (for these circular firmans issued in the attempt to rectify abuses, see *Belgeler*, ii/3-4 (1965), 49-145), or the promotion of reforms.

A *ḳānūn* might confirm *ʿāda* [*q.v.*] ("custom") or *amthāl* ("precedent"), or—with or without modification—the *ḳānūns* of a state newly occupied by the Ottomans. Appeal to "traditional practice" is a common feature of Ottoman *ḳānūns*.

An indication of the independent status enjoyed by *ḳānūns* in the Ottoman state is the fact that they were entirely under the supervision of the Nishāndjı̊. Their final and official promulgation lay in his hands, for he possessed the responsibility of affixing to them the *tughra* [*q.v.*] by which they were authenticated. It was he who determined whether a *ḳānūn* remained in force, and whether new *ḥukms* issuing from the various departments of the administration were in conformity with the existing corpus of *ḳānūns*. Since *ḳānūns* so largely dealt with land matters and the *tīmār*-system, with the decline of the latter the scope for *ḳānūn* activity contracted, and the Nishāndjı̊ lost his former importance.

It is no accident that outside the Ottoman Empire, the principle of independent legislation by *ḳānūn* was established, particularly in India and in those Muslim states founded by Turkish dynasties who had migrated from Central Asia. There too the *ḳānūn*, or rather, to use the terms there current, the *ḍābiṭa*, *āʾīn*, *dastūr*, or *shāhī farmān*, is to be traced back both to the Iranian concept of "justice" as the ruler's principal concern and to the central Asian *törü* or *tüzük*. According to Ḍiyāʾ al-Dīn al-Bārānī (writing c. 760/1359), a *ḍābiṭa*, or state law, is "a rule of action which a king imposes as an obligatory duty upon himself for realizing the welfare of the state and from which he absolutely never deviates" (tr. M. Habib and Salim Khan, *Political theories*, 6).

(Halil İnalcık)

iv.—Berber Usage

The word *ḳānūn* was adopted by various Berber groups, especially in Kabylia and the Aurès, to mean the customs, mainly as regards penal matters, pertaining to a particular village. A number of *ḳānūns* have been published, notably by A. Hanoteau and A. Letourneux (*La Kabylie et les coutumes kabyles*, Paris 1872-3, [2]1893, vols. ii and iii). To the bibliography given in the article berbers (iv), C. Lacoste, *Bibliographie ethnologique de la Grande Kabylie*, Paris-The Hague 1962, 72-6, should be added; see also the articles ʿāda and ʿurf. (Ed.)

ḲĀNŪN, musical instrument [see malāhī].

ḲĀNŪN-I ESĀSĪ [see dustūr].

ḲĀNŪNNĀME, in Ottoman usage the term generally referred to a decree of the sultan containing legal clauses on a particular topic. In the 9th/15th century the term *yasaḳnāme* had the same meaning, and during the Arab caliphate *ḳawānīn* had the sense of "a code of laws". In the Ottoman empire *Ḳānūnnāme* was occasionally extended to refer to regulations which viziers and pas̲h̲as had enacted (see *Ḳāsim Pas̲h̲a ḳānūnnāmesi*, in M. T. Gökbilgin, *Edirne ve Paşa livası*, Istanbul 1952, 434), laws which a competent authority had formulated (*e.g.*, the *ḳānūnnāme* of the *nis̲h̲ānd̲j̲ī* D̲j̲elālzāde) or to reform projects (*e.g.*, the *ḳānūnnāme* of Ibs̲h̲īr Pas̲h̲a, see Naʿīmā, *Taʾrīk̲h̲*, Istanbul 1280, v, 199). However, a *ḳānūnnāme* was like any normal *ḳānūn* in that only a Sultan's decree could give it official authority. Just as a single decree (*fermān* or *berāt*) or a defined and limited topic could form a *ḳānūnnāme*, there were others applicable to the whole Empire or to a particular region or social group.

The practice in Islamic states of issuing official, codified *ḳānūnnāmes* has two apparent sources, one being the traditions of the old Middle Eastern cultures and the other the traditions of the Turco-Mongol k̲h̲ānates (see ḳānūn). To prevent abuses by officials, the old Iranian Empires established the practice of carrying legal clauses—particularly tax-laws—on stone, in places always visible to the public. This was possibly a tradition descended from the older Mesopotamian civilisations (see M. Tosun, *Sumer, Babil ve Asurlularda Hukuk*, in *Belleten* xxxvii/148 (1973), 565; W. Hinz, *Steuerinschriften aus dem mittelalterlichen vorderen Orient*, in *Belleten*, xiii/52 (1949), 745-23). Similarly, in the era of the Caliphate, there must have been registers in *ḳānūnnāme* form containing decrees (*aḥkām*) and conditions (*s̲h̲urūṭ* connected with land tax. These decrees were officially transmitted to administrators and tax farmers (*multazim*) as a *dastūr* (see ḳānūn) in the collection of taxes (Kiya Māzandarānī, *Resālä-ye Falakiyyä*, ed. W. Hinz, 57). In the Mongol-Iranian Empire, the *yasa* [*q.v.*] of Čingiz K̲h̲ān, known as *yāsā-yi ḳadīm-i Čingiz K̲h̲ān*, *yarg̲h̲ūnāme* (Ras̲h̲īd al-Dīn, *Taʾrīk̲h̲-i mubārak-i G̲h̲āzān K̲h̲ān*, ed. K. Jahn, 149) or *yāsāḳ-i buzurg*, served as a basis for the ordering of military-political affairs and the settlement of law-suits. Even in the days of the Muslim G̲h̲āzān K̲h̲ān, the observance of Čingiz K̲h̲ān's *yāsā* was regarded as the foundation of the state's well-being (Ras̲h̲īd al-Dīn, *op. cit.*, 304). Even after the fall of the Mongol régime and despite a powerful reaction of the *ʿulamāʾ* against the *yāsā*, the term *yasaḳnāme*, or simply *yasaḳ*, continued as a name for collections of laws by the ruler. The efforts of the native officials led to the amalgamation of the *yāsā* with the Iranian-Islamic tradition of *maẓālim* [*q.v.*] jurisdiction (Muḥammad b. Hindūs̲h̲āh-i Nak̲h̲d̲j̲evānī, *Dastūr al-Kātib*, ed. ʿAlīzāde, i, 212, 322, 325). It is significant that codified *ḳānūnnāmes* appeared only in Iran, Anatolia, ʿIrāḳ and India—places with firmly established Turco-Mongol traditions and dynasties—, and in regions of the Ottoman Empire where the typical Ottoman laws and administration were in force, sc. in Rumelia and Anatolia.

Ḳānūnnāmes covered the fields of public law, state organization, administration, taxation, penal law and *ḥisba* [*q.v.*] (*aḥkām-i dīwānī*; *istifāʾ-i mamālik*, *taḥdīd ve siyāsat-i mud̲j̲rimān*, see Muḥammad b. Hindus̲h̲āh-i Nak̲h̲d̲j̲evānī, *op. cit.*, part i, ch. 1).

When the Ottomans first occupied a newly conquered territory, they usually maintained existing *Ḳānūns* or else adopted them with slight modifications, In this way the codes of the Mamlūk Ḳāyitbay, the Aḳ-ḳoyunlu Uzun Ḥasan and the Dulḳadīrlī ʿAlāʾ al-Dawla have reached us in their original forms under the guise of Ottoman *ḳānūnnāmes*. An Aḳ-ḳoyunlu source confirms that Uzun Ḥasan [*q.v.*] issued a penal *ḳānūnnāme* for general use throughout his territory, whose application was compulsory (M. Schmidt-Dumont, *Turkmenische Herrscher ... nach dem Tārīḫ al-Giyāṯī*, Freiburg 1970, 219; J. Woods, *From clan to empire, Aḳḳoyunlus ...*, Dissertation, Princeton University, 1974). Uzun Ḥasan's *ḳānūnnāmes* or *yāsās* were current in eastern Anatolia, Ād̲h̲arbāyd̲j̲ān, ʿIraḳ-i ʿArab and ʿIraḳ-i ʿAd̲j̲am (S̲h̲araf K̲h̲ān, *S̲h̲arafnāme*, ii, 120, cited by J. Woods, *op. cit.*). The Ottomans confirmed those in force in eastern Anatolia, applying them from 922/1516 to 955/1548. Thus the Ottomans, while abolishing Ṣafārid *ḳānūns* after the conquest of ʿIrāḳ, retained those of Uzun Ḥasan (see H. İnalcık, *Adâletnâmeler*, in *Belgeler*, ii/3-4 (1965), 140-2). The main purpose of these *ḳānūnnāmes* was to show the rates and methods of payment of *ʿurfī* taxes and market taxes or *bād̲j̲* [see ṭamg̲h̲a]. The Dulḳadīrlī (D̲h̲u ʾl-Ḳādiriyye) *ḳānūnnāmes* are essentially

criminal *ḳānūnnāme*s (see Ö. L. Barkan, *Kanunlar*, i, Istanbul 1943, 119-29). The Ottoman *ḳānūnnāmes* for Cilicia, Syria and Egypt comprise the *ḳānūnnāme* attributed to Ḳāyitbay [*q.v.*] dealing with *ʿurfī* taxes, customs duties and gifts (see Barkan, *op. cit.*, 200, 223, 226, 361, 364, 365, 370). Certain Indian collections of Sultanic laws and regulations, such as the *Tüzükāt* attributed to Tīmūr (see *Tüzükāt-i Tīmūrī*, ed. Major Davy, Oxford 1783), the *Āʾīn-i Akbarī*, or the *Aḥkām-i ʿĀlamgīrī*, are well known, but only the criminal code of ʿĀlamgīr I is really comparable to Ottoman *ḳānūnnāmes*, since it was issued in the form of imperial decrees (see J. N. Sarkar, *Mughal Administration* 122-30; U. Heyd, *Studies in Old Ottoman Criminal Law*, Oxford 1973, 317).

The opposition of the *ʿulamāʾ* to such compilations usually made the Sultans reluctant to give *ḳānūn*s a permanent character by publishing them in codified versions. They preferred to issue *Ḳānūn*s in the form of single imperial decrees (*fermān*s) on a particular topic and, as a result, there are few codified *ḳānūnnāme*s. Meḥemmed II [*q.v.*] appears to have been the first Islamic sovereign to issue a codified and officially promulgated *ḳānūnnāme* intended to be binding on posterity. In this he was perhaps conforming to the legal practice of the Turco-Mongol *ḳaghan*s. He issued two *ḳānūnnāmes*, one for the *reʿāyā* and one for state organisations.

Meḥemmed II's *ḳānūnnāme* for the *reʿāyā* aimed firstly to prevent the malpractices of the *ʿaskerī* [*q.v.*] class who gathered a number of taxes directly from the *reʿāyā*, and secondly to fix the rates of taxes and money fines, and in this way to realise the state's ideal of bringing protective justice to the *reʿāyā*. This *ḳānūnnāme* was issued as a code of practice for *ḳāḍī*s and governors in settling disputes. The *reʿāyā ḳānūnnāme* is codified according to a particular pattern (for the theory that *ḳānūnnāmes* follow no set pattern, see Ö. L. Barkan, *op. cit.*, liv-lxiii). The first three chapters contain criminal clauses applicable to both Muslim and non-Muslim *reʿāyā*. The arrangement of the subject matter is the same as in *fiḳh* books. In particular, it fixes the amounts of fines due to the *ʿaskerī* class from the *reʿāyā* (see İnalcık, *Osmanlı hukukuna giriş*, 117; U. Heyd, *op. cit.*, 7-18; text edited by Fr. Kraelitz, in *MOG*, i (1921-22), 13-48; cf. İnalcık, *Osmanlılarda raiyyet rüsûmu*, in *Belleten*, xxiii/92, 576-78). Added to the end of the third chapter are the rates of some other taxes levied by *ḳāḍī*'s decree (see Kraelitz, *op. cit.*, clauses 11-18).

The fourth chapter of the *reʿāyā ḳānūnnāme* lists the regular taxes which the *reʿāyā* pay to the *sipāhī*s. It comprises seven sections based on the seven duties which the *reʿāyā* have to perform for the *sipāhī*s and gives fixed taxes in lieu of these services (see Inalcik, *op. cit.*). This section again follows a clear pattern. It deals first of all with Muslim *reʿāyā* liable to *cift* [*q.v.*] tax. Then a separate section shows the organisation and obligations of the *yürük*s (*ḳānūn-i yürükān*) who were exempted from all services. The next section shows taxes paid by Christian *reʿāyā* liable to the *ispendje* (see Inalcik, *Osmanlilarda raiyyet rüsumu*, 602-8). The final section lists the *bādj* taxes, payable in town markets (Kraelitz, *op. cit.*, clauses 9-28) and applicable to both Christians and Muslims.

In general, Ottoman *ḳānūnnāmes* were systematically drawn up according to the logic of the Ottoman tax and administrative system. Only *ḳānūn*s added later went contrary to the system. The four chapters in the *ḳānūnnāme* of Meḥemmed the Conqueror, setting out taxes and relations between *reʿāyā* and *sipāhī*s, follow the same system as the *sandjaḳ ḳānūnnāmes* and *taḥrīr* registers. These list, in turn, *čift* tax and similar imports, tithes (*aʿshār*), orchard tax, beehive tax and the like, then taxes paid on animals and, lastly, fines (*djerāʾim*) and irregular taxes (*bād-i havā*). Some *sandjaḳ ḳānūnnāmes*, like the *ḳānūnnāme* of Meḥemmed the Conqueror, contain a supplement showing *bādj* taxes (cf. the *ḳānūnnāme* of Aydln in Barkan, *op. cit.*, 6-18).

Most Ottoman *ḳānūnnāme*s can be classified, according to their form, under four main headings:

1. *Ḳānūnnāmes* in the form of decrees of the Sulṭān

These were issued as *fermān*s or *berāt*s in answer to particular administrative problems or needs, and required governors and *ḳāḍī*s to put them into immediate effect. Most of them are in genuine *ḳānūnnāme* form and contain a number of clauses on a specific topic. Complete or abridged copies existed in official registers in the capital or in *ḳāḍī*s' registers in the provinces. Valid official copies of the decrees could be issued from these sources (see *Belleten*, xi/44 (1947), 693-703).

It is likely that such *ḳānūn*s in the form of decrees were collected in book form to meet the needs of secretaries. The oldest known collection dates from the reign of Bāyezīd II (see R. Anhegger and H. İnalcık (eds.), *Ḳānūnnāme-yi sulṭānī ber mūceb-i ʿörf-i ʿoṣmānī*, Ankara 1956. Other important collections, dating from the 10th/16th century are as follows: Library of the Topkapı Sarayı, MSS. Revan Nos. 1935, 1936; Istanbul University Library, MS No. T. 2753; British Museum, MS Or. No. 9503; Paris, Bibliothèque Nationale, ancien fonds turc, MSS Nos. 34, 85; Sarajevo, Orientalni Institut, MS Turcica No. 3; Istanbul Bayezid Library, MS Veliyüddin No. 1970; Istanbul, Süleymaniye Library, MS Reîsülküttâb, No. 1085).

2. *Sandjaḳ ḳānūnnāmes*

The government of Ilkhānid Iran maintained separate registers showing taxes and regulations for each region, known as *Ḳānūn-i mamlakat*. The custom, no doubt, went back via the ʿAbbāsids to ancient Iran. The Ottomans continued to practice with their regional *vilāyet* or *sandjaḳ* (*livāʾ*) *ḳānūnnāmes*.

These *ḳānūnnāme*s were confirmed by the Sulṭān's cipher (*ṭughra*, [*q.v.*]) and placed at the beginning of the detailed (*mufaṣṣal*) cadastral registers of each province. They existed for provinces where the system of state (*mīrī*) lands and *timars* [*q.v.*] was in force, with the primary aim of preventing and settling disputes between the *reʿāyā* and the timar-holders.

They were like the *Ḳānūnnāme*s in the form of decrees in that they were official and in force at a particular date. The *beylerbeyi*s' councils and *ḳāḍī*'s courts had to give judgement in accordance with these codes.

The arrangement of clauses in Ottoman *sandjaḳ ḳānūnnāmes* follows a specific pattern (see above).

Sandjaḳ ḳānūnnāmes followed well-defined principles in the formulation of *reʿāyā* taxes and land laws. These principles probably took on the character of a system in the first half of the 9th/15th century, or perhaps a little earlier and, under the title *ḳānūn-i ʿothmānī*, displayed the peculiarities of the Ottoman régime (see İnalcık, *Suleiman the Lawgiver*, in *Archivum Ottomanicum*, i (1969), 128-35). Meḥemmed the Conqueror was the first to have these principles codified in his *reʿāyā ḳānūnnāme* which was to be enforced throughout the Empire. Apart from occasional legal clauses, obviously summarized from

ḳānūns in the form of decrees, the detailed cadastral registers from Meḥemmed the Conqueror's reign contain no *sandjaḳ ḳānūnnāmes*. The oldest surviving *sandjaḳ ḳānūnnāme* is that of Khudāvendigār (Bursa), dated 892/1487 (see Barkan, *op. cit.*, 1-6).

The practice of placing at the front of the detailed cadastral surveys for each *sandjaḳ*, separate *ḳānūnnāmes* showing the *ḳānūns* in force in the *sandjaḳ*, dates from Bāyezīd II's reign. The Khudāvendigār *ḳānūnnāme* of 892/1487 appears to be a model for later ones. Some *sandjaḳ ḳānūnnāmes* have been collected and published (Barkan, *op. cit.*, contains about 80 *sandjaḳ ḳānūnnāmes*. Other collections are J. von Hammer, *Des osmanischen Reichs Staatsverfassung und Staatsverwaltung*, i, Vienna 1815; *Kanūn-i kanun-name*, Monumenta Turcica, series I, No. 1, Sarajevo 1957).

Since Ottoman Law was in general based on precedent, it is possible to divide *sandjaḳ ḳānūnnāmes* into related groups based on chronology and geography. Taking the rate of taxation as a basis, we find that the *ḳānūnnāmes* from the *eyālet* of Anadolu in western Anatolia form a group with the *ḳānūnnāme* of Khudāvendigār. Central Anatolia—Ḳaramān, Ičel and Anḳara—forms a second category, similar to the first, whereas the *sandjaḳs* of eastern Anatolia—Malātya, Diyārbekir, Erẓurūm, Muṣul, Khārpūt and Mārdīn—and Syria form two separate groups.

The Rumelian *sandjaḳ ḳānūnnāmes* form a special group. Here clauses from the typical *ḳānūn-i ʿothmānī* co-exist with Byzantine and Slav customary law and institutions. A number of laws are based entirely on pre-Ottoman practice: the *bashtina* as a unit of land and the *ispendje* [*q.v.*] as a *reʿāyā* tax; the taxes on hay and wood derived from Balkan feudalism and the grain levy of two measures of wheat and two of barley. Other taxes on wine production—barrel tax, *obručuna* and *monopolya ʿādeti*—again ante-date Ottoman rule. The Rumelian *ḳānūnnāmes* also contain clauses relating to groups such as the *yürüks*, *müsellems*, *voynuks*, Vlachs, Tatars and *filoridjis*. Another peculiarity of Rumelian *ḳānūnnāmes* is that side-by-side with typical *sandjaḳ ḳānūnnāmes* regulating affairs between the *reʿāyā* and *sipāhīs* (e.g. the 977/1569 *ḳānūnnāme* of Silistra, in Barkan, *op. cit.*, 278-89), there are others regulating affairs between members of the *ʿaskerī* class only (e.g. the *ḳānūnnāme* of Nighbolu (Nikopol) in Barkan, *op. cit.*, 267-71).

The *sandjaḳ ḳānūnnāmes* for Hungary are modelled on other 10th/16th century Rumelian *ḳānūnnāmes*, except that certain taxes and laws were retained from the days of the Hungarian kingdom. It thus becomes obvious that, after the conquest of an area, the Ottomans adopted the *sandjaḳ ḳānūnnāmes* of adjoining regions as a model for the newly-conquered lands. Differences arose from the survival of certain local laws and taxes and from changes in Ottoman law which occurred at certain dates. However, it is important to realise that the principles of the *ḳānūn-i ʿothmānī* always applied to questions of land ownership and the status of the peasantry.

3. *Ḳānūnnāmes* relating to specific groups

These can be treated in the same category as *ḳānūnnāmes* of provinces. Special *ḳānūnnāmes* were usually issued for *reʿāyā* groups serving the state in a particular capacity (see İnalcık, *Osmanlılarda raiyyet rüsûmu*, 295-300). These were principally groups performing auxiliary military service, the most important of which were *yaya* and *müsellem* (for *ḳānūnnāme*, see Barkan, *op. cit.*, 241-2, 259), *djānbāz* (for *ḳānūnnāme*, *ibid.*, 247-8), *eshkindji yürük* and *eshkindji tatar* (for *ḳānūnnāmes*, see M. T. Gökbilgin, *Rumeli'de yürükler, tatarlar ve evlâd-i fâtihan*, Istanbul 1957), Vlachs (*eflāk*) (for *ḳānūnnāmes*, see B. Đurđev and others (eds.), *Ḳānūn-i ḳānūnnāme*, Sarajevo 1957, 12-14; N. Beldiceanu and I. Beldiceanu-Steinherr, *Quatre actes de Mehmed II concernant les valaques des Balkans slaves*, Südost-Forschungen, xxiv, 1965, 115) and *voynuk* (for *ḳānūnnāme*, see *Osmanische-Türkische Quellen zur Bulgarischer Geschichte*, iii, Sofia 1943).

The *Ḳānūnnāmes* of these groups make it clear that their organisation was on the pattern of an auxiliary military corps, and that they were all, therefore, liable to tax exemptions (see İnalcık, *Osmanlılarda raiyyet rüsûmu*, 594-601). In the 9th/15th century these groups had *ʿaskerī* status, but as their military importance declined in the 10th/16th century, they descended to *reʿāyā* status and became subject no longer to their own, but to ordinary *sandjaḳ ḳānūnnāmes*.

Secondly, certain groups engaged in production for the state had their own *ḳānūnnāmes*, for example the rice-field workers (*čeltükči*) (for *ḳānūnnāme*, see Library of the Topkapı sarayı, Revan no. 1936) and the miners (*maʿdendji*) (for *ḳānūnnāmes*, see R. Anhegger, *Beiträge zur Geschichte des Bergbaus im osmanischen Reich*, 2 parts and supplement, Istanbul 1943-5; N. Beldiceanu, *Les actes des premiers sultans*, ii, *Règlements miniers*, 1390-1572, Paris-The Hague 1964). Most of the miners' *ḳānūnnāmes* are translations of local, pre-Ottoman statutes. Prisoners-of-war settled in a particular place (*ortaḳčï ḳullar*) occupied a special position among these groups (see Barkan, *Osmanlı imperatorluğunun toprak işçiliğinin organizasyonu şekilleri*, in *İktisat Fakültesi Mecmuası*, i/1-3). Similarly, the gipsies of Rumelia were subject to their own *ḳānūnnāme* (Barkan, *Kanunlar*, 249-50).

4. *Ḳānūnnāmes* relating to state organisations

These form a third category. Meḥemmed II's *ḳānūnnāme* dealing with state organisations (see M. ʿĀrif [ed.], in *TOEM* supplement, Istanbul 1330; A. S. Tveritonova [ed.], *Badāʾiʿ al-Waḳāʾiʿ*, ii, Moscow 1961, 277b-283b) states at the beginning that it was written to regulate the affairs of the sultanate. Its pattern follows the logic of the Ottoman system of government, dealing in one place with matters of the Palace, government and protocol. Its claims deal in turn with the form of government, its notables and their sphere of authority, their relationship with the Sultan, their ranks and degrees, promotion, salary, retirement and punishment. Meḥemmed II's *ḳānūnnāme* is the only one of this type. Later Sultans did issue regulations for state organisations, but they are not comprehensive. Later *ḳānūnnāmes* and regulations on this topic are the compilations of statesmen and bureaucrats (among the most important are ʿAynī ʿAlī Efendi, *Ḳawānīn-i āl-i ʿOthmān der khulāṣa-yi meḍāmīn-i defter-i dīwān*, Istanbul 1280; the *ḳānūnnāme* of Nishāndjī ʿAbdurraḥmān Pasha, in *MTM* i/5 [1331], 494-544; the *ḳānūnnāme* of Eyyūbī Efendi, Istanbul University Library, MS T 734; Hezārfenn Ḥüseyn Efendi, *Talkhīṣ al-bayān fī ḳawānīn-i āl-i ʿOthmān*; see H. Wurm, *Der osmanische Historiker Ḥüseyn b. Ğaʿfer, genannt Hezārfenn*, Freiburg 1971; İ. H. Uzunçarşılı (ed.), *Ḳānūn-i ʿothmānī mefhūm-i defter-i khāḳānī*, in *Belleten*, xv/59 (1951), 381-99, and a longer version of this work, H. Hadzibegič, *Rasprava Ali čauša . . .*, in *Glasnik zemaljskog Muzeja u Bosni i Hercegovini*, ii, Sarajevo 1947, 146-73).

The Ottoman archives, however, contain the

manuscripts of several official *ḳānūnnāmes* dealing with ceremonial (Istanbul, Başvekâlet Arşivi, Kâmil Kepeci tasnifi, *Teşrifât defterleri*), and there are also works written by officials concerned with ceremonial (e.g. Nāʾilī ʿAbdullāh Pas̲h̲a, *Defter-i tes̲h̲rīfāt*, Turkish Historical Society Library, MS no. Y 49, published in part in *TOEM*, xvi, 249-60; Esʿad Efendi, *Teshrīfāt-i ḳadīme*, Istanbul 1293; see also *Ḳānūnnāme-yi tes̲h̲rīfāt*, Istanbul University Library, MS T 220).

Some of the works written to recommend reforms or as handbooks for Sultans or Grand Viziers contain detailed facts about *ḳānūns* relating to state organisations (e.g. Luṭfī Pas̲h̲a, *Kitāb-i musteṭāb*, ed. Yaşar Yücel, Ankara 1974; *Ḥirz al-Mulūk*, MS. Library of the Topkapı Sarayı, Revan 1612; see K. Röhrborn, *Untersuchungen zur osmanischen Verwaltungsgeschichte*, Berlin 1973; Ḳoči Beg, *Risāle*, ed. A. K. Aksüt, Istanbul 1239; Ṣarī Meḥmed Pas̲h̲a, *Naṣāʾiḥ al-umarāʾ waʾl-wuzarāʾ*, ed. and tr. W. L. Wright, Princeton 1935. Works concerning Palace statutes and organisation: Meḥmed K̲h̲alīfe, *Taʾrīk̲h̲-i g̲h̲ilmānī*, in *TOEM*, supplement, 1340; Ilyās, *Leṭāʾif-i enderūn*; A. ʿAṭāʾ, *Taʾrīk̲h̲-i ʿAṭāʾ*, Istanbul 1291-3).

There are also *ḳānūnnāmes* for particular aspects of state organisation, the *Ḳawānīn-i yeničeriyān* (Library of the Topkapı Sarayı, MS Revan no. 1320; Istanbul University Library, MS no. T 3293), for example, dealing with the Janissaries. There are other *ḳānūns* and *ḳānūnnāmes* dealing with *timars*, treasury affairs, *muḳāṭaʿas*, customs, the mint, currency, the *ḳapī ḳullarī*, the *ʿulamāʾ*, cadastral surveys, military campaigns etc. (See Library of the Topkapı Sarayı, MSS Revan nos. 1935, 1936, Bagdad no. 346; Süleymaniye Library, Reîsülküttâb no. 1004, Esʿad Efendi no. 2362, Bayezid Library, Veliyüddin Nos. 1969, 1970; Şehid Ali Paşa, no. 3832; Istanbul University Library MS no. T 1438; Âtıf Efendi Library, Istanbul, no. 1734; Staatsbibliothek, Vienna, Mixt. 478, H. O. 154; Bibliothèque Nationale, Paris, ancien fonds turc, nos. 35, 85; Westdeutsche Staatsbibliothek, Marburg, Orient No. 2730; Staatsbibliothek, Munich, cod. turc. nos. 117, 118).

5. *General ḳānūnnāmes*

This type of *ḳānūnnāme* was in force throughout the Empire. Meḥemmed II's *reʿāyā ḳānūnnāme* formed the nucleus of the codes of the following Sultans. This *Ḳānūnnāme* was promulgated under Bāyezīd II in *ca.* 907/1501 in a much enlarged and modified version, under the title *Kitāb-i ḳawānīn-i ʿurfiyye-yi ʿot̲h̲māniyye* (Koyunoglu MS facsimile edition, N. Beldiceaneu, *Code de lois coutumières de Mehmed II*, Wiesbaden 1967). It contains the amendments of Hersekzāde Aḥmed Pas̲h̲a [*q.v.*] and forms the basis of the *ḳānūnnāme* later attributed to Sulaymān I (see İnalcık, *Adâletnâmeler*, 56; *Suleiman the Lawgiver*, 117-26; U. Heyd, *ibid.*, 18-24). Their introduction and chapter headings are identical. It falls into three large chapters. The first chapter is a version of Meḥemmed II's criminal code, extended and further systematized (Koyunoğlu MS, 1-9; M. ʿĀrif's edition, *TOEM* supplement, 1-10). The second chapter deals with the obligations of the *sipāhī* and laws affecting the *sipāhī* class. It then describes the *sipāhī*'s rights over the *reʿāyā* in their capacity of *ṣāhib-i raʿiyyet* and *ṣāḥib-i arḍ* and the taxes which they received. This chapter also contains a *bād̲j̲ ḳānūn* related to *k̲h̲āṣṣ* and *timar* incomes, and a supplementary *ḳānūnnāme* for *yayas* and *müsellems*. The third chapter deals with the rights and obligations of the *reʿāyā* and the conditions of land tenure. Following this are special *ḳānūnnāmes* for *reʿāyā* groups performing military duties and subject to special statutes—*ʿazab*, *yürük*, *haymana* and *eflāk*. To conclude there are two special *ḳānūns* obviously issued during the compilation of the *ḳānūnnāme*. One concerns illegal innovations (*bidʿat*) in Ḳonya, abrogated for contravening the *ḳānūn-i ʿot̲h̲mānī*. The other contains regulations for collecting Palace firewood.

The compilation of the *ḳānūnnāme* seems to have followed this pattern. To start with, it makes large scale borrowings from the K̲h̲udāvendigār *ḳānūnnāme* of 892/1487, and similarly from the *ḳānūnnāmes* of the *sand̲j̲aḳs* of Anadolu, Ḳarāmān and Rūm (Amasya). It also has frequent references to the *ḳānūnnāmes* of frontier *sand̲j̲aḳs* such as Vidir and Semendere (Smederovo) in Rumelia, obviously because laws outside the *ḳānūn-i ʿot̲h̲mānī* were current in these regions. Clauses from the cadastral register of Semendere were added directly to the *ḳānūnnāme* (see İnalcık, *Suleiman the Lawgiver*, 120). Tax laws had a regional character, and for this reason the *ḳānūnnāme* contains no general regulations on the subject. It was rather in the fields of land law, *timar* holdings and criminal law that the *ḳānūnnāme* was of universal application.

Newly-issued *ḳānūns* in the form of decrees and new *sand̲j̲aḳ ḳānūns* led to later modifications and re-issues of this *ḳānūnnāme* in the names of the Sultans following Bāyezīd II. Although Selīm I's *ḳānūnnāme* (for various versions see A. S. Tveritinova, *Kniga zakonov Sultan Selima I*, Moscow 1969) has not been widely publicised, the later version promulgated under Sulaymān I has received widespread attention (for copies see U. Heyd, *op. cit.*, 24-32). In this period the *nis̲h̲ānd̲j̲ī* D̲j̲elālzāde made important changes in the general *ḳānūnnāmes*, and a number of manuscripts contain *ḳānūns* collected under his name (*e.g.*, Süleymaniye Library, Reîsülküttap no. 1004). During the era of decline following the 10th/16th century, the *ḳānūnnāme* of Sulaymān I came to be idealised as the foundation of the classical Ottoman régime (see İnalcık, *Suleiman the Lawgiver*, 105; Naʿīmā, *Taʾrīk̲h̲*, v, 101). Nevertheless, the decay of the *tīmār* régime made much of it obsolete and in the 11th/17th century a new *ḳānūnnāme* replaced it, called *ḳānūnnāme-yi d̲j̲edīd-i sulṭānī*. This was a detailed compilation widely used in Ottoman courts of the period. (There is no critical study of this text. Most versions end with a *fermān* dated 1084/1673 concerning taxes such as tithes (*ʿus̲h̲r*)—cf. *MTM*, i, 330. Some versions are shorter. One version, with additions, is printed: *MTM*, i, 49-112, 305-48. Other important versions: Istanbul University Library MSS T 398, 400, 475, 969, 2664, 2730, 3586, 4107, 5828, 5845, 5846, 9623, 9550, 9737; Bursa Public Library, no. 1996; Library of the Topkapı Palace, Bağdad no. 347, 404; Istanbul, Millet Library, Fatih, Ali Emiri no. 72, 76, 80; Tirana National Library no. 154 ff. 27-67; Vienna, Staatsarchiv, Krafft no. 470; Vienna, Staatsbibliothek, Flügel no. 149, ff. 1-43; Munich, Staatsbibliothek, cod. turc. nos. 113, 114, 115; Marburg, Westdeutsche Staatsbibliothek, Hs.or. quart. nos. 1023, 1102, 1835, Hs. Or. oct. nos. 809, 843, 892; Sofia, National Library, Turkish MSS 1332/166, facsimile edition by G. Galabov, *Turski Izvori ...*, Sofia 1961, 167-200; Paris, Bibliothèque Nationale, E. Blochet, supplement, 68, 71, 78, 79, 1311; British Museum, Rieu Add. 7834, 7840; Istanbul, Süleymaniye Library, Fatih no. 5424; Konya, Koyunoğlu Museum, nos. 12337, 11337, 12396, 12334, 12395; Ankara, Library of the Turkish Historical Society, Y 321, 325, 396).

The definite compilation of this *Ḳānūnnāme* dates from 1084/1673, obviously as an answer to the new problems of the age of decline, in particular to land problems. *Ḳānūn*s which the *nis̲h̲āndji̊* Djelālzāde formulated in the classical age, and others formulated by Nis̲h̲andji̊ Ḥamza Pas̲h̲a, the author of many reforming *ḳānūn*s in the late 16th century, occupy a large part of this *ḳānūnnāme*. Similarly, *ḳānūn*s promulgated between the years 1012/1603 and 1019/1610 are among the new features of this *ḳānūnnāme* which also makes mention of a *Ḳānūnnāme-yi Sulṭān Aḥmed K̲h̲ān*. Another important point distinguishes it from earlier collections. This is the inclusion from the time of Aḥmed I, of *müftīs*' *fetvā*s on topics previously dealt with by the *nis̲h̲āndji̊*s, in particular problems of land law and sometimes the law concerning *sipāhī*s (see *MTM*, i, 320). The compiler obviously drew them mainly from the *fetvā* collections of Pīr Meḥmed [*q.v.*] (see *Ẓāhir al-Ḳuḍat*, MS, Library of the Topkapı Sarayı, Revan no. 1938; Süleymaniye, Esad Efendi, no. 1094; for details of the work see, Heyd, *op. cit.*, 189-90), S̲h̲eyk̲h̲ ül-Islām Yaḥyā (there are many copies of his *fetvā* collection, e.g. Süleymaniye, Esad Efendi, no. 1088; Beşir Ağa no. 332) and S̲h̲eyk̲h̲ ül-Islām Bahāʾī (one copy of his *fetvā* collection, Library of the Topkapı Sarayı, Revan no. 1938, ff. 151-166).

The *ḳānūnnāme-yi djedīd* differed from the *ḳānūnnāme*s of the classical age which *nis̲h̲andji̊*s prepared and the Sultan ratified, and which contained only *ʿurfī ḳānūn*s [see ḲĀNŪN].

It has been claimed that none of the general *ḳānūnnāme*s was an official code to be enforced in the courts and offices of state (see Barkan, *Kanunlar*, i, xx-xxxiv; *Osmanlı imperatorluğu teşkilât ve müesseselerinin şerʿîliği meselesi*, in *Istanbul Üniversitesi Hukuk Fakültesi Mecmuası*, xi/3-4 (1945), 214-15; art. *Ḳanunname*, in *İA*). It is true that the law valid for a particular subject at a particular date was always the most recent imperial *fermān* or a clause in the latest *sandjaḳ ḳānūnnāme*. Nevertheless, the *ḳānūnnāme*s showing all the laws current in the courts and *beylerbeyi*s' councils at a specific period were a source and reference book for official decisions. Clauses in the general *ḳānūnnāme*s requiring amendment were either entered directly by the *ḳāḍī* or *beylerbeyi*, or sent for correction to the *nis̲h̲āndji̊* in the capital (see İnalcık, *Suleiman the Lawgiver*, 120-3). However, it should not be forgotten that *ḳāḍī*s were as free to give decisions in accordance with unratified *ḳānūnnāme*s in their possession as they were in accordance with *s̲h̲arʿī fiḳh* books. There are thousands of surviving *ḳānūnnāme*s which previously belonged to *ḳāḍī*s or clerks of court. On rare occasions, these officials arranged the legal clauses under chapters and sub-headings according to their personal system (e.g. Istanbul University Library, MS T. 1807). Several types of general *ḳānūnnāme* have survived. The 10th/16th century documents make it abundantly clear that these *ḳānūnnāme*s intended as general penal codes for the whole Empire were promulgated by the central government as official codes whose application in the courts was compulsory (see İnalcık, *Suleiman the Lawgiver*, 115, 117; U. Heyd, *op. cit.*, 171-80). An official *ḳānūnnāme*, whose application was enforced (*maʿmūlün bihi*) remained in the possession of the *reʾīsülküttāb* as a reference work for the correction of other *ḳānūnnāme*s or for transactions and the drawing up of documents in the *dīwān* (Barkan, *Kanunlar*, i, 32). *Ḳāḍī*s entered the official *ḳānūnnāme*s into official registers and were henceforth bound to act in accordance with them. The introductions to the codes of Meḥmed II, Bāyezīd II and Sulaymān I state that their publication was a decree of the Sultan, and that their application was compulsory. The expressions *maʿmūlün bihi* or *muʿtabar* are used to make this clear.

The concept of an official code in the sense of European legal terminology entered the Ottoman Empire in the 13th/19th century. In this century European legal concepts predominated in the codification and promulgation of *ḳānūnnāme*s, *niẓāmnāme*s and even of the *Medjelle* [*q.v.*] [see also TANZĪMĀT]. This influence, apparent already in the military statutes of Selīm III's reign, grew stronger in the codes of the *tanẓīmāt* epoch. Some of these are direct translations of European laws (see Hıfzı Veldet, *Kanunlaştırma hareketleri ve Tanzimat*, in *Tanzimat*, i, Istanbul 1940, 139-209; *Dustūr, tertīb-i evvel*, Istanbul 1279; Aristarchi Bey, *Législation Ottomane*, Istanbul 1873-4).

KANURI. The name Kanuri, applied to both a language and to a people, appears to be of recent origin. The earliest known written occurrence is in the 18th century. The Kanuri language belongs apparently to the Teda-Daza group, mainly located east of Lake Chad. The most recent hypothesis is that Kanembu, the language of Kanem [*q.v.*], evolved from various older Daza languages, as speakers of these moved south into Kanem; and that Kanuri in turn developed, partly through the influence upon Kanembu of languages of the Chadic family spoken west of Lake Chad, among Kanembu-speakers as these gradually moved southwest into Bornū. Kanembu is still regarded as the classical language of *tafsīr* [*q.v.*] in Bornū. The Kanuri language achieved widespread importance through the political power of Bornū, the Islamic prestige of that state, and its position at the southern end of the ancient trans-Saharan highway to Tripoli.

The Kanuri people have undergone a similar development. Traditions speak of Sayf b. D̲h̲ī Yazan [*q.v.*], the great Arab folk hero, becoming leader of the Magumi nomads, and of the Magumi gradually establishing their ascendancy over a number of other groups in the Kanem region. The emergence of some form of organized state, embracing disparate groups, in Kanem, which may be assigned to the 9th or 10th centuries A.D., is now seen less as the result of the imposition of rule by nomad immigrants upon disorganized local peoples than as the interaction between nomadic and settled. Early Sefawa rulers, *i.e.*, reputed descendants of the perhaps legendary Sayf, who are probably more accurately to be regarded as heads of the Sefawa lineage of the Magumi clan, married women of various groups which were later to help make up the Kanuri, and the children of these non-Magumi women succeeded to the kingship, which was of the "divine" pattern. Sedentarisation advanced; the first towns in Kanem are mentioned in the 12th century.

Whether the name Kanuri may properly be used of the people of Kanem at this stage is a moot point, though many recent authorities do so. The further movement of people into Bornū, the region southwest of Lake Chad, had apparently begun early. Both Ibn Khaldūn and Ibn Baṭṭūṭa knew the name Bornū; and in the 1390s the ruler of Kanem and his court themselves fled into Bornū, driven from Kanem by their rivals, the Balula [*q.v.*]. Gradually Bornū, rather than Kanem, became the centre of gravity in the area, following this exodus; even when the old Kanem capital, Njimi, was recaptured in the 15th century, the Sefawa never returned to settle there. In Bornū, a remarkable process of amalgamation went on, facilitated by the absence of natural boundaries, and involving immigrants from Kanem, the local peoples (loosely called the So or Sao [*q.v.*], nomadic arrivals and others, and large numbers of slaves from various quarters. From this melting pot came the Kanuri proper, far more homogeneous by the 18th century that they had been in the 15th. The process of assimilation continues until today: the outward sign of it is the adoption of the Kanuri language. The Kanuri are thus, like the Hausa [*q.v.*], less a tribe in the customary sense than a group of people of diverse origins bound together by a common language. When, early in the 19th century, Shaykh Muḥammad al-Amīn al-Kānemī [*q.v.*] rescued Bornū from the threat of the Fulani [see FULBE] *djihād*, his chief reliance was upon his Kanembu troops, and these were quite distinct from the Kanuri of Bornū.

The Lake Chad area has from a very early date benefited from the trans-Saharan route running north through Kawar and Fazzān [*qq.v.*] to Tripoli. Slaves were the principal export. Al-Yaʿḳūbī [*q.v.*], in the 3rd/9th century, refers to Zawīla, then the centre of Fazzān, where slave traders even from Asia were already established. Al-Iṣṭakhrī [*q.v.*] in the 4th/10th century contrasts the slaves passing through Zawīla with those from eastern Africa, the Zandj [*q.v.*] among them, and finds those from the Central Sudan blacker and better than all the others. It is likely that the slave revolt in ʿIrāḳ, in the late 3rd/9th century, particularly associated with Zandj slaves, may have occasioned a reaction in Middle Eastern markets in favour of other varieties. Al-Bakrī [*q.v.*] in the 5th/11th century mentions slave exports from Fazzān. Ibn Baṭṭūṭa comments upon the excellent slave girls from Bornū, its eunuchs (*fityān*) and saffron-dyed fabrics. Leo Africanus [*q.v.*] gives an interesting description of trade in Bornū at the beginning of the 10th/16th century, Barbary merchants bringing horses for the king in exchange for slaves. Trade in slaves and other commodities continued until the end of the 19th century.

Islamic penetration in the Chad region came from the north, along the trade route. ʿUḳba b. Nāfiʿ [*q.v.*] reached Kawar in 46/666-7. Al-Bakrī mentions the descendants of Umayyad refugees living in Kanem; legends of the Umayyad diaspora are, however, frequent, and should not always be taken seriously. The first Muslim ruler, or *mai*, among the Sefawa was Humai, probably in the late 5th/11th century. Al-Maḳrīzī [*q.v.*], on the contrary, affirms that Dunama Dibbalemi, the famous 7th/13th century *mai*, under whom the Kanem empire reached its peak, was the first convert. Dunama Dibbalemi is said to have opened the *mune*, or sacred talisman, of Kanem, thus precipitating civil strife; it is possible, though the evidence is scanty, that he was trying to reform local Islam, hitherto too tolerant of non-Islamic survivals. Several *mais* made the pilgrimage, among them Humai's successor (also named Dunama), who went twice to Mecca and was drowned on his third journey. In the 1240s, perhaps during the reign of Dunama Dibbalemi, a hostel for pilgrims and students from Kanem was established in Cairo. It is likely that two *mais* in the 8th/14th century were pilgrims. Idris Alooma, towards the end of the 10th/16th century, renewed the tradition, which flourished particularly in the 11th/17th and 18th centuries.

After the shift to Bornū, the Kanuri began to influence their western neighbours, the Hausa. The Hausa words for writing and reading, as well as for gun, city wall, market, and a number of other key elements, are borrowed from Arabic through Kanuri, or from Kanuri itself. Constitutional patterns also spread; the title *galadima*, for example, originally the governor of the western provinces of Bornū, was adopted in Sokoto, and may be found in places as distant as Fazzān and Adamawa. At the time of the Fulani *djihād*, Kanuri Islam was harshly criticized by Fulani critics, but Sultan Bello of Sokoto nevertheless admitted that the earlier rulers had been good and devout Muslims, many among them pilgrims.

Kanuri-speakers are found in various adjacent areas, such as Mandara, Baghirmi and Kawar. In Kawar, frequented also by Tubu and Tuareg, Kanuri provide most of the *ʿulamāʾ*.

For further details, particularly on the later history of Bornū, see the article BORNŪ.

(H. FISHER)

KANZ, BANU 'L (AWLĀD AL-KANZ), a clan descended from Rabīʿa tribesmen who migrated to the region of Aswān in the 3rd/9th century, intermarried with Bedja [*q.v.*], and ultimately gained control of the gold-mines of al-ʿAllāḳī [*q.v.*]. The eponym of the clan, whose personal name was Abu ʾl-Makārim Hibat Allāh, received in 397/1007 from the Fāṭimid caliph al-Ḥākim [*q.v.*] the honorific of Kanz al-Dawla for his services in capturing the rebel Abū Rakwa. The title continued to be borne by his successors. As marcher-chiefs of the frontier of Islam

with the Bedja and Nubians, the Banu ʾl-Kanz were not easily controlled by the rulers in Cairo. Both Badr al-Djamālī [*q.v.*] and al-ʿĀdil Sayf al-Dīn [*q.v.*] undertook operations against them in 469/1076-7 and 570/1174 respectively. During the Ayyūbid and early Mamlūk periods, the clan extended its power southwards into the Nubian kingdom of al-Muḳurra, which was (after 717/1317) ruled for a time by a Kanz al-Dawla. With the subsequent disintegration of al-Muḳurra, Banu ʾl-Kanz appear to have directed their energies again northwards. In the late 8th/14th and early 9th/15th centuries they fought repeatedly against the Mamlūk governors of Aswān, and devastated the town and its vicinity. Their domination was countered only by another tribe, Hawwāra [*q.v.*], a fraction of which was established in Upper Egypt by Barḳūḳ [*q.v.*], *ca.* 782/1380-1. The arabized Nubian tribe of Kunāz, living between Aswān and Kurūskū (with some branches also in the Sudan), claims descent from Banu ʾl-Kanz.

KAPAN [see ISTANBUL, MĪZĀN].

ḲAPĪ, literally "gate" in Turkish, which by extension means "Ottoman Porte", that is, the sultan's palace, and is also used for the grand vizier's palace and the seat of government. The word *ḳapī* was used concurrently with the Arabic *bāb* (*e.g.*, *bāb-ī ʿālī* [*q.v.*]) and the Persian *dar/der* (*e.g.*, *der-i devlet*, *der-i ʿāliye*, *der-i seʿādet*). It appears, however, that in Ottoman the word *ḳapī*, unlike *bāb* and *der*, was rarely used with a non-Turkish epithet or determinative. On the other hand, it is very frequently employed to designate military or civil functions directly subordinate to the "Porte", *e.g.*, *ḳapī ḳullarī*, literally "slaves of the Porte", that is, the sultan's troops, and *ḳapī kethüdasī*, or *ḳapī kāhyasī*, an agent "close to the Porte" of a high dignitary of an Ottoman subject or vassal.

From 1654, the grand vizier lived in a private palace, separate from the imperial *saray*, where more and more frequently meetings of the *dīwān* were held. This palace, known as the *pasha ḳapīsī* (shortened to *ḳapī*), was later called the *bāb-ī ʿālī* (the Sublime Porte), and represented the effective seat of government. Westerners, however, confused the sultan's palace, the Ottoman court and even the Ottoman state, calling them all by the name of Porte. The expression was current in Iṣfahān in the form *ʿālī ḳapū*.

(R. Mantran)

ḲAPĪ AGHASĪ [see ḲAPU AGHASI].

ḲAPĪ ḲULU [see ORDU].

ḲAPĪDJI, "porter", "guardian" (cf. A. *bawwāb*, Pers. *derbān*), a term which, in the Ottoman empire, designated the guards placed at the main gates of the sultan's palace in Istanbul: the *Bāb-ī hümāyūn*, *Orta ḳapī* and *Bāb üs-seʿādet*. The guards on the first two gates belonged to the same category, while those of the *Bāb üs-seʿādet*, which gave access to the sultan's private residence and to the harem, constituted a distinct category, the *ḳule ṣofularī*, subordinate to the *kīzlar aghasī*. The *ḳapīdjī* are first mentioned in the *ḳānūnnāme* of Meḥemmed I the Conquerer. They were recruited from the janissaries or were promoted from various barracks of the *saray*. The guards on the *Orta ḳapī* were considered to belong to a superior echelon to those on the *Bāb-ī hümayūn*, a distinction which became evident in the second half of the 10th/16th century. The number of *ḳapīdjī* grew from 50 before 1500 to more than 350 in the 16th century and around 2,400 in the 17th century, then gradually declined. The guards on the *Bāb-ī hümāyūn* were divided into 5 *bölüks* (companies), those on the *Orta ḳapī* into 45 *bölüks* in the 17th century and then only 15 *bölüks* in the 18th century, while those on the *Bab üs-seʿādet* were formed into 7 *bölüks*. Apart from their service at the palace gates, the *ḳapīdjī* had to accompany the notables who participated in the *dīwān* to the council chamber on the days when they met. They also stood guard at the entrance to the imperial tent whenever the sultan embarked on expeditions.

In the time of Meḥemmed the Conquerer, there was only one *ḳapīdjī bāshī*, or leader of the guards. As time passed, they numbered 4, then 10, 13, 17, 12 and finally 60 in the 12th/18th century. The *ḳapīdjī bāshī* wore fur robes and carried as insignia a silver baton. Each night, one of them took his place at the *Orta ḳapī*; on days when the *dīwān* met, two of them stood at the door of the council chamber; they accompanied the sultan whenever he went to the Great Mosque for the Friday prayers or the principal religious holidays; when the sultan received an ambassador, two *ḳapīdjī bāshī* obliged him to bow low and prostrate himself upon the ground. They were also employed to carry important firmans and secret orders to provincial governors and viziers.

The *ḳapīdjī bashī* were entitled to a *timār* of 19,000 aspers at the end of the 16th century. The most important of them who bore the title of *bāsh ḳapīdjī bāshī*, received a *dirlik* of 400,000 aspers and were included among the *ṣandjāḳ beys*. They were responsible for all matters concerning the guards: nomination, retirement, transfer and promotion. Originally two in number, the *bāsh ḳapīdjī bāshī* were increased to 4, then to 6 in the reign of Meḥemmed III.

After the destruction of the janissaries in 1826, only 30 *ḳapīdjī bāshī* were retained, increasing to 40 in 1839 and subordinate to the imperial stable. Both title and function disappeared in 1908.

ḲAPLAN GIRĀY I, Crimean Tatar Khān, the third son of Ḥādjdjī Selīm Giray [*q.v.*], born on Rhodes in Shaʿbān 1091/July 1680. In 1108/1697 he became temporary commander of the military forces in Budjāḳ [*q.v.*] and made a successful raid into Poland. During the negotiations at Carlowicz, he remained in defense of Ferah-Kerman, but Örek-Timur, the *beg* of the rebel Shirins, forced him to take refuge in Kiliya (Rabīʿ al-Ākhir 1111/October 1699). He was afterwards appointed military commander of Circassia, where he fought the Kalmuks (1112/1700) and the Besleney Circassians (Dhu ʾl-ḥidjdja 1112/May 1701). However, Dawlat Giray did not want to

promote him to the rank of *nuradin* (*nūr al-dīn*) [*q.v.*], so he fled to the Ottoman Pas̲h̲a in Kefe (Feodosiya). Dawlat Giray's influence at the Porte was instrumental in the decision to exile him to Rhodes, but on his father's request he was sent to Yanbolu. When his father became K̲h̲ān on 26 S̲h̲aʿbān 1113/26 January 1702, he appointed him *nuradin*. Ḳaplan Giray marched against the former K̲h̲ān, who had rebelled with the support of the Nog̲h̲ay tribes. The civil war came to an end when the Nogay *mīrzā*s deserted Dawlat Giray. On the death of Selîm Giray, his second son G̲h̲āzī Giray became K̲h̲ān and, on 3 Ramaḍān 1116/30 December 1704, he made Ḳaplan Giray *ḳalg̲h̲ay* [*q.v.*]. In contrast to Dawlat Giray and the new K̲h̲ān, G̲h̲āzī Giray, who followed the *mīrzā*s of the Crimea in pursuing a hostile policy towards Russia, Ḳaplan Giray was prepared to support the Ottoman government's policy of peaceful relations. It was for this reason that in Muḥarram 1119/April 1707 he was appointed K̲h̲ān. Leaving the Russians free to act against Sweden, Ḳaplan Giray led a campaign against the Circassians, but was lucky to escape with his life when he fell into an ambush which they had set. The Sultan deposed him at once (S̲h̲aʿbān 1120/ November 1708), and his rival Dawlat Giray became K̲h̲ān in his place. Eventually, the problem of the Swedish king Charles XII led to the deposition of Dawlat Giray and Ḳaplan Giray was brought back from Rhodes and again made K̲h̲ān on 18 Rabīʿ al-Awwal 1125/15 April 1713. To secure a definitive peace treaty with Russia, he went to K̲h̲otin with the Ottoman commander-in-chief ʿAbdī Pas̲h̲a and supported the Polish defensive campaign in the summer of 1125/1713. He sent a force under the *nuradin* to the Ottomans' Morea expedition, but the rebellions of the Circassians and the Nog̲h̲ays prevented his taking part in the Austrian campaign of 1128/1716, and he was again deposed from the k̲h̲ānate in D̲h̲ū'l-Ḳaʿda/November of the same year. The rebels who overthrew Aḥmad III [*q.v.*] in 1143/1730 secured his re-accession, but since he afterwards became a major force in ousting the rebels, he kept his influential position under Maḥmūd I [*q.v.*]. In 1145/1732 there were clashes with the Russians in Dag̲h̲istān. Crimean forces with the support of the Čečens [*q.v.*] repulsed a Russian attack. In 1148/1735, on the insistence of the Porte, the K̲h̲ān personally campaigned in Dag̲h̲istān, but at this moment, Russian and Cossack forces advanced to Or-ḳapî (Perekop), threatening the Crimea with invasion. Ḳaplan Giray attacked this force, but he was compelled to retreat in the face of enemy artillery and resort to guerilla tactics. He could not prevent the enemy's invasion of the Crimea in Ṣafar 1149/June 1736, and it was only when they were withdrawing that he pursued them to Or-ḳapî. At this moment, a command came from Istanbul appointing Fetḥ Giray K̲h̲ān in place of the old and ailing Ḳaplan Giray (Rabīʿ al-Āk̲h̲ir 1149/August 1736), who was exiled to Chios where he died in S̲h̲aʿbān 1151/November 1738.

(Halil İnalcik)

ḲAPLAN GIRĀY II, Crimean Tatār K̲h̲ān (S̲h̲awwāl 1183-S̲h̲aʿbān 1184/February-November 1770). He was appointed *nuradin* (*nūr al-dīn*) in 1182-1183/1768-1769 and K̲h̲ān in S̲h̲awwāl 1183/February 1770. He sent his *ḳalg̲h̲ay* and *nuradin* to the Crimea to defend it against the Russians, while the Ottoman commander K̲h̲alīl Pas̲h̲a appointed him to the campaign intended to expel the Russians from Bog̲h̲dān (Moldavia). He was unsuccessful against the Russian artillery on the Prut, and retired to Kalči, whilst Rumyantsev crossed the Prut and routed the Ottoman-Crimean forces. The indiscipline of the soldiers prevented the commander and the K̲h̲ān from carrying out their plans for a counter-attack; the fortresses of Kiliya, Bender (Bendery) and Ismail fell to the Russians, whom the Nog̲h̲ays then joined in Budjāḳ. After facing a siege in the fortress of Özi (Ochakov), Ḳaplan Giray was eventually able to reach the Crimea. Here, in the summer of 1184/1770, the *ḳalg̲h̲ay* Islām Giray and the Ottoman commander Ibrāhīm Pas̲h̲a drove the enemy from before the fortress of Or-ḳapî (Perekop). However, the Mīrzās of the Crimea, like the Nog̲h̲ays, were hoping, by remaining neutral, to escape invasion and were in contact with the Russians. Ottoman sources claim that Ḳaplan Giray supported this policy (*TV*, xiv, 138), but this does not seem to be true (V. Smirnov, ii, 127). He, in fact, requested military aid for the Crimea from Istanbul and tried to divert the Kalmuks from their alliance with the Russians. The Ottoman commander in the Crimea, Ibrāhīm Pas̲h̲a, agreed with him in these policies, but in S̲h̲aʿbān 1184/November 1770 a decree for the K̲h̲ān's deposition came from Istanbul, and in Rabīʿal-Āk̲h̲ir 1185/ July 1771 Ḳaplan Giray died of plague at the age of 32.

(Halil İnalcik)

ḲAPLÎDJA, *kaplud̲j̲a* or *ḳablud̲j̲a*, the general term used in Turkey for a place where a hot spring is roofed over, as in a bath house. Other terms used in Turkish are *ḳaynard̲j̲a*, *aḳard̲j̲a*, *ılîsu*, *ḳudret ḥamāmî*, *čermik*, *ılîd̲j̲a* and *germābe* (see *XIII. Yüzyıldan beri Türkiye türkçesiyle yazılmış kitaplardan toplanan tanklariyle Tarama Sözlüğü*, Ankara 1967, iii, 1942-3). Ewliyā Čelebi [*q.v.*], ii, 21, describes varieties of hot springs in different parts of the Ottoman Empire and in other Asian countries. In Anatolia and in Türkistan, he writes, the term *ılîd̲j̲a* was used to denote a hot spring, as was *bana* (from *bagno*) in Balkan countries, *germābe* in Persia, *ılîssî* (*ılîsu*) in the Crimea, *ḥammām* in the Arab lands and *ḳaplîd̲j̲a* in Bursa. Today thermal baths in Turkey have been classified and numbered: there are 26 *ḳaplîd̲j̲a*, 79 *čermik*, 67 *ḥammām*, 158 *ılîca*, 3 *germāb* (see Rıza Reman, *Şifalı suları kullanma ilmi*: *Balneologi, Türkiye'nin şifalı kaynakları*, Istanbul 1942). J. von Hammer (*Umblick auf einer Reise von Constantinople nach Brussa und Demolypos und von da zurück über Nicaea und Nicomedien*, Pest 1818, 10 n.) claimed that *ḳaplîdja* was derived from Greek *kapnos*, meaning "smoke". Hot springs, however, were in

Turkish classified in two types: *üstü ačïk ïlïdja* (open hot springs) and *kapalï ïlïdja*. It is possible that colloquial usage telescoped *ḳapalï ïlïdja* (covered hot springs) into *kaplïdja*.

Hot and mineral springs are found not only in Anatolia but also in Czechoslovakia and European countries formerly under Ottoman rule such as Hungary, Bulgaria and Yugoslavia. The medicinal properties of some of these *ḳaplïdja* and mineral springs have been recognized from very early times; for this reason, miracles were attributed to them and it was believed that each hot spring was protected by its own deity. There were sacred cleaning and washing places in all Indian temples; the early peoples of Anatolia, the Greeks and the Romans made use of hot springs in different ways, even building special baths whose remains still exist today (K. Bertels and L. Huber (eds.), *Lexikon der alten Welt*, Zürich 1965, 3059-63). While this institution was neglected and the buildings fell into disrepair, in some countries the Turks who settled in Anatolia took advantage of the experience of earlier civilizations, repairing old baths and even building new ones. In time they evolved a special *ḳaplïdja* architecture, a building divided into three parts: dressing room, cooling room and the bath proper.

Some *ḳaplïdjas* in Turkey were built by the Anatolian Saldjūḳs and are still in use today, for example Karakurt (Kırşehir) built in 529/1135, Yoncalı (Kütahya) built in 630/1233, Ilgın (Konya) built in 633/1236, and Eskişehir. Other *ḳaplïdjas* in north-eastern Turkey were built by the Aḳ-Ḳoyunlu rulers late in the 8th/14th century, such as those in Erzurum (Ewliyā Čelebi, ii, 203; İ. Hakkı Konyalı, *Erzurum Tarihi*, Istanbul 1960, 452-5) and Hasankale (in 1390: Ewliyā Čelebi, ii, 223; İ. Hakkı Konyalı, *ibid.*, 464-70). The presence of a *ḳaplïdja* (*germābe* in the Persian text) in Ilgın (Konya) led to the foundation of a town there (Ibn Bībī, *Taʾrīkh-i Āl-i Saldjūḳ*, *Recueil de Textes Relatifs à l'Histoire des Seldjoucides*, iv, ed. M. Th. Houtsma, Leiden 1902, 150). A beautiful building was erected; among the people who came for treatment was Djalāl al-Dīn Rūmī, the famous mystic. There were around 300 thermal baths in Anatolia, attracting the sick and paralysed in search of a cure (Fr. Taeschner, *Al-ʿUmarī's Bericht über Anatolien in seinem Werke Masālik al-abṣār fī Mamālik al-amṣār*, Leipzig 1929, 43). Besides the *ḳaplïdjas* in Anatolia, hot springs were known and used in other Muslim countries; for example in Kirman, Persia (*The Book of Ser Marco Polo*, ed. H. Cordier, London 1929[3], i, 110), and in Tiberias, Palestine, where the old Roman baths were restored by Muslims (Le Strange, *Palestine under the Moslems*, London 1890, repr. Beirut 1954, 335, 336). When Ibn Baṭṭūṭa visited Baghdād, there was a famous hot spring there much favoured by the people.

Ḳaplïdja architecture developed greatly in the Ottoman period; the building was now divided into four parts: dressing room, rest room (*djāmekān*), cooling room and the bath proper with private cubicles. These buildings were erected beside hot springs. Generally, the Turkish type of *ḳaplïdja* contains large pools and hot water pours from a hole into the pool draining out by another hole. The *ḳaplïdja* architecture of the Ottomans developed in Bursa where the first Turkish *ḳaplïdja*, called Eski Ḳaplïdja, was built by Murad I. Since it was established on the site of an old Byzantine *ḳaplïdja*, it was believed (see A. Gabriel, *Une Capitale Turque Broussa* (Bursa), Paris 1958, 165-70) that Eski Ḳaplïdja showed typical Byzantine architectural influence. Pointing to the originality of its plan and technical construction, some Turkish art historians (Ekrem Hakkı Ayverdi, *Osmanlı mimarisinin ilk devri*, 630-850 (1230-1402), Istanbul 1966, 280, 281, 282, 283) reject this idea, asserting that the architecture of Eski Ḳaplidja is typically Turkish. Some *ḳaplïdjas* built in the Ottoman period are still in use in Turkey and in countries previously under Ottoman rule. The most famous are in Hungary: Budin (Budapest), Yeshil-direkli (Rudas) built in 1556, Ḥammām of Velī Bey (Csarzar) and Tabakkhāne (Ewliyā Čelebi, *loc. cit.*, vi, 242, 243, 249; V. Bierhauer, *Les Bains Turcs en Hongrie*, Budapest 1943). Some Ottoman *ḳaplïdjas* can be seen in Bulgaria: near Sofia (J. von Hammer, *Rumeli und Bosna*, Vienna 1812, 51, 88), İslimye, Yeni Zağra, and in Bosnia-Hercegovina (H. Krsevlaković. *Banya u Bosni i Hercegovini*, 1462-1916, Sarajevo 1952).

An important function of the *ḳaplïdja* in Ottoman society was its use as a meeting place by poets and literary men (see Nedjātī Beg, *Dīwān*, ed. Ali Nihat Tarlan, Istanbul 1963, 434, 435 "the ghazal ḳapludja" Mehmed Čavuşoğlu, *Zâtî'nin Letâyifi*, in *Edebiyat Fakültesi Türk Dili ve Edebiyatı Dergisi*, xviii (Istanbul 1970), 7).

(C. Orhonlu)

ḲAPU AGHASİ, ḳapï aghasï (or *Bāb al-Saʿāde Aghasï*), the senior officer in the Ottoman Sultan's Palace, until the *dār al-saʿāde aghasï* [*q.v.*] began to gain ascendancy in the late 10th/16th century. Like the other Palace *aghas* in continuous service, the Sultan himself selected him from the eunuchs. He had the authority to petition the Sultan for the appointment, promotion and transfer of Palace servants, *aghas* and *ič oghlans* [*qq.v.*].

As the sole mediator between the Sultan and the world outside the Palace, he sat at the gate known as the Inner Gate or Bāb al-Saʿāde ("Gate of Felicity") which divided the Inner (*enderūn*) from the Outer (*bīrūn*) Palace. His office lay to the right of this gate. It was through him that the Sultan transmitted his permission to anyone to enter the Inner Palace and his commands to the government (*Ḳānūnnāme* of *Meḥmed the Conqueror*, *TOEM*, suppl. 1330/1912, 23). The *ḳapu aghasï* had the rank of vizier and in ceremonies took his place below the Grand Vizier and the *shaykh al-islām* [*q.v.*]. Nevertheless, his daily pay of 100 *akčes* [*q.v.*] was well below the *agha* of the Janissaries' 500 *akčes* (for other salaries see İ. H. Uzunçarşılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 355).

In pre-Ottoman usage the post was known, in the

earliest Islamic states, as *ḥādjib*, *ḥādjib al-ḥudjdjāb* or *amīr ḥādjib*. In later times it acquired the titles *ṣāḥib al-sitāra*, *amīr-i pardadārān*, *zimāmdār* and *ishikākāsībāshī* (see M. F. Köprülü, *THİM*, i, 208-211; ḤADJIB in *EI*²; D. Ayalon, in *St. Isl.* xxxviii, 107-56). In the Turkish states of Central Asia it was known as *aghadjî* or sometimes *ulugh ḥādjib* (for its importance in Turkish states see *Kutadgu Bilig*, ed. R. R. Arat, Ankara 1959, 181-7). In the Ottoman Empire this official never, as in the ʿAbbāsid and Mamlūk states, annexed the roles of commander of the Sultan's private troops and of supreme judge to hear non-*sharʿī* cases in the Sultan's name. Nor as in the Saldjūḳ administration, did he ever overstep his position as chief palace official or chamberlain. To ensure that the Ottoman Sultan's authority should remain inviolate, the commandership of his personal troops was delegated to the *agha* of the Janissaries and the duty of hearing complaints to the Grand Vizier. Great pains were taken to keep these functions separate.

Nevertheless, the *ḳapu aghasî* must have exercised considerable influence in the state. He played a vital part in the accession of Sultans, and was the ruler's close adviser. Besides, he must have had some influence and authority as the one-time officer of the commanders and governors graduating from the Inner Palace. The *ḳapu aghasî*'s power and influence in the 9th/15th and 10th/16th centuries was compared to the Grand Vizier's (*Kitāb-i mustaṭāb*, ed. Y. Yücel, Ankara 1974, 44). His influence increased yet further when ,in the reign of Süleymān I, the superintendence of the *waḳf*s of Mecca and Medina and later of about 70 large mosques passed to an office under his control. However, their influence decreased at the end of the 10th/16th century when, at the instigation of the *wālide sultāns*, this superintendance passed to the *dār al-saʿāde aghasî*. In 995/1587, this official became independent of the *ḳapu aghasî*, eventually rising to the position of senior Palace officer. In 1116/1704, with the transfer of his powers to the *silaḥdār* [*q.v.*], the *ḳapu aghasî* declined into insignificance.

In the 9th/15th and 10th/16th centuries, the *ḳapu aghasî* could transfer to service outside the Palace and receive the highest governorships of the Empire such as the *beglerbegi*-ships of Rumelia or Egypt. Khādim ʿAlī, Khādim Sinān, Khādim Sulaymān and Khādim Aḥmad [*qq.v.*] who are reckoned among the great statesmen of the early period of Ottoman history, are famous examples. Two more, Fīrūz Ḥusayn and Merdjān, are well known as founders of city quarters and charitable institutions during the reign of Bāyazīd II [*q.v.*] (for details of their *waḳf*s see E. H. Ayverdi and Ö. L. Barkan, *İstanbul vakıfları tahrir defteri*, Istanbul 1970). From the second half of the 10th/16th century, the *ḳapu aghasî* began to intervene more and more in state affairs, and became a bitter rival of the Grand Vizier in the power struggle (Meḥmed, *Taʾrīkh-i ghilmānī*, *TOEM*, suppl., 29, 39). Gazanfer Agha, who was *ḳapu aghasî* for 30 years in the late 10th/16th century is particularly noteworthy.

(HALIL İNALCIK)

ḲAPUČA, a small Muslim people of the Caucasus, (self designation: Ḳapučias suko or Bezhtlas suko; Russian: Ḳapučinî or Bezhitinî), whose language forms with Dido [*q.v.*], Ginukh [*q.v.*], Khunzal [*q.v.*], and Khvarshi [*q.v.*], the Dido division of the Avar-Andi-Dido group of the northeastern Ibero-Caucasian languages. In 1926 the Soviet census gave the population as 1,448. The Ḳapuča inhabit the *awl*s of Bezhiti, Khočarkhota, and Tliadal in the upper basin of the Avar Ḳoysu, Tliarata district, in the Dāghistān A.S.S.R. Living in isolated mountain valleys, they have escaped strong outside influence and have maintained many of the patriarchal customs. They are Sunnīs of the Shāfiʿī rite. The traditional economy was based on sheep and goat herding and agriculture. The Ḳapuča also had some repute as craftsmen, especially as goldsmiths. The language is purely vernacular, and the people use Avar and Russian as their literary languages. They are being assimilated culturally and linguistically by the Avars, and appear as Avar-speaking Avars in the 1959 and 1970 Soviet censuses. See also AVAR, DĀGHISTĀN, AL-ḲABḲ.

(R. WIXMAN)

ḲAPUDAN PASHA (ḲAPTAN PASHA, ḲAPUDAN-I DERYĀ), title of the commander-in-chief of the Ottoman navy. Although the word evidently derives from the Italian term *capitano* (for its various uses see H. and R. Kahane and A. Tietze, *The Lingua Franca in the Levant*, Urbana 1958, 139 ff.), it does not follow that the Ottoman navy [see BAḤRIYYA, iii] was modelled upon any foreign naval organization (see M. F. Köprülüzade, *Bizans müesseselerinin Osmanlı muesseselerine teʾsiri hakkında bâzı mülâhazalar*, in *THITM*, i (1931), 205-7; İ. H. Uzunçarşilî, *Osmanlı devletinin merkez ve bahriye teşkılâtı*, Ankara 1948, 389 ff.).

To judge from the entries in the *Mühimme Defteri*, the term *Ḳapudan Pasha* became current only towards 975/1567 (when ʿAlī Pasha, the *beglerbegi* of Algiers, is referred to as *Djezāʾir beglerbegisi ve ḳapudan pasha*: see, *e.g.*, *Mühimme*, vol. 7, nos. 502, 507, 587, 782). Strictly speaking, therefore, it is erroneous to refer to earlier naval commanders as *Ḳapudan Pasha*: ʿAlī Pasha's predecessor, Piyāle Pasha (who was granted the rank of *vezīr*, and thus had a seat in the *Dīwān*, see *İA*, s.v. Piyâle Paşa, by Ş. Turan), first bore the title *Ḳapudan Beg* (Başbakanlık Arşivi, Kâmil Kepeci, *Ruûs* register no. 214, p. 17); he is later referred to as *Djezāʾir beglerbegisi* and as *vezīr ve Ḳapudan* (see, e.g., *Mühimme*, vol. 1, no. 276; vol. 6, no. 112; vol. 7 nos. 158, 160).

In earlier days, the commander of the fleet stationed at Gelibolu [*q.v.*] had had the title *Deryā Begi* [see DARYĀ BEGI], being at the same time *sandjaḳbegi* of the *liwāʾ* of Gelibolu. The Gelibolu register of 924/1518 uses the term *reʾīs ḳapudan* to designate the commander of the fleet (F. Kurtoğlu, *Gelibolu yöresi ve tarihi*, Istanbul 1938, 51). Gelibolu remained the principal naval base until the time of Sultan Selīm I,

who ordered that a new fleet be constructed in the "new arsenal" at Istanbul (*Tersāne-i ʿĀmire*) in 923/1517 under the supervision of Dja'far Ḳapudan (cf. Ş. Tekindağ, *Haliç Tersanesinde inşa edilen ilk Osmanlı donanması ve Cafer Kapudan'ın arizası*, in *Belgelerle Türk Tarihi Dergisi*, no. 7 (Nisan 1969), 66-70).

When Barbarossa (Khayr al-Dīn [*q.v.*]) entered the service of the Sultan in 941/1534, he was given the *beglerbeglik* of the *eyālet* of Djezā'ir (Algiers). This *eyālet* later became the seat of the *ḳapudan pashas* (A. S. İlter, *Şimalı Afrika'da Türkler*, İstanbul 1936, i, 94 ff.). The *sandjaḳs* of Kodja-eli, Sughla and Bigha from the *beglerbeglik* of Anadolu, and those of Eghriboz, Aynabakhtı, Karlî-eli, Mizistre and Midilli from the *beglerbeglik* of Rumeli were also added to the new *eyālet* [see DJAZĀ'IR-I BAḤR-I SAFĪD]. Gelibolu remained the *sandjaḳ* of the pasha. Later on, two *sandjaḳs* of Cyprus and (in the time of Güzeldje ʿAlī Pasha, who was *Kapudan-î Deryā* twice, in 1026/1617 and 1027/1618) the *sandjaḳs* of Sakîz, Naksha and Mehdiye were also attached to it. In the first half of the 11th/17th century, the *eyālet* of the *ḳapudan pasha* consisted of twelve *sandjaḳs* (cf. Ş. Turan, *XVII. yüzyılda Osmanlı İmparatorluğunun idarî taksimatı*, in *Atatürk Üniversitesi 1961 Yıllığı*, 204).

The *ḳapudan pasha*'s residence was the *Dīwānkhāne* of the Arsenal in Istanbul. His main duties were to oversee the Arsenal, to supervise all matters relating to the Ottoman fleet, to govern the *eyālet* of the *ḳapudan pasha* and to make all the necessary appointments in it. This entailed his visiting and inspecting each *sandjaḳ* annually. He also had to protect merchant ships against the activities of pirates in the Mediterranean and in the Black Sea (cf. *Tevḳīʿi ʿAbdurraḥmān Pasha Ḳānūnnāmesi*, in *MTM*, iii (1331/1912), 536-8). If necessary, he co-operated with the land forces (see, *e.g.*, *Mühimme*, vol. 104, no. 193; vol. 105, nos. 48-49).

The office of *Ḳapudan Pasha* carried great prestige. In the 11th/17th century it had an annual revenue of 885,000 *akčes* (Ewliyā Čelebi, *Seyāḥat-nāme*, v, 315; P. Rycaut, *The Present State of the Ottoman Empire*, London 1668, 54). It also received an income of 70,000 *ḳurush* when 33 islands of the *eyālet* were granted to the voyvoda for *iltizām* (Ewliyā, v, 316; D'Ohsson, *Tableau Général de l'Empire Ottoman*, vii, Paris 1791, 442); this sum was increased to 300,000 *ḳurush* in the late 12th-13th/18th-19th century. The success of the Ottoman naval forces always depended on the ability and the seamanship of its *ḳapudans*, particularly the *Ḳapudan Pashas*. In the 10th/16th century Ottoman supremacy in the Mediterranean seems to have been largely due to able *ḳapudans*. In the following centuries the empire lost its naval supremacy, Though in principle only an admiral (*Kapudan-î Hümāyūn*) or a chief of the Arsenal (*Tersāne Ketkhüdāsî*) or, at the lowest, a *sandjaḳ-beyi* of Rhodes was eligible to become *Ḳapudan Pasha*, appointments were now made regardless of the holder's ability. In 1014/1605 Derwīsh Pasha, who was Chief Gardener (*Bostandjî bashî*), was appointed *Ḳapudan-î Deryā*, together with the rank of vizier (cf. C. Orhunlu, *Osmanlı tarihine aid belgeler*: *Telhisler*, Istanbul 1970, 118); in 1184/1770 a certain officer in the Janissary corps (*sekbān bashî*) was appointed *Ḳapudan Pasha*, although Ḥasan Ḳapudan was considered a better candidate in view of his earlier echievements (cf. Topkapı Sarayı Arşivi, Istanbul, nos. E. 4846 and 10321).

With the naval reorganization of 1804, in the time of Selīm III, the post of the chief of the Arsenal was abolished and the office of Superintendent of Naval Affairs (*Umūr-i Baḥriyye Neẓāreti*) established (Ṣafvet, *Umūr-i Baḥriyye Neẓāreti*, in *TOEM*, no. 21 (1329/1911), 1350-1). In 1863 the title *Ḳapudan Pasha* was altered to *Umūr-i Baḥriyye Nāẓîrî*. Four years later the senior admiral (*bash amiral*) became the commander of the Ottoman navy, and naval affairs were supervised by the *Baḥriyye Nāẓîrî* or Naval Minister.

Bibliography: The most authentic sources on the office of *Ḳapudan Pasha* are in the Başbakanlık Arşivi in Istanbul. Documents relating to the navy will be found within three classifications: Cevdet, Kâmil Kepeci and İbnü'l-Emin, covering the period from the 10th/16th to the 19th centuries. The *Mühimme* registers in the same archive, dating from 961/1554 to 1300/1882, are also of significance. For the documents in the Topkapı Palace Archive relating to the *Ḳapudan Pasha*, see *Arşiv Kılavuzu*, i-ii, Istanbul 1939 and 1940. Other sources: E. Alberi, *Relazioni degli ambasciatori Veneti al Senado* Series iii, Florence 1840-55, i, 20, 67, 136, 423, ii, 335, iii, 263; Pečewī, *Ta'rīkh*, Istanbul 1281-83/1864-66, i, 486, ii, 25, 91, 285, 292, 333, 344, 354, 460; Kātib Čelebi, *Tuḥfat al-Kibār*, Istanbul 1329/1911, *passim*; Silāḥdār, *Ta'rīkh*, Istanbul 1328/1910, ii, 253; Marsigli, *L'État Militaire de l'Empire Ottoman*, Amsterdam 1732, i, 146; Aḥmed Djewdet, *Ta'rīkh*, 12 vols., Istanbul 1309/1891, *passim*; Meḥmed Ḥafīd, *Safīnat al-Wuzerā'*, Istanbul 1952 (ed. OZBARAN)

ḲARĀ, the Turkish word for "black" or "dark colour" in general. It is commonly used with this meaning as the first component of geographical names *e.g.*, Ḳarā Āmid (on account of the black basalt of which this fortress is built), Ḳarā Dagh (on account of its dark forests), etc. Besides Ḳarā we find in place names the diminutive form Ḳaradja. In personal names, *ḳarā* may refer to the black or dark brown colour of hair or to a dark complexion. It has, however, at the same time the meaning "strong, powerful", and should be interpreted in this sense in names like Ḳarā ʿOthmān or Ḳarā Arslan. It is also in this sense that we have the name Ḳarā Khān which the Ḳarākhānids or Ilek-Khāns [*q.v.*] assumed in Central Asia.

Bibliography: von Hammer-Purgstall, *GOR*, i, 80; Kāshgharī, *Dīwān lughāt al-turk*, iii, 167, tr. Atalay, iii, 221-2; O. Pritsak, *«Qara», Studie zur türkischen Rechtssymbolik*, in *Zeki Velidi Togan'a armağan*, Istanbul 1950-5, 239-63; Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 643-4; *İA*, s.v. (J. H. KRAMERS*)

In order to preserve a logical alphabetical sequence and to place one after the other those words which comprise the element *ḳarā*, these last have been placed together in a somewhat arbitrary fashion, so that *e.g. ḳarāba* comes after all the words beginning with *ḳarā*. Moreover, the transliteration of this term has been unified, and is always written as *ḳarā*, the second vowel *-ā* being written with an *alif* in Arabic orthography; however, the modern Turkish orthography with a short *a* is indicated where relevant.

ḲARĀ ĀMID [see DIYĀR BAKR].

ḲARĀ ARSLĀN [see ARTUḲIDS; KĀWŪRD B. DĀWŪD].

ḲARĀ BĀGH̲ (Turkish-Persian "black garden", allegedly because of the fertility of its upland valleys, but this is probably a folk etymology), the recent name of the mountainous region lying to the north of the middle course of the Araxes River in Transcaucasia, corresponding to the southern part of the mediaeval Islamic Arrān [*q.v.*]. The mountains of Ḳarābāg̲h̲ rise to over 12,000 feet, and the modern population (mostly Armenian, with some S̲h̲īʿī Azeri Turks) is concentrated in the deep valleys. The original Armenian princes of Artzak̲h̲ were dispossessed after the Sald̲j̲ūḳ drive into Transcaucasia under Sultan Alp Arslan, and a gradual process of Turkish settlement began. In the Mongol period we meet the designation Ḳarābāg̲h̲-i Arrān for the region. It subsequently fell within the domains of the Persian Il-K̲h̲ānids, of Timūr and of the Aḳ-Ḳoyunlu. In the second half of the 9th/15th century Ḳarābāg̲h̲ was involved in the rise of the Ṣafawid movement, and by 893/1488 S̲h̲ayk̲h̲ Ḥaydar b. D̲j̲unayd [*q.v.*] had taken over much of the region. During the Ottoman-Ṣafawid warfare, Ḳarābāg̲h̲ and Gand̲j̲a fell into the hands of Sultan Murād III (996/1588), until Shah ʿAbbās I regained them. Ḳarābāg̲h̲ was at this period in the hereditary possession of the Turkish D̲j̲ewāns̲h̲īr family, who traced their origin back to the Og̲h̲uz Afs̲h̲ārid tribe; in 1165/1752 Panāh ʿAlī K̲h̲ān built the fortress of S̲h̲ūs̲h̲a and named it Panāhābād. His son Ibrāhīm K̲h̲alīl K̲h̲ān defied the Ḳād̲j̲ār leader Āg̲h̲ā K̲h̲ān Muḥammad, who nevertheless eventually captured S̲h̲ūs̲h̲a in 1211/1797, where he was shortly afterwards assassinated.

Ḳarābāg̲h̲ now became a buffer-region between Ḳād̲j̲ār Persia and the expanding Russian empire. Ibrāhīm K̲h̲alīl submitted to the Russo-Georgian general Prince Zizis̲h̲wili in 1805. The last chief of the D̲j̲ewāns̲h̲īr line, Mahdī Ḳulī K̲h̲ān, abandoned his principality to the Russians in 1822, but already in the Gulistān [*q.v.*] Treaty of 1813 the Ḳād̲j̲ārs had been forced to renounce all claims to Georgia, Dāg̲h̲istān, Ḳarābāg̲h̲ and the northern part of Tālis̲h̲. For the remainder of the Czarist period, Ḳarābāg̲h̲ formed part of the "Muslim governorship" of Bākū till 1868, and thereafter part of the newly-established governorship of Elizavetpol or Gand̲j̲a. During the short-lived Muslim republic of Ād̲h̲arbāyd̲j̲ān (1918-20), Ḳarābāg̲h̲ enjoyed freedom from foreign control. Within the Soviet Union it now forms the Nagorno-Karabakh Autonomous Oblast within the Ād̲h̲arbāyd̲j̲ān SSR, with a population in 1970 of 150,000 and its administrative centre at Stepanakert.

Bibliography: There is little specific information in the mediaeval Islamic geographers, excepting Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, 181-2, tr. 173-4. A local history, the *Ḳarābāg̲h̲-nāma* of Mīrzā D̲j̲amāl, was utilized by the Ottoman historian Ferīdūn Beg. A full bibliography is given in Mirza Bala's *İA* art. *Karabağ*, to which should be added A. A. Alizade, *Sotsialno-ekonomičeskaya i političeskaya istoriya* Azerbaidzhana XIII-XIV vv., Baku 1956, K. M. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, and *BSE*[2], xx, 92.

(C. E. BOSWORTH)

ḲARĀ BOGH̲DAN [see BOG̲H̲DĀN].

ḲARĀ ČAY [see KARAČAY].

ḲARĀ-ČELEBI-ZĀDE, the name of a family of Ottoman ʿulamāʾ which became prominent during the 10th/16th and 11th/17th centuries.

(1) Meḥmed Muḥyi ʾl-Dīn b. Ḥüsām al-Dīn
(2) Hüseyn Ḥüsām al-Dīn
(3) Meḥmed — (4) ʿAbd al-ʿAzīz
(5) Maḥmūd — Ṣāliḥa — Rabīʿa
(6) ʿUt̲h̲mān — (7) Aḥmed Nedīm
The founder of the family, (1). Meḥmed Muḥyi ʾl-Dīn Efendi, was given the *laḳab* Ḳarā-Čelebi-zāde after his maternal grandfather, Ḳarā Yaʿḳūb. He held several positions as a *müderris*, was the teacher of Sulaymān I's son Muṣṭafā. and *ḳāḍī* in Edirne and Istanbul. His pseudonym as a poet was Hid̲j̲rī, and he is said to have left a *dīwān* of poetry. He died in 965/1557. (2). Ḳarā-Čelebi-zāde Hüseyn Ḥüsām al-Dīn Efendi was born in 940/1553 in Kütahya, was *ḳāḍī-ʿasker* [*q.v.*] of Anadolu and of Rumeli, and died in Bursa in 1007/1598. His son (3) Meḥmed Efendi (970-1042/1562-1632) held several posts as *ḳāḍī* and *müderris*, and became *ḳāḍī-ʿasker* of Anadolu in 1023/1614 and of Rumeli in 1029/1619. He wrote poetry under the pseudonym Zuhūrī and built a mosque in Bursa (Başvekâlet Arşivi, Kâmil Kepeci, Defter no. 257, p. 22). (4). Ḳarā-Čelebi-zāde ʿAbd al-ʿAzīz Efendi, who was born at the end of 1000/September 1592, was brought up in Istanbul by his elder brother, Meḥmed Efendi (3), and studied canonical law under the *s̲h̲ayk̲h̲ al-Islām* Ṣunʿ Allāh Efendi. He was *müderris* in *madrasas* in Istanbul, Edirne and Bursa and in one of the *madrasas* of the Süleymâniyye Mosque in Istanbul. Later he became a *ḳāḍī*, being appointed to posts in Yeñis̲h̲ehir, Mecca (1036/1626), Edirne (1040/1630) and finally, in 1043/1633, in Istanbul. He remained in this last post for only seven months before he was dismissed and sentenced to death; through the intervention of grand vizier Bayram Pas̲h̲a, however, he was reprieved and exiled to Cyprus (1044/1634). Eighteen months later he returned to Istanbul and first became *ḳāḍī-ʿasker* of Anadolu. On 15 Rad̲j̲ab 1054/17 September 1644 he was nominated *ḳāḍī-ʿasker* of Rumeli (Başvekâlet Arşivi, Kâmil Kepeci, Defter no. 258, p. 57), a function he actually assumed on 19 Rad̲j̲ab 1058/9 August 1648 (*Ṣadāret-i Rumeli defteri* no. 79, in the Şeriye Sicilleri Arşivi in Istanbul, is concerned with this period). In recognition of his role in Meḥmed IV's succession to the throne, he was given the title of *s̲h̲ayk̲h̲ al-Islām*, an award unprecedented in Ottoman history, in Ramaḍān 1058/October 1648; he in fact took up the post on 11 D̲j̲umādā I 1061/2 May 1651. While *s̲h̲ayk̲h̲ al-Islām* he restored a number of old practices relating to this function, revealed some subtlety in distributing *ḳāḍī* and *müderris* posts, and re-organized *waḳf* matters. On 15 Ramaḍān 1061/1 September 1651 he was dismissed and a week later exiled to the island of Saḳīz (Chios). He was transported to Bursa in D̲j̲umādā I 1062/April 1652 and died there in Rabīʿ I 1068/end October 1657.

ʿAbd al-ʿAzīz Efendi's periodic falls from grace were the result of his interference in the internal politics of the period. His extant poetry, written under the pseudonym ʿAzīzī, consists of a *dīwān*, a *mat̲h̲nawī* entitled *Güls̲h̲en-i niyāz* which contains details about his life as a *ḳāḍī* of Istanbul and as an exile on Cyprus, works on *fiḳh* (*Ḥall al-is̲h̲tibāh ʿan ʿaḳd al-is̲h̲bāh, Kitāb al-Ilg̲h̲āz fi ʾl-fiḳh al-Ḥanafiyya* and *Kāfī*) and on the life of the Prophet (*Mirʾāt al-ṣafāʾ*, consisting of *ḳiṣaṣ*, which he dedicated to Murād IV, and *Ḥilyat al-anbiyāʾ*) and translations, one in the field of ethics (Muḥsinī's *Ak̲h̲lāḳ*) and one

in *sīra* (Kāzarūnī's *Fawā'iḥ al-nabawiyya*). His fame, however, rests on his historical works. Of these, the *Sulaymān-nāme*, a history of Sulaymān I's era which he dedicated to Sultan Ibrāhīm, and the *Rawḍat al-abrār*, dedicated to Meḥemmed IV, have been printed (Būlāķ 1248). The latter work contains a description of the events from Adam to the time of Sultan Ibrāhīm; the printed edition relies on a defective manuscript (O. Köprülü and İ. Parmaksizoglu, *Şeyhülislâm Kara-Čelebizade Abdülaziz Efendi*, İstanbul Edebiyat Fakültesi, unpublished, doctoral thesis, 1944-5, no. 359, p. 18; this work is the most detailed study available of Ķarā-Čelebi-zāde and his family). According to M. H. Yınanç, *Türkiye tarihi, Selçuklular devri*, Istanbul 1944, 16, the *Rawḍat al-abrār* should consist in part of repetitions of ʿAlī and Djannābī. The *dhayl* of the *Rawḍat al-abrār* is more in the form of memoirs and narrates events down to 1068/1658. Another of his historical works is entitled *Ta'rīkh-i fetḥ-i Revān we-Baghdād* or *Ẓafer-nāme* and deals with Murād IV's campaigns to Eriwān in 1635 and to Baghdād in 1638. Many manuscripts of his works are extant in libraries in Istanbul and Europe (see *Istanbul kütüphaneleri tarih coğrafya yazmalar kataloğu, Topkapı Sarayı Türkçe yazmalar kataloğu,* and the catalogues of Flügel, Pertsch, Rieu and Tornberg).

ʿAbd al-ʿAzīz Efendi is known to have been short in stature, stout, with a high-pitched voice, and a ruthless and inflexible character. In Bursa he constructed works, the Muftu Şuyu, carrying water from the Ulu Dagh to the town, and had the water distributed to forty different public fountains (O. F. Köprülü, *Şeyhülislâm Kara- Çelebi-zade Abdülaziz Efendi ve Müftü Suyu*, in *Belleten*, xi (1947), 137-45).

(5). Maḥmūd Efendi (997-1063/1588-1653), the son of Meḥmed Efendi, was known by the *laķab* Abu 'l-Faḍl. He rose to the positions of *ķāḍī-ʿasker* of Anadolu and Rumeli. In Istanbul he owned a *madrasa* in the Shehzāde-bashī quarter (S. Eyice, *Kaziasker Ebu 'l-Fazl Mahmud Efendi medresesi*, in *Tarih dergisi*, x (1959), 147-62), and in Bursa a mosque in the Set-bashī quarter (Başvekâlet Arşivi, Divan-ı Humâyûn ruûs defterleri no. 28, p. 31) and a teachers' seminary (*muʿallim-khāne* (*ibid.*, Defter no. 25, p. 183).

(6). ʿUthmān Efendi (s. 1062/1651), son of the above, held several posts as *ķāḍī*. (7). Aḥmed Nedīm [see NEDĪM], the famous poet of the 18th century, is related to the family of the Ķarā-Čelebi-zāde through his mother.

Bibliography: *Dhayl al-Shaķā'iķ*, 419; Ismāʿīl Belīgh, *Güldeste-i riyāḍ-i ʿirfān*, 317-22; Rifʿat, *Dawḥat al-mashā'ikh*, 58-62; *ʿIlmiyye sālnāmesi*, Istanbul 1334, 461-2; *ʿOthmānli mü'ellifleri*, iii, 120-1; art. *ʿAbd al-ʿAzīz, Ķara-Čelebi-zāde*, in *EI*[1].

(NEJAT GÖYÜNÇ)

ĶARADAGH, the Turkish name for the land of Crna Gora (Montenegro), at present one of the six republics of the Socialist Federal Republic of Yugoslavia, located in the southwestern part of that country. It is the smallest republic in Yugoslavia, being 13,967 sq. km. in area with a population of 530,361 (census of 31 March 1971). The region is primarily mountainous, the inland area differing considerably from the coastal belt, both in natural features and in the way of life of the population. The capital is Titograd (formerly known as Podgorica). Until 1918 the capital of the principality (and from 1910 the kingdom) of Montenegro was the city of Cetinje.

The population of present day Montenegro is made up as follows (according to the Institute for Statistics of Titograd): 66.55% Montenegrins, 1.81% Croatians, 7.51% Serbians and 13.43% Muslims. This is the part of the population which speaks Serbo-Croat and which declared a national or religious affiliation (0.14% of the population did not declared any national or religious affiliation and 0.22% gave a regional affiliation). In addition to other less numerous minorities, 6.55% of the population is Albanian, of which some are Muslim and some Catholic.

The Muslim religious organization in the Socialist Republic of Montenegro is an autonomous region of the Islamic Union (*Islamska Zajednica*) of the Yugoslavia S.F.R. which has four such regions with seats in Sarajevo, Priština, Skopje and Titograd. The supreme organ of the Islamic religious organization in Montenegro is — as in the other autonomous regions — the Islamic Union Council (*Sabor Islamske zajednice*) with an executive body (*Starješinstvo*) at its head. The Montenegrin Islamic Union Council has 16 members, and sends three delegates to the Supreme Council of the Islamic Union in the Yugoslavia S.F.R. which has 35 members. In Montenegro there are 70 mosques and 9 Boards of the Islamic Union which carry out the basic functions of Muslim religious organization in Montenegro (data of 1969).

Montenegro is so called from the region known as the Black Mountain (*Crna Gora*). Originally, this area belonged to the medieval Serbian state. On the disintegration of the latter in the 15th century, a separate Montenegrin state was formed under the Crnojevič dynasty. From 886/1481 it was an Ottoman vassal state, and in 901/1496 came under Ottoman rule. Other parts of present-day Montenegro had already fallen under Ottoman domination, while most of the coastal belt was under Venetian rule.

Once it became part of the Ottoman empire, the country was officially named Ķaradagh. Within most of the country — as well as in certain outlying areas — there developed a tribal system which was the basis for development of a type of military democracy in the internal life of the country. From 919/1513 the *sandjaķ-beg* of Ķaradagh was Iskender Beg [*q.v.*], an islamicized descendant of the Crnojevič dynasty. At that time the country was granted certain privileges. The population was no longer required to pay the *djizya* [*q.v.*] nor to submit to the *ʿushūr* and other taxes, but had to contribute only a gold coin (*filuri*) per house and field. After the death of Iskender Beg the land of Ķaradagh was no longer a separate *sandjaķ* falling mainly within the *sandjaķ* of Iskenderiyye (Scutari), but even then the population had certain privileges. From the middle of the 10th/16th century the role of the Montenegrin bishop became stronger. In the 11th/17th century the autonomy of Ķaradagh was established under Ottoman rule headed by a native *sipahi* (Serb. *spahija*); however, the bishop played an increasingly important role, and in the second half of the 11th/17th century he became the only representative of the people vis-à-vis the Ottoman authorities. At the end of the 11th/17th century the people of Ķaradagh drew nearer to the Venetians, whose influence led to a swiftly suppressed revolt against Ottoman rule. In the 12th/18th century the people, led by bishops of the Petrovič family from the village of Njeguš, overthrew Ottoman rule and defended their independence in many battles. In the 19th century, first under the Petrovič bishops and then under lay rulers of the same family, the land developed into a state and gradually obtained international recognition. It was recognized as an independent principality at the Berlin Congress of 1878, and in 1910 was proclaimed a kingdom.

Owing to the tribal organization which predominated in the area and to the struggles against the Ottoman authorities, Montenegro acquired a warriorlike society and a strong notion of freedom. In the 12th/18th century a folk tradition developed according to which Montenegro had never been under Turkish rule. This tradition still survives in some measure and for a fairly long time prevailed in historiography too.

Montenegro participated in the Balkan War (1912-13) against the Ottoman Empire, and in World War I (1914-18) as an ally of Serbia on the side of the Entente. During World War I, it was occupied by the Central Powers, and in 1918 was unified with Serbia, becoming part of the Kingdom of the Serbs, Croats and Slovenes (later renamed Yugoslavia). During World War II Montenegro was under Italian occupation, and the people participated *en masse* in the struggle for liberation of the Yugoslavs.

Durdev, *Turska vlast u Crnoj Gori u XVI i XVII veku* ("The Turkish rule in Montenegro in the 16th and 17th centuries"), Sarajevo 1953; *Istorija Crne Gore* ("History of Montenegro") ii 2, Titograd 1970 (volume iii, covering the period of Turkish rule, is in preparation); *Ustav Islamske zajednice u Socijalističkoj Federativnoj Jugoslaviji* ("The Constitution of the Islamic Union in the S.F.R. of Yugoslavia"), in *Glasnik Vrhovnog islamskog starješinstva u SFRJ*, xxxiii, 1-2 (Sarajevo 1970), 105-12.

(B. ĐURDEV)

ĶARĀ DENIZ, name of the Black Sea in Turkish.

i. — The name. — The expression "Black Sea" is encountered from the 7th/13th century in the Arabic form of al-Baḥr al-Aswad (in Abū ᵓl-Fidāᵓ, tr., Reynaud, ii/1,38,316), in the Greek form in the treaty concluded in 1265 between Michael Paleologus and Venice (*Fontes Rerum Austracarum*, Section ii, xiv, 63, Vienna 1857), and among the western sources in Schiltberger at the end of the 14th century. But other expressions have for long been employed in parallel with it ("Russian Sea", "Sea of Sinop", etc.) The most frequent has been "the Great Sea", "Mare Maius", in Odoric of Pordenone, ed. G. Strasman, Berlin 1968, 38; the same, in William of Rubruck, ed. Michel and Wright, Paris 1839, *Recueil de voyages et mémoires*, iv, 214; "Mare Magnum, in Plano Carpini, ed. d'Avezac, *ibid.*, 743), a form which appears dominant mostly in the 13th and 14th centuries in the western sources and which persisted in various aspects ("mare maggiore", "mer majour", etc., until the 17th century, from which date the term "Black Sea" finally becomes general, and very soon in widespread use in the eastern sources.

The origin of the Turkish expression thus poses a problem. The ingenious explanation of L. de Saussure (*L'origine des noms de Mer Rouge, Mer Blanche et Mer Noire*, in *Le Globe*, xliii, 23 ff.), calling attention to the coloured quality attributed to the cardinal points by the Chinese (and transmitted by them to the Turks), cannot be upheld. J. H. Mordtmann (ĶARA DENIZ in EI[1]) found the solution in its equation with the "Great Sea" of Western sources, remarking of it that the epithet *ķarā* frequently has the meaning of "great, powerful, terrible" in Turkish, particularly in the proper names. This would be the initial meaning of *ķarā* in Ķarā Deniz, displayed in its medieaval western translation. The contamination of the two meanings in fact seems probable, but the explanation appears inadequate. In fact, the existence of the doublet Ķarā Deniz-Aķ Deniz ("the White Sea", the Mediterranean) does not plead in its favour. Above all the expression Black Sea seems to have been well attested before the arrival of the Turks. Constantine Porphyrogenetos (*De adm. imp.*, ed. Bonn, 132) in the 10th century, speaks of the Θάλασσα Σκοτεινή ("dark sea"). Doubtless one must accept the thesis of Aurel Decei (article Ķara Deniz in *İA*), who supposes the existence of an ancient Iranian name (from *aḫsaena* "dark, sombre"), Hellenized in Ἄξεινος by false etymology, then transformed because of superstition into Εὔξεινος; this would have survived with its original meaning in the East-Pontic regions where the Turks came into contact with this geographical concept (see also BAḤR BUNṬUS).

ii. — The Turkish conquest. — The development of the Turkish seizure of the Black Sea lands was spread over almost three centuries. Since the turmoil of the end of the 5th/11th century, Byzantium had succeeded in preserving all its fortresses on the coasts of the Black Sea, and the Saldjūķid Empire of Iconium (Ķonya) remained practically cut off from the sea. It was only at the very end of the 6th/12th century that the Turks gained a foothold there. When in 581/1185, Ķilïdj Arslān II, divided his states between his sons, one of them, Rukn al-Dīn, received, with Tokat as its centre, the territory extending as far as the coast of the Black Sea. According to Nicetas, he laid hold on Sāmsūn. It was also without doubt before the death of Ķilïdj Arslān in 588/1192 that the Turkish occupation of Sāmsūn took place, a process which developed alongside the Greek town of Amisos, which survived as a Greek, and then Genoese, city until the 14th century. In 611/1214, the capture of Sinūb (Sinop) by ʿIzz al-Dīn Kaykāᵓūs I assured the Turks of Iconium of a second important base in this central sector of the Black Sea coasts, towards which the natural routes of penetration from the great valleys of the Ķïzïl Irmak and the Yes̲h̲il Irmak had guided the Turkish advance. On the other hand, the Greeks held on in the eastern part of the littoral, in the shelter of the mountainous and forested barrier of the East-Pontic chains which protected the independance of the Empire of Trebizond, and equally in the western sector of the coast, where Heracliums (Ereğli) was doubtless only sold to the Turks in 761/1360 (Heyd, ii, 358), while Samastri (Amasra) remained a Genoese colony until the 9th/15th century.

Sinop (Sanūb) and Sāmsūn also played their part in the regional export traffic of the products of northern Anatolia, sc. wool, fur, leather and mining products. But whereas the Black Sea trade remained up until then directed essentially towards Constantinople at the beginning of the 7th/13th century a considerable southern trade appears between the Turkish ports of the south and the Greek towns of the north, such as Soldaïa (Sudak), an outlet for the steppes at that time held by the Ķïpčaķ Turks, who were still pagans. From 602/1205-6 some merchants of Iconium, Syria and Mesopotamia banded together in caravans to go from Sïvās to Trebizond and, from there, to the eastern and northern coasts of the Black Sea (Heyd, ii, 93). The appearance of Turkish footholds on the southern coast stabilized this traffic to Sinop and Sāmsūn. From the north came furs and slaves in exchange for cotton goods, silk and spices (observations of William of Rubruck at Soldaïa in 1253). The Mongol conquest and the ruin of Baghdad, in deflecting the trade of Inner Asia towards the north, made a powerful contribution to strengthening trans-Pontic relations in the second half of the century. They were essentially consolidated, following the Genoese en-

tente with the Paleologus dynasty, by a whole series of Genoese warehouses established in the first place on the southern coast of the Crimea between Caffa (doubtless from 1266) and Cembalo (Balaklava), including Soldaïa taken by the Genoese in 1365. Some other establishments were added there around the Sea of Azov (Tana-Azov at the mouth of the Don, Copa-Kopil, etc.), and on the eastern coast of the Black Sea (Mapa-Anapa, Sebastopolis-Suk͟hum, Kalʿe etc.). The traffic in slaves (Turks and Circassians), fish and caviar, salt, cereals and furs was directed towards Constantinople and Europe, but certainly also in an appreciable proportion towards Asia Minor and across it as far as Egypt. Besides, Christian merchants passed via Trebizond as far as Sulṭāniyya in Persia. The part of the Muslim merchants cannot have been negligible in this trans-Pontic commerce, but is difficult to evaluate with precision. It was on a Greek ship that Ibn Baṭṭūṭa made his way from Kerč to Sinop in 1333 (tr. Defremery, ii, 345; tr. Gibb, ii, 468).

The capture of Constantinople, with the occupation of the Straits by the Ottomans, upset these relations. The K͟hān of the Tartars then diverted the merchandise and slaves sent to Sāmsūn or other ports towards the points of the coast situated outside the Genoese territory, such as Vosporo (Kerč) and Calamita (near Inkerman) (Heyd, ii, 387). Nevertheless, the policy of Ottoman expansion in the Black Sea did not begin immediately. The Bank of St. George, heir of the rights of Genoa, was able to maintain relations for some time. In 859/1455 its ships succeeded in forcing the passage of the Bosphorus and reaching Caffa and Samastri. Meḥemmed II took this town in 863/1459, but the trade to Caffa, henceforth a tributary of the Sultan, continued during the following years. The corn of Caffa still passed to Genoa. It was only in 880/1475 that Meḥemmed II made some incidents between the K͟hān of the Crimea and the Tartars in connection with the nomination of the governor who had jurisdiction over them a pretext for seizing the town, and the speedily, all the other Genoese towns.

iii. — The Ottoman Sea. — From that time, when the principalities of Rūm, the Crimean Tartars, the Nogay, and the western Caucasians were made vassals, the Black Sea became an Ottoman lake, for approximately three centuries, to which the Sublime Porte jealously forbade access to foreign ships. The Ambassador of France, Girardin who, in 1686, solicited authorization for French ships to trade there, received the reply that "the Grand Seigneur would sooner open the doors of his harem to foreigners" (P. Masson, *Histoire du commerce français dans le Levant au xviii*ᵉ *siècle*, Paris 1911, 638). A similar reply was made in 1699 to the Ambassador of Russia Ukraintzev (B. Nicolsky, *Le peuple russe: carrière historique 862-1945*, Neuchatel 1945, 189). The Black Sea was to be the base for a policy of Ottoman expansion towards the steppes of Southern Russia and the Caspian, whose culminating point was the expedition of Astrakhan in 1569 with the project of a Don-Volga canal. This exclusive domination did not prevent, however, incursions of Cossacks in the 17th century, whose boats came at times to pillage the Anatolian coasts, for example at Giresun (Ewliyā Čelebi, *Seyahatnâmesi*, ed. Zuhuri Danişman, Istanbul 1970, iii, 81).

In the Ottoman period, Black Sea trade was organized at first essentially to provision the immense conurbation of Istanbul. The corporation of Black Sea merchants (numbering 8,000 in 2,000 shops, according to Ewliyā Čelebi (*ibid*, ii, 246) played a principal role in the town's activity, as did the sailors of the Black Sea (numbering 9,000, or 2,000 according to another passage, *ibid.*, ii, 240). Cereals (wheat, oats, barley), fish, fats (Eremya Çelebi Kömürucüyan, *Istanbul tarihi: xvii asirda Istanbul*, Turkish tr. Hrand D. Andreasyan, Istanbul 1952, 15) from the northern steppes, the wood of the Anatolian coasts, the slaves of the Caucasus, and furs, were in the 17th century the principal objects of commerce. The Ottoman administration devoted all its efforts to developing this internal Black Sea trade, and compelled the trade routes crossing it to be diverted via Istanbul in order to assure itself of control. Thus in 1095/1684 the trade of Ankara to Poland was compelled to pass via the capital (R. Mantran, *Istanbul dans la seconde moitié du xvii*ᵉ *siècle*, Paris 1962, 482), puréed plums from the Trebizond coast, as well as wood from the Anatolian coast and wooden objects (vases, plates) manufactured at Amasya. In return, the grain of Crimea frequently passed to Trebizond and Rize despite the prohibitions. The wines of Tripoli on the Anatolian coast, those of Aḳ Ḳirmān and of Misevria on the coasts of Bessarabia and Bulgaria, were sent to the Crimea, to the Abkhazians or to the Cossacks of the South of Russia, who got their food supplies at Oczakov. To these commercial currents were added migratory movements. The mountaineers of the East-Pontic chains of Anatolia had already migrated in large numbers towards Constantinople, and also to all the western part of the Black Sea. There was also in Moldavia an important Laz commercial colony (Peyssonel ii, 203-4).

iv. — European penetration. — The first breach in the Ottoman Black Sea system dates from 1107/1696 at the time of the capture of Azov by the Russians and the construction of the first Russian fleet on the waters of the Azov Sea. Some Russian ships also accompanied the plenipotentiary of the Tsar to Istanbul in 1111/1699. Retroceded to Turkey at the treaty of Pruth in 1713, Azov returned to Russia at the treaty of Belgrade in 1739, with a portion of the littoral of the Sea of Azov, but Article ix of the treaty stipulated that the Russians' trade in the Black Sea should be done exclusively by ships belonging to the Turks. On a parallel with the treaty of Passarowitz, the limit for the movement of Austrian ships on the Danube remained fixed at the mouths of the river. From 1163/1750 a first French factory was established at Caffa, where the French dragoman carried on trade from 1746, but it was done in ships flying the Ottoman flag (P. Masson, *op. cit.*, 641-3). It was only the treaty of Küçük Kaynarca (1187/1774) which opened the Black Sea to the Russian merchant ships, while the annexation of Kerč, Yeni Ḳalʿe and the mouths of the Dnieper considerably enlarged the sea coasts of the Empire of the Tsars. The conference of Aynali Kavak in 1193/1779 completed it by according to the same ships the free passage of the Bosphorus and the Dardanelles. The foundation of Kherson in 1778, the annexation of the Crimea and the occupation of Georgia in 1783, the capture of Oczakov in 1788, and in 1789 that of Hod͟ja Bey, where in 1795 the new town of Odessa was founded, mark the decisive stages of Russian installation in the Black Sea at the end of the 18th century. The Russian privileges were rapidly extended to the other European nations. In 1784 Austrian ships, in 1799 English ships, in 1802 French ships, obtained freedom of traffic.

European penetration entailed a considerable disturbance in the commercial currents. In 1781 the first Russian ship passed from Kherson to Marseille. In 1784 a French factory was established at Kherson. At the beginning of the 19th century several hundred

ships already participated in the trade of South Russia (an annual movement of 900 ships, of which 552 went to Odessa and 210 to Taganrog; 421 Austrian ones and 329 Russian ones, according to Anthoine, 262). Ottoman trade was progressively reduced to the West coasts of the Caucasus (with which the slave trade remained active throughout the first half of the 19th century) and to the north coasts of Anatolia. Sinop remained an important Ottoman naval base and a great centre of ship-building yards. The trans-Pontic trade of Russia to the Anatolian coasts survived on a restricted scale (fabrics from Aleppo and nuts sent from Trebizond: V. Fontanier, *Voyages en Orient ... de 1830 à 1833, deuxième voyage en Anatolie*, Paris 1834, 225). But a new fact was the great rise in transit commerce from Persia via Trebizond and Erzurum, which was the normal access route from the Black Sea to Persia until the development of the traffic from Persia to Russia by land at the end of the 19th century and, more recently, the diversion of Persian trade to the Persian Gulf (C. Issawi, *The Tabriz-Trabzon Trade 1830-1900: Rise and Decline of a Route*, in *International Journal of Middle East Studies*, i (1970), 18-28). Since this date, the Turkish trade of the Black Sea has been essentially a coastal traffic, notably concerned with passengers, wood, the coal of the Zonguldak basin sent to Istanbul, to which are added some direct exports of nuts and tobacco to Europe.

v. — Political and naval history in the modern period. — If the freedom of commercial navigation has never been called into question since the end of the 18th century, the same has not been the case in regard to the naval status of the Black Sea. The treaty of Hunkiar Skelesi (1249/1833), by which the Porte undertook to close the Straits at Russia's request had practically conferred on this latter power the control of the Sea. The Conference of London (1840), in closing the Straits to all warships, caused Russia to lose this privileged situation, but left her assured of dominance in the Black Sea. But after the destruction of the Turkish naval forces by the Russians at Sinop in 1269/1853 and the victory of the Franco-Anglo-Turkish allied forces in the Crimean War, the treaty of Paris of 1856 provided for the neutralisation of the Black Sea (except for six steamships with a maximum length of 50m. at the water-mark and four light ships for each power, as well as two light ships per power at the mouths of the Danube). The Franco-German War of 1871 gave Russia the opportunity, through the Conference of London, to have this neutralization annulled and to regain her freedom of action, but the passage of the Straits remained forbidden to warships. The Conference of Lausanne in 1921, by according freedom of passage to warships of every nationality (provided that they did not constitute a force superior to that of the most important fleet existing in the Black Sea) and by demilitarizing the Straits, made the Black Sea practically a free sea, open to the outside powers. This arrangement was only ephemeral, and the Conference of Montreux (1936), by giving Turkey the right to fortify the Straits once more, by restricting freedom of passage to the fleets of the powers bordering on the Black Sea (with exceptions for light ships) and by according Turkey the right to close the Straits in event of a war in which she remained neutral, has made the Black Sea once more a half-closed sea.

(X. DE PLANHOL)

ḲARĀ FAḌLĪ [see FAḌLĪ MEḤMED].

ḲARĀ GÖZ [see KARAGÖZ].

ḲARĀ GÖZLÜ, Turkish tribe in Iran. It is not mentioned in any 10th/16th or 11th/17th century sources. Originally a member of the famous S͟hāmlu tribe during the Ṣafawid period, the tribe must have taken its name from one of its beys; it is probable that it originated in the Bey Dili sub-tribe of the S͟hāmlu.

The homeland of the Ḳara Gözlü was the Hamadān region, but in the mid-20th century there was a small branch known by the same name in Fars. The Ḳarā Gözlü had abandoned a fully nomadic life as early as the beginning of the 19th century, and lived in large and prosperous villages on the Hamadān plain. Nevertheless, they were foremost amongst those peoples who preserved tribal unity. Today they are divided into two branches, the ʿAs͟hīklu and the Ḥād͟jd͟jilu. All European travellers who visited the region describe them as a numerous community. Dupré (1807-9) gives their number as 12,000 (*Voyage en Perse*, Paris 1819, ii, 460); Macdonald Kinneir (1810) records that they were able to field an army of 7,000 men (*A Geographical memoir of the Persian Empire*, London 1813, 127); while Lady Sheil (mid-19th century) gives their number as 4,000 (*Glimpses of life and manners in Persia*, London 1856, 398). The population of the Ḳarā Gözlü was given as 300,000 in 1930. Travellers also describe them as one of the most warlike tribes. Macdonald Kinneir (*op. cit.*, 46) calls them the best horsemen in Iran. According to Muḥammad Hās͟him (*Rustam al-tawārīk͟h*, ed. M. Mus͟hīrī, Tehran 1348, 105), Ḳarā Gözlü Saʿīd Beg was one of the most gallant *amīrs* of the reign of Sultan Ḥusayn, the last Ṣafawid ruler. Although the Ḳarā Gözlü were a closely-knit community, they chose to remain subject to other ruling dynasties; for this reason they settled in the Hamadān plain as early as the 19th century, leading a prosperous life in comparison with other tribes. This can be explained by the fact, that as members of the S͟hāmlu subtribe, they had had a long-established political tradition and experience.

Following the death of Nādir S͟hah Afs͟hār, the tribe accepted vassalage to Karīm K͟han Zand; but in the struggle between the successors of Karīm K͟han and Āḳā Muḥammad K͟han Ḳād͟jar, the Ḳarā Gözlü promptly sided with the Ḳād͟jars, and played an important part in Āḳā Muḥammad's accession to power. The tribe's loyalty to the Ḳād͟jar dynasty continued in later years, and as a result many important military and political figures were appointed from it.

Foremost among these was Muḥammad Husayn Khān (d. 1240/1824-5), who had rendered important service to Āķā Muḥammad in the creation of his state. He was also known as a just and benevolent ruler (J. Morier, *A Second Journey through Persia...*, London 1818, ii, 263). Rustam Khān, son of the above-mentioned khān, and Ḥādjdji Muḥammad Khān, Naṣr Allāh Khān, ʿAlī Khān, Maḥmūd Khān and ʿAbd Allāh Khān were the most famous political and military figures of the Ķarā Gözlü during the periods of Fatḥ ʿAlī, Muḥammad Shah and Nāṣir al-Dīn Shah (Mīrzā Muḥammad Taķī, *Nāsikh al-tawārīkh*, ed. Djihāngīr Ķāʾim Maķāmī, Tehran 1337, ii, 84; iii, 123; Riḍā Ķulī Khān, *Rawḍat al-ṣafā-yi Nāṣirī*, Tehran 1339, ix, 636, 648; 44-5, 211, 226-7, 238-40, 458, 459, 467, 529). Of these, Maḥmūd Khān and ʿAlī Khān were married to girls of the Ķādjār dynasty (J. P. Ferrier, *Voyage en Perse dans l'Afghanistan...*, Paris 1860, i, 70-1). Chiefs of the Ķarā Gözlü were among those statesmen assimilated to Western European culture. One of these was Naṣr al-Mulk, educated at Oxford University, who was regent in 1914, while his brother Amīr Tūmān was ambassador in Washington.

Bibliography: For detailed information and bibliography of the Ķarā Gözlü see F. Sümer *Kaçarlar devrinde Türk oymakları*, in *Selçuklu Araştırmaları Dergisi*, v (Ankara 1974). (F. SÜMER)

ĶARĀ ḤIṢĀR, "black castle, black fortress", name of several localities of Asia Minor distinguished from one another by means of other names or epithets, but nevertheless still frequently confused. One finds them already enumerated in the *Muʿdjam* of Yāķūt (iv, 44), in the *Nuzhat al-ķulūb* of Ḥamd Allāh Mustawfī (ed. Le Strange, 97), in the *Seyāḥāt-nāma* of Ewliyā Čelebi (Istanbul 1314-18, ii, 384 = *Narrative of Travels by Ewliya Efendi*, London 1850. ii, 205), in the *Lehdje-i ʿOthmānī* of Aḥmed Wefīķ, (Istanbul 1293, 911) and in the *Taʾrīkh* of ʿAlī Djewād (Istanbul 1313, i, 599); the enumeration is nowhere near complete. These localities all have in common their situation on heights, for the most part fortified and difficult of access, and owe their colour-epithet to some volcanic rocks of black colour (basalt, andesite or trachyte such as at Afyūn Ķarā Ḥiṣār). The majority of these fortresses were without doubt built in the Middle Ages to serve above all as places of refuge for the inhabitants of the surrounding area in case of unforeseen attack, as occurred frequently during the quarrels between the Byzantines on one hand and the Arabs and Saldjūķids on the other, and also, later, during the wars between the small states that made up Asia Minor: many among them were abandoned during the domination of the Ottomans and are no longer found on our maps.

The most important localities of this name are:

1. AFYŪN ĶARĀ ḤIṢĀR (Afyon Kara Hisar); see the article that has been already devoted to it [*q.v.*]. (To add to the *Bibl.*: Süleyman Gönçer, *Afyon ili tarihi*, i, İzmir 1971).

2. ISDJE ĶARĀ ḤIṢĀR (İsçe Karahisar/İsçehisar), 22 km. to the north-east of Afyon Karahisar, evidently owes its name (= "black castle, of the colour of soot") to the colour of its dwellings constructed of black lava; so it must be written thus and not as Eski Ķarā Ḥiṣār, as do Hamilton (*Researches in Asia Minor*, London 1842, i, 461, 467), L. de Laborde, (*Voyage de l'Asie Mineure*, Paris 1838, 68-9), Texier, (*Descr. de l'Asie Mineure*, i, 145-52), and Ritter who follows them (Kleinasien, i, 605, 642-3). Nor is it Itchki or Istya (Ramsay, in *Mitt. Deutschen Arch. Instituts in Athen*, vii, 132 ff.; x, 348), nor Ischtschi (Körte, *Anatolische Skizzen*, Berlin, 1896, 88 ff.) or Ishite (von Dienst, map accompanying the *Geogr. Mitteilungen*, of Petermann, Gotha 1860, suppl. fasc. no. 125). This small locality of around 4,000 inhabitants is situated in the neighbourhood of the quarries of ancient Dokimion, from which were extracted the Synnadix marble; these quarries have recently been worked by European contractors (*Sālnāma Brūsa*, 1325, 125).

Bibliography: L. Robert, in the *Journal des Savants* (1962), 24-5.

3. SHĀBĪN OR SHEBĪN, Sheb Ķarā Ḥiṣār (Şebin Kara Hisar) "the black castle of alum", also called Ķarā Hiṣār-i Sharķī or Ķarā Ḥiṣār-i Shabkhāne, owes its name to the deposits of alum which are found in the vicinity; these deposits, which had already been mined in antiquity, were worked especially in the Middle Ages ,and they furnished a product of a quality particularly esteemed in this mineral.

The town is built at about 1300 m. altitude, on the inner slopes of the Pontic chains, 120 km. to the South of Giresun, 190 km. to the north-east of Sīwās. The ruins of the fortress which gave its name to the town are situated on an isolated hill to the east of the town, which they dominate from 50 m., being at an elevation of 200 metres on the other side at the top of a valley of a small tributary of the Kelkit Çay.

As Blau already demonstrated in 1865, relying on a Byzantine inscription, the town is the Colonia of antiquity and the Middle Ages, and it preserved this name until the modern period. According to the *Novellae* of Justinian, it belonged to Armenia Prima; in the *Notitiae Episcopatum*, it figures as the episcopal seat of Armenia Secunda. In 162/778 the town fell into the hands of Yazīd b. Usayd al-Sulamī at the time of an invasion of Pontus (Ghévond, *Hist. des Guerres des Arabes en Arménie*, Paris 1856, 106; al-Ṭabarī, iii, 493, and Ibn Khurradādhbih, in *BGA*, vi, 108). However, the Ķalūniya, which according to Eutychius (ed. Selden and Pococke, 383), was conquered by the Sāsānid Shāpūr together with Cappadocia, and the Ķalūniya that the Ḥamdānid Sayf al-Dawla took in the year 335/946-7 (*ZDMG*, x, 467; Yāķūt, 168) must be without doubt the Colonia Cappadociae which, according to Niketas (72, 689) much later became Aķsarāy. This powerful fortress must have been lost by the Byzantines after the battle of Manzikert; soon after the Danishmend-Oghullarī established themselves there (Anna Comnena, *Alexiad*, ed. Reifferscheid, ii, 164); and much later we find it in the possession of the Saltūķids of Erzurum (Niketas Chon, *Ann.*, ed. Bonn, 185, 294) who in the year 598/1201-2 were dispossessed by the Saldjūķids of Ķonya; the latter established the Mengūdjids, vassals of Ķonya, in their place; after the fall of the sultanate of Ķonya, the descendants of Eretnā and different princes of the dynasties of the Aķ-Ķoyunlu and Ķarā-Ķoyunlu reigned there (cf. Saʿd al-Dīn, i, 287 = ʿAlī, *Künh al-akhbār*, v, 178 = Leunclavius, *Hist. Musulm.*, col. 474); in the year 878/1473, the town was taken by Meḥemmed the Conqueror, after the battle of Terdjān, and was incorporated into the Turkish empire (ʿĀshïķ-Pasha-Zāde, *Taʾrīkh*, 378, 181, who designates the town as Ķarā Hiṣār of Kemākh, also Saʿd al-Dīn, i, 541, 542; Leunclavius, *Hist. Musulm.*, col. 589). It constituted a *sandjaķ* of the *wilāyet* of Erzurum (Ewliyā, *Travels*, ii, 205; Ḥādjdjī Khalīfa, *Djihānnumā*, 422. 424), but sometimes of Erzindjan. Re-attached to Sivas in the 19th century, then after having been promoted to *chef-lieu* of a *wilāyet* at the beginning of the Republican era, it is today a *kaza* of the *wilāyet* of Giresun.

The old name of Colonia was adopted by the Sal-djūḳids under the Armenian form Kug͟hūniya that we encounter in the chronicle of Ibn Bībī (ed. Duda, Copenhagen 1959, 151, 152, 306), in Ḥamd Allāh Mustawfī (*op. cit.*, where the readings of the manuscripts *Limūniya* or *Lī*ʿ*ūniya* must be corrected to *Kīg͟hūniya*), and on the money of Eretnā (Aḥmed Tawḥīd, *Meskūkāt-i Ḳadīme-i islāmiyye*, iv, 439). If, as appears almost certain, the Mavro-Kastran mentioned by Michael Astaliota (ed. Bonn, 125) and by Skylitzes (679) as being "situated on a hill in Armenia difficult of access", can be identified with Colonia, it seems then that alongside the name of Colonia the name of Ḳarā Ḥiṣār was already known at this period; likewise, we encounter among the Greeks of the 18th century, alongside Colonia, the form Garasaris which is a corruption of Ḳarā Ḥiṣār.

The majority of the population seems to have remained Christian for a long time. A census of 935/1529 counted 213 Christian houses there as against 84 Muslim. In 1022/1710 there were still 240 Christian houses as against 217 Muslim. Ewliyā Čelebi, who has left us a highly imaginative description, counted 1600 houses there, 750 shops, 42 mosques (1057/1647). There were 70 houses within the citadel, where the villagers of the Black Sea coasts, exposed to the ravages of the Cossacks, came to store their precious objects. A. D. Mordtmann (1858) counted 2,000 houses there, 500 of them Armenian and 100 Greek, and Vital Cuinet, 11,700 inhabitants (of whom 2,750 were Armenian and 1,650 Greek). Trade, judged to be in decline by Barth in 1858, appeared to have become active once more at the end of the century, according to Cumont and Cuinet.

The richness of the gardens and vineyards adjoining the town always formed a primary basis of this activity. Schilberger (*Reisebuch*, ed. Langmantel, 57) calls Karassere "a land rich in vines"; these vines, which still exist today, were always less famous than the rich mines of alum of the neighbouring village S͟hābk͟hāne, mines from which was extracted the "alume de rocca di Colonna" (that is to say Colonia) that was so esteemed (Pegolotti, in Heyd, *Histoire du Commerce du Levant*, ii, 565); they are the *aluminis minera juxta Sabastiam quae valet unam argentarium* of Vincentius Bellovacensis, xxxi, c. 143; they are also mentioned by William of Rubruck (ed. Bergeron, 147). Meḥemmed the Conqueror took possession of them for the treasury (Saʿd al-Dīn, i, 542), and later, the pay of the garrison of the fortress was levied on the income from their rent (*D̲j̲ihānnumā*, 424). In the middle of the 19th century 100,000 okes of ore were still being extracted from four shafts (Barth) and exported to Giresun. The working ceased at the end of the 19th century.

The town suffered greatly from the 1914-18 War, when it found itself close to the front in 1916 at the time of the Russian troops' advance, and was abandoned by a part of its population. After the disappearance of the minority population, there were no more than 7,091 inhabitants in 1927, and 7,600 in 1950. The castle, encircled by surrounding walls in which some old wells seem to indicate a pre-Hellenic settlement, is no longer inhabited; within these fortifications, on the summit of the mountain, there is a small keep with an octagonal tower. The fortifications date from the Byzantines and were completed by the Muslim governors of the town.

4. ḳarā ḥiṣār-i behrāmshāh (Bayrāms͟hāh), already cited by Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, 97; Sidī Reʾīs (16th century) visited this place at the time of his journey from Sīwās to Bozaḳ and Ḳīrs͟hehir (*Mirʾāt al-mamālik*, Istanbul 1312, 96). In the age of Ewliyā Čelebi it was a jurisdiction (*ḳaḍāʾ*) of the *eyālet* of Sīwās (*D̲j̲ihānnumā*, 662). This locality is today the Karahisar Tatlisi marked by the *Meskûn Yerler Kılavuzu* (Ankara 1946) as a parish of the *bucak* of Kara Mağara, between Yozgat and Akdağ Madeni (and not the Karahisar Kemalisi, a parish of the *bucak* of Kadişehri, *İlçe* of Çeherek, *wilāyet* of Yozgat, to the north-west of Akdağ Madeni and 30 km. to the north-east of the former).

5. ḳarā ḥiṣār-i demird̲j̲i, locality situated in the *wilāyet* of Çorum, some hours to the north of the well-known field of ruins of Üyük, cited in the *D̲j̲ihānnumā*, 625, among the *ḳaḍāʾ*s of the *sand̲j̲aḳ* of Çorum. W. Hamilton was, in 1838, the first of the European travellers who visited it and described it (*Researches*, etc., i, 379, 381, 403; Ritter relied on this book in his *Kleinasien*, i, 147, 149 ff.), then came H. Barth in 1859 (*Reise von Trapezunt nach Scutari*, 42) and A. D. Mordtmann, (*Ausland*, 1863, 785; *SB Bayr. Ak.* (1861), 191-2). The place covers the ruins of Ḳaṭā Sarāy, which, as it lies on top of it, is also cited under this name in the *D̲j̲ihānnumā*. It must be identified with the Ḳarā Ḥiṣār that the old Ottoman chronicles cite in connection with Prince Meḥemmed's battles with the chief of the Yürüks Gözlerog͟hlu in *ca.* 805/1402 (Leunclavius, *Hist. Musulm.*, col. 386; Saʿd al-Dīn, i, 200). Kiepert's map marks in this place, a little to the North of Alaca Höyük, two places with the name of Ḳarā Ḥiṣār near to one another, one mentioned as a ruin, the other as a village. The Turkish 1/200,000 map marks in this place a ruin of a fortress on a hill at 1250 m. altitude, and two villages, to the north-west and to the north-east, called respectively Türk Kalehisar and Çerkes Kalehisar (surely for Ḳara Ḥiṣār).

6. ḳarā ḥiṣār-i teke (D̲j̲ihānnuma, 638, Aḥmed Wefīḳ, ʿAlī D̲j̲ewād, *op. cit.*), also called Ḳarā Ḥiṣār Adalia (Ewliyā, *Travels*, ii, 705), already cited by Yāḳūt (iv, 44) as a place situated a day's journey from Anṭākiya (actually Anṭāliya). At the time of Ibn Faḍl Allāh, a certain Zekeriyyā, formerly *mamlūk* of the lord of Adalia, made himself independent and governed a small territory which comprised 3 towns and 12 strongholds (*Notices et extraits*, xiii, 372-3). Cited on several occasions in the pre-Ottoman texts, this place is still to be found in the accounts of the cadastral survey dating from Meḥemmed the Conqueror (*Revue Historique publ. par l'Institut d'Histoire Turque*, ii, 76), and is noted in the D̲j̲ihānnumā (*loc. cit.*) as a jurisdiction of the *sand̲j̲aḳ* of Adalia.

The identification of this town has given rise to

several mistakes. Following the information of Aḥmed Wefīḳ (*op. cit.*), who mentions Ḳarā Ḥiṣār as the chief place of a *nāḥiye* of the *ḳaḍā'* of Serik in the *sandjaḳ* of Adalia, and the information of Ewliyā Čelebi (*Seyāḥatnāmesi*, ix, 290) according to which the place was built at the foot of a mountain called Serek dağı, Mordtmann in *EI*[1] and Besim Darkot in *İA* have sought to identify it with the large village of Serik, a real centre of a *ḳaḍā'* in the plain between the Aksu and the Köprü Su, nearer to this last river. This identification of the locality is incompatible with the data of the same text of Ewliyā, which place it to the west of the Aksu, four hours' journey from Antalya and an hour to the north of the village of Kundu (still existing) on the one hand, and on the other with the information of the same, as well as of al-Ḳalḳashandī (*Ṣubḥ*, v, 346), which places it on a lofty hill. Süleyman Fikri Erten (*Antalya vilayeti tarihi*, Istanbul 1940, 90) wished incorrectly to place it at the ancient town of Sillyon, a hypothesis compatible with the data on the elevated site but not with the information on distance and placing in relation to the river. In fact, there is no doubt that it can be identified with the ancient town of Pergum in terms of the above characteristics. Recognized since the 19th century by Krause in his articles *Pamphylia* and *Perge* in the *Allgemeine Enzyklopädie der Wissenschaften und Künste*, Sect. 3, vol. x (1838), 244, and vol. xv-xvi (1841), 435, but without comment and information on sources, then by X. de Planhol (*De la plaine pamphylienne aux lacs pisidiens*, Paris 1958, 105, 123), it has been set out clearly in detail by Barbara Fleming (*Landschaftsgeschichte von Pamphylien, Pisidien und Lykien im Spätmittelalter*, Wiesbaden 1964, *Abhandlungen für die Kunde des Morgenlandes*, xxxv/1, 101-2; see equally the index, s.v. for the numerous mentions of this town).

7. DEVELI ḲARĀ ḤIṢĀR, i.e., the Ḳaraḥiṣār of Develü (*develeniñ Ḳarāḥiṣārī* in Neshrī, *ZDMG*, xv, 341, and Leunclavius, *Hist. Musulm.*, 334); also named after the district of Develü (Houtsma, *Recueil*, iii, 104) to distinguish it from other towns of the same name. This town, situated in Asia Minor, 45 km. to the south-west of Ḳayṣariyye, is already frequently mentioned in the history of the Saldjūḳids (Houtsma, *Recueil*, iv, *passim*). It belonged afterwards to the possessions of the Banū Eretnā (cf. Max van Berchem, *Matériaux*, Pt. 3, 41 and 48), then to that of the Ḳarāmān-oghullarī and was conquered in 794/1391 by Bāyazīd I (Neshrī, *loc. cit.*); at the time of the conquest of Ḳarāmān by Meḥemmed II in 879/1474, it surrendered to the Ottomans (Saʿd al-Dīn, i, 550). At the end of the 17th century, the district of Develi Ḳarā Ḥiṣār formed a *ḳaḍā'* dependent on Ḳayṣariyye *Djihānnumā*, 620). The town then declined, without doubt due to the insalubrity of the swamps (Sultan Sazlığı) which extend to the approaches of the town, and the consequence of this was the transfer of the centre of the *ḳaḍā'* to Develi (or Everek), to the south of Kayseri and 40 km. to the east, whereas Ḳarā Ḥiṣār, at the end of the 19th century, was no more than a *nāḥiye* of the *ḳaḍā'* of Indjesu. This transfer has been at the source of a whole series of confusions between the two towns (Aḥmed Wefīḳ, *Lehdje*, 580, and Cuinet, *Turquie d'Asie*, i, 304, 320, give information which is quite obscure and false). The town, established anew as a *kaza* in 1946, took the name of Yeşil Hisar. Of the ancient fortifications of Develi Ḳarā Ḥiṣār, only insignificant fragments remain; the town, known for its fruit production, is situated at the foot of some hills, in the midst of extensive gardens (Kinneir, *Journey*, 109; Hamilton, ii, 284). There were several hundred houses at the end of the last century, with an increase to 5,800 inhabitants in 1950. In the neighbourhood of Develi Ḳara Ḥiṣār, 3 km. to the south-west, are the ruins of Zindjibar Ḳalʿesi, considered formely to be the ancient Nora (W. F. Ainsworth, *Travels and Researches in Asia Minor*, London 1842, i, 210) and now identified with Cyzustra (W. M. Calder and G. E. Bean, *A classical map of Asia Minor*, London 1958).

Bibliography: Apart from the works already cited, I. Beldiceanu-Steinherr and N. Beldiceanu, *Deux villes de l'Anatolie pre-ottomane, Develi et Qarahisar, d'après des documents inédits*, in *REI*, xxxix (1971), 337-86.

8. ḲARĀ ḤIṢĀR in the land of ʿUthmān (Yāḳut, iv, 45): perhaps this is meant to be the Ḳaradja Ḥiṣār, also named Ḳaradja Shehir, near İnönu in the territory of origin of the Ottoman Sultans, a place which is often described even in the ancient chronicles by the name of Ḳarā Ḥiṣār.

9. ḲARĀ ḤIṢĀR, in the territory of Ibn Torghut (Ibn Faḍl Allāh, *op. cit.*, 350); this is, however, impossible to identify, unless it is an ancient name for Ṭorghudlu Ḳaṣabasī near Mānīsa.

10. ḲARĀ ḤIṢĀR, *chef-lieu* of the *ḳaḍā'* of Naʿllu-khān (Nallihan), *vilāyet* of Ankara (Aḥmed Wefīḳ, *op. cit.*). One encounters several villages of this name in the boundaries of the said *kaza*.

11. ḤAMMĀM ḲARĀ ḤIṢĀR, village of the *nāḥiye* of Günyünzī, *ḳaḍā'* of Sivri Ḥiṣār, *wilāyet* of Eskişehir, 17 km. to the east of the *chef-lieu* of the *kaza*.

12. VĀN ḲARĀḤIṢĀRI (Ewliyā, *op. cit.*, iv, 275-6), which the traveller visited on the route from Van to Kotur, and of which he says that the Kurds call it Ḳaradja Kale; this is today a village of the *kaza* of Saray (newly called Özalp).

A certain number of other places of the name of Ḳarā Ḥiṣār figure in the gazeteers of the Anatolian villages; none of them have any historical importance. See the article of Besim Darkot in *İA* for the enumeration of several of them.

(J. H. MORDTMANN-[X. DE PLANHOL])

ḲARĀ ḲALPAḲ [see ḲARAḲALPAḲ].

ḲARĀ KHALĪL [see DJANDARLĪ].

ḲARĀ-KHĀNIDS [see ILEK-KHĀNS].

ḲARĀ KHIṬĀY, the usual name in Muslim sources of the 6th/12th and 7th/13th centuries of the Kitai people, mentioned in Chinese sources from the 4th century A.D. onwards as living on the northern fringes of the Chinese empire; during the course of the 6th/12th century a group of them migrated into the Islamic lands of Central Asia and established a domination there which endured for some eighty years.

In the Orkhon inscriptions of Outer Mongolia, the royal annals of the T'u-chüeh or Turks (ca. 732 A.D.), the Kitai are mentioned as enemies of the Turks and as living to the east of the Turkish heartland on the Orkhon and Selenga rivers. Ethnically and linguistically, the Kitai were most probably Mongols rather than Tungus, as some earlier orientalists surmised, though there is a possibility that they spoke a language of their own, unrelated to the above two groups (see the discussions in Wittfogel and Fêng, *History of Chinese society*: *Liao*, 21-3, and Sir Gerard Clauson, *Turk, Mongol, Tungus*, in *Asia Major*, N.S. viii (1960), 120-1, 123). There must also have been considerable Uyghur Turkish influence on them when they were subject to the Ḳaghans of the Eastern Turks.

In Chinese sources, the Kitai are first called the Ch'i-tan (K'i-tan) and then, after 947, the Liao. In

the period of chaos after the downfall of the T'ang dynasty (907), the expansionist Kitai overran northern China and established there a ruling dynasty which, whilst retaining its basic steppe ethos, became at least superficially sinicized, so that Chinese annals account them a native dynasty; southern China, on the other hand, remained in the hands of the indigenous Sung dynasty (960-1279). The Liao empire stretched from the Pacific in the east to the Altai mountains and the Uyghur lands in the west, and their original name of Kitai, in the form Khitā or Khatā, was applied by the Muslims to northern China, whence older English Cathay, Russian Kitay, Greek Kitaïa, etc. for the whole country of China (see Sir Henry Yule, *Cathay and the way thither*, London 1913-16, i, 146; in Muslim usage Čīn, Arabic form Ṣīn [*q.v.*] became the term reserved for southern China).

Between 1116 and 1123, however, the Liao of northern China were overthrown by a fresh wave of barbarian invaders from the north, the Tungusic Jürchen of the Amur-Ussuri basin and northern Manchuria, who formed the Chin ("golden") dynasty, Mongol Altun Khans. A part of the Kitai remained in China with the Chin and later, in the time of Čingiz Khān, were able successfully to rebel and restore the Kitai kingdom as a Mongol vassal state. Muslim sources mention raids westwards by the "Khiṭāy" on Islamic territories adjoining the Semirečye during the 5th/11th century (see Ibn al-Athīr, ix, 209-10, incursion of the Khiṭāʾiyya in 408/1017-18), but these attacks may well have been made by Mongol groups, perhaps the Nayman, pushed westwards by the expansion of the Kitai proper in northern China (see Barthold, *Histoire des Turcs d'Asie centrale*, 95). It was the migration of ca. 519/1125 and thereafter by the Ķarā ("black") Khiṭāy (in the Latin of John of Plano Carpini, 1246, *nigri Kitai*), Chinese Hsi ("western") Liao, which was really significant for the eastern Islamic world. One more southerly group moved into eastern Turkestan, but came up against the branch of Ilek Khānids or Ķarakhānids [*q.v.*] ruling in Kāshgharia. Arslan Khān Aḥmad b. Ḥasan defeated them before they could reach Kāshghar and captured their leader. Ibn al-Athīr, xi, 55, places this battle in 522/1128, which is perhaps too early, since in a letter from the Saldjūķ sultan of eastern Persia, Sandjar, to the caliph's vizier, dated 527/1133, the victory is described as a recent event.

The adventures of the other group of Khiṭāy are described by Djuwaynī, tr. Boyle, i, 354 ff. It may be that we should regard these merely as the right wing of a general Ķarā Khiṭāy advance along a broad front, successful in breaking through where the left wing thrust into Kāshgharia failed. At all events, this second group came westwards by a more northerly route, through the Kirghiz lands on the upper Yenisei, building the settlement of Emil to the east of Lake Balkhash, which they used as a base for intervening in the Ķarakhānid principality in the Semirečye. By this time, their numbers had swollen to 40,000 tents. The Ķarakhānid ruler tried to win the Khiṭāy over as allies against his own unruly Ķarluķ and Ķanghlī tribesmen, but instead found himself deposed. The Ķarā Khiṭāy leader. whose name appears in Chinese sources as Yeh-lü Ta-shih (d. 537/1143) now, after a half-hearted attempt to organize a revanche and regain the Liao homeland in China, made the town of Balāsāghūn [*q.v.*] in the Ču valley his base for a series of attacks on the surrounding Turkish tribes and principalities: against the Kirghiz and Ķanghlī in the steppes, and against the Ķarakhānids in Khotan and Kāshghar, where Ibrāhīm b. Arslan Khān Aḥmad probably died in battle against them. In 536/1137 Maḥmūd Khān b. Arslan Muḥammad of Samarķand was defeated at Khudjand in Farghāna.

After the Ķarā Khiṭāy had halted for four years, internal disputes in the Samarķand Khānate laid open the whole of Transoxania to them. Nomadic Ķarluķ tribesmen at odds with Maḥmūd Khān appealed to the Ķarā Khiṭāy against their overlord. Maḥmūd had recourse to his own suzerain Sandjar, and the Saldjūķ sultan now invaded Transoxania from Khurāsān with a large army. In Ṣafar 536/September 1141 a bloody battle was fought at the Ķaṭwān Steppe in Ushrūsana to the south of the middle Syr Daryā. Despite a probable numerical superiority, the Muslims were routed with huge losses, and Sandjar and Maḥmūd Khān abandoned Transoxania and fled to Khurāsān; this clash between the conventionally organized Muslim army and the Ķarā Khiṭāy nomadic horde was, indeed, a foretaste of what was to happen when Čingiz Khān's Mongols appeared in the Islamic lands. The Ķara Khiṭāy now occupied Samarķand and Bukhārā, and Yeh-lü Ta-shih sent an army against Khʷārazm, compelling the Khʷārazm-Shāh Atsïz [*q.v.*] to pay an annual tribute of 30,000 *dīnār*s. The lands under Ķarā Khiṭāy control came to stretch from the borders of the Kirghiz country in the north to Balkh in the south (occupied in 560/1165), and from Khʷārazm in the west to the Uyghur lands of eastern Turkestan (see the maps in A. Herrmann, *An historical atlas of China*, Edinburgh 1966, 38-40, and Wittfogel and Fêng, *op. cit.*, 658). The news of the Ķarā Khiṭāy victory over the Muslim forces at the Ķaṭwān Steppe filtered through to the Crusaders in the Levant and thence to Christian Europe, giving fresh impetus to the legends about Prester John, the powerful Christian monarch who supposedly ruled in Inner Asia and who was attacking the Muslims from the rear (that these legends were in circulation before this time is suggested by C. F. Beckingham, *The achievements of Prester John*, Inaugural Lecture, University of Londen 1966).

The Ķarā Khiṭāy leaders are called in the Islamic sources by the title Gür-Khān, and the personal names of the successive rulers are known only in their Chinese forms (see below). Djuwaynī, tr. i, 354, and Djūzdjānī, *Ṭabaķāt-i Nāṣirī*, ed. Ḥabībī[2], ii, 96, tr. Raverty, ii, 911, explain that Gür-Khān means "Supreme Khān", *Khān-i Khānān*; Barthold, *Histoire des Turcs d'Asie centrale*, 97, n. 1, connected the first element with the old Turkish word *kür*, *kül*, "noble, courageous", found in names and titles of the Orkhon inscriptions, giving something like "Heroic Khān".

Pace Barthold's categorical assertion that "The Qara-Khitay kingdom was vastly different from the usual type of nomad empires" (*Four studies on the history of Central Asia*, i, 29), the Ķarā Khiṭāy empire was in many ways typical of the steppe empires established by a Eurasian steppe confederation, despite the partial sinicization of the Ķarā Khiṭāy themselves. It is probable that, like all nomadic confederations, they were not an ethnically homogeneous group; the successes of the first Gür-Khān doubtless attracted numbers of Turks, Tanguts and perhaps even Tungus to swell the original core of the Kitai. They were a military aristocracy of cavalrymen, spread thinly over the lands which they dominated, but with their main concentration at the Gür-Khān's ordu or army camp outside Balāsāghūn

in the Semirečye. The Chinese history of the dynasty, the *Liao Shih* (completed in 1344), mentions a census taken in 546/1151 by the Gür-Khān Yi-lieh. This enumerated 84,500 households with adult males in them, but this figure probably included the indigenous Muslim population of Balāsāghūn and its hinterland as well as the Ḳarā Khiṭāy tribesmen; even reckoning two fighting men per household, the numbers of the Ḳarā Khiṭāy cannot have been all that large (see Wittfogel and Fêng, 659-60).

Nor was there any administrative centralization, despite the fact that they did not follow the practice in other nomadic empires of granting out appanages to relatives and others of high rank; the first Gür-Khān is said not to have entrusted to any man command of more than 100 warriors. Except in Balāsāghūn, where, as noted above, the local Ḳarā Khānid ruler was displaced (although the population of the town remained largely Muslim), local dynasties continued elsewhere to exist as the Gür-Khāns' vassals. In some places, there were appointed permanent representatives of the Gür-Khān (Chinese *chien-kuo* "state supervisor", Turkish *basḳaḳ*, Arabic-Persian *shaḥna*) side-by-side with the local ruler; a province like Khwārazm was only visited periodically by the Ḳarā Khiṭāy tribute-collectors; whilst at the beginning of the 7th/13th century the *ṣadrs* or religious leaders in Bukhārā of the Burhān family (on whom see O. Pritsak, *Āl-i Burhān*, in *Isl.*, xxx (1952), 81-96) took the tribute of the city in person to the Gür-Khān's *ordu*, just as later under the Golden Horde the prince of Muscovy took his tribute to the capital at Sarāy.

The Ḳarā Khiṭāy administration was therefore primarily a fiscal one, and beyond the collection of taxes, the subject territories were left largely to their local rulers. Ibn al-Athīr, xi, 56, says that the Gür-Khān imposed a tax of one *dīnār* per annum on each household of the conquered peoples, but we know that tribute in kind was also collected. Barthold thought that the *dīnār* levy on each family was a specifically Chinese feature, but it seems to have been only one method followed amongst several in a far-from-uniform system; one Chinese source says that the rural populace around Balāsāghūn paid a tithe on their crops to the Gür-Khān. The Gür-Khāns coined their own copper currency on the Liao and Chinese pattern, with the regnal period inscribed in Chinese characters, but the vassal states continued to mint their own Islamic-type coins, and as we have just seen, the unit of the *dīnār* was recognised by the Ḳarā Khiṭāy for tax-collecting purposes (see Wittfogel and Fêng, 661-2, 664, 672-3).

Barthold also asserted in his *EI*[1] article ḲARA KHITĀI that the "language of the government seems to have been Chinese", but the linguistic and cultural structure of Central Asia at this time was complex and reflected the mélange of races, cultures and faiths to be found there. The Ḳarā Khiṭāy undeniably set a Chinese imprint on the administration and culture of the lands under their control, and Muslim authors noted a few Chinese words like *fu-ma* "imperial son-in-law" for the Gür-Khān's son-in-law (Djuwaynī-Boyle, i, 290, 292) and *pāyza*, Chinese *p'ai-tzŭ*, "tablet, insignia of a government official's authority" (*ibid.*, i, 158; ʿAwfī, *Lubāb al-albāb*, ed. Browne, ii, 385). The Gür-Khāns bestowed Chinese official titles and used the Chinese script for solemn decrees, but the number of Chinese litterati at their ordu can never have been very large. They must have called upon Muslim scholars and secretaries for their correspondence in Persian and the Arabic script with their Muslim vassals, and probably upon Uyghur officials for correspondence in Turkish and the Uyghur script with vassals in eastern Turkestan.

The Ḳarā Khiṭāy never adopted Islam, as did eventually the Mongol Khāns in the Islamic world, but they displayed the traditional tolerance of the steppes towards all faiths. Even though Islam was especially identified with the resistance in Transoxania by the Ḳarakhānids and by Sandjar, they did not systematically persecute Muslims, as did their brief supplanter Küčlüg (see below) in Kāshgharia. A contemporary Muslim author like Niẓāmī ʿArūḍī Samarḳandī gives an anecdote about the first Gür-Khān's boundless justice, his deference to the *Ṣudūr* of Bukhārā and his removal of an oppressive representative of the Ḳarā Khiṭāy administration there (*Čahār maḳāla*, ed. Browne, 24, revised tr. 24-5). Djūzdjānī, the historian of the Ghūrids, is also remarkably enthusiastic about them; he praises the first Gür-Khān for his just rule and respect for Muslim sensibilities, and even purveys a tale that one of the later Gür-Khāns had secretly become a Muslim (*Ṭabaḳāt-i Nāṣirī*, ii, 96, tr. 911-12). Muslims retained leading positions in the Ḳarā Khiṭāy administration; the wealthy merchant Maḥmūd Tay is mentioned by Djuwaynī, tr. i, 357-8, as being vizier to the last Gür-Khān.

However, the religious tolerance and impartiality of the Ḳarā Khiṭāy undoubtedly permitted adherents of non-Islamic faiths to flourish more openly in Turkestan than under the orthodox Muslim Ḳarakhānids. A great period of missionary activity and enterprise opened for the Nestorian Christian Church in Inner Asia; the patriarch Elias III (1176-90) founded a metropolitan see in Kāshghar whose jurisdiction also included the Semirečye; and the oldest of the Syriac-inscribed Christian gravestones from the Ču valley in the Semirečye stem from this period (see Barthold, *Zur Geschichte des Christentums in Mittel-Asien bis zur mongolischen Eroberung*, Tübingen-Leipzig 1901, 57 ff.; idem, *Histoire des Turcs d'Asie centrale*, 99-101; the earliest inscription published by Chwolson dates from 1186). There were Chinese artisans working in Samarḳand at this time, and the Jewish communities in Khīwa, Samarḳand, etc. were flourishing, according to the evidence of a Jewish traveller in Persia like Benjamin of Tudela (see W. J. Fischel, *The Jews of Central Asia* (*Khorasan*) *in mediaeval Hebrew and Islamic literature*, in *Historia Judaica*, vii (1945), 29-50). Grousset commented with some justice that "the foundation of the Qara Khitay empire may be viewed as a reaction against the work of Islamization accomplished by the Qarakhanids" (*L'Empire des steppes*[4], Paris 1952, 221).

As for the Ḳarā Khiṭāys' own religion, we can glean very little from the sources. Ibn al-Athīr, xi, 55, calls the first Gür-Khān a Manichaean. Muslim writers usually, however, simply call them "idolaters", but we may surmise that Buddhism, which had overlaid the original shamanism of the Ch'i-tan in China, was widespread amongst them.

One may accordingly say that the receptiveness of the Ḳarā Khiṭāy environment to differing cultural and religious traditions, and the consequent encouragement of the flowering of these traditions under the dynasty's relaxed rule, constitutes a certain achievement in human civilization, one which anticipates the better side of the succeeding *pax mongolica*. Thus the Chinese connections of the Ḳarā Khiṭāy probably facilitated the journeyings of Muslim traders into Mongolia and perhaps even as far as northern China. Acts of violence and oppression towards the subject

peoples can never have been wholly absent, and these may have increased towards the end of their rule. Yet our admittedly fragmentary knowledge of the trends of the period allows us to go some way with Marquart's approbation of Ķarā Khiṭāy culture (*Über das Volkstum der Komanen*, 209), and to regard Barthold's dismissal of the achievements of the dynasty as negligible (*Histoire des Turcs d'Asie centrale*, 98-9) as unduly harsh.

The chronology of the line of Ķarā Khiṭāy Gür-Khāns can be pieced together from the *Liao Shih* and from odd items of information in the Islamic sources (*e.g.*, the recording by Ibn al-Athīr, xi, 57, of the first Gür-Khāns's death in Rajab 537/Jan.-Feb. 1143). In his standard *Manuel de généalogie et de chronologie pour l'histoire de l'Islam*, Zambaur made no attempt to deal with the Ķarā Khiṭāy, although Marquart, *op. cit.*, 237-8, had given a substantially correct list of their rulers. After the death of the original Gür-Khān Yeh-lü Ta-shih (1124-43), his widow T'a-pu-yen (named in Djuwaynī-Boyle, i, 356, as Kuyan, honorific title Kan-t'ien, regnal title Hsien-ch'ing) reigned 1144-50. There succeeded the Gür-Khān Yi-lieh, regnal title Shao-hsing (1151-63); and finally the last Gür-Khān, Yi-lieh's younger son Chih-lu-ku (1178-1211, d. 1213). The fact that the Karā Khiṭāy dominions were ruled by women for two out of these five reigns is significant evidence for the matriarchal trend in Ķarā Khiṭāy society; in China proper, the Liao empress-dowagers had traditionally wielded great influence in the state. See on these questions of chronology, Wittfogel and Fêng, 620-1, 627 ff.; 672.

The Khwārazm-shāhs from Il Arslan (551/1156 567/1172) onwards endeavoured at various times to throw off the yoke of the Ķarā Khiṭāy, but their withholdings of tribute were normally followed by Ķarā Khiṭāy invasions which re-asserted their overlordship. The Shāh Tekish (567/1172-596/1200) owed his throne to the help of the Gür-Khān Yeh-lü's son-in-law Fuma, but he later renounced his allegiance, adducing the oppressiveness of the Ķarā Khiṭāy tax-collectors and raising the banner of *djihād* against the infidels; in the words of Ibn al-Athīr, xi, 248, he rebelled "out of zeal for the dignity of his throne and for the faith". The Ķarā Khiṭāy in turn now supported Tekish's younger brother and earlier rival for the throne, Sulṭān Shāh, and helped him to seize several towns in northern Khurāsān (576/1181). In the last decades of the 6th/12th century and the opening years of the 7th/13th century, the Ķarā Khiṭāy aided Tekish and his son and sucsessor ʿAlāʾ Al-Dīn Muḥammad in their rivalry with the Ghūrids of Afghānistān [*q.v.*]; thus in 594/1198 the Gür-Khān sent an army across the Oxus to recover the vassal city of Balkh from the Ghūrids; the Ķarā Khiṭāy were, however, defeated, and this led to recriminations between them and the Khwārazm-Shāh.

After his eventual crushing of the Ghūrids, ʿAlāʾ al-Dīn Muḥammad had ambitions to extend Khwārazmian control over the whole of Transoxania and to reduce the last vestiges of Ķarakhānid rule there. This necessarily involved clashing with the Ķarā Khiṭāy suzerains of the province. A general revolt flared up in eastern Turkestan amongst the Gür-Khāns' Muslim vassals, and it was on the crest of these disorders that the Nayman Mongol Küčlüg rose to power there after his flight westwards before Čingiz Khān [*q.v.*]. The last Ķarakhānid ruler in Samarķand, ʿUthmān Khān b. Ibrāhīm (600/1204-608/1212), attempted to throw off Ķarā Khiṭāy control, offended by the Gür-Khān's refusal to grant him the hand of a daughter in marriage; but he had his capital temporarily occupied by a Ķarā Khiṭāy force (probably in 606/1209-10), and the marriage in fact later took place. ʿUthmān Khān then allied with the Khwārazm-Shāh to defeat the Ķarā Khiṭāy near Talas in 607/1210, and although the Gür-Khān defeated Küčlüg, the appearance of a Mongol force under Čingiz's general Ķubilay Noyan compelled him to come to terms with Küčlüg (608/1211) and to surrender; he remained as nominal ruler only, and died two years later. Thus for a brief while, before the arrival of Čingiz in the west, the Ķarā Khiṭāy dominions were partitioned between the fiercely anti-Muslim Küčlüg in Kāshgharia and the Semirečye, and the Khwārazm-Shāh in Transoxania. The remaining members of the Ķarā Khiṭāy horde must have been caught up in the armies of the Mongols.

However, their rule was perpetuated indirectly in one corner of the eastern Islamic world. Shortly after the collapse of 608/1211, one of the Ķarā Khiṭāy commanders called Baraķ Ḥādjib entered the service of the Khwārazm-Shāhs and eventually founded the principality of the Ķutlugh-Khānids in Kirmān; see BURĀĶ ḤĀDJIB, Zambaur, *Manuel*, 237, and Wittfogel and Fêng, 626, 655-7.

Bibliography: The chief Muslim sources include Ibn al-Athīr. Djuwaynī and the standard Saldjūķ sources (*e.g.*, Rāwandī, Bundārī) for the establishment of Ķarā Khiṭāy power in Transoxania, and Djuwaynī again and Djūzdjānī for the later phases. Some of the relevant Chinese sources were translated in E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, London 1910, i, 208-35, but the Chinese sources are utilized directly by K. A. Wittfogel and Fêng Chia-Shêng, *History of Chinese society: Liao (907-1125)*, in *Trans. American Philisophical Society*, N.S. xxxvi (Philadelphia 1946), 619-74.

ĶARĀ KIRGIZ [see KIRGIZ].

ĶARĀ-KÖL (Turkish "black lake"), ĶARAKUL, the name of various lakes in Central Asia and of a modern town in the Uzbek SSR.

The best-known lake is that lying at the western extremity of the Zarafshān River in Soghdia (modern Uzbekistan), midway between Bukhārā and Čardjūy (mediaeval Āmul-i Shaṭṭ, see ĀMUL. 2). The basin in which it lay was known as the Sāmdjan basin, see Iṣṭakhrī, 315, and Ibn Ḥawķal, ed. Kramers, 485, tr. Kramers and Wiet, 466. In Narshakhī's *Taʾrīkh-i Bukhārā*, ed. Schefer, 17, tr. Frye, 19, the lake is given both the Turkish name of Ķarā-Köl and the Iranian one of Bārgīn-farākh "extensive basin", and is said to have been 20 *farsakhs* long by one *farsakh* wide.

In history, this lake has been identified with the *ķara köl* mentioned in the Old Turkish Orkhon inscriptions (8th century), Kültigin N 2, where it is described as the scene of a battle between the Tiukiu or Eastern Turks under the prince Kültigin and the rebellious Az people (possibly the Türgesh), cf.

V. Thomsen, *Alttürkische Inschriften aus der Mongolei*, in *ZDMG*, lxxvii (1924), 154, and T. Tekin, *A grammar of Orkhon Turkic*, Bloomington, Indiana 1968, 270. The lake was a celebrated wintering-place for migrating wildfowl, and therefore much frequented by hunters and fishermen. The Mongol princes Čag̲h̲atay and Ögedey wintered there in 619-20/1222-3 (D̲j̲uwaynī-Boyle, i, 140), and the Tīmūrid Ulug̲h̲ Beg apparently hunted there periodically (Barthold, *Ulugh-Beg*, in *Four studies on the history of Central Asia*, tr. T. and V. Minorsky, ii, 134). After the Tsarist Russian conquest of the K̲h̲ānate of Buk̲h̲ārā in the late 19th century, a Fort Karakul was built to command the Čārd̲j̲ūy-Buk̲h̲ārā road, and a modern town has now grown up there.

The steppelands and pastures of the Ķarā-Köl basin are especially famed as the original habitat of the Karakul breed of sheep, whose lambs produce a glossy, tightly-curled, rich black fur, commercially known as Persian lamb, and used for making Astrakhan fur; the full-grown sheep produce dark-coloured wool for carpet making. The Soviet Central Asian republics, Afghanistan and Persia are today important breeders of this sheep and exporters of its fur.

Other lakes with this toponym of Ķarā-Köl are found in the Pamirs (Tadzhik SSR) and in the mediaeval region of Semirechye near the Isik-Köl (cf. Barthold, in *Four studies*, i, 88, 91).

Bibliography: In addition to the references given in the article, see Barthold, *Turkestan down to the Mongol invasion*[3], 118, 455; Marquart, *Wehrot und Arang*, 81, 85; *Ḥudūd al-ʿālam*, tr. Minorsky, 302. (C. E. Bosworth)

ĶARĀ-ĶOYUNLU, Turkish dynasty which ruled over parts of Eastern Anatolia, ʿIrāķ, al-D̲j̲azīra, and most of Iran, also known as the Barānī (Bārānlu). It is not known why the dynasty was given this name. The Ķarā-Ķoyunlu tribe was undoubtedly a sub-tribe (*oba*) of the Og̲h̲uz. Minorsky's claim that this sub-tribe belonged to the Yıwa is probably true (*The Clan of the Qara Qoyunlu rulers*, in *Köprülü Armağanı*, Istanbul 1953, 391-5). The political achievements of the dynasty led many tribes to enter the service of the Ķarā-Ķoyunlu, notably the Saʿdlu (Nak̲h̲d̲j̲ivān region), the Duk̲h̲arlu (Erzurum-Bayburt region), the Alpag̲h̲ut and Ag̲h̲ač Eri (Marʿash region), the Baharlu (Hamadān region during the reign of D̲j̲ihān S̲h̲āh), the Ķarāmānlu (Gand̲j̲a and Bardaʿa region), the D̲j̲ākirlu (Ardabīl region) and the Āyīnlu. Besides these, a large community known as Ķarā Ulus was also subject to the Ķarā-Ķōyunlu. Subsequently, these tribes took service with the Aķ-Ķoyunlu and later with the Ṣafawids. During the Mongol period, the Ķarā-Ķoyunlu's winter quarters were in the Mosul region, and their grazing grounds in the Van region (probably Ard̲j̲is̲h̲), and they were subject to the Uyrat. When the Sutaylī occupied most of the eastern and south-eastern Anatolian territories belonging to the Uyrat in 737/1337, the Ķarā-Ķoyunlu became their vassals. Pīr Muḥammad of the Sutaylī was killed in 751/1350 by Ḥusayn Beg, son of Tay Bug̲h̲a, one of his amīrs, who succeeded to his position. However, before long, he too was killed by Amīr Bayram K̲h̲ōd̲j̲a (752/1351), the man who was responsible for bringing the Ķarā-Ķoyunlu on to the stage of history. Although he failed to capture Mosul from Ordu Bug̲h̲a, Ḥusayn Beg's nephew, he succeeded in assuming the leadership of the group without much difficulty. Before long, however, Bayram K̲h̲ōd̲j̲a did capture Mosul, where he appointed Berdi K̲h̲ōd̲j̲a, his brother, as governor. Bayram K̲h̲ōd̲j̲a, like the Diyārbakr governors of the Mongols, lived in the Mosul area in winter and moved to the Mus̲h̲-Ak̲h̲lāṭ region, and sometimes to Erzurum, in summer. Most of the local dynasties in the above-mentioned regions had been made either his allies or vassals, but although defeated, Malik Manṣūr, the Artuķid ruler of Mārdīn, refused to recognize Bayram K̲h̲ōd̲j̲a's suzerainity, and complained to Sulṭān Uways, the D̲j̲alāyir ruler, about him. Thereupon Sulṭān Uways left Bag̲h̲dād in the spring of 767/1366, took Mosul from Berdi K̲h̲ōd̲j̲a, and after passing the month of Ramaḍān in Mārdīn, marched against Bayram K̲h̲ōd̲j̲a, who was with his forces on the plain of Mus̲h̲. Defeating the amīr of the Ķarā-Ķoyunlu there, Sulṭān Uways went to Tabrīz by way of Ķarā Kilise (Ağrı). After this defeat, Bayram K̲h̲ōd̲j̲a seems to have become one of the tribute-paying vassals of Uways. Nevertheless, the Ķarā-Ķoyunlu beg continued his activities by besieging Mosul, which probably belonged to Uways, in 773/1371, and by capturing Sind̲j̲ār in the next year.

When the D̲j̲alāyīrid ruler died in the same year (744/1372), Bayram K̲h̲ōd̲j̲a severed his ties of vassalage, and, taking advantage of the situation, added Sürmeli, Ala Kilise, K̲h̲oy, Nak̲h̲d̲j̲ivān and some other places to his territory. However, S̲h̲ayk̲h̲ Ḥusayn, successor to Uways, and particularly ʿĀdil Āķā, who held the real power, were not prepared to overlook his activities, and the Ķarā-Ķoyunlu accepted vassalage under lighter conditions (779/1377). When Bayram K̲h̲ōd̲j̲a died in 782/1380, the territory extending from Mosul to Erzurum was directly subject to the Ķarā-Ķōyunlu.

Bayram K̲h̲ōd̲j̲a was succeeded by his nephew Ķarā Meḥmed, an energetic and capable amir. He gained an overwhelming victory against the D̲j̲alāyīr army, which met him near Nak̲h̲d̲j̲ivān in 784/1382 under the command of S̲h̲ah-zāda S̲h̲ayk̲h̲ ʿAlī of the D̲j̲alāyīrs and Pīr ʿAli Bār Beg. Both the D̲j̲alāyīr prince and the other commander were killed in the battle. This victory increased Ķarā Meḥmed's status, and secured the D̲j̲alāyīr throne for Aḥmad, who probably married Ķarā Meḥmed's daughter after this event. His vassalage to the D̲j̲alāyīrs came to an end with the murder of Sulṭān Ḥusayn. After a series of successes—forcing the ruler of D̲j̲aʿbar, Döger Sālim Beg, to take refuge with the Mamlūk sultan for robbing the pilgrims of Mosul; besieging Mārdīn; defeating Malik ʿĪsā of the Artuķids and marrying his daughter; defeating the Aķ-Ķoyunlu with their ally Muṭahhar, the ruler of Erzind̲j̲an, and compelling them to enter the service of Ķāḍī Burhān al-Dīn—Ķarā Meḥmed defended his country heroically against the attacks of Tīmūr in 789/1387. In fact, taking advantage of Tīmūr's return to Transoxania, he captured Tabrīz the next year. After leaving troops to guard Tabrīz, returning to eastern Anatolia, he was faced with the opposition of Pīr Ḥasan Beg, one of the amīrs in his service. Pīr Ḥasan was the son of Ḥusayn Beg, who had been killed by Bayram K̲h̲ōd̲j̲a, and he had distinguished himself particularly in the battles with Tīmūr. Encouraged by this, and determined to avenge his father, he severed his ties of allegiance to Ķarā Meḥmed and attempted to capture his principality. His venture was successful; in a battle (Rabīʿ II 791/April 1389) Pīr Ḥasan killed Ķarā Meḥmed and seized the principality. According to some Mamlūk historians (Ibn al-Fūrāt, al-ʿAynī) Pīr Ḥasan (Ķarā Ḥasan in their works) was Ķarā Meḥmed's nephew, but this is not confirmed by other sources.

GENEALOGY OF THE ḲARĀ-ḲOYUNLU

- Türemish
- I. BAYRAM KHŌDJA (d. 1380)
  - Tatar Khātun
  - II. ḲARĀ MEḤMED (d. 1389)
    - Bayram (d. 1389)
    - Mīsr Khōdja
      - Ḳilīdj Arslan
      - Sulṭān Aḥmad
      - Ghazan
    - III. ḲARĀ YUSUF (d. 1420)
      - Abū Saʿīd
      - 1. Shāh Meḥmed (d. 1434) (ruler of Baghdād)
        - Shāh ʿAlī
        - Shāh Rukh
        - Shāh Budak
        - Shāh Walī
        - Shāh Malik
        - Karamān
        - Kamar al-Dīn
      - Pīr Budak (d. 1418)
      - 2. Iṣfahān (d. 1445) (ruler of Baghdād)
        - 3. Fulad (ruler of Baghdād)
      - IV. ISKANDAR (d. 1438)
        - Arayish Begim (Daughter)
        - Shāh Saray (Daughter)
        - Uruk Sulṭān (Daughter)
        - Shāh Kubād (d. 1438)
        - Elvend (d. 1457)
        - Ḳāsīm
        - Esed
        - Meḥmed
        - Rüstem
        - Tarhan Malik
        - Hüseyn ʿAlī (d. 1468)
        - Yār ʿAlī (d. 1449)
      - V. DJIHĀN SHĀH
        - Farrukhzād
        - Abūl-Ḳāsīm (d. 1468)
        - Abū Yūsuf (d. 1469)
        - Muḥammadī (d. 1467)
        - Pīr Budak (d. 1466)
        - VI. ḤASAN ʿALĪ (d. 1469)
      - Daughter (Wife of Ṣāliḥ of the Artuḳids)
      - Daughter (Wife of Shams al-Dīn, ruler of Bidlīs)
    - Yār ʿAlī (d. 1403)
      - Zaynal
        - 5. Shāh Manṣūr (d. 1469) (ruler of Baghdād)
        - Bayram Beğ (d. 1469)
        - 4. Hüseyn ʿAlī (d. 1469) (ruler of Baghdād)
    - Pīr ʿAlī
      - Mīrzā ʿAlī (d. 1437-8)
        - Belkīs Pasha (d. 1437-8)
- Mīsr Khōdja
- Berdi Khōdja
  - Yār ʿAlī

Pīr Ḥasan Beg's rule did not last long, and an important part of the Ķarā-Ķoyunlu Turcomans gathered round Mīṣr Khōdja, one of the sons of Ķarā Meḥmed, and continued the struggle. But it soon became apparent that Mīṣr Khōdja was a man of weak character, and he was replaced by his brother Ķarā Yūsuf. The bitter fighting between Ķarā Yūsuf and Pīr Ḥasan led to heavy losses on both sides. Finally, Döger Sālim Beg intervened and stopped the hostilities. Although the death of Pīr Ḥasan (793/1391) saved Ķarā Yūsuf from his enemy, shortly afterwards he had to resume fighting with his son Ḥusayn Beg. The rule of Ķarā Yūsuf coincided with the expansion of Tīmūr's operations in the Middle East. Like his father, Ķarā Yūsuf opposed Tīmūr and tried to defend his country against his attacks. Taking advantage of Tīmūr's departure, he captured Tabrīz several times, and took prisoner Atlamīsh, governor of Awnik and one of Tīmūr's commanders, and sent him to Egypt (797/1395). However, when Tīmūr started invading Anatolia, Yūsuf Beg was obliged to take refuge with Bāyezīd I [*q.v.*] (802/1400). In fact, Bāyezīd's offer of shelter to the Ķarā-Ķoyunlu Beg was one of Tīmūr's pretexts for opening hostilities against the Ottoman ruler. When Tīmūr entered Ottoman territory, Ķarā Yūsuf left Anatolia (805/1402) and went to ʿIrāķ, where he helped Sulṭān Aḥmad to suppress his son's revolt, but upon Sulṭān Aḥmad's failure to keep his word, he attacked Baghdād (805/1403). Defeated in battle by the superior forces of Tīmūr's grandsons, he went to Damascus by the desert route. Ķarā Yūsuf and Djalāyīr Aḥmad were imprisoned in Damascus on the order of the Mamlūk sultan, who sentenced them to death shortly afterwards, but Shaykh, the governor of Damascus, ignored his command.

The Mamlūk sultan's treatment of the refugees was due to pressure exerted by Tīmūr. Before returning to his homeland for good, Tīmūr wanted to be sure that these two minor enemies of his, particularly Ķarā Yūsuf, would not give his commanders and grandchildren any trouble in the future. In fact, if Sharaf al-Dīn ʿAlī's words are true, Tīmūr said to Amīr Doladay, commander of the fortress of Awnik, who had come to bid him farewell: "Don't worry about Djalāyīr Sulṭān Aḥmad, because he has been assimilated by the Tadjiks; but watch Ķarā Yūsuf closely, because he is a Turcoman". The refusal of Shaykh, governor of Damascus, to carry out the order for their execution had nothing to do with protecting the honour of the Mamlūk state, but was the outcome of his own political aims. He released the prisoners, supplying them with provisions in 807/1405, by which time Tīmūr had returned to Samarķand.

Shaykh, accompanied by Ķarā Yūsuf, advanced on Cairo. Although he won the first battle, in which he followed the advice of the Ķarā-Ķoyunlu Beg, he suffered defeat in a second, because most of his amīrs had defected, and he was forced to return to Damascus with a small force, consisting mainly of the Turcomans of Ķarā Yūsuf (807/1405). Ķarā Yūsuf returned to his homeland in eastern Anatolia at the beginning of the next year, contrary to the wish of Shaykh. Shams al-Dīn, amīr of Bidlīs, provided him with all the supplies he needed. That ʿUmar and Abū Bakr Mīrzā, grandsons of Tīmūr, who had been appointed rulers over Ādharbāydjān, Arrān, ʿIrāķ-i ʿArab and eastern Anatolia, were incompetent administrators and rivals, was a fortunate circumstance for the Ķarā Ķōyunlu beg. By his victories over ʿIzz al-Dīn Shīr, amīr of Van and Hakkārī, and Doladay, who was made the commander of the fortress of Awnik by Tīmūr, he regained his territories in eastern Anatolia (809/1406). His victories over Abū Bakr Mīrzā, Tīmūr's grandson, first in the Nakhdjivān area (2 Djumādā I 809/15 Oct. 1406) and later at Sard Rūd near Tabrīz (16 Dhu'l-Ķaʿda/13 April 1408) secured Ādharbāydjān. He followed this by capturing Sulṭāniyya and Hamadān, then internationally important commercial centres. Ķarā Yūsuf's unexpected successes aroused the envy of the Djalāyīr Sulṭān Aḥmad and many other amīrs, especially as it was mainly as a result of his achievements that Sulṭān Aḥmad became the ruler of ʿIrāķ-i ʿArab and Khūzistān. What is more, when in prison in Damascus, they had agreed that Ādharbāydjān be given to the Ķarā-Ķōyunlu and ʿIrāķ-i ʿArab to Sulṭān Aḥmad. In fact, the Djalāyir ruler had become the adopted father of Pīr Budak, Ķarā Yūsuf's son born in Damascus. A battle fought between these two former allies at the village of Asad near Tabrīz (28 Rabiʿ II 813/30 August 1410) ended in the defeat and capture of Sulṭān Aḥmad, who was later put to death. His territories in ʿIrāķ-i ʿArab were incorporated into the lands of the Ķarā-Ķoyunlu, under the command of Shāh Meḥmed, Ķarā Yūsuf's son. His other son, Pīr Budak, was declared sultan of the Ķarā-Ķōyunlu (814/1411). Letters bore the title *Sulṭān Pīr Budak Khān yarlīghīdīn ... Abū Naṣr Yūsuf Bahādur Noyan sözümüz*, and copper and silver coins were struck to commemorate the event.

Ķarā Yūsuf's successive achievements were watched with growing concern by Shāh Rukh, the Čaghatayid ruler and Shaykh, the ruler of Egypt. In a short space of time, he had leapt from the modest level of a tribal chief to the exalted position of ruler of a large country. From around this time onwards, Shah Rukh in particular encouraged Karā Yülük ʿOthmān, the Aķ-Ķōyunlu ruler of Āmid, Urfa and Kamakh, the Shīrvān-Shāh Shaykh Ibrāhīm and others, in hostility towards Ķarā Yūsuf. The alliance of the Shīrvān-Shāh Shaykh Ibrāhīm with Arlat Sayyidī Aḥmad, the ruler of Shakī, and Köstendil (Constantine), the Georgian king, against the Ķarā-Ķoyunlu ruler, was also related to this situation. But in a battle fought on the banks of the river Kür, they were heavily defeated (Ramaḍān 814/December 1412); while Shaykh Ībrahīm managed to save himself by paying a heavy ransom, the Georgian king was put to death.

The Ķarā-Ķoyunlu territory in Anatolia covered the Erzindjān area in the north, and the Mārdīn area in the south. Ķarā Yūsuf had captured Erzindjān from Shaykh Ḥasan, grandson of Muṭahhar (813/1410), and Mārdīn from Malik Ṣāliḥ of the Artuķids (812/1409). However, the Ķarā-Ķoyunlu border could be extended no further in that direction because of the resistance of Ķarā Yülük ʿOthmān Beg of the Aķ-Ķoyunlu. Although Ķarā Yūsuf defeated this stubborn enemy many times, and even forced him to take refuge with the Mamlūks, he was never able to subdue him. Besides this, Ķarā Yūsuf's trespassing into Mamlūk territory in an effort to catch Ķarā Yülük, and the plunder and destruction he caused there, gave rise to hostilities between the two states. Deeply concerned that Ķarā Yūsuf, whom he knew well, would some day be a cause of serious danger, Shaykh felt compelled to support the Aķ-Ķoyunlu Beg secretly. Returning to Mārdīn from Mamlūk territory (November-December 1418), Ķarā Yūsuf met with an unexpected disaster, the death of his favourite son Pīr Budak; his death was

a source of deep sorrow to his father, who had returned to Tabrīz. Shaykh could not forget the destruction wreaked on his territory by the Ķarā-Ķoyunlu and the threatening letter he had received from Ķarā Yūsuf and started preparing for war, although he was suffering from gout at the time and had to be carried. When he received the news of Shāh Rukh's attack on Ķarā Yūsuf, he cancelled his war preparations.

Shāh Rukh, who had brought under his rule the great part of the empire founded by his father Tīmūr, would not tolerate Ādharbāydjān, and in particular, a part of ʿIrāķ-i ʿAdjam, remaining under the rule of Ķarā Yūsuf. He had already made a number of attempts to crush him in 812/1409 and 817/1414, but had not been able to carry these through because of family squabbles. Peace negotiations came to nothing. Shāh Rukh demanded that Ķarā Yūsuf return the cities of Sulṭāniyya and Ķazwīn and agree to be his vassal. The Ķarā-Ķoyunlu ruler refused, and set out from Tabrīz, his capital, to meet the Čaghatayid ruler. The news terrified the Čaghatayid army of 200,000 horsemen, although Ķarā Yūsuf's forces consisted of 50,000 horsemen at the most. As the historian Ḥāfiẓ-i Abrū noted, everyone from the Čaghatayid ruler down to the lowest-ranking soldier was doubtful of victory. Their fears turned to joy at the news of the death of the Ķarā-Ķoyunlu ruler. In fact, Ķarā Yūsuf had become seriously ill on his departure from Tabrīz, but had insisted on being carried on a stretcher. His condition worsened when he was two leagues from Udjan, and he died soon after (7 Dhuʾl-Ķaʿda 823/13 November 1420).

Ķarā Yūsuf's greatness transformed the Ķarā-Ķoyunlu dynasty. When he returned home in 807/1405, he and his retinue were in a miserable state, but at his death he left his successors a large country extending from Erzindjān to Ķazwīn and from Shīrvān to Baṣra. He was buried at Ardjish, but the site of his lavishly-constructed tomb and *zāwiya* has not been found.

The panic caused by the death of their ruler and the arrival of the Čaghatayid army was short lived. Most of the Ķarā-Ķoyunlu rallied around Iskandar, one of Ķarā Yūsuf's sons, who was known for his bravery. Iskandar defeated Ķarā Yülük of the Aķ-Ķoyunlu, who had attacked Mārdīn (Rabīʿ II 824/April 1421). This victory caused dismay among the forces of Shāh Rukh, then camped along the river Aras, but it raised the morale of the Ķarā-Ķōyunlu so much that they started preparing an army of 30-40,000 men for battle with Shāh Rukh on the Alashgird plain between Erzurum and Agrī. Knowing that elephants were employed in the Čaghatayid army, they trained their horses against elephants made of mud. Shāh Rukh would have preferred not to cross the shores of Lake Van and to return to Ādharbāydjān, but on the request of Ķarā Yülük and some local amīrs he resolved to march against the Ķarā-Ķoyunlu. The three-day battle (29-30 Radjab and 1 Shaʿbān 824/30-31 July and 1 August 1421) fought on the Alashgird plain ended in victory for Shāh Rukh thanks to the numerical superiority of his forces. He could not, however, find anybody among his sons, amīrs or others, worthy to be appointed as governor of Ādharbāydjān (which made him an object of satire by some poets); no-one would accept the position for fear of Iskandar. The Čaghatayid ruler therefore returned to Khurāsān, leaving Ādharbāydjān to its former owners. Although Tabrīz was occupied by Iṣfahān, brother of Iskandar, who had commanded the left flank of the Ķarā-Ķōyunlu army in the battle of Alashgird, he evacuated the city and withdrew to the Pasin plain when he heard that Iskandar was on his way. Some time later he went to seek his fortune in ʿIrāķ-i ʿArab.

Iskandar spent the years 825/1422 and 827/1424 punishing the amīrs of Hakkārī and Bidlīs who had betrayed him by becoming vassals to Shāh Rukh, and annexing Van, Akhlāṭ and Mush. Attacking the Shīrvān Shāh Khalīl Allāh, one of the vassals of Shāh Rukh, in 831/1428, he plundered his territory, and in the next year captured Sultāniyya, Zandjān, Ķazwīn and Abhar, which were subject to Shāh Rukh. Concerned at these exploits, the Čaghatayid ruler marched into Ādharbāydjān with a large army. A two-day battle (17-18 Dhuʾl-Ḥidjdja 832/17-18 September, 1429) fought at Salmas ended in a Čaghatayid victory. In spite of this, Shāh Rukh realized that he would never be able to wipe out the Ķarā-Ķoyunlu; he therefore appointed Abū Saʿīd, the youngest son of Ķarā Yūsuf, as amīr of Ādharbāydjān and returned home in the spring of 833/1430. Before long, Iskandar seized his brother and put him to death. His relationships with his other brothers were also strained. Shāh Meḥmed had broken off relations with his family after he had become ruler of Baghdād, while Iṣfahān, refusing to be subject to Iskandar, went to ʿIrāķ-i ʿArab and captured one by one the cities in the territory of the ineffective and foolish Shāh Meḥmed. Finally capturing Baghdād in 836/1433, he effectively robbed his brother of all his lands. As for Djihān, whose fief was around Lake Van, he resented his brother's hostile attitude towards him. Through opening hostilities against his brother in 837/1433-34, he became, like Iṣfahān, a vassal of Shāh Rukh. The acquisition of these two vassals prompted Shāh Rukh to carry out the third Ādharbāydjān expedition, despite the opposition of most of his amirs, allied to the bitter complaints of the Shīrvān Shāh, whose territories had been devastated (838/1434). Iskandar probably knew nothing definite of Djihān Shāh's action.

Calling Djihān Shāh to his presence at Rayy in 838/1434, Shāh Rukh declared him the head of the Ķarā-Ķoyunlu and sent a large army against Iskandar. Withdrawing towards Erzurum, Iskandar met the forces of Ķarā Yülük ʿOthmān of the Aķ-Ķoyunlu, defeated him in a bloody battle, and took refuge in Ottoman territory when pursued by the forces of the Tīmūrids. Iskandar probably thought that he could deal with Djihān Shāh as easily as he did with Abū Saʿīd, but he suffered defeat near Tabrīz (841/1438) and took shelter in the impregnable fortress of Allndjak, which housed his family and treasury. Besieged by Djihān Shah, Iskandar could hope only for military aid from Egypt, but the news of the death of Sulṭān Barsbāy was received at Erzindjān and the Egyptian force returned. Iskandar was murdered one night by his son Shāh Kubād (841/1438). He was one of the most courageous rulers of his time, and few were able to withstand him. It was mainly through his courage that he was able to rule his country for 18 years. However, he was devoid of political wisdom, a deficiency which led to the destruction of his lands, the misery of his people, and the sad end of his reign.

During the reign of Djihān Shāh (843-72/1439-67), the Ķarā-Ķoyunlu territory grew into a large empire and enjoyed its most brilliant phase. On the death of Iṣfahān in 848/1445, Djihān Shāh annexed ʿIrāķ-i ʿArab (849/1446), and taking advantage of the death

in 850/1447 of Shāh Rukh, whose vassal he was, he attacked the cities of Sulṭāniyya and Ḳazwīn. Not content with these victories, he later took the cities of Rayy and Iṣfahān and the regions of Fārs and Kirmān. Although his Khurasān expedition failed, mainly because of the revolt of his son Ḥasan ʿAlī in 862/1458, he signed a treaty of firm friendship with Abū Saʿīd of the Tīmūrids, and thereby obtained confirmation of his sovereignty over the territories he had gained from the Čaghatayid. Djihān Shāh had reached the height of his achievements, and was the bearer of such titles as *khān*, *khāḳān* and *sulṭān*. During his reign, the Ḳarā-Ḳoyunlu territory had become one of the major Islamic powers. Parallel to his renown as a ruler, the political, military and administrative organization of his state also reached a high level of development. Culture and learning were encouraged by Djihān Shāh, who was also a great builder. A highly cultured man, he wrote poems in Turkish and Persian under the pseudonym of *Ḥaḳīḳī*.

Djihān Shāh's expedition against Uzun Ḥasan Beg of the Aḳ-Ḳoyunlu ended in disaster through his own carelessness. He and his son Muḥammadī were killed, while another son, Yūsuf, was blinded (872/1467). His son Pīr Budak had been put to death earlier (870/1466) for rising against his father. His son Ḥasan ʿAlī, who was in prison, was therefore placed on the Ḳarā-Ḳoyunlu throne. Deficient in intelligence and weak in character, he could not hope to hold out against Uzun Ḥasan Beg. In fact, he was defeated by him at Marand, and had to take refuge under Abū Saʿīd, whom he had called to his aid. When Abū Saʿīd was also defeated, Ḥasan ʿAlī fled towards Hamadān, but killed himself when he realized that he could not avoid capture (Shawwāl 873/April 1469). Although his brother Yūsuf, who had been blinded, was taken to Fārs and placed on the throne by the begs of the Bahārlu, he was put to death by Ughurlu Meḥmed, son of Uzun Ḥasan Beg, in 874/1469. In that year all the Ḳarā-Ḳoyunlu territories passed into the hands of the Aḳ-Ḳoyunlu, and Ḳarā-Ḳōyunlu power virtually came to an end.

The organization of the Ḳarā-Ḳoyunlu state was a continuation of that of the Djalāyīrids. The fact that the last members of the dynasty, as well as some tribal begs, had such names as Yār ʿAlī, Pīr ʿAlī, Ḥasan ʿAlī, Ḥusayn ʿAlī and ʿAlī Sheker may be taken as evidence of the existence of a tendency towards Shīʿism among the Ḳarā-Ḳoyunlu. Moreover it is said that Iṣfahān (Ispend) had coins struck on behalf of the Twelve Imāms. On the other hand, the names of the Four Caliphs appear on the coins belonging to the reign of Djihān Shāh, and no contemporary historian has any record of his having had any inclinations towards Shīʿism. The tombstones carved in the form of rams that can now be seen in eastern Anatolia and Iran were normally erected in memory of men famed for their bravery and gallantry; some of these tombstones certainly belong to the Ḳarā-Ḳoyunlu.

ḲARĀ-ḲUM [see Ḳaraḳum]

ḲARĀ MAḤMŪD PASHA, Ishḳodralī, Bushatlī (*ca.* 1155-1211/1742-96), and important representative of the powerful north Albanian *aʿyān* family of the Bushatlī (Turkish: Budjatlī), which achieved local prominence in the mid-12th/18th century as holders of large *muḳāṭaʿāt*. This family was able, between 1163/1750 and 1247/1831, to maintain itself in control of the *sandjāḳ* of Ishḳodra (Iskenderiye, Scutari, Skadar, the present Shkodër) and the surrounding territories as a hereditary quasi-principality.

The origins of the Bushatlī remain debatable: amongst other traditions, that of their alleged descent from Stanisha, the rebellious brother of the *vladika* Gjuragj, who, in the aftermath of the battle of Ljeshkopolje (865/1461), settled in the village of Bushat, may be balanced by a claim (unsubstantiated) to a Venetian origin, while Ḳarā Maḥmūd ascribed to himself, at a critical point in his career (1201/1787), descent from Skanderbeg. Be that as it may, from the later 9th/15th until the end of the 11th/17th century, the Bushatlī are found as *sandjāḳ-beyis* of Ishḳodra. For example, *ca.* 1015/1604 a certain Ṭāhir Bey Bushatlī is found engaged as an auxiliary of the pasha against the Klimenti. After a period of confusion during the first half of the 12th/18th century, Ghāzī Meḥmed Pasha, the restorer of Bushatlī power in Ishḳodra, and the founder of their fortunes as *aʿyān*, succeeded from *ca.* 1163/1750 in eliminating all opposition to his rule. On his death (15 Djumādā ʾl-awwal 1189/14 July 1775 —not, as commonly stated, in 1184/1770 or 1193/1779, or, as stated in *EI*² i, 657, in 1211/1796), power passed briefly to his eldest son, Muṣṭafā, and then (1190/1776) to his second son, Maḥmūd, who came rapidly to exercise "presque impunément une autorité souveraine dans ce pays" (Capriate, Venetian consul at Durazzo (Durrës), 1782).

As *sandjāḳ-beyi* of Ishḳodra, with the honorary rank of *mīrmīrān*, Ḳarā Maḥmūd Pasha found it possible to profit from the internal weakness of the Ottoman state and its involvement in successive wars with Russia and Austria, by reducing to obedience much of northern and central Albania, and engaging in incessant warfare with, *e.g.*, Okhrīlī Aḥmed Pasha to the east and the much better-known Tepedelenli ʿAlī Pasha to the south. With the *wālīs* of Bosnia, to the north, Ḳarā Maḥmūd Pasha also came into conflict, establishing his control over the fortresses of Podghoridja (Podgorica) and Ishpuzi (Špuz). Internally, he consolidated his power by an alliance with the highland Malisors and by an economic policy of encouraging trade—especially Venetian trade—through Ishḳodra. Like his father, he drew considerable financial advantage from this commerce.

It was believed in Istanbul—and possibly with reason—that the authority of the *ḳāḍīs* had lapsed and that the *Sharīʿa* was no longer enforced in the territories under Ḳarā Maḥmūd Pasha's control. The Porte, accordingly, declared him a rebel, sending (1199/1784-5) an expedition under the *kapudan pasha* Djezāʾirli Ḥasan Pasha [*q.v.*]; Ḳarā Maḥmūd Pasha was forced to surrender, but was pardoned and reinstated as *sandjāḳ-beyi* of Ishḳodra. Shortly afterwards (1785) he invaded Montenegro, and at the same time began to intrigue with Austria against the sultan in exchange for a promise of recognition as an independent ruler, an act which may have precipitated an unsuccessful second Ottoman expedition against him in 1200-1/1786-7, led by Tepedelenli ʿAlī Pasha and the *wālī* of Rumili, Aydoslu Meḥmed Pasha. Pardoned once more, in exchange for his rendering military assistance against Austria, and after having demonstrated his loyalty to the sultan by effecting the massacre of an Austrian mission under Brugnard in Shaʿbān 1202/May 1788, Ḳarā Maḥmūd Pasha was invested with the titular *wālīliḳ* of Anatolia and appointed commander (*serʿasker*) of the Ottoman forces assembled at Yeñi-

pazar (1204/1789). The following year he acted as *ser'asker* at Widin, but was soon once more in revolt, being now dismissed from command.

Returned to Ishkodra, Ķarā Maḥmūd Pasha resisted successfully the new sultan, Selīm III, who in 1208/1793 sent against him the *wālī* of Rumili, Ebū Bekir Pasha. A further attempt to remove him, made by Tepedelenli 'Alī Pasha, in 1209/1794, was also unsuccessful.

During these years Ķarā Maḥmūd Pasha had also engaged in hostilities with the *njegoš* Petar I Petrovič of Montenegro in a futile effort to bring the Montenegrins under his control. In the second of two expeditions undertaken against them in 1211-12/1796, Ķarā Maḥmūd Pasha's force was routed and he himself slain (Rabī' I 1211/September 1796) in circumstances which are commemorated by the Montenegrin epic ballad *Pjesen*. His head was for long preserved in a church at Cetinje; his body was eventually buried at Podgorica.

There is no doubt that, compared with *e.g.* Tepedelenli 'Alī Pasha, the importance of the Bushatli family in general, and of Ķarā Maḥmūd Pasha in particular, for the history of the Balkan *a'yanate* of the 18th-19th centuries, has been underestimated. Recent attempts, however, to read into the activities of Ķarā Maḥmūd Pasha an Albanian proto-national significance should perhaps be treated with considerable reserve.

Koka, *Historiografia Shqiptare gjatë 25 vjetëve të pushtetit popullor*, in *Studime Historike*, xxiii (1969), 72, n. 6.

The official and private correspondence of the Bushatli family survives in part in the Albanian State Archives (see Selami Pulaha, *Matériaux documentaires en langue osmano-turque des archives albanaises . . .*, in *Studia Albanica*, iii/1 (1966), 187-98. For a Ms. once belonging to the family see J. Blaskovič, *Arabische, Türkische und Persische Hss. der Universitätsbibliothek in Bratislava*, no. 569. A few notices of what are doubtless far more extensive Başvekâlet Arşivi materials have been provided by I. H. Uzunçarşılı and S. J. Shaw, in their works indicated above; a number of Turkish documents (*sidjills* preserved in the Oriental Institute, Sarajevo) relating to Ķarā Maḥmūd Pasha have been utilized by M. Spaho, *Skadarski mutesarif Mahmud Paşa Buşatlija prema turskim dokumentima*, in *Istoriski Zapisi*, xx/3 (1963), 669-81.

(C. J. HEYWOOD)

ĶARĀ MUṢṬAFĀ PASHA, MERZIFONLU, MAĶTŪL, Ottoman Grand Vizier.

According to the "official" Ottoman accounts (*e.g.*, Rāshid, *Tā'rīkh*[2], i, 430), Ķarā Muṣṭafā Pasha was of Turkish origin, born in 1044/1634-5 into the Anatolian "feudal gentry", his father, whose name is given in this tradition as Urudj Beg (but as Ḥasan Agha in *S'O*, iv, 402), being a member of the *a'yān-i sipāhīyān* and one of those who fell in the siege of Baghdād by Murād IV in 1048/1638. A friendship was said to have existed between his father and Köprülü Meḥmed Pasha [*q.v.*], in whose household, accordingly, the son was brought up, educated with Köprülü's own son, Aḥmed.

The relationship thus apparently established between the house of Köprülü and Ķarā Muṣṭafā certainly determined, in large measure, the latter's subsequent political career, but other, and often conflicting, accounts of his origins and early years have survived from the time preceding his nomination to the Grand Vizierate in 1087/1676. According to a report prepared for the French ambassador de Nointel at some time between March 1675 and October 1676 (appended in Ch. Schéfer, ed., *Journal d'Antoine Galland pendant son séjour à Constantinople* (1672-1673), Paris 1881, ii, 186-207), Ķarā Muṣṭafā Pasha was at that time "aagé de quarante-huit ans ou environ" (*i.e.*, born *ca.* 1036/1626-7) and the son of a *sipāhī* called Derwīsh Beg, of Merzifon. His father gave him, at the age of eighteen (? *ca.* 1054/1644-5), to Meḥmed Köprülü, who made him an *ič-oghlan* in his service, promoting him to *silāḥdār* on his own appointment as *müsellim* for the *eyālet* of Shām (Damascus) (cf. Silāḥdār, *Ta'rīkh*, Istanbul 1928, i, 225), and, subsequently, to be his *mühürdār* (seal-bearer). On the appointment of Meḥmed Köprülü to the governorship of the *eyālet* of Ṭrablūs al-Shām (report *apud* Schefer, 186: in 1065/1654-5, cf. Silāḥdār i, 226) he raised Ķarā Muṣṭafā to be one of his *aghās*; shortly afterwards, on assuming the Grand Vizierate (1066/1655-6), Meḥmed Köprülü summoned Ķarā Muṣṭafā from Merzifon—where he had retired because of illness—and appointed him to his *telkhīṣdji*—"celuy que le Pacha depesche au Grand Seigneur lorsqu'il a quelque chose de consequence à lui faire scavoir" (cf. Rāshid[2], i, 430-1).

A third conflicting early account of Ķarā Muṣṭafā Pasha's origins is supplied in a *relazione* compiled c. 1680 by the Venetian *bailo* Morosini di Alvise (N. Barozzi and G. Berchet, *Relazioni*, Series v, *Turchia* i/2, Venice 1872, 207, and cf. 259), which seems to reflect a tradition current even in the 1660s

(cf. Roger North, *Life... of Sir Dudley North*, London 1744, 73). This relates that Ḳara Muṣṭafā was born "among the dregs of the people" ("nato per castigo de' popoli") near Trabzon (? a dragoman's misreading of "Merzifon"). Ḳarā Muṣṭafā obtained a post as one of the lowest domestics of Meḥmed Köprülü—who had indeed for a short time governed the *eyālet* of Trabzon *ca.* 1054-5/1644-5 (cf. Silāḥdār, i, 225) (this providing some support to the chronology of the account published by Schéfer).

Amongst this conflicting evidence no clear path can be charted. The "official" account is circumstantially weak and appears to be a romantic *ex post facto* construction. Epigraphic evidence, however, confirms at least that Ḳarā Muṣṭafā was a native of Merzifon or, more precisely, of the nearby village of Marīndja (now Bahčekent), where he founded a mosque, a fountain, and a library (A. Gabriel, *Monuments turcs d'Anatolie*. ii, Paris 1934, 71; *Amasya İl yıllığı*, n.p., n.d., 187-8). Only upon the appointment of his patron, Meḥmed Köprülü, to the Grand Vizierate in 1066/1656 does Ḳarā Muṣṭafā become a visible public figure.

He participated in the campaign undertaken by the Grand Vizier against Transylvania in 1068/1658, and, on the Ottoman capture of the important fortress of Yanova (Jenö) (3 Dhu 'l-Ḥidjdja 1068/1 September 1658) he was employed—as *telkhīṣdji* to Meḥmed Köprülü—to convey the news of the success to Meḥemmed IV (Meḥmed Khalīfe, *Ta'rīkh-i Ghilmānī*, ed. A. Refīḳ, in *TOEM*, supp., 1340, 54) and as a reward was taken into the Outside Service of the Sultan, being appointed to the office of *küčük mīrakhor* (Silāḥdār, i, 127, 140).

On 3 Djumādā II 1070/15 February 1660 Ḳara Muṣṭafa "Āghā" was appointed *beglerbegi* of Silistre, from which office he was removed on 26 Shaʿbān 1071/16 April 1661 in order to superintend the removal of the *Wālide sulṭān* from Edirne to Istanbul. Shortly afterwards, he was raised to the rank of Vizier and appointed *wālī* of Diyārbakr (Silāḥdār i, 181-2, 217; Rāshid[2] i, 13; ii, 430).

His dependence on the continuing ascendancy of the Köprülü family was also soon apparent. Shortly after the death of Meḥmed Köprülü and the appointment to the Grand Vizierate of his son, Fāḍıl Aḥmed Köprülü (7-8 Rabīʿ I 1072/31 Oct.-1 Nov. 1661), Ḳarā Muṣṭafā Pasha was appointed *Ḳapudān Pasha* on 1 Djumādā I/23 December of the same year (Silāḥdār i, 221; Rāshid[2] i, 23). In this capacity he commanded the Ottoman fleet in the Aegean Sea, returning to Istanbul in Djumādā II 1073/January 1663, in time to take part in the great military parade held before the sultan at Edirne on 28 Shaʿbān 1073/7 April 1663. In the official description of this event he ranked second in the list of participants—an indication of his steadily improving political fortunes.

He did not serve in the campaigns undertaken by Aḥmed Köprülü in Hungary. On the departure of the army and the Grand Vizier from Edirne (5 Ramaḍān 1073/13 April 1663), he was appointed *ḳā'immaḳām* [*q.v.*], a position which allowed him to exercise an increasing influence on the sultan and on affairs of state. At the same time he was permitted to retain the office of the *ḳapudānlīk-i deryā*, administering it through a deputy (Silāḥdār i, 241; Rāshid[2] i, 26-7). During this period his duties, as recorded in the Ottoman sources, appear to have been largely only ceremonial, but it was rumoured among western diplomats that he was already aiming at the Grand Vizierate and intriguing with the sultan against Fāḍıl Aḥmed Pasha (Silāḥdār i, 231 ff., *passim*; Knolles, *Generall Historie*[6], ii, 163).

As *Ḳapudan Pasha*, Ḳarā Muṣṭafā accompanied Meḥemmed IV on an inspection of the fortifications of the Dardanelles (Ṣafar to Rabīʿ II 1076/August to October 1665), and was subsequently put in charge of naval preparations for the planned final reduction of Crete. His actions at this time, in attempting to commandeer for transport purposes ships of the European maritime powers, were resisted by their representatives at the Porte, and contributed materially to the exaggerated accounts concerning him which became current in Europe.

In Shaʿbān 1076/February 1666 he briefly resumed the post of *ḳā'immaḳām*, accompanying Meḥemmed IV on a hunting expedition to Čataldja. While there (1-14 Shaʿbān/6-19 February) he was dismissed as *Ḳapudan Pasha* but received in compensation promotion to the rank of Second Vizier, as part of a complicated reassignment of posts (Silāḥdār i, 392-3). At this point, with the siege of Ḳandiye entrusted to the Grand Vizier, Ḳarā Muṣṭafā became once more *ḳā'immaḳām* (5 Dhu 'l-Ḳaʿda 1076/9 May 1666), a post which he retained until the return of the Grand Vizier to Edirne on 8 Ṣafar 1081/27 June 1670 (Silāḥdār i, 409, 558).

During these years Ḳarā Muṣṭafā Pasha remained in close attendance on Meḥemmed IV, but his ascendancy appears to have been threatened by the sudden rise to a position of influence of the sultan's boon companion Muṣṭafā Agha, who was given the rank of Second Vizier on 28 Muḥarram 1077/31 July 1666 (thus causing Ḳara Muṣṭafā's demotion to the rank of Third Vizier) and who was regarded in court circles as equal in rank to the *ḳā'immaḳām* (Silāḥdār i, 430).

In Shawwāl 1078/March-April 1668 Ḳarā Muṣṭafā accompanied Meḥemmed IV to Yeñishehir-i Fenār (Lárissa), in order to observe more closely the progress of the siege of Ḳandiye. Here he lived with great pomp and magnificence—his military band attracting the particular attention of foreign visitors—dividing his time between the reception of envoys and hunting with Meḥemmed IV in his frequent expeditions throughout Thessaly. It was on one of these excursions, while encamped at Livadya in Djumādā' I 1080/October 1669 that Ḳarā Muṣṭafā carried to the sultan the news of the capitulation of Ḳandiye (Silāḥdār i, 483 ff., 501 ff., 554-5).

In the interval of peace (1669-72) between the end of the Cretan campaign and the outbreak of war with Poland, Ḳarā Muṣṭafā Pasha, still with the rank of Third Vizier, remained close to the sultan (cf. Silāḥdār i, 562-8).

Ḳarā Muṣṭafā Pasha played an active, if subordinate, role in the Polish campaign of 1083/1672, this being the first time since 1068/1658 that he had seen service in the field. He was present at the siege of Khotin and later commanded the right wing at the opening of the siege of Ḳamaniče (1083/1672). After the Ottoman capture of Bučash (Buczacz), an operation which he commanded, he was appointed chief plenipotentiary in the negotiations with the Poles and concluded with them the cessation of hostilities which transferred Podolia to Ottoman control and recognized the western Ukraine as an Ottoman protectorate (Silāḥdār i, 568 ff., 582-5, 592 ff., 610, 611 ff.).

It would seem that after his return from Poland Ḳarā Muṣṭafā Pasha was able further to establish his influence with the sultan. Having, earlier in his

career, married a daughter of Meḥmed Köprülü, he was on 4 Rabīʿ II 1086/29 May 1675, as part of the ceremonies held at Edirne in honour of the circumcision of the sons of Meḥemmed IV, betrothed to the sultan's daughter, Küčük Sulṭān.

During the last illness of Fāḍīl Aḥmed Pasha, Ḳarā Muṣṭafā was authorized by the sultan to take over the public functions of the Grand Vizier—functions which he exercised first at a *dīwān* held in the Oḳ Meydānī at Istanbul on 17 Djumādā 1087/28 July 1676. On 2 Shaʿbān/10 October of the same year he was appointed *yol ḳāʾimmaḳāmī* for the journey of Meḥemmed IV from Istanbul to Edirne. The Grand Vizier himself, following behind, died on the road between Čorlu and Ḳarīshtīran. The seals of office were brought on 26-7 Shaʿbān 1087/3 November 1676 to the sultan, who invested Ḳarā Muṣṭafā Pasha with the Grand Vizierate (Rāshid², i, 332-4; Silāḥdār, i, 651-2).

Ḳarā Muṣṭafā Pasha occupied the Grand Vizierate for seven years (Shaʿbān 1087/November 1676 to 6 Muḥarram 1095/25 December 1683. His domestic policies were conservative, frequently rapacious, and designed both for the exigencies of a war economy and for his personal enrichment. Morosini di Alvise, for example, described him as "tutto venale, crudele e ingiusto" (*op. cit.*, 207). Principle, nonetheless, was on occasion allowed to override the financial interests of the state: thus in Dhu ʾl-Ḳaʿda 1091/November-December 1680 he decreed the (temporary) abolition of the *khamr emāneti*, the excise on wine, it being argued that for the state to profit from the sale of wine was contrary to the *Sharīʿa*. In the same spirit he restored (1087/1676) the ancient custom that the Grand Vizier and his assistants should tour the markets of Istanbul on Wednesdays, and refused to admit to other than public audience the interpreters of western ambassadors, on the grounds that they were of *reʿāyā* status (Silāḥdār i, 735; R. Mantran, *Istanbul dans la seconde moitié du XVII^e siècle*, Paris 1962, 126, n; Knolles, *op. cit.*, ii, 264).

In his dealings with the envoys of Christian states and with the merchant communities in Istanbul and the other ports of the Ottoman Empire, Ḳarā Muṣṭafā Pasha seems to have been animated by an "intense xenophobia" (Mantran, *op. cit.*, 527), which had been remarked as early as 1074/1663 (cf. a harsh letter of that year to the English ambassador, omitting the customary salutations (Leicester, County Record Office), but which became more strongly marked after his assumption of the Grand Vizierate (*e.g.*, the exactions laid upon the Dutch for the renewal of their Capitulations, upon the French over their bombardment of Chios, and against the English in a constant stream of *avania*s during the years 1676-83). Despite this, the Dutch ambassador Colyer could describe him in 1677 as "een stout ende prompt, ondernement man" (K. Heeringa, ed., *Bronnen tot de Geschiedenis van den Levantschen Handel*, ii (1661-1726), The Hague 1917 (= Rijksgeschiedkundige Publicatiën, 34), 227, n.), and several observers spoke at this time of his deep interest in, and knowledge of, the affairs of Europe—a knowledge which he perhaps acquired in large part from the Phanariot Alexander Mavrocordato (cf. Hist. MSS. Commission, *Report on the MSS. of Allan George Finch, Esq.*, ii (London 1922), 62; Berchet, *op. cit.*, 187, 209; Schéfer, *op. cit.*, ii, 205).

In foreign affairs, Ḳarā Muṣṭafā Pasha continued, but with less careful statecraft, the policies of his two illustrious predecessors. Circumstances, and perhaps—as was at the time alleged—his personal predilections, enforced a preoccupation with the northern frontiers of the Empire and with those Christian states—Russia, Poland and Austria—which lay beyond its borders. In his relations with these states he attempted, with little success, to make use of often refractory Ottoman vassals, such as the Cossack hetman Doroshenko, the Hungarian magnate Imre Thököly, and the then *khān* of the Crimea, Selīm Girāy II. His policy has been commonly regarded as war for its own sake, but some at least of his actions seem rather to have been attempts to consolidate or define the Ottoman presence in those disputed areas—most notable the Ukraine and Hungary—which formed buffer zones between the Ottoman state and the recognized lands of *dār al-ḥarb*.

The years from 1087/1676 to 1092/1681 were entirely taken up with the problem of the Dniepr frontier. The settlement between Poland and the Ottoman Empire, which had been concluded at Izvandja/Zurawno shortly before the death of Aḥmed Köprülü, had opened the door to Russo-Ottoman rivalry in the Ukraine, but the defection from the Ottoman camp of the hetman Doroshenko led directly to Ḳarā Muṣṭafā Pasha's unsuccessful first Russian campaign (1088/1677). In a second expedition which was launched in the following year, the Cossack stronghold of Čehrin was taken (Radjab 1089/August 1687) and later demolished (Silāḥdār, i, 672-722; the *feth-nāme* celebrating the event, *ibid.*, 714). The essentially defensive nature of these campaigns was underlined by the construction (1090/1679) of new Ottoman fortresses on the Dniepr and Bug rivers, and by a third inconclusive campaign in 1091/1680, which led to a Russo-Ottoman truce (22 Ṣafar 1092/13 March 1681).

Ottoman relations with Russia and Poland being thus stabilized, Ḳarā Muṣṭafā Pasha was free to turn his attention to the affairs of Hungary and to the planning of offensive warfare against Austria. To this end he recognized (1093/1682) the Hungarian malcontent Thököly as puppet ruler and refused to renew except on the severest terms the twenty-year truce of Vasvár, due to expire in 1684. At the same time extensive military preparations were undertaken; finally, in Muḥarram 1094/December 1682, a large army with Meḥemmed IV and Ḳarā Muṣṭafā Pasha at its head departed from Edirne for a major campaign in Hungary and for the fateful second Ottoman attempt to capture Vienna (Silāḥdār, ii, 1 ff.).

This final, disastrous phase of Ḳarā Muṣṭafā's career—the progress of the campaign, the unsuccessful siege of Vienna, and the failure of the Grand Vizier to survive politically the consequences of military defeat—cannot be treated in detail here. It has, in any case, received considerable (if often uncritical) attention from contemporary and later observers (see Bibliography, below). Nor, perhaps, should the defeat of Ḳarā Muṣṭafā before Vienna be viewed in the totally apocalyptic light cast on it at the time and subsequently. In the context of Ottoman warfare it may be regarded as no more than the unexpected failure of a single campaign: after the siege was lifted (20 Ramaḍān 1094/12 September 1683) Ḳarā Muṣṭafā Pasha fell back on Yanīḳ (Raab, Györ) (22-25 Ramaḍān), and from thence retreated to Buda, where he arrived on 30 Ramaḍān/22 September. There he attempted to regroup his forces and to restore the shattered defences of the frontier, *e.g.*, by sending 6000 men from the Buda garrison

to reinforce Ujvár (Silāḥdār ii, 85-96, *passim*). There is no evidence that while at Buda his authority as Grand Vizier was in any way questioned, or that his standing with the sultan was impaired by the failure at Vienna; what is clear is that having strengthened, to the best of his ability, the defences of the frontier, and having left Ḳarā Meḥmed Pasha as *serdār* in Hungary, Ḳarā Muṣṭafā departed with the army for Belgrade, where he went into winter quarters on 28 Dhu ʾl-Ḳaʿda 1094/18 November 1683 (Silāḥdār ii, 107, 113).

It was at this time that his political fortunes began to ebb. On 29 Ramaḍān/21 September his *telkhīṣdji*, Ismāʿīl Agha, had arrived at the sultan's camp before Belgrade with the news of the defeat of the Ottoman army and its retreat to Yanlḳ. The Grand Vizier informed the sultan that he would remain at Buda until *rūz-i ḳāsîm* (26 October, old style, *i.e.*, 5 November) and would then go into winter quarters at Belgrade, from whence, in the following spring, a large and victorious army would, with the sultan's permission, attempt to regain the losses of the past campaign (Silāḥdār ii, 117 f.). The result of this communication was a series of consultations among the officers attendant on the sultan; robes of honour and a bejewelled sword—signs of royal favour—were despatched to the Grand Vizier at Buda. But with Meḥemmed IV's own departure from Belgrade on 21 Shawwāl/13 October, and especially after the sultan's arrival at Edirne (16 Dhu ʾl-Ḥidjdja/6 December), Ḳarā Muṣṭafā's political enemies were able to turn the sultan against him. His execution was decreed (23 Dhu ʾl-Ḥidjdja/13 December), and was carried out at Belgrade by officers sent from Edirne on 6 Muḥarram 1095/25 December 1683 (description in Silāḥdār ii, 119).

Bibliography: Beyond the references given in the text, a necrology of Ḳarā Muṣṭafā Pasha is provided by Rāshid², i, 430 ff. and an appreciation of his character and account of his pious foundations at Istanbul, Ghalaṭa, Edirne, Djidda, Merzifon, *ibid.*, 431-2; cf., for further details, the article by M. Münir Aktepe in *İA*, s.v. Mustafa Paşa, Merzifonlu. The account given in *SʿO* is erroneous in its chronology. For general treatments of the period of Ḳarā Muṣṭafā Pasha see Hammer-Purgstall, vi, 334 ff.; J. W. Zinkeisen, *Geschichte des osmanischen Reiches*, Hamburg-Gotha, 1840-63, v, *passim*; I. H. Uzunçarşılı, *Osmanlı Tarihi* iii, Ankara 1951-4; cf. further the works by Ahmed Refik and Cevat Üstün (in Turkish) listed by Aktepe, *loc. cit.*

The epigraphic material connected with Ḳarā Muṣṭafā Pasha has not been brought together. Cf., however, A. Gabriel, *op. cit.*, ii, *passim*, and also Oral Onur, *Edirne Türk tarihi vesikalarından kitabeler*, Istanbul 1972, 25: *česhme* erected by Ḳarā Muṣṭafā in 1077/1667 (reproduced in Osman Nuri Peremeci, *Edirne Tarihi*, Istanbul 1939, pl. 30) and Onur, *op. cit.*, 26: a further *česhme* of uncertain date. The mosque built at Marlndja by Ḳarā Muṣṭafā Pasha for his mother is reproduced in Şehabeddin Uygun, *Merzifon İlčesi* (n.p., 1938), 7. The tombstone erected at the Ṣarîdja Pasha mosque in Edirne (where Ḳarā Muṣṭafā's head was buried) is reproduced by H. T. Dağlioglu, *Edirne mezarları*, in *Türk Tarih, Arkeologya ve Etnografya Dergisi*, iii (1936), 167, 179. For his relations with the maritime powers see A. Vandal, *Les voyages du marquis de Nointel* (1670-1680), Paris 1900; and the reports of European travellers listed in *EI*¹, by F. Babinger, Cf. also K. Heeringa, *op. cit.*, *passim* (167 ff., *avania* levied on the Dutch ship *Keyser Octavianus*; 228 ff., the struggle over the renewal of the Dutch Capitulations); Roger North, *op. cit.*, 71-102: "A Relation of diverse Turkish Avanias, since [*i.e.*, in] the government of Cara Mustapha Basha, Vizier Azem"; Knolles, cont. Rycaut, ii, *passim*; Hist. Mss. Comm., *Report on Finch MSS.* (see *supra*), i (London 1913), 201 ff.; ii (1922), 62-166, *passim* (*avanias* on English trade as *Kapudan Pasha*, *ḳāʾimmaḳām* and Grand Vizier); G. F. Abbot, *Under the Turk in Constantinople*, London 1920. For unpublished Turkish sources on the Čehrin campaign of 1089/1678 see Agah Sırrı Levend, *Gazavāt-nāmeler*, Ankara 1956, 129-30 (an anonymous *relazione*), and 130: ʿAbd ül-Kerīm, *Aḥvāl-i sefer-i Čehrin*; also J. Blaškovič, *Die arabische, türkische und persische Hss. der Universitätsbibl. in Bratislava*, 1961, 346-52: extended notice of *Ghazānāme-i Čehrin*, by ʿAlī Beg el-Užičevi, who dedicated it to Ḳarā Muṣṭafā Pasha. The Ottoman sources, both published and unpublished, for the campaign against Vienna have been surveyed and analysed by Richard F. Kreutel, *Osmanische Berichte über Kara Muṣṭafās Feldzug gegen Wien*, in *WI*, NS xxi/4 (1969), 196-227. Numerous accounts of the siege itself exist in western languages: the most recent—John Stoye, *The Siege of Vienna*, London 1964, and Thomas W. Barker, *Double Eagle and Crescent*, Albany, N.Y., 1967—have not entirely superseded earlier studies by Camesina (1865), Klopp (1882) and von Renner and Toifel (1883). The contemporary western pamphlet literature, much of it sensational and quite unreliable, is immense. For the *beyān-nāmes* (invitations to submit) issued by Ḳarā Muṣṭafā Pasha in the course of the Vienna campaign see Khalīl Edhem [Eldem], *Kara Muṣṭafā Pashanln Shopron ahālisine beyānnāmesi*, in *TOEM*, nos. 16-17; J. H. Mordtmann, *Die Kapitulation von Konstantinopel im J.* 1453, in *BZ*, xxi (1912): *beyān-nāme* addressed to the people of Vienna; contemporary English translation in Knolles, cont. Rycaut, ii, 290).

(C. J. Heywood)

ḲARĀ ʿOTHMĀN-OGHLÎ (mod.: Karaosmanoğlu), name of an *aʿyān* [*q.v.*] family active in Manisa and district from the end of the 11th/17th century. The Ḳarā ʿOthmān who gave his name to the family was the son of Meḥmed Čavush, a *müteferriḳa* [*q.v.*] of the Palace, known also as Ḳara Čavush, who founded a mosque in 1050/1640 at the village of Yaya, near Manısa and was later buried there (*TV*, IX (1942), 198; see *Bibl.*). Meḥmed was the son of a certain Ḥasan Agha, also a *müteferriḳa*.

Ḳarā ʿOthmān, a native of Yaya, on retiring from service as a *sipāhī*, acted as *ketkhüda* to the *mütesellim* and *emīn* for the *beyt ül māl-i ʿāmme* and the *muḳāṭaʿa* of the Imperial Domains (*khāṣṣa*). In 1102-3/1691 he was ordered to seize for the state the property of the *timar*-holders and *zaʿīms* who had failed to present themselves for service on the Vienna campaign. This interlude left him extremely wealthy. He died in 1118/1706 in the village of Yaya (M. Çağatay Uluçay, *Karaosmanoğullarına ait düşünceler*, III. Türk Tarih Kongresi, Ankara 1948, 245). There is thus a period of 72 years between Meḥmed Čavush's death and Ḳarā ʿOthmān's death in 1118/1706. A newly discovered *wakfiyya* indicates that Ḳarā ʿOthmān could have had a father called ʿAbd al-Raḥmān (Münir Aktepe, *Manisa âyânlarından Kara Osman-oğlu Mustafa Ağa ve üç vakfiyesi hakkında*

bir araştırma, in *Vakiflar Dergisi*, ix (1971), 369, 370).

Ķarā ʿOthmān-oghlî amassed sufficient wealth and prestige for the members of his family henceforth to assume the name ʿOthmān-zāde or Ķarā ʿOthmān-oghlî. After Ķarā ʿOthmān's death, the headship of the family passed to Muṣṭafā, one of his four sons, the others being Ibrāhīm, ʿAbd Allāh and Aḥmad. During Aḥmad III's reign, Ḥādjdjī Muṣṭafā Agha increased his influence while seeking to avoid a direct clash with the government. The war with Persia led the state to neglect the Empire's internal problems, at the same time allowing influential and powerful men, such as Ḥādjdjī Muṣṭafā Agha, to oust the less successful contenders for power in the provinces and to extend their own influence. In 1152/1739 he assisted in the operations to remove Ṣarî Beyoghlî Muṣṭafā and other brigands marauding in the regions of Denizli, Aydîn, and Ṣarukhān. He was later to take part in other campaigns at the summons of the government. His support of the government helped the Ķarā ʿOthmān-oghlî dynasty to establish its hegemony in the region. Muṣṭafā Agha, already *emīn* for the *beyt ül māl-i ʿāmme* and for the *muķāṭaʿa* of the Imperial domains in Manisa, profited from his activity on the government's behalf to become *mütesellim* of Sarukhān in 1156/1743. He kept his position until 1167/1754, when the populace complained of his illegal activities as *mütesellim*. He was found guilty and executed in the same year (Wāṣīf, *Taʾrīkh*, Būlāķ 1243, i, 59).

The family's influence, however, did not end with Muṣṭafā Agha's execution. His eldest son, ʿAṭāʾ Allāh succeeded in becoming *mütesellim* of Ṣarukhān, but in 1174/1761 he was dismissed for incompetence and for improprieties committed during his term of office. He was recommended to retire to the village of Yaya, but chose instead to fight against the men who had played a part in bringing about his father's execution. He was defeated in the ensuing struggle and died in 1181/1767. The headship of the family soon afterwards passed to Ḥādjdjī Muṣṭafā Agha's other son, Aḥmad Agha, who gathered the other members around himself and succeeded, in 1183/1769, in becoming *voyvoda* of Akhiṣār. After being forced out of the post he became, in 1184/1770, *voyvoda* of İzmir and *muḥafîẓ* of Sandjaķburnî (Sancakburnu). Close family ties and a sharp eye for opportunities enabled the Ķarā ʿOthmān dynasty to extend the areas under its influence. In 1187/1773, Aḥmad Agha achieved the rank of *ķapîdjî bashî* [*q.v.*] at the Palace and in 1190/1776 became a *mültezim* of the *sandjaķ*. The fact that his other brother Meḥmed Agha was a *mütesellim* of the *sandjaķ* of Ṣarukhān meant that the whole *sandjaķ* now came under the control of the Ķarā ʿOthmān-oghlî family. The distinguished service of ʿÖmer and ʿOthmān Aghas in the Russian war of 1201-6/1787-92 brought further benefits to the family.

With the weakening of the provincial government towards the end of the 12th/18th century, officials of the second rank, such as *mütesellim*s, *muḥaṣṣîl*s or *voyvoda*s, came to dominate local administrations, thanks to the wealth which they had amassed. The Ķarā ʿOthmān-oghlî family is typical of these dynasties, which were now assuming a distinctive form under the general title of *aʿyān* [*q.v.*]. Towards the end of the 12th/18th century, the Ķarā ʿOthmān family extended its power beyond the boundaries of Ṣarukhān. Various members of the family were respectively *mütesellim* of Aydîn and *voyvoda*s of Turgutlu, Menemen and Bergama. Ḥādjdjī Ḥüseyn Agha became *muḥāfîẓ* of İzmir and *mubāyaʿadjî* of the quay. It was during the time of ʿÖmer Agha that the Ķarā ʿOthmān-oghlî family, who by now had acquired the *mütesellim*-ship of Isparta and the *voyvoda*-ship of Gelenbe, became the most influential dynasty in western Anatolia. ʿÖmer Agha was said to be the richest of the *aʿyān* of the period. He was among the influential *aʿyān* of Anatolia and Rumelia who received invitations during the reign of Selīm III [*q.v.*] to discuss the government of the empire, and he put his signature to the document of agreement (İ. H. Uzunçarşılı, *Meşhur Rumeli âyânlarından Tirsinikli Ismail, Yılıkoğlu Süleymân Agalar ve Alemdar Mustafa Paşa*, Istanbul 1942, 142, 143, 144).

When Maḥmūd II attempted to establish a strong, centralised administration, he did not at first interfere with the powerful Ķarā ʿOthmān-oghlî family. Their turn came only when the others had been removed. However, the revolt in the Morea and the opening of the Russian campaign seem to have regained for the Ķarā ʿOthmān-oghlî family some of its former dignity, even if this was only for a short time. Then in 1244/1829 two members of the family died, one of whom was ʿÖmer Agha, the *voyvoda* of Bergama, and the other Ḥüseyn Agha, the *mütesellim* of Manısa. No other members of the family were appointed in their place, but instead the posts reverted to the government. When the central government re-established its authority in the provinces and the power of the *aʿyān* diminished, the Ķarā ʿOthmān-oghlî family was quick to adapt to the new conditions, as the careers of Pūlād Meḥmed's sons Eyyūb Agha, and Yaʿķūb Pasha exemplify (Luṭfī, *Taʾrīkh*, Istanbul 1305, v, 96). In 1249/1833 Eyyūb Agha became *mütesellim* of Manısa and two years later achieved the rank of Chiet Equerry (*Istabl-i ʿāmire müdürlüğü*). His brother Yaʿķūb Pasha was many times *wālī* of Aydîn (1249-52/1833-6, 1257/1841, 1261-3/1845-7). Eyyūb Agha was *muḥaṣṣîl* of Manisa between 1255/1839 and 1258/1842, and died in 1261/1845 while *ķāʾimmaķām* of Aydîn. His son, Ṣādıķ Beg, was at various times *ķāʾimmaķām* of Aydîn and, like his father, became Imperial Equerry. With his death in 1277/1861, the influence of the Ķarā ʿOthmān-oghlî family in the district, already weakened, faded altogether.

Nevertheless, the family continued to produce some noteworthy members. ʿOthmān Beg and Khālid Pasha, for example, worked with the organisations established to fight the War of Independence. When the Greeks entered Manisa, Khālid Pasha began to fight at the head of a guerilla group which he had formed, but met his death on 23 June 1919. Between 1923 and 1950, the family produced such noteworthy figures as Meḥmed Riḍā (Mehmed Rıza), Suʿād Kānī (Suat Kânî) and Nāʾim (Naim). The family's most famous member in the Republican era is the writer and politician Yaʿķūb Ķadrī ʿOthmān-oghlî (Yakup Kadri Karaosmanoğlu), Ķadrī Beg's son and Yaʿķūb Pasha's grandson. Members of the family are still living at Manisa and Ķîrķ-aghač (Kırkağaç).

ḲARĀ PAPAKH [see ḲARAPAPAKH].

ḲARĀ ṢU [see AL-FURĀT].

ḲARĀ ṢŪ-BĀZĀR [see ḲARAṢŪ-BĀZĀR].

ḲARĀ TAKÎN [see ḲARATIGIN].

ḲARĀ YAZÎDJÎ (?947-1011/?1540-1602), whose real name was ʿABD AL-ḤALĪM, is one of the best-known leaders of the Djelālī rebellions [see SUPPLEMENT, s.v.] in Turkey. It was previously believed that he started the rebellions, but investigations have proved that he appeared on the scene when they were at their height. Little is known about his life. Hüseyn Hüsām ed-Dīn (*Amasya tārīkhi*, iii, 348) states that he was the son of a Turcoman called ʿAlī from Edessa. The 18th-century Armenian writer Arakel (see Brosset, *Collection d'historiens arméniens*: Arakel de Tauriz, 359) described him as the son of a Turk from Čorum, which is historically accurate.

Ḳarā Yazîdjî's civil function is obscure; little is heard of him until after he became a prominent rebel leader. Like very many Turkish youths of his time, he left home and joined the entourage of one of the *sandjaḳ-begs* as a *sekbān* (soldier). In 972/1565 his name is recorded for the first time as one of the *ṣu-bashîs* of Ḳāsim Beg, the *sandjaḳ-beg* (governor) of Divrik. During Murād III's reign, Ḳarā Yazîdjî, who had enrolled in one of the mounted *bölüks* (squadrons) of the Ḳapu-ḳulîs, was garrisoned with his squadron in the fortress of Damascus. Shortly after, he returned to Anatolia and was given command of a squadron of the *sandjaḳ-beg* of Malatya. When in 1003/1595 the *sandjaḳ-beg* was summoned to join the campaign of Meḥmed III to Eğri [*q.v.*], he stayed behind as his deputy. During the preparation of the campaign to Eğri, the Djelālī rebellions suddenly gained strength and spread in all directions. The government then formed voluntary squadrons consisting of timariots who had not joined the campaign and their dependents (the youths of each village), and sent them in pursuit of the rebels. Ḳarā Yazîdjî and the voluntary squadrons of his *sandjaḳ* also received orders to disperse the Djelālī rebels. In 1003/1595 he was ordered to join the forces that had been sent against the rebellious *medrese* students who had assembled in the mountain range between Ṭarsūs and Silifḳe. In the meantime the *sandjaḳ* of Malatya had been given to another *sandjaḳ-beg*, and Ḳarā Yazîdjî and the former *sandjaḳ-beg*, faced with retirement, refused to surrender their power to the man who came to accept it on behalf of the new *sandjaḳ-beg*. Having thereby resisted the order of the government (1598), Ḳarā Yazîdjî joined the ranks of the Djelālī rebels. He enlarged the garrisons under his command, and within a short time rose to the position of an unchallenged Djelālī chief. Some who had become Djelālīs (the majority of them *ḳapu-ḳulî* commanders [*süvaris*] who had moved to Anatolia because they could not longer live with the Janissaries in Istanbul and had become *ḳapu-aghas* of the *sandjaḳ-begs* and *beglerbegs*, *i.e.*, controlling the *sekbāns*) began to join Ḳarā Yazîdjî to escape from the persecutions of the government. Ḳarā Yazîdjî, learning that the government was preparing a large campaign against the Djelālīs, retreated to the Marʿash-Edessa region, which was densely populated with south-east Anatolian Turcomans who had lived lawlessly for a long time. There, the former *beglerbeg* Hüseyn Pasha, who was living as a rebel in the region of Ḳarāmān, joined him too. It has been estimated that Ḳarā Yazîdjî had at his disposal a total of 20,000 *sekbāns*. Defeating the government forces sent against him from the *sandjaḳs* of Marʿash and the surrounding area, he attained great fame. As he undertook to collect provisions by force so as to feed his men, many wealthy people fled to Istanbul and there organized a demonstration against the government. The government then sent the vizier Sinān Pasha-zāde Meḥmed Pasha with a fairly large army against the rebels. In view of this, Ḳarā Yazîdjî occupied the fortress of Edessa, where he was surrounded. As neither Meḥmed Pasha nor Ḳarā Yazîdjî proved able to gain the victory, the government made an agreement with the rebel chief and made him *sandjaḳ-beg* of ʿAyntāb in exchange for the extradition of the rebellious Hüseyn Pasha. Shortly after, Meḥmed Pasha attacked Ḳarā Yazîdjî again. Both sides suffered heavy losses and the rebel chief retreated in the direction of Sivas. The government was reconciled with him once more, investing him with the added function of *sandjaḳ-beyi* of Amasya. Sinān Pasha-zāde Meḥmed Pasha was dismissed in 1009/1601 on the grounds that he should have admitted that his troops plundered the people and that they were becoming worse than the Djelālīs. As the people of Amasya began to complain more and more about Ḳarā Yazîdjî, he too was transferred to Čorum as its *sandjaḳ-beyi*, and received orders to join the forces raised to suppress the revolts of the students in the region between Ṭarsūs and Silifḳe. Once more he turned to rebellion. To feed the large masses of *sekbāns* whom he had assembled around him, he continued to collect provisions from the people, and to demand ransoms from the towns which he surrounded, as in Sivas in spring 1009/1601. He was contemplating seizing the fortress of Ḳasṭamonu and quartering his men there, when the government, determined to put an end to his activities, sent the *wālī* of Baghdād, Soḳollî-zāde Ḥasan Pasha [*q.v.*], against him. The nucleus of this commander's troops consisted of southern Kurdish and Arab soldiers with a strong tribal spirit. A large contingent of *Ḳapu-ḳulî* soldiers was sent from Istanbul under the command of the former *wālī* of Aleppo, Ḥādjdjī Ibrāhīm Pasha. But in the vicinity of Ḳayṣeriyye, before Ḥādjdjī Ibrāhīm Pasha had found the time to unite with the main forces, Ḳarā Yazîdjî mounted a surprise attack on him, inflicting heavy losses, so that he was forced to retire to the fortress of Ḳayṣeriyye. Ḥasan Pasha, who had great difficulty in maintaining peace among his Arab and Kurdish troops in Diyārbakr, came too late to be able to help Ḥādjdjī Ibrāhīm

Pas̲h̲a. The Dj̲elālī leader ceased harrying Ķayṣeriyye and moved to the Marʿas̲h̲-Göksun region, where he met Ḥasan Pas̲h̲a. In this battle the Dj̲elālī *sekbān*s suffered a heavy defeat. Ķarā Yazīdj̲ī thereupon fled with the remaining troops, took refuge in the mountainous region near Dj̲ānīk (Samsun) and died there at the beginning of 1603. His brother Deli Ḥasan took command of the Dj̲elālīs in his place.

Since he had succeeded in maintaining a large part of Anatolia under his control for three years, Ķarā Yazīdj̲ī was suspected by his enemies in Istanbul of intending to found a separate state, a rumour spread by the wealthy people who fled from Anatolia to Istanbul in order to rouse the authorities. He neither issued *fermān*s nor founded a corps like the Janissaries, and never chose for himself a grand vizier. After Ķarā Yazīdj̲ī's defeat, the *sekbān*s and the other Dj̲elālī leaders who had helped the rebel chief scattered in all directions; statements from those who were captured and brought to trial, and the sealed and signed documents relating to Ķarā Yazīdj̲ī that were found in their possession, have proved that such assertions about his desire for independent power are fictitious.

(Mustafa Akdağ)

ĶARĀBA (A.), kinship, from the root *ḳ-r-b*, which has the meaning of closeness, proximity. As a technical term, *ḳarāba* seems to be of post-Hidj̲ra usage. It is found in the works of the Muslim exegetes, but not in the Ķurʾān itself, where the preferred word is *ḳurba*, also employed in pre-Islamic poetry (cf. Ṭarafa, *Muʿallaḳa*). In fact, in these cases it is less a question of kinship than of relatives, more particularly close relatives, such as *d̲h̲ū*, *d̲h̲awū*, *ūlū 'l-ḳurba* (Ķurʾān, II, 83, 177, IV, 8, 36, V, 106, VI, 152, VIII, 41, IX, 113, XVI, 90, XVII, 26, XXIV, 22, XXX, 38, XXXV, 18, XLII, 23, LIX, 7). The superlative, *al-aḳrabūn*, is also found, with the meaning of the closest relatives, those who have a claim to inherit from a man (II, 180, 215, IV, 7, 33, 135). Kinship itself, however, is nowhere clearly defined. This was because Western Arabia was at that time under an essentially tribal system, dominated by patrilineal concepts. Thus the domestic community embraced all the members of the tribe, in whose veins, so they believed, the same blood flowed. Despite this extension of consanguinity, solidarity existed only within a relatively restricted group, the *ʿas̲h̲īra* [*q.v.*], whose members did not exact blood vengeance on one another. This is why Muḥammad first called on his closest clan (Ķurʾān XXVI, 214). The same practices are still current among the Bedouins, who also call upon their true blood-kin, the *damawiyya*, to contribute towards blood-money.

What conception does the Ķurʾān have of kinship? Certainly it reflects, to a large extent, the notions of its era: patrilineal filiation, the superiority of men over women, the solidarity of agnates and collective responsibility. It appears, nevertheless, that Muḥammad allowed a slight bias in favour of uterine siblings. From a purely patriarchal point of view, these latter are not part of the family and thus have no inheritance rights. Although Muslim doctrine concerning rights of succession follows paternal kinship, it is noteworthy that, in the absence of direct heirs, a part of the goods left by the dead man go to his uterine brothers (al-Buk̲h̲ārī, *Ṣaḥīḥ*, *Kitāb al-Farāʾiḍ*, 14; Ibn Rus̲h̲d, *Bidāya al-mudj̲tahid*, Cairo 1335, ii, 207). Furthermore, according to one tradition "the maternal uncle is the heir of him who has no others" (Ibn Rus̲h̲d, *op. cit.*, ii, 205), while another states that "the son of the sister is part of the group" (al-Buk̲h̲ārī, *op. cit.*, 23). Finally, one should note that the prohibited degrees of marriage affect the same degrees of relationship on the father's side as on the mother's (Ķurʾān, IV, 23), and that foster-relationship creates the same prohibited degrees for marriage as does blood kinship (al-Buk̲h̲ārī, *Kitāb al-Nikāḥ*, 21). On the other hand, marriage between parallel cousins and cross cousins is permitted, and even recommended.

As a result, in the Islamic conception, kinship is bilateral. However, this position is affirmed very hesitantly, since in practice only agnates were considered true kin. Matters of blood-vengeance and the payment of blood-money or wergild concerned them alone. This is why the *diya* due for a wife is incumbent on her *ʿaṣaba*, although succession to her reverts to her children and her husband (al-Buk̲h̲ārī, *Farāʾiḍ*, 10, *Diyāt*, 25). In the accounts of the heroic period of the *Dj̲āhiliyya*, uterine siblings often bear the costs of a vendetta. Bedouin law adopts the same point of view with regard to the wife and the maternal nephew (cf. J. Chelhod, *Le droit dans le société bédouine*, Paris 1971).

Did the extension of kinship to cognates go against pre-Islamic customs and meet with considerable resistance from them? In the thesis brilliantly presented by W. Robertson Smith (*Kinship and marriage in early Arabia*) precisely the opposite point of view is advanced. According to him, the patriarchal system was a late phenomenon in Asia, practically contemporaneous with the Hidj̲ra, and it was preceded by a system of filiation through female descent. Following studies by Morgan and MacLennan, this hypothesis has been gradually abandoned. Nevertheless, it does still have a small number of supporters (M. Gaudefroy-Demombynes, *Mahomet*, 616; W. M. Watt, *Muhammad at Medina*, 378 f.; Lecerf in ʿĀʾila), and must therefore be considered briefly. Smith was quite correct to reject the viewpoint of genealogists who saw the tribe as a large patriarchal family; he also rightly criticised the artificial nature of their neatly-organised structure. They can also be faulted for having lost sight of the tribal heterogenity which is indicated by the structures of the *ḳabīla* [*q.v.*]. It nevertheless remains true that unity of blood shows itself effectively at the higher levels of the social pyramid, such as the *fak̲h̲id̲h̲* and the *ʿas̲h̲īra*. Besides, Robertson Smith's conclusions about the old system of filiation are based essentially on philological considerations and on later survivals. It is certain, however, that it is not through concentrating on a few isolated facts that we will be able to throw light on this problem. Rather, we need an approach based on a sound study of social and family structures before we can see to what extent they are compatible with matriliny. It would seem that warrior nomadism tends towards

patrilineal filiation and endogamy, while a life of settled cultivation encourages exogamy. Thus, to a large degree, the social system existing in pre-Hidjra western Arabia contradicts Smith's hypothesis. If we actually examine the traditions which give credence to the notion of a matrilineal system in pre-Islamic Arabia, we can see that almost all of them apply to the Arabs of the south (from Medina, Ḥimyar and Sabaʾ) that is, groups which had been settled for a long period, although some, like the Anṣār, had reverted to nomadism for a short time. In fact, any conclusions, even provisional ones, about these groups are no more than speculative before further documentation can be provided by archaeological research in the Yemen. The northern Arabs, on the other hand, were deeply imbued with desert traditions and their social system bears the stamp of patriarchy. This was the prevailing system in Mecca itself. Ḳurʾānic reform took its inspiration mainly from this background, but it did make a few concessions to the customs of Medina in enlarging the concept of *ḳarāba*. Principally, the latter was concerned with agnates, but nevertheless it did not completely reject cognates.

This timid overture in the direction of uterine siblings was allied to an important trend towards restriction in the realm of *ḳarāba*. According to pre-Islamic beliefs, mystical kinship (through adoption, blood-ties, communal descent) created links equal to those of actual kinship. Muḥammad himself had recourse to such customs in making the *Muhādjirun* the "brothers" of the *Anṣār* and thus each other's heirs (Ḳurʾān, VIII, 72); but he reverted to a stricter concept of kinship, limiting it almost to true blood relations (LXVIII, 2, XXXIII, 3, 40, VIII, 75).

Bibliography: Many works deal with this topic. Apart from those cited in the article, bibliographical details can be found in J. Chelhod, *Le mariage avec la cousine parallele dans le système arabe*, in *l'Homme*, v (1965), 113-73.

(J. Chelhod)

ḲARĀBĀDHĪN [see aḳrābādhīn].

KARABAĞ [see ḳarā bāgh].

al-**KARĀBĪSĪ**, "clothes-seller", a name given to a number of people, of whom the following are of note:

1) Aḥmad b. ʿUmar, a mathematician. The date of his death is unknown. Among those of his works which have been lost, a commentary on the translation of Euclid was especially celebrated. The one work of his which is still extant is *K. Misāḥat al-ḥalaḳ*. which is preserved in Oxford (Bodleian Lib., Mss. Or. i, no. 913) and in Cairo (*Fihrist al-kutub al-ʿarabiyya fī 'l-kutubkhāna al-khadīwiyya*, v, 204); see *Fihrist*, 265, l. 25, 282, l. 3; Ibn al-Ḳiftī, *Taʾrīkh al-ḥukamāʾ*, Cairo 1326, 57, l. 5.

2) Abū ʿAlī al-Ḥusayn b. ʿAlī b. Yazīd al-Muhallabī, a traditionist and faḳīh. Initially, he was a member of the *ahl al-raʾy*, but after al-Shāfiʿī's arrival in Baghdād, he joined his group. In spite of this, he was an unreserved supporter of the doctrine of predestination, *djabr*. None of his works of criticism or *fiḳh* survive. He died in 245/859 or, according to some, in 248/862.

Bibliography: *Fihrist* (ed. Flügel), 181, l. 4; Samʿānī, *Ansāb* (facsimile ed. Margoliouth), fol. 476b; Ibn Khallikān (ed. Wüstenfeld), no. 180 (ed. Cairo 1299, i, 181); Shahrastānī, *Milal* (ed. Cureton), 96; Nawawī, *Tahdhīb* (ed. Wüstenfeld), 774; Subkī, *Tabaḳāt*, Cairo 1324, i, 251-6; Ibn al-Athīr, *Kāmil*, Cairo 1303, vii, 29; Abu 'l-Fidāʾ, *Taʾrīkh*, Istanbul 1287, ii, 439 (ed. Reiske-Adler, ii, 204); Ibn Taghrībirdī (ed. Juynboll), i, 753, 763.

3) Asʿad b. Muḥammad, Ḥanafī *faḳīh* who died in 570/1174. His *K. al-Furūḳ fī 'l-furūʿ*, which Ḥādjdjī Khalīfa in *Kashf al-ẓunūn* (ed. Flügel), iv, 419, 9041, confuses with the *Talḳīḥ al-ʿuḳūl* of al-Maḥbūbī (Brockelmann, *GAL*, i, 473, no. 34), is extant in Cairo: see *Fihrist al-kutub al-ʿarabiyya fī 'l-kutubkhāna al-khadīwiyya*, iii, 96.

(C. Brockelmann*)

ḲARAČAY, a Turkic tribe of the North Caucasus. They call themselves Ḳaračaylï and are known as Ḳaračaylar in Turkish and Karačaitsï, or Karačaievtsï, in Russian. The Ḳaračay language belongs to the Ḳïpčaḳ branch of Turkic. According to the 1926 Russian census, ethnically there were 55,123 Ḳaračay and linguistically 55,349. In the 1959 census, the numbers recorded were 81,403 and 78,817 respectively. The Ḳaračay occupy the mountain valleys of the upper Kuban, Taberda, Zelenčuk, Laba and Podkumok rivers on the northern slopes of the Caucasus.

Little is known of their history. Their ancestry goes back to the Hunno-Bulgarian conglomeration which lived along the Kuban River in so-called "Black Bulgaria" during and after the downfall of the Khazar [*q.v.*] realm. They were Turkicized by the Turkic tribes, the Pečenegs and Kumans, which took over the Khazar kingdom in the middle of the 5th/11th century. In the high Middle Ages they lived as one group with the Balkar [*q.v.*] along the edge of the Caucasian mountain chain and mixed with local Ibero-Caucasian peoples. They later submitted to the authority of the Golden Horde. From the 7th/13th to the 9th/15th centuries they were slowly pushed by the Kabards [see kabards] towards the high chain. At this time, as a result of Kabard pressure, the Ḳaračay-Balkar separated into two groups, the Balkar going to Dih-Tau and Koshtan-Tau. In the 9th/15th century the Ḳaračay became vassals of the Kabards, and from the 10th/16th century onwards, they also came under the infuence of the Crimean khanate. Sunnī Islam, of the Ḥanafī *madhhab*, was slowly introduced at this time by the Crimean Tatars, and in the 11th/17th and early 12th/18th centuries by the Ottomans. The Ḳaračay and Balkars did not play an active role in the Caucasian mountain-dwellers' resistance to the Russian conquest in the middle of the 18th century.

The social structure of the Ḳaračay was influenced by that of Kabard, but the feudal system was less developed. The head of the tribe was the *biy* (*bey*) or *tav-biys*, followed by the most numerous class of *özden* or *ḳaraözden*, consisting of free men. The *kul*, or slaves, formed the lowest class. With the influence of Islam under Ottoman rule the *kul* were freed and became *azatli*. The traditional economy of the Ḳaračay is based on cattle breeding, agriculture and handicrafts. Their land has important coal deposits and other mineral resources.

Ḳaračay was not a literary language until 1924, at which time, jointly with Balkar, a Ḳaračay-Balkar literary language was created which adopted the Latin script. In 1938-39 it was replaced by the Cyrillic. According to *Letopis' periodičeskikh izdanij S.S.S.R.* and *Pecat' S.S.R. v 1960 godu*, there were six newspapers published in Ḳaračay-Balkar in 1935; in 1960 the figure had dropped to one.

Administrative position. With the onset of the Soviet régime, the Ḳaračay became part of the Mountain Autonomous Socialist Republic (*Gorskaya A.S.S.R.*) on 20 January 1920, which included also

the Čerkes, the Balkars, the Ossetians, the Čečens and the Ingus̲h̲es, and had its capital in Vladikavkaz. On 12 January 1922, they were joined with the Čerkes into the Ḳaračay-Čerkes Autonomous Oblast. On 26 April 1926, the administrative unit was divided into a Čerkes National Okrug and a Ḳaračay Autonomous Oblast with Mikoyans̲h̲ahar as capital. In 1944, the Ḳaračays were deported to Central Asia and their national territory suppressed for alleged collaboration with the Germans during World War II. They were rehabilitated on 9 January 1957 and between 1957 and 1958 brought back to their original land, their deportation being termed a result of the "personality cult" of Stalin. They resumed their former status in the Ḳaračay-Čerkes Autonomous Oblast, which was reformed on 9 January 1957. The region occupies a territory of 14,200 sq. km. In 1959, the Ḳaračay and Čerkes made up 33.1 % of the population of the region, while 51 % were Russian.

According to the 1926 Russian census the mother tongue of 99.9 % of the Ḳaračay in their native area was Ḳaračay; none had Russian as their first spoken language. The figures for 1959 showed that their native language was the mother tongue of 99 % of the Ḳaračay, while the percentage of those who used Russian had risen from zero to 0.5 %.

KARĀČĪ (Karachi), the most important commercial and industrial centre of Pakistan, situated on the Indian Ocean shores at 25° 51′ latitude N. and 67° 04′ longitude E. Its population was 360,000 at the time of the creation of Pakistan in 1947, and by 1972 was substantially over 3 millions, if one includes the new suburbs laid out over the last decade. From 1947 to 1960 Karāčī was the official capital of the Islamic Republic of Pakistan, but it has gradually been replaced by Islāmābād [*q.v.*], a few miles away from Rawalpindi, where all the Pakistan government departments are to be established.

The name Karāčī does not seem to be very old. It may possibly derive from the settlement there of a Balūč tribe called Kulāčī, originally of Rād̲j̲pūt origin (*A glossary of Panjab castes*, Lahore 1911), which may also have given its name to the town of Kulāčī in the district of Dēra Ismā'īl K̲h̲ān on the North-West frontier. An alternative explanation would derive the town's name from Kalāčī, the name of a humble fisherman who lived in the vicinity. Whatever the case, we have the transition $l > r$ according to an habitual rule in Sindhi (cf. Kōtlī in the Pand̲j̲āb and Kōtrī in Sind).

Being protected on the west by Cape Monze, the most southerly point of the Kirthar mountain chain, and sheltered from the force of the open sea and the monsoon squalls by the rocky island of Manora, Karāčī enjoyed an ideal situation for becoming a great port. The town itself is situated between the lower course of the Lyarī river to the west and the Malir river to the east, both of which come down from the Kōhistān or mountain region. Lt.-Gen. Haig, in his book on the Indus delta, thought that one could identify the port of Karāčī with the port of Alexander the Great which Nearchus reached on leaving the western mouth of the Indus and where he waited for 15 days, with his fleet at Manora, until a favourable wind might blow and enable him to continue exploring the coastland (326 B.C.).

It is shortly after 1137/1725 that Karāčī begins to become known as a port. The effective cause of its prosperity seems to have been the gradual deterioration of the port of Daybul [*q.v.*], which was very probably situated on the banks of the western mouth of the Indus. Although the historians disagree on the exact site of Daybul, it can nevertheless be asserted that this port was already flourishing when the Arabs, under their youthful general Muḥammad b. al-Ḳāsim, disembarked there in 93/712 in order to conquer Sind. During the 10th/16th century the maritime trade of the region relied on the port of Laribunder in the Indus delta, near Thatta, the then capital of Sind; but after 1060/1650, Laribunder lost all its value as a port, since navigation became very difficult through the silting-up of the Indus delta. During the 12th/18th century, the land encroached on the sea and left the port of Daybul cut off from access to the sea. Karāčī, situated outside the delta region and to the west, was not in such danger of a rapid silting-up, but it could not yet assume its later importance because of the uncertain political conditions prevailing in the province of Sind, where were confronted the divergent interests of Afg̲h̲ān power, the British East India Company and the Kalhōra rulers of Sind, who ceded Karāčī to the K̲h̲ān of Kalāt. The Afg̲h̲āns wished to avoid any trouble with the Sind officials and endeavoured to develope a line of communication starting from Karāčī and running through Makrān and Kalāt, well away from the Indus valley. All this favoured the expansion of Karāčī, both as a town and as a port, whilst Thatta inexorably declined on account of the constant changes in the Indus course.

After the fall of the Kalhōra rulers, the *amīr* of Talpur, Fatḥ 'Alī K̲h̲ān, seized Karāčī from the K̲h̲ān of Kalāt. In 1209/1795 he built a fortress on Cape Manora to protect the port, though this did not prevent the capture of Karāčī by British troops in 1839. The conquest of the province of Sind did not take place till four years later, when Sir Charles Napier used Karāčī as his port of disembarkation in 1843. But the British at first preferred to establish themselves at Ḥaydarābād, and it was only as a result of Capt. Richard Burton's report, which praised the much fresher climate of the "fishermen's village by the sea", that Sir Charles Napier came along to make Karāčī the capital, and civil and military centre, of Sind, and an important port suitable for trading equally with the Pand̲j̲āb as with Sind.

Sir Bartle Frere improved the port by constructing in 1854 the Napier mole connecting the island of

Kāmārī with the mainland. The Manora breakwater was finished in 1873. After 1861 a railway line connected Karāčī with the town of Kōtrī, and then in 1878 with the Pandjāb, thus allowing the trade of Karāčī to double in volume between 1864 and 1884. By 1900, it had become one of the greatest export outlets of the East, and the two World Wars of 1914-18 and 1939-45 contributed greatly to its prosperity.

But it was really 1947 which marked the turning-point in the development of this great city, which still had a provincial atmosphere at the time of the creation of Pakistan, and whose population increased almost tenfold within 25 years (1947-72), presenting successive governments with problems still not completely resolved. Suburbs like Nāẓimābād and Liyāḳatābād on the right bank of the Lyarī river did not exist before 1947. Similarly, the satellite town of Korangī and the new industrial complex of Landī on the left bank of the Malir river have only been created in the last decade or so. A planned policy of urbanisation and industrialisation, together with the bringing of water supplies and a sewage system, was undertaken by a body called the "Karachi Development Authority" set up in 1958 by Field-Marshal Ayyūb Khān, the head of the Pakistan Republic.

The international airport of Karāčī is considered one of the best-equipped in Asia; its runways will accommodate the most modern aircraft and its geographical situation makes it an important crossroads between Europe and the East. Pakistan International Airlines (P.I.A.) flights connect Karāčī with London via Tehran, Beirut, Rome and Frankfurt or via Geneva or via Moscow, and a regular service also exists between Karāčī and Shanghai via Dacca and Canton. Since 1955, a pipeline over 300 miles long has brought the natural gas of Sui in Sind to Karāčī, where it is used both for industrial and private purposes.

Karāčī has owed its great strides of recent times to its trade connections with the whole of north-western India and to its rôle as the natural outlet for the most important products of its hinterland, such as cotton, cereals, oil-yielding plants and hides. Karāčī is the great industrial centre of Pakistan, thanks to an expanding iron-smelting industry, newly-built oil refineries (at Korangī), recent petrochemical installations, the traditional activities involving wool, timber and hides, the increasing production of cement (limestone being plentiful on the outskirts of the city), various food-processing industries (flour mills, confectionery factories, fish canning and preserving), and many other activities such as production of knitwear, soap-making and plastic objects.

KARADAĞ [see ĶARĀ DĀGH].

(AL)-**KARADJ** (KARAH) or KARADJ ABĪ DULAF, an ancient town in the Djibāl province [*q.v.*] of Persia; the actual site is unknown, but it was situated to the south-east of Hamadhān, almost half-way between that city and Iṣfahān. It derives its second name from al-Ḳāsim b. ʿĪsā al-ʿIdjlī [*q.v.*], better known by his *kunya* of Abū Dulaf, who probably enlarged (*maṣṣara*) an existing settlement and constructed a fortress there; during the wars between al-Amīn and al-Maʾmūn, this commander carved out for himself a fief in Djibāl and secured the privilege of paying in return a tax for this concession (*īghār* [*q.v.*]; add to the *Bibl.*: Ibn Khurradādhbih, 241; *Mafātīḥ al-ʿulūm*, 60; Yāḳūt, s.v. al-Īghārān[1]; and correct Mardj to al-Burdj) of the district surrounding (al-)Karadj and al-Burdj, whence the name of al-Īghārān[1] by which it is known. (Al-) Karadj became the *chef-lieu* of this district and the residence of the Dulafids ([*q.v.*]; add to the Bibl.: M. Canard, *H'amdânides*, 311-13 and the references cited there). The line of Dulafids ended in 284/897; town and district then reverted to dependence on the central government and soon became an autonomous administrative district.

Nothing is known of the town beyond the information in the geographers that it was built of unfired brick, had two markets, numerous baths and a crowded population, even though it extended over two parasangs; the sources stress the absence of orchards, but mention the fertility of the surrounding countryside, where stock-raising was practised. Various poets who frequented the Dulafid court celebrated the town, but Ibn al-Faḳīh found it crowded-together, dirty, cold and poverty-stricken.

(ED.)

ĶARADJA [see ĶARĀ].

ĶARADJA ḤIṢĀR, ĶARA ḤIṢĀR, also known as ĶARADJA SHEHIR, probably the Byzantine Melangeia, one of the first places in which the Ottomans settled after coming to the Eskishehir region. The district around Ḳaradja Ḥiṣār was given by Sultan ʿAlāʾ al-Dīn Kaykobād as winter quarters to Ertoghrul's followers; the town was occupied by ʿOthmān Ghāzī, traditionally in 687/1288 (ʿĀshīḳpasha-zāde, ed. ʿAlī, 18; Neshrī, ed. Taeschner, i, 26, 87). In order to make the town prosper, ʿOthmān invited all those who wished to come and live there; he consequently settled in the town those coming from Germiyān and other places, the churches in the town were converted into mosques, and a Friday mosque was built. ʿOthmān entrusted the administration of Ḳaradja Ḥiṣār to his son, Orkhān Bey.

In the sources of the 9th/15th and 10th/16th centuries, the town is usually referred to as Ḳaradja Shehīr. In the second half of the 9th/15th century it belonged to the *sandjaḳ* of Sulṭānöñü. In the 10th/16th century reference is made to the *nāḥiye* of "Eskishehir with Ḳaradja Shehir" which still belonged to the *sandjak* of Sulṭānöñü (Başbakanlık Arşiv Genel Müdürlüğü Maliyeden Müdevver defterler, no. 27, p. 2). The *nāḥiye* of Ḳaradja Shehir (11 villages with an annual revenue of 58,739 *akčes*) formed part of the *khāṣṣ* of the *sandjaḳbeği* Sulṭānöñü (Sultanöñü sancağı tahrir defteri, no. 515,

p. 13), Eskishehir then being under Karadjashehir; in the 11th/17th century, however, Karadjashehir had become a *nāḥiyye* of Eskishehir (Topkapı Sarayı Müzesi Arşivi, N.D. 166 pp. 124-6). According to the census of 1830, the population of Karadja Shehir consisted of 3,725 Muslims and 575 non-Muslims (E. Z. Karal, *Osmanlı imperatorluğunda ilk nüfus sayımı*, 1831, Ankara 1943, 110).

Karadja Ḥiṣār, today bearing the name Karacaşehir, is a village belonging to the central *kaza* of the *vilāyet* of Eskişehir.

(C. Orhonlu)

KARADJA OGHLAN, Turkish folk poet, the greatest and most typical representative of the *ʿāshiḳ*s. In many ways, the *ʿāshiḳ*s continued in the Ottoman period the pre-Islamic and early Islamic tradition of Turkish musician-poets (*ozan*), who often improvised their poems, singing them to the accompaniment of a musical instrument, especially the *kopuz*. *ʿĀshiḳ*, a term originally applied to popular mystic poets of various dervish orders, was later taken over by wandering minstrels (*saz shāʿirleri*), who gave up the old secular term of *ozan*. The influence of Ṣūfism on the *ʿāshiḳ*s was only superficial and did not substantially alter their realism. The impact of *madrasa* and Palace School-trained court poets was greater, growing increasingly from the 10th/16th century onwards, and they adopted many classical verse forms, particularly the *ghazal* and *murabbaʿ*, and introduced many patterns oj *ʿarūḍ*, preferably those reminiscent of syllabic metre (*hedje*). Many common themes, motifs and stereotyped concepts found their way into folk poetry. The continued impact of the hackneyed forms and concepts of court poetry eventually caused folk poetry to degenerate into a sterile cliché of the former, and caused many *ʿāshiḳ*s to become unskilled imitators of classical poets.

In this general picture, Karadjaoghlan is a brilliant exception. He was not trained in a city atmosphere like many others, but belonged to the small group of bards who came from the countryside and from nomadic tribes. His life is shrouded in legends like that of the great popular mystic poet Yūnus Emre. Following the impetus given by Ziya Gökalp to research into Turkish popular literature and culture many scholars (particularly M. F. Köprülü, A. R. Yalgın, S. N. Ergun, İ. R. Isıtman, A. K. Tecer, P. N. Boratav and C. Öztelli) have made remarkable contributions to Karadjaoghlan studies (for a complete bibliography up to 1940, see F. A. Tansel, *Karacaoğlan hakkında tenkidi bir bibliyoğrafya*, in *Ülkü*, xv, no. 85, 1940). In spite of this intensive research, several problems concerning the life, time and identity of the poet himself, and concerning many of his poems, continue to be controversial. The claims that these are finally solved put forward in a recent publication (Cahit Öztelli, *Karaca Oğlan, Bütün Şiirleri*, Istanbul, 1970) are not altogether convincing, in spite of the author's many important contributions to the subject. Vague references in Karadjaoghlan's poems to the capture or re-capture of Aleppo and Baghdad and to the Austrian campaign of "Aḥmed Pasha" have been differently interpreted by various scholars and more explicit mention of the poet's name both in 10th/16th- and 11th/17th-century sources gave rise to the theory that two different poets of the same name may have lived in different centuries (for details of the controversy see Cahit Öztelli, *op. cit.*, intro., and Cemil Yener, *Karacaoğlan üzerine*, in *Türk Dili*, xxv, no. 244, Ankara 1972, 291-4).

At the present stage of research, we can cautiously state that Karadjaoghlan, whose real name was Ḥasan and whose family is referred to as Saylī Oghlu, belonged to the Varsak clan of the Üč Ok Turcoman tribes who had their winter quarters at the foot of Taurus mountains and moved to high summer pastures in early spring. He seems to have travelled extensively in southern Anatolia and perhaps in many other parts of the Ottoman Empire. There are indications that he took part in a campaign against Persia. It is not certain whether he was ever in Istanbul although two of his *türkü*s are included in a musical anthology of popular songs prepared for the Ottoman court under Sultan Ibrāhīm (see C. Öztelli, *Ali Ufki, Karaca Oğlan ve Istanbul*, in *Türk Folklor Araştırmaları*, no. 239). Except for a few motifs and expressions common to Muslim culture, Karadjaoghlan completely ignored the *art poétique* both of court poetry and of popular mystic poetry of the dervish orders, and wrote all his poems (numbering nearly 500) in the traditional Turkish syllabic metre (mostly in 6-5 and 4-4 patterns), and in the unsophisticated spoken Turkish of his time, coloured with occasional provincial words and expressions. These dealt with nomadic life and the natural beauties of the Taurus Mountains environment. The poet's own exuberant feelings of love and *joie de vivre* are also described in his unparalleled *koşma*s, *semai*s, *türkü*s and *destan*s. In the "National Literature" (*Millī Edebiyat*) movement of the post-1908 Constitution period, and again during the early Republican era up to the late 1930s, Karadjaoghlan was the most loved folk poet, inspiring many young poets in their endeavours to renew and make more indigenous the form and content of Turkish poetry. According to local traditions, Karadjaoghlan is buried on a hill in the village of Çukur near Mut in the province of İçel (Mersin), and his tomb became a frequently visited shrine in the area. In 1958 a film was made of a legendary version of his life based on a script by the novelist Yaşar Kemal (b. 1922), who later wrote a short story on the same theme (in *Üç Anadolu Efsanesi*, Istanbul, 1967).

(Fahir İz)

AL-KARADJĪ, ABŪ BAKR MUḤAMMAD B. AL-ḤASAN (and also al-Ḥusayn), Arab mathematician and engineer, a native of al-Karadj (in the Djibāl, Iran) as G. Levi Della Vida has demonstrated (in *RSO*, xiv (1933), 250) and not from the al-Karkh district of Baghdād, as was long believed. While still young, he went to Baghdad where he held high positions in the administration and composed, towards 402/1011-2, his works *al-Fakhrī*, *al-Kāfī* and *al-Badīʿ*, in which he attempted to free algebra from the tutelage of geometry. He returned afterwards to his native land, where he must have died after 410/1019, the probable date of the composition of his *Inbāṭ al-miyāh al-khafiyya*. ʿĀdil Anbūba, in the introduction of his edition of the *Badīʿ* (Beirut 1964), lists 12 works of this author, most of which have been lost. The following are of interest here: (1). *Al-Fakhrī fī ʾl-djabr wa ʾl-muḳābala*, studied by F. Woepcke (*Extraits du Fakhri, traité d'algèbre*, Paris 1853), who demonstrates the agreements between this work and the *Arithmetica* of Diophantes, which al-Karadjī must have known through the partial translation (the first three books and a part of the fourth) of Ḳuṣtā b. Lūḳā (d. 296/912), and concludes that "more than a third of the problems of the first book of Diophantes, the problems of the second book beginning with the eighth one, and almost all the problems of the third have been inserted by Alqarkhi into his collection" (p. 21). On this basis it can perhaps be established that problems 1-7 of Book ii of Diophantes, which might be spurious, are missing in the Arabic version (cf. E. Vereecke, *Diophante d'Alexandrie*, repr. Paris 1959, xxvl). Diophantes' work must have been in vogue among the contemporaries of al-Karadjī because we know that Ibn al-Haytham and Abu ʾl-Wafāʾ devoted commentaries or scholia to it. In the *Fakhrī*, al-Karadjī attempted the study of the successive powers of a binomial, developed it further in the *Badīʿ*, and concluded it in a work now lost but preserved in fragments in the *Bāhir* of al-Samawʾāl b. Yaḥyā al-Maghribī (d. *ca.* 570/1174), through the discovery of the generation of the coefficients of $(a-b)^n$ by means of the triangle which is now named after Pascal or Tartaglia; (2). *Al-Badīʿ fi ʾl-ḥisāb*, in which are developed the fixed points treated by Euclid and Nicomachus and in which an important place is accorded to algebraic operations; the author expounds for the first time the theory of the extraction of the square root of a polynomial with an unknown; he resolves the systems $x^2 + 5$ and $x^2 - 5$, likewise treated by Leonardo of Pisa in his *Liber Quadratorum*, and $x^2 + y$ and $y^2 + x$, which are found in Diophantes, ii, 20 and which much more slowly gained the attention of Euler and others. In these problems, he often utilizes the expedient of changing the variable, the auxiliary variables or the process through substitution; (3). *Al-Kāfī fi ʾl-ḥisāb*, written on the use of functions, and as such a summary of arithmetic, algebra, geometry and the register based on the processes of mental calculus (called *hawāʾī*, "aerial", in Ibn al-Samḥ d. 426/1034) as opposed to "Indian" calculus); this work has been edited and translated into German by A. Hocheim, 1-3, Halle 1877-80; (4). *Inbāṭ al-miyāh al-khafiyya*, printed in Ḥaydarābād in 1359/1945, an excellent manual on hydraulic water supplies; it contains some autobiographical notes, as well as a discussion of a series of conceptions relative to the geography of the globe; he describes a certain number of surveying instruments [see MĪZĀN], the geometrical bases of which he demonstrates, and ends with very concrete details on the construction and servicing of *ḳanāts* [*q.v.*], subterranean tunnels (he makes an express allusion to those of Iṣfahān, 31) for providing water in arid places. He likewise discusses the basis of the *Sharīʿa*, the legality of the construction of wells and hydraulic conduits and in what circumstances these might be prejudicial to the people.

(J. VERNET)

AL-ḲARĀFA [see AL-ḲĀHIRA].

KARAFERYE (in earlier sources also KARAVERYE), Ottoman name for Bérrhoia, Béroia (mod. Gk., Vérria, Véria; Slavonic, Ber), a small town in Macedonia, 60 km. WSW of Salonika, 8 km. from the left bank of the Aliákmon (Vistrítza; Tk. Indje Ḳara Ṣu), near the foot of the eastern slopes of the Olympene range (Tk. Aghustos Daghl) and overlooking a broad and fertile plain: "one of the most agreeable towns in Rumili" (Leake). The Turkish epithet *ḳarā* [*q.v.*] was prefixed perhaps in order to distinguish it from Bérrhoia in northern Thrace, Tk. [Eski] Zaghra)cf. Jorga, *GOR*, i, 213). According to Byzantine sources, the neighbourhood was pillaged by Turks from Karasl [*q.v.*] as early as 1331 (Hammer-Purgstall, i, 127). The district for a time belonged to the Serbian Empire of Stefan Dušan (Ostrogorsky, History, 524) and, after his death (1355), to a Serbian princeling, Hlapen (Jireček, *Gesch. d. Serben*, ii, 105, 107).

The Ottoman chroniclers report that the town was taken (? by Lālā Shāhīn) in 787/1385 (Giese, *Anon.*, 26. 13, whence ʿĀshıḳpashazāde (§ 55), Neshrī, etc.; cf. Saʿd al-Dīn, i, 91-2, with the date 776/1374-5). The Greek Short Chronicles give the precise date 8 May 1387 (cited by P. Wittek, in *BSOAS*, xiv (1952), 661, n. 3); but the definitive occupation may have occurred only under Bāyezīd I, who from there directed extensive raids into the Peloponnese (Giese, *Anon.*, 28-9; Hammer-Purgstall, i, 249).

According to a tradition preserved by Yazıdjıoghlu ʿAlī [*q.v.*], some time after the Saldjūḳ sultan of Rūm Kay-Kāʾūs II [*q.v.*] had taken refuge with the Byzantine Emperor Michael VIII his two younger sons were made governors of Béroia; the grandchildren of one prince embraced Christianity, and it was one of his descendants, a certain Lyzikos, who surrendered Béroia to the Ottoman sultan (? Bāyezīd I); thereupon he and his family were transferred to Zikhna. And indeed Karaferye (and Zikhna) are among the districts inhabited by Gagauz [*q.v.*] Turks, *i.e.*, "followers of Kay-Kāʾūs" (P. Wittek, *Les Gagaouzes = Les gens de Kaykāūs*, in *RO*, xvii (1951-52), 12-24; idem, *Yazıjıoghlu ʿAlī on the Christian Turks of the Dobruja*, in *BSOAS*, xiv (1952), 639-68; E. A. Zakhariadou, Οἱ χριστιανοὶ ἀπόγονοι τοῦ Ἰζζεδδὶν Καϊκαοὺς Β' στὴ Βέροια, in Μακεδονικά, vi (Salonika 1964), 62-74).

By the end of the 9th/15th century there were extensive rice-fields, state-run, in the meadows to the south and west of the town (M. T. Gökbilgin, *Edirne ve Paşa Livâsi*, Istanbul 1952, 135-7; cf. FILĀḤA, p. 907). In the 11th/17th century (and presumably also before) Karaferye was administered as a *ḳaḍāʾ* of the *sandjaḳ* of Selānik [*q.v.*]. Ewliyā Čelebi described it as unwalled and ungarrisoned, but with the remains of a citadel; it had 4,000 houses, in 16 Muslim and 15 Christian quarters, with two Jewish *djemāʿats*. In 1885 the *ḳaḍāʾ*, together with the *nāḥiye*

of Aghustos (Náoussa), comprised 46 villages and *čiftlik*s (*İA*, art. *Selânik*, p. 347a).

In the First Balkan War (Oct.-Dec. 1912), Karaferye fell to the Greeks on 25 October, and since the Treaty of Athens (14 Nov. 1913) it has belonged to Greece.

ḲARAGÖZ (Tk. "black eye"), the principal character in the Turkish shadow play, and also the shadow play theatre itself; the shadow player is called a *ḳaragözdjü* or *khayālī*.

The *ḳaragöz* theatre is played with inanimate actors and flat, two-dimensional figures (*ṣūret*, *taṣwīr*), manipulated by the shadow player who, as in the puppet theatre, makes them move and talks from behind a screen whilst he himself remains out of sight. The characters are presented in caricature; as well as human figures, there are also schematised repres entationsof certain animals, plants and objects, as well as fantastic beings and some rudimentary scenery. All the figures are made from leather (the superior ones used formerly to be made with camel hide), prepared in a special way and painted in bright colours. The human figures are jointed at one point (rarely at two points) in order to permit the required movements. The size of the figures varies between 7.5 cm. and 46 cm. in height for objects, animals and scenic features, and between 21 cm. and 40 cm. for the humans.

A stick (two sticks for the figure of Ḳaragöz and for a few other characters) 50 cm. long and as thick as a human finger has its pointed end inserted into a hole made in the figure's or object's body. The showman stands behind a screen made from muslin and one m. long by 0.60 m. high, and with the aid of the stick keeps the whole surface of the figure up against the screen and makes it move along it according to its movements in the play. He also makes the upper part of the figure's body move slightly in order to mark each character's replies, at the same time imitating the voice and accent appropriate to that character. The screen is illuminated from below by a lamp placed between the shadow player and the figures of the play. The shadow player retails the monologues and dialogues, and sings the songs; his assistant or apprentice passes the figures to him, does the sound effects and shakes a tambourine to mark the appearance of the characters on stage.

The *ḳaragöz* theatre was played before a very restricted public only. It used to be staged in the cafés during Ramaḍān or else in the salons of private houses during circumcision festivities or during the winter evenings.

The shadow play figures can be divided into three groups: (1) Inanimate objects. These are either pieces of scenery and accessories directly connected with the play's theme, such as the shop where Ḳaragöz functions as a grocer, the pickaxe which Ferhād uses to excavate a water channel in the mountain, etc.; or else a tree, a section of landscape, a group of figures, etc. without any direct connection with the play and called *göstermelik*, but shown on the screen before the actual play in order to attract the interest of spectators and fire their imagination. (2) Animals which may on occasion have a rôle in a play, such as Ḳaragöz's ass, Ferhād's horse, etc. (3) Fantastic beasts and beings, such as dragons, sorcerers, a magic poplar tree, etc. (4) Human characters, the actors in the play. Some of these appear only in a single play, when the latter is drawn from a work of popular literature, *e.g.*, Ferhād and Shīrīn, Ṭāhir and Zühre, but also in cases like that of ʿĀshıḳ Ḥasan and his son Muṣlī, who only appear in the play *The bloody poplar tree*. Other characters may appear in all the plays, such as Ḳaragöz and Hadjivad, the two central characters; the Zenne ("ladies"), women of various types and ages; Čelebi ("young man"); Matiz or Tuzsuz-Deli-Bekir ("the strong man"), often portrayed with the characteristics of a drunkard, but occasionally in the guise of a judge or arbiter; various types of provincials and foreigners (*e.g.*, the Frank), of Muslim minority groups (the Arab, the Laz) and of non-Muslim minority groups (the Jew, the Armenian, the Greek); persons depicted in caricature because of their physical or moral defects (*e.g.*, Beberuhi "the dwarf", Tiryākī "the opium smoker"); and so forth.

Hadjivad represents the petit bourgeois, the educated man, temperate, highly opportunist and universally respected; people often come to him for advice and help and often ask him to arrange complicated matters. His partner Ḳaragöz combines within himself all the minor vices; he is illiterate, greedy, ill-behaved and scandalously outspoken. He calls himself a gypsy; although he is a blacksmith by trade, he is often out of work and in perpetual financial difficulties, leading to frequent quarrels with his wife and necessitating the intervention of Hadjivad in order to find him a job. Hadjivad appears in two introductory scenes in the finale, holding the stage then for as long as his partner, whereas his presence in the action of the play proper is briefer. Ḳaragöz, on the other hand, is present all through the proceedings; he is involved in intrigues, even in those plays originating from outside genres. Whatever the origin of the play, it is always set in a place called by the shadow players *Küshterī meydānī* "Küshterī square", which derives its name from the learned Shaykh Kushterī, who lived in Bursa and died there *ca.* 767/1366; the invention of the *ḳaragöz* theatre is attributed to him in popular legend. The right-hand side of the screen (sc. the right-hand side as seen by the audience) is considered to be Ḳaragöz's house; he always enters the scene from there, and he alone occupies this half of the screen. The left-hand side is reserved for Hadjivad and all the other characters. All told, Ḳaragöz himself takes up a good half of the whole performance.

The text of a traditional play comprises four sections: (1) The prologue. Hadjivad comes in, chanting a *semāʿī* and then a *ghazel*, the so-called "screen *ghazel*", a poem couched in pseudo-philosophical terms, stressing the profound meaning of

the shadowplay and the lessons which the spectator may derive from it. Then he proclaims his desire to amuse himself by shouting for his "friend" Ḳaragöz. The latter, disturbed by the noise, comes down into the street and beats Hadjivad. (2) The dialogue (*muḥāwere*) comprises either a discussion on any subject whatsoever between Hadjivad and Ḳaragöz, whose comic effect comes from the contrast in character and the cultural levels of the two participants, or else it is the embellishment of an extravagant adventure of one of the two companions, usually Ḳaragöz. The spectators are amused by the remarks and questions of the listener of the dialogue, and the verbose replies of the narrator; very often, the adventure turns out to be a dream or a delusion of hashish-taking.

The text of the dialogue may well be improvised, and the *ḳaragözdjü*, according to the circumstances and according to his creative powers, may prolong it as he likes. However, there are some traditional plot outlines, and it seems—on the basis of the texts which have been collected—that the artists always followed them. Some 60 texts of these dialogues have been counted, some of them clearly later versions of a basic original. In the most recent and most complete edition of *ḳaragöz* texts (Cevdet Kudret, *Ḳaragöz*, 3 vols., Ankara 1968-70), 53 are given. Certain of these *muḥāwere*s, of the type comprising a narration of extravagant adventures, are variations of the *tekerleme* stories (see P. N. Boratav, *Le "tekerleme"*, Cahiers de la Société Asiatique, xvii, Paris 1963, 106-14, 174-5, types 51 I, 51 J, 51 K, 52, 53). Tradition permits the *ḳaragözdjü* the freedom of prefixing a *muḥāwere* of his own choice to the play of his programme, whence the fact that in many editions of texts one finds different plays accompanied by the same "dialogue", or even the same play preceded by different "dialogues" in the various versions. When the dramatic section (sc. the "play" proper) is only short, or when the shadow player wishes, for some reason or other, to extend the show, he may add a second *muḥāwere* after the first one; this is called an *ara muḥāweresi* "intercalated dialogue". (3) The play proper (the *faṣl*). There are two main categories of theme elaborated in this dramatic section: (a) Subjects drawn from popular romances, such as *Ferhād we Shīrīn*, or *Ṭāhir we Zühre*. A certain number of themes have also been enumerated as stemming from the popular stories of the *meddāḥ*s, such as *Handjerli Hanım*, and *Ṭayyārzāde*, or from modern novels like *Ḥüseyin Fellāḥ* and *Ḥasan Mellāḥ* of Aḥmed Midḥat, but the texts of these are not extant. Cevdet Kudret, *op. cit.*, ii, 244-64, has edited an adaptation of Molière's comedy *Le Médecin malgré lui*. (b) Sketches inspired by everyday life in the towns, and peculiar to the *ḳaragöz* theatre. Georg Jacob, in his *Türkische Literaturgeschichte in Einzeldarstellungen, I. Das türkische Schattentheater*, Berlin 1900, 46-54, has classified the plays in this second category thus: (i) Ḳaragöz is out of work; Hadjivad finds him a job which looks like being agreeable and profitable. The ensuing farce revolved round the blunders, mistakes and extravagant behaviour of Karagöz in this job, for which he is totally unfitted. Plays in this group include *Ḳaragöz the cook*, *Ḳ. the grocer*, *The see-saw*, *The druggist's shop*, *Ḳ. the poet*, etc. (ii) Karagöz tries to insinuate himself, or actually succeeds in doing so, into some forbidden or dangerous place, by mere curiosity, interest or chance, and this brings about a series of awkward situations and unpleasant confrontations. Examples of this group are *The bath*, *The garden*, *The bloody poplar tree*, etc. (iii) Ḳaragöz embarks, unwittingly and without foreseeing the unpleasant consequences, on various complicated adventures. Through improvised actions, he astounds and disarms his opponents, turns tragic situations into comic ones, and emerges completely unscathed. The themes of plays like *The excursion to Yalova*, *The tavern*, *The lunatic asylum*, *Ḳaragöz the hashish smoker*, etc., are built around these themes.

Several of the plays in both these categories belong equally to the répertoire of *ḳaragöz* and to those of two other types of Turkish popular theatre, the *kukla* or marionette theatre and the *orta oyunu* or traditional theatre with living actors.

The number of "plays" (*faṣl*) so far counted is 47. Kudret has edited 36 of them, choosing one text for those attested in several versions; for three other texts he has been unable to give more than the titles. It has also been possible to draw up two lists of "older plays" and "newer plays". Out of the 47 plays enumerated, 27 are known to be "plays from the older répertoire". It was formerly the practice to stage a different play for every evening of Ramaḍān, with the exception of the evening of the 26th-27th, the "Night of Power" [see RAMAḌĀN], when there was a break, out of respect for the especially sacred character of that evening. The conclusion is, therefore, that the traditional répertoire comprised 28 or 29 plays. It seems, too, that we should add to the total enumerated of 47 *ḳaragöz* plays a large number of texts put together by "scholarly" authors, see Kudret, i, 45 and 56-9, bibliography nos. XXIV, XXX-XXXI, XXXIV-XXXVII, XL, XLII, and Aziz Nesin, *Üç karagöz oyunu*, ed. Düşün, Istanbul 1968.

Although scholars do not yet agree about the country of origin of the shadow theatre, it is generally recognised that it spread from eastern and south-east Asia towards the Near East and Europe. With regard to its appearance in the Ottoman territories, it was long believed that it had come from China through the mediation of the Mongols and via the traditional route through Central Asia and Iran. However, it has now been realised that scholars have been in error through the incorrect interpretation of a technical term: the *khayāl* of Arabic, Persian and Turkish sources does not mean "shadow figure" (whose equivalent is *Khayāl-i ẓill*, [*q.v.*]), but rather "figure" *tout court*, *i.e.*, it is not connected with the shadow theatre at all, but with three-dimensional marionettes. Thus whilst the puppet theatre has been known from an early date amongst the Mongols and Turks of Central Asia, as also among the Iranians, the shadow theatre has only existed among them in recent centuries.

In the Near Eastern lands, the shadow theatre goes back to the 6th/12th century, see Ritter, art. *Ḳaragöz* in *İA*, and Metin And, *Geleneksel türk tiyatrosu*, Ankara 1969, 113. This is certain with regard to Egypt. Ibn Dāniyāl [*q.v.*] (7th/13th century) has left three texts for performance in this theatre, those themes have striking affinities with the plays of the traditional *karagöz* répertoire. Furthermore, some actual figures of the Egyptian shadow theatre, probably of 7th/13th or 8th/14th century construction, have come down to us; these too have many features in common with the Turkish *ḳaragöz* figures.

The tradition of the Turkish *ḳaragözdjüs* purports to trace the origin of their art to the time of Sultan Orkhan, and its invention to Shaykh Kushterī. Ewliyā Čelebi (11th/17th century) records a legend which would make the two main characters of the

theatre contemporaries of the Saldjūks of Anatolia, and which makes the gypsy Ḳaragöz a messenger for the Byzantine Emperor Constantine. These legends lack historical foundation. The oldest piece of evidence for the appearance of the shadow theatre in Ottoman territory comes from the 10th/16th century. The Egyptian chronicler Ibn Iyās speaks of a shadow theatre performance at Djizza in 923/1517 in front of Selīm I after his victory over the Mamlūks; the Ottoman sultan, delighted by this performance, wished to bring the shadow player to Istanbul. It is known from another source that under Aḥmed I (1012-26/1603-17) an Egyptian shadow play artist came to practice his art in Istanbul. From the end of the 10th/16th century onwards, we have extensive information about the *ḳaragöz* theatre, both in the travel narratives of western writers and also in Ottoman sources of various kinds; the most interesting details are given in the *sūrnāmes*, works describing festivities of various kinds, such as marriages, circumcisions, etc.

From the 11th/17th century, Ḳaragöz is clearly mentioned as the chief character of the shadow theatre. In all the regions to which this theatre spread, including lands with such diverse non-Turkish populations as Greece, Tripolitania, Tunisia and Algeria, it is called by various metamorphoses of the word *ḳaragöz*. Similarly, the Turkish *ḳaragöz* came to Egypt from the Ottoman homeland and was in the last century a favourite form of entertainment; it also gave the name *aragoz* to a type of Egyptian puppet.

It was probably only in the 11th/17th century that the *ḳaragöz* theatre acquired its actual technique and style. Ewliyā Čelebi gives details of certain amusing dialogues of Karagöz and Hadjivad and of several other characters, as well as outlines of a few plays in the classical répertoire.

The *ḳaragöz* theatre was an art form of the big towns in the Ottoman empire. In particular, it described the distinctive types and the manners of the motley peoples of the capital. It retained this emphasis even in the large provincial towns like Bursa and Izmir and in eastern Anatolia. Ewliyā Čelebi speaks of some famous shadow players of Erzerum; one wonders whether the *ḳaragöz* theatre might have acquired peculiar local features in the regions from the capital. Notes published on the *ḳaragöz* at Ḳars by Fahrettin Kırzıoğlu, *Kars şehrinde karagöz oyunu*, in *Türk Folklor Araştırmaları*, no. 112 (Nov. 1958), show this as possible, since the répertoire and the characters of the *karagöz* in that town display some local peculiarities.

(P. N. Boratav)

KARAITES, a Jewish sect which does not recognize the authority of the post-biblical tradition incorporated in the Talmud and in later rabbinic works. It is the only Jewish sect (not counting the Samaritans) which has survived for over 1200 years and is still in existence. The name (in Hebrew *ḳārāʾīm*, *bĕne* (or *baʿăle*) *Miḳrāʾ*; in Arabic *ḳarāʾiyyūn*, occasionally *aṣḥāb ʿĀnān wa-Binyāmīn*) is variously explained as "readers (*ḳārāʾ*) of Scripture (*Miḳrāʾ*)" and as "callers (to the true faith)", from the alternate meaning of *ḳārāʾ*, "to call, to invite", (cf. the Shīʿī "callers", *duʿāt*, sing. *dāʿī*).

(1) History. Although Karaism as we know it, and as the Karaites themselves have always known it, is essentially the product of the intellectual and social ferment in the Jewish community of the Muslim empire, the influence of several historical factors can be discerned in the early period of its development. The basic factor was probably the ancient and uninterrupted resistance on the part of some segments of Jewry to the growing oral tradition (the Oral Law) and to the authority of its tradents and interpreters, which resulted in a number of dissident sects antedating or contemporary with the Talmudic era (Sadducees, Essenes, Qumran sectarians), all insisting on the monopoly of the Bible as the sole source of divinely inspired law. Contributing factors probably were: (1). The collapse of the messianic hopes which had been inspired by the spectacular fall of Persian and Byzantine rule and rise of the Muslim empire in the 1st/7th century, and sorrowful realization that the redemption of Zion and the end of the exile were not at hand; (2). The growing social unrest in the most populous autonomous Jewish settlement, that of ʿIrāḳ (Babylonia), where the poorer classes of rural tenant-farmers and urban artisans and labourers felt themselves grievously oppressed by the official bureaucracy of the exilarch (*raʾs al-djālūt*, the official representative of ʿIrāḳi Jewry before the caliph's court) and of the *geonim* (sing. *gaon*; the presidents of the ʿIrāḳi talmudic academies); (3). The consolidation of the vast Muslim empire, which resulted in the opening of the sparsely populated mountainous lands to the east and north of ʿIrāḳ to settlement by discontented emigrants, both gentiles and Jews.

It was no doubt these malcontents who formed the nucleus of what later became Karaism. The earliest known sectarian leader, Abū ʿĪsā Obadiah (ʿAbd Allāh) al-Iṣfahānī q.v. of Isfahan, in Iran, organized an armed revolt against the government of the caliph ʿAbd al-Malik (65-86/685-705), but was quickly defeated and slain, although some of his followers asserted that he did not die but went into hiding, meaning that he would in due time reappear, like the Shīʿī hidden *imām*. His successor, Yūdghān, was

likewise thought to continue in hiding until his eventual reappearance [see ʿIsāwiyya].

By the middle of the 2nd/8th century the schism penetrated back into ʿIrāḳ, particularly into the newly-built capital city of Baghdād, where it was joined by ʿĀnān b. David, a member of the highest echelon of the rabbinic aristocracy. The traditional rabbinic account (quoted by the 6th/12th century Karaite author Elijah b. Abraham) designates him as the actual founder of Karaism and gives as his motive for secession his bitter resentment at his failure to be elected to the office of exilarch. This oversimplified story would seem to be true only to the extent that ʿĀnān had lent his aristocratic and scholarly prestige to the budding schism, and what is even more important, composed the first code of schismatic law (*Sefer ha-miṣwot*), which is the earliest extant Karaite literary document. His followers, called Ananites (*ʿĀnāniyyim*, *ʿĀnāniyya*), styled him exilarch, and his lineal descendants bore the title of Karaite prince (*nāśīʾ*); few of them, however, distinguished themselves as either leaders or scholars.

The 3rd/9th century produced several schismatic teachers, some of whom sharply criticized ʿĀnān's views: Ismāʿīl and Mīshawayh al-ʿUkbarī (of ʿUkbarā, in ʿIrāḳ), Benjamin al-Nahāwandi, in Iran; the first to use the collective term Karaites), and Malik al-Ramlī (of Ramla, in Palestine). Mūsā al-Zaʿfarānī (of the Zaʿfarān district in Baghdad) migrated with his followers to Tiflīs, in Armenia, and became known as Abū ʿImrān al-Tiflīsī. With Daniel al-Ḳūmisī (a native of Dāmghān, in the Iranian province of Ḳūmis), Karaism reached the 4th/10th century.

The surnames just listed indicate the fairly rapid territorial expansion of Karaism during this early period. Daniel al-Ḳūmisī was the first eminent Karaite scholar known to have settled in Jerusalem, and other Karaite communities were established in Damascus, Cairo, and other smaller towns. Zealous Karaite preachers undertook missionary journeys to seek converts among rabbinic audiences, but apparently with little success, for with the exception of ʿĀnān, not a single early Karaite scholar is stated to have been a convert from rabbinism, and early Karaite writings are replete with sad complaints about the smallness and poverty of their communities. In any case, a more or less amicable *modus vivendi* prevailed for a long time between the schism and the rabbinic mother-synagogue, but in the first half of the 4th/10th century this peaceful situation came to an abrupt end. Saadiah al-Fayyūmī (882-942 A.D.), president of the rabbinic academy at Sūrā (in ʿIrāḳ), an exceedingly brilliant and influential scholar, published a series of polemical writings in which he condemned the Karaites as outright heretics who had cut themselves off completely from rabbinic Judaism. The effect of this sudden and unexpected blow upon the Karaites was cataclysmic: it deprived them of the only missionary field open to them, and it extinguished forever their cherished hope of eventually persuading their rabbinic cousins to return to the true—that is, Karaite—faith. No wonder their reaction was most bitter, and polemics against Saadiah run like a scarlet thread through Karaite literature from that time on down to the 19th century.

On the other hand, the necessity to combat Saadiah's scholarly criticism ushered in the golden age (4th-5th/10th-11th centuries) of Karaite scholarship, and brought about not only the consolidation of the various schismatic groups into a more or less unified sect, but also some modest but highly necessary reforms which softened to some extent the rigorous burden of Karaite practice. At the same time, ʿIrāḳ and Iran gradually lost their primacy as Karaite centres and were superseded by Jerusalem and Cairo, and new settlements were established in the Balkans (then under Byzantine rule; first half of the 5th/11th century), Cyprus (6th/12 th century), Spain (where Karaism, under the leadership of Ibn al-Tarās, 5th/11th century, endured for a while but eventually disappeared entirely), Crimea (7th/13th century), and Lithuania (end of 8th/14th century). The First Crusade (1099 A.D.) put an end to all Jewish activity in Palestine and much of Syria, and the Karaite academy in Jerusalem, which had trained scholars from many countries, went out of existence. Some Karaite scholarly activity shifted to Cairo, but most of it moved to Constantinople where Greek-speaking Karaite translators turned some Arabic Karaite classics into Hebrew, thus making them accessible to later generations of Western Karaites who knew no Arabic. The liquidation of the Byzantine empire with the capture of Constantinople by the Ottoman Turks in 1453 A.D. gave a new impetus to Karaite scholarship, and the Istanbul community, now Greek and Turkish-speaking, gave its spiritual support to the Crimean and Lithuanian settlements, where a Tatar dialect was, and still is, spoken. The decline of the Ottoman Empire in the 18th and 19th centuries resulted in the rise in importance of the latter settlements, which by the end of the 18th century came under Russian rule. Soon thereafter the Russian Karaites succeeded in obtaining from the Czarist government full rights of citizenship, thus escaping the crushing restrictions which were imposed upon their rabbinic cousins. During World War II the Crimean, Polish and Lithuanian Karaites were left unmolested by the German occupational authorities, on the ground that they were ethnically not of the Jewish race. In the post-war period, however, many Karaites in Egypt and ʿIrāḳ, including the entire ancient community in Hīt (on the Euphrates), found themselves compelled to emigrate to Israel, where they settled in several compact colonies (Ramla, Ashdod, etc.). No accurate statistics of the Karaite population of the world are available; an approximate figure is 12,000—13,000.

(2). Literature. No writings by pre-Ananite schismatics have been preserved, although at least one of them, Abū ʿĪsā al-Iṣfahānī, reputedly illiterate (cf. Muḥammad's epithet *ummī*), is said to have miraculously produced books and volumes. ʿĀnān's code, written in Aramaic (the language of the Talmud), is the earliest Karaite document of which fragments have survived. Benjamin al-Nahāwandī also composed a code of law, written in Hebrew, of which only a portion has survived, as well as commentaries on some biblical books. Daniel al-Ḳūmisī wrote a code of law and a commentary on the Bible, likewise in Hebrew, known only in fragments. The overwhelming bulk of later literature, composed by Karaite authors resident in Muslim countries (except Turkey) down to the 15th century, was written in Arabic. After the First Crusade, the Balkan Karaite translators used a clumsy Hebrew heavily interlarded with Arabic and Greek loanwords. Later Karaite authors in Turkey, Crimea, Lithuania, and Poland, down to the 20th century, wrote in a more idiomatic Hebrew, and occasionally in the spoken Karaite-Tatar dialect, which was written in Hebrew characters.

The golden age of Karaite literary activity opened with the works of Abū Yūsuf Yaʿḳūb al-Ḳirḳisānī (or al-Ḳarḳasānī, of Ḳirḳīsiyā [Circesium] on the Euphrates, or Ḳarḳasān near Baghdād), a man of encyclopaedic learning and a keen analytic mind who wrote two voluminous works entitled *Kitāb al-anwār wa'l-marāḳib* (code of law) and *Kitāb al-riyāḍ wa'l-ḥadā'iḳ* (commentary on the non-legal portions of the Pentateuch). The former also provides the earliest, most detailed, and most reliable information on the sectarian leaders and groups which eventually coalesced into the unified Karaite sect, and has probably served as the chief source for all subsequent accounts, both Jewish and Muslim. His smaller works, not yet recovered, include commentaries on Genesis, Job, and Ecclesiastes, a refutation of Muḥammad's claim to prophecy (*Kitāb fī ifsād nubuwwat Muḥammad*), essays (*ḳawl*) on textual interpretation (*ʿala 'l-tafsīr wa-sharḥ al-maʿānī*) and on the art of translation (*ʿala 'l-tardjama*), and others. His younger contemporary, Salmon b. Jeroham (Sulaym, or Sulaymān, b. Ruḥaym) wrote a violent tract against Saadiah (only the Hebrew version, entitled *Milḥamōt ha-Shēm*, has been preserved) and commentaries in Arabic on several biblical books. The end of the 4th/10th century produced the foremost Karaite Bible-commentator, Japheth b. Eli (Abū ʿAlī Ḥasan ibn ʿAlī al-Baṣrī), who was still living in 395/1004-5 and wrote a commentary on the entire Bible, in Arabic, with a very literal and often grammatically awkward Arabic rendering of each Hebrew verse. Karaite study of Hebrew grammar and lexicography, necessitated by the Karaite preoccupation with biblical exegesis, resulted in the monumental Hebrew-Arabic dictionary (*Djāmiʿ al-alfāẓ*) by David b. Abraham al-Fāsī (of Fez, in Morocco). A zealous and expert Karaite missionary, Abu 'l-Surrī Sahl b. Maṣlīaḥ, wrote a long epistle in Hebrew (in which he promises to write an Arabic version also) in answer to his rabbinic opponents with whom he came in conflict, probably in Cairo. Japheth b. Eli's son, Abū Saʿīd Levi b. Japheth, followed his illustrious father in composing a series of brief exegetical glosses (*nukat*) on the Bible, as well as an authoritative code of law (composed in 397/1006-7), the latter known only under the Hebrew title of *Sēfer ha-miṣwōt*.

The 5th/11th century saw the Karaite academy in Jerusalem, presided over by Joseph b. Noah (Abū Yaʿḳūb Yūsuf b. Nūḥ), in full flourish and produced a number (reputedly 70) of eminent scholars. Joseph b. Noah himself wrote a commentary on the Pentateuch and a Hebrew grammar. His pupil, Aaron b. Jeshuah (Abu 'l-Faradj Hārūn b. al-Faradj), composed a grammatico-lexicographical work entitled *al-Mushtamil*, another grammatical work entitled *al-Kāfī*, and a commentary on the Pentateuch. Another pupil of Joseph b. Noah, Joseph ha-Rō'eh (Abū Yaʿḳūb Yūsuf al-Baṣīr; "the Seeing", euphemistically for "the Blind"), the foremost Karaite philosopher of the 5th/11th century, composed an adaptation of the Muʿtazilī *kalām* entitled *al-Muḥtawī* (abridged by the author under the title *Kitāb al-tamyīz* or *al-Kitāb al-Manṣūrī*), and a code of law entitled *Kitāb al-istibṣār*. Joseph ha-Rō'eh's advocacy of the relaxation of the suicidal severity of the original Karaite law of incest was developed further by his pupil Jeshuah b. Judah (Abu 'l-Faradj Furḳān b. Asad) in a work known only in its Hebrew translation entitled *Sēfer ha-ʿārāyōt*; he also composed several theologico-philosophical works.

The First Crusade marked the transfer of the centre of Karaite literary activity to the Balkans, where Hebrew was the literary vehicle, with a secondary branch in Egypt, where Arabic continued to be the literary language. The two most eminent Byzantine translators, Tobiah b. Moses and Jacob b. Simeon, turned a number of Karaite Arabic classics into Hebrew. Judah Hadassī (of Edessa, the modern Urfa, in Turkey, near the Syrian border) compiled a large encyclopedia (begun in 1148 A.D.) of early Karaite learning entitled *Eshkōl ha-kōfer*. Jacob b. Reuben wrote a commentary on the Bible, mainly compiled from older Arabic-writing authors, entitled *Sēfer hā-ʿōsher*. In Egypt, Karaite efforts to write Hebrew poetry produced (about the middle of the 6th/12th century) the most eminent poet of the earlier period, Moses Darʿī (of Darʿa, in Morocco, but born in Alexandria, Egypt), who imitated, not very successfully, the great rabbinic poets of the Spanish school, and left an extensive *dīwān* of poetic pieces, both religious and secular. Japheth (Ḥasan b. Abi 'l-Ḥasan) al-Barḳamānī, who lived in the middle of the 7th/13th century, wrote in Arabic a medical work (*al-Maḳāla al-Muḥsiniyya fī ḥifẓ al-ṣiḥḥa al-badaniyya*) and a polemical treatise. Israel ha-Maʿārābī (al-Maghribī), an eminent theologian and jurist in Cairo (first half of the 8th/14th century), wrote a number of works in Arabic. Samuel b. Moses al-Maghribī completed in 837/1434 a concise code of law entitled *al-Murshid* (the last Karaite code written in Arabic), and David b. al-Hītī (of Hīt, on the Euphrates), his younger contemporary, wrote a brief but valuable Arabic chronicle of Karaite scholars from ʿĀnān down to his own time. Some eighty years earlier a lesser poet, Moses b. Samuel of Ṣafad, in Palestine, left a *dīwān* of Hebrew poems, in which the most interesting piece is a long epic poem describing his troubled career as clerk (*kātib*) in charge of the private estates of the amir of Damascus and his forced conversion (in 755/1354) to Islam and pilgrimage to Mecca; he finally escaped to Egypt, where he seems to have returned to his ancestral faith.

In Byzantine Karaism, the 7th-8th/13th-14th centuries marked a substantial literary revival. Aaron b. Joseph (Aaron the Elder) wrote (after 691/1292) a much esteemed philosophical commentary on the Pentateuch (*Sēfer ha-mibḥār*), but is equally renowned also for his redaction of the official Karaite liturgy, in which he included a number of poetic hymns, many of his own composition. Another Aaron, Aaron b. Elijah (Aaron the Younger, of Nicomedia, the modern Izmīd or Izmit, in Asia Minor; d. 770/1369), produced a complete *summa* of Karaite theology, in three parts, philisophical (*ʿĒṣ ḥayyim*, obviously intended as the Karaite counterpart of Maimonides' *Dalālat al-ḥā'rīn*), legal (*Gan ʿĒden*), and exegetical (*Keter Tōrāh*). In the 9th/15th century, Elijah Bashyāčī, *ḥākām* (rabbi) of the Istanbul Karaite community, died in 895/1490, leaving behind him an unfinished code of law entitled *Adderet Ēliyyāhū*, which was continued, but not completed, by his brother-in-law Caleb Afendopolo (d. after 1522 A.D.), an encyclopaedic scholar in his own right. It was recognized by most Karaites as the most authoritative manual of their law and ritual.

The decline of the Ottoman empire once more shifted the centre of Karaite literary activity, this time to the Crimea, Lithuania and Poland. The town of Troki (near Wilna, in Lithuania) produced its most famous Karaite son, Isaac b. Abraham (d. 1594 A.D. [1586?]), whose tract against Christianity, entitled *Ḥizzūḳ emūnāh*, evoked Voltaire's praise for

its skill and acumen. The interest shown in Karaism, from the middle of the 17th century onward, by Protestant theologians (Johann Rittangel, Gustav Peringer, Johann Puffendorf, Lewin Warner, Jacob Trigland and others) resulted in several works by their Karaite informants, setting forth, of course from the partisan Karaite point of view, the history of the Karaite secession from the mother-synagogue, the elements of Karaite belief, and the history of Karaite literature: *Appiryōn*, by Solomon b. Aaron of Troki (d. 1745 A.D.); *Dōd Mordekay* and *Lebūsh malkūt*, by Mordecai b. Nisan of Kukizów (near Lvóv, in Polish Galicia). The Karaite community of Lutsk, in Volhynia, produced the first Karaite bibliographer, Simḥah Isaac b. Moses (d. 1766 A.D., whose *Nēr* (*Ōraḥ*) *ṣaddīḳīm*, a history of Karaism, has an appendix containing a list of Karaite writers and their works. He also wrote an extensive commentary on Aaron the Younger's philosophical *ʿĒṣ ḥayyim*.

The most eminent Karaite author of the 19th century was Abraham Firkovič (1785-1874). Armed with the official authorization of the Russian government, he travelled extensively in the Crimea, the Caucasus, Syro-Palestine and Egypt, gathering original materials for the history of the Karaites. Unfortunately, in his zeal to prove that the Karaites had left Palestine before the advent of Jesus and therefore had no part in his crucifixion, he permitted himself to tamper with dates in manuscripts and on tombstones, and thus blemished his otherwise well-founded reputation for scholarship. The mass of manuscripts he collected (sometimes, to be sure, in a rather highhanded fashion) was later acquired by the Leningrad Public Library, and forms one of the largest, though least utilized, Karaite manuscript collections in the world. His older contemporary, Mordecai Sultansky (d. 1862), composed a number of works, the best known being *Zēker ṣaddīḳīm*, valuable as a detailed specimen of the present-day official Karaite version of the sect's history and its relationship to the rabbinic mother-synagogue.

(3). Dogma and Practice. Aside from the rejection of the authority of the post-biblical tradition, there is no basic divergence between Karaite and rabbinic dogmatics. The Karaite creed, as formulated in ten articles by Elijah Bas͟hyāčī (9th/15th century), postulates the existence of God, Creator of the world and all that is in it, the divine inspiration of all the biblical prophets, the authority of the Torah and the duty of the believer to study it, the certainty of the resurrection of the dead and of the final judgment, the responsibility of each human being for his own deeds, and the eventual advent of the Messiah. An earlier Arabic creed (*ʿAḳāʾid*), formulated by Israel ha-Maʿărābī (8th/14th century), still adhered to by the Egyptian Karaites, has only six articles, and omits all mention of the Messiah—a puzzling peculiarity for which no satisfactory explanation has so far been suggested. None of these articles of faith conflicts with rabbinic teachings.

In fact the Karaite rejection of postbiblical tradition and the cry "Back to the Bible!" already proved impractical as early as the time of ʿĀnān, who found himself compelled to deduce new laws from the biblical text by the method of analogy (Hebrew *heḳḳēs͟h*, Arabic *ḳiyās*), supposedly borrowed by him from the *imām* Abū Ḥanīfa, whom he is said to have met in prison. Life in the social and economic milieu of the Muslim empire simply could not, as a practical matter, be governed by a code of law enacted in Palestine a thousand or more years earlier. ʿĀnān's successor as the second *pater synagogae*, Benjamin al-Nahāwandī, freely borrowed from talmudic law. In this manner the monopoly of the Bible was gradually extended into the three official basic sources of Karaite law; the scriptural text (Hebrew *kātūb*, Arabic *naṣṣ*), analogy based on it, and the consensus of the successive generations of scholars (Hebrew *ḳibbūṣ*, *ʿēdāh* [inspired by the Arabic *ʿāda*?], later *sēbel ha-yĕrūs͟hāh*, "burden of inheritance"; Arabic *id͟jmāʿ*), the latter term covering laws which have no direct or indirect root in the Bible, but which are not contrary to it or to reason and logic, and have been accepted by the generality of scholars after exhaustive study (*naẓar*, *baḥt͟h*). The early Karaite leaders developed a strong centrifugal tendency, expressed in the maxim attributed to ʿĀnān, "Search thoroughly in the Torah, and rely not on my opinion", and recognized the right of every individual, within certain limits, to draw his own conclusions from his own study of Scripture and to abide by them. But time and experience modified this tendency, too, and produced more or less general obedience to prevalent scholarly opinion, at least in the particular country or region. In matters of philosophy of religion, the earlier Karaite scholars chose to accept the Muʿtazilī *kalām* almost in its entirety, and the later philosophical writers felt duty-bound to stand by their predecessors and permitted themselves only as few deviations from them as possible. There was thus in Karaism no such further progression to Neo-Platonism and Aristotelianism as occurred in rabbinic philosophy.

The intense and impatient nationalistic-messianic tendency which inspired Abū ʿĪsā's armed revolt (1st/7th century) against the Muslim authorities subsequently subsided into a no less intense but more peaceful longing for an end to the exile and for the restoration of Zion in all its glory. One result of this was the unceasing and rather touching effort on the part of the Karaites to maintain at least a small representative community of pious individuals in Jerusalem, who by prayer, fasting, and other devotional exercises besought God to "hasten the end". Some of these Karaite pietists belonged to the ascetic order of "Mourners for Zion" (Hebrew *Ăbēlē Ṣiyyōn*), which included rabbinic members as well. Another consequence of this powerful messianic feeling was the rather sombre and cheerless tone of the Karaite way of life, in which the elements of joy and pleasure inherent in such ancient institutions as Sabbath and Passover were as far as possible excluded, as incompatible with the sad plight of Israel in exile. Yet at the same time the usual concomitant of messianism, mysticism, which eventually came to flourish in rabbinic intellectual circles, was roundly condemned by Karaite scholars as impious and wicked.

It is in practical theology that Karaism parts ways with rabbinic usage, and here the earmark of Karaism is greater rigour and rejection of such relaxations or extensions of biblical law as were introduced by the rabbis in order to conform with changing public opinion and changing circumstances —for example, the replacement of the *lex talionis* by monetary compensation, the extension of the interdict of seething a kid's flesh in its mother's milk into an extensive dietary legislation, the substitution of a fixed mathematical calendar for the visual observation of the phases of the moon, etc. Hence radical reform, in the modern sense, could never gain a foothold in Karaism. The only change resembling such basic reform was the modest

liberalization by Jeshuah b. Judah (5th/11th century) of the suicidal so-called catenary (Hebrew *rikkūb*, Arabic *tarkīb*) theory of incest, which by endless compounding of analogy upon analogy to the forbidden relatives listed in the Bible had made it increasingly difficult for Karaites to find mates whom they could lawfully marry. A few other milder reforms were vigorously resisted and were adopted only locally under the pressure of practical conditions of life—for example, the relaxation of the biblical prohibition of all fire on the Sabbath, to permit lighting of the synagogue on Sabbath eve and leaving fire in ovens (kindled before the onset of the Sabbath) for heating of homes and keeping food warm during the Sabbath day, matters of vital necessity during the severe winters in Poland and Russia; or the introduction of a mixed visual and mathematical calendar, in order to secure at least some uniformity of holy days in the northern climes, where observation of the new moon is often impossible. Even with all these minor reforms, Karaite law still remains far more restrictive than rabbinic law in matters of marriage (levirate marriage is forbidden), inheritance (the husband has no right to his deceased wife's estate), diet, Sabbath rest, ritual cleanliness, dates of holidays (Pentecost is fixed invariably on a Sunday, a custom which appears to be one of the most ancient earmarks of Jewish sectarianism), etc. Mixed marriages between Karaite and rabbinic parties seem, curiously enough, to have been quite frequent in the 4th-5th/10th-11th centuries in Egypt and Syria, even among the upper echelons of Jewish society, and in such instances clauses were added in the marriage contract to safeguard the right of each party to observe the customs of his or her faith. Later on, however, the practice dwindled and such mixed marriages became quite rare. Polygamy was never explicitly forbidden by Karaite law (as it was by western rabbinic law), but seems to have been quite rare even in Muslim countries, and was certainly impossible in the West, where the law of the land (recognized by both Karaites and rabbinic Jews as binding) forbade it.

The codification of the Karaite liturgy by Aaron the Elder (7th/13th century) has been mentioned above. Originally Karaite rigorism led to an insistence that all formal prayer must consist exclusively of biblical psalmody, and the rabbinic practice of complementing biblical prayers with prose prayers and versified hymns composed by later authors was therefore condemned. But the passage of time and the example of the elaborate and poetically rich rabbinic prayerbook made their influence felt, and Aaron's order of prayer, supplemented by later additions in prose and verse, has finally developed into the voluminous liturgical corpus that it is today.

The relationship of Karaism to the older Jewish sects, particularly the Sadducees and the Dead Sea community, on the one hand, and to Islam, particularly Shīʿism, on the other, is still very obscure. Similarities and dissimilarities can be easily cited in both respects. The nature of Karaism as we know it, as the product of the Muslim milieu, makes it highly likely that, while it represents another link in the ancient chain of Jewish heterodoxy, it is certainly not, at least chronologically, a direct heir to its Jewish sectarian predecessors. Nor has it ever made any visible attempt at *Gleichschaltung* with Islam—every feature of Karaism is, at any rate as far as we can judge in the present state of our knowledge, a genuine product of Jewish history, Jewish tradition and Jewish thought.

(4). Printing. Unlike the rabbinic Jews, who eagerly seized upon Gutenberg's invention and produced a flood of printed books from the 1470s down to the present day, the Karaites ignored the printing press until well into the 18th century. The earliest Karaite printed book, an edition of the liturgy, was set up by rabbinic typesetters in 1528-9 A.D. at the Christian press of Daniel Bomberg in Venice. The second Karaite book was an edition of Bashyāčī's *Adderet Ēliyyāhū*, printed at Istanbul in 1530-1 A.D. by Gershom, a member of the great rabbinic family of masterprinters, the Soncinos. Two smaller Karaite books appeared in 1581-2 A.D., likewise in Istanbul, from an unnamed but probably rabbinic press. In the 17th century only one Karaite book was published, that in 1643 A.D. by the rabbinic press of Manasseh ben Israel (the correspondent of Oliver Cromwell) at Amsterdam.

The first Karaite printers were the brothers Afdah (Afidah) and Shabbethai Yĕrāḳā, who in 1733 issued a few sample sheets of the liturgy at Istanbul, but subsequently moved to Čufut-Ḳale in the Crimea, where they published a few books in 1734-41, whereupon they apparently went out of business. In 1804, soon after the Crimea was annexed by Russia, a new press was organized, likewise in Čufut-Ḳale, and four more books were issued from it in 1804-6. The first more or less successful Karaite press was established in 1833 at Eupatoria (Gozlow), also in the Crimea, and published a series of important old texts.

The reason for this neglect of the printing press by the Karaites can only be conjectured. Presumably it was their traditional dislike of innovations, however beneficial, and the very limited circle of prospective purchasers of books, which made printing a philantropic undertaking rather than a minimally profitable business.

Bibliography: No authoritative general history of Karaism is in existence, and the older works by J. Fürst (*Geschichte des Karäerthums*, Leipzig 1862-9) and W. H. Rule (*History of the Karaite Jews*, London 1870) must be used with great caution. Z. Cahn's *The rise of the Karaite sect*, New York 1937, is devoid of any value. The only reliable general sketches are those of S. Poznanski in *Encyclopaedia of religion and ethics*, vii, 662-72, and I. Markon in *Encyclopaedia judaica*, ix, 923-45, revised and augmented by L. Nemoy in *Encyclopaedia judaica* [in English], x, 761-85. S. Pinsker's *Liḳḳūṭē ḳadmōniyyōt*, Vienna 1860, is still valuable only for the original texts published in it for the first time. J. Mann's *Texts and studies, ii: Karaitica*, Philadelphia 1935, is a veritable thesaurus of documents and studies, but the major portion of it is devoted to the modern period after 1500 A.D. R. Mahler's *Karaimer*, New York 1947, is a Marxist-oriented interpretation of Karaism as a movement for political and socio-economic liberation; it is, however, a timely counterweight to the older predominantly theological view of Karaite history, and points out the great need to investigate more fully the social and economic factors in the sect's history. The history of the Arabic literature of the Karaites is included in M. Steinschneider's *Die arabische Literatur der Juden*, Frankfurt-on-Main 1902 (addenda by Poznanski in *OLZ*, vii, 1904), which obviously does not include a number of important texts published after that year. Karaite anti-Saadian polemics are sketched in S. Poznanski's *The Karaite literary opponents of Saadiah Gaon*, London 1908. B. Revel's *The Karaite halakah, i*

(all published), Philadelphia 1913, is somewhat antiquated. L. Nemoy, *Karaite anthology*, New Haven 1952, offers an annotated English translation of extracts from some of the most important texts prior to 1500 A.D. The principal Karaite philosophical writers are discussed in I. Husik's *A history of medieval Jewish philosophy*, New York 1916. P. S. Goldberg's *Karaite liturgy and its relation to synagogue worship*, Manchester 1957, is a useful comparative study, but is based solely on Hebrew Karaite sources, leaving the Arabic sources (particularly al-Ḳirḳisānī's order of the liturgy; L. Nemoy, *The liturgy of al-Qirqisānī*, in *Studies ... in honor of I. Edward Kiev*, New York 1971) entirely out of consideration. See also S. W. Baron, *A social and religious history of the Jews*, New York 1957, v, 209-85, 388-416 (for further references to Karaism see index to volumes i-viii, New York 1960); Z. Ankori, *Karaites in Byzantium*, New York 1959; N. Wieder, *The Judean scrolls and Karaism*, London 1962; A. Paul, *Écrits de Qumran et sectes juives aux premiers siècles de l'Islam: recherches sur l'origine du Qaraïsme*, Paris 1969 (defends more or less the traditional role of ʿĀnān as the founder of Karaism and the direct connexion between Karaism and Qumran); S. Poznanski, *Karaïsche Drucke und Druckereien* (unfinished), in *Zeitschrift für hebräische Bibliographie*, xxi-xxii (1918-20). The Arab accounts of Karaism (in the works of al-Bīrūnī, al-Shahrastānī, al-Maḳrīzī and others) are all based on uncritical data supplied by Karaite informants and often misunderstood and distorted, and are therefore of little if any historical value.

(L. Nemoy)

(5). The Karaites in Eastern Europe. Apart from Karaite settlements in the Byzantine empire, from around the 9th century Karaism began to disseminate in the western areas of the Khazar Ḳaghanate. In the early years of the 20th century, there were still members of the confession among the Slavs, in a group of Kuban Cossacks. The main bulk of the Karaites in these areas, however, was of Turkic origin, the name of their creed having become at the same time an ethnonym (ḳaray, pl. ḳaraylar; karaim, karaimi, karamI in Polish and Russian; the language is called ḳaray tili, ḳarayča, ḳaraimča). Since the 11th century the Karaites lived for the most part in the south of Crimea; as farmers, artisans and merchants, they enjoyed a privileged position in the Crimean Khānate, both from judicial and economic aspects. Their communities at Mangup and Ḳirḳ-yer were described in 1666 by the famous Turkish traveller Ewliyā Čelebi [*q.v.*]. In the late 14th century Vitold, Grand-Duke of Lithuania, settled some of the Crimean Karaites in his lands during his wars against the Tatars. They served in his guard in his capital, Troki, and were garrisoned in his strongholds on the border; here, too, they were granted land and privileges as well as an autonomous communal organisation. There are good grounds for believing that they spread from Lithuania southwards, settling at Luck, Lvov, and Halicz. By the end of the 17th century, the Polish and Lithuanian areas comprised 32 communities in all. Without severing their ties with the Crimea and Istanbul, Karaites here (mainly in Lvov and Halicz) were engaged also in ransoming Polish prisoners of war from Muslim captivity and in trade with the East. The epidemics and wars of the 17th and 18th centuries gradually reduced their smaller settlements. At the present day, compact Karaim communities survive at Luck, Halicz, Panevežys, Troki, and (since the 19th century) in Vilna.

For many years the main Karaite centre was at Ḳirḳ-yer, where in 1731 a Karaite printing-press was established. When the Crimean Khānate fell, contacts between the Crimean communities and those in Lithuania and Poland became stronger, resulting in the gradual Europeanisation of the Crimean Karaites. In the 19th century their main centre was at Gözleve (Eupatoria), where in 1837 the Tauridian Karaite Religious Board was established, and later a Karaite religious college and library. On Lithuanian territories (integrated from the end of the 18th century with the Crimea), a separate Karaite religious board was established in 1857 at Troki. When, with the end of World War I, Poland regained its independence, Troki maintained its sway over the Panevežys community in Lithuania and extended it to Halicz, a centre formerly isolated from the others (under Austrian rule). The Troki and Crimean Karaites resumed regular relations after World War II, while on the other hand a separate Karaite Religious Board was established in 1945 in Poland (Warsaw). After World War I, groups of Crimean Karaites went to settle in other European countries (chiefly in Paris). One outstanding leader was S. Szapszal (1873-1961), elected head of the Religious Board at Troki (1927), who contributed largely to the organization of Karaite communal life.

Anthropological research carried out on Karaites in Poland and Lithuania (mainly by C. Gini, 1936) revealed their resemblance to the Tchuvash, evidence supporting the recognition of the Karaites of Eastern Europe as a Turkic nation converted to Karaism. Their language belongs to the Ḳïpčaḳ sub-group of the Turkic family. West-Karaim, somewhat different from that of Crimean Karaim, has two dialects; the northern (Troki, Panevežys, and Vilna), and the southern (Luck and Halicz). Both in its vocabulary and syntax it shows numerous borrowings from Persian, Arabic, Hebrew, Slavonic languages and Lithuanian. In Karaite folklore there are visible traces of historic relations with the Khazars [*q.v.*] (Ḥazar oghlu and Ḥazar biy[i] in Crimean songs) and many wholly Turkic elements, such as the initial formula bir bar edi in a lullaby, many riddles and proverbs. In their general culture there are also similar vestiges of a Khazarian past (talḳï, an original dough-kneading device; the dishes ḥazar ḥelvâsï or ḥazar ḳaymaghï "Khazar ḥelvā", served at times of mourning occasions; ḳatlama, a seven-layered cheese cake, etc.).

For centuries the main intellectual interest of the Karaites has been their religion. Apart from Hebrew, their scholars also wrote in the Karaim language: translations of the Bible, remarkable for their omission of anthropomorphic definitions of the divine attributes, and also original works. In the cultural field, the influence of the Christian world (in Poland) and of the Muslim (in Crimea) was felt. Towards the end of the 19th century secular works also began to appear, the most prominent Karaite authors writing in Karaim being I. Erak (Crimea, 19th century), Z. Abrahamowicz (Halicz, 1878-1903), S. Kobecki (Troki, 1865-1933), A. Mardkowicz (Luck, 1875-1944), J. Lobanos (Vilna, 1878-1947), and S. Firkovič (Troki, b. 1897). There were several Karaite periodicals, published in Russian (*Karaimskaya Zhizn'*; *Karaimskoe Slovo*), Polish (*Myśl Karaimska*) and Karaim (*Sahyszymyz*, "Our Thought", Vilna 1927; *Karaj Awazy*, "The Karaim Voice", Luck, 1931-38; *Onarmach*, "Development",

Panevežys, 1937-39). Several Karaites in East Europe devoted themselves to Turkic studies (S. Szapszal, A. Zajączkowski, and others).

(W. Zajączkowski)

AL-**KARAK**, a fortress situated to the east of the Dead Sea, in the ancient Moab and at an altitude of *ca.* 3,000 feet. The name comes from Aramaic *karkhā* "town" and is found in the form χαραχμωβα in Ptolemy (v, 16, 4), on the mosaic map of Mādaba and in Stephen of Byzantium. Its situation on a steep-sided spur, separated from the mountain by a narrow and artificially-deepened moat, makes it an extraordinarily strong site. It is remarkable that we do not hear of it at the time of the Muslim conquest of the lands east of the Jordan, nor in the ensuing centuries. It is only at the time of the Crusades, when in 1142 it was fortified by King Fulk's former cup-bearer Payen, that it began to play a role, but this was now a very prominent one. The Franks of that time, being little versed in geography, sought to localise the ancient Petra there and called it *Petra deserti*. Since this stronghold dominated the pilgrim route from Damascus and the caravan way between Syria and Egypt, it caused the Muslims much trouble. It was during the period 1176-87, when it was in the hands of Reynaud of Châtillon, that it constituted a particular menace for the Muslim lands; it was at this time that Reynaud sent his expedition southwards towards Arabia, and although this failed, it caused great anxiety to the Muslims, who saw in it an attack against the Holy Cities, when it was rather an action impelled by economic motives.

From 565/1170 the fortress began to suffer siege by Nūr al-Dīn and the Ṣalāḥ al-Dīn (Saladin), who aimed at restoring the authority of the Muslims in al-Karak. They had no success until finally, as a result of starvation, the garrison surrendered in 584/1188 to Saladin's brother al-Malik al-ʿĀdil, and it again fell within the latter's share of territory in the division of Saladin's possessions after his death. It then belonged to various members of the Ayyūbid family, and even after the various Ayyūbid principalities had gradually disappeared, the *amīr* al-Mughīth ʿUmar still held out in al-Karak until Baybars captured him by treachery and had him executed in 661/1263.

The Mamlūk sultan al-Nāṣir found refuge within the fortress's mighty walls in 708/1309 when he fled from Cairo in order to make firm his royal power. Al-Karak was at that time the *chef-lieu* of one of the *mamlakas* into which Syria and Palestine were then divided. The descriptions of Arabic authors show us how powerful the fortress was at that time; the local inhabitants were still in part Christian. Al-Karak lost its importance under Ottoman rule. In 1840 it was occupied by Ibrāhīm Pasha, who had part of the ramparts destroyed; thereafter it was re-occupied by the Ottomans, who after 1893 erected there various public buildings. As the centre of an administrative district, al-Karak had in 1973 *ca.* 10,000 inhabitants. It is at times difficult to distinguish, both in the town and in the adjacent fortress, the traces of the Crusaders and of subsequent Islamic constructions, both of which are built upon ancient substructures. However, it is certain that the donjon and the external wall surrounding the lower courtyard are Muslim in origin and date to the time of Baybars.

KARAK NŪḤ, a village in the Biḳāʿ of Lebanon, situated at the foot of Mount Lebanon not far from Zahlé on the road to Baʿlabakk. Authors of the Ayyūbid period call it al-Karak, but then in the Mamlūk period it was called Karak Nūḥ. It was actually considered as the locality of the prophet Nūḥ's tomb, which is still shown and which was apparently already mentioned in the 4th/10th century by the geographer al-Muḳaddasī. The structure which is considered to contain the stone cenotaph of Nūḥ and which is unusually long, adjoins an oratory with three bays, on the walls and columns of which have been carved, at the end of the 8th/14th century, various Mamlūk period inscriptions recording the construction of the building and also decrees concerning the abolition of taxes. The presence of these last is explicable by the fact that Karak Nūḥ was in the Mamlūk period the *chef-lieu* of the district of the two *Biḳāʿ*s.

tions arabes de Karak Nūḥ, in *BEO*, xiii (1949-50), 71-84 (with references to the geographers and travellers). (D. SOURDEL)

AL-KARAKĪ, NŪR AL-DĪN ʿALĪ B. AL-ḤUSAYN B. ʿALĪ B. MUḤAMMAD B. ʿABD AL-ʿĀLĪ AL-ʿĀMILĪ, Imāmī scholar, born probably not later than 870/1466 into a family of scholars. His *nisba* al-Karakī refers to Karak Nūḥ in al-Biḳāʿ, where he studied religious sciences, chiefly under ʿAlī b. Hilāl al-Djazāʾirī. He also visited Egypt and heard some Sunnī scholars there. Around 909/1504 he settled in al-Nadjaf, and in winter 910/1504-5 he was probably present at the court of the Ṣafawid Shāh Ismāʿīl in Iṣfahān. Along with other Imāmī scholars from al-Nadjaf, in 916-17/1510-11 he accepted an invitation to Harāt and Mashhad extended Shāh Ismāʿīl with the purpose of enlisting their help in propagating Imāmism in the newly conquered eastern provinces of Persia. Shāh Ismāʿīl is reported later to have sent him 70,000 *dīnār*s annually to al-Nadjaf for expenditure on teaching and for distribution among students. Under Shāh Ṭahmāsp, who succeeded Ismāʿīl in 930/1524, he paid at least two extended visits to the Ṣafawid court. Shāh Ṭahmāsp recognized him officially as the Seal of the *Mudjtahid*s (*Khātam al-mudjtahidīn*) and the Deputy of the *Imām* (*nāʾib al-imām*) and gave him full authority to direct the government in matters of religion. Al-Karakī instructed the governors concerning the assessment of the land tax, ordered the removal of Sunnī scholars and the appointment of Shīʿī *imām*s to lead the prayers and instruct the public everywhere, and had the *ḳibla* rectified in several Persian towns in accordance with his views on geodesy. He defended these latter views in a dispute with the *ṣadr* Ghiyāth al-Dīn al-Dashtakī. Shāh Ṭahmāsp, taking the side of al-Karakī, dismissed Ghiyāth al-Dīn in 938/1531-2 and on the recommendation of al-Karakī appointed a student of the latter, Muʿizz al-Dīn al-Iṣfahānī, in his place. During the interim before the arrival of Muʿizz al-Dīn at the court, al-Karakī acted as *ṣadr* and appointed his deputies and agents. This situation is perhaps reflected in a *firmān* of 939/1532-3 quoted in the sources in which Shāh Ṭahmāsp granted him the exclusive authority of appointing and deposing religious officials in the Ṣafawid kingdom and conferred on him as a hereditary *waḳf* extensive land holdings in the area of al-Nadjaf valued at 700 *tūmān*s annually. Al-Karakī died in Dhu ʾl-Ḥidjdja 940/July 1534 in al-Nadjaf.

Some of al-Karakī's commentaries on earlier legal works, like al-Muḥaḳḳiḳ al-Ḥillī's *Sharāʾiʿ al-islām*, became popular books of instruction. His *Risālat al-Djaʿfariyya*, on the rules of the ritual prayer, had commentaries written on it by several scholars during his lifetime and was translated into Persian. Other of his writings aroused controversy. In his *Risālat ḳāṭiʿat al-ladjādj fī taḥḳīḳ ḥill al-kharādj* he upheld the legality of government grants of *kharādj* land and thus defended himself against criticism levelled at him for accepting such grants. The treatise was refuted by his sharp-tongued opponent in al-Nadjaf Ibrāhīm al-Ḳaṭīfī, who also wrote refutations of some of his other treatises, among them the *Risāla fī ṣalāt al-djumʿa* in which al-Karakī upheld that the congregational Friday prayer was obligatory during the absence (*ghayba*) of the *Imām* if a qualified legal scholar was present. In his *Risālat nafaḥāt al-lāhūt fī laʿn al-djibt wa ʾl-ṭāghūt* he asserted the permissibility of cursing Abū Bakr and ʿUmar, thus defending the early Ṣafawid practice, though other Imāmī scholars objected to this practice as a breach of *taḳiyya*. With the exception of this last question, later Imāmī opinion generally upheld his views against his critics and gave him the honorary surname of al-Muḥaḳḳiḳ al-Thānī.

Sunnī anti-Ṣafawid polemics singled him out among Imāmī scholars for attack and variously accused him of being a Druze, of having concocted a new religion from the heresies of all other erring Muslim sects, of having converted Shāh Ismāʿīl to his "false religion", and of having abolished the canonical prayers in Persia; but these accusations are without foundation.

ḲARAḲALPAḲ (Turkic "black hat"), a Turkic people of Central Asia. In the Russian annals, a people of this name (Černiye Klobutsi) is mentioned as early as the 12th century A.D.; but whether these "black hats" are identical with the modern Ḳaraḳalpaḳ cannot be definitely ascertained. It is not until the end of the 11th/17th century that there are records of the Ḳaraḳalpaḳ in Central Asia. According to the embassy report of Skibin and Troshin (1694), they then lived on the Sīr Daryā, 10 days' journey below the town of Turkestān. There they are again mentioned in the 12th/18th century as neighbours of the land of the Khāns of Khīwa; in *ca.* 1722 a treaty was concluded by the ambassador Vershinin between Peter the Great and the Khān of the Ḳaraḳalpaḳ, Abu 'l-Muẓaffar Saʿādat ʿInāyat Muḥammad Bahādur (*Polnoye Sobraniye Zakonov*, 1722, no. 4101). At that time the Ḳaraḳalpaḳs lived not only by herding and raiding but also by agriculture—with artificial irrigation of their fields—and by fishing in the Aral Sea. They are said to have migrated to Central Asia from the Volga region. About the middle of the 12th/18th century the winter quarters of a group of Ḳaraḳalpaḳ were on the central course of the Sīr Daryā at Khawās (north of Ura-Tübe); the prince (*tura*) of these Ḳaraḳalpaḳ entered into an alliance in 1168/1755 with the Atalïḳ of Bukhārā, Muḥammad Raḥīm; 3,000 Ḳaraḳalpaḳ families were settled at Samarḳand. The Ḳaraḳalpaḳ are said to have been driven out of the lower valley of the Sīr Daryā by the Ḳazaḳ towards the end of the 12th/18th century; they are still mentioned in the 19th century a little farther south on the Yeñi Daryā in connection with the campaigns of Muḥammad Raḥīm, Khān of Khīwa, against the land of the Kungrat (1222-6/1807-11). The Ḳaraḳalpaḳ were then subject to the Khān of Kungrat. After the union of Kungrat with

Kh̲īwa (1226/1811) the Ḳaraḳalpaḳ too had to submit to the Kh̲ān of Kh̲īva. They made frequent attempts to throw off this yoke; in 1827 they even captured and held the town of Kungrat for a time. After the suppression of this uprising, a body of them migrated to Farg̲h̲āna. In 1855 the leader of the rebel Ḳaraḳalpaḳ, Ir-Naẓar-bī, adopted the title of Kh̲an, building a fortress near where the Ḳazaḳ river flows into the Aral Sea.

After the Russian conquest of Kh̲īwa in 1873, when the Kh̲ān had to cede to Russia all his possessions east of the main arm of the Amū Daryā and the most north-westerly arm of its delta, the land of the Ḳaraḳalpaḳ became Russian. The area, then separated from Kh̲īva, was first administered as a separate department (*otdyel*), and later as part of the "government" of Sīr Daryā. On 11 May 1925 the Ḳaraḳalpaḳ Autonomous Oblast' was formed as part of the Ḳazaḳ A.S.S.R.; on 20 March 1932 its status was changed to an Autonomous Soviet Socialist Republic (A.S.S.R.); and on 5 December 1936 this A.S.S.R. was transferred to the Uzbek S.S.R.. The capital of the Ḳaraḳalpaḳ A.S.S.R. is Nukus. The Ḳaraḳalpaḳ, who at the time of the Revolution were on the verge of being totally assimilated by the Ḳazaḳ (and to a lesser extent by the Uzbek), were preserved as a distinct group by the Soviet régime. Linguistically the Ḳaraḳalpaḳ language is merely a dialect of Ḳazaḳ; their tribal divisions are the same as that of the Ḳazaḳ. Ḳaraḳalpaḳ was first written (*i.e.*, established as a literary language) in 1925 using the Arabic script; in 1928 this was changed to a Latin script; and since 1940 it has been written in Cyrillic. The 1970 Soviet census lists 236,009 Ḳaraḳalpaḳs in the U.S.S.R. Of these 230,258 (97.6 %) live in the Uzbek S.S.R.; and of these latter, 217,505 (92.2 % of the total Soviet Ḳaraḳalpaḳ population) live in the Ḳaraḳalpaḳ A.S.S.R., 8,668 in Buk̲h̲āra *Oblast'*, 1428 in Tas̲h̲kent, and 732 in Farg̲h̲ana *Oblast'* (the Farg̲h̲āna Ḳaraḳalpaḳs are rapidly being assimilated by the Uzbek).

KARAKAY. The cross-reference to this from carucuel is erroneous; see ḳarā-köl, ḳarākul.

KARAKOL, modern Turkish term for "police-station", "[military] patrol", a popular etymology ("black [i.e., ominous] arm [of the authorities]" or "patrol"); for Ottoman *ḳarāg̲h̲ul*, *ḳarāvul*, a loan-word from Mongol (attested from the 8th/14th century), see *Tarama sözlüğü*, Ankara 1969, iv, 2283 ff. The Mongol word also passed into Persian as *ḳarāvul*/*ḳarāʾul*. For full references and details of the diffusion of the word (as far as Swahili), see Doerfer, i, no. 276.

In the Ottoman Empire the maintenance of security and order in different quarters of Istanbul was entrusted mainly to the Janissaries [see yeñi-čeri], and the *ortas* (companies) patrolling the city were called *ḳulluḳ*. During the military campaigns, apart from the *čark̲h̲adji* (vanguard) forces, the Ottoman army used to send out small units called *karāvul müfrezeleri*. In the same way the Ottoman navy, when at sea, sent out two mail ships as *karāvul sefineleri*, with the task of preventing any sudden attack on the fleet. About ten ships under the command of the *tersāne ketk̲h̲udāsī* (Intendant of the Admiralty) brought up the rear as *ard karāvul* to help ships in trouble when necessary.

After the suppression of the Janissaries in 1826, public security in Istanbul became the responsibility of the *serʿasker* [*q.v.*]; an autonomous administration, the *Ḍabṭiyye Müs̲h̲īriyyeti*, which was founded in 1846 to take charge of police functions, was changed into a *neẓāret* (ministry) in 1870 and in 1909 attached to the Ministry of the Interior as a directorate with authority extending over the whole country [see ḍabṭiyya]. At that time, a police-station was called *karakol-k̲h̲āne*, and later *karakol*. The word *karakol* was used also in the Turkish army and navy to designate a unit charged with security or observation duty (*istināḍ karakolu*, *ileri karakol*, *niẓām karakolu*, etc.).

KARAKOL DJEMʿİYYETİ, a secret society founded in Istanbul towards the end of 1918 by a group of former members of the Union and Progress Committee [see ittiḥād we teraḳḳī djemʿiyyeti]. Its aim was to organize guerilla resistance bands against the Allied forces which had occupied strategic points in Turkey following the armistice of Mudros on 30 October 1918. After the organization of the Nationalist Movement in Anatolia under the leadership of Muṣṭafā Kemāl Pas̲h̲a, the Karakol society supplied the movement with intelligence, officers and arms. The society tried to gain control over the nationalists of Anatolia, and Ḳarā Wāṣif, one of the founding members, became their representative in Istanbul. However, Muṣṭafā Kemāl succeeded in checking the activities of the Karakol society and ordered its dissolution in the spring of 1920, on the grounds that a delegate of the society had signed a pact of military assistance with the Bolsheviks on 10 January 1920 without the authorization of the nationalists. Nevertheless, the Karakol society seems to have continued its underground activities until the end of the Turkish War of Independence.

ḲARAḲORUM (ḳaraḳoram), a chain of mountains in the centre of Asia lying north of and almost parallel to the Himalayas. The range extends westwards as far as 73° long.; it has not yet been definitely ascertained how far it runs eastwards. At one time the eastern limit was thought to be the pass of the Ḳaraḳorum, the plateau of Depsong and the upper part of the S̲h̲ayok, but, according to the views of several famous geographers, the range runs much farther into Tibet, and the Tang-la (to the north of upper Saluën) should, they think, be re-

garded as a part of the Ḳaraḳorum. This idea was first put forward by Klaproth in 1836 and was held by Burrard, Sven Hedin and others who further regarded the Trans-Himalaya as belonging to the Ḳaraḳorum system. If this is accurate, the whole system would be about 2,000 km. long.

The highest elevations are found in the part west of the pass of Ḳaraḳorum. There we find several peaks over 8,000 m. high and countless summits over 7,000 m. The highest peak—probably the second highest in the world—is K 2, which seems to have been long known as Chogo-ri among the natives. This giant attains a height of 8,611 m.

This western part of the Ḳaraḳorum possesses a wild and imposing natural beauty; a large part of is covered with perpetual snows over a considerable extent. The snow line runs from 4,770 m. north of the principal chain to 5,203 m. in the south. The inhabitants are Baltis, a mixed people with Tibetan language, Ladakhis, who are Tibetans, and Hunzas.

If we exclude the polar regions, the largest glaciers in the world are found in this part of the Ḳaraḳorum. The Siachen glacier is 68 km. long and covers a surface of about 2,500 sq. km. The Baltoro, Hispara and Biafo glaciers are only a little less than the Siacben. The plateau out of which rises the Ḳaraḳorum has an average height of 3,070 m. The whole region is excessively dry because the rain (snow, hail) falls almost exclusively on the high mountains. The vegetation in the valleys is very slight and is confined to the vicinity of torrents and streams. At the terminations of the glaciers we find—very often on a little plain—a very beautiful alpine flora.

The Ḳaraḳorum is the most important watershed in Central Asia, dividing the rivers which running northwards, empty their waters into the deserts of this part of the world, and those running southwards into the Indian Ocean.

The principal pass is the col of Ḳaraḳorum (5,574 m.), through which runs the important trade route between Chinese Turkestan and Kashmir. It is difficult and dangerous. In their long journey countless beasts of burden perish of exhaustion or in the avalanches. The mountains take their name from the pass. But as Ḳaraḳorum means "black débris", the name is not very appropriate. It is found for the first time in a map by Elphinstone published in 1815. On this map the range in question is indicated by the name Moor Taugh (instead of Mur Tagh, "Ice Mountain") or Karrakoorrum Mountains.

The first traveller to write on the mountains now called Ḳaraḳorum was Mīrzā Ḥaydar Dughlāt, à propos of his journey from Yarkand to Leh, capital of Ladakh, in 960/1553. The exploration proper of the Ḳaraḳorum only began in 1808 when Elphinstone visited these regions. The more systematic and detailed exploration of the high mountains proper was only begun in 1892 by Sir Martin Conway's expedition, which was followed by many others (including 5 expeditions of Ph. C. and J. Visser between 1922 and 1935).

(Ph. C. Visser-B. Spuler)

ḲARAḲORUM, a town in the *aymak* of Övör Khangay in Central Mongolia, now in ruins; in the 7th/13th century it was for a short time the capital of the Mongol World Empire. The fullest accounts of the town are given by the European traveller William of Rubruck and the Persian historian Djuwaynī [*q.v.*]. The ruins were first discovered in 1889 by N. M. Yadrentsev; they were visited and described by the members of the Russian expedition of 1891 led by Radlov; and in 1948-49 an expedition jointly organized by the Soviet Union and the Mongolian People's Republic investigated the palace of the Great Khān Ögedey, the handicraft workshops at the crossroads of the main thoroughfares of Ḳaraḳorum and some places near the southern gate of the town. Though walled by Ögedey only in 1235, Ḳaraḳorum had been chosen by Čingiz-Khān as his capital as early as 1220. The name, which is Turkish and means "black boulder", was, as Djuwaynī expressly remarks, originally applied to the mountain region around the sources of the Orkhon. According to William of Rubruck, the city of Ḳaraḳorum, exclusive of Ögedey's palace, was "not as big as the village of Saint Denis", while the monastery of Saint Denis was "ten times larger than the palace". There was, however, much building in Ḳaraḳorum during its brief period of splendour, and William of Rubruck as well as Djuwaynī give full descriptions of the imperial palaces built in the city and around it, some by Chinese and others by Muslim architects. According to the European traveller, Russian and Western European craftsmen also shared in these operations. To the east of Ḳaraḳorum, in a village called Tuzghu-Baliḳ (from the Turkish *tuzghu*, "offering of food to a traveller", and *baliḳ* "town") built in 1238, there was a palace with the Chinese name of Ying chia tien ("Welcome Carriage Hall").

After the Mongol emperors had removed their residence to China, Ḳaraḳorum was only the seat of the governor of Mongolia. It changed hands temporarily during the long war with Ḳaydu, but generally remained in the possession of the emperor. When the Mongol dynasty was expelled from China (1368), the emperors returned to Ḳaraḳorum, but after the extinction of the dynasty in the 15th

century the town lost all importance. At the present day, the Buddhist monastery of Erdeni-Dzu is adjacent to the site.

(W. BARTHOLD-J. A. BOYLE)

KARAKUL [see ḲARĀ-KÖL].

ḲARAḲUM (Turkish "black sand"), a desert in Russian Turkestān, between the Amū Daryā, the Üst Yurt and the ranges of hills on the Caspian, contrasted with Ḳïzïl-Ḳum ("red sand"), the desert between the Sïr Daryā and the Āmū Daryā. The Ḳaraḳum (area *ca.* 300,000 sq. km.) is a still more dreary waste and possesses even fewer fertile areas than the Ḳïzïl-ḳum. The sandy stretches north of the Sïr as far as Lake Čalkar are called "little Ḳarā-ḳum"; cf. F. Machatschek, *Landeskunde von Russisch-Turkestan*, Stuttgart 1921, 15 f., 285, and index. A good deal of the Ḳarāḳum is still used by Turcoman nomads as pasture for sheep and camels. In the south, the Ḳarāḳum is traversed (since 1883-6) by the railway from Ḳïzïl Suw (Russ. Krasnovodsk) to Čahār D̲j̲ūy (Russ. Čard̲j̲ou) and the very important Ḳarāḳum canal from Bozagha on the Āmū-Daryā via Marw (Marī) and the delta of the Ted̲j̲en to ʿAs̲h̲ḳābād and to Arčman on the northern slope of the Köpet Dag̲h̲ (since 1962). The Ḳarāḳum mentioned by D̲j̲uwaynī in the *Taʾrīk̲h̲-i D̲j̲ihān Gus̲h̲āy* as populated by the Ḳanḳlī [see ḲANG̲H̲LĪ] is, in the opinion of the editor, probably identical with the little Ḳarāḳum (the readings of the Mss. are not certain; cf. edition by Mīrzā Muḥ. Ḳazwīnī, *GMS*, xvi/I, 69 f., ii, 101 f., and *Ḥudūd al-ʿālam*, 309 f.).

(W. BARTHOLD-B. SPULER)

ḲARĀḲŪS̲H̲, BAHĀʾ AL-DĪN B. ʿABD ALLĀH (*i.e.* son of an unknown father) AL-ASADĪ (*mamlūk* of Asad al-Dīn S̲h̲īrkūh) AL-RŪMĪ AL-MALIKĪ AL-NĀṢIRĪ, officer of Malik al-Nāṣir Yūsuf (*i.e.* Saladin), a eunuch, received his liberty from S̲h̲īrkūh and was appointed an *amīr*. By the time of S̲h̲īrkūh's death (564/1169) he was already playing an influential part; it is said that it was due to him and the *ḳāḍī* ʿIsā al-Hakkārī that the caliph al-ʿĀḍid appointed Saladin vizier. After the suppression of the rebellion fomented after al-ʿĀḍid's death by his chamberlain, the eunuch Muʾtaman al-K̲h̲ilāfa, Ḳarāḳūs̲h̲ was appointed chamberlain. In this capacity he had the surveillance of the family of the late caliph and is said to have administered his office with great strictness. To prevent the family of the caliph increasing, he separated men and women. Saladin gave him the task of building the citadel of Cairo and extending the city walls to include Cairo and Fusṭāṭ; later he was asked to fortify and defend ʿAkkā. When the town fell in 587/1191 after eighteen months fighting, he was taken prisoner; Saladin ransomed him a few months later for the high sum of 20,000 *dīnārs*. After the death of Saladin in 589/1193 he entered the service of his son al-Malik al-ʿAzīz ʿUt̲h̲mān and was appointed to represent the Sulṭān when the latter was out of Egypt. When the Sulṭān felt his end approaching (in 595/1199), he designated his son al-Malik al-Manṣūr his successor and Ḳarāḳūs̲h̲ his regent. In keeping with this wish, the young ruler appointed him *atābeg*, although Ḳarāḳūs̲h̲ was now very old. He only held his post for a very short time as most of the *amīrs* and the head of the chancellery, Ibn Mammātī, declared him incapable of ruling, presumably on account of his great age.

His supporters, who considered him the most worthy, consulted Saladin's adviser, al-Ḳāḍī al-Fāḍil [*q.v.*], but the latter, who had retired from political life, would not be drawn into the question. Finally the *amīrs* asked al-Manṣūr's uncle, al-Malik al-Afḍal, to take over the regency. After this we find only one mention of Ḳarāḳūs̲h̲, when Sulṭān al-ʿĀdil, who had seized the throne in 596/1200, had two of his nephews taken to the house of Ḳarāḳūs̲h̲ as prisoners. He died a year later. Contemporary historians, like ʿImād al-Dīn al-Kātib al-Iṣfahānī, bestow the highest praise upon him, as do later writers, like al-Maḳrīzī and Ibn Tag̲h̲rībirdī, and describe him as the ablest man of his day. They give him particular credit for his activity as a builder. Besides the buildings already mentioned, his house, his hippodrome and the bridge at Gizeh, which he built out of stones from the Pyramids at Memphis, are mentioned.

In the same period a "Ḳarāḳūs̲h̲" became notorious as a byword for stupidity. A series of absurd verdicts are related in a work entitled *Kitāb al-Fās̲h̲ūs̲h̲ fī Aḥkām Ḳarāḳūs̲h̲*, "the book on the stupidity in the judgments of Ḳarāḳūs̲h̲". According to Ḥād̲j̲d̲j̲ī K̲h̲alīfa, the above-mentioned Ibn Mammātī was the author of this book. Casanova (see *Bibl.*) in his elaborate study on Ḳarāḳūs̲h̲ quotes three manuscripts: (1) a Cairo manuscript which contains a brief selection from the *Kitāb al-Fās̲h̲ūs̲h̲*; the author is there given as Ibn Mammātī; (2) a Paris manuscript the author of which is given as al-Sūyūṭī, certainly wrongly, as in the introduction Ibn Tag̲h̲rībirdī is wrongly quoted and given a wrong praenomen, which one can hardly credit of al-Sūyūṭī; (3) a Cairo manuscript which is a later version, in which Ḳarāḳūs̲h̲ is called a sulṭān and the number of his "judgments" is increased, by ʿAbd al-Salām al-Laḳānī, dating from 1200/1786. These "judgments" have nothing to do with statecraft but are court verdicts; they are typical, well known anecdotes, current among other nations also. A special investigation has not yet been made of the problem. Casanova endeavours to show that the work is a pamphlet against Ḳarāḳūs̲h̲, whom, he says, Ibn Mammātī hated as an exceedingly severe man. It is not known whether Ibn Mammātī collected and published these anecdotes in the life-time of Ḳarāḳūs̲h̲. Ibn K̲h̲allikān rightly points out that it is impossible that a man such as is described in the anecdotes could have held high offices of state. Nor is anything known of a particular feud between Ibn Mammātī and Ḳarāḳūs̲h̲, except that Ibn Mammātī had protested in 595/1199 against the appointment of this then very old man; Ḳarāḳūs̲h̲ is described by the Frankish chroniclers as advanced in years even in 585/1189 at the siege of ʿAkkā; he is said even to have known Godfrey de Bouillon. One thing is clear from Ibn K̲h̲allikān's observation: the

anecdotes given by Ibn Mammātī were referred to our Ḳarāḳūsh.

(M. Sobernheim)

ḲARĀḲŪSH, Sharaf al-Dīn al-Armanī al-Muẓaffarī al-Nāṣirī (and also al-Taḳawī and al-Ghuzzī), Armenian *mamlūk* of Saladin's nephew al-Malik al-Muẓaffar Taḳī al-Dīn, who conducted military operations in Tripolitania and southern Tunisia and for a certain period of time occupied Tripoli, Gabès and other towns. Taḳī al-Dīn, who had personal ambitions, had to renounce the idea of conquering Ifrīḳiya, where the authority of the Almohads was not yet firmly established, and it was his *mamlūk* who undertook this enterprise (most probably with Saladin's blessing) from 568/1172 onwards. He first of all made various raids (cf. Abū Shāma, *Rawḍatayn*, Cairo 1956-62, i/2, 548) on Barḳa, Tripoli and Awdjila, and then returned to Cairo, where he was thrown into prison; but he soon began his activities once more (572/1176-7). Returning once again to Tripolitania (cf. Abū Shāma, *op. cit.*, i/2, 692) at the head of a force of Ghuzz [*q.v.*], he occupied the eastern and southern parts of the country as far as Fazzān, and then, with the aid of bedouins of the Banū Hilāl and Sulaym, seized Tripoli. It seems to have been at this point that he was rejoined by Taḳī al-Dīn's *silāḥdār*, a person whose rôle and even personal name remain obscure (Gaudefroy-Demombynes, *Une lettre de Saladin au calife almohade*, in *Mélanges Rene Basset*, Paris 1925, ii, 290-1, put forward the idea that Nāṣir al-Dīn Ibrāhīm, Ibrāhīm b. Ḳarātakīn and Abū Zāba and variants [= Yāzabā = Joseph] were three names for the one person).

After having made an alliance with ʿAlī b. Isḥāḳ b. Ghāniya [see ghāniya], who had declared his allegiance to the ʿAbbāsid Caliph and was fighting the Almohads in southern Tunisia, Ḳarāḳūsh extended his territories towards the Djabal Nafūsa and of Gabès, without however reaching Tunis. Finding himself at Gafsa at the time of the Banū Ghāniya's defeat of the Almohad army near that town (15 Rabīʿ II 583/24 June 1187), he put to the sword the survivors who had placed themselves under his protection. But the Almohad Abū Yūsuf Yaʿḳūb al-Manṣūr [*q.v.*] immediately assumed charge of operations and gained the victory of al-Ḥāmma on 10 Shaʿbān 583/15 October 1187, thus expelling Ḳarāḳūsh from Gabès. Whilst the latter fled through the desert with ʿAlī Ibn Ghāniya, his possessions and troops were handed over to al-Manṣūr, who sent his Ghuzz troops to Marrakesh [see ghuzz, and Ibn al-Athīr, xi, 343-4]; soon afterwards (Dhu ʾl-ḳaʿda 583/January 1188), Gafsa also fell, and the Ghuzz in the town suffered the same fate. It is possible that even before the capture of Gafsa, Ḳarāḳūsh may have offered his submission to the Almohads and that in Tripoli, the *silāḥdār* may have done likewise (Lévi-Provençal, *Trente-sept lettres almohades*, 198, and *Recueil*, 62), but it is equally possible that this manoeuvre took place some time later. Whatever may have been the case, Saladin, who had rejoiced at Ḳarāḳūsh's successes (cf. Abū Shāma, i/2, 547), at this time needed the support of the Almohad fleet against the Franks, and there is extant the text of a letter drawn up in his name by al-Ḳāḍī al-Fāḍil [*q.v.*], dated 585/1189 and addressed to al-Manṣūr, asking for his intervention (*apud* al-Ḳalḳashandī, *Ṣubḥ*, vi, 526 ff., tr. and comm. in Gaudefroy-Demombynes, *op. cit.*, 279-304). Ḳarāḳūsh had then to pretend to rally to him, probably on Saladin's orders, who in the following year (28 Shaʿbān 586/30 September 1190) sent an embassy to al-Manṣūr with a letter (*apud* Abū Shāma, *Rawḍatayn*, in *RHC*, Hist Or., iv, 497-505) in which he unequivocally disowned the reprehensible actions of the *silāḥdār* and the *mamlūk* (according to Abū Shāma, *ibid.*, ii, 508, the former was handed over at Tunis by Ḳarāḳūsh, whilst according to *Istibṣār*, 111, this person, here called Abū Zabā al-Fārisī, was expelled from Tripoli and sent to Marrakesh). After having stayed for some time with the governor of Tunis, Ḳarāḳūsh took to flight and successfully regained Gabès and Tripoli with the aid of some turbulent tribes (586/1190).

However, after the death of ʿAlī Ibn Ghāniya (584/1188), Ḳarāḳūsh's relations with his brother and successor Yaḥyā Ibn Ghāniya had deteriorated. In 591/1195, Yaḥyā, who was in possession of the Djarīd, seized Gabès and Tripoli; at this latter place, Ḳarāḳūsh left his lieutenant Yāḳūt and fled for safety to Waddān. Driven out of Ifrīḳiya in his turn, Yaḥyā also fled to Waddān (606/1209) and besieged the former ally of the Banū Ghāniya, who was unable to withstand him; Yaḥyā had him and one of his sons executed in 609/1212. Thus there came to an end the life of an adventurer who had carried on warfare for forty years as much for Saladin's benefit as for his own. The presence at Waddān is further mentioned of another of his sons who fled there after betraying the Ḥafṣid al-Mustanṣir (647—75/1249-77); he was eventually put to death by the king of Kanem.

(Ch. Pellat)

KARAM, generosity [see Supplement].

AL-KARAM, Banū [see zurayʿids].

KARAM, YŪSUF [see YŪSUF KARAM]

KARĀMA may be considered as the *maṣdar* of *karuma* "to be generous ,be beneficent, be *karīm* (one of the "99 Most beautiful names of God" [see AL-ASMĀʾ AL-ḤUSNĀ]). The root KRM appears frequently in the Ḳurʾān, and God is called there *al-Karīm* "the Generous One"; the actual term *karāma* is not however found there. If it was later adopted as a synonym of the *maṣdars* of forms II and IV (*takrīm* and *ikrām*), this seems very likely to have come about through phonetic assimilation to the Greek χάρισμα. In the technical vocabulary of the religious sciences, *karāma* (pl. *karāmāt*) from now onwards assumes the sense of "charisma", the favour bestowed by God completely freely and in superabundance. More precisely, the word comes to denote the "marvels" wrought by the "friends of God", *awliyāʾ* (sing. *walī*), which God grants to them to bring about. These marvels most usually consist of miraculous happenings in the corporeal world, or else of predictions of the future, or else of interpretation of the secrets of hearts, etc.

The notion of *karāma* differs from that of *muʿdjiza* [*q.v.*]. Each involves a "breaking of the natural order of things" (*khāriḳ li'l-ʿāda*), that is, an extraordinary happening which breaks this "divine custom" (*sunnat Allāh*) which is the normal course of events. But whilst the *muʿdjiza* is a public act, preceeded by a "proclamation" (*daʿwa*) and a "challenge" (*taḥaddī*), by means of which the prophet demonstrates incontrovertibly the "impotence" (*ʿadjz*) of his hearers to reproduce likewise the miracle thus brought about, the *karāma* is a simple, personal favour. It should be kept secret, and is in no way the sign of a prophetic mission. There is a risk of ambiguity if one translates both terms by "miracle" (of a prophet, of a saint). If *muʿdjiza* is rendered, as has become common, by "miracle of a prophet", it seems preferable — taking into account the difference of the respective Arabic roots — to translate *karāma* by "marvel of a saint".

Are the *karāmāt* attributed to the *awliyāʾ* — often in great abundance — to be regarded as authentic? If not, then why not? And if so, in what sense? These questions presented themselves very early to the Muslim mind, and gave rise to diverse, and even contradictory, interpretations. We shall deal here with four main types of answer.

(1) The Muʿtazilī schools of thought. The generality of the partisans of *iʿtizāl* denied the reality of *karāmāt*. The most prominent argument from scripture is that put forward by al-Zamakhsharī commenting on Ḳurʾān, LXXII, 26-7, "He (sc. God) knows the Mystery, but does not reveal to anyone His Mystery, except to the one whom he designates as His messenger". This text is understood as justifying the miracles which God performs openly "by the hands" of the prophets in order to demonstrate the truth of their missions, but as setting aside all other supernatural happenings. Al-Djubbāʾī says that if the *awliyāʾ* possessed this power, how would one be able to distinguish them from the prophets?

A detailed exposition of the Muʿtazilī interpretations of these "miracles of a prophet" will be found in the article MUʿDJIZA. Briefly, if the heresiographers (al-Isfarāʾinī, al-Baghdādī, al-Shahrastānī, etc.) can be believed, al-Naẓẓām and al-Murdār for example regarded as doubtful every miraculous happening traditionally attributed to the Prophet, and did not attribute any miraculous nature to the inimitability of the Ḳurʾān (cf. A. Nader, *Le systeme philosophique des Muʿtazila*, Beirut 1956, 318 and refs.). But this statement must be strongly qualified. Al-Khayyāṭ, for instance, in his *Kitāb al-Intiṣār*, ed. Nyberg, 28-9, tr. Nader, Beirut 1957, 25-6, states that for al-Naẓẓām, the Ḳurʾān is certainly "the proof of the Prophet's mission". Moreover, Ibn Mattawayh says that the *muʿdjizāt* merely confirm a teaching (sc. the ḳurʾānic revelation) which is conformable to reason, and it is this fact which justifies them. They are bound up with the missions of the prophet-messengers who are, like all mankind, responsible for their own actions. Nevertheless, the Muʿtazilīs are unanimous in denying the authenticity of *karāmāt*, which they stigmatise as "charlatans' tricks". ʿAbd al-Djabbār's attack on al-Ḥallādj is well-known. His *Mughnī*, xv, 270 ff., relates in detail many "marvels" of al-Ḥallādj; following al-Djubbāʾī, he makes them out as feats of prestidigitation, performed with the help of accomplices and by using faked houses and rooms. The tone of the *Mughnī* is extremely polemical, and goes so far as to attack the very morals of al-Ḥallādj (*ibid.*, 270-1), turning into a personal attack. But the conclusion is clear (*ibid.*, 275): the *karāmāt* are all tricks, and the accounts which later repeat them are only restating popular superstitions.

(2) *Falsafa* (Ibn Sīnā). To illustrate the position taken up by *falsafa*, we shall take the example of Ibn Sīnā, who dealt with this question on several occasions. Ibn Sīnā's cosmology undertakes to place *muʿdjizāt* and *karāmāt* within the existential determinism of the "necessary and consciously-willed" emanation. It is because of the perfection of their human nature and the power which their soul possesses as a fact of nature over external matter that the prophets confirm their coming by miracles. (One should note that Ibn Rushd, in his *Tahāfut al-tahāfut*, ed. Bouyges, 515, makes a distinction here: only those miracles can be regarded as such where a change "in regard to quality" (*istiḥāla*) is involved, because this is in itself possible, though impossible to the ordinary man; on the other hand, a change in substance is fundamentally impossible.) Now this justification of *muʿdjizāt* is equally valid, more or less, for *karāmat*. In his *Risāla fī aḳsām al-ʿulūm* (in *Tisʿ rasāʾil*, Cairo 1326/1908, 14), Ibn Sīnā tells us that *karāmāt*, in regard to their nature, "resemble" *muʿdjizāt*, and in his *Ishārāt* (ed. Forget, Leiden 1892, 120) he insists that the person whose soul has, by virtue of its spiritual intensity, the power to act upon external matter, and who uses this power for good and according to the righteous way, possess the gift of *muʿdjiza* if he is a prophet, or that of *karāma* if he is a *walī*. The only difference is that the prophet is such by his very nature, through the innate, triple perfection of his intellect, his imaginative power and his factibile, whereas the saint (*walī*, *ṣiddīḳ*) or the "initiate" (*ʿarif*) acquires this perfection by following the appropriate path of asceticism, though at a lower level, at least in regard to his imaginative power. Furthermore, Ibn Sīnā mentions the possible additional factors of certain hypnotic processes "stemming from the Turks" (very rapid gyrations, fixation on a shining or a black object, etc.), and which are capable, in that they cause a withdrawal of the normal senses, or of bringing about the power of divination. He is distrustful towards them, and points out the dangers from them for those of feeble constitution, but he does not deny their reality.

Whether dealing with *muʿdjizāt* or *karāmāt*, there is no question, among the leading figures in *falsafa*, of gratuitous favours freely bestowed by God; these "powers" are the end product of the highest stage of perfection to which the human soul can attain in the determining lines of its own nature. In the light of this perspective of existential determinism, a recogni-

tion of the possibility of "prophetic miracles" leads logically to admitting the possibility of *karāmāt*. The explanation is common to both, the differences lying essentially not in the deeds as such, but in the superiority which raises the prophet over the saint.

(3) The As̲h̲ʿarī reply. It seems that some As̲h̲ʿarīs, such as al-Isfarāʾīnī and al-Ḥalīmī, shared the severe judgment of the Muʿtazilīs in regard to *karāmāt*, The generality of the school, however, recognised their authenticity on the following grounds: (a) Rational probability. The raison d'être of a *muʿd̲j̲iza* is not the moral perfecting of a prophet, but the freely-exercised will of God, who brings about this miracle "by the hands of the prophet", a public miracle, preceeded by a "proclamation" and a "challenge". It is therefore possible (*d̲j̲āʾiz*) for God to create, through the intermediacy of a saint, a supernatural occurence without either a proclamation or a challenge. (b) Existence of the occurrences. They are authenticated above all by the miraculous happenings which are mentioned in the Ḳurʾān and whose beneficiaries have not in any way received a prophetic message to proclaim. Thus sūra III, 37, tells of a marvel brought about for Mary, mother of Jesus, and XXVIII, 9 ff., stress the "marvel" of the story of the Seven Sleepers, in themselves "miraculous signs" (*āyāt*) from God. Finally, XVII, 40 ff., mention the extraordinary happenings which came about at Solomon's request, whether through an *ʿifrīt* or through "The one who had knowledge of the Book", particularised by tradition as the vizier Āsaf. (c) *Karāmāt* are therefore possible, but should not be confused with *muʿd̲j̲izāt*. God grants the former to saints in order to honour them and to confirm them in piety and God-fearing reverence, but He brings about the second ones "by the hands of the prophet" as a proof of his mission. The former should be kept hidden, but the second ones proclaimed before all men. Both should, in any case, be carefully distinguished, not only from acts of trickery (*ḥiyal*), but also from divinatory acts (*kihānāt*), those of (permitted) magic, *siḥr*, and those of sorcery (*nārand̲j̲āt*). Al-Bāḳillānī devotes a whole work, his *Kitāb al-Bayān* (ed. R. McCarthy, Baghdad-Beirut 1958), to defining the various kinds of "signs", some of them authentic and the rest deceptive and illusory, and to tracing back to their subject the rules for the "discernment of spirits". It is virtually the As̲h̲ʿarī thesis which Ibn K̲h̲aldūn sums up in his *Muḳaddima* (ed. Cairo N.D., 67, 332, tr. de Slane, i, 191-4, iii, 111-12, tr. Rosenthal i, 188-91, iii, 167-8).

(4) The Ṣūfī attitude. The existence of "saints' miracles" (*karāmāt al-awliyāʾ*) is affirmed. In Sunnī *taṣawwuf*, the explanation given is in general terms very close to the As̲h̲ʿarī position. There is a freely-given stress on the distinction between *karāmāt* and *muʿd̲j̲izāt*; the saint who performs marvels cannot accordingly be recognised as a prophet, and must remain subject to the religious law laid down by the Messenger of God. However, whilst the As̲h̲ʿarīs insisted on the objective difference of the two types of "signs", the Ṣūfī texts deal with the differences in spiritual attitudes.

The problem comes up in almost all the Ṣūfī manuals, e.g. in the *Kitāb al-Lumaʿ* of Abū Naṣr al-Sarrād̲j̲ (ed. Nicholson, GMS, 1914, chs. 113-18, Kalābād̲h̲ī's *Kitab al-Taʿarruf* (ed. Arberry, Cairo 1352/1933, ch. 26), the *Risāla al-ḳus̲h̲ayriyya* (ed. Cairo N.D. 158 ff.), Hud̲j̲wīrī's *Kas̲h̲f al-maḥd̲j̲ūb* (tr. Nicholson, GMS, 1911, 218-39), etc. The "signs" (*āyāt*) of saints resemble externally those of prophets, but whereas these last bring them about publicly (and with a "challenge" hurled forth), the saints strive to keep them secret. One of the charges made against al-Ḥallād̲j̲ was just this "divulging of marvels" (*ifs̲h̲āʾ al-karāmāt*) by means of which he could apparently aspire, in the eyes of contemporaries, to the role of prophet.

Subjectively, *muʿd̲j̲izāt* are an aid to the prophet -messenger, in that they confirm his mission; *karāmāt* on the other hand can become a subject of disquiet for the saint, who may be afraid of being the dupe of an illusion (cf. al-Sarrād̲j̲, *loc. cit.*). Al-Kalābād̲h̲ī, *op. cit.*, 44, relates that according to Abū Bakr al-Warrāḳ, it is not the power of working miracles which constitutes a prophet, but the mission with which God has entrusted him. Saints able to perform charismatic acts do not take any offence at this mission, once they recognise it and remain faithful to the message proclaimed. Also, when they receive the gift of working marvels, according to al-Kalābād̲h̲ī, 46, "they display towards God all the more humility, submission, godly fear, abasement and self-contempt, and all the more promptness in responding to God's claims over them". This humility and abasement on the saint's part are a sign of the authenticity of the *karāmāt*, whilst the "enemies of God" who work apparently similar deeds, become puffed up and attribute the merit to themselves alone (*loc. cit.*); in this respect they become the dupes of "God's plotting" (*makr Allāh*), who has allowed these swindles in order the better to confound them. We find the same teaching in al-Hud̲j̲wīrī, who stresses the impeccability of prophets but the fallibility of saints. He adds that the *karāmāt* accomplished over the ages by the Muslims are precisely a *muʿd̲j̲iza* of the Prophet of Islam: the ḳurʾanic law, necessarily permanent, thereby acquires a proof of authenticity also permanent (*Kas̲h̲f al-maḥd̲j̲ūb*, tr. 222). The remainder of the text gives a series of examples of *karāmāt*, some ḳurʾānic or contemporary with the Ḳurʾān, others post-kurʾānic, including those of *inter alios* Abū Saʿīd al-K̲h̲arrāz, D̲h̲ū 'l-Nūn al-Miṣrī, etc.

On one side, the Ṣūfīs often teach that saints must not seek after this gift of marvel-working, but must even mistrust it, and that to become attached to it would make a serious obstacle of the road to union with God; on the other side, however, the biographies of the leading Ṣūfīs abound in marvellous acts and supernatural charismatic deeds. This dual note is for example found all through the *Laṭāʾif al-minan wa 'l-ak̲h̲lāḳ* of ʿAbd al-Wahhāb al-S̲h̲aʿrānī (ed. Cairo N.D.) studied by Asín Palacios.

It should be finally noted that in general S̲h̲īʿism also admits *karāmāt* and distinguished them from *muʿd̲j̲izāt*. The great Imāms, since they are endowed with impeccability and perfect knowledge, can work "marvels". Strict Imāmī thought accords this power to them alone, or at most, will only admit the possibility of *karāmāt* performed under the influence or through the intermediacy of the Imāns.

Bibliography: Given in the article.

(L. Gardet)

ḲARĀMĀN, the name of a Turkoman leader, founder of the Anatolian dynasty of the Ḳarāmānids or Ḳarāmān-og̲h̲ullarï [*q.v.*]; hence the name of the Ottoman province into which the territories of this principality were subsequently formed, with Ḳonya as its administrative centre, see below. Ḳarāmān was also the later Ottoman name for the town of Laranda [*q.v.*]. The term *Ḳarāmānlï*/*Ḳarāmānlü* was applied to the turcophone Greek Orthodox Christians of the Ḳarāmān region, and *Ḳarāmānlïd̲j̲a* (Grk. *Karamanlidhika*) to their dialect of Turkish and their literature (written in Greek characters). Emigrants from this

ethnico-religious group (who were not Greeks, but probably descendants of the ancient Lycaonians) were brought to Istanbul after the Ottoman conquest and gave their name to a quarter near Yedikule [see ISTANBUL, i, vii]; in the early years of this century, the Ḳarāmānlī community in Istanbul published its own newspaper, *Nea Anatoli*. See A. M. Scheider, *Die Bevölkerung Konstantinopels in XV. Jahrhundert*, in *Nachr. der Akad. der Wiss. in Göttingen* (1949), 238 ff. (Tk. tr. in *Bell.*, xxi (1952), 35 ff.); S. Salaville and E. Dalleggio (eds.), *Karamanlidha, Bibliographie analytique* . . . , i, Years 1584-1850, ii, Years 1850-65, Athens 1958-66; S. Vryonis Jr., *The decline of medieval Hellenism in Asia Minor*, Berkeley and Los Angeles 1971, index; and TURKS, section on languages. Emigrants from the Ḳarāmān region have further given their name to some 19 other places in Turkey, see *Son teşkilat-i mülkiye'de köylerimizin adları*, Istanbul 1928, and *Türkiye'de meskun yerler kilavuzu*, Ankara 1946-50.

What follows relates only to the administrative province of Ḳarāmān under the Ottomans and after the definitive disappearance of the Ḳarāmānid dynasty.

In 888/1483, the Ḳarāmānid lands became a *beglerbegilik* divided into two parts: the first comprised the *sandjaḳ* of Ič-il(i) [*q.v.*] in the eastern part of the area adjacent to the coast (see the map in ANADOLU) and included Mut and the administrative centre Ḳonya, whilst the second comprised the interior regions, called Khāridj. In the middle of the 10th/16th century, the *sandjaḳ* of Ič-il(i) was separated from it. In the 11th/17th century, the province (*eyālet*) of Ḳarāmān comprised the *sandjaḳs* of Aḳsaray, Aḳshehir, Beyshehir, Ḳayseri, Ḳîrshehir, Ḳonya and Nigde [*qq.v.*]. With the administrative reform of 1281/1864, the former *eyālet* became the *wilāyet* of Ḳonya. See Ḥādjdjī Khalīfa, *Djihān-nümā*, 614-15; Von Hammer, *Staatsverfassung*, i, 254 ff., ii, 256-7; Barkan, *Kanunlar*, 39 ff.; N. and I. ḲARAMĀNĪ MEḤMED PASHA [see MEḤMED PASHA, ḲARAMĀNĪ].

ḲARAMĀNLĪ, family of Turkish origin, of whom several members governed Tripolitania from 1123/1711 to 1251/1835, constituting themselves into a real dynasty. Its founder was Ḳaramānlī Aḥmad Bey, of whose origins scarcely anything is known apart from the fact that he himself or his father or an ancestor came from Anatolia, probably from the town or the region of Ḳaramān, to serve as a soldier in the *odjāḳ* of Tripoli; certain authors put forward the view that one of his ancestors may have come to Tripolitania with the corsair Ṭurghūt (Dragut). The chronicler Ibn Ghalbūn, who lived at the time of Aḥmad Bey, calls him Aḥmad b. Yūsuf b. Muḥammad b. Muṣṭafā.

In 1122/1710, and for several years earlier, the Ottoman province of Tripolitania had been plunged into anarchy due to rivalries that brought into opposition Janissaries, *ḳulughlīs* and Arab notables. Aḥmad Ḳaramānlī, then *ʿāmil* or governor of the region of the Manshiya and of the Sāḥil, had succeeded at the end of 1122/1710 in restoring order there and making himself appreciated by the local population. Resolved to put an end to the disorder, and supporting the Arabs against the *ḳulughlīs*, Aḥmad seized Tripoli, took the title of *bey* (commander of the troops) and in fact exercised control over the province (13 Djumādā II 1123/29 July 1711), Shortly afterwards, he had Khalīl Pasha, the governor sent by the sultan, executed, and had a large number of Turkish officers and functionaries assassinated, at the same time sending a delegation to Sultan Aḥmad III in order to justify himself. Finally, the Sultan accorded him the title of *beylerbey* (governor), recognizing him also as chief of the province; but it was only in 1134/1722 that the Sultan bestowed on him the title of Pasha, making him his official representative.

Having little confidence in the Janissaries, Aḥmad Bey created an indigenous militia and favoured the corsairs. He had to face several local revolts from 1125/1713 to 1135/1723 in the south-east of Tripolitania, in Cyrenaica and Fazzān. Following these revolts, he took under his direct control the whole province by making terror reign when necessary: he had a number of people put to death, including dignitaries and notables, and even, over a libel, the chronicler Ibn Ghalbūn, who nevertheless had written his work for his glory. While encouraging piracy, Aḥmad Ḳaramānlī avoided entangling himself with the great Western powers and concluded or renewed, notably with England and France, treaties of peace and commerce. He had the fortifications of Tripoli restored and the mosque and *madrasa* which bear his name constructed in that town. He died (he probably committed suicide) on the night of 26th or 27th Ramaḍān 1157/3rd or 4th November 1745; he was approximately 60 years old.

His son Meḥmed (Muḥammad, 1158-67/1745-54) was proclaimed governor and recognized without difficulty by the Sultan. He maintained the country in peace and renewed the agreements with England and France, although piracy had at that time enjoyed a great prosperity, which led to several incidents with Venice and Naples. He died in Shawwāl 1167/July 1754. His son ʿAlī succeeded him (1167-1207/1754-93) and received the agreement of the Sultan. Until 1171/1758 he had to face several revolts, notably in the Manshiya and the Sāḥil, revolts which were drowned in blood. However, after this, the country enjoyed a sufficiently long period of calm until 1204/1790.

From the middle of the reign of Aḥmad Ḳaramānlī, Tripolitania saw its economic activity increase and became an important staging post of commerce in the Mediterranean; but a serious epidemic in 1181/1767, and then the plague and famine in 1198-1200/1784-6, led to a certain decline of Tripoli and its commerce. During this period, the authority of the Ḳaramānlīs was incontestable: they had a firm grip on the central power (*bey*, *āghā* of the Janissaries, *kāhya*, *raʾīsal-baḥr*, *khaznadār*, *shaykh al-balad*, *dīwān*) and on the provinces where they were represented by the *ḳāʾid*; the military forces comprised about 400 Janissaries, 200 to 300 renegades, 500 Albanians and 600 Arabs; the navy was composed of Albanians and Arabs.

The situation deteriorated with the old age of ʿAlī Pasha; in 1790 his elder son, Ḥasan Bey, was assassinated and his second son, Aḥmad, then became bey, but had to face the hostility of his brother Yūsuf, who was supported by the Arabs. In view of this situation, the notables of Tripoli and some military leaders intervened with the Sultan and asked him to name another governor, to which Yūsuf replied by having himself proclaimed governor with the support of the Nuwayr (1207/1792-3); he then undertook the siege of Tripoli (June 1793). Shortly afterwards there arrived unexpectedly ʿAlī Bulghūr, a high dignitary ousted from Algiers, who claimed to have been invested with the governorship by the Sultan: he bene-

fited from the gathering of notables and officers of Tripoli and entered the town (July 1793), while Yūsuf and ʿAlī Pas̲h̲a retired to Tunisia. ʿAlī Bulg̲h̲ūr having seized the island of D̲j̲arba, the *bey* of Tunis Ḥamūda then favoured the action of the Ḳaramānlī to regain power. Finally, the vanquished ʿAlī Bulg̲h̲ūr fled to Egypt (February 1795), while ʿAlī Pas̲h̲a, resident at Tunis, renounced the governorship in favour of his son Aḥmad. In S̲h̲aʿbān 1210/November 1796, profiting from the departure of Aḥmad for Tad̲j̲ūra, Yūsuf entered Tripoli and had himself proclaimed governor there; Aḥmad did not persist in his claims and retired to Malta. The following year, Yūsuf received from the Sultan the investiture *firmān*; he then took severe measures to repress disorder, reinforced the fortifications and increased the corsairs' fleet.

During Bonaparte's expedition in Egypt, Yūsuf Pas̲h̲a refused to break off relations with France; constrained to do so, following an English threat, he hastened to conclude a treaty with France as early as 1799. In 1800 an incident occurred with the United States of America, which resulted in the severing of relations, and then in acts of hostility. The Americans were on the point of reintroducing Aḥmad Bey to Cyrenaica and having him proclaimed governor, but English mediation put an end to these events; a new treaty was concluded with the Americans, while Aḥmad Bey retired to Egypt (June 1805).

From 1806 to 1830, numerous revolts broke out in different regions, repressed with more or less success; in 1810, the region of Ghadamès was once more joined to Tripoli. In 1819 a Franco-English fleet arrived before Tripoli and, under threat, had the slaves and Christian prisoners freed. From 1823 to 1826 at the request of the Sultan, Yūsuf Pas̲h̲a sent a Tripolitanian fleet to participate in the operations of the Ottoman fleet on the coasts of Morea and returned by the same route, but this provoked severe reactions by the Kingdoms of Sardinia and Naples (1825-6). The assassination of Major Laing, son-in-law of the English Consul Warrington, who held the French Consul Rousseau responsible, placed Yūsuf Pas̲h̲a in a delicate situation: he had finally to sign a new treaty with France (August 1830). In 1832, having imposed taxes on the inhabitants of the Mans̲h̲iya and the Sāḥil in order to recover his debts, they revolted, proclaimed a grandson of Yūsuf, Meḥmed (Muḥammad) Bey governor, and besieged Tripoli. On the 5th August 1832, Yūsuf abdicated in favour of his son ʿAlī; the latter could count on the support of Cyrenaica and the good will of the French, whereas Meḥmed Bey enjoyed the favour of the English. An emissary of the Sultan, Meḥmed S̲h̲ākir Efendi, tried in vain to arrange an agreement between the parties. He returned in September 1834 with a *firmān* of investiture for ʿAlī Bey that the rebels and England refused to recognize. Meanwhile, the Ottoman Government took careful note of that what was necessary, in view of the French pressure that was being exerted on the Ḳaramānlīs and on account of the presence of the French in Algeria which constituted a serious threat, to display more energetically the suzerainty of the Sultan over Tripolitania; in February 1835 the Ottomans decided to send a fleet and troops to Tripoli under the command of Muṣṭafā Nad̲j̲īb Pas̲h̲a. This fleet arrived before Tripoli on the 26th May and the disembarkation of the troops took place on the 27th; the next day, ʿAlī Pas̲h̲a and a certain number of Tripolitanian dignitaries were arrested, while Muṣṭafā Nad̲j̲īb Pas̲h̲a had the imperial *firmān* read, naming him governor of the province and decreeing the removal of ʿAlī Pas̲h̲a. Meḥmed Bey committed suicide, his brother Aḥmad took refuge in Malta, and all the other members of the Ḳaramānlī family were sent to Istanbul with the exception of Yūsuf Pas̲h̲a who, owing to his great age was authorised to live in Tripoli; he died there on the 4th August 1838.

Thus the dynasty of the Ḳaramānlīs came to an end. Its initial originality lay in its support for the Arabs of Tripolitania against the Turks and the *ḳulug̲h̲līs*, without however rejecting Ottoman suzerainty. Later, the Ḳaramānlīs did not escape the rivalries and internal quarrels that rendered null and void the efforts of the first members of the dynasty, and facilitated the province being taken once more into control by the Ottomans, aided in this by the implications of the "Eastern Question". Like the Ḥusaynids in Tunisia, but to a lesser degree on account of the extent and disparity of the land, the Ḳaramānlīs were able momentarily to cut a figure as a local dynasty, but not as a national one.

ḲARĀMĀN-OGHULLARĪ (ḲARĀMĀNIDS), a Turkish dynasty which ruled over the regions of Ič-Il, Ḳonya and Niğde [*qq.v.*].

The claim made by Yazīdjī-oghlu ʿAlī [*q.v.*] that the Ḳarāmān-oghullarī belonged to the Avshar [see AFSHAR] tribe is plausible. It is probable that they were settled in Arrān [*q.v.*] prior to the Mongol invasion, that because of it they had to immigrate to the Sivas region, and that after taking part in the Babāʾī [*q.v.*] revolt they moved to the Ermenek region and established their home there. The Ermenek-Mut-Anamur region was conquered in 622/1225 during the reign of ʿAlāʾ al-Dīn Kayḳubād.

The principal tribes over which the Ḳarāmānids ruled were: Igdir (one of the 24 Oghuz tribes), Boz Doghan (possibly a sub-tribe of Igdir), Turghudlu, Bayburdlu, Bozḳīrlu, Oghuz-Khānlu, Khʷādja Yūnuslu, Yapa-oghullarī, Adalī-oghullarī, Shāmlu, Khodjantīlu (Khodjantī = from Khudjand in Türkistan?), Yīva and Beğ-Dili. Some of these tribes are patently named after clan-leaders (*boy-beği*). To these we can also add the Gökez-oghullarī and the Gödjer oghullarī. We also know that tribes living on the Bulghar Daghī (Bulgharlu), and such tribes as Ḳush Temürlü, Ḳuṣūnlu, Elwānlu and Ulashlu, which belonged to the Warsaḳ confederation, were in the service of the Ḳarāmānids. Some small Mongol tribes that were left behind after Tīmūr's invasion may also be added to these.

The defeat of the Saldjūḳ army for the second time by the Mongol commander Baydjū in 654/1256, and the beginning of a struggle between Sultan ʿIzz al-Dīn Kaykāwūs and Rukn al-Dīn Ḳīlīdj Arslan, his brother and rival, allowed the Turkmen peoples living along the frontier regions to enjoy greater autonomy and gain greater political importance. Ḳarāmān Beg's emergence in the Ermenek-Mut region was part of this development.

According to Shikārī [*q.v.*] and to some later chronicles, inscriptions and archival records, Ḳarāmān's father was Nūr al-Dīn Ṣūfī or Nūre Ṣūfī. Shikārī claims that Nūre Ṣūfī was interested in religious matters rather than in state affairs and was a follower of Bābā Ilyās; leaving the administration of his principality to his son Ḳarāmān, he led a life of seclusion. He is buried at Değirmenlik, in the Sinanlu district of Ermenek. Like the majority of the Turkmen begs, Ḳarāmān was a supporter of ʿIzz al-Dīn Kaykāwus. It is, therefore, probable that he took part in the battle between ʿAlī Bahādur, commander of the army of Kaykāwus, and Rukn al-Dīn Ḳīlīdj Arslan near the Altunpa (Altun Apa) caravanserai to the west of Ḳonya in 660/1262. Zayn al-Ḥādjdj, one of his brothers, was killed in this battle.

The Parwāna Muʿīn al-Dīn Sulaymān, who held administrative authority in Anatolia with the support of Rukn al-Dīn Ḳīlīdj Arslan and the Mongols, put many *amīrs* who had sided with Kaykāwus to death and pacified Ḳarāmān, whom he was unable to seize, by granting him an amīrate (possibly the governorship of Ermenek). He also appointed his brother Buñsuz as Amīr Djāndār. Ḳarāmān made frequent attacks on the territory of the neighbouring Kingdom

GENEALOGICAL TABLE OF THE ḲARĀMĀNID DYNASTY

- Nūr al-Dīn (Nūre Ṣūfī)
  - Zayn al-Ḥādjdj
  - Daughter
    - Evliyā (d. 1282)
  - Ḳarāmān (d. 1263?)
    - Shams al-Dīn Meḥmed (d. 1278)
    - ʿAlī
    - Tānū (d. 1278)
    - Maḥmūd
      - Yakhshī Beg (Khān)
      - Badr al-Dīn Ibrāhīm (d. after 1340)
        - Durrī Khwānd (d. 1410)
        - Fakhr al-Dīn Aḥmad (d. 1350)
        - Shams al-Dīn (d. 1352-1353)
        - Ḳarāmān
      - Sulaymān
      - Khalīl
        - ʿAlāʾ al-Dīn (d. 1397-1398)
          - ʿAlī
          - Meḥmed Beg (d. 1423)
            - Muṣṭafā (d. 1419)
            - ʿAlī
            - ʿĪsā
            - Tādj al-Dīn Ibrāhīm (d. 1464)
              - Meḥmed
              - Isḥāḳ (d. 1465)
                - Ibrāhīm (?)
              - Pīr Aḥmād (d. 1474)
              - Ḳāsim (d. 1483)
              - Ḳarāmān
              - ʿAlāʾ al-Dīn (d. 1465-1466)
              - Daughter
                - Turghut Oghlu Maḥmūd Beg
              - Sulaymān
              - Nūre Ṣūfī
            - Ḳarāmān (d. 1471-1472)
        - Sulaymān (d. 1361)
          - Shaykh Ḥasan (d. 1403)
      - Pāshā Mūsā (d. 1345)
      - ʿAlāʾiyya Branch ?
        - Yūsuf
          - ʿAlāʾ al-Dīn
            - Maḥmūd
    - Zakariyyā (d. 1278)
    - Güneri (d. 1300)
  - Buñsuz

of Little Armenia. In fact, according to contemporary Armenian chroniclers, in a battle fought between Ḳarāmān and the Armenian king Hethoum at the fortress of "Maniaun" (probably Mennan castle near Ermenek), his brother Buñsuz and his brother-in-law were killed. Ḳarāmān also died after a time from the wounds he received in the same battle. The claim by the Armenian chronicler that Buñsuz was killed in battle is not correct. S͟hikārī, 33, claims that Ḳarāmān was buried in Ermenek. However, the text of the inscription attributed to Ḳarāmān in the village of Balkasun (K͟halīl Edhem, *Ḳarāmān Og͟hullarî ḥaḳḳînda wet͟hā'iḳ-i maḥḳūke*, in *TOEM*, ii, 699; İ. H. Konyalı, *Karaman Tarihi*, Istanbul 1967, 693) makes it clear that the inscription belongs to his son Maḥmūd Beg, the builder of the tomb, in which he also is buried.

Although the Saldjūḳ Sultan Rukn al-Dīn Ḳîlîdj Arslan was enraged at Ḳarāmān's refusal to obey his orders, he left him unmolested. When he heard of his death, however, he imprisoned his brother Buñsuz, who was in Ḳonya as Amīr Djāndār. Ḳaramān's young children were taken into custody in the castle of Gevele, near Ḳonya. His sons were transferred to other castles after Ḳîlîdj Arslan's death (663/1265), and were later released by the Parwāna; one of them, ʿAlī Beg, was still held hostage in Kayseri. The Beglerbegi K͟haṭīr-og͟hlu S͟haraf al-Dīn, who had revolted against the Mongols in 675/1276, dismissed the governor of Ermenek, Badr al-Dīn Ibrāhīm, the son of Ḳāḍī K͟huteni, and appointed in his stead Ḳarāmān's son S͟hams al-Dīn Meḥmed Beg. Meḥmed Beg occupied Ič-Il down to the sea, and started raiding the Mongol detachments. Following the dismissal of K͟haṭīr-og͟hlu, the Parwāna sent the former governor Badr al-Dīn Ibrāhīm against the Ḳarāmānids, but he suffered a heavy defeat in a battle with the forces of Meḥmed Beg. Following this, Saldjūḳ forces under the command of the Nā'ib al-Salṭana Amīn al-Dīn Mīk͟hā'īl and Ṣāḥib Fak͟hr al-Dīn ʿAlī's sons failed to gain any victory over the Ḳarāmānids. At about this time, the Mamlūk Sultan Baybars had defeated the Mongols on the Albistan plain (10 D͟hu'l-Ḳaʿda 675/15 April 1277) and entered Kayseri.

Baybars gave Ḳarāmān's son ʿAlī Beg—at his own request—amīrates and "sandjaḳs" for himself and his elder brothers. The Ḳarāmānids, taking advantage of this situation, began hostilities under the command of Meḥmed Beg, supported by ʿAlā' al-Dīn Siyāvus͟h, the Saldjūḳid prince, who was called "Djimrī" ("miserly"). He was one of the sons of ʿIzz al-Dīn Kaykāwūs. Meḥmed Beg first came to Aḳsarāy with a fairly small army (a contemporary source gives this as 3,000); because of the few forces at his disposal, he turned towards Ḳonya. He captured Ḳonya (9 D͟hu'l-Ḥidjdja 675/15 May 1277), ineffectually defended by the Nā'ib al-Salṭana, and put ʿAlā al-Dīn Siyāvus͟h on the Saldjūḳ throne; the *k͟huṭba* was read in his name, and coins were struck; one of these is still extant (O. F. Sağlam, *Şimdiye kadar görülmeyen Cimri sikkesi*, in *III. Tarih Kongresi zabıtları*, Ankara 1943, 224-8). Meḥmed Beg became ʿAlā' al-Dīn Siyāvus͟h's vizier. One of the first decrees passed at the first meeting of his council was that no language other than Turkish should thenceforth be spoken in government offices and the court.

Meḥmed Beg, learning that the sons of Ṣāḥib Fak͟hr al-Dīn ʿAlī were moving towards Ḳonya with a large army, went to Aḳ S͟hehir, taking ʿAlā' al-Dīn Siyāvus͟h with him. In the ensuing battle he defeated and killed the sons of Ṣāḥib. Although Sivri-Ḥiṣār opened its gates to him, he met with resistance at Ḳara Ḥiṣār (Afyon) and therefore returned to Ḳonya. He declared that he would go to Erzurum to fight the Mongols, but as he could not raise the necessary troops he abandoned the plan. When he heard that a Mongol army was approaching, he returned to Ič-il. In fact, the Mongol ruler, Abaḳa, sent the vizier S͟hams al-Dīn Muḥammad Djuwaynī and some Mongol commanders to Turkey at the head of a large army for the purpose of establishing peace, and applying the Mongol financial system in the country (Rabīʿ II 676/September 1277). Djuwaynī came to the country of the Ḳarāmānids along with the Mongol troops. After some plunder and destruction he moved to Kaz Ova (in the Tokat region) for the approaching winter. As a precaution, a Mongol unit was left under the command of G͟hiyāt͟h al-Dīn Kay-K͟husraw. In spring, the sultan and the vizier Fak͟hr al-Dīn ʿAlī marched against the Ḳarāmānids with the Saldjūḳ and Mongol forces under their command, and reached Mut. Meḥmed Beg, who had taken up a position near the fortress of Kurbag͟ha for the purpose of reconnaissance, encountered a Mongol detachment and was killed together with two brothers and a cousin. Upon this unexpected success the sultan and the vizier swept down to the Mediterranean in order to put an end to the Ḳarāmānids (676/1277). Meanwhile, ʿAlā' al-Dīn Siyāvus͟h succeeded in gathering a considerable force in the west, to which he had escaped, but he was defeated and killed by G͟hiyāt͟h al-Dīn Kay-K͟husraw (Muḥarram 677/May 1278). This success, far from wiping out the Ḳarāmānids, helped to strengthen their will to fight.

Following this, they were headed by Güneri Beg, who seems to have been a member of the Ḳarāmānid dynasty. The defeat of the Mongol army by the Mamlūks at Ḥimṣ in 680/1281, and the death of Abaḳa following this, led to disturbances in Turkey. Ḳarāmān Og͟hlu Güneri Beg carried out frequent acts of plunder in the Ḳonya region, while Ashraf Og͟hlu Sulaymān Beg started making raids from Beg S͟hehri on Ḳonya and Aḳ S͟hehir. Finding himself helpless in the face of the raids of the Turkmen begs, Sulṭān G͟hiyāt͟h al-Dīn Kay-K͟husraw sought help from Aḥmad, the successor of Abaḳa. Aḥmad sent his brother Ḳong͟hurtay to Anatolia at the head of a large army. After plundering Aḳsaray in a manner without precedent, Ḳong͟hurtay arrived in Ḳarāmānid territory. Great destruction was caused there by forest fires, pillage and plunder, and massacre. Large numbers of people were killed. Women and children were captured and sold as slaves. The savage destruction wrought by Ḳong͟hurtay in Ḳarāmānid territory created deep sorrow and anger among the Mamlūks, and in a letter written to the Ilk͟hān Aḥmad, the savagery was described as something incompatible with Muslim brotherhood. The fact that Aḥmad summoned Ḳong͟hurtay and had him executed (682 S͟hawwāl/January 1284) may be related with feelings of anger at a brother in the faith's cruelty. In spite of this, Ḳong͟hurtay's acts of violence could not break down the resistance of the Ḳarāmānids. The new sultan, G͟hiyāt͟h al-Dīn Masʿūd, was a weak man who preferred to live in Ḳayseri as he did not feel safe in Ḳonya. The invading Mongol troops were stationed in eastern parts of central Anatolia; taking advantage of this, the wife of the former sultan, G͟hiyāt͟h al-Dīn Kay-K͟husraw, had her two sons acclaimed as rulers in Ḳonya. To gain their support, Ḳarāmān Og͟hlu Güneri Beg and As͟hraf Og͟hlu Sulaymān Beg were given a *beglerbegilik* and regency respectively (684/1285). Shortly afterwards, the two children were put to death by the orders of

Arghun Khān, but neither Sultan Masʿūd nor the Mongols were able to establish peace and order in the western part of central Anatolia.

After the Ḳarāmānids and the Ashraf Oghullarī, the Germiyānids appeared on the scene in the Kütahya region. In the meantime, Güneri Beg took Laranda (modern Karaman: see LARANDA). In 686/1287 a certain Ḳarāmān Oghlu marched against Ṭarsūs, causing destruction around the city. It is almost certain that this "Ḳarāmān Oghlu" was Güneri Beg. Maḥmūd Beg, one of the sons of Ḳarāmān ruling somewhere in the Ič-il, accepted Güneri Beg as suzerain. Sultan Masʿūd and the vizier Fakhr al-Dīn ʿAlī, by order of the Shāhzāde Gaykhatu marched against the Ḳarāmān territory at the head of a joint Saldjūḳ and Mongol army in the same year. However, they could not engage the Ḳarāmānid forces, which had withdrawn into the rugged mountains, and were unable to do more than destroy some of the town of Laranda and its surroundings. In the next year (687/1288), Ḳarāmān Oghlu and Ashraf Oghlu came to Ḳonya to express their submission to Masʿūd, while Güneri Beg, accompanied by his brother (and possibly also by Maḥmūd Beg), came before the sultan with a large army and kissed his hand (Djumādā II/May-June 1289). Güneri Beg sent his brother (Maḥmūd Beg?) to visit Gaykhatu, the Mongol governor who had come to Ḳonya. However, Gaykhatu's return to Iran on the death of Arghun (690/1290) gave rise to disturbances everywhere. At this time, the Ḳarāmānids attacked Ashraf Oghlu and entered Beg Shehri, but they were driven back. As Sultan Masʿūd lived in Ḳayseri and there was no competent governor in Ḳonya, the Ḳarāmānids were emboldened to carry out frequent raids and acts of plunder in and around the city. On one occasion, under the command of Khalīl Bahādur, they raided and plundered the city for three days in succession. Sultan Masʿūd thereupon requested help from Gaykhatu, who had recently succeeded to the Ilkhānid throne, Gaykhatu came to Anatolia with a large army, which also included Georgian soldiers. Laranda and Eregli and the villages around these cities were destroyed with particular savagery. The number of captives taken from the lands of the Ḳarāmānids and Ashraf Oghullarī alone (690/1292) was 7,000. The Mongol ruler carried destruction as far as Ladik (modern Denizli, ancient Laodicia) and the newly created Menteshe principality; he did not even spare the citizens of such cities as were obedient to him. He then returned to Īrān with the abundant booty seized in Anatolia. Gaykhatu, the perpetrator of many cruel acts such as these was essentially an incompetent ruler. He was unable to resist Baydu, and eventually lost both his throne and his life in 694/1295.

In spite of heavy losses, the Ḳarāmānids renewed action as soon as Gaykhatu returned, while Ashraf Oghlu captured Gevele Castle near Ḳonya. Taking advantage of this situation, Henry II, King of Cyprus, landed troops at ʿAlāʾiyya, but they beaten back by the Ḳarāmānids led by Maḥmūd Beg.

Mongol dominion in Anatolia during the time of Ghāzān Khān was in its weakest phase. The city of Ḳonya was under the rule of Akhī Aḥmad Shāh. Henceforth, the Akhīs had a considerable say in the administration of the city for many years to come. When Baltu (696/1297) and Sülemish (698/1299), two of the Mongol commanders in Anatolia, revolted against Ghāzān, they were in collusion with the Ḳarāmānids; in fact, a large number or perhaps all of the Turkmens in the army of Sülemish belonged to the Ḳarāmānids. Nevertheless, Ghāzān Khān declined to take any action against them. Referring to the Ḳarāmānids, he is reported to have said, "I was seeking the enemy in the east and west, while he was hiding beneath my clothing. If it had not been for the Ḳarāmānids, Turkmens and Kurds, the Mongol horsemen would have reached the place where the sun sets", indicating that the Mongols regarded the Ḳarāmānids as the main barrier to their domination of the whole of Anatolia. Shortly after the revolt of Sülemish, the brave and competent Ḳarāmānid leader Güneri Beg died (28 Radjab 699/20 April 1300).

The first half of the 8th/14th century constitutes the least-known period in the history of the Ḳarāmānids, owing to the scarcity and contradictory nature of the available historical evidence, Güneri Beg was succeeded by his brother Maḥmūd Beg, who is known to have built a mosque in Ermenek in 702/1302 and a *turba* for himself and his father, Ḳarāmān Beg, in the same year. According to Neshrī, Maḥmūd Beg died in 707/1307-8 (*Djihān-numā*, ed. F. R. Unat—M. A. Köymen, Ankara 1949, i, 48, 49). Although he gives no source, İ. H. Uzunçarşılı (*Anadolu beylikleri*, Ankara 1969), refers to an inscription on a mosque dated 711/1311 mentioning Maḥmūd Beg. In the same year the Ḳarāmānids and Aldum (?), a powerful Turkmen Beg, defeated and killed Ḳazāndjūḳ, a Mongol commander, in one of the passes of the Taurus Mountains. Neshrī mentions that Maḥmūd Beg had two sons, Yakhshī and Sulaymān, and that Yakhshī succeeded to his father's title in Ermenek (*ibid.*). The Yakhshī Beg referred to by Neshrī is the Yakhshī Khān mentioned in other sources as the successor of Maḥmūd. Maḥmūd had several other sons, named Badr al-Dīn Ibrāhīm, Pāshā Mūsā, Khalīl (and perhaps Yūsuf), but nothing is clearly known of their political lives, and not even the dates of their deaths. It is understood that Yakhshī Khān, who succeeded to his father's title in Ermenek, overthrew Akhi Muṣṭafā, ruler of Ḳonya, and captured the city. It is probable that this event occurred during the early months of 714/end of 1314, because it is suggested that the main reason for Čōbān Beg's being sent to Turkey was the capture of Ḳonya by the Ḳarāmānids (Ḳāshānī, *Taʾrīkh-i Uldjaytu*, ed. Mahin Hambly, Tehran 1969, 168-70). According to the same historian Ḳarāmān Oghlu, who ruled Ḳonya for some time, fled to Laranda during a famine which broke out in the city; he was pursued and forced to come before Čōbān, who pardoned him. After leaving officials in Ḳonya and appointing his son Demir Tash (Tīmūr Tāsh) as his regent in Anatolia, Čōbān returned to Īrān. Before long Ḳonya was recaptured by the Ḳarāmānids. According to Neshrī, Yakhshī Beg died in Ermenik in 717/1317-18, and was succeeded by his brother Sulaymān Beg. It is presumed that Neshrī's source for this was an old calendar (*İstanbul'un fethinden önce yazılmış tarihî takvimler*, ed. O. Turan, Ankara 1954, 32, 33), which mentions that Yakhshī Beg was killed. The next year, "Ḳarāmān Oghlu" Ibrāhīm Beg's ambassador came to Cairo, stating that his master had read the *khuṭba* in the name of the sultan and also struck coins in his name. This statement might confirm that Yakhshī Khān was killed in the year already mentioned, and that Badr al-Dīn Ibrāhīm had replaced him, but Yakhshī Khān is referred to in other calendars as living at a later date. The date of his death accordingly remains uncertain.

Pāshā Mūsā Beg, one of the sons of Maḥmūd Beg, restored Laranda, which had been destroyed by Gaykhatu, in 711/1311-12 and took up residence there. The city may possibly have been in the hands of Badr al-Dīn Ibrāhīm Beg prior to 718/1318. We know that

at this time Nadjm al-Dīn Demīr Khān b. Ḳarāmān was in the service of the Mamlūks, being either the commander or one of the commanders of the Mamlūk forces sent to Mecca as early as 715/1315; he died in Damascus in 734/1333-34. Three years earlier ʿAlī Bahādur b. Ḳarāmān had been appointed to one of the *ṭabl-khāna* amīrates. Unfortunately we do not know the names of the fathers of these Ḳarāmānid princes.

The appointment of Demir Tash, Čōbān's son, as commander of the Mongol forces in Anatolia led to the strengthening of Mongol domination in Anatolia, and to the expansion of the territories under Mongol occupation. Demir Tash took measures to establish the long-awaited peace and order in central Anatolia, and was so popular with both villagers and townsmen that he was called "Mahdī-i ākhir zamān". His aim was to bring the Turkmen begs under his control and to become the sole ruler of Anatolia. According to Aflākī (*Manāḳib al-ʿārifīn*, ed. T. Yazıcı, Ankara 1964, ii, 977), Demir Tash took Ḳonya from the Ḳarāmānids in 720/1320. It is more probable, howver, that this conquest took place, as recorded in the anonymous *Saldjūḳnāma*, 94, in 723/1323, or that he conquered the city for the second time on the latter date. As well as conquering Ḳonya in 723, he also captured Mūsā Beg and the Ḥamīd-oghlu Dündar Beg, but is understood to have set Mūsā Beg free. Although Demir Tash wiped out the principalities of Ashraf Oghullarī, he was more lenient to the Ḳarāmānids, and pursued a policy of friendship towards them. When he fled to Egypt in 727/1327, his lieutenants Eretna and Sunghur Āghā escaped to Laranda, where Badr al-Dīn Ibrāhīm Beg was living. Quick to grasp this chance, the Ḳarāmānids re-took Ḳonya, the fortress of Gevele and Bey Shehri in 729/1328-29. It is to be assumed that in 735/1334-35 Badr al-Dīn Ibrāhīm Beg was in Laranda, his son Aḥmad Beg was in Ḳonya, Yakhshī Khān was in Ermenek (?), Khalīl Beg in Bey Shehrı and Mūsā in Mecca. As Ibn Baṭṭūṭa visited neither Ḳonya nor Laranda, he did not meet the Ḳarāmānid begs, and what he wrote about them is based only on hearsay, Mūsā Beg, who stopped at Cairo on his way to and from Mecca, was entertained and even offered a high position by the Mamlūk sultan al-Malik al-Nāṣir, but he refused the sultan's offer on the grounds that he could not live away from his people and country. While he was returning to his country under the protection of Mamlūk *amīrs*, partisans of the Armenian king tried to capture him, resulting in further destruction and plunder of the Cilician Armenian kingdom by the Mamlūk forces.

Mūsā Beg was probably the builder of a *madrasa* (the Tol Madrasa) in Ermenek in 740/1339-40; he probably died in Ramaḍān 745/January 1345. İ. H. Konyalı believes that the Amīr Mūsā Madrasa, which no longer stands, was built in Laranda by "Karaman Oghlu" Mūsā Beg (*Karaman Tarihi*, 720). Yet this is highly improbable, because there was, during the reign of ʿAlāʾ al-Dīn Kayḳubād, a Saldjūḳ governor by the name of Amīr Mūsā in Laranda, who had a *madrasa* built in the city for the father of Djalāl al-Dīn al-Rūmī (Aflākī, i, 25-8, 303). It is therefore more likely that the Saldjuk Amīr Mūsā was responsible for the *madrasa* in Karaman.

Badr al-Dīn Ibrāhīm Beg is known to have been alive in 741/1341. His ambassador to Cairo departed with the standards sent by the caliph and the sultan and the moulds for minting silver and gold coins on behalf of the sultan. It is difficult to assess why Ibrāhīm Beg accepted the suzerainty of the Mamlūk sultan. Historical calendars record that Khalīl Beg, one of the sons of Maḥmūd Beg, came from Bey Shehri to Ḳonya, where Aḥmad Beg was living, and fought with Yakhshī Beg (or Khān). The date of this event is given as 742/1341-2 and 743/1342-3 in two calendars (Nurosmaniye no. 5080, f.4a, ed. O. Turan, 32, 33), while in two other calendars we have the dates of 761/1360 and 762/1361 (ed. Atsız, *Osmanlı Tarihine ait takvimler*, Istanbul 1961, 22, 23; ed. O. Turan, 49). Of these dates, 742 or 743 is approximately correct. It is probable that Khalīl Beg killed Yakhshī Khān (Beg) in this battle. The fact that, like Güneri Beg, Yakhshī Khān is not mentioned by Shikārī, is puzzling. Khalīl Beg is understood to have built a mosque in Ermenek, *zāwiyas* in the villages of Ermenek, and a *zāwiya* in Laranda. There is a copy of a *waḳfiyya* dated 745/1344-45 made by him. The year of his death is not known, but it must have been between 745/1344-5 and 750/1349-50.

Fakhr al-Dīn Aḥmad Beg, the son of Badr al-Dīn Ibrāhīm Beg, was then left as the sole ruler. Shikārī's claim that he was killed in one of the endless battles with the Mongols is acceptable, because the adjective *al-shahīd* appears on a burial inscription dated 750/1349. Fakhr al-Dīn was succeeded by his brother Shams al-Dīn Beg, who died in 753/1352. According to Shikārī (p. 60), Shams al-Dīn Beg was poisoned by his brother Ḳarāmān. The word *al-shahīd* occurs in his inscription (İ. H. Konyalı, *op. cit.*, p. 460). Sulaymān Beg, one of the sons of Khalīl Beg, succeeded to the throne. Konya was then under the rule of the Eretna Dynasty, and Bey Shehri seems to have been in the possession of Ismāʿīl Āghā, one of the Mongol *amīrs*. It is probable that the Ḳarāmānids lost Ḳonya during the time of Eretna (d. 753/1352). The various Mongol tribes settled by Demir Tash (Tīmūr Tash) in the western parts of Central Anatolia became a continuous sources of trouble for the Ḳarāmānids, a situation that endured until the tribesmen were taken back to Turkistān by Tımūr. Although a kind, good-natured and religious ruler, Sulaymān Beg was killed in a plot organized by begs of his family (762/1361). The titles of "Ṣāḥib al-Dawla al-Nāṣir, Sayf al-Dawla waʾl-Dīn", which occur in the inscription of the Ḥādjdjī Begler Djāmiʿ dated 757/1356, refer to Sulaymān Beg.

Sulaymān Beg was buried in the Akhī Meḥmed Beg or Ḳalamiyya *zāwiya*, and his tomb was built by his brother ʿAlāʾ al-Dīn Beg in 772/1370-71. According to Shikārī (p. 90), Ḳāsim, one of the organizers of the plot, succeeded to the throne, but later he and his supporters were killed by ʿAlā ʾal-Dīn Beg, who obtained the throne. As this Ḳarāmānid Beg is referred to merely as ʿAlāʾ al-Dīn in inscriptions, coins, *waḳfiyyas*, historical calendars and in reliable contemporary foreign and native chroniclers, calling him "ʿAlāʾ al-Dīn ʿAlī" is simply the perpetuation of an error in some historical works. ʿAlāʾ al-Dīn Beg differed from his predecessors (perhaps with the exception of Mūsā Beg) in being an educated ruler. Yardjānī's *Shāhnāma* on the Ḳarāmān dynasty, which was Shikārī's principal source, was written at his command. During the reign of ʿAlāʾ al-Dīn Beg the borders of the Ḳarāmānid state were extended in every direction, and the Ḳarāmānid rulers were no longer mere "rulers of the Anatolian mountains" (*Ṣāḥib djibāl al-Rūm*), as Mamlūk chroniclers used to call them. During this period the Mamlūks occupied the whole of Cilicia, bringing to an end the Armenian kingdom (777/1375). The Eretnas were also in a state of confusion. Taking advantage of this situation, ʿAlāʾ al-Dīn Beg captured certain Armenian castles, and took Ḳonya in 767 or 768/1366-67 and later Aḳ Saray, Nigde, Karaḥiṣār (Yeşil Hisar), Aḳ Shehir,

Ilghīn, Ishāķlu and even Ķayseri. The latter, however, was soon recovered by the Eretnas. Following on these successes, the Babuk Oghullarī, Ata Beg, Devlet Shāh and other Mongol begs entered the Ķarāmānid service. If Bey Shehri and even Seydī Shehri were taken by ʿAlāʾ al-Dīn Beg, they must have been captured following the death of Ismāʿīl Āghā (780/1379). It must, however, be noted that ʿAlāʾ al-Dīn Beg's rule, like that of his successors, was devoid of consistent diplomatic principle. He abandoned the traditional alliance with the Mamlūks, and became a supporter of the rebellious Ramaḍān Oghullarī against Sultan Barķūķ, while pursuing a hostile policy against Ķāḍī Burhān al-Dīn, his natural ally against the Ottomans. This led to a loss of territory, and damaged his prestige, particularly among the Mongol tribes. His encouragement of Tīmūr's attack on the Ottomans and the Mamlūks, probably motivated by a desire for revenge for the defeat he had suffered, left him completely isolated against Bāyazīd.

The Ķarāmānid territory included the following regions and cities in 782/1380: Gülnar, Anamur, Silifke, Mut, Ermenek, Hâdim, Bozkīr, Laranda (the capital), Ereğli, Ulukīshla, Niğde, Ķara Ḥiṣār, Aķ Saray, Aķ Shehir, Ilghīn, Saʿīd ili (Kadīn Khānī) and Ķonya (see map in ANADOLU). We do not know definitely whether Bey Shehri and Seydi Shehri were under Ķarāmānid rule. It is clear that ʿAlāʾ al-Dīn Beg considerably enlarged Ķarāmānid territory, whence his names "Sulṭān" and "Abū l-Fatḥ". Nevertheless he was unable, contrary to Shikārī's claim, to capture Corycos (Kīz Kulesi) on the Mediterranean coast, which was held by the Kingdom of Cyprus.

His relations with the Ottomans were uneasy. He was a son-in-law of Murād I, but when Murād bought part of the Ḥamīd Oghullarī territory, ʿAlāʾ al-Dīn was offended because he was planning to capture the area himself; the Ḥamīd Oghlu had in fact sold a part of his lands to the Ottomans because he had discovered ʿAlāʾ al-Dīn Beg's intention. ʿAlāʾ al-Dīn Beg's occupation of Ķara Aghač and Yalvadj, while Murād was engaged with his expeditions in the Balkans, was a cause of war between the two states. Murād defeated his son-in-law easily (789/1387), and made peace through the mediation of his daughter, on the condition that Bey Shehri be given to him. However, ʿAlāʾ al-Dīn Beg regarded this as a temporary peace only, and hoped that an opportunity would arise for him to renew hostilities. In fact, when he heard that his father-in-law had been killed at Kosova (791/1389), he captured Bey Shehri and encouraged the begs of western Anatolia to fight against the new ruler Bāyazīd. But this act proved to be against his own interests. He sent an ambassador to his brother-in-law from the Ermenek region, from which he had withdrawn, and sued for peace. Köshk Bükü, one of the villages of Bey Shehri, was accepted as marking the border and peace was made (793/1391). In spite of these successive defeats, the Ķarāmānid never abandoned his struggle against the Ottomans. He attacked Anķara at the time of the battle of Niğbolu, and imprisoned Sarī Demir Tash Pāshā, governor of the city. But he was again defeated by Bāyazīd and retreated to the citadel of Ķonya castle. The people of Ķonya demonstrated their feelings about the Ķarāmānids by handing over their ruler to Bāyazīd. The Ottoman ruler, who had decided to annex Ķarāmānid territory, then had his brother-in-law put to death (800/1397-8). Meḥmed Beg and ʿAlī Beg, sons of the Ķarāmānid, were taken to Bursa and imprisoned. Bāyazīd gave the conquered Ķarāmānid lands to his son Muṣṭafā. Ič-il was placed under the rule of Shaykh Ḥasan, son of Sulaymān Beg, who had earlier taken refuge with Ķāḍī Burhān al-Dīn.

Following the battle of Anķara (804/1402), Tīmūr gave back to Meḥmed Beg and ʿAlī Beg their father's territory, as well as Ķayseri, Ķīr Shehri and Sivri Ḥiṣār. But Meḥmed Beg was not content with these. This energetic new Ķarāmānid ruler annexed Ḥamīd-ili, and taking advantage of the weak rule of the Mamlūk sultan Faradj, took Ṭarsūs and occupied Ķara Ḥiṣār (Afyon) and Kütahya. It is recorded in some calendars that "Ķarāmān Oghlu" even captured Antalya. Meḥmed Beg went even further and besieged Bursa (816/1413). Before long, however, it was apparent that Meḥmed Beg's achievements were the result of favourable prevailing conditions rather than of his personal qualities. He was forced to make peace with Meḥemmed I Čelebi by handing over Bey Shehri, Seydī Shehri and Aķ Shehir (812/1414). The following year he and his son Muṣṭafā were taken before the Ottoman ruler as virtual prisoners: their lives were spared in return for an oath that Meḥmed Beg would never again break the peace. Al-Malik al-Muʾayyad Shaykh, the new Mamlūk sultan, demanded that Ķarāmān Oghlu return to him Ṭarsūs, which the Ķarāmānid had captured for the second time. Believing that the Mamlūk sultan could not touch him, Meḥmed Beg ignored this demand. Furthermore, he gave his daughter to the Ramaḍānid Ibrāhīm Beg and protected him against al-Muʾayyad Shaykh. But when he heard that a large Mamlūk army under the command of Ibrāhīm, son of al-Muʾayyad Shaykh, was marching against Ķarāmānid territory, he realized his mistake. Unwilling to risk the battle with the Mamlūk army, Meḥmed Beg withdrew into the mountains. Ķayseri was given to the Dulkadīr Oghullarī while the territory of Ķarāmān was given to ʿAlī Beg, brother of Meḥmed Beg (822/1419). As soon as the Mamlūk army had left, Meḥmed Beg regained authority in most of his lands, but his son Muṣṭafā was killed in a battle fought with the Dulkadīrīds near Kayseri, while he himself was captured and taken to Cairo as a prisoner (822/1419). Although ʿAlī Beg was protected by the Mamlūk sultan, he was unable to establish his authority throughout the Ķarāmānid teritoty. He failed to capture Ķonya in the face of a strong defence by Sunghur, a loyal commander of Meḥmed Beg; unable to withstand the attacks of Ibrāhīm, one of the sons of Meḥmed Beg who was being helped by the Ottomans, he returned to Nigde. Having been released upon the death of al-Muʾayyad Shaykh in 824/1421, Meḥmed Beg had no difficulty in re-establishing his authority over his country. Despite the many setbacks with he had suffered, he lost none of his ambition. Taking advantage of the newly-crowned Ottoman sultan's struggle with his uncle Muṣṭafā, he besieged Antalya at the suggestion of the Teke Oghlu ʿUthmān Beg, but was killed by a shot fired from the castle (826/1423). His sons took his body to Laranda and buried him there. A man of great energy, Meḥmed Beg observed moderation in his private life and showed great respect to men of learning. He was not, however, popular with his subjects, as he frequently levied heavy taxes. Upon his death his brother, ʿAlī Beg, became the ruler of the entire Ķarāmānid territory, but his rule was shortlived. Unable to fight against Ibrāhīm Beg, who was again aided by Murād II, and, like his grandfather, was related to the Ottomans by marriage, ʿAlī Beg retreated to Nigde. Following the death of his uncle, Ibrāhīm Beg captured Nigde as well.

Tādj al-Dīn Ibrāhīm Beg was the last great ruler of the Ķarāmānid state. An energetic and warlike

man like his father and grandfather, he was over-ambitious. After making an agreement with the Serbs and Hungarians, he captured Eğridir and Isparta (837/1433), but was forced to sue for peace from Murād II, who had marched against him. Murād wanted to give the Ķarāmānid territory to ʿĪsā, a brother of Ibrāhīm Beg in his service. But as he had failed to overcome Ibrāhīm Beg on a previous occasion (830/1426-7), he made peace with his brother-in-law on the condition that the territory belonging to the Ḥamīd Og͟hullarī would remain under Ottoman rule (838/1435). However, Ibrāhīm Beg won a great victory against the Dulkadīr Og͟hlu Nāṣir al-Dīn Meḥmed Beg, and took Ķara Ḥiṣār, Develi, Uč Ḥiṣār, Ürgüb and Ķayseri. This achievement had been possible through the approval and aid of the Mamlūk sultan Bārsbay. Ibrāhīm Beg continued his policy of hostility towards the Ottomans. In concert with the Hungarian attack on the Ottomans in 846/1442, he sent an army under the command of his son-in-law Turg͟hut Og͟hlu Ḥasan Beg, effecting large-scale destruction and plunder in Anķara, Beg Pazarı, Kütahya, Ķara Ḥiṣār (Afyon), Bolvadin and Ḥamīd Ili, but sharp Ottoman retaliation followed. When Murād heard that the Hungarians had broken the Treaty of Szegedin, he accepted Ibrāhīm Beg's peace offer, but the ensuing treaty contained some of the harshest terms that the Ķarāmānids had ever had to accept and reduced them to vassals of the Ottomans. (For the text of this treaty see İ. H. Uzunçarşılı, *Karaman oğulları devri vesikalarından Ibrahim Bey'in Karaman emareti vakfiyesi*, *Belleten* i/1, 120-1). In 1448 Ibrāhīm Beg captured the fortress of Corycos, which his grandfather ʿAlāʾ al-Dīn Beg had failed to take. However, this conquest did not worsen commercial relations between Cyprus and the Ķarāmānids; on the contrary, Ibrāhīm Beg granted the Venetians special trade concessions within his country.

Of the many sons of Ibrāhīm Beg, Pīr Aḥmad, Ķāsim and ʿAlāʾ al-Dīn were born of Čelebi Meḥemmed I's daughter. According to early Ottoman chroniclers, Ibrāhīm Beg disliked these children because they had Ottoman blood in their veins and he made Isḥāķ, son of another wife, his crown prince. Upon his father becoming seriously ill, Pīr Aḥmad Beg declared himself ruler in Ķonya. Realizing that he could not hold the city, Ibrāhīm Beg fled with his son Isḥāķ, but died on the way to the fortress of Gevele (869/1464). His body was taken to Laranda and buried in his tomb near his *ʿimāret*. Ibrāhīm Beg, an active and brave ruler, was also a great builder: apart from the *ʿimāret* in Laranda, he constructed numerous public buildings, mosques, *madrasas*, bridges and irrigation canals. He was also a patron of artists and scholars. Yet he was also a man of violent temper, and had many of his viziers put to death.

Following the death of Ibrāhīm Beg, Isḥāķ and Pīr Aḥmad between them divided the country into two principalities, Isḥāķ ruling Ič-il with capital at Silifke, and Pīr Aḥmad ruling the larger part of the country with his capital at Ķonya. Before long Isḥāķ, with the help of Uzun Ḥasan, the Aķ Ķoyunlu ruler, forced Pīr Aḥmad to take refuge under the Ottoman sultan Meḥemmed II, but Pīr Aḥmad defeated Isḥāķ with the reinforcements he had received from the Ottoman ruler and brought the entire Ķarāmānid territory under his rule (870/1465). Isḥāķ again took refuge under Uzun Ḥasan, and died in 870/1465-6.

Meḥemmed II was determined to put an end to the separate Ķarāmānid political existence. He fulfilled his objective after numerous expeditions, and Ķarāmān finally became an Ottoman province in 880/1475. Pīr Aḥmad died in the same year. His brother Ķāsim Beg remained as beg and as a vassal of Bāyazīd II in Gülnar and Silifke. Upon his death (888/1483), the Ķarāmānid begs made Maḥmūd, son of Turg͟hut Og͟hlu and the grandson of Ibrāhīm Beg, their chief. But as he supported the Mamlūks in the Ottoman-Mamlūk warfare, he was forced to flee to Aleppo in 892/1487. When disaffection broke out among the Ķarāmānid feudal forces by the Ottoman tax assessment carried out in 906/1500-1, Muṣṭafā, nephew of Ķāsim Beg, was called from Iran and declared prince. But Muṣṭafā could not resist the Ottoman forces: he took refuge with the Mamlūks, and died in Cairo in 919/1513.

Together with other Anatolian tribesmen, various groups in the Ķarāmānid state, such as Turg͟hudlu and Bayburdlu, took part in the foundation of the Ṣafawid state. There was also an ʿAlāʾiyya branch of the Ķarāmānid dynasty, which came to the fore in 692/1293, but little is known about the history of this branch.

The fact that the Ķarāmānids were able to oppose the Ottomans for so many years was largely due to the geographical features of their territory, for they possessed strong fortified points in rugged country. There is no doubt that the use of firearms by the Ottomans played an important role in the extinction of their independence. As heirs of the Sald͟jūķs, the Ķarāmānids had a firm military and administrative organisation. They valued culture and learning, and as early as the time of Maḥmūd Beg, they built many public buildings such as mosques, *zāwiyas*, *madrasas*, *ʿimārets*, caravanserais and baths, many of these buildings of considerable artistic value. Ķarāmānid works of art reflect Sald͟jūķ characteristics, with most distinguishing features of Ķarāmānid art being its decorative quality.

Although taxes on land and animals constituted the main source of revenue in the Ķarāmānid state, customs duties collected at the ports and gates in the south were also considerable. The Ķarāmān horses raised on the Ķonya plain between Ķonya, Aķsaray and Laranda were famous and were valued not only in Turkey, but also in the Arab lands and Europe, whither many were exported. The Turkish tribes raising these horses used to be called *Atčeken* until one or two centuries ago. Carpets and rugs were formerly exported from Ķarāmān lands, and of these, the Aķ Saray carpets were particularly in demand in foreign markets.

(F. Sümer)

KARĀMAT ʿALĪ, born (date uncertain, early in the 19th century?) at Djawnpūr [*q.v.*], of a family of *shaykhs*, which had held the office of *khaṭīb* under Muslim rule; his father was *sarishtadār* in the Djawnpūr Collectorate. He studied theology and other Muslim sciences under various celebrated teachers of the time, especially Shāh ʿAbd al-ʿAzīz, *muḥaddith* of Dihlī, who was also the teacher and afterwards follower of Sayyid Aḥmad of Brēlwī. Between 1820 and 1824, Sayyid Aḥmad made a tour through Bengal and Northern India, collecting a band of disciples, and Karāmat ʿAlī was one of the most devoted of the younger men who followed him, but he does not appear to have taken part in the *djihād* against the Sikhs [*q.v.*], in which Sayyid Aḥmad was slain in battle in 1831. The Sayyīd's old master, Shāh ʿAbd al-ʿAzīz, now became his khalīfa, and an active propaganda for the revival of Islam was organised in Bihār and Bengal; with this peaceful propaganda Karāmat ʿAlī was now identified. In 1252/1836-7 Ḥādjdjī Sharīʿat Allāh [see FARĀʾIḌIYYA] met Karāmat ʿAlī in Calcutta. By 1855 the two schools had made some progress towards a rapprochement, and in the meeting then held at Barisal, Karāmat ʿAlī was able to agree on several points with the representative of the other movement, Mawlawī ʿAbd al-Djabbār, though on the question of the lawfulness of *Djumʿa* and *ʿĪd* prayers in British India, he could not overcome the stubborn opposition of ʿAbd al-Djabbār (*Ḥudjdjat-i ḳāṭiʿa*, 29-32).

Karāmat ʿAlī's life was a double struggle: firstly, against the Hindu customs and superstitions which had crept into the practise of Islām in Eastern Bengal, against which he wrote a book, entitled *Radd al-Bidʿa*; and secondly, he tried to bring back into the fold of orthodoxy the new heterodox schools, and he devoted a special book, *Hidāyat al-Rāfiḍīn*, to this subject. He kept in touch with the Muslims of Bengal, and distributed to the needy all the presents that he received. He was a trained *ḳāriʾ* and an expert calligraphist.

Garcin de Tassy (ii, 162) says that he competed for the prize offered by Sir Charles Trevelyan for the best Hindustani essay (see *Bibl.*) on the influence of the Greeks and Arabs on the Renaissance in Europe, but that his essay was not accepted for want of an English translation. He was thus interested, unlike the majority of contemporary Indian Mawlawīs, in the relation of Islām to the wider questions of the world at large. He died on 3rd Rabīʿ II 1290/30th May 1873, and was buried in Rangpūr (*Tadjallī-i-Nūr*, ii, 136), in the province in which he had laboured for the regeneration of Islām all his life. He was succeeded in his work by his son, Mawlawī Ḥāfiẓ Aḥmad (d. 1898), and his nephew, Muḥammad Muḥsin. His following was so large that there was hardly a Bengal village without his disciples.

He wrote chiefly in Urdū. Raḥmān ʿAlī (*Tadhkira-i ʿulamāʾ-i Hind*, Lucknow 1894, 171-2) gives a list of 46 of his works, without claiming that it is exhaustive. One of his works, *Miftāḥ al-Djannat*, has run through numerous editions and is accepted in India as a correct statement of Islamic principles. His writings may be divided into four classes: (1) general works, like *Miftāḥ al-Djannat*; (2) works on the reading and interpretation of the Ḳurʾān, and formal prayers and ablutions; (3) works on the doctrine of spiritual preceptorship (*Pīrī Murīdī*), the cornerstone of orthodox Islām in India; in accepting this doctrine, Karāmat ʿAlī stands in sharp opposition to the Wahhābī sect and merges insensibly into the *Taṣawwuf* schools, which he brings into relation with the traditional religious orders; (4) polemics against Sharīʿat Allāh, Dūda Miyān, the Wahhābīs, etc.

The common conception that Karāmat ʿAlī was a Wahhābī is refuted by the detailed exposition of his own views as set forth in *Mukāshafāt-i Raḥmat*; he had not seen any Wahhābī books, but had made oral enquiries and found that they were so fanatical (*ḍiddī*) that they called all who did not agree with them *mushrik* (38-9); he and his school carefully distinguished between *shirk*, which was the negation of Islām, and *bidʿa*, which was only an error in doctrine (39). In his *Ḥudjdjat-i ḳāṭiʿa* he draws a clear distinction between a *fāsiḳ* (sinner) and a *kāfir* (infidel), and inveighs against those sectaries who would deny funeral prayers to those who did not pray but repeated the *kalima* (21); if non-Muslims conquer Islamic lands, the *Djumʿa* prayer and the two *ʿĪd* [*q.v.*] prayers were not only lawful but obligatory (13 *bis*). He based his doctrine on the orthodox Sunnī books of the Ḥanafī school (*Mukāshafāt-i Raḥmat*, 37). He accepted the six orthodox books of tradition (*Ṣiḥāḥ sitta*), the commentaries (*tafāsīr*), the principles of ceremonial law as interpreted by the masters, and the doctrines of *taṣawwuf* and *pīrī murīdī* (38, 45), even basing the mission of Sayyid Aḥmad on a *ḥadīth* from Abū Hurayra (p. 32); in every century a teacher is born to revivify the faith: Sayyid Aḥmad was such a teacher for the 13th century and should be followed until another teacher arises for the 14th century (34). All this was in direct antithesis to Wahhābī teaching, and the "reform" amounted merely to the abolition of rites and ceremonies introduced through ignorance (36), or to a revival of Islām according to the accepted orthodox schools (50). The political effects of Sayyid Aḥmad's life brought his followers into conflict with the authorities, but the writings of the school show that there was no connection, political or doctrinal, with the sect founded by Muḥammad b. ʿAbd al-Wahhāb in Arabia.

Bibliography: The European accounts of Karāmat ʿAlī are unsatisfactory, being based on secondary information and failing to distinguish between this school of reform and Wahhābism, and in some places there is confusion between the subject of this article and Mawlawī Sayyid Karāmat ʿAlī of Djawnpūr (1796-1876), who represented the British Government at the court of Dōst Muḥammad Khān at Kābul ,1832-1835, and was superintendent (*mutawallī*) of the Hughlī Imāmbāra, 1837-1876 (*Nineteenth Century*, May, 1905, cf. 780-2; Sir W. W. Hunter, *The Indian Musulmans*, 114; C. E. Buckland, *Dictionary of Indian Biography*, 229; Nūr al-Dīn Zaydī, *Tadjallī-i Nūr*, ii, 139); *Census of India*, 1901, vol. vi. part 1 (Bengal, 174) Calcutta 1902; *Journ. As. Soc. of Bengal*, lxiii, part 3, 54-6, Calcutta 1894; Garcin de Tassy, *Hist. de la Littérature Hindouie et Hindoustanie*, ii, 162, Paris 1870); (it is doubtful whether the *Muʿdjiza-i rashk-i Masīḥa*, Dihlī 1868, mentioned there, was a work by the subject of this article); Sayyid Nūr al-Dīn Zaydī, *Tadjallī-i Nūr* (biographies of the famous men of Djawnpūr), Djawnpūr 1900, 135-6.

A correct appreciation of Karāmat ʿAlī's doctrines can only be gained by a study of his own writings, the most important of which are the following: *Miftāḥ al-Djannat*, Calcutta 1234 (frequently reprinted); *Kawkab-i durrī*, Calcutta 1253 (translates passages from the Ḳurʾān); *Bayʿat-i Tawba*, Calcutta 1254, various practices of the religious orders); *Zīnāt al-ḳāriʾ*, Calcutta 1264 (on reading the Ḳurʾān); *Fayḍ-i ʿāmm*, Calcutta 1282 (a tract on the doctrines of Shaykh Aḥmad Sirhindī); *Ḥudjdjat-i Ḳāṭiʿa*, Calcutta 1282 (a polemical tract against the school of Sharīʿat Allāh and his son Dūda Miyān; *Nūr al-Hudā*, Calcutta 1286, on the doctrines of *taṣawwuf*, of the *mudjaddidiyya school*, apparently the new school of Sayyid Aḥmad Brēlwī); *Mukāshafāt-i Raḥmat*, Calcutta 1286, (gives an account of the life and work of Sayyid Aḥmad Brēlwī, and discusses and disowns the Wahhābīs); *Zīnat al-Muṣallī*, Calcutta 1259; *Zād al-Taḳwā*, Calcutta 1287 (the beliefs and practices of Islām and *taṣawwuf*; accepts the Naḳshbandiyya teaching).

ĶARĀMĪD [see KHAZAF].

ĶARĀMIṬA [see KARMAṬĪ].

ĶARANFUL, the clove. According to the Arabic dictionaries, varying names were given to this plant, including *ḳarnful* and *ḳarnfūl*, whilst popular pronunciations included *ḳuranful* and *ḳuranfil*.

It seems that before the end of the Middle Ages the clove had not yet spread beyond the Moluccas, and since the Muslims who sailed towards China left these islands on their right hand, the old Arab writers could not pin down the origin of the clove. Ibn Khurradādhbih thought that it came from "Salāhiṭ", but he also mentions the island of Waḳwāḳ [*q.v.*]; Salāhiṭ was probably the southern part of the Malayan peninsula. On the other hand, al-Masʿūdī says that it comes from the kingdom of the Mahārādja called Zābadj situated in the islands of the Sea of Annam (Ṣanf); this must be the kingdom of Śrivijaya, of which Palembang in southeastern Sumatra was the centre. Later Arab geographers, such as al-Idrīsī and al-Ḳazwīnī, merely repeat these items of information. However, al-Ḳazwīnī also relates that the clove grows in Sumatra, in Ceylon and in the other islands of the Indonesian archipelago. Ibn Baṭṭūṭa claims to have seen it in Sumatra and Java, but the description which he gives makes one suspect that he confused it with other trees. The stories in mediaeval Arabic literature about cloves being obtained by

"dumb barter" further point to uncertainty about the origin of this spice.

The clove, sc. the dried flower-buds of the tree, were employed in cooking as a spice, but above all, in pharmacy. In Morocco it is also used for perfuming milk. Arab physicians, such as Isḥāḳ b. Ḥunayn and Ibn Sīnā, recommend it as a medicament for sharpening the faculty of vision. Ibn Sīnā, and before him Isḥāḳ al-Isrāʾīlī (Isaac Israeli) further considered the clove as good for the digestion, since it strengthened the stomach and liver. The celebrated physician Isḥāḳ b. ʿImrān notes its effect on powers of procreation; like other medical authorities, he says that it strengthens the sexual powers, and brings about, or lessens, according to the procedure followed, obesity. The clove was also used by the Arabic physicians as a specific against diabetes and other diseases. The instructions of various physicians concerning its use are cited *in extenso* by the Spanish botanist and pharmacologist Ibn al-Bayṭār in his *al-Djāmiʿ li-mufradāt al-adwiya wa 'l-aghdiya*. Because of its pleasant smell, it was used for chewing and as an ingredient in perfumes; the Bedouins (and their womenfolk) in Morocco use it as part of necklaces.

Thus the clove was an important item in the spice trade. From caliphal times onwards, it was imported into the Middle East via the Red Sea, whence consignments were conveyed to Cairo and Damascus. In the later Middle Ages, some of these cargoes were resold in Alexandria and Beirut to Italian merchants. Nevertheless, the clove did not play as big a role in the Indian trade as pepper or ginger, on the evidence of what we know of the cargoes of Venetian, Genoese and Florentine ships. Moreover, the clove was a very costly spice, costing two or three times more than pepper; 100 *manns* were generally sold at Alexandria in the 9th/15th century for 70-80 ducats, though the stems were cheaper.

ḲARAPAPAKH (Turkish, "black hat"), a Turkic people whose language belongs to the western Oghuz division, and differs little from Āzerī and the Turkish of Turkey. In the Georgian S.S.R. it is often confused with Āzerī, and in Turkey itself Ḳarapapakh is no longer spoken (having been replaced by Turkish). In 1828, the Ḳarapapakh emigrated from the region along the Debeda or Borčala river in eastern Georgia partly to the region of Ḳars (where they formed about 15% of the population) and partly to the Sulduz region of Persia, south of Lake Riḍāʾiyya (Urmiyya). In 1883 they numbered 21,652, of whom 11,721 were Sunnīs and 9,931 Shīʿīs (K. Sadovskiy, *Kratkaya zametka o Karskoy oblasti*, in *Sbornik Materialov... Kavkaza*, iii, 315-50); according to the Russian census of 1897 they numbered 29,879 (in the Russian Empire); in 1910 their population was given as 39,000 (*Kavkazskiy Kalendar'*, 1910, 546) living in 99 villages in the Ḳars territory, of which 63 were in the Ḳars district, 29 in Ardahān, and 7 in Ḳagizman. In 1926, however, the Soviet census listed only 6,316 Ḳarapapakhs, this sharp decline reflecting the loss of the territory of Ḳars to Turkey after World War I. The distribution of the Ḳarapapakh was given in the mid-1920s as 30% in the U.S.S.R. and 70% in Persia (those of Turkey probably being considered simply as Turks). The Ḳarapapakhs of the U.S.S.R. are being assimilated culturally and linguistically by the Āzerīs, and they appear as Āzerīs in the 1959 and 1970 Soviet censuses.

The traditional economy of the Ḳarapapakhs was based on sheep-rearing and some agriculture.

ḲARĀR [see mūsīḳī].

ḲARASİ (or ḳarasi). 1. The name of a Turkish chief in Asia Minor and of the dynasty arising from him; his territory has retained this name until the present time (sc. the ancient Mysia, the coastland and hinterland of the Asiatic side of the Dardanelles). Only unsubstantiated hypotheses have so far been put forward for the sense and etymology of the name. Indeed, the whole history of the dynasty, the first of those which were to be suppressed by the Ottomans, is wrapped in obscurity.

The Byzantine historian Ducas, who wrote 150 years after the events in question, classes Ḳarasī amongst those dynasties which established themselves in western Anatolia in the reign of the Emperor Andronicus II (1282-1328); this clearly provides no exact or firm chronology. On the contrary, the name's absence from Muntaner's account of the Catalan expedition (1304-6) and from the list of principalities laid down by Pachymeres (d. 1313), leads one to conclude that Ḳarasī was established—as one would expect—somewhat later than its sister-states further to the south and east. Muntaner, Pachymeres himself and the very well-informed historian of half-a-century later, Nicephorus Gregoras, certainly testify to the presence of Turks who were infiltrating into the region from the beginning of the century, but only the second authority, whose pieces of information are of various dates, is familiar with the name of the dynasty (the equation of the Lamisai of Pachymere with the Kalamēs, father of Ḳarasī, of Gregoras, put forward by Mordtmann is improbable, because of the geographical order followed in Pachymeres' list, which would place the Lamisai in southern or central Anatolia; the list also omits Ṣārūkhān).

Whatever the solution may be, the most important thing is to determine the origin of the Turks settled in Mysia. Later authors include the dynasty amongst the Turcoman ones of Anatolia, but this blanket designation in fact covers several possible distinctions. On the basis of a funerary inscription, in which a person with the name Ḳarasī claims descent from the Dānishmendids [*q.v.*], an attempt has been made to connect the famous 6th/12th century central Anatolian dynasty with the petty principality of the 8th/14th one; but this inscription is at Tokat, in the former Dānishmendid territory, and not in Ḳarasī-Ili, homonymy does not imply identity, and the genealogical pretensions of the party concerned point more to the undeniable fame of the Dānishmendids. It is true that *ca.* 600/1200 we hear of the Dānishmendids on the western fringes of Anatolia, but there is nothing to allow us to suppose any more links with the new Turcoman formations at the end of the 7th/13th and beginning of the 8th/14th centuries than those links of other ancient families. Moreover, if there was apparently, in the case of the

Turks of Ḳarasī, infiltration from the east, as in the neighbouring principalities, it is also clear that one element amongst them is of an entirely different origin. Thus it is known that, at the time of the collapse of independent Saldjūḳ Anatolia in the face of the Mongols, certain Turks and Turcomans fled with Sultan ʿIzz al-Dīn Kay-Kāwūs into Byzantine territory and were finally established in the Dobrudja [*q.v.*], where, mixed with other people coming from South Russia, they were more or less Christianised. During the troubles of the opening years of the 8th/14th century, some of these, either called in by the contending parties or else acting on their own initiative, banded together under a certain Khalīl and returned to Thrace and Mysia, in the end constructing some kind of bridge across the Dardanelles. With the recovering of contact with other Muslim Turks, those of Mysia at least became absorbed once more into the fold of Islam; some memories of these happenings can still be discerned in the legend of their great saint and mystic Sarī Saltuḳ.

We are on much firmer ground with the information of Ibn Baṭṭūṭa and of al-ʿUmarī, who both bring us up to *ca.* 1330. There must at that time have been two principalities in the hands of two brothers (the discussion on this relationship arose from the inadequacies of old editions of al-ʿUmarī), Demir Khān and Yakhshī Khān, the former at Balikesri (of which al-ʿUmarī records the ancient name Akīras) and the latter at Bergama. Al-ʿUmarī also gives the name of the dynasty's founder, their father Ḳarasī, and not that of Kalamēs (Ḳalam-shāh or ʿĀlam-shāh?), which is nevertheless not that of the real founder. Ibn Baṭṭūṭa further attributes to Demir Khān's father (not named by him) the foundation (*sic*) of Bergama, which in that traveller's time had no real mosque of its own. The two names are confirmed by Cantacuzenos. The Ottoman sources, on the other hand, all of them more or less connected with ʿĀshīḳpashazāde and none of them really concerned with Ḳarasī until the time of Ottoman intervention in its affairs, call the prince who died *ca.* 735/1335 ʿAdjlān Beg son of Ḳarasī; he is said to have left two sons, who quarreled. One of these two, Dursun, together with his vizier Ḥādjdjī Ilbegi, called in the help of Orkhān, promising him part of his territory; then, when Dursun had been killed by his brother, Orkhān annexed the whole principality. The chronology of the Ottoman sources is for this period vague and tends to simplify events. One might infer that ʿAdjlān was Ḳarasī's title, for the unnamed son, allegedly of bad reputation, might well be (despite the bias of the sources) equated with the Demir Khān of Ibn Baṭṭūṭa, who also describes him in unfavourable terms. In this context, Yakhshī Khān (which is also a title, "the good khān") could well be Dursun. Furthermore, it is certain that the Ottomans' annexation of the Ḳarasī territory was not so immediate as the sources allege, since a further prince called Sulaymān retained certain places—perhaps as a vassal ruler—until around the time of Orkhān's death, and intervened in the Turco-Byzantine struggles of this period. However, the principality did then disappear, and unlike its neighbours, absorbed by the Ottoman state at a later period, was not subsequently revived by Tīmūr. It had nevertheless left sufficient mark on the region for its name to be perpetuated there.

Because the Ottoman province of Ḳarasī more or less retained the boundaries of the former principality, Münedjdjim Bashī in the 12th/18th century and we today can largely establish its precise limits. After the absorption of certain Byzantine towns which had remained unconquered longer than the open countryside, it embraced a rectangle of territory bounded on the north by the western half of the Marmara Sea and the Dardanelles straits, on the west by the Aegean, on the south by the valley of the Bekir Çay, and on the east by the Simav Su and Susurlu. The island of Mytilene or Lesbos (Midilli [*q.v.*]), which lay opposite the province of Bergama, always remained in the hands of the Byzantines or their Genoese vassals,

Until now, except in error, no coin, inscription or *waḳf* of the rulers of Ḳarasī has been recorded, although al-ʿUmarī mentions coinage of theirs, on the strength of information derived from a well-informed Genoese merchant. It may well be that the multitude of small coins found here and there contain some Ḳarasī ones, but this is for the moment pure hypothesis.

The historical significance of the principality of Ḳarasī lies in the fact, deliberately obscured by the Ottoman historians, that it paved the way for the crossing of the Dardanelles, attributed by those historians exclusively to Murād. Al-ʿUmarī already mentions the naval raids made by the rulers of Ḳarasī, and in this regard, their seamen were tutors of the Ottomans. Several Ḳarasī chiefs rallied to the Ottoman side and then served them; amongst these should probably be included the celebrated Evrenos [see EWRENOS], whose name possibly recalls an origin from Varna/Evren temporarily Hellenised.

(CL. CAHEN)

2. An administrative division carried the name of Karasī for more than five centuries after the end of the dynasty (see above) and its annexation by the Ottomans. However, the *sandjaḳ* of Karasī did not correspond exactly to the old area which was under the rule of the Karasī Oghullarī. The region of Čanaḳ-ḳalʿe and the Dardanelles was detached as a separate district, an indication of the Ottomans' pressing interest in the control of the Straits. The *sandjaḳ* of Karasī, centred on the plain of Balıkesir, had therefore only one opening to the sea, on the gulf of Edremit and Ayvalık. Its attachment to the *ḳaḍā*ʾ of Erdek in 1846 provided another outlet, on the Marmara, which was gradually enlarged at the expense of the province of Bursa. From 1926, the *vilayet* of Karasī took the name of the *vilayet* of Balıkesir, and comprised the *ḳaḍā*ʾs of Ayvalık, Bur-

haniye, Edremit, Havran, İvrindi, Savas tepe, Balya, Gönen, Erdek, Bandırma, Manyas, Susurluk, Balıkesir, Bigadic, Sındırgı, Kepsut, and Dursunbey.

(X. DE PLANHOL)

AL-ḲARASṬŪN, probably Armeno-Persian in origin, denotes etymologically an instrument made up of a long beam which has at one of its ends a stone as a weight. It is certainly not Greek in origin, and even less does it derive from a Greek personal name, that of the instrument's inventor, as certain authors have believed. If the Armeno-Persian origin of the word is correct, the *ḳarasṭūn* must be a kind of lever or balance, very similar to the *s̲h̲ādūf*, the contrivance used for raising water and still in use in certain eastern countries.

The word figures in Greek and Arabic texts. In Greek, the first reference to it is in the commentaries devoted to Aristotle's Physics by Simplicius. The second and last reference is in the poem written by the 12th century Byzantine grammarian Tzetzes to celebrate the mechanical devices brought to bear by Archimedes at the time of the siege of Syracuse by Marcellus's armies. In the first of these two texts, the word χαριστίων denotes a balance which must be, it is generally agreed, the so-called Roman balance. In the second citation, all the evidence seems to point to a straight lever.

This sense of lever is also found in the writings of Muslim scholars, although some of them used it as a synonym for *ḳabbān*, which specifically means the Roman balance or steelyard. However, it is the first sense, sc. of lever, which appears in the sole surviving work dealing with this instrument, the *Kitāb al-Ḳarasṭūn* of T̲h̲ābit b. Ḳurra. Moreover, this seems to be the basic meaning of the word in Islamic literature, and its application to the Roman balance—which is itself nothing but a straight lever—must be a derived sense.

According to Ibn al-Nadīm and Ibn al-Ḳifṭī, Muslim scholars devoted three works to the *ḳarasṭūn*, sc. that of the Banū Mūsā, that of Ḳusṭā b. Lūḳā and that of T̲h̲ābit b. Ḳurra. As late as 1911, three manuscripts existed of this last work, those of the Stadtbibliothek in Berlin, of the Library of the Jesuit Fathers in Beirut and of the India Office; today, only the latter manuscript exists (Arabic No. 767, vii, fols. 198-208).

In this work, T̲h̲ābit b. Ḳurra treats of the theory of the *ḳarasṭūn*, sc. in brief, of the equilibrium of a beam of homogenous substance suspended at a point away from its centre of balance and to which weights, variously placed along the beam, have been attached. The work is extremely interesting from a twofold point of view. From that of statics, it is the first work really opening the way to what later became the principle of displacement operations; T̲h̲ābit b. Ḳurra in effect determines here the conditions of equilibrium of a lever, basing himself on principles of dynamics going back to Aristotle's *Physics* and to the *Mechanical* problems falsely attributed to him. From the mathematical point of view, the demonstration of proposition 4 in Ibn Ḳurra's work is an important point in the history of the integral calculus. For the first time, certain methods used by Archimedes for calculating areas are now for the first time adopted for calculating the static momentum of a homogenous beam.

Yet in spite of the importance of Ibn Ḳurra's work, this does not seem to have directly influenced the science of statics in the West. Its main themes were certainly rediscovered by the mediaeval and Renaissance theorists, but in a form modified and attached to Archimedes' principles of statics, from which Ibn Ḳurra's diverge fundamentally.

His work was translated into Latin, probably by Gerard of Cremona, under the title *Liber karastonis*. This translations differs in certain respects from the manuscript surviving today. In particular, the meaning of proposition 4 (proposition 6 of the *Liber karastonis*) completely escaped the translator. Ibn Ḳurra's work has also been translated into German in 1911 by E. Wiedemann; this is a good translation, although the order of the propositions is not clearly indicated and the German orientalist was mistaken concerning the number of propositions in the work. A French translation, differing substantially from the two others, has been made by K. Jaouiche (to be published shortly).

Ibn Ḳurra further mentioned the *ḳarasṭūn* in his more popular work *Fī ṣifat istiwā' al-wazn wa 'k̲h̲tilāfihi* ("Concerning the equilibrium and disequilibrium of weights"). This book is intended for workmen who had no mathematical knowledge and is more about the balance with two pans than the lever proper; it has only come down to us in the version transmitted by al-K̲h̲āzin [*q.v.*] in his *K. Mīzān al-ḥikma*, ed. Ḥaydarābād 1359/1940, 338.

ḲARĀ-ṢŪ [see AL-FURĀT].

ḲARAṢŪ-BĀZĀR (Byz. Mavron Kastron; Soviet, Belogorsk), an important commercial centre in the Crimea, particularly under the Girav [*q.v.*] dynasty of the Ḳrîm Tatars (826/1423-1197/1783). Situated on the well-watered meadows of the northern slopes of the Yayla Mountains, Ḳaraṣūbāzār (Turk. "Blackwater market") took its name from the Ḳaraṣū river, a source of the Salg̲h̲ir. From Byzantine times, the Crimea was subjected to a recurring geo-political pattern of importance for all Crimean towns: imperial powers such as Byzantium, the Genoese and the Ottomans held the southern shoreline up to the Yayla range, while the k̲h̲āns of

nomadic states (Khazars, Pečenegs, Kumans, the Golden Horde (Batu'ids [*q.v.*]) and the Ḳrïm Tatars [*q.v.*]) controlled the Crimean steppe (and often the steppe of the mainland) and dwelt in the attractive towns between steppe and mountain such as Baghče-sarāy [*q.v.*], Aḳmesdjid [*q.v.*] (Russ. Simfercpol), and Ḳaraṣūbāzār.

Politically, Ḳaraṣūbāzār was important as the seat of power of the senior Crimean tribe of Shīrīn, whose leaders controlled the district from the Ḳaraṣū to the Strait of Kerč. Seldom was a khān powerful enough to rule without the support of the Shīrīn begs, who had easy access to the Ottoman governors at Kaffa (Russ. Feodosia), the centre of Ottoman power in the Crimea and a city so prosperous in the 10th/17th century that it was called "little Istanbul". Generally the Shīrīn begs and the Ottomans exercised power on the side of conservatism and against the centralizing tendencies of the khān.

The valley of Ḳaraṣūbāzār was enclosed on all but the north side by hills and to the north-west imposing white limestone cliffs (*aḳ ḳaya*) towered above the town. At these sacred cliffs the Ḳrïm Tatar tribal leaders (*mīrzās*) customarily met to coordinate important Crimean affairs such as the choosing of a rival khān or preparing for war. Because of the hills, the town was easy to defend from nomad and Don Cossack raids, a factor of decisive importance for a trade centre close to the steppe. Moreover, a Ḳrïm Tatar vizier, Sefer Ghāzī, had built in 1065/1654-55 a fortress-like covered bazaar with its own water supply, mosque, bath and iron gates in which merchants could safely store their merchandise and defend it. Ḳaraṣūbāzār was chiefly an entrepôt and manufacturing centre for Tatar pastoral and handicraft products. It lay on the main east-west caravan route 45km. east of Aḳmesdjid and 60km. west of Kaffa via Eski Ḳrïm. It probably served also as a way station for slaves in transit to the huge slave market in Kaffa.

According to A. L. Yakobson (*Sredne-vekovyy Krym* ("Crimea in the Middle Ages"), Moscow 1964), Crimean towns in proximity to the Genoese coastal towns enjoyed high prosperity until the Ottoman conquest of 880/1475. They then experienced a period of readjustment in the 10th/16th century, but enjoyed great prosperity in the 11th/17th century. At first the artisan classes consisted mainly of long-established Karaite [*q.v.*] Jews, Armenians, Italians and Greeks. This situation changed gradually in the 11th/17th century as Ḳrïm Tatars joined the craft guilds. Travellers in the 12th/18th century (*e.g.* M. Guthrie, *A Tour Performed in the Years* 1795-96 . . . , London 1802, and Yakobson, 139 ff.), make a distinction between Ḳrïm Tatars who had become cultivators and craftsmen and the Nogay elements who continued their pastoral life. The chief products of the Ḳaraṣū region were fruit and vegetables, grain, mostly millet and wheat, Moroccan leather made from the hides of Tauric goats, woollen products and some wine. Dyestuffs, such as madder, sumac, saffron etc. grew wild and there were also close at hand forests of oak, beech, linden and poplar. The town boasted a goodly number of craft guilds including armourers, coppersmiths, tinkers, dyers, felt processors, weavers and others.

Ewliyā Čelebi (*Seyāḥatnāme* vii, 644-9) in the mid-11th/17th century observed in the town 8 wooden bridges, a number of water mills, 28 mosques, 5 *madrasas*, 8 Ḳur'ān schools, 4 large *ḥammāms*, 1140 shops, 10 coffee houses and 40 taverns (*meykhāne*). Apart from the less elegant houses of the poorer Christians and Jews, he estimated that the town possessed 5,500 two-storey houses with tiled roofs (at 6 persons per house about 33-35,000 inhabitants). These figures contrast sharply with the estimated 15,000 inhabitants, 12 mosques, 2 Christian churches and a synagogue recorded by Demidoff in the 13th/19th century (M. Anatole de Demidoff, *Voyage dans la Russie méridionale et la Crimée*, Paris 1854, 394).

By the late 11th/17th century, Don Cossack raids had become a common occurrence, but the town prospered even after 1150/1737 when Ḳaraṣūbāzār served as a temporary capital after the burning of Baghčesarāy and thus invited an attack by the invading Russian and Kalmuk [*q.v.*] troops of General Münnich. The town was damaged but the raid was beaten of by Ottoman artillery. In 1185/1771 during the Russo-Turkish war (1182/1768-1184/1774) the town was partially destroyed by Russian troops. After the Russian annexation in 1197/1783, thousands of Ḳrïm Tatars fled to the Caucasus and to Istanbul. Periodically new exoduses occurred as Russia oppressed the Crimea further.

The decline in Tatar population and the influx of cheap manufactured goods made serious inroads upon the prosperity of Ḳaraṣūbāzār in the 13th/19th century. Henceforth the town shared the fate of the Ḳrïm Tatars as a whole. The first stirrings of Tatar nationalism and Turanian [*q.v.*] ideas swept the peninsula at the end of the 13th/19th century under the tutelage of Ismāʿīl Gaspïralï [*q.v.*]. This movement led to the publication of newspapers, the founding of modern schools, and the formation of political parties, prior to World War I.

After the Russian Revolution, between 1348/1929 and 1360/1941, the Ḳrïm Tatars were killed or deported by the thousands as national consciousness and the traditional social cohesion of Tatars came into direct conflict with Stalin's plans for the Sovietization of the Crimea. Thereafter, caught between Hitler's concept of *Untermenschen* and hatred for Soviet injustices, the Ḳrïm Tatar remnant was partly executed and partly deported to Siberia in 1363/1944 by the USSR after the German army was expelled (E. Kirimal, *Der Nationale Kampf der Krimtürken*, Emsdetten 1952, *passim*).

W. Fisher, *The Russian Annexation of the Crimea 1772-1783*, Cambridge 1970, particularly with reference to the Treaty of Ḳaraṣūbāzār of 1772 (pp. 44-51).

(C. M. KORTEPETER)

ḲARATA (self designation, *Kirtle*, pl. *Kirtlei*; Russ. *Karatai*, *Karatin(tsi)*, *Kirdli*; Avar *Ḳalalal*; other *Kirdi Ḳalal*), along with Andi [*q.v.*], Akhwakh, Bagulal, Botlikh, Čamalal, Godoberi and Tindi forms the Andi division of the Avar-Andi-Dido group of the Ibero-Caucasian languages; the Ḳarata-speaking peoples.

According to an estimate of 1886 (*Dagestanskaya Oblast'*) there were 7,217 Ḳarata at that time; in 1926 there were 5,305 and in 1933 (estimate by Grande) 7,000. The Ḳarata inhabit the northern part of Akhvakh district, in the valley and on the right bank of the Andi Koisu, and two outlying areas in Andalalī and Vedeno districts, an isolated territory of high, rugged mountains in the western part of the Dāghistān A.S.S.R., in seven *auls*: Ḳarata, Archo, Ančikh, Tokita, Mashtada, Račabalda and Čabakoro.

Islam was introduced through the Avar country, probably at the end of the 5th/11th century. The

Ḳarata are Sunnī of the Shāfiʿī rite. According to the testament of Andunik, *nutsal* Gruler of Avaristan (Khašaev, *Obshčestvenniy Stroy Dagestana v XIX Veke*, 135), in 890/1485 the Ḳarata country was one of the seven territories owned by the rulers of Avaristān, and enjoyed at this period a semi-independence. At a later period it was annexed by the Avar Khānate and remained part of it until the destruction of the Khānate by Shamīl. Like almost all Andi peoples, the Ḳarata took an active part in the Shamīl movement.

In the 18th and early 19th century, there were periodic wars between the Ḳarata and Akhvakh, and the Ḳarata and Avars over land and pastures. Occasional alliances existed between the Ḳarata and Gidatl against the Akhvakh society "Ratlub-Akhvakh". Although part of the Avar Khānate, the Ḳarata maintained their own independent social structure, which differed greatly from the feudalistic Avar society. Like all Andi peoples, the Ḳarata had no feudal hierarchy; their patriarchal-clanic democratic system was ruled by the *ʿadat* (see *Pamyatniki Običnogo Prava Dagestana* XVII-XIX VV, Moscow Academy of Sciences 1965, 143-52, text of the *ʿadat* of Ḳarata *naibat*). The basic social structure was the joint extended family (*tukhum*).

The traditional economy was based on herding (sheep and goats) with a transhumance system, agriculture and home industries. The Ḳarata women were well known for their weaving of woollen cloth.

The Ḳarata language has three dialects: Ḳarata proper, Ančikh and Tokita. The Avar language is genetically closely related to Ḳarata, which is a purely vernacular language. The Ḳarata use Avar as their first literary language, and second (sometimes first) spoken language. Avar is the language used in the first few years of education. Russian is the second written and third spoken language.

The Ḳarata are being linguistically and culturally assimilated by the Avar: "Asked the question, 'what is your nationality?' a Ḳarata will answer, 'if a stranger asks us what is our nationality, we answer Avar. If they ask where from, we say Ḳarata. On our own land we call each other by *aul*' " (*Narodî Dagestana*, 67). (See also ANDI, AVAR, DĀGHISTĀN, AL-ḲABK, SHAMĪL)

(R. WIXMAN)

ḲARATIGIN, a district on both sides of the middle course of the Wakhsh or Surkhāb (Turk. Ḳîzîl Ṣū), one of the rivers which form the Āmū Daryā, called Rāsht by the Arab geographers (Ibn Khurradādhbih 34, 211 f.; Ibn Rusta, 92 f., 290; Yaʿḳūbī, *Buldān*, 260). The principal place (or "the fortress", *al-Ḳalʿa*, al-Iṣṭakhrī, 340) of Rāsht corresponded as regards its situation perfectly with the modern Garm or Harm, the only town in Ḳaratigin. Rāsht then formed one of the frontier lands of Islām and was defended on the east against the inroads of the Turks by a wall built by Faḍl b. Barmak [*q.v.*] (cf. Ibn al-Faḳīh, 324 f.). In ancient times there ran through this region the road from western to eastern Asia described by Ptolemy. Ḳaratigin is frequently connected with the "highlands of the Komeds", Κομηδῶν ὀρεινή [see KUMĪDJĪS] (*e.g.*, as recently as E. Chavannes, *Documents sur les Turcs Occidentaux*, 164, on the authority of Sewertsow in the *Bull. de la Soc. de Géogr.*, part iii (1890), 420-31). In the Middle Ages the name (Arabic Kumīdh or Kumādh, Chinese Kiu-mi-tʿo) was borne by the country below Rāsht. In the Middle Ages and later, the valley of the Wakhsh seems to have had no great importance for trade. As has been so far ascertained, only the embassy sent by Shāh Rukh to China (822-5I/1419-22) used on its return journey the road between Farghāna and Balkh described by Ptolemy.

Like all the highlands on the upper course of the Āmū Daryā, Ḳaratigin also was under its own rulers down to quite modern times; in the pre-Mongol period only one amīr of Rāsht, Djaʿfar b. Shamānīḳū (Gardīzī, ed. M. Nāẓim, 36), is mentioned. Under Tīmūr and later the name of the country Ḳayir Tigin (or Tīgīn) is found (in the edition of Sharaf al-Dīn ʿAlī Yazdī's *Ẓafar-nāma* by Mawlawí M. Iláhdád, i, Calcutta 1885, 189, erroneously Tīr Tegīn). When and how the present form arose is unknown. In the manuscripts of the *Bāburnāma* (ed. Beveridge, f. 33[b] and f. 63[b], Ḳarātīgīn, f. 69[b] and f. 81, Ḳayyirtīgīn), and of the *Taʾrīkh-i Rashīdī* (tr. Ross, esp. 241) both forms are found. *Ḳaratigin* is popularly explained as a Turkish word for "blackthorn" (cf. W. Radloff, *Wörterbuch*, St. Petersburg, ii, 135, Ottoman *Ḳara diken*) or as the name of the two first Ḳîrghîz tillers of the soil (I. Minayew, *Swyedeniya o stranakh po verkhovyam Amu Daryi*, St. Petersburg, 241, following Arendarenko). As is narrated in the *Baḥr al-Asrār* of Maḥmūd b. Walī (India Office Ms., Éthé, *Cat.* no. 575, f. 277[a], in Radjab 1045 (Dec. 1635-Jan. 1636) 12,000 families of Ḳîrghîz, then still pagans, went through Ḳaratigin to Ḥiṣār. At the present day the Ḳîrghîz (Ḳara Ḳirghiz) form a part of the population of Ḳaratigin along with the Tādjīk (and a small number of Özbegs).

In the 19th century, the princes of Ḳaratigin, like the princes of Badakhshān [*q.v.*], claimed descent from Alexander the Great. Ḳaratigin was then under the suzerainty of the Khāns of Khōḳand; their subjection is said to have taken place under Muḥammad ʿAlī Khān (1238-58/1822-42) in 1250/1834 (V. P. Nalivkin, *Kratkaya istoria Kok. Khanstva*, Kazán 1886, 134 f.). Already under ʿĀlim Khān (beginning of the 19th century) we find men from Ḳaratigin forming a considerable part of the standing army founded by this Khān (*Taʾrīkh-i Shāhrukh*, ed. N. N. Pantusov, Kazán 1885, 42 f.). A campaign from Khōḳand against Ḳaratigin in 1275/1858 under Malla Khān (1858-62) is also mentioned (Nalivkin, *op. cit.*, 190); the ruler of Ḳaratigin was at this time Muẓaffar Khān (later also called Muẓaffar Shāh). In 1869 Ḳaratigin was occupied by the troops of the amīr of Bukhārā and Muẓaffar Khān taken as prisoner to Bukhārā; the conflict was only settled by the verdict of the Russian governor-general, (K. P. von Kauffmann), and Muẓaffar Khān again restored to his principality. After his death, Ḳaratigin was definitely incorporated in Bukhārā as a district of 10,792 sq. km. with (about 1890) 60,000 inhabitants (mostly Tādjīks, the others Ḳîrghîz). Ḳaratigin also became involved in the last fighting in Farghāna before the final subjection of this country by the

Russians (1874-76). The frontier between Farghāna and Ḳaratigin (on the heights east of the valley of Kičik Karamuk Su) was defined by a treaty concluded between M. D. Skobelew and another brother of the Beg, Ṣūfī Khān on Sept. 9 (new style), 1876.

It was not till 1878 that Ḳaratigin was for the first time visited by a European (V. Oshanin). In the following decade a mountain road, one of the best in Central Asia, was built through Ḳaratigin on the right bank of the Wakhsh, which made Ḳaratigin much more accessible. Oshanin and later travellers (especially A. Regel, 1881-3) describe Ḳaratigin as a fertile country with numerous villages and orchards, and as one of the most prosperous provinces in the kingdom of the amīr of Bukhārā. It was said (Logofet, 322) that in Ḳaratigin all the inhabitants without exception made a living by agriculture (including gardening), and that there were no landless proletariat there. Anyone who neglected his piece of land for three years lost any right to it. On the other hand Rickmers (p. 340) says that many peasants went from Ḳaratigin to Farghāna, worked there as day-labourers and servants and brought their savings home. The only town is Garm; as regards the number of inhabitants, estimates are very contradictory: according to Oshanin 2,300 houses, to Masal'skiy 4,000 people, to Logofet 15,000. Information regarding administration, taxes, etc. is given in particular by A. Semënow (journey of 1898).

Rāsht); *Enciklopedičeskij Slovar' Brokhaus-Efron*, xiv/27, 460.

(W. BARTHOLD-B. SPULER)

AL-ḲARAWIYYĪN (MASDJID), a celebrated mosque and Islamic university at Fās, in Morocco.

i.—ARCHAEOLOGICAL STUDY

The architectural history of the mosque, already sketched by the late H. Terrasse, in the article FĀS [*q.v.*], heading "Monuments", is sufficiently well-known. It has been revised by the same author in a comprehensive work: *La Mosquée al-Qarawiyyin à Fès*, avec une étude de G. Deverdun, sur les inscriptions historiques de la mosquée, Paris 1968. Three stages can be distinguished there (Pl. 1).

A. The first edifice was built, on the left bank of the Wādī Fās, in 245/859 and was the work of a pious woman, Fāṭima bint Muḥammad al-Fihrī, who came from Ḳayrawān to Fās with her family. She very probably received the authorization to build from the Amīr Yaḥyā b. Idrīs, grandson of Idrīs II. The first oratory measured on the inside 46.60 m. from east to west and 17.20 m. from north to south and included a prayer hall with four parallel bays in the *ḳibla* wall. The *miḥrāb* was on the site of the present great chandelier, the minaret in the place of which is today that of the *ʿanaza*; it was later in the centre of the mosque. The Idrīsid bays are larger than those of later extensions (4.10 m. as against 3.70 m.) and contain 12 archways: 5 on the west of the axial nave and 6 on the east. There has been no success in finding the motive for this abnormal arrangement; perhaps it should be connected with the alteration suggested by the inscription of 263/877 (G. Deverdun, *Une nouvelle inscription idrisite*, in *Mélanges d'histoire et d'archéologie de l'Occident musulman*, ii, *Hommage à G. Marcais*, Algiers 1957), and whose author would be the *amīr* Dāwūd, a grandson of Idrīs I. The eastern and western boundaries of the initial oratory are marked in the present monument by a line of cruciform pillars which separate it from the extension of the 6th/12th century. The court (*ṣaḥn*) extended in front of the prayer hall. It was of meagre dimensions. So it is established, by its overall lay-out and its exterior, that this first mosque resembles the sanctuaries which were erected in the 3rd/11th century in the Maghrib al-Aḳṣā and of which al-Bakrī gives us information.

B. The population of Fās having greatly increased, the Ḳarawiyyīn was enlarged in 345/956, a century after its foundation. In 307/919, it had already become the *khuṭba* mosque of the Ḳayrawānīs' quarter, whose name it has preserved. This was the work of the Zanāta *amīr* Aḥmad b. Abī 'l-Saʿīd who acknowledged his holding the land as a vassal of the Umayyad caliph of Cordova ʿAbd al-Raḥmān al-Nāṣir. The latter sent large sums of money levied on the fifth taken from the Christians, and these allowed the extension of the prayer hall by basing the enlargement on the Idrīsid nucleus. The four existing bays were lengthened on the west to four arcades, and, naturally, on the east, to five. On the site of the first *ṣaḥn* and primitive minaret, three other arcades were added. The oratory was then almost doubled, in depth as well as in breadth; it included from that time seven bays and twenty-one naves. The roofs remained set in the direction of the original bays, *i.e.*, parallel to the *ḳibla* wall. The minaret, that is still seen today (pl. xv of the art. FĀS), was constructed of hewn stone, protected later by a facing of carefully polished lime. It is a square tower 4.95 m. wide and 26.75 m. in total height. The walls are 0.95 m. thick. The stairway, 0.85 m. wide, opens out in straight flights around the central nucleus; it is covered with rampart vaults, as were the Cordovan minarets. It is lit by loopholes and by two bays (north and south) of a different style. At the top of the minaret lies a platform for the call to prayer; its parapet forms a straight band in relief and the whole is crowned, not by a lantern-place, but by a hemispherical cupola in the fashion of Ifrīḳiya. The choice of the minaret's site remains without explanation, just as the dimensions of the *ṣaḥn* which has become asymmetrical and which extends at its feet, remain imprecise.

When in 388/998 al-Muẓaffar, son of the famous chief minister of Cordova, al-Manṣūr, conducted an expedition as far as Fās, he attempted to embellish the Ḳarawiyyīn. A beautiful cupola was constructed at the entrance of the axial nave of the oratory. A *minbar* was set up and a cistern was laid out, but neither have been rediscovered.

At the end of the 4th/10th century the mosque was an edifice of fine proportions. The texts tell us nothing of its decoration, but the Ḳarawiyyīn was without rival in the Maghrib.

C. In the age of the Almoravids [see AL-MURĀBIṬŪN] Fās had become the most populous city in the Maghrib, and the Ḳarawiyyīn became too narrow for the faithful. The *ḳāḍī* Ibn Muʿīsha al-Kinānī

obtained from the *amīr* ʿAlī b. Yūsuf, the great builder of the dynasty, the authorization to enlarge once more the famous oratory. The funds were gathered together, thanks to the correct resumption of the mosque's revenues, which had been fraudulently diverted by some administrators, and doubtless with the help of the state treasury. About 528/1134 the work was begun. As early as 531/1136 two new cupolas received their final inscription, but the construction was not completed until 537/1143. As for the new *minbar*, it was not finished until 538/1144. It may then be concluded that the work lasted fifteen years, at the end of which the mosque was augmented in the direction of the *ḳibla* by three supplementary bays, which, as in all the rest of the building, preserve the arch as a thoroughly-exaggerated curve providing a new and magnificent *miḥrāb*. The arcades of the enlargement, for the twenty-one naves, take on once more exactly the dimensions of these of the Idrīsid oratory, such as it had been transformed by the Zanāta prince. It was traditional in the mosques of the west to mark the pre-eminence of the axial nave which leads towards the *miḥrāb*. The Almoravids wanted to mark it exactly on the outside, and they built a raised principal nave that dominates the roofs of the bays with a doublesloped tiled roof. This high nave, richly decorated, allows for the arrangement of a luxurious series of five cupolas. The first, on a square plan, is situated in front of the *miḥrāb*; then a huge dome covers the two other bays corresponding to the enlargement. Some very beautiful Kūfic inscriptions attribute the work to the reign of the *amīr* ʿAlī b. Yūsuf. "The seven ancient bays of the axial nave were reshaped and decorated: today there are still five cupolas to be found; the three bays which antedate the Almoravid extension are covered by two domes with stalactites forming a flanged cupola; another dome with stalactites has taken the place of the cupola of al-Muẓaffar; on the three remaining bays a flanged ʿAlawite cupola is situated between two doubly-sloped roofs" (H. Terrasse). Finally, at the same time there was erected behind the *miḥrāb* a mosque of the dead (*d̲j̲āmiʿ al-d̲j̲anāʾiz*), the first without doubt in Morocco of this genre of edifice, and the most beautiful. This annex, like the median bays of the prayer hall, presents an elegant cupola with stalactites, sheltered beneath a roof in a pavilion, in accordance with the Andalusian method. Also, to reconcile the pious desire to pray over the dead in the mosque itself and the necessity of not polluting the oratory by the presence of a corpse, the mosque of the dead connects with the mosque of the living by three doors, each bearing a twin arcature. If the work of the Almoravids was conceived with the greatest respect for the ancient parts of the building, one must recognize there the desire to magnificently ornament the Ḳarawiyyīn in the manner of the great mosques of the Empire, those of Tlemcen (Tilimsān) and Marrākas̲h̲ in particular. The ornamental richness that they brought together in the axial nave testifies to the expertise of the artists of the time and to the opulence of the Hispano-Moorish art of the 6th/12th century. But all these decorations were to be covered again in plaster, towards 1150, for fear that the Almohad conquerors would get rid of them, as happened at Tlemcen and Marrākas̲h̲ where this precaution against the rigour of the partisans of God's Unity was not taken in time.

For the study in detail of the Almoravid decoration, the epigraphy of the bronzes, the *minbar* etc., one should consult the work of Terrasse, mentioned at the beginning; this has served as a basis in the preparation of this article.

Later, the dynasty of the Almohads [see AL-MUWAḤḤIDŪN], doubtless satisfied by the arrangements made to erase the name of the abhorred and cursed ʿAlī, brought to the mosque some utilitarian arrangements and above all an admirable reconstruction of great splendour.

The dynasty of the Marīnids [*q.v.*] respected the work of the past, built the present *ʿanaza* [*q.v.*], enriched the liturgical furniture, added several splendid mountings on the bells taken from the Christians and proceeded to undertake numerous restorations. Finally, what was an illustrious feat, they created the Library. The Saʿdids [*q.v.*] had two fountain-pavilions constructed which survive today in the *ṣaḥn*, in imitation of those which still exist in the Court of the Lions at the Alhambra of Granada. No concern for utility explains their construction (pl. xv of the art. FĀS).

The ʿAlawīs were not sparing in their care for the venerable mosque. It is under their reign that the exceptional competence of H. Terrasse allowed the rediscovery, with their original freshness and sometimes colour, of the richnesses of the Almoravid décor that was believed to have been destroyed for ever and which had remained choked with plaster for eight centuries.

Al-Ḳarawiyyīn is thus not only the great sanctuary of the town of Fās, but an eminent witness of the Hispano-Moorish art in architecture as in the decorative arts.

Bibliography: In addition to the sources given at the beginning of the article and to those that are found in the art. FĀS, one should add that the two essential Arabic texts for the history of the mosque in the Middle Ages are the *Rawḍ al-ḳirṭās* of Ibn Abī Zarʿ and the *Zahrat al-Ās* of al-D̲j̲aznāʾī. The comprehensive plan of the mosque and its annexes was sketched and published by E Pauty, *Le plan de l'Université Qarawiyyin à Fès*, in *Hespéris*, iii/4 (1923) (pl. I). The mosque of the dead has been studied by B. Moslow, *Les Mosquées de Fès et du Nord marocain*, P.I.H.E.M.T., xix, Paris 1938; whilst G. Marçais, *L'architecture musulmane d'Occident*, Paris 1954, 387-8, has given what is essential on the Saʿdid portions of the *ṣaḥn*.

For the Arabic inscriptions, see the *RCEA*, iv, No. 1478; vi, No. 2099; viii, Nos. 3031 and 3061; ix, No. 3545; xv, No. 5626; xvi, Nos. 6080 and 6081. See also the critical article of ʿAbd al-Hādī al-Tāzī, *Taʾrīk̲h̲ bināʾ al-Ḳarawiyyīn*, in D̲j̲āmiʿat al-Ḳarawiyyīn, *al-Kitāb al-d̲h̲ahabī*, Muḥammadiyya 1379/1959.

ii.—ORGANIZATION OF THE TEACHING

At exactly what date can one speak of higher education of the Ḳarawiyyīn? It is really difficult to answer this question with precision. Muḥammad al-Manūnī, *Taʾrīk̲h̲ al-Ḳarawiyyīn*, in D̲j̲āmiʿat al-Ḳarawiyyīn, *al-Kitāb al-d̲h̲ahabī*, Muḥammadiyya 1379/1959, thinks that it is in the reign of the Almoravids that the University really became attached to the mosque; but the Ḳarawiyyīn was not the only place of worship where there was teaching.

From the beginning of the 6th/12th century until our own time, the glory of the Ḳarawiyyīn was its body of scholars (*ʿulamāʾ*). It attracted a host of students from all the regions of Morocco, North Africa, Andalusia and even the Sahara, and the Moroccan dynasties and the people of Fās were actively concerned with housing them, in order to be

able to provide instruction; the Marīnids in particular erected the charming *madrasas* [*q.v.*] which still excite the admiration of visitors. The university attained its apogee in the 8th/14th century, but, later, the masters, in devoting their efforts to reconciling the requirements of custom and those of the religious law, could not prevent the decline of the intellectual and teaching methods, above all after the definitive rupture with Spain, and, consequently, with Europe. When, under the Saʿdids, Fās lost its rank of capital in favour of Marrākas͟h, al-Ḳarawiyyīn remained turned in on itself and set in its traditional teaching. It continued to exist, without damage but without progress, by virtue of the Islamic institutions which took centuries to disappear. In reading Leo Africanus, as also Marmol, references are to be found that lack neither interest nor pungency. Finally, some reforms were imposed under the dynasty of the ʿAlawids. In 1203/1788 the Sultan Muḥammad b. ʿAbd Allāh decided to limit the authors, programmes and hours. The essence of this regulation is to be found in the work of Ibn Zaydān, *al-Durar al-fāk͟hira bi-maʾāt͟hir al-mulūk al-ʿAlawiyyīn bi-Fās al-zāhira*, Rabat 1356/1937, 60-1. But fifteen years later, if one believés a Spaniard who travelled under the name of ʿAlī Bey al-ʿAbbāsī, things were going no better. Nevertheless, it is reported that the Sultan Mawlāy Sulaymān (1207-38/1793-1822) used often to visit the classes, question the students and reward the best replies. Mawlāy ʿAbd al-Raḥmān, nephew of the above, devoted himself to new reforms and, by a *ẓahīr* dated Muḥarram 1261/January 1845, reorganized the teaching of the Ḳarawiyyīn (see Ibn Zaydān, *op. cit.*, 79-82). In the present state of our knowledge, we have few means of attempting to evaluate the results attained by this new regulation of the studies, inspired by a sound and clear teaching method.

The general organization of the university before 1912 is described in R. Le Tourneau, *Fās avant le Protectorat*, Casablanca 1949 (book vi). It aimed at giving to the faithful as perfect a knowledge as possible of the truths of belief and of the line of conduct to adopt in the light of these truths. Dogmatism and conformity were the dominating factors in the teaching, which no longer embraced the universality of human knowledge, as before; it was reduced to the strictly religious disciplines. Among the branches of learning professed, certain had gradually disappeared; such was the case of Ḳurʾānic exegesis (*tafsīr*), of which the classes must have ceased in the reign of the Sultan Muḥammad b. ʿAbd Allāh, of astronomy (*tand̲j̲īm*), dialectic (*kalām*), mysticism (*taṣawwuf*), which disappeared in 1906, lexicography (*lug͟ha*), philology (*taṣrīf*), geography (*d̲j̲ug͟hrāfiyā*), medicine (*ṭibb*), divination (*d̲j̲adwal*).

The university was not organized in the European manner, nor even in that of Cairo or Tunis. It was placed under the control of the chief *ḳāḍī* of Fās, a kind of rector, but without a proper specialised administration. The scholastic year was unknown. No registration was imposed; the teaching was free; the duration of studies was not fixed, but custom demanded that classes be pursued for five years at least. No examination ratified the studies, a simple certificate (*id̲j̲āza* [*q.v.*]) being handed by the professor to every student who had given proof of application and of a certain ability. Three weeks of leave were accorded on the occasion of the great Muslim festivals, and a month on the occasion of the Spring festival, during which the Sulṭān of the *ṭalba* (plur. of *ṭālib*, student) was chosen (see E. Doutté, *La Khutba burlesque de la fete des Tolba au Maroc*, in *Recueil de mémoires et de textes publiés en l'honneur du XIV*[e] *Congrès des Orientalistes*, Algiers 1905).

It is impossible to know the number of students at the end of the 19th century—a thousand perhaps, but certainly less at the beginning of the following century. They were divided into two categories: the Fāsīs by origin and the strangers at Fās (*āfāḳiyyūn*), who lived, especially the poor ones, in the *madrasas*. The two groups mixed together little.

Nomination to the rank of professor (*mudarris*) depended on the Sultan following an empirical process which seems to have been always accepted by all. The salaries were only small, but, each year, the government made some gifts in kind; it was well understood that in return one had to demonstrate loyalty towards it. The professors enjoyed the most complete freedom, although tradition demanded that they give at least one lesson a day. The first-class professors, numbering 17 in 1904, enjoyed great renown and were called the "Great Scholars" (*al-ʿulamāʾ al-kibār*). It cannot be said that the masters of the Ḳarawiyyīn formed a genuine body, except for granting investiture to a new sultan, along with other personages, or for replying to the consultations that the sovereign sometimes demanded of them. Fās held its doctors in high esteem, but there is no doubt that they were no longer as their illustrious predecessors had been. In their social milieu, their influence, however, remained considerable.

After the establishment of the French Protectorate in 1912, the Sultan Mawlāy Yūsuf signed, on 23 D̲j̲umādā II 1332/19 May 1914, a *ẓahīr* which created a council of improvement charged with looking again for means to improve the studies and their administration, as well as to study the situation of the teaching personnel. Some years later (1918), the university had been entrusted to a Council of Direction and reattached to the Ministry of Justice. In 1346/1927, the professors were submitted to progress and received a fixed salary corresponding to the class in which they were ranked (for further details, see Ibn Zaydān, *op. cit.*, 133-8).

After many plans, often keenly contested by the conservative milieux of Morocco and especially of Fās, an important reform was introduced to the Ḳarawiyyīn by two *ẓahīrs* of the future King Muḥammad V, the first dated 12th D͟hū 'l-Ḳaʿda 1349/1st April 1931, the second 15th Muḥarram 1352/10th May 1933. The teaching was divided into three cycles: elementary, secondary and final or higher. The last comprised two sections: the first was reserved for the Religious Law, the sources of this law, *ḥadīt͟h* and *tafsīr*; the second entirely modern, was devoted to literature, Arabic language, history and geography. The hours were imposed on the professors as on the students, some examinations were organized and the vacations regularized. The masters received professional recognition, general supervision was reinforced, discipline enjoined, etc. (see Ibn Zaydān, *op. cit.*, 146-66). The old university, now rejuvenated, became a State institution in 1947.

After independence, al-Ḳarawiyyīn was thoroughly reorganized by the royal decree No. 1.62.249 of 12th Ramaḍān 1382/6th February 1963. Now a public establishment, endowed with a civil corporate nature, the university was placed under the control of the Ministry of National Education. It is before all "charged with (1) assuring the education of specialists in the Islamic disciplines and Arabic language; and (2) promoting academic research in the fields of the *s͟harʿ* and the Arabic language". It comprises: (1) the Faculty of the *S͟harīʿa* (Muslim law) which was opened

in Fās in October 1960; (2) the Faculty of Arabic Studies, whose centre is at Marrākash; (3) the Faculty of Theology (*Uṣūl al-dīn*) created at Tatwān; and (4) some institutes attached to it, of which the most important is the *dār al-ḥadīth*, at Rabat, which produces scholars in the Islamic sciences. Each faculty is directed by a dean, assisted by a deputy, both of them appointed by the Directorate of Higher Education of the Ministry. The university at present (1972) comprises about a thousand students and each year grants an ever-increasing number of degrees (110 in 1970). Each academic year also produces a generation of educated young people who find a place less and less easily in modern Morocco. The Moroccan Government is not unaware of the problem, for which there is no easy and satisfactory solution.

Today, the university no longer functions at the foot of the pillars of the ancient mosque; it has been transferred to an old French barracks where the students no longer lead the mediaeval life of yesteryear. Meanwhile the professors, even the less aged, continue to teach in a traditional spirit and, consequently, to form young people who do not move in the same atmosphere as their companions in modern education.

Épaulard, Paris 1956, i; Djāmiʿat al-Ḳarawiyyīn, *al-Kitāb al-Dhahabī fī dhikrāhā al-miʾa baʿd al-alf* (245-1379/859-1960), Muḥammadiyya 1959, numerous articles of very unequal documentary value, and a bibliography of some European publications, especially in French (232-4); R. Le Tourneau, *Évolution politique de l'Afrique du Nord musulmane, 1920-1961*, Paris 1962; J. J. Waardenburg, *Les Universités dans le monde arabe actuel*, The Hague 1966; Abd el-Hadi Tazi, *Al. Qaraouiyyine*, Beirut 1973 (in Arabic, with French summary).

iii.—THE LIBRARY

The library of al-Ḳarawiyyīn is not situated within the mosque, but in an annex building. As the inscriptions preserved in the building itself and published (*RCEA*, xvi, Nos. 6081-2) indicate, it was created in 750/1349 by the Marīnid Sultan Abū ʿInān Fāris [*q.v.*], and enlarged by the Saʿdid Sultan Aḥmad al-Manṣūr [*q.v.*].

Its richness, once famous, attracted to Fās European scholars in search of ancient works. But in the 19th century it had fallen into a pitiable state of abandonment, dilapidation and pillage. The supervision of the library was in principle incumbent on the *naḳīb* [*q.v.*] of the university's pious foundations, but he shifted the responsibility onto a student agreed by a higher authority. No catalogue or register of loans has been discovered, as in Marrākash at the Library of the Mosque of Ibn Yūsuf. Many borrowers must have neglected to return the works, to such an extent that at the beginning of the 20th century the number was estimated at no more than 1600 manuscripts and 400 printed books. Some are very valuable or very rare, in particular the 5th volume of the *Kitāb al-ʿIbar* of Ibn Khaldūn, with a dedication in the famous historian's own hand. There are also some volumes there bearing the acts of donation of certain Moroccan princes. The most ancient manuscripts date back a thousand years, and the most numerous of them result from gifts, in the form of *ḥabus*, of the Saʿdid Sultan Aḥmad al-Manṣūr. The Ḳarawiyyīn also received an important part of the library of the ʿAlawī Sultan Muḥammad b. ʿAbd Allāh at the time when it was dispersed among the towns of Morocco.

In 1918, the catalogue was published and provoked a certain sense of disappointment, but, later, some valuable manuscripts were discovered in unlisted files. In the reign of Muḥammad V the Library was enlarged and modernized, its administration remodelled, supervision of it reinforced and its departments enriched. Today it counts, in addition to very numerous printed books, more than 4,000 manuscripts, and has resumed its activity and its secular role.

(G. DEVERDUN)

KARAY, REFĪḲ KHĀLID (modern Turkish REFİK HALİT KARAY), Turkish essayist, humorist and novelist (d. 1888/1965). He was born in Beylerbeyi on the Bosphorus, Istanbul. His father, Meḥmed Khālid of the Karakayîsh Oğullarî (later shortened to Karay by Refīḳ Khālid), was chief treasurer at the Ministry of Finance. Trained at the Galatasaray lycée (1900-6), which he left before graduating, Karay became a clerk in a department of the Ministry of Finance and at the same time attended the school of law (*Mekteb-i Ḥuḳūḳ*) until the restoration of the Constitution in 1908; he then abandoned both job and study and became a journalist. After contributing to various papers, he founded in 1909 his own shortlived *Ṣon Ḥawādith*. In the same year he joined the new literary group *Fedjr-i Ātī* (Dawn of the Future), formed for a brief period by the young generation of poets and writers, which was no more than the closing phase of the *Therwet-i Fünūn* movement.

His real personality as a writer took shape in 1910 when he began to contribute, under the penname *Kirpi* ("hedghog"), to the humorous magazines *Ḳalem* and *Djem*, of which he soon became a leader writer. His powerful satirical essays, mixed with subtle humour, were written in a masterly style and were directed against the leaders of the Committee of Union and Progress, the party in power, and these immediately established his unchallenged reputation. Following the assassination of Grand Vizier Maḥmūd Shewket Pasha in June 1913, Refīḳ Khālid, although he did not belong to any party and was not a militant, was arrested together with several hundred opposi-

tion "suspects" and banished to Sinop, on the Black Sea. Ṭalʿat Pasha himself, who had been the target of one of his ruthlessly sarcastic articles, included his name in the list of people "to be punished" (R. H. Karay, *Minelbab ilelmihrab*, Istanbul 1964, 36). He spent the following five years in exile in Sinop, Çorum, Ankara and Bilecik, during which time he remained silent except for a few essays and short stories which were published, under the pen-name *Aydede*, in the Istanbul daily *Peyam*, and later, under his own name, in Gökalp's famous *Yeñi Medjmūʿa*.

On his return from exile towards the end of World War I, he contributed to the newspapers *Zamān* and *Ṣabāḥ* (of which he became later a leader writer). When in 1918 the war was lost and the Unionist leaders fled the country. Refīḳ Khālid's satires against them and the committee baceme more vitriolic. He joined the Liberal Union Party (*Ḥürriyet ve Iʾtilāf Firḳasi*) and became increasingly involved in the anti-Nationalist politics and activities of the Istanbul governments of the 1919-22 period. His many articles and satirical essays, in which he tried to discredit the resistance movement in Anatolia led by Muṣṭafā Kemāl Pasha, depicting it as a resurgence of Unionist ambitions, and his efforts to disrupt the telegraphic communications of the Nationalists while he was Director-General of Posts and Telegraph during the collaborationist governments of Dāmād Ferīd Pasha, made him *persona non grata* in the eyes of the Ankara government. His arrest and trial was one of the conditions put forward by the Nationalists for any compromise with the sultan's government in October 1919 (S. Selek, *Anadolu İhtilâli*, Istanbul 1968, 304). Following the victory of the Nationalists in Anatolia in September 1922 and soon after the arrival in Istanbul of Reʾfet Pasha (Bele) as their special representative, the writer and journalist ʿAlī Kemāl, a close friend and collaborator of Refīḳ Khālid, a leading opponent of the Nationalists and former Minister of the Interior, was kidnapped and murdered in Izmid on the way to his trial in Ankara (F. R. Atay, *Çankaya*[2], Istanbul 1969, 341-42). On learning this, Refīḳ Khālid joined a group of leading members of the Liberal Union Party, most of whom had collaborated with the army of occupation in Istanbul, and took refuge in the British Embassy. He was taken later to Tashkïshla barracks with other refugees, but managed to slip away from there and left Istanbul on a French ship on 9 November 1922. (Later he was included among the 150 "undesirables" (*Yüzellilikler*) excepted from the amnesty provisions of the Lausanne Treaty of 1923). He went to Djūniyya in the Lebanon where he wrote his political memoirs; their serialization in the Istanbul daily *Akshām* in 1924 caused a great furore and it was consequently suspended. In the same year he moved from Djūniyya to Aleppo, where the editors of the Turkish newspaper *Doghru Yol* invited him to work. He published his essays, short stories and articles in this paper and published his books in Aleppo, remaining there until the general amnesty of 1938 when he returned to Turkey. During the last 27 years of his life he lived in Istanbul, carefully avoiding politics, devoting all his time to contributing to many papers and magazines and writing a great number of essays and sketches and many popular novels. He was the president of the Turkish P.E.N. club when he died in Istanbul on 13 July 1965.

As he confessed in a famous interview (Rüshen Eshref, *Diyorlar ki*, Istanbul 1334/1918, 247-59), Refīḳ Khālid was completely ignorant of classical Turkish literature and of the works of the mid-19th century modernists (*Tanẓīmāt* School). He avidly read everything the *Therwet-i Fünūn*, his immediate predecessors, published at the turn of the century. He admired their technique but rejected their French-inspired themes and characters and their artificial and precious style (excepting, however, some writings of Khālid Ḍiyāʾ, Meḥmed Raʾūf and Ḥüseyn Djāhid). Thus he started his epoch-making career from scratch. Apart from one or two forerunners at the end of the 19th century, he pioneered realism in the novel and short story and switched his attention from the over-exploited capital (Istanbul) to the Anatolian countryside; he specialized in subtle social and political satire without having recourse to gross and obscene language. He advocated and practised the use of spoken Turkish as a literary medium as early as 1909, *i.e.*, before Ömer (ʿUmar) Seyf ed-Din and his associates inaugurated the movement of *Yeñi Lisān* (New Language) which aimed at the simplification of written Turkish. Refīḳ Khālid's published works, numbering 37, can be divided into the following categories:

(1) Humorous and satirical essays, on incidents of everyday life, topical events or political personalities, which reveal his real personality. These have been put together in the following volumes: *Kirpinin dedikleri* ("What the Hedgehog said"), containing essays published between 1909-19, second enlarged edition, Istanbul 1336 (1920), in Roman script 1940; *Tanıdıklarım* ("My Acquaintances"), Istanbul 1335 (1919), in Roman script 1941; *Sakın aldanma, inanma, kanma* ("Don't be deceived, don't believe, don't be taken in"), Istanbul 1335 (1919), in Roman script 1941; *Agho Pashanïñ Khāṭïralarï* ("Memoirs of Agho Pasha the Parrot"), Istanbul 1338 (1922), in Roman script 1939; *Ay peshinde* ("In Pursuit of the Moon"), Istanbul 1339 (1923); *Ghughuḳlu sā-ʿat* ("The Cuckoo Clock"), Istanbul 1341 (1925), in Roman script 1940; *Bir avuč sačma* ("A Handful of Nonsense"), Aleppo 1932.

(2). Short Stories. Refīḳ Khālid's short stories have been collected in *Memleket Ḥikāyeleri* ("Stories from the Country"), Istanbul 1335 (1919), in Roman script 1939 (French tr. Belkis Tavad, *Contes turcs*, Istanbul n.d.), sometimes considered as his masterpiece. Except for a few stories which belong to his early period (1909-12), these stories were written during his five-year exile in Anatolia where he was able to study closely the types and customs of villagers and provincial townspeople. An invaluable documentary on everyday life of pre-World War I Central Anatolia, these stories are told with a rare virtuosity of natural style unprecedented in modern Turkish literature. He observes and describes landscape, provincial towns and local types—peasants, shopkeepers, notables, teachers, khodjas and civil servants—with powerful realism, without always seeking to penetrate the soul of his characters. His *Gurbet Hikâyeleri* ("Stories of Exile"), Istanbul 1940, contain mainly sketches using much autobiographical material, a feature of his later works.

(3). Novels. Refīḳ Khālid wrote only one novel between 1909 and 1929, *Istanbul'uñ Ič Yüzü* ("The inside Story of Istanbul"), Istanbul 1336 (1920), in Roman script as *Istanbul'un Bir Yüzü* ("One Face of Istanbul"), Istanbul 1939, perhaps his best. Written in the form of a diary of a woman of humble origin, brought up in the mansion (*konak*) of a Ḥamīdian pasha, this novel is a series of masterly sketches of Istanbul "society" between 1900-20, where the last vestiges of the old régime, the influential magnates of the all-powerful committee of Union and Progress and the degenerate nouveaux-riches of the war years

are depicted with scintillating and merciless sarcasm. After 1930 and particularly after his return from exile in 1938, he serialized in newspapers and magazines a great number of popular novels (19 of which were published in book form and some also filmed) of mediocre literary value, written mainly for the purpose of making a living, as he himself admitted (Mustafa Baydar, *Edebiyatçılarımız ne Diyorlar?*, Istanbul 1960, 108). But some of these novels, particularly *Sürgün* ("Exile"), Istanbul 1941, *Anahtar* ("The Key"), Istanbul 1947 and *Bu Bizim Hayatımız* ("This is our Life"), Istanbul 1950, are worth mentioning for many important autobiographical data and period descriptions. Among his non-political and non-satirical essays the volume *Üç Nesil Üç Hayat* ("Three generations, Three ways of Life"), Istanbul 1943, contains lively sketches of everyday life in Istanbul from the 1860s onwards. A considerable number of his essays and articles published in his very popular humorous magazine *Aydede* (from January 1922, 90 issues, and again in 1948-49, 125 issues) have not been collected in book form.

(4). Plays. Refīḳ K͟hālid wrote two plays: *Tiryāki Ḥasan Pasha*, a historical play about the famous defender of the fortress of Kanizsa in Hungary in 1601. The play, which had a great success at the time (1909), has not been published. He wrote his second play, a one-act comedy, while in Syria: *Deli* ("The Madman"), Aleppo 1931, in Roman script, Istanbul 1939. It is the story of a mental patient restored to health who, on experiencing the effects of the radical social reforms of the 20s, goes irrevocably mad again. Kemal Atatürk stated on reading the play that "it did not satirize the reforms but emphasized them" and on his suggestion, Refīḳ K͟hālid (together with the remaining survivors of the 150 "undesirables") was included in the amnesty for the 15th anniversary of the republic in 1938 (Y. K. Karaosmanoğlu, *Gençlik ve Edebiyat Hatıraları*, Ankara 1969, 87-90).

Refīḳ K͟hālid has been almost unanimously accepted as the unchallenged master of modern Turkish prose (Occasional reservations appear to be motivated by personal bias, *e.g.*, Yahya Kemal Beyatlı, *Siyasi ve Edebi Portreler*, Istanbul 1968, 50-53). It has been said that no other writer wrote a more natural, spontaneous Turkish, based on the spoken language. This judgement is still held by many critics to be true even for contemporary literature. It is no doubt correct for the period 1908-28; but it has not been sufficiently noticed that the profound transformation of the language and style and literary taste which took place from the 1930s onwards is beginning to "date" his language and style, which was truly unmatched during the pre-reform period.

(Fahir İz)

KARBALĀʾ, a place in ʿIrāḳ some 60 miles SSW of Bag͟hdād celebrated by the fact that the Prophet's grandson al-Ḥusayn b. ʿAlī was killed and his decapitated body buried there (*Ḳabr al-Ḥusayn*). For all these events, see AL-ḤUSAYN B. ʿALĪ. When it became a place of pilgrimage, Karbalāʾ became known as Mas͟hhad (al-) Ḥusayn.

The name Karbalāʾ probably comes from the Aramaic Karbelā (Daniel, III, 21) and from the Assyrian Karballatu, a kind of headdress; see G. Jacob, *Türkische Bibliothek*, xi, 35, n. 2. It is not mentioned in the pre-Islamic period. K͟hālid b. al-Walīd camped there after the capture of al-Ḥīra (Yāḳūt, *Buldān*, iv, 250). At al-Ḥāʾir, where al-Ḥusayn was buried, the Ḳabr al-Ḥusayn was built and very soon began to attract pilgrims. As early as 65/684-5 we find Sulaymān b. Ṣurad going with his followers to Ḥusayn's grave where he spent a day and a night (al-Ṭabarī, ii, 545 ff.). Ibn al-At͟hīr, v, 184, ix, 358, mentions further pilgrimages in the years 122/739-40 and 436/1044-5. The custodians of the tomb at quite an early date were endowed by the pious benefactions of Umm Mūsā, mother of the Caliph al-Mahdī (al-Ṭabarī, iii, 752).

The Caliph al-Mutawakkil in 236/850-1 destroyed the tomb and its annexes and had the ground levelled and sown; he prohibited under threat of heavy penalties visiting the holy places (al-Ṭabarī, iii, 1407; Ḥamd Allāh al-Mustawfī, *Nuzhat al-Ḳulūb*, ed. Le Strange, 32). Ibn Ḥawḳal (ed. de Goeje, 166), however, mentions about 366/977 a large *mas͟hhad* with a domed chamber, entered by a door on each side, over the tomb of Ḥusayn, which in his time was already much visited by pilgrims. Ḍabba b. Muḥammad al-Asadī of ʿAyn al-Tamr, supreme chief of a number of tribes, devastated Mas͟hhad al-Ḥāʾir (Karbalāʾ) along with other sanctuaries, for which a punitive expedition was sent against ʿAyn al-Tamr in 369/979-80 before which he had fled into the desert (Ibn Miskawayh, *Tadjārib al-Umam*, ed. Amedroz in *The Eclipse of the Abbasid Caliphate*, ii, 338, 414). In the same year, the S͟hīʿī Būyid ʿAḍud al-Dawla [*q.v.*] took the two sanctuaries of Mas͟hhad ʿAlī (= al-Nadjaf) and Mas͟hhad al-Ḥusayn (M. Ḥāʾirī) under his special protection (Ibn al-At͟hīr, viii, 518; Ḥamd Allāh al-Mustawfī, *loc. cit.*).

Ḥasan b. al-Faḍl, who died in 414/1023-4, built a wall round the holy tomb at Mas͟hhad al-Ḥusayn (Ibn Tag͟hrībirdī, *Nudjūm*, ed. Popper, ii, 123, 141), as he also did at Mas͟hhad ʿAlī (Ibn al-At͟hīr, ix, 154).

In Rabīʿ I 407/Aug.-Sept. 1016, a great conflagration broke out caused by the upsetting of two wax candles, which reduced the main building (*al-ḳubba*) and the open halls (*al-arwiḳa*) to ashes (Ibn al-At͟hīr, ix, 209).

When the Saldjūḳ Sulṭān Malik S͟hāh came to Bag͟hdād in 479/1086-7, he did not neglect to visit the two Mas͟hhads of ʿAlī and al-Ḥusayn (Ibn al-At͟hīr, x, 103). The two sanctuaries at this time were known as al-Mas͟hhadān (al-Bundarī-al-Iṣfahānī, *Zubdat al-nuṣra*, ed. Houtsma, in *Recueil des textes . . .*, ii, 77) on the analogy of the duals al-ʿIrāḳān, al-Baṣratān, al-Ḥīratān, al-Miṣrān, etc.

The Ilk͟hān G͟hāzān in 702/1303 visited Karbalāʾ and gave lavish gifts to the sanctuary. He or his father Arg͟hūn is credited with bringing water to the district by leading a canal from the Frāt (the modern Nahr al-Ḥusayniyya) (A. Nöldeke, *Das Heiligtum al-Ḥusains zu Kerbelāʾ*, Berlin 1909, 40).

Ibn Baṭṭūṭa, ii, 99, visited Karbalāʾ in 727/1326-7 from al-Ḥilla and describes it as a small town which lies among palm groves and gets its water from the Frāt. In the centre is the sacred tomb; beside it is a large *madrasa* and the famous hostel (*al-zāwiya*) in which the pilgrims are entertained. Admission to the tomb could only be obtained by permission of the gate-keeper. The pilgrims kiss the silver sarcophagus, above which hang gold and silver lamps. The doors are hung with silken curtains. The inhabitants are divided into the Awlād Rak͟hīk and Awlād Fāyiz,

whose continual feuds are detrimental to the town, although they are all Shīʿīs.

About the same date, Ḥamd Allāh al-Mustawfī (*op. cit.*) gives the circumference of the town as 2,400 paces; he mentions there also the tomb of Ḥurr Riyā (b. Yazīd), who was the first to fall fighting for Ḥusayn at Karbalāʾ.

The Ṣafawid Shāh Ismāʿīl I (d. 930/1524) made a pilgrimage to al-Nadjaf and Mashhad Ḥusayn.

Sulṭān Sulaymān the Magnificent visited the two sanctuaries in 941/1534-5, repaired the canal at Mashhad al-Ḥusayn (al-Ḥusayniyya) and transformed the fields which had been buried in sand into gardens again. The Manārat al-ʿAbd [*q.v.*], formerly called Engusht-i Yār, was built in 982/1574-5. Murād III in 991/1583 ordered the Wālī of Baghdād, ʿAlī Pasha b. Alwand, to build or more correctly, restore, a sanctuary over the grave of Ḥusayn. Soon after the capture of Baghdād in 1032/1623, ʿAbbās the Great won the Mashhads for the Persian empire. Nādir Shāh visited Karbalāʾ in 1156/1743; while he is credited with gilding the dome in Mashhad ʿAlī, he is also said to have confiscated endowments intended for the priests of Karbalāʾ.

The great prosperity of the place of pilgrimage and its large number of inhabitants is emphasised on the occasion of the pilgrimage of ʿAbd al-Karīm, a favourite of Nādir Shāh. Radiyya Sulṭān Bēgum, a daughter of Shāh Ḥusayn (1105-34/1694-1722), presented 20,000 *nādirīs* for improvements at the mosque of Ḥusayn.

The founder of the Ḳādjār dynasty, Āghā Muḥammad Khān, towards the end of the 12th/18th century, presented the gold covering for the dome and the *manāra* of the sanctuary of Ḥusayn (Jacob, in A. Nöldeke, *op. cit.*, 65, 4).

In Dhu ʾl-Ḥidjdja 1215/April 1801, in the absence of the pilgrims who had gone to al-Nadjaf, 12,000 Wahhābīs under Shaykh Saʿūd entered Karbalāʾ, slew over 3,000 inhabitants there and looted the houses and bazaars. In particular they carried off the gilt copper plates and other treasures of the sanctuary and destroyed the shrine. But after this catastrophe contributions poured in for the sanctuary from the whole Shīʿī world.

After a temporary occupation of Karbalāʾ by the Persians, Nadjīb Pasha in 1259/1843 succeeded by force of arms in enforcing the recognition of Turkish suzerainty over the town; the walls of the present old town were now for the most part destroyed. The governor Midḥat Pasha ln 1288/1871 began the building of government offices, which remained incomplete, and extended the adjoining market place (documents on the history of Mashhad Ḥusayn are given in A. Nöldeke, *op. cit.*, 35-50).

In 1965 Karbalāʾ had 81,500 inhabitants (1970 estimate, 107,500), a number swollen to well over 100,000 during Muḥarram with its influx of pilgrims. Karbalāʾ has always been a particularly rich town, not only because of its possession of the shrine but also because it has been a starting-point for Persian pilgrim caravans to Nadjaf and Mecca and a "desert port" for trade with the interior of Arabia. The old town with its tortuous streets is now surrounded by modern suburbs. About half of the resident population is Persian, and there is a strong mixture of Indian and Pakistani Muslims; there have long been Indian connections through the shrine's benefiting from the former ruler of Oudh's bequests. Of the remaining Shīʿī Arabs, the most important tribes amongst them are the B. Saʿd, Salālma, al-Wuzūm, al-Tahāmza and al-Nāṣiriyya. The Dede family has been especially prominent; it was rewarded with extensive estates by Sulṭān Selīm I for constructing the Nahr al-Ḥusayniyya.

The name Karbalāʾ strictly speaking only applies to the eastern part of the palm gardens which surround the town in a semi-circle on its east side (Musil, *The Middle Euphrates*, 41). The town itself is called al-Mashhad or Mashhad al-Ḥusayn.

The sanctuary of the third Imām lies in a court yard (*ṣaḥn*) 354 × 270 feet in area, which is surrounded by *līwāns* and cells. Its walls are decorated with a continuous ornamental band which is said to contain the whole Ḳurʾān written in white on a blue ground. The building itself is 156 × 138 feet in area. The rectangular main building entered by the "golden outer hall" (picture in Grothe, *Geogr. Charakterbilder*, pl. lxxviii, fig. 136) is surrounded by a valued corridor (now called *djāmiʿ*; A. Nöldeke, *op. cit.*, 20, l. 3) in which the pilgrims go round the sanctuary (*ṭawāf*) (Wellhausen, *Reste arab. Heidentums*[2], 109-12). In the middle of the central domed chamber is the shrine (*ṣandūḳa*) of Ḥusayn about 6 feet high and 12 long surrounded by silver *mashrabiyya* work, at the foot of which stands a second smaller shrine, that of his son and companion-in-arms ʿAlī Akbar (Masʿūdī, *Kitāb al-Tanbīh*, ed. de Goeje, *BGA*, viii, 303).

"The general impression made by the interior must be called fairy-like, when in the dusk—even in the daytime it is dim inside—the light of innumerable lamps and candles around the silver shrine, reflected a thousand and again a thousand times from the innumerable small crystal facets, produces a charming effect beyond the dreams of imagination. In the roof of the dome the light loses its strength, only here and there a few crystal surfaces gleam like the stars in the sky" (A. Nöldeke, *op. cit.*, 25-6).

The sanctuary is adorned on the *Ḳibla* face with magnificent and costly ornamentation. Two *manāras* flank the entrance. A third, the Manārat al-ʿAbd, rises before the buildings on the east side of the *Ṣaḥn*; south of it the face of the buildings surrounding the court recedes about 50 feet; on this spot is a Sunnī mosque. Adjoining the Ṣaḥn on the north side is a large *madrasa* the courtyard of which measures about 84 feet square with a mosque of its own and several *miḥrābs* (on the present condition of the sanctuary: cf. A. Nöldeke, *op. cit.*, 5-26, on its history 35-50 and on its architectural history, 51-66).

About 600 yards N E of the sanctuary of Ḥusayn is the mausoleum of his half-brother ʿAbbās. On the road which runs westward out of the town is the site of the tent of Ḥusayn (*khaymagāh*). The building erected there (plan in Nöldeke, pl. vii; photograph in Grothe, pl. lxxxviv, fig. 145) has the plan of a tent and on both sides of the entrance there are stone copies of camel saddles.

On the desert plateau (*ḥammād*) west of the town stretch the graves of the devout Shīʿīs. North of the gardens of Karbalāʾ lie the suburbs, gardens and fields of al-Bḳēre, to the north-west those of Ḳurra, and to the south those of al-Ghādhirīya (Yāḳūt, iii, 768). Among places in the vicinity, Yāḳūt mentions al-ʿAḳr (iii, 695) and al-Nawāyiḥ (iv, 816).

A branch line diverging north of al-Ḥilla connects Karbalāʾ with the Baghdād-al-Baṣra railway. The sanctuary of Ḥusayn still has the reputation of securing entrance to Paradise for those buried there, hence many aged pilgrims and those in failing health go there to die on the holy spot.

KARBIYYA the cross-reference to this heading under ḤAMZA B. ʿUMĀRA is an error, since the subsect in question of the Kaysāniyya is called in the sources Karibiyya or Kuraybiyya [*q.v.*], the *kunya* of its founder being Abū Karib or Abū Kurayb.

ḲARDĀ and **BĀZABDĀ**, ancient districts of Upper Mesopotamia (al-Djazīra), often mentioned together. The first place derives its name from Bēth Ḳardū, the land of the Carduci, which became Bāḳardā; according to Yāḳūt, s.v., this form is found "in the books", but the local people say Ḳardā. The district comprised *ca.* 200 villages, the most notable being al-Djūdī and Thamānīn, and the district of Faysābūr; it produced mainly corn and barley. The original *chef-lieu*, Ḳardā, lost its importance and was replaced by Bāsūrīn.

Bāzabdā, for its part, is the name of a district in the region of Djazīrat Ibn ʿUmar [*q.v.*], lying to the west of the Tigris, and also of a village lying opposite the latter town.

AL-**KARDŪDĪ**, ABŪ ʿABD ALLĀH MUḤAMMAD B. ʿABD AL-ḲĀDIR B. AḤMAD AL-GULĀLĪ AL-ḤASANĪ AL-IDRĪSĪ, Moroccan legal scholar and author (1216-65/1801-49) who was for some time *ḳāḍī* of Tangier. He is the author of the following works: (1) a *fahrasa* in which are recorded the names of his masters and also the *idjāzas* given by certain of them, such as al-Kūhin and al-Damnātī; (2) a commentary on the *Iṣṭilāḥ al-ḳāmūs*; (3) another commentary on the introduction (*khuṭba*) of Ibn Mālik's *Alfiyya*; (4) a history of the ʿAlawī dynasty called *al-Durr al-munaḍḍad al-fākhir fī mā li-abnāʾ mawlānā ʿAlī al-Sharīf min al-maḥāsin wa 'l-mafākhir* (unfinished); and (5) a treatise on the need for modernising the army, *Kashf al-ghumma fī bayān anna ḥarb al-niẓām wādjib ʿalā ḥādith al-umma* (lith. Fez 1303/1885).

He died at Fez, where he was buried outside the Bāb al-Futūḥ, near the tomb of Yūsuf al-Fāsī.

(M. Lakhdar)

KARĪM KHĀN ZAND (MUḤAMMAD KARĪM), (*ca.* 1164-93/*ca.* 1751-79), the founder of the Zand dynasty and the *de facto* ruler of the greater part of Persia. Having no claim to the title of shāh, he instead, assumed, that of *wakīl*, "regent, lieutenant". Brought up during exile of the Zand tribe imposed by Nādir Shāh Afshār, on the latter's death he succeeded in conducting the Zands from their exile in northern Khurāsān to the village of Pīriya, modern Parī, 30 km. south east of Malāyir, where the clan, originally a lateral branch of the Lakk [*q.v.*], had had their settlements prior to their deportation. In the course of clashes with neighbouring chieftains, he displayed great military skill. In alliance with the Bakhtiyārī ʿAlī Mardān Khān [*q.v.*], he seized Iṣfahān; there, in 1164/1751, they placed on the throne a Ṣafawid boy of eight, whom they styled Ismāʿīl III. In his service Karīm held the office of commander-in-chief, and ʿAlī Mardān that of guardian of the sovereign, *wakīl*. Fearing ʿAlī Mardān's duplicity, Karīm captured Iṣfahān, took Ismāʿīl III under his own guardianship, assumed the title of *wakīl* and put ʿAlī Mardān Khān to flight. When the latter's attempt to win support for a new Ṣafawid puppet failed and the Bakhtiyārī chief was assassinated by a Zand commander, Karīm found himself obliged to defend Iṣfahān and Shīrāz against other claimants, including the Ḳadjār Muḥammad Ḥasan Khān, the Afshār Fatḥ ʿAlī, and the Afghān Āzād Khān. At the end of a fierce struggle for the vacant throne, during which Muḥammad Ḥasan was assassinated by his own tribesmen in 1172/1759, Fatḥ ʿAlī and Āzād Khān had no option but to join forces in 1176/1763 and in 1179/1765; Karīm, already more popular than the other contestants, emerged as the undisputed ruler over the whole of Persia except Khurāsān, which he purposely left in the hands of Nādir Shāh's descendants. Although subsequently he had repeatedly to suppress local revolts, such as those of the Kaʿb tribes in Khūzistān, the Līrāvī nomads in Kūh-i Gīlūya, of Taḳī Durrānī in Kirmān, Naṣīr Lārī in Fārs, Mīr Muhannā in the Persian Gulf region, and Ḥusayn Ḳulī Ḳadjār in Astarābād and Māzandarān, on the whole his rule brought a period of sorely needed peace to Persia. When Ismāʿīl III, who had deserted Karīm in 1165/1752, returned in 1172/1759, he formally deposed him as incompetent, holding him, however, in honoured captivity with a large pension in Ābāda [*q.v.*]. Karīm did not drop the title of *wakīl*, using it thereafter in the sense of *wakīl al-raʿāyā* ("regent for the people") rather than that of *wakīl al-dawla*. He established his capital in Shīrāz, enriching it with magnificent buildings, some of which stand to this day. Through prudent husbandry he developed commerce, handi-

crafts and agriculture, encouraged foreign trade, and granted some commercial privileges to European companies in the Persian Gulf, mainly in order to utilize their power to enforce order and security on the coasts. His sole expedition beyond the Persian frontiers was the capture of Baṣra in 1190/1776, which was a challenge to the commercial supremacy of this Ottoman port rather than an attempt to destroy Ottoman rule in Mesopotamia. Karīm's last years were darkened by the loss of a young son, the death of a beloved wife, and a series of illnesses (colic, tuberculosis, etc.), which ended in his death in 13 Ṣafar 1193/2 March, 1779. He was buried in Shīrāz, whence the hostile Ḳādjārs transferred his remains to Tehran and later to Nadjaf. Karīm's rule was a paternal monarchy, based on tribal traditions common among the Lakk and Lur nomads. His bodily strength, his skill in arms, his sense of humour, his concern for his people's welfare, and his anxiety to secure prosperity for the inhabitants of Shīrāz, have provided materials for a series of folk tales, specimens of which can be found in *Tadjribat al-Aḥrār*, *Fārs-Nāma-yi Nāṣirī*, *Rawḍat al-Ṣafā-yi Nāṣirī*; cf. also J. Malcolm, *History of Persia*.

(A. H. ZARRINKOOB)

KĀRIMĪ, name of a group of Muslim merchants operating from the major centres of trade in the Ayyūbid and Mamlūk empires, above all in spices. No satisfactory etymology has yet been given of the word *Kārimī*, *Kārim* or *Akārim*. Quatremère follows al-Ḳalḳashandī's statements and maintains that the name derives from *Kānim*, a territory in Western Sudan, which was altered into *Kārim*. Al-Ḳalḳashandī commented that the word occurred as such in the *dīwān*s and had no meaning in Arabic, and Ibn Mādjid [*q.v.*] does indeed mention the ancient (*ḳadīm*[an]) pepper route from the *Bilād al-Kānim* (Western Sudan). Littmann proposes an Amharic origin, deriving it from the word *Kuararīma*, a spice imported into Ethiopia by the *Kārimī*.

It is certain that the Kārimī were in the first place merchants of the Indian Ocean and the Red Sea, so that Littmann's idea that the word *Kārimī* may be connected with the name of some kind of merchandise is suggestive. From al-Maḳrīzī's description of the Cairene markets it is clear that the amber (= *kārim* or *kahramān*) market was very active. Yellow amber is still named *kārim* in Egypt, and the origin of the term *Kārimī* may thus be explained. Blochet also advocates this derivation. G. Wiet remarks that the source of yellow amber is to be sought in the Baltic region and not in the merchandise of the Indian Ocean. Wiedemann, who did not occupy himself with the Kārimīs, cites Nuwayrī, who mentions the import of amber from the Byzantine empire, *i.e.* through Byzantine markets. Fischel, Goitein, Ashtor, Naura, R. de Miglio, Darrag, Sublet and Cahen on the other hand concentrated more on the development of the Kārimī corporation than on the origin of the term.

It is evident from the Arabic documents that the word Kārim was also used to design a fleet, especially a merchant fleet. The Geniza documents point to a similar meaning of the term.

In any case, the term Kārim occurs for the first time in a text transmitted by al-Ḳalḳashandī. It relates that the Fāṭimids established a special fleet (of five, later of three ships) to protect the Kārimī-ships on their journeys between 'Aydhāb and Sawākin against the pirates of the neighbouring islands, especially the Dahlak group. The command was committed to the *wālī* of Ḳūṣ [*q.v.*], sometimes however to an emir in direct contact with the government in Cairo. Saladin lent growing support to the Kārimī-trade, which yielded high revenue from the taxes imposed. Al-Maḳrīzī reports that Saladin demanded beforehand the taxes for four years when the Kārimī-merchants (*Tudjdjār al-Kārim*) came from Aden in 577/1181. It is worthwhile noting that al-Maḳrīzī speaks of "merchants" and not simply of "Kārim", in the sense of a trade or a fleet.

One year later (578/1182) the Kārimī encountered their most serious crisis, with the attempt of the Crusaders to establish themselves into the Red Sea. This constituted a very great danger to Islam, for the Crusaders would thus threaten the sacred territory of the Ḥidjāz, but Saladin's greatest concern was the danger to the Egyptian monopoly of the transit traffic in the Red Sea. However, Saladin's victory over Renaud de Châtillon enabled him to keep the Frankish powers and merchants away from this most important trade route between the West and the Far East, and promoted the expansion of the Kārimī merchants.

In 579/1183 Saladin's nephew and deputy in Egypt, Taḳī al-Dīn 'Umar, built the famous *funduḳ al-Kārim* in al-Fusṭāṭ, the port district of Cairo. At this period both Jewish and Coptic merchants had more or less to abandon their major enterprises in the Red Sea. They were replaced by Muslim merchants, principally the Kārimī.

Lack of sources makes it difficult to write the history of the Kārimī during the Ayyūbid period after the death of Saladin. The Mamlūk sultans, however, maintained the commercial policy of their predecessors and thus promoted the expansion of the Kārim enterprises.

The transition from Ayyūbid to Mamlūk government in Egypt was full of interior and exterior problems: the crusade of Saint Louis and the advance

of the Mongols on the one side, and on the other the revolts of the Arab tribes settled in Egypt. During this critical period the Kārimī and other wholesale merchants thought it wise to reduce imports into Egypt, especially when al-Malik al-Muẓaffar Ḳuṭuz [*q.v.*], to help finance his campaigns, imposed such drastic levies on the merchants of Egypt that they lost one third of their wealth. Baybars I [*q.v.*] abolished these measures, and ordered his *wālī* in Ḳūṣ and ʿAydhāb to treat the merchants well, so that ships sailed without delay from Yemenī ports to ʿAydhāb. Ibn Wāṣil [*q.v.*] reports that no one took action against them and that their property did not suffer any losses at all.

The activities of the Kārimī started a new chapter in the history of the development of the Egyptian capital and of commercial financing. If the capital of a wholesale merchant, Muslim or *dhimmī* in Egypt is estimated before the Kārimī period at 10,000 to 30,000 dīnārs, the fortune of a Kārimī-merchant amounted to one million dīnārs or more. Because of his financial capacity, the reputation of the Kārimī Naṣr al-Dīn Muḥ. b. Musallam al-Bālisī (d. 776/1375), whose fortune was calculated to amount to ten million dīnārs, went beyond the boundaries of the mercantile circles of Egypt. Muslim merchants from India, who carried on trade in Egypt, Mecca and Aden, confirmed that no Indian possessed such a huge fortune, except one (Indian) unbeliever,—and he was associated with Naṣr al-Dīn. Tādj al-Dīn al-Kārimī, known as al-Damāminī (d. 731/1331) left 100,000 dīnārs, a more credible figure than the one reported about al-Bālisī. Describing the enormous wealth of the Saha, the unbelieving Indian merchants from Dawlatābād [*q.v.*], Ibn Baṭṭūṭa remarks (iv, 49): "They resembled the Kārimī-merchants in Egypt". Elsewhere (iv, 259) he compares the Sati of China with the Kārimīs.

The Kārimīs earned higher profits than the third of the purchase-price allowed by Muslim law. Besides bartering, they paid both in cash and by cheque. Indeed, through their network of markets and transactions, the Kārimīs operated a kind of banking institution, the most important clients of which were sultans and amirs whom they assisted not only with credits but also by supplying troops and arms. The Mamlūk sultan was not the only ruler to borrow money from the Kārimīs. The king of the Yemen also was given credits when he found himself in financial difficulties. Even Mansā Mūsā, the king of Māli who owned the gold-mines in western Sudan, borrowed money from a Kārimī-merchant before he left Mecca to return home.

The Kārimī commercial houses were primarily family-owned firms, each generation inheriting the experience, assets and clients of the preceding one, and the younger members being sent away for training to the various markets of the huge enterprise. Freemen as well as slaves represented the firms, studied the markets, brought in clients, imported and exported merchandise. One Kārimī is reported to have sent his slaves as representatives to the markets of the Indian Ocean and in the western Sudan in order to trade and carry through transactions in his name. Of the Kārimī Naṣr al-Dīn Muḥ. b. Musallam, whose father, grandfather and paternal uncle had also been merchants, it is reported that none of his slaves died while they were trading on his behalf in India, the Yemen, Ethiopia, Māli and Bilād al-Takrūr, so that his affairs had not sustained any loss on that account.

During the reign of sultan al-Nāṣir Muḥ. b. Ḳalāwūn [*q.v.*] the Kārimī-merchants numbered two hundred, owning at least a hundred slaves authorized to make important business-tours.

Al-Asadī (Ibn Ḳāḍī Shuhba [*q.v.*]) is evidently not exaggerating when he remarks that the activities of the Kārimī merchants reached from the Maghrib to China. Some were as powerful and rich as "kings", with their own armed caravans, and with guards, commissioners, partners, slaves and servants. They had the *kūsāt* (cymbals) sounded before the gates of their palaces, usually the prerogative of high state-officials.

A considerable amount of the merchandise imported from the Orient by the Kārimīs and other merchants was transported from the Yemen to the Ḥidjāz and Syria, but mostly to Cairo and also to Alexandria and Damietta, the two most important Egyptian ports on the Mediterranean, where Frankish merchants, especially Venetians, came to trade. The Egyptian merchant regarded these Italians as his opponents, both as businessmen and as capitalists. The Venetians, it is true, tried to extend their commercial and financial activities over Europe and the Byzantine Empire, while Asia and Africa were left to the Kārimīs. However, the friendly relations between the Mongol Empire and the Occident enabled the Italians, for almost a century (*ca.* 1250-1350), to travel inside Asia as far as China, but the Kārimīs also remained in these areas, where both met. More important however was that the caravan-trade by land and sea across the Indian Ocean and the Red Sea did not lose its position during the period of the "Pax Mongolica".

Both the Frankish merchants and the Kārimī had to solve the problem of piracy, the former in the Mediterranean, the latter in the Red Sea and the Indian Ocean, and also to face similar difficulties on the desert routes in Africa and Asia. Both also pursued business in the towns, but in this connection there was a fundamental difference between the two. The towns of the Christian West in the Middle Ages were struggling to free themselves from feudal lords, whereas the oriental, Muslim towns were, during that period, under the control of central authorities and their governors. Thus the political rôle of the Kārimī-merchant can hardly be compared with that of his opponent, the occidental merchant. The Kārimī took part in politics only indirectly, since the authorities set bounds to his capital and his freedom of trade.

Nevertheless, the stability of the government and the good relations between the sultan of Egypt and the countries on the Mediterranean, the Black Sea and the Indian Ocean enlarged the Kārimīs' activities and crowned with success their endeavours to establish trade-relations between Egypt and these countries and even beyond, as far as western Sudan and China.

During the period of the Crusades the Kārimīs were by far the most important wholesale-merchants. The most prominent among them, in financial, political and religious respects, was granted the official title of "leader" or "chief" (*kabīr*, *raʾīs*), and in all the territories under Egyptian domination, as well as in the sultan's palace itself, he was treated with esteem and honour. Although contemporary sources do not enable us as yet to establish the way in which a *raʾīs* or *kabīr* was elected or how he exercised his power, we can form a general idea thanks to a story told by Ibn Ḥadjar al-Asḳalānī [*q.v.*]. In his Annals he relates that the great Kārimī-merchant Zakī al-Dīn al-Kharrūbī, on his return from the Ḥidjāz

to Egypt in 786/1384, had made costly gifts to sultan Barḳūḳ and the leading emirs. He was attacked by Shihāb al-Dīn al-Fāriḳī, an influential Yemenī merchant resident in Egypt (possibly the head of the Yemenī Kārimīs and brother of the contemporary Yemenī vizier al-Ashraf). Al-Kharrūbī then produced a letter addressed to him by the Yemenī king, in which was cited a letter by al-Fāriḳī, alleging that corruption was rife in Egypt since there was no effective ruler; al-Fāriḳī had therefore suggested to the Yemenī king that he should send no more tribute, because the ruling Egyptian sultan was one of the basest and most contemptible of the Mamlūks. Barḳūḳ ordered that al-Fāriḳī should be imprisoned, have his tongue cut out, and his property confiscated; al-Kharrūbī on the other hand was presented with a costly robe of honour and granted the title *Kabīr al-Tudjdjār*. This passage tells us something about the conditions required to obtain this title: it was a symbol of the most privileged position among the merchants, acquired by loyalty, unimpeachable religious and political behaviour and wealth.

Government policy was to favour the Kārimī-merchants. The *nāẓir al-bahār wa'l-kārim*, inspector of spices and Kārim-merchandise, was responsible for the interests of the Kārimīs in the Red Sea and Egypt and collected customs and taxes from them. This function was so esteemed that it was sometimes assigned to the vizier or the *nāẓir al-khāṣṣ*. The final decision however was with the sultan since the dues levied on Kārimī merchandise accrued to his treasury. Under al-Muʾayyad Shaykh the importance of this function is demonstrated in a diploma of appointment, the text of which has been transmitted by Ibn Ḥidjdja al-Ḥamawī [*q.v.*] and in which the post is offered to the Shāfiʿī *faḳīh* Kamāl al-Dīn al-Bārizī. Since Upper-Egypt was during a long period the ordinary trade-route for the import of oriental merchandise, another letter of appointment emphasized that the chief *wālī* of Upper Egypt, *Wālī Wulāt al-Ṣaʿīd*, should pay special attention to the commercial aspects of his post, as being "the gate to the Yemen and Ḥidjāz". A third letter of appointment mentions the great importance of Kārimī activities in Upper Egypt: it is the chief *wālī*'s duty to treat them well and to promote their interests.

In 832/1429 Barsbāy [*q.v.*] introduced his monopoly of pepper and a rigid supervision of the market. He bought pepper in Djudda on his own account and even forbade the merchants to deal in it before he had concluded his own affairs. He also curtailed the pepper and spice trade with the Franks in Alexandria by fixing prices. The Franks were hard hit since they had to acquire the pepper at a price which was about 50 dīnārs above the market-price. They were forced to limit their purchases and often had to return home without having sold their merchandise. The Egyptian merchants also sustained losses. When the Kārimī-merchants tried to trade clandestinely with the Franks, Barsbāy threatened in 833/1430 to bar them completely from trade. Two years later he forced them not to trade at all without his permission. In 838/1435 he curtailed the spice-trade in Djudda and fixed the prices for the trade with the Occident. The ensuing difficulties between Egypt and the western traders were further increased by the Catalan and Turkish pirates. Čaḳmaḳ (841/1438-756/1453) restricted the period of residence of the Frankish merchants in Egyptian ports to six months at most.

The deteriorating situation of the Kārimī-merchants during the 9th/15th century was however due not only to the policy of the Mamlūk sultans, but also to increasing economic crisis in Egypt, and to the policies of the Yemenī king al-Nāṣir Aḥmad, who tried to extend his power over the Ḥidjāz and to oust Egypt from its privileged position there, while in the Yemen he established a reign of terror. The Kārimīs fled to India or Djudda, leaving part of their fortunes behind in Aden. Also the merchants and ships' captains from China sustained losses. When despatching a gift in 823/1421, the emperor of China made a strong protest against the measures of the Rasūlid ruler. The Egyptian government meanwhile not only tried to lure the merchants and captains from Aden to Djudda, but to establish a state-monopoly.

On the northern frontiers of the Mamlūk domains the political situation remained tense during the 9th/15th century and necessitated continuous Egyptian expeditions, which burdened the state-finances. By increasing the prices of monopoly merchandise, Ḳāʾitbay [*q.v.*] financed sixteen military expeditions, which cost altogether 8 million dīnārs, besides the soldiers' pay. Since the rural economy was not able to cover these expenses, they had to be borne by imposts on trade, which caused a set-back to the Kārimī-merchants. From then on they started losing their lucrative business. Many of them entered the sultan's service, and became the wholesale merchants of Egypt *par excellence*. Others emigrated to India, especially to Kalikat [*q.v.*] and Cambaya, and many turned to monetary transactions, less profitable to themselves but causing many difficulties to the State. They exported so many copper coins, that the sultan in 832/1429 strictly forbade their export to Djudda. The prohibition, however, had to be repeated in 839/1437. How difficult the merchants' position was during Barsbāy's reign is clearly indicated by a contemporary's note that a merchant had to contract a loan in order to cover his expenses while he possessed a stock of merchandise valued at 10,000 dīnārs.

The Red Sea merchants, in contradistinction to their colleagues in Cairo, tried openly and expressly to assert their rights with the sultan. Even Shāh-Rukh, the Tīmūrid ruler, became involved in this quarrel. He denounced the collection of taxes in Djudda which were not in accordance with the *sharīʿa*, and called the *fuḳahāʾ* and *fatwā*-experts in Cairo "the riding animals of their master's wilfulness". Shāh-Rukh tried to intensify the tension between the Mamlūk sultan and the oriental merchants, but did not succeed in forcing the sultan to abandon his monopolizing policy or to collect taxes solely according to ḳurʾānic prescriptions. The short-lived penetration of the Chinese fleet to the East African coast and the Gulf of Aden in the first decades of the 9th/15th century could not avail the Kārimīs against the arbitrary behaviour of the sultans, nor could the establishment at this period of close relations between Ethiopia and Europe alter the policy of the sultan of Egypt towards the Kārimīs. Nūr al-Dīn ʿAlī al-Tawrīzī, the son of a Kārimī Muslim of Persian origin, who sold arms and European cloth in Ethiopia, was arrested on the charge of high treason. He was accused of having gone to Europe via the Maghrib by order of the Negus in order to incite Alphonso of Aragon against the Muslims. He was convicted and executed in Cairo in 832/1429. Ibn Ḥadjar al-ʿAsḳalanī and his pupil al-Sakhāwī questioned the legality of this verdict and were of the opinion that al-Tawrīzī had promoted the cause of Islam in Ethiopia where he was said to have been in high esteem because of his activities. The envoys of Negus Yeshāḳ did indeed reach the court of Alphonso V (C. de la Roncière, *La découverte de l'Afrique au*

moyen âge, ii, 116; F. Cerone, *La politica orientale di Alfonso di Aragona*, in *Archivio Storico per le Province Napoletane*, xxvii (1902), 39-43, 65-66), who accepted the alliance with Ethiopia. The Negus wanted to start trade in the Red Sea, with Sawākin taking over the leading position of al-Djudda. Barsbāy however tried to secure its monopolizing position by ordering ships not to call at the port of ʿAydhāb [*q.v.*]. A revolt of the local tribes, who turned pirates, was crushed and the town was destroyed in 829/1426. According to Leo Africanus 4,000 inhabitants were killed while the rest emigrated to Dongola or Sawākin, the port of Ethiopia. The Mamluk sultans extended their power over both Massawa and Sawākin, the prince of the latter becoming a vassal of the sultan and receiving his diploma from the chancellery in Cairo.

According to Ibn Taghrībirdī, the Kārimīs did not appear on the Egyptian markets in 859/1455, and after 889/1484 they are no more mentioned in contemporary sources. So far as we know, the last two Kārimīs in Egypt, ʿAlī b. Muḥ. b. Yūsuf Ḳalyūbī and ʿAlī b. Badr al-Dīn Ḥasan b. ʿUlayba, died in 897/1491-92.

Not only the Kārimīs but the merchant-class as a whole lost their high entreprenurial position. Shortly before the Ottomans took over in Egypt, two mere butchers acted as representatives of the merchant-class. The Egyptian wholesale trader had lost his international business connections, which he did not win back till the late 19th century. During Egypt's confrontation with two strong foreign powers, the Portuguese and the Ottomans, the Kārimīs and other Egyptian merchants neither joined the Venetians against the new competitors from the West, nor did they try to combat the mismanagement of the Mamlūks. Adhering to the deeply rooted conception according to which state authority belonged to the military, they did not think of seeking political power. It is true that many Mamlūks, from the 8th/14th century onwards, had sold their *iḳṭāʿ*s [*q.v.*] and had thus enabled merchants to acquire land, notwithstanding the opposition of the government and the *fuḳahāʾ*. Thus the Kārimī merchant Nāṣir al-Dīn b. Musallam (d. 775/1373) is said to have come into possession of 3,438 *faddāns*, for which a land-tax of 10,000 dīnārs was due. This situation influenced the Egyptian *iḳṭāʿ* system, but cannot be said to have been the Kārimīs' expression of "Wille zur Macht". The Kārimī and other people who acquired *iḳṭāʿ*s never succeeded in stepping into the political and military power of the Mamlūks. They submitted to them, although this brought about their own decline.

ḲARĪN (A.) means "companion" in the largest sense (synonym of *muṣāḥib* in *LA* and the *Ṣaḥāḥ*, and of *khidn* in al-Bayḍāwī on Ḳurʾān, XLI, 24/25). However, for people in pre-Islamic Arabia and for Muḥammad, the word also suggested a man's spirit-companion or familiar, and this is the commonest usage in the Ḳurʾān, where *ḳarīn* is used eight times. If a human companion is meant in XXXVII, 49/51, *Shayṭān* is a *ḳarīn* in IV, 42/38, and the use of the plural *ḳuranāʾ* in XLI, 24/25, together with the context, shows that tempting spirits are meant here. In this verse and in XLIII, 35/36, 37/38, a *shayṭān* is assigned (*ḳuyyiḍa*) by God as a *ḳarīn*; al-Bayḍāwī on L, 22/23, is dubious whether by *ḳarīn* a *shayṭān* or an angel is meant, but for L, 26/27, he is sure that a *shayṭān* is involved. In this he follows the oldest exegetical tradition as already related by al-Ṭabarī in his *Tafsīr*, xxvi, 93-4. Every human being has a *ḳarīn* at his side, that is, a *shayṭān* and an angel to accompany, the first of whom tempts him into evil and the second induces him to do good. The *shayṭān*, sometimes called a *djinnī*, will be thrown into hell-fire at the Judgment along with the human companion whom he has led astray. These two *ḳarīn*s are therefore different from the recording angels who accompany each human being (Ḳurʾān, LXXXII, 10-12).

Even the prophets have such a *shayṭān*, but that of Muḥammad was converted by him to Islām; a great many traditions bearing on this are given in the *Āḳām al-mardjān* of al-Shiblī, ed. 1326, 26-7. A very suggestive and full ethical-theological treatment of the whole subject is in the *Iḥyāʾ*, Book xxi, of al-Ghazālī, *Kitāb ʿadjāʾib al-ḳalb*, ed. with comm. *Itḥāf al-sāda*, vii, 264-5, where the traditions are given in detail; cf. D. B. Macdonald, *The Religious Attitude and Life in Islam*, 274-5. At the other extreme is the folkloristic development in popular Islâm; for it see S. M. Zwemer, *The Influence of Animism on Islam*, ch. vi.

Another use of *ḳarīn* in old Arabia was for the *djinnī* who accompanied a poet and brought to him his verses [see SHAYṬĀN, TĀBIʿA]. This use has been transferred in Islām to the angel who consorted with the Prophet and brought him his revelations (LA, s.v.; Goldziher, *Abhandlungen zur arab. Philologie*, i, 5-6; D. B. Macdonald, *op. cit.*, 19-20).

(D. B. MACDONALD*)

ĶĀRINIDS, a local dynasty of Ṭabaristān, who reigned over a part of the mountainous regions from the age of Khusraw (Chosroes) I (531-79 A.D.) until 225/840.

Origins. The Ķārinids claimed descent from Ķārin son of Sūkhrā, whose ancestor was none other than the legendary blacksmith Kāwah [*q.v.*]. According to the Arab and Persian chronicles, Sūkhrā was the most powerful among the great men of the Sāsānid Empire at the time of Kawādh I (488-531 A.D.), but the conflict of sources with which A. Christensen concerned himself in *Le Règne de Kawādh I et le communisme mazdakite*, 94-5, led him to ask himself whether Sūkhrā and his elder son Zarmihr are not in reality one and the same person. The Ķārinids traced the origin of their power to the age of Khusraw I, who allegedly rewarded Zarmihr and Ķārin son of Sūkhrā for the help they brought him to repel an attack of the Turks (Ibn Isfandiyār, 93-5; Ẓahīr al-dīn, 37). In fact, it is probably a case of a legend invented for the glory of Ķārin, confused furthermore with a namesake, the chief of the great noble family of Ķārin (Christensen, *L'Iran sous les Sasanides*[2], 98-9). Ķārin son of Sūkhrā received as domains Wandā-Ummīd Kūh (to the south of Āmul; Rabino di Borgomale, *Māzandarān and Astarābād*, 2), Āmul, Lafūr (on the eastern source of the River Bābul, which then passes by Māmtīr, see Minorsky in *EI*[1], art. *Māzyār*) and Firrīm, which is called Kūh-i Ķārin: "Ṭabaristan was also partitioned between Ķārin and the chiefs established at Ṭamīsha, and Ķārin became Ispahbad" (Ibn Isfandiyār, 95; Ẓahīr al-Dīn, 31-5; Balʿamī, ii, 297-8). Ķārin was allegedly confirmed in his post by Hurmizd IV (579-90 A.D.).

According to the local historians of Ṭabaristān, Ķārin reigned 37 years and was replaced by his son Alanda for 52 years (Ẓahīr al-Dīn, 167, 321), but these chronological data are fanciful and do not appear to correspond with the age of these persons (cf. below). The actual centre of the Ķārinid principality has not been precisely determined, being situated according to some at Firrīm (cf. Ibn Ḥawḳal, 377, tr. 367; Casanova, *Les Ispehbeds de Firrīm*, in *A Volume of Oriental Studies presented to E. G. Browne*, 117-22), and according to others elsewhere (Minorsky in *EI*[1], *art. cit.*). In any case, at the time of the Arab conquest the Ķārinids must have lost Āmul, which was the capital of Prince Farrukhān Gīlānshāh, ancestor of the Dābūyids [*q.v.*] and of the Bāduspānids [*q.v.*] and they recognized his suzerainty (Balʿamī, iii, 493). They sent some troops to help the governor of al-Rayy to resist the Arab advance after the battle of Nihāwand (21/649), but in vain (Balʿamī, iii, 489-91; al-Ṭabarī, i, 2653-4). The submission of the local chiefs of Dunbāwand, Ķūmis and Gurgān on condition of tribute led the different *ispahbads* and *marzubāns* of Ṭabaristān to surrender in their turn. Given the difficult character of the land, Suwayd b. Muḳarrin accepted the conditions of their capitulation: to pay 500,000 dirhams and remain tributaries of the Arab Empire, but without obligation to send military contingents in case of war and without the interference of the Arabs in the internal affairs of these principalities (Balʿamī, iii, 492-3; al-Ṭabarī, i, 2659-60). But even these slight dues (compared with the tribute paid to the Sāsānids; Ibn Isfandiyār, 118) were not to be discharged regularly or in full, judging by the evolution of the proportionate forces maintained by the central power and the local princes (al-Balādhurī, 337-8), for numerous expeditions were launched against these regions to restore the caliphal authority.

We know scarcely anything of the Ķārinid princes before the revolt of Wandād-Hurmuzd in 165/781, and we must have recourse to the history of Ṭabaristān and of other local princes for some incidental references. According to the local historians (Ibn Isfandiyār, 98), a new dynasty was created about 45/665 in the Sharwīn Mountains situated in the south-east of Ṭabaristān (Ibn al-Faḳīh, 305) with Firrīm as centre (*Ḥudūd al-ʿĀlam*, 135-6); it is very difficult to recognize in these different names mountains that form the eastern chain of the Elburz, for they have changed in name or their names may be easily confused, even when one does not come across several names for one and the same mountain (Rabino di Borgomale, *Māzandarān and Astarābād*, 2). Always according to the local historians (Ibn Isfandiyār, 98-9, 237; Ẓahīr al-Dīn, 206-7, 323-4), the inhabitants of Kūh-i Ķārin helped Surkhāb son of Bāw to regain his throne from the usurper Adhur-Walāsh (the Zarmihrid?), who had assassinated his father *ca.* 59-60/679-80 and had maintained himself for 8 years. Surkhāb was crowned *Pādhshah* at Firrīm, which would suggest a return to the Ķārinid patrimony, but the suzerainty remained with the son of Farrukhān Gīlānshāh, Gīl Gawbarā, who took the title of King of the Mountains (Farshwādgarrshāh; Ibn Isfandiyār, 97; Ẓahīr al-Dīn, 42).

It was not until 97/716 that Yazīd b. al-Muhallab, strengthened by his success at Gurgān, tried to annex Ṭabaristān also to the Umayyad empire, but he fell in his turn in an ambush (like Maṣḳala b. Hubayra in 54/674, Muḥammad b. al-Ashʿath in 55/675), and had to content himself with imposing a tribute sufficiently heavy for him to turn back against Djurdjān, which had revolted in his absence (al-Ṭabarī, ii, 1320-1, 1327-9; al-Balādhuri, 336-8 etc.). Nevertheless, the inhabitants of Ṭabaristān revolted afresh under Hishām (105-25/724-43); (al-Yaʿḳūbī, *Taʾrīkh*, ii, 381), then under Marwān II (al-Balādhurī, 338; Ibn al-Faḳīh, 308). The ʿAbbāsids were meanwhile recognized in the course of their rebellion (al-Ṭabarī, ii, 2016; Ibn al-Faḳīh, 275-7), and al-Manṣūr himself succeeded in imposing on the local chiefs the payment of the tribute they had paid to the Sāsānids, following their complicity in the revolt of Sunbādh in 137/755 (Ibn Isfandiyār, 118). The conquest of Ṭabaristān was achieved in the course of the years 142-3/759-60 and resulted in its annexation to the ʿAbbāsid empire, which led to the installation of military garrisons in the mountainous regions, notably at Firrīm and at Khurramābād (Ibn Isfandiyār, 122-3). The Bāwandids profited from the disappearance of the Dābūyids by taking the title of *Padishwārharshāh* (Ibn Isfandiyār, 126), indicating by it their pre-eminent position in Kūhistān. The local princes appear to have adapted themselves poorly to ʿAbbāsid tutelage, and they revolted in 165/781, when the governor of Ṭabaristān tried to apply an increase in the taxes ratified by the jurist Aḥmad b. Ḥanbal, arguing that Ṭabaristān had surrendered by force (Ibn Isfandiyār, 125). The inhabitants of Ummīdvar-Kūh (to the South of Āmul) went to find the Ķārinid prince Wandād-Hurmuzd, who lived near Dunbāwand (al-Ṭabarī, iii, 129), and promised him their help, if he would revolt (Ibn Isf., 126).

The Revolt of Wandād-Hurmuzd. Wandād-

Hurmuzd assured himself of the alliance of the other local princes (Sharwīn the Bāwandid in the Sharwīn Mountains, Shahriyār the Bāduspānid in the Bāduspān Mountains, Masmughān Walāsh (the Zarmihrid?) at Miyāndurūd near Sāriya, Wandād-Safān the Ķārinid in the Wandād-Safān Mountains to the west of Ṭabaristān), and proclaimed a revolt, which began with a massacre of the Muslims (Ibn Isf., 122-3). Exploiting the lie of the land, Wandād-Hurmuzd held the mountainous regions for several years (165-8/781-5) and inflicted numerous defeats on the caliphal armies. Al-Mahdī had to organize four expeditions, each of growing importance, at the head of which he placed generals of ever-greater renown (Sālim al-Farghānī, the Amīr Firāsha, ʿUmar b. al-ʿAlāʾ in 167/783, Taym b. Sinān), but in vain. He had to send the heir to the throne, al-Hādī, in person, accompanied by the general Yazīd b. Mazyad, to obtain the surrender of Wandād-Hurmuzd (Ibn Isf., 44-5 126-31; Ẓahīr al-Dīn, 155-9; al-Ṭabarī, iii, 517-8, 551, 705; Ibn al-Faķīh, 304). The latter was imprisoned in Baghdād (al-Yaʿķūbī, *Taʾrīkh*, ii, 487), and his brother Wandād-Safān had sought his own destruction in executing a client of the caliph, Bahrām b. Fīrūz, recently converted to Islam. Wandād-Hurmuzd was meanwhile freed after having promised to give up his brother to the caliph, but once in his mountains, he did nothing about it (Ibn Isf., 131-2; Ẓahīr al-Dīn, 160). His hostility to Islam persisted as before (Ibn Isf., 140), and he profited by acquiring 1,000 *djarīb*s of demesne lands in the environs of Sāriya that had been put up for sale (Ibn Isf., 132; Ibn Rusta, 150, tr. 173). Wandād-Safān continued his opposition to ʿAbbāsid penetration by having executed Djaʿfar b. Hārūn, sent by the caliph in 187/803 to carry out again the cadastral survey (Ibn Isf., 141-2). These multiple acts of insubordination forced Hārūn al-Rashīd, at the time of his move to Rayy in 189/805, to summon Wandād-Hurmuzd and to reaffirm solemnly the sovereignty of the caliphate and to exact guarantees of submission: Wandād-Hurmuzd had to join in paying tribute, to send troops in event of war, and at the same time was constrained to "offer" some domains to the caliph (the Maʾmūnī lands) and to send his son Ķārin as hostage to the court. In exchange, he was reinvested as "*Ispahbad of Khurāsān*" (Ibn al-Faķīh, 304; al-Ṭabarī, iii, 705; al-Yaʿķūbī, *Taʾrīkh*, ii, 514; Ibn Isfandiyār, 44, 142-3). Despite the fame of the revolt of his grandson Māzyār, it seems to us that the personality and movement of Wandād-Hurmuzd merit more consideration on the part of historians, for he effected a coalition that only Ḥasan b. Zayd was able to recreate in 250/864, and opposed with success the attempts to repress his revolt, whereas Māzyār collapsed without fighting in 225/840.

Ķārin was sent back to his father in 192/808 (al-Yaʿķūbī, ii, 520; Ibn Isf., 143). In the course of the struggle between al-Amīn and al-Maʾmūn, ʿAlī b. ʿĪsā b. Māhān in 195/811 offered some presents to the "princes of Daylam, the mountains of Ṭabaristān and the neighbouring regions" and made them promise that he would cut the route from Khurāsān to Baghdād (which was dominated by the mountains of Ṭabaristān) and that he would hinder the arrival of reinforcements for Ṭāhir b. al-Ḥusayn, commander of the troops of al-Maʾmūn. The local princes promised their help (al-Ṭabarī, iii, 820), but ʿAlī b. ʿĪsā b. Māhān was killed near al-Rayy.

According to the local historians, Wandād-Hurmuzd died in the time of al-Maʾmūn (198-218/813-33) after having reigned 50 years. His son Ķārin succeeded him for 40 years (Ibn Isf., 144-5; Ẓahīr al-Dīn, 321), but this information is certainly false, for, if one adds the 30 years of a reign that these same sources attribute to Māzyār, one cannot see how these two princes could have reigned 40+30 years, when there were 27 years between the accession of al-Maʾmūn (in 198/813) and the execution of Māzyār (in 225/840). Besides, Ibn Isfandiyār (145-7) recounts the participation of Ķārin in the campaign of al-Maʾmūn against the Byzantines (the first dating from 215/830), whilst further on he contradicts himself in saying that Māzyār profited from this campaign to eliminate his adversaries.

The fact remains that Ķārin lost his possessions bit by bit, following the attempts of his rival Shahriyār to nibble them away. Then, when he succeeded his father, Māzyār found himself at the head of a diminished principality (Ibn Isfandiyār, 146). He even lost his possessions completely following a battle against Shahriyār, who annexed his domains. Māzyār took refuge with his cousin Wandād-Ummīd, son of Wandād-Safān, but the latter was constrained to give him up to the Bāwandid (Ibn Isfandiyār, 146-7). Whilst, according to Ibn Isfandiyār, Māzyār escaped from prison and made his way to Baghdād and to the caliph al-Maʾmūn (*ibid.*), al-Ṭabarī (iii, 1015) attributes to the governor of Ṭabaristān, ʿAbd Allāh b. Khurdhādhbah, the victory over Shahriyār the Bāwandid and the sending of Māzyār to al-Maʾmūn in 201/816-7 (then at Marw, since the Caliph did not return to Baghdād until 204/819; cf. Ibn al-Athīr, vi, 253; Balʿamī, iv, 518). Whatever may be the case, Māzyār had to become a convert to Islam and received the name of Abu'l-Ḥasan Muḥammad b. Ķārin, with the title of "*mawlā* of the Commander of the Faithful" (al-Yaʿķūbī, *Taʾrīkh*, ii, 582; al-Ṭabarī, iii, 1298; Ibn Isf., 147). He was afterwards named, in 207/822-3, co-governor of Ṭabaristān, Rūyān and Dunbāwand with Mūsā b. Ḥafṣ, and charged specially with the control of the mountainous regions that he knew best (al-Ṭabarī, iii, 1066, 1096; Ibn Isf., 148). On his return to Ṭabaristān, Māzyār appears to have begun by eliminating the other local princes, both his own kinsmen, notably his brother Kūhyār (al-Ṭabarī, iii, 1295; al-Balādhurī, 339) and his nephew, Ķārin, son of Shahriyār (al-Ṭabarī, iii, 1283), as well as his rivals, the Bāwandids: *ca.* 210/825-6, he invaded the Sharwīn Mountains, defeated Shāpūr, son of Shahriyār, and even had him executed on learning that he would become a convert to Islam and a "*mawlā* of the Commander of the Faithful" like himself (al-Ṭabarī, iii, 1093; Ibn Isfandiyār, 148). He annexed the Sharwīn Mountains and added the title of *Malik al-Djibāl* to his already pompous titulature: "Gīl-Gīlān, Ispabadh of Khurāsān, Padishkhwārgarshāh" (al-Yaʿķūbī, *Buldān*, 276, tr. 81), which is identical to that of Farrukhān Gīlānshāh at the time of the Arab conquest (cf. Balʿamī, iii, 493). These titles do not indicate any claim to Khurāsān, in contradiction to what several historians have thought (Azizi, 186; Minovi, 24; Minorsky, in *EI*[1], art. *Māzyār*), otherwise al-Maʾmūn would not have used this titulature in his correspondence with Māzyār (al-Ṭabarī, iii, 1298 gives the variant Ispahbad/Ispahbadhān).

This policy of concentrating power for his own sole profit is at the origin of the "treason" of his own kinsmen in 225/840, who saw in it the only means of their being restored as princes (al-Ṭabarī, iii, 1283, 1291, 1295).

Mūsā b. Ḥafṣ died in 211/826-7 and was replaced by his son Muḥammad (Ibn al-Athīr, vi, 286), but

Māzyār seems not to have had a high opinion of him (Ibn Isf., 148). He sought to extend his control over the plains of Ṭabaristān with brutal methods, which alienated the Muslim population of the towns against him after already attracting the hostility of the local Zoroastrian landowners (Ibn Isf., 148-9). Complaints were then addressed to the Caliph, but Māzyār refused to go to Baghdād for fear of being removed from office on this occasion. On the insistence of al-Maʾmūn, he sent the *ḳāḍīs* of Āmul and Rūyān to inform the Caliph of his actions. The *ḳāḍī* of Āmul claimed that Māzyār had abjured the faith, but the Caliph did not believe this accusation (cf. al-Ṭabarī, iii, 1270-1). Despite his ever more independent bearing (he called himself "ally" and no longer "client" of the Caliph; cf. al-Yaʿḳūbī, *Taʾrīkh*, ii, 582), al-Maʾmūn named him later as sole governor of Ṭabaristān (Ibn Isf., 150-1), and al-Muʿtaṣim confirmed him in his post in 218/833. Having also become a veritable petty king, with an administration modelled on the central power and a considerable personal strength (cf. al-Ṭabarī, iii, 1292), he reached a new degree of insubordination in refusing to send his *kharādj* to the Ṭāhirids of Khurāsān, to whom he was administratively subject. The Caliph agreed to spare him (probably against the advice of ʿAbd Allāh b. Ṭāhir), and his agents received the *kharādj* from Māzyār at Hamadhān and sent it on to the Ṭāhirid agents (al-Ṭabarī, iii, 1268).

According to a version of al-Ṭabarī (iii, 1269), "Māzyār was also in correspondence with Bābak; he encouraged him (in his revolt) and proposed to help him", but this sentence is perhaps truncated like the sentence on the stirring-up of the peasants (also 1269), whose correct reconstruction (1278-9) gives a completely different meaning. Let us note that there is no question anywhere else of any complicity of Māzyār with Bābak, although the rumours and accusations hurled against al-Afshīn are very numerous. Towards the beginning of 223/end of 837, there was planned an expedition of al-Afshīn against Māzyār, but only because of his tyranny and his insubordination (al-Ṭabarī, iii, 1269-71; al-Balādhurī, 339; Ibn Isf., 152; Ẓahīr al-Dīn, 167). The thesis of a vast "anti-Arab plot" fomented by Bābak, al-Afshīn, Māzyār and the Byzantine Emperor Theophilus at this period is only a fabrication made up by the historians (M. Minovi, 26; M. Azizi, 212, 364, etc.).

Feeling himself threatened also, Māzyār ordered the cadastral survey to be carried out again and the *kharādj* to be levied before the end of the month of Tīr/August 838, and his agents surveyed in two months what had usually been surveyed in twelve months and in three sessions (al-Ṭabarī, iii, 1270-2). Besides, the tension between Māzyār and the Ṭāhirids worsened the more ʿAbd Allāh b. Ṭāhir succeeded in setting the Caliph against this "tyrannical and insubordinate prince-governor", the one who led Māzyār to rebel, revolt, refuse the *kharādj* and impose his ascendancy over the mountains of Ṭabaristān and its adjacent parts (al-Ṭabarī, iii, 1269). Certain sources even assert that this insubordination was encouraged by al-Afshīn, who urged Māzyār to revolt (al-Ṭabarī, 1269, 1305, etc.). If it is undeniable that one meets with this accusation against the rival of the Ṭāhirids, who had become ambitious after his victory over Bābak in 222/837 and over Theophilus in 223/838, it is not certain that it corresponds to reality, for as al-Yaʿḳūbī suggests (*Taʾrīkh*, ii, 583), when al-Afshīn addressed himself in these terms to Māzyār: " 'By God, your falsehood will not save you from death. Don't perpetrate a falsehood to end your life', then Māzyār regained his composure and protested 'By God, he has not written to me or entered into correspondence with me . . .' ". The position of al-Afshīn is made clear by the sources: having heard of the conflict that set Māzyār in opposition to the Ṭāhirids, he "hoped that this conflict would be at the root of the dismissal of ʿAbd Allāh b. Ṭāhir from the government of Khurasān" (al-Ṭabarī, iii, 1269), for "he believed that, if Māzyār revolted, he would hold out for a long time against ʿAbd Allāh b. Ṭāhir and would resist until al-Muʿtaṣim was obliged to send him, as well as others, to combat him, and that he would dismiss ʿAbd Allāh b. Ṭāhir, and appoint him in his place and charge him with the suppression of Māzyār" (al-Ṭabarī, iii, 1305). All this allows us to reject the theses of "anti-Arab" revolt leading to the restoration of the power of the Persians, that several historians have freely adopted (notably M. Minovi and M. Azizi, although Gh. H. Sadighi had refuted these assertions as far back as 1938).

The Revolt of Māzyār. Māzyār revolted openly "after six years and several months of the caliphate of al-Muʿtaṣim" (al-Balādhurī, 339), *i.e.* the end of 224/839. Certain sources (al-Balādhurī and Ibn Isf., 152) use the word *kafara* which has led several historians to maintain that he apostasised (Minovi, 24; Azizi, 187). This interpretation is erroneous, for all the other chroniclers use the verb "to revolt" or a synonym, and al-Balādhurī himself uses the word *kafara* as a synonym of "to revolt".

He compelled the inhabitants to offer him the oath of allegiance, and in order to assure himself of them, he put their goods under sequestration and made them surrender hostages (al-Ṭabarī, iii, 1269, 1273). In addition, he had imprisoned "all those whom he believed to hate him in secret" (*Kitāb al-ʿUyūn*, iii, 399; Miskawayh, vi, 504), from amongst the inhabitants of Sāriya, Āmul, Rūyān and western Ṭabaristān (al-Ṭabarī, iii, 1273-4, 1278, 1283). He had the ramparts of Āmul, Sāriya and Ṭamīsha demolished, which alerted ʿAbd Allāh b. Ṭāhir (Ibn Isf., 150-2; al-Ṭabarī, iii, 1274-5). However, the inhabitants of Āmul sollicited the intervention of al-Muʿtaṣim, who decided finally to put an end to this prince-governor who had revolted (Ibn Isf., 153-4).

Ṭabaristān was surrounded on all sides by five armies sent by ʿAbd Allāh b. Ṭāhir (to the east and south-east) and al-Muʿtaṣim. Māzyār believed himself secure, for he had recalled his brother Kūhyār, to whom he had entrusted the defence of the Ḳārin Mountains (al-Ṭabarī, iii, 1295), and his nephew Ḳārin b. Shahriyār, charged with defending the Sharwīn Mountains and the eastern chain as far as Djurdjān (al-Ṭabarī, iii, 1283). As for the rest of the routes of entry into Ṭabaristān, his confidants Sarkhāstān and al-Durrī had to prevent the entrance of troops, the first from Djurdjān, the second from al-Rayy (al-Ṭabarī, iii, 1295-6).

Seeing himself surrounded, Māzyār tried to disencumber himself of the prisoners by rousing *al-akara al-mukhtārīn min bayn al-dahāḳīn*, but his manœuvre miscarried (al-Ṭabarī, iii, 1278-80 and not 1269, which has inspired more than one commentary of it as a social, agrarian, Mazdakite movement etc.). The collapse of Māzyār was quick; some soldiers of Sarkhāstān brought in some soldiers of al-Ḥasan b. al-Ḥusayn with whom they had fraternized, and not Ṭamīsha was taken by surprise (al-Ṭabarī, iii, 1278-80). Ḳārin b. Shahriyār surrendered all the heartlands of his possessions and the Sharwīn Mountains to Ḥayyān b. Djabala in exchange for the promise of his restoration as prince (al-Ṭabarī, iii, 1282-3). Two

brothers, Muḥammad and Dja'far b. Rustam, rallied the soldiers of Rūyān and some fortresses of Kalān and Shālūs against their commandant, the brother of al-Durrī, who had surrendered to Muḥammad b. Ibrāhīm (al-Ṭabarī, iii, 1299). Having learnt of these successes and the execution of Sarkhāstān and al-Durrī, who had both tried to take flight, the inhabitants of Sāriya and of Marraw rebelled the same day, the 13th Sha'bān 225/18th June 840 (al-Ṭabarī, iii, 1299). The decisive blow was struck against Māzyār by his brother Kūhyār, who was sollicited by all the generals to deliver Māzyār to them in exchange for his own restoration (al-Ṭabarī, iii, 1286-8, 1291, 1296-7). Kūhyār delivered him finally to al-Ḥasan b. al-Ḥusayn in Sha'bān or in Ramaḍān 225/June-July 840 (al-Ṭabarī, iii, 1299). Māzyār was escorted to Sāmarrā, where he arrived in Shawwāl/August (al-Ṭabarī, iii, 1303). Al-Afshīn was not arrested until 4th Dhu 'l-Ḳa'da/5th September, not after having been denounced by Māzyār, but on the pretext of having been the instigator of the revolt of Mankdjūr in Ādharbaydjān (al-Ṭabarī, iii, 1305). His trial took place the very next day (al-Ṭabarī, iii, 1303) and Māzyār was cited as witness for the prosecution. It is remarkable that Māzyār was only reproached in the course of his interrogation for having revolted and not for having abjured the faith. Māzyār accused al-Afshīn of being the instigator of this revolt, but his statements seem inconsistent and most sources say that he retracted (al-Ya'ḳūbī, *Ta'rīkh*, ii, 583; al-Ṭabarī, iii, 1298; Ibn al-Athīr, vi, 363). Māzyār was condemned to be flogged, and expired after having received several hundred blows (al-Ṭabarī, iii, 1303). The Ḳārinids disappeared as a dynasty, more especially as Kūhyār was executed by the Daylamī guards of Māzyār for his "treason" (al-Ṭabarī, iii, 1293-4). Ṭabaristān was thereafter administered by the Ṭāhirids (Ibn Ḥawḳal, ii, 381, tr. 370).

Bibliography: Sources: Apart from the chronicles of Ya'ḳūbī, Balādhurī, and Ṭabarī—whose information is taken up by the *Kitāb al-'Uyūn*: *Historia Chalifatus al-Motacim*, Leiden 1849—Miskawayh, Bal'amī, Ibn al-Athīr, etc., one should note above all: Ibn Isfandiyār, *An abridged translation of the History of Ṭabaristān*, Leiden 1905 (Persian text completely edited at Tehran 1933), and Ẓahīr al-Dīn, *Geschichte von Ṭabaristân, Rûyân und Mâzandarân* (Persian text), St. Petersburg 1850. (M. Rekaya)

KĀRĪZ [See ḲANĀT].

KARKADDAN, preferable to *Karkadann*, and KARKAND (fem. *karkanda*, Maghribī, *kerkedān*) are arabicized forms of the Persian *kargadān* from Pahlavi *karg*. They denote primarily the Rhinocerotidae of India and the East Indies including (a) the Indian rhinoceros (*Rhinoceros unicornis*), also called *mirmis*, *ziba'rā*/*zib'arā* and *sinād*; (b) the rhinoceros of Java (*Rhinoceros sondaicus*), which al-Bīrūnī calls by its Sanskrit name *kunda*; and (c) the rhinoceros of Sumatra (*Didermoceros sumatrensis*), which is Persian *nishān*, becoming *nisyān* and *nūshān*.

Well before Islam and the Muslim conquest of Persia, the Arabs knew the African species of rhinoceros through Ethiopia. They kept the local names and arabicized them, so that the Black Rhinoceros (*Diceros bicornis*) becomes *ḥarīsh*, *ḥarīs* (from *arwaharīs*, *wārwahrīs*, "a large horned beast"), *khirtīt* and *kharṭīṭ*; Burchell's Rhinoceros or the White Rhinoceros (*Ceratotherium simum*) became *hirmīs*, *abū ḳarn*, *umm ḳarn* and *'anaza*. These pachydermata were known to the Romans; first, Pompey offered one to the circus games in 55 B.C. and Later, the Emperor Domitian depicted them on his coins. An excellent picture of one is preserved in the celebrated Palestrina mosaic. In Islam, with the arrival of the 'Abbāsid dynasty, the term *karkaddan* seems to have become synonymous with *ḥarīsh*.

Because they live in the same habitat, the rhinoceros is often found in literature associated with the elephant (see FĪL). They are both known for their weight and prodigious strength, but the elephant, long subjugated to the service of man in the Indies and Persia, was familiar to all, while the fierce and sensitive one-horned beast (*waḥīd al-ḳarn*, from the Greek μονόκερος) was almost unknown in the Near East. In fact, it became the source of a group of fabulous legends which resulted in the myth of the Unicorn, not only in Islam but also in Christianity. Popular credulity soon served to place it among the fantastical animals, and the *Ikhwān al-ṣafā'*, preserving this mysterious atmosphere in their *Rasā'il* (Beirut 1957, ii, 258-62), suppose it to be the vizier of the phoenix (*'anḳā' mughrib*) in the course of the animals' law-suit against man.

It should be remembered that the more or less extravagant accounts about China, the east Indies and this Asiatic animal which were already known in Persia had been channelled through India or heard from the mouths of merchants. It was highly praised for the special virtues of its nasal spur, which was believed to be a horn. In fact, it is only an excrescence of the skin made of compressed hair and without any bony support. It was, therefore, in simple good faith that one of the ancient Greek doctors, Ctesias, became the propagator of a fable which he had told to him. He had been in the service of Artaxerxes, and on his return to Cnide about 398 B.C. he compiled his *Persica* and his *Indica* (summarized 1300 years later by Photius, patriarch of Constantinople) in which he mentioned the "white donkey", the unicorn of the Indies (ἰνδικὸς ὄνος). The name is taken up again by Aristotle (*Hist. Animal.*, I, 118) and translated *ḥimār hindī* by al-Djāḥiẓ (*Ḥayawān*, vii, 123).

From the description given by Ctesias arose the perpetual confusion on the part of most subsequent authors, whether Muslims or not, between two animals: the single-horned rhinoceros and the swift Antilope Cervicapre with straight spiralling horns. This animal took pride of place in Hindu mythology. The confusion was carried over into Arabic by cosmographers, naturalists and lexicographers with the terms *ḥarīsh* and *karkaddan*. With certain writers these terms denoted only the rhinoceros, and then with others only the Cervicapre (so al-Ḳazwīnī and Abū Ḥayyān al-Tawḥīdī—see the margin of al-Damīrī, Cairo 1356/1937, i, 233). Finally, with a third group the two animals blended into a famous

quadruped figure like that already presented in Greek by the Latin zoologist Aelian (*De natura animalium*, XVI, 20) under the hellenized Indian name of καρτάζωνον/καρκάζωνον. The Persian *kargadān* can be recognized in this word, and some philologists would see the Sanskrit *kartajan* (in the sense of "master of the wilderness"). By contrast the same Aelian speaks in another chapter (XVII, 44) of a ρινόκερως, "horned nose", a formidable enemy of the elephant which he impales on his horn, but Aelian makes no comparison with the previously described "monoceros". Later, Pliny the Elder and then Julius Solinus (*Polyhistoria*, tr. A. Golding, 1587) augmented the unicorn's monstrosity by giving him a horse's body, elephant's feet, swine's tail, a deer's head and a long slender horn, with a terrifying appearance, in the middle of the forehead.

In the end, the animal became the terror of man and every beast in his vicinity fled "a hundred parasangs away". Such an animal had been supposedly produced by the crossing of an elephant with a mare, and it was the only horned soliped. It was famed for the speed of its running. According to the sources, the fertile female of the species carried its young from three to seven years, and the young acquired all its teeth in the first year so that it could push its head from its mother's womb and browse on the foliage in passing. As soon as it was born, it ran away swiftly to escape the licking of its mother's tongue which bristled with prickles, and this formidable licking was one of the "Chinese tortures" inflicted on condemned men.

The *karkaddan* could live 700 years, but was not able to reproduce until the age of 50. Its impenetrable leather was used by the Chinese to cover their breastplates, yet the monster was moved by the cooing of a turtle dove, whose company it sought. Similarly, it would dart to the side of a young virgin positioned in the forest to attract it. Pretending to suck at the milkless bosom, it would drop intoxicated (*nis̲h̲yān*) and give itself up to the hunters all around, who would kill it and remove its precious horn. This last fable suggests the famous "Lady of the Unicorn" story of mediaeval Christianity. But the main interest of this zoological rarity remained that single horn, with its special extraordinary properties (*k̲h̲awāṣṣ*).

In Arabic, one of the earliest if not the earliest occurrences of the *karkaddan* is found in the important anonymous chronicle [see AL-SĪRĀFĪ and SULAYMĀN] on India and China (*Ak̲h̲bar al-Ṣīn wa'l-Hind*, ed. and tr. J. Sauvaget, Paris 1948, § 28), on which most of the Muslim geographers and cartographers, especially al-Masʿūdī (*Murūd̲j̲*, ed. and tr. Pellat, §§ 430-2), have largely drawn. Sauvaget translates as follows: "The *vichān* recorded in the region of Dharma is none other than the rhinoceros. It has on the front of his forehead a single horn and in this horn is a mark [which is] the representation of a creature like [for example] a picture resembling a man. The horn is entirely black and the picture placed in the middle is white. This rhinoceros is smaller in height than the elephant and it is almost black in colour. It resembles the buffalo but is so strong that no other animal has strength like it. It has no joint in the knee or the ankle; from its foot to its haunch is just one single member. The elephant turns tail before it. It chews the cud like oxen and camels and it is permitted [to consume] its flesh; we have eaten it. It is numerous in this Kingdom, in the jungle, and is found in every region of India; the horns which come from these beasts are very beautiful. In the horn there may happen to be the picture of a man, a peacock, a fish or even other pictures. The Chinese make belts of these and the price of them in China reaches 2,000-3,000 dīnārs or more according to the beauty of the picture." The *Chronicle* further adds that there were imported into China "ivory, incense, copper ingots, sea shell ... and this *vichān* which I have described and which is the rhinoceros".

The reason for the fame in China of the rhinoceros horn, itself called *karg/kark*, *k̲h̲irtīt*, *k̲h̲artūt*, and *k̲h̲utū* (see Ibn al-Akfānī, *Nuk̲h̲ab al-d̲h̲akhā'ir*, in *Machriq*, xi (1908), 764 f.), which is given here, is not the only one. Indeed, the alchemists and magicians of antiquity in Ethiopia as well as in the Indies had noticed a chemical reaction, in that this organic matter swelled when brought into contact with certain poisonous products. This property immediately aroused the interest of eminent persons. Those who were ceaselessly exposed to intrigues and plots saw in this the "touchstone" to reveal poisoned drinks and dishes. The Chinese and Abyssinian princes then became accustomed to fashioning bowls, goblets and even the handles of knives from it, imagining that they would thus protect themselves from the treacherous intentions of their enemies. To plunge again into the realm of the fabulous, it was but a short step for the therapeutists from the idea of a poison test to suggesting it as an antidote, and from there they did not hesitate to attribute exceptional properties to the horn, whole or pulverized. From east to west it was presented as a panacea which was sought after at great expense.

The one who possessed this sovereign remedy was protected from the evil eye and spells; he escaped all accidents, including his horse falling; mere contact with the horn instantly cured colic and a woman in childbirth was instantly delivered by it; powdered and diluted it could be administered to cut short an epileptic fit and the convulsions of a maniac; it could even neutralize the effects of venom. Finally, and above all, this powder, called *obat* among the Asiatian pharmacists, was the most effective of a number of aphrodisiacs and was able to overcome senile impotence. In short, the product had such success that the apothecaries, druggists, healers and charlatans were not able to meet the demand and had recourse to substitute products, introducing not only *unicornum verum* but also *unicornum falsum* to the drug market. For most of the time, both of them were in fact no more than the long tooth on the spur of the narwhal (*Monodon monoceros*) *ḥarīs̲h̲ al-baḥr*, the tusks of the walrus (*fīl al-baḥr, fazz*) or even those of the mammoth exhumed from the Siberian soil. All this ivory would arrive from the far north by the fur-traders' route; Bulg̲h̲ār [*q.v.*] was one of the chief exchange centres. The true rhinoceros horn actually reached China by caravans from the kingdom of Assam (*Ḳāmarīsa*), or by Muslim coasters which obtained it from the ports of the Irrawadi delta, from the gulf of Siam (Kirdand̲j̲), in Cambodia, Champa (Annam), Malaya [see BAḤR AL-HIND] and in the Red Sea from Ethiopia. Considering the fact that the traffic was so intense, if there had not been some falsification in the rhinoceros horn trade, this not very prolific animal would certainly have totally disappeared from all the countries which knew it for many centuries, as is the case in Borneo. A census of 1937 showed that only 70 were recorded in the whole of Malaya.

In the west, confusion persisted until the 12th/18th century about the identity of the one-horned beast/unicorn and this confusion had been reinforced by the way the Septuagint translators in their transla-

tion of the Bible into Greek had translated the Hebrew term *re'em*. The term occurs seven times in the Bible, three in the Psalms of David, and designates a fierce and dangerous desert animal they rendered as *monokerōs*, after hesitation, without any other precise details. The Latin Vulgate took over the name as *unicornus* and so established the unicorn in vulgar Latin.

Meanwhile, there were some clear minds on the Arab side which could not accept all these extravagant ideas about the position of the *karkaddan-ḥarīsh*; they were certain that they recognized in this term the true pachyderm, the Asian species as well as the African. Among these was the geographer al-Yaʿḳūbī (*Buldān*, tr. G. Wiet, Cairo 1937, 191). Of course, al-Djāḥiẓ himself does not allow himself to tell stories about the animal, and he denounces the ridiculous credulity of the scholars of his time on this subject (*Ḥayawān*, vii, 124); but he was not able to draw the parallel between the *ḥimār hindī* of Aristotle and the *karkaddan-ḥarīsh*. His suggestion about the route followed by the horn-traders is particularly imaginative (op. cit., vii, 129). According to him, it arrived by caravans in Baghdād and left again by sea from Baṣra for China. Unfortunately, he does not say from where it came, and so it is not clear whether he is discussing the true horn from India or Abyssinia or the false horn from Lapland.

Two centuries later the naturalist and Christian doctor ʿUbayd Allāh b. Djibrīl Ibn Bukhtīshūʿ [see BUKHTISHŪʿ], a polyglot like his ancestors, removed all ambiguity by affirming that "... the *karkand* is the animal which the Arabs call *ḥarīsh* and the Armenians *ri'm/rīm* ..." (in *ʿIḳd al-djumān*, ms. *Dār al-kutub*, Cairo). It must be made clear that the Biblical *ri'm/rīm* has no connexion with the white gazelle (*Gazella leptoceros*) to which the Arabs later gave this name [see GHAZĀL]. With these far-sighted authors can be included other "debunkers" of the fabulous one-horned beast, invented by some traveller-explorers who had encountered the rhinoceros in the course of their wanderings in Asia. Among the Christians there was Marco Polo, who saw the pachyderm in Sumatra in 1291 and who gave an accurate description of it, though slightly permeated with disappointment (*Description du Monde*, French version by L. Hambis, Paris 1955, 243). *Ca.* 40 years later the Muslims had the evidence of the Moroccan Ibn Baṭṭūṭa [*q.v.*], who had had the opportunity of observing the beast three times in the Punjab in 734/1333 (*Riḥla*, Cairo 1346/1928, ii, 4). He was impressed by the size of its head and quotes the local saying that "the *karkaddan* is all head". Mounted on an elephant, he even had to take part in a hunt, together with the Sultan of that place, and he was able to see the rhinoceros brought down and the trophy with its horn displayed in the prince's encampment. But the traveller does not say whether or not he tasted the flesh of the animal, as did the writer of the Chronicle.

As the legends surrounding the *karkaddan* were gradually forgotten, the question of the permissibility of eating its flesh no longer met with any objection, for the animal was recognized as an herbivore. But in the Middle Ages, in an atmosphere charged with the miraculous, certain strict legal writers were able to envisage a prohibition on its consumption if it could be shown that the beast resulted from the cross-breeding of a mare and an elephant. The question has been resolved in time with more exact knowledge of the pachydermata. In our own time, in Islam as elsewhere, the rhinoceros is no longer regarded as a curiosity except in a zoo, and there are only but a few small Muslim tribes in black Africa who hunt it as meat.

Iconography. In the plastic arts of Islam, the rhinoceros has not aroused the interest accorded to many other better-known animals, especially the elephant [see FĪL]. Without the legends and the wonderment provoked by its nasal excrescence the *karkaddan* would have remained completely unknown to Muslim artists in Arab countries, and so it is rather in the works of Persian, Moghul and Indian artists that almost true-to-life representations of the formidable pachyderm are to be found.

Arab painting itself seems to have been limited to imaginary interpretations of the fabled one-horned beast without defining it in any greater detail than the unicorn was defined in Christian iconography. It can be found depicted in the most varied of guises—antelope, equida, bovida, feline and, above all canida; this last is perhaps due to a linguistic type of confusion arising from the similarity of spelling in Pahlavi of *gurg* "wolf" and *karg* "rhinoceros". The "Histories" of Gushtāsp and Isfandiyār, as well as the accounts of Iskandar and Bahrām [*q.v.*], give examples of word plays between *suturg* (= "large"), *buzurg* (= "big"), *gurg* (= "wolf"), *targ* (= "helmet"), *tagarg* (= "hailstone"), *marg* (= "death)" and *karg* (= "rhinoceros") which are often difficult to explain. Further, these four creatures are believed to have succeeded in the exploit of killing a *karg* (= *karkaddan*), an exploit to be compared with one of the twelve tasks of Hercules (see W. Ley, *op. cit.*, 19). The rhinoceros can be discovered in very rare ʿIrāḳī manuscripts of the 7th/13th and 8th/14th centuries included among the monsters and the fantastic animals. These are illustrated and describe various types of beast and cosmography like those of al-Ḳazwīnī (*ʿAdjā'ib*, in ms. B.N. Paris, no. 2775, 682/1283; ms. Bayer. Staatsbibl. Munich, C, Ar. 464, 678/1280; ms. Freer Gallery of Art, Washington, no. 5451, *ca.* 782/1380); of Ibn Bukhtīshūʿ (*Manāfiʿ al-ḥayawān*, ms. Pierpont Morgan Libr., New York, no. 500, *ca.* 694/1295); of the anonymous *Naʿt al-ḥayawān* (ms. Brit. Mus., no. OR. 2784); of Ibn Durayhim al-Mawṣilī (*Manāfiʿ al-ḥayawān*, ms. Escurial, Madrid, no. Ar. 898, dated 755/1354; see E. de Lorey, *Le Bestiaire de l'Escurial*, in *Gazette des Beaux Arts*, xiv (1935), 1-11); of al-Djāḥiẓ (*al-Ḥayawān*, ms. unic. Bibl. Ambros., Milan, no. Ar. A.F.D. 140; see C. J. Lamm and O. Löfgren, *Ambrosian fragments of an illuminated manuscript containing the Zoology of al-Ǧāḥiẓ*, in *Univ. Års.*, Uppsala 1946); and of Ibn Ghānim al-Maḳdisī (*Kashf al-asrār*, ms. unic., Süleymaniye, Istanbul, Kara Ismail 565).

With the initiative of the non-Arabic styles from the second half of the 7th/13th century, and with the Persian schools which followed them up to the

12th/18th century, pictorial art took on a much more realistic approach in its treatment of animal subjects. In it the rhinoceros again became simply a large game animal, a trophy which every prince would like in his bag and which he tracked from high up on his elephant, rounding them up in great droves like the Sāsānid monarchs. The *Bābur Nāma* [*q.v.*] in its Persian translation of the 10th/16th century by ʿAbd Raḥim Khān (ms. Brit. Mus., no. Or. 3714, fol. 352; [see FĪL], pl. XXIII, and S. I. Tulajev, *Miniatures from a 16th century manuscript*: *Bâbur Nâmah*, in *Marg*, xi (1958), 45-8), offers a typical example of a return to the more accurate forms of the animal (see Eletr M. Riad, *Birds and animals in Mughal painting*, in *Bull. Coll. Arts*, Baghdad Univ., i (1959), 12-18). The miraculous element has remained and it is a very commonplace animal, worthy of popular imagery, in what can be made out to be the rhinoceros in certain miniatures of the 10th/16th century, like the one which H. R. d'Allemagne has reproduced on the frontispiece of his fine work on Persia (*Du Khorassan au pays des Backhtiaris*, Paris 1911). He has taken it from a Persian manuscript (Collect. Verver), and it represents the animals coming in a delegation up to the mullah Djāmī [*q.v.*] to complain of their ill treatment at the hands of man, and the rhinoceros which walks beside the elephant has rather the profile of a bear. But it is interesting that the miniaturist has dressed it with the same elaborate ornaments as its noble neighbour, wishing thus to put them both on an equal footing and giving the impression that the *karkaddan* too was in the service of man. Also distinctly ingenuous are the animal figures illustrating a copy of the *Cosmography* of *Shaykh* Aḥmad Miṣrī (*Ķānūn al-dunyā waʿadjāʾibu-hā*, ms. Bibl. Musée Topkapı Sarayı, Istanbul, Revan 1638, 970/1563) as are those of a copy of al-Ķazwīnī *ʿAdjāʾib*, ms. Bayer. Staatsbibl., Munich, no. C Ar. 463, of the 12th/18th century), both designed for the intellectual curiosity of a very wide-ranging public.

Apart from the miniatures, the rhinoceros appears in the animal compositions of great woollen Indian carpets woven in the 11th/17th century and intended seemingly to decorate the mosques and palaces of the great Mughals. The technique is Persian, but the motif is typically Indian, like the fragment preserved at the Musée du Louvre (Legs Jeuniette) and reproduced by G. Mignon (*Manuel d'Art musulman*, Paris 1927, ii, 383). Quite a fantastic faun can be seen there in dark tints, among which in lighter shades elephant and rhinoceros heads stand out clearly and with astonishing reality. Probably in an allusion to some legend, a hare rises from the mouth of the pachyderm towards its horned nose. Scenes like this evoke a mythology which is very strange to the Muslim world.

Investigations into modes of artistic expression other than the miniature and tapestry, by their negative results, lead to the certainty that these two techniques alone have given a place to the rhinoceros—and a very modest place in the light of those occupied by lions, panthers, cheetahs, gazelles and elephants, not to speak of the world of birds—in all the industrial and plastic arts of the Muslim world.

ĶARĶANA (Kerkennah; local pronunciation: Ķarķna) is an archipelago lying off the eastern coast of Tunisia, 15 miles from the Sfax coast (between 11° and 11° 20' E. and between 34° 36' and 34° 50' N.). It consists of two main islands; to the north-east is the larger one of Kerkena (Cercina to the ancient world, Sharķī to the geographers) and to the south, Mellita (Cercinitis). The first stretches from north-east to south-west in the shape of a spear head 27 km. long and averaging 7 km. in width. The second assumes the shape of a triangle with a base of 14 km. and a height of 7-8 km. Formely it was linked to the larger island by a causeway built by Romans, but it has long been separated from it by a narrow strait, al-Ķanṭara, 800 m. wide and fordable at low tide; a narrow channel had been cut out to allow boats to pass through. To-day a road, which has replaced the ancient causeway, reconnects the two islands. The archipelago also includes seven inhabited islets, four of which border the northern coast.

The total area above sea-level is about 69 sq. miles of more or less arable land. The archipelago is supported by an immense underwater shelf which extends from Ras Kapoudia (La Chebba) in the north to the Maharès parallel in the south. It is partially separated from the "Channel of Kerkennah" where the depth of the water is almost 20 m. Otherwise, to find depths of 10 m. it is necessary to go up to 40 miles north of the archipelago. The depth of the water around these islands varies from zero to 5 m. with long, inshore stretches of one metre. Al-Bakrī (*Descrip. de l'Afr. Sept.*, 51) remarked: "In the sea around Sfax there is an island called Karkina, which occupies the centre of El-Casir. It is situated ten miles from Sfax beyond a sea which is dead and not very deep, and the surface of which is never rough." El-Casir here denotes the broad sandbanks, and because of these numerous banks it is possible to reach the south and south-east of the islands only by the "holes" (*baḥīra*—light depressions of 3-4 metres surrounded for several feet by shallows) and by the "wādīs". These underwater wādīs are vast depressions hollowed out in the middle of the sandbanks; they can be from 5-12 m. deep and as much as 300 m. wide. These wādīs never occur just on the coast and are all south of the islands or on the southern slope of a bank; they have been formed by swell currents and are maintained by the interplay of the ebb and the flow. An incoming wave is partially absorbed by the sand and it goes out again in "a little river in the shape of a hair". This then develops into a large wādī of which one or the other branch merges into a hole where the current carries away the silt.

The islands are very low-lying and the highest points of these little pieces of land, which hardly rise from the sea, scarcely exceed 13 m. But the "land" of the Kerkenians is not restricted to the 36 km. on which their archipelago is stretched, from the marabout of Sīdī Yūsuf (Mellita) to Bordj Inf al-Rakīk or to the little island of Roumedia. Their "land" also includes the many banks which surround the archipelago where they have "sown" their fisheries. Their maritime life is largely governed by the underwater geography.

The south-south-eastern coast is flat and almost rectilinear and the villages along it are numerous, but the north-north-eastern coast is very jagged and the water penetrates into the many *sebkhas* which alternate with arable beds on the larger island. There are no wādīs to irrigate an already mediocre soil or to alleviate the insufficiency of the rain (less than 200 mm. per annum). A few wells are used for the live-

stock and for watering the ground and most of these give brackish water. Before the sinking of an artesian well in 1953, the Kerkenians used cisterns for their drinking water.

History. The Greek authors scarcely mention Cercina (Herodotus, *Hist.*, IV, 195; Agathemerus, *Hypotyposis*, V.21,22; Diodorus Siculus, *Bibl. Hist.*, V.12,4; Plutarch, *Parallel Lives.*, Dion, 25, Marius, 40; Strabo, *Geogr.*, bk. II, ch. 5,20 and bk. XVII, ch. 3,17). Polybius, (*Hist. Gen.*, III, 96,12), states clearly that at the time of the second Punic war the consul Cn. Serv. Germanus landed at Cercina (217 B.C.) after he had ravaged Menynx (D̲jerba), and spared it only on the payment of a ransom of 10 talents of silver.

There are numerous details in Latin writers. In 195 B.C. while trying to flee towards Antioch from Syria to escape from the Romans, Hannibal took refuge at Cercina. But fearing lest he be followed by the boat-owners from the port, he had tents pitched for himself and his retinue, using yards and sails. He offered his hosts a sumptuous feast and leaving them to enjoy their libations seized the opportunity to flee (T. Livy, *Hist. Rom.*, bk. XXXIII, ch. 48). In 88 B.C. Marius and his son took refuge there in a fishing boat. At the time of the civil wars between Pompey and Caesar, Sallust received the order to take refuge with his vessels on the island of Cercina for "the republicans had laid up some provisions there". (*Bell. Afr.*, VIII, 2, 3 and XXXIV, 1-3). Towards the beginning of the Christian era, as a punishment for his culpable relationship with the daughter of Augustus, C. Sempr. Gracchus was sentenced to be deported there for fourteen years and he was executed in the year 15 (Tacitus, *Ann.*, I, 53 and IV, 3). Under Diocletian the archipelago paid allegiance to Byzantium under the supervision of officials living in Hadrumete (Sousse). There were two cities there; Cercina on the larger island and Cercinitis on the little island of Mellita, of which there are still some remains on the northern coast. A type of Christianity seems to have developed there (*Notic. episc. Byz.*, 47), for ruins of Christian sanctuaries have been brought to light.

No more mention is made of the archipelago until the 5th/11th century. In 491/1098 it was in the hands of the Zīrids (that is to say, greater Ḳarḳana, for Mellita was used for pasture by the Sfaxians who sent their animals there (Yāḳūt, IV, 66-7). For the five centuries that Ḳarḳana was to be used as a place of refuge or a beachhead, it was raided several times and its population dispersed or carried off captive.

Taking advantage of the rivalries which separated the Ḥammādides and the Zīrids, Roger II of Sicily imposed his sovereignty on Mahdiyya and undertook a raid on Ḳarḳana: "It is certainly a fine island and is well populated, although there is no town there". (al-Idrīsī, *Descr. de l'Afr.*, ed. Dozy 1866, text 126-7, tr. 150). He took possession of it in 548/1153, but from 1158 he had to face a revolutionary movement. Ḳarḳana was recaptured from the Normans of Sicily by the lieutenants of the Almohad prince ʿAbd al-Muʾmin. A hundred years afterwards Peter of Aragon attacked D̲jerba (1284) and the islands of Ḳarḳana (1287). When Roger of Lauria captured them they were conceded to him "in fief to the Holy See with an hereditary title and under an annual rent of fifteen ounces of gold". It was conceded to Ramon Muntaner, the memorialist captain, by Frederick of Sicily from 1311 until 1315 with "all rights and revenues and the power to do as he wished with it for three years" (*Cronicá (1265-1336)*, ch. 265). Twenty years later, the islanders rose against the Christian powers and recovered their independence (1335). Under the reign of Abū Fāris, there were in 1423 fresh sightings of the men of Aragon. The Kerkenians could not resist; their population was decimated and a great number were taken prisoner—3,450 to judge from the *Fragment. Hist. Siculae*, (cols. 1095-6). In 1510 the archipelago became the bone of contention between the Turks and the Spaniards, and Peter of Navarre led an unfortunate expedition there against an island which he found almost empty "with a few poor Berber hamlets" (Marmol, *l'Afrique*, 536-8). For a time it became a vassal to the Spanish, but it was taken again by the Turks in 1560. It had to suffer a new Spanish invasion in 1576 in which 1,000 Kerkenians were taken captive, and 15,000 sheep were carried off. Other raids occurred in 1596 and 1611.

The people who remained in the seven villages mentioned by the *Relación anónima de los meritos y servicios de D. Alvaro Basan* (1576) "live on the produce of the palms and by fishing, raising numerous sheep, weaving wool and growing vines, figs and olives".

The Ḳarḳana islands were gradually repopulated. One account from the beginning of the 19th century mentions ten villages on the larger island and the small town of Mellita on the smaller one. The successive influxes of population were of very varied origin. Many came from eastern Tunisia, a few marabout families must have been of southern Moroccan origin, others came from little Syrte (D̲jerba, Zuwag̲h̲a), but the houses, clothing customs and language all point especially to a sub-Sahelian influence. The case of Mellita must be examined separately, because this island was only recently populated by people from *blēd el-aʿrāb*, from semi-nomadic regions of the Sahelian or the Sfaxian hinterland. While the inhabitants of greater Ḳarḳana pronounce their words like city dwellers, those of Mellita have a bedouin type of speech.

The population of the archipelago scarcely exceeds 13,000 inhabitants, but more than 25,000 live on the mainland. Kerkenian emigration is beginning to develop since Ḳarḳana is no longer isolated. Indeed, for a long time the inhabitants were forced by isolation to be self-sufficient within a limited economic pattern and at village level there was a strong social cohesion.

Kerkenian life. As islanders the Kerkenians seek their subsistence and find their livelihood primarily from the sea. Isolated by the shallows which encircle the archipelago, these sea-folk try to take full advantage of them by erecting barrages to catch fish and establish fishing grounds (*s̲h̲ərfīya*) there. The palm tree is very extensive on the archipelago, and its branches mark the paths in the fishing grounds and serve as hurdles in the fishing traps. They hang up their nets (*drīna*) on the projecting points of the trunk. As lagoon fishermen, they also know how to take advantage of the natural habits of the fish like the flying mullet. To kill it they use the water falling from a simple channel (*dəmmāsat əl-bərr*) which is discharged into the sea in the direction of the flow. Overpopulation necessarily drove the workers more and more to the sea. A man by purchase or by hiring would lay claim to an area for fishing, such as the very smallest part of a sandbank, where it was possible to establish a fishing ground, set bait for the octopus or gather sponges.

The shallows extend very far out to sea. To travel among them the Kerkenians have devised a boat, the *lūd*, which is broad and without a keel and therefore well adapted to the contours of the sea-bed. They use it for going to sell their fishing produce on the coast and for going even far as Greece to deliver and trade

in dried octopus. Renowned as sailors, they have tackled the business of transporting goods from port to port along the coasts and they have crossed the sea as far as the Orient on board their two-sailed santel, which is well suited to them.

The coastal trading with the stops made on land gives them the opportunity to learn new techniques here and there and to bring back working materials, together with a useful replenishment of supplies. They obtain esparto (*ḥalfa maḥbūla*) in this way, and to gather this they have to go to the Sahelian hinterland or the gulf of the lesser Syrte.

The Kerkenian sea is not really sufficient to guarantee a food supply, so they have to look for complementary activities in the limited agriculture the archipelago permits or as craftsmen. They use everything from the palm-tree: the fibres of the trunk, the tigelles, the palm branches and the stem. Taking advantage of the magnificent retting bed for the esparto offered by the shallows, they undertake there the twisting of alfa for ropes or for plaiting baskets and camel panniers.

The day comes when the islander's ease of adjustment to difficult circumstances, his connexions with the coast, his success in his studies—Ḳerḳana benefits from an exceptional percentage of children attending school—give him the chance to emigrate, and then he will leave the archipelago, but not without leaving some of his family there. Doing seasonal activities or employment in the fishing or shipping companies, being a minor civil servant in the large towns, holding important management posts—almost 30,000 Kerkenians live in this way in Sfax, Sousse, La Goulette, Tunis, outside the archipelago to which faithfully they love to return: "*yā ḳarḳna, yā ḳarḳāra*", "O Kerkena, you always bring back your children to yourself!"

KARKARN [see BISBARĀY].

AL-**KARKH**, a loan word from Aramaic *karka* meaning "fortified city", "city" (Fraenkel, *Fremdwörter*, xx; Pauly-Wissowa, iv, 2122, 2124; *Supplement*, i, 275, 283). In Islamic times, the word is associated with various towns. Found in areas of Aramaic culture before the Islamic conquest, such towns are distinguished from one another by adding the name of their geographic location, *e.g.*, Karkh Baghdād, Karkh Sāmarrā (cf. Yāḳūt, *Mushtarik*, 368-70; *Muʿdjam*, iv, 252-7).

In Baghdād, al-Karkh refers to a specific area (Bāb al-Karkh) and more generally to the whole of the west side below the Round City of Caliph al-Manṣūr, the founder of Islamic Baghdād (cf. Iṣṭakhrī, 84; also Ibn Ḥawḳal. ed. Kramers, 241-2). According to Yaʿḳūbī, whose account reflects conditions of the 2nd/8th century, the limits of al-Karkh in length were Ḳaṣr Waḍḍāḥ (north) and the Tuesday Market (south). The limits in width were the fief of al-Rabīʿ (west) and the Tigris (*Buldān*, 246; see Le Strange, *Baghdad*, Maps III, IV and VII).

As the Aramaic name shows, the al-Karkh quarter was already in existence before the foundation of Baghdād by al-Manṣūr (145/762), as a small independent township said to have been founded by the Sasanid Shāpūr II (309-379 A.D.), and which like the other earlier settlements on the site of the future capital of the caliphs was no doubt mainly inhabited by Aramaic Christians.

Before the building of the city of al-Manṣūr, the old market of the west side (Sūḳ Baghdād) was situated in al-Karkh, and there is reason to believe that the Karkh markets continued to service the large population of that area when the Round City was built (Ṭabarī, ii, 910, 914). Towards the end of his reign, in 157/774 al-Manṣūr decided to redevelop the commercial districts to the south of the Round City and re-locate certain markets that had been situated there. To this end government funds were allocated to various entrepreneurs to build their own establishments in al-Karkh. The government on its part also widened the network of roads leading in and out of the suburb (Khaṭīb al-Baghdādī, Cairo, i, 79-82; Ṭabarī, *Annales*, iii, 323-4; Yaʿḳūbī, *Buldān*, 241).

Al-Karkh was watered by the Nahr ʿĪsā [*q.v.*], the most northerly large canal of the Euphrates in ʿIrāḳ, as well as by its branches, the Ṣarāt and the Karkhāyā. The latter is the "Karkhian Canal" which left the Nahr ʿĪsā below the small town of al-Muḥawwal near the village of al-Barāthā (see Yāḳūt, i, 665) and supplied the southern part of the western half of Baghdād, *i.e.*, the mercantile quarter and its neighbourhood, with its branch channels, which in places ran underground. Numerous bridges carried the busy traffic over it. On the Karkhāyā and its canal system see Ibn Serapion, ed. Le Strange in *JRAS* (1895), 17-26, 286-8, 292-3; Suhrāb, *ʿAdjāʾib*, ed. von Mžik, 123-4; al-Khaṭīb al-Baghdādī, Cairo, i, 79-82; Yāḳūt, ii, 252; Streck, *Babylonien*, 85-90; Le Strange, *Baghdad*, 52-56, 63-80; Herzfeld in Sarre-Herzfeld, *Archäologische Reise*, ii, 110. What made al-Karkh commercially advantageous was this intricate network of canals, the most important of which was the Ṣarāt, a waterway large enough to allow for the passage of deep boats, and which connected the Euphrates and the Tigris, the major river systems of ʿIrāḳ.

The suburb, which had its own Friday mosque, was probably considered a municipal entity unto itself, one of several urban aggregations which made up the general metropolitan environment (J. Lassner, in *JESHO*, x, 53-63). Detailed descriptions of the various locations in al-Karkh are preserved by al-Khaṭīb al-Baghdādī, Yaʿḳūbī, and the unedited Mashhad Ms. of Ibn al-Faḳīh, *K. al-Buldān*. The most systematic

presentation is that of Suhrāb, *Aʿdjāʾib* = Ibn Serapion, which is arranged according to canalization.

Al-Karkh was heavily populated by Shīʿīs, and beginning in the 4th/10th century, frequent altercations took place between Shīʿīs and Sunnīs, particularly from the neighbouring Bāb al-Baṣra and Bāb al-Muḥawwal quarters. The area suffered considerable damage during the period of Būyid decline and that of the Saldjūḳs which followed, as the government found neither the inclination nor the funds to sustain the markets (M. Canard, *Baghdād au IVe siècle de l'hégire*, in *Arabica*, ix (1964), 268-87; G. Makdisi, *The Topography of Eleventh Century Baghdad: Materials and Notes*, in *Arabica*, vi (1959), 178-97, 281-309). Under the Būyids, who had ʿAlid sympathies, the already frequent encounters and frictions between the Sunnīs and Shīʿīs of the capital became more and more serious. Bloody street fighting between the two hostile sects, often accompanied by pillaging and incendiarism, was the order of the day. Al-Karkh was usually in the very centre of this civil strife; its inhabitants were always at daggers drawn with the Sunnīs of the adjoining quarters (Bāb al-Baṣra, etc.). Djalāl al-Dawla (416-35/1024-44), under whom the situation had become unusually serious, was even on one occasion, in 422/1031, reduced to take refuge with his Shīʿī co-religionists in al-Karkh. In 445/1053 a considerable part of al-Karkh was laid in ashes as a result of these feuds. A great fire had previously devastated al-Karkh under the Caliph al-Wāthiḳ (227/842-232/847), but the destruction was very soon made good. Al-Khaṭīb al-Baghdādī (5th/11th century) observes that much of the canal system had become silted up in his time and no trace of them can be found today. By the modern period, this once great urban area had been reduced to a truncated section along the river bank.

In course of time, numerous mosques and tombs arose in the area of al-Karkh in the wider sense, by which the whole southern half of Baghdād west of the Tigris was often meant. The most celebrated is the tomb-mosque of the local saint Maʿrūf b. al-Fayzurān al-Karkhī (d. 200/816) and the alleged tomb of Zubayda, the wife of Hārūn al-Rashīd, barely 300 yards south of it. Both mausoleums still exist and are important starting points for studying the topography of old Baghdād. In their present form they were renovated by Caliph al-Nāṣir (575/1180-622/1225), but they have been frequently restored since then. On the tomb of al-Karkhī, which as early as the 3rd/9th century was one of the most popular places of pilgrimage in Baghdād and which lies in the middle of an impressive cemetery as in the ʿAbbāsid period, cf. Streck, *op. cit.*, 159; Le Strange, *op. cit.*, 98-100, 350; Massignon, *Mission*, 49, 108; Herzfeld, *op. cit.*, ii, 172-3. For the so-called grave of Zubayda, see Le Strange, *op. cit.*, 100, 161 f., 350 f.; Massignon, *op. cit.*, 108 f.; Herzfeld, *op. cit.*, 173. On other mosques and tombs in the west side of Baghdād see Massignon, *op. cit.*, 64 f., 94 f.

Al-Karkh was not only the largest but also the most long-lived quarter of the western half of Baghdād. When the quarters around it had gradually fallen into ruins, it stood quite isolated—as early as Yāḳūt's day for example (beginning of the 7th/13th cent.)—like a separate town, as it had been in the earliest period after the foundation of Baghdād. It was a mile distant from the then still inhabited quarter of Bāb al-Baṣra (in the southeast of the old Round City of al-Manṣūr). In the later Middle Ages (cf., for example, Ibn Baṭṭūta in the 8th/14th century) the name of the Bāb al-Baṣra quarter was not infrequently extended to all the quarters of western Baghdād still standing, *i.e.*, even to include al-Karkh; cf. Le Strange, *op. cit.*, 336; Herzfeld, *op. cit.*, ii, 114 f. We may point out here that the topography of al-Karkh and its vicinity in Yāḳūt is not quite in agreement with the other sources. It appears that the local knowledge of the author of the *Geographical Dictionary* at the time of writing was no longer quite reliable, as many of the places had disappeared with no trace. This situation continued into modern times with al-Karkh consisting of but a fraction of its mediaeval environment (cf. Le Strange, 84, 159).

The other important Karkh was that of Sāmarrā, the second imperial capital which was built some 60 miles up the Tigris from Baghdād by the Caliph al-Muʿtaṣim in 836. It was known as Karkh Sāmarrā and also Karkh Djuddān (Yāḳūt, *Muʿdjam*, iv, 255-6). The site, which is older than Sāmarrā, was originally situated at some distance from the palace area; however, as the city grew towards al-Mutawakkiliyya, it became part of a continuous line of occupation extending some 20 miles along the river front. Unlike Karkh, Baghdād which was entirely a commercial district, and was the only area of Baghdād that was entirely devoid of a military colony, Karkh Sāmarrā was a military cantonment housing some of the caliph's Turkish guard under the command of General Ashnās (Yaʿḳūbī, *Buldān*, 258-9; Yāḳūt, iv, 256). Moreover, the Turkish forces were isolated from the general populace. They were permitted to marry only women chosen for them, and no commercial establishments other than a distributive outlet for foodstuffs was to be found there. With the decline of Sāmarrā many areas were abandoned, but al-Karkh continued to be occupied.

(M. Streck-[J. Lassner])

KARKHA (KERKHA), a river in Luristān and Khūzistān, whose source lies in the region of Nihāwand. Its upper and middle course is strictly a tributary of the mountain system of the Zagros, where the valleys run in the same direction as the chains, the watercourses passing at times from one to the other by short transverse gorges. From which results the uncertainty over nomenclature, the rivers changing name with the divided regions that they traverse.

The Karkha is made up of the union in the region of Nihāwand of a certain number of watercourses: Čashm-i Kāẓim, Sura Kunč, Kar Sara, Āb-i Kulan and Sīrwān Rūd. On the first part of its course in a north-west direction the river bears the name of Gamasāb or Gamasiyāb (corrupted to Garasiyāb). Then begins the crossing of some of the folds of the Zagros in a general south-west direction, during which the river receives its name of Karkha; in this region around Bīsutūn it is swelled by the Shādjū,

which itself receives the Kangarshāh, then by the Ḳara Ṣu from Kirmānshahān and finally by the Āb-i Karind. Then striking the chain of the Kabīr Kūh, the river turns towards the south-east, taking the name of Āb-i Ṣaymara and receiving its first important tributary from the left bank, the Kashgan, swelled itself by the Maydan, the Khorramābād and the Kūlkū. On the right bank it is joined by the Laylum and the Āb-i Zāl.

After the confluence with this last, the river, having become the Karkha again, begins its lower course towards the south, its powerful alluvia contributing, with those of the Kārūn, to the obstruction of the Tigris's course. All this region constitutes a genuine delta formed by the convergence of the Karkha, the Kārūn and the Āb-i Diz. As soon as the Karkha reaches the region of Pā-i Pul, the canals begin which link it to the Āb-i Diz and its tributaries, such as the Nahr Tabal Khān and the Nahr Daghdarī. The ruins of Susa lie on one of its eastern branches, which later takes the name of Shawr. The Karkha ends in the region situated to the south of Nahr Hāshim, where it receives the Shaṭṭ al-Djamūz, but one of its branches, thrown back towards the north-west by the thrust of the alluvia of the Kārūn, continues as far as the region of Sūsandjird and the marshes of the Hor al-Ḥawīza (al-Ḥuwayza).

In antiquity, the river was called the Choaspes, a tributary of the Tigris on the left bank, whose waters were so pure that they alone had the honour of being drank at the table of the kings of Persia. The Arab geographers refer to it without giving it a particular name, except, on occasion, that of "river of Susiana" (*nahr al-Sūs*). Ibn Khurradādhbih locates its source in the district of Dīnawar and makes it a tributary of the Dudjayl (Kārūn). Al-Yaʿḳūbī, while recapitulating this last source, makes the river rise in the region of Hamadhān and gives it the name of Hinduwān. Ibn Rusta speaks of a great river running at the foot of Mt. Bihistūn (Bīsutūn), with an important source driving five mills. On the two banks in the region of Nihāwand a black sealing-clay of excellent quality was extracted, according to Ibn al-Faḳīh. On the map of al-Iṣṭakhrī-Ibn Ḥawḳal, the Nahr al-Sūs is marked as watering the town of Susa and finishing near a watercourse (or canal), the Nahr Tīrā; in the riverbed lies the tomb of the Prophet Daniel, an object of veneration and procession on the part of the People of the Book, particularly during the periods of dryness. Al-Muḳaddasī, also speaking of the tomb, refers, with regard to the town of Baṣinnā, to a river called Tigris (Didjla), which is without doubt the Karkha; the river in question ran within a bowshot of the town and drove seven mills set up on some boats. As for the *Ḥudūd al-ʿĀlam*, it tells us that the river of Shūsh rises in "the environs of Karkha on one of the spurs of the mountains of al-Djibāl" and then runs towards the regions of Shūstar (Tustar) and Shūsh (Susa) which it irrigates; however, before reaching the boundaries of the land of Baṣunnay (Baṣinnā), this irrigation exhausts completely the waters of the river.

As a final note the bridge situated between al-Ṣaymara (Ṣaymere) and al-Ṭarḥān (cf. Yāḳūt, iii, 439, Schwarz, *op. cit.*, iv, 472), considered as a masterpiece of construction, may well correspond to the Pul-i Khusraw on the Karkha.

(P. Schwarz-A. Miquel)

AL-**KARKHĪ** [see AL-KARADJĪ].

ḲARḲĪSIYĀ (also Ḳarḳīsiya), a town in al-Djazīra on the left bank of the Euphrates, close to the confluence of the Khābūr, a little above 35° N. Lat. Ḳarḳīsiyā is simply an Arabic reproduction of the Graeco-Roman name (τὸ) Κιρκήσιον, (τὸ) Κιρτήσιον κάστρον or Κιρκίσιον (Κιρκισία in the *Notit. episcop.*, ed. Parthey, 87), Circesium, Syriac Kerkusion, Latin = castrum Circense, "the castle with the circus"; cf. Nöldeke, *op. cit.* (see *Bibl.*), p. 3. Ḥamza al-Iṣfahānī in Yāḳūt, iv, 65, ll. 21 ff., still knew the etymology of the place-name (Ḳarḳīsiyā, arabicised from Kirkīsiyā, from *kirkīs* = Ar. *ḥalba*, hippodrome). The name Circesium for the place at the mouth of the Khābūr in any case first appeared, when a Roman military station was built there. This perhaps may have been even before Diocletian. It was, however, this Emperor who first made the place of great importance by making it a powerful fortress on the extreme frontier of the Roman Empire in Southern Mesopotamia. From this it seems quite impossible that Circesium could have been a latinisation of the Aramaic Karkā = town [see AL-KARKH], as Moritz, *Palmyrene*, 37, supposed; for the opposite view, see Streck, in *ZA*, xxvii, 259.

In the fourth century A.D. Circesium passed into the hands of the Persians by the shameful treaty made by the Emperor Jovian (363). The Arabs next captured it in the conquest of al-Djazīra. The occupation by the Muslims, which took place, apparently without fighting, under the commander Ḥabīb b. Maslama who was sent by ʿIyāḍ b. Ghanm, probably happened in the year 19/640, not 16/637, as many sources say. Cf. al-Balādhurī, *Futūḥ*, 176, and also 111, 175, 178, 179; al-Ṭabarī, i, 2478; Ibn al-Athīr, ii, 409 ff.; Yāḳūt, *Muʿdjam*, iv, 65 ff.; Weil, *Gesch. der Chalifen*, i, 82; Caetani, *Annali dell' Islām*, ii, 402, iii, 732, 755 f., 799. Ḳarḳīsiyā became the capital of the district of Khābūr in the province of Diyār Bakr. On account of its very characteristic situation, Ḳarḳīsiyā is mentioned by all the Arab geographers in their descriptions of the river-courses and roads, but no detailed account of it is given. The place probably did not attain any great size in the Islamic period either. The high percentage of Jews (500 families) found by Benjamin of Tudela in the second half of the 12th century there is remarkable; see his travels ed. and tr. Grünhut and Adler (Jerusalem 1903, Frankfurt a/M. 1904), i, 49, 21 f. and ii, 47.

In the history of the wars of mediaeval Islām, we find Ḳarḳīsiyā often mentioned. When ʿAbd al-Malik was engaged in his campaign against Muṣʿab, governor of ʿIrāḳ and brother of the anti-caliph ʿAbdallāh b. al-Zubayr, he had to devote his attention to

Ḳarḳīsiyā in 71/690, where the Ḳaysī Zufar b. al-Ḥārith was ruling independently and had successfully resisted the governor of Ḥims who had been sent against him. After a siege of some length, Zufar had to submit to the caliph's army; cf. Ibn al-Athīr, iv, 275 f.; Weil, *Gesch. der Chalifen*, i, 431; J. Wellhausen, *Das arabische Reich und sein Sturz*, Berlin 1902, 115-6, 119-120, 126; Canard, *H'amdânides*, 138. In the wars fought in the 5th/10th century on Mesopotamian soil in the Ḥamdānid epoch, we find Ḳarḳīsiyā playing a part along with al-Raḥba, a day's journey down the Euphrates from it; cf. Canard, *op. cit.*, 492, 545-7. The rulers of Egypt repeatedly extended their power as far as Ḳarḳīsiyā, for example the Ṭūlūnid Aḥmad, from whom, however, the Caliph al-Muʿtamid's vigorous brother al-Muwaffaḳ was able to retake it in 268/881; see Wüstenfeld, *Die Statthalter von Ägypten zur Zeit der Chalifen*, in *Abh. GGW* (1876), xxi, part 3, 20. Several centuries later the Egyptian Sulṭān Baybars again advanced his frontier up to the Khābūr, when he took Ḳarḳīsiyā from the Mongols in 663/1264; cf. Weil, *Gesch. der Chalifen*, iv, 96.

At the present day, the site of Ḳarḳīsiyā is marked by a miserable village of 30-40 houses and hovels of clay and an extensive ruined site adjoining it. It is now called Busayra (Besêra; sometimes written Buṣeyra); older travellers give the form Abū Seray etc. Busayra is probably a corruption of Abū Seray (as, along with other authors, Moritz, *op. cit.*, 37, thinks); it has been with less probability taken as a derivative from Basīr, the older name—recorded by Abū ʾl-Fidāʾ for 732/1331—of the present Dayr al-Zōr, as believed by Herzfeld. According to Herzfeld, the old name Ḳarḳīsiyā still survives locally in the form Ḳarḳīsa.

Busayra lies on an irregularly-shaped tongue of land formed by the Khābūr at its junction with the Euphrates and is about half an hour's journey distant from its mouth. Communication with the hinterland is broken by a ditch so that we have a well-marked peninsula. The plan of the old fortress can still be easily recognised; it forms a rectangle, the longer side of which runs along the Khābūr, while the shorter faces the Euphrates from which it is now about 1,000 yards distant. Four more or less well preserved towers and a fort-like building (praetorium, serai) can still be seen, from which Moritz (*op. cit.*) suggests that the modern name Abū Seray (Busayra) may be derived. The fairly extensive town lay to the north-east of the fortress and is still marked by numerous walls of earth. Descriptions of the modern ruins are given by Sachau, Moritz and Herzfeld; Sachau and Herzfeld also give plans.

The important part once played by Ḳarḳīsiyā as a trading centre as a result of the important roads which meet here—from Syria to Babylonia, Mawṣil to Syria—has in modern times been to a great extent regained by the town of Dayr al-Zōr [*q.v.*] on the Euphrates above mentioned, a few hour's journey above the mouth of the Khābūr.

(M. Streck*)

KARKŪR, more exactly *kərkūr* (the word is only known in Maghribī colloquial Arabic, cf. Berber *akərkur*), "a heap of stones", and more especially "a sacred heap of stones". The cult of heaps of stones is extremely ancient and distributed all over the world. It seems to come not from an act of litholatry in the strict sense but from a rite of transference or expulsion of evil; the individual, picking up a stone, causes the evil of whatever kind that afflicts him to pass onto it—as the case may be, fatigue, physical or moral suffering, sin, the dangerous power that attaches itself to a man in certain sacred neighbourhoods, or all these things together—and gets rid of it by throwing it or depositing it with the stone on a place suitable for absorbing it; the accumulation of these expiatory pebbles forms the sacred piles of stones which rise all along the roads, at difficult passes and at the entrances to sanctuaries. Alongside of these, the throwing or placing of a pebble or the building of a little pyramid of stone often becomes one of the obligatory rites of the pilgrimage and the rite losing its primitive character has been sometimes taken for a true offering-rite. The piles of stones are often built at the place where a man has been killed and buried; this has been explained from the desire to bury more deeply a dead man whose spirit might be tempted to come out and avenge itself or, less plausibly, as a kind of homage to the dead; but this casting of stones can also be explained rather as a rite for the expulsion of evil (a dangerous place, the infection of death, proximity of disturbing magical forces). It appears, therefore, that we always find rites of purification as the origin here (a general view in J. G. Frazer, *The golden bough*[3], Part VI, *The scapegoat*, 8-30, with a certain number of references relating to the Islamic world; French tr. *Le bouc émissaire*, Paris 1925).

Pre-Islamic Arabia knew the rite of casting stones and sacred heaps of stones. The rites of the *ḥadjdj* have preserved evidence of this, but several varying interpretations have been made [see djamra, ḥadjdj, radjm], and the sources give other examples (see T. Fahd, *La divination arabe*, 188-95).

Islam found the cult of piles of stones in all or almost all the lands that it conquered and although orthodoxy looked askance at it, it had to accommodate itself, as to so many other popular practices, which owed their origin to paganism in the remote past. Piles of stones are especially numerous in certain regions [see radjm], but nowhere has their cult been so developed and is so vigorous as in North Africa, especially in the south of Morocco, where it has been especially studied by E. Doutté (*Marrakech*, Paris 1905, 58-108; *Magie et religion dans l'Afrique du Nord*, Algiers 1908, ch. x; see also E. Westermarck, *The Moorish conception of holiness* (*Baraka*), Helsingfors 1916, 26 ff.). There, one may say, there is not a pass, or ravine or cross-roads which has not its little pyramids of stones or its great *kərkūr* to which every passer-by adds his pebble, not a rustic sanctuary but has its sacred piles of stones.

Sometimes the *kərkūr* itself, as in other cases a spring, a tree or a rock, has given rise to a sanctuary which has become islamised in a marabout fashion. It is also very common to find under the aegis of a saint several of these cults combined—strange sanctuaries which perpetuate the ancient rites of paganism, still vigorous after twelve centuries of Islam.

Bibliography: given in the article.

(H. BASSET*)

KARLĪ-ĪLI, also KARLO-ĪLI, "the land [see ĪL] of Carlo", Ottoman name for a district of north-west Greece (Acarnania and most of Aetolia), as corresponding approximately to the territories of Carlo Tocco I (1381-1430).

Carlo's father, Leonardo, had been created count of Cephalonia in 1357; he had extended his original dominions of Cephalonia, Zante and Ithaca to embrace the island of Leucas (Leucadia, Santa Maura; Turkish: Aya Mavra) and, on the mainland, Vonitza (1362). Laying claim to the Despotate of Epirus, in 1417 Carlo made himself master of the regions of Arta (Ambracia, Larta; Turkish: Narda) and Ioannina (Turkish: Yanya [*q.v.*]). At his death his territories extended to the south to the Gulf of Patras (Lepanto, Turkish Aynabakhtī [*q.v.*], remaining in Venetian hands); he had also acquired a foothold in the Morea with the port of Clarentza. When he died at Ioannina in 1430, leaving no legitimate heir, Memnon, one of his five bastard sons, appealed to Murād II against Carlo's nephew Carlo II (1430-48). As soon as Thessaloníki (Selānik [*q.v.*]) was taken, Murād sent Sinān Pasha, the *beglerbegi* of Rūmeli, against Ioannina, which surrendered (October 1430); Carlo II retained the rest of his dominions against the payment of an annual tribute. On his death (September 1448), the guardians of his son Leonardo, a minor, appealed to Venice for protection. The sultan thereupon took Arta (1449), and in 1460 Angelokastron was lost, leaving to Leonardo on the mainland only Vonitza. In 1479 Venice, annoyed at Leonardo's approaches to the king of Naples, did not include Leonardo in the treaty concluding the war of 1463-79. Meḥemmed II was already planning his descent on southern Italy, and found the pretext for attacking Leonardo's island principality in an alleged slight to an Ottoman *sandjakbegi* (probably a member of the Tocco family). Upon the approach of the fleet under Gedik Aḥmed Pasha [*q.v.*], then *sandjak-begi* of Valona (Turkish: Awlonya [*q.v.*]), Leonardo fled, and Aḥmed Pasha occupied Vonitza, Santa Maura, Cephalonia and Zante. (In 1481 Cephalonia and Zante were recovered by the Tocchi, only to be lost to Venice; Venice retained Zante (until 1797); she had to cede Cephalonia to Bāyezīd II in 1485 but recovered it in 1500).

The earliest references to "Karlī-īli" in Ottoman sources are confused. The statement in ʿĀshīkpashazāde (§ 56) that in 787/1385 Timürtash Pasha raided "as far as Karlī-éli" has been condemned as a misreading (for "the land of Kraljević", *i.e.*, Prilep; see, most recently, Irène Beldiceanu-Steinherr, *Recherches sur les actes*..., Munich 1967, 197-8), though H. İnalcık suggests that the reference is to "the land of Carlo Thopia" (see ARNAWUTLUḲ, col. 653b). ʿĀshīkpashazāde seems again to be in error when, in describing (§ 130) Meḥemmed II's campaign of 864/1460 in the Morea, he calls certain fortresses there (Mistra, Leondári, ? Astros) "Karlī-éli", a statement repeated by Neshrī, Ibn Kemāl, Saʿd al-Dīn, etc.; nevertheless, southern Aetolia was evidently occupied by the Ottomans in the course of this campaign: see Hopf, *Gesch. Griechenlands*, ii, 136, and cf. Sphrantzes, ed. Grecu, 124 (a *subashī* in Angelókastron in autumn 1460).

When Karlī-īli was formally constituted a *sandjaḳ* (with Angelókastron as its *chef-lieu*) is not clear. It is not named by Promontorio de Campis (*ca.* 1475, ed. Babinger) among the 17 *sandjaḳ*s of Rūmeli; but the *djizya* returns for 894/1489 mention "*liwā-i Karlo*" (*Belgeler*, i/1 (1964), 101), and a *sandjaḳ-begi* ("*mīr-i liwā-i Karlī*") is named for 909/1503 (M. T. Gökbilgin, *Edirne ve Paşa Livâsi*, Istanbul 1952, 481). (For slightly later appearances of Karlī-īli in lists of the *sandjaḳ*s of Rūmeli, see *İkt. Fak. Mecm.*, xv (1953-4), 303; *Bell.*, xx (1956), 253, 260, and n. 170; and cf. *İA*, art. *Rumeli* (H. İnalcık), 771-2. For the number of households, overwhelmingly Christian, about this time, see *JESHO*, i (1957-8), 32).

The "*Beglerbegilik* of the Sea" [see DJAZĀʾIR-I BAḤR-I SAFĪD], created for Khayr al-Dīn (Barbarossa) [*q.v.*] in 940/1534, comprised at first, besides Gelibolu, only Rodos, Eghriboz and Midilli [*qq.v.*] (see Ramberti, in A. H. Lybyer, *The government of the Ottoman Empire*..., Cambridge, Mass. 1913 (repr. New York 1966), 256, 259, and cf. for Ramberti's reliability, 314); Karlī-īli was added later, perhaps in 957/1550, when Turghud Reʾīs [*q.v.*], entering Ottoman service, was appointed its *sandjaḳ-begi* (see Aziz Samih İlter, *Şimalı Afrika'da Türkler*, ii, Istanbul 1937, 189 and 194, discussing Pečevī [i, 346-7] and Ḥādjdjī Khalīfa, *Tuḥfat al-kibār* [Istanbul 1329, 67-8]); it certainly figures among the *sandjaḳ*s of this *eyālet* in the 11th/17th century, *e.g.*, *apud* ʿAyn-i ʿAlī, *ca.* 1018/1609 (*JA*, ser. 6, xv (1870), 266); Kočī Beg, *ca.* 1050/1640 (ed. A. K. Aksüt, Istanbul 1939, 110); and Ḥādjdjī Khalīfa, *ca.* 1056/1656 (*Tuḥfat al-kibār*, 147; his inclusion of Karlī-īli in "Rūmeli" in the Djihānnümā is an anomaly: he was perhaps here using a list of the 10th/16th century, see *İA*, art. *Rumeli*, col. 772b).

Ḥādjdjī Khalīfa (J. von Hammer, *Rumeli und Bosna*, Vienna 1812, 127-9) names seven *ḳaḍā*'s: Préveza (an error?), Aya Mavra, Vónitsa, Angelókastron, Xerómeron, Váltos and Vrakhórion. Evliyā Čelebi travelled through the region in 1081/1670. His itinerary is not easy to follow. He names six *ḳaḍā*'s (omitting Préveza) (viii, 626). The eastern boundary of the *sandjaḳ* (p. 623) is the Yīlan Čayī = R. Phídharis/Évinos. He describes further the townships of "Zebān" (Zapandi), "B.hūr" (Bokhóri, Hypokhorion), Mesolónghi, Anatolikó = Etolikón, and "Ḳālīve" (Kalivia).

Aya Mavra and Vonitsa, falling to Morosini in 1095/1684, were ceded to Venice by the Treaty of Karlowitz (Karlofča [*q.v.*], 1110/1699) (see further, for the history of the Ionian Islands, YEDI ADALAR). At the end of the 18th century, Karlī-īli came under the sway of ʿAlī Pasha Tependelenli [*q.v.*]. In the very first weeks of the War of Greek Independence (1821-9), Mesolónghi and Vrakhóri had joined the revolt, and the district was the scene of much fighting. The northern frontier of the new kingdom, as finally drawn (1832), left all Karlī-īli to Greece.

(V. L. Ménage)

ĶARLOFČA (in modern Turkish, Karlofça; Carlowicz in common western usage), a town, now Sremski Karlovci, in northern Yugoslavia. It lies close to the Danube on the northern slopes of the Fruška Gora in Sirmium (Serbo-Croat Srem, Ottoman Sirem), $45^1/_2$ miles by rail north-west of Belgrade. It has a population (1961 est.) of 6,390.

The first notice is of A.D. 1308, when it was known as Karon. In the later middle ages under Hungarian rule—its castle (*ķalʿa*) was, as the seventeenth-century Ottoman traveller Ewliyā Čelebī pointed out, the work of the kings of Hungary—Ķarlofča came under Ottoman rule in Shaʿbān 927/ July 1521, in the course of the campaign which culminated in the conquest of Belgrade. Its reduction was the work of the Bosnian *ghāzīs* under the future *beglerbegi* of Belgrade, Yaḥyā Pāshā-zāde Küčük Bālī Beg (F. Tauer (ed.), *Histoire de la campagne du Sultan Suleyman* I*er* *contre Belgrade en 1521*, Prague 1924, 47, n. 152; cf. Ferīdūn, *Munshaʾāt*[2], i, 508-10).

In Ottoman sources, the encountered forms of the name are: in a late 10th/16th century *defter-i mufaṣṣal*, Ķārlovčī/Ķārlōčī (? = Hung. Karlócza); in the mid-11th/17th century, Ķārlōfča; by the early 12th/ 18th century (Rāshid), Ķārlovīče (this last form perhaps reflecting the by then current Austrian (*i.e.* German) usage of Karlowitz).

Under Ottoman rule, Ķarlofča came initially under the authority of the *beglerbegi* of Belgrade; later, after the conquest of Budin and the formation of that *eyālet* (948/1541), Ķarlofča became and remained subject to that place. Within the *sandjāķ* of Sirem it formed a *niyāba* of the *ķaḍāʾ* of Varadin (Peterwardein). In the later 10th/16th century, according to a *defter-i mufaṣṣal* from the reign of Selīm II (B. McGowan (ed.), *Defter-i Liwā-i Sirem*, unpubl. Columbia Ph.D. thesis, 1967, 241-9 [= text, ff. 65v-68r]), Ķarlofča possessed the largest Christian population in the *sandjāķ*. Within the five quarters of the town was a civilian population of 487 households, all Christian. By the time Ewliyā Čelebī visited Ķarlofča the population was partly Christian and partly Muslim. The collection of the *kharādj* and *bādj-i bāzār* taxes was in the hands of Ottoman officials from Budin; the *ķalʿa* contained a garrison of about fifty officers and men.

Ķarlofča's subsequent fate, and its sole claim to historical significance, were both determined by the course of the war of 1094-1110/1683-99 between the Ottoman Empire and Austria and her allies—Poland, Venice, and, belatedly, Russia—of the *Sacra Liga*. After the Ottoman defeat at Mohácz (1687), Ķarlofča passed under Austrian rule. Its historical significance, however, lies in its almost fortuitous selection as the site for the diplomatic gathering generally known as the Congress of Carlowicz which assembled there in October 1698 and by the end of January 1699 had brought laboriously to birth a series of agreements regulating the territorial and other adjustments consequent upon the war.

Within the limits of this article no extensive treatment of the Congress of Carlowicz can be attempted. Lacking as we do not only a corpus of documents for the congress and for its essential diplomatic "prehistory", but even a satisfactory edition of the Turkish and Latin or Italian texts of the treaties themselves, recent attempts to place the Ottoman side of the congress proceedings on a more secure basis must be regarded as (in some ways) provisional. Some general remarks concerning the significance of the settlement may however be made.

Congress diplomacy, which had evolved rapidly in Europe after the end of the Thirty Years' War (1648) was for the first time applied to a settlement involving an Islamic state. Thus was brought about the simultaneous culmination and incipient erosion of the Islamic concepts of *dār al-Islām* and *dār al-ḥarb* which had determined in large measure the settlement of, *e.g.* previous conflicts between the Ottomans and the Austrian Hapsburgs. With the unwilling Ottoman acceptance of (a) diplomatic mediation (*tawassuṭ*) by the representatives at the Porte of England (Lord Paget) and the United Provinces (Colyer) and (b) the provisions in the treaties for a demarcated frontier, the assumptions which had hitherto determined the Ottoman state's relations with the lands of *dār al-ḥarb* were no longer tenable, and the military and diplomatic balance for the first time tipped steeply against them.

The Ottoman negotiators at Carlowicz—the *raʾīs ul-kuttāb* Rāmī Meḥmed Efendi and the chief dragoman Alexander Mavrocordato—were well aware of this long before the congress opened; indeed, there is much to recommend the view that the real transformation of Ottoman attitudes took place in a series of secret negotiations between ʿAmudja-zāde Ḥusayn Köprülü, the Ottoman grand vizier, and the Austrian chancellor, Kinsky, with Mavrocordato and Paget serving as intermediaries, during the latter part of 1697 and the early months of 1698. The basis for the settlement which was then worked out was that of *uti possidetis/ʿalā ḥālihi*, *i.e.* that each side should hold what it possessed at the conclusion of hostilities. Ottoman diplomatic objectives, which went some way beyond the strict application of this principle, were to be achieved only in part at the congress, despite skilful diplomacy by Rāmī Meḥmed Efendi and Mavrocordato. The Ottomans failed to obtain the evacuation by Austria of Transylvania and its restoration to the rather ambiguous status which it had enjoyed before 1683, but were able to maintain their authority over the strategic salient of Temeshvar (Timişoara) as far as the Muresh and Tisa rivers. They were also able to hold the immediate hinterland of Belgrade in Sirmium and to retain a foothold in Slavonia and Croatia. Conversely, against Poland the Ottomans were obliged to relinquish the strong fortress of Ķamaniče, which had never surrendered, and thus lost control of Podolia in exchange for Polish abandonment of claims to Moldavia. No permanent settlement with Russia was reached at Carlowicz: a truce for two years was regularised at Istanbul in 1112/1701. The latter stages of the congress were mostly taken up with the imposition of terms on Venice, the weakest of the Sacra Liga powers, who was in the end forced to give up her conquests north of the Morea.

No conclusive assessment of the Carlowicz settlement should yet be attempted. Diplomatically it was

perhaps less of a defeat for the Ottoman Empire than has been commonly accepted, and the Ottomans were able to withdraw from a disastrous war with their pride, if not their territories, intact. Within governing circles of the Empire the settlement nonetheless was to generate considerable opposition, particularly from military elements, and it is probably in these internal repercussions, leading up to the Edirne Incident of 1115/1703, as much as in the actual territorial adjustments, that its significance lies.

Bibliography: Ewliyā Čelebī, *Seyāḥatnāme*, vii (Istanbul 1928), 144-5. Meḥmed Rāshid, *Ta'rīkh*[2] (Istanbul 1282), ii, 415-74 (texts of treaties at pp. 449-73; western-language versions were published in *Flugschriften* soon after the conclusion of the congress, in Vienna, Venice and elsewhere; cf. also R. Knolles, *The Generall Historie of the Turkes*[6], iii, London 1700, *ad finem*, for the first English edition of the treaties). For important Ottoman works still in MS. form, cf. the references given in the article by İ. Parmaksızoğlu, s.v. *Karlofça*, in *İA*. The account by J. von Hammer, *GOR*, vi (Pest, 1828), 636-78, is based in part on these, and is still useful on that account. The studies on the Congress of Carlowicz by Popovic (1893) and Munson (1940) are now superseded; the results of recent research by R. A. Abou-El-Haj are to be found in his unpublished Ph.D. dissertation (Princeton 1963) and in articles in *JAOS*, lxxxvii/4 (1967) and lxxxix/3 (1963), and *Islam*, li/1 (1974).

(C. J. Heywood)

ĶARLUĶ, early Arabic form Kharlukh, Persian Khallukh (whence frequent confusion in the sources with the Khaladj [*q.v.*], Chinese Ko-lo-lu (northwestern Middle Chinese *Kâr-lâ-luk), a Turkish tribal group in Central Asia. They were originally a small federation of three tribes (whence the name given to them in the Uyghur Shine-usu inscription ca. 760 of Uč Ķarlıķ; the *Ḥudūd al-ʿālam*, 98, on the other hand, mentions seven tribes of the Ķarluķ), and comparatively unimportant. Their paramount chief never bore the title of *khaghan* or *khan*, but in the 7th and 8th centuries had that of *élteber* (perhaps "possessor of a land or people"), one of only moderate rank (see A. Bombaci, *On the ancient Turkic title Eltäbär*, in *Proceedings of the IXth meeting of the Permanent International Altaistic Conference*, Naples 1970, 24, 57-8), and Kāshgharī does not mention them amongst the twenty Turkish tribes listed in the introduction of the *Dīwān lughāt al-turk* (tr. Atalay, i, 28). Kāshgharī does, however, mention the Ķarluķ in connection with certain Turkish words or phrases, and defines them as a nomadic tribe, distinct from the Oghuz, but, like them, counted as Turkmen (tr. i, 473, cf. Barthold, *Four studies on the history of Central Asia*, iii, *A history of the Turkman people*, 78).

Our first information on the Ķarluķ comes from Chinese sources, which mention them as having been subjugated by the Western T'u-chüeh or Turks *ca.* 640-50. At this time they were a pastoralist people located on the upper reaches of the Irtysh River and north of the T'ien Shan. In the early years of the 8th century they passed under the control of the Eastern T'u-chüeh empire, and the Orkhon inscriptions mention the rebellion of the Ķarluķ against the Khaghan in 711-14 (see Sir Gerard Clauson and E. Tryjarski, *The inscription at Ikhe Khushotu*, in *RO*, xxxiv/1 (1971), 27-8, 29). The Ķarluķ took part with the Basmıl and Uyghur in the general upheaval which brought about the disintegration of the Eastern T'u-chüeh empire (743-5), but were in turn defeated by the Uyghur and compelled to move westwards towards Transoxania (on all these events, see E. Chavannes, *Documents sur les Tou-kiue (Turcs) Occidentaux*, St. Petersburg 1900; Liu Mau-tsai, *Die chinesische Nachrichten zur Geschichte der Ost-Türken (T'u-küe)*, Wiesbaden 1958; L. N. Gumilev, *Drevnie Tyurki*, Moscow 1957; J. R. Hamilton, *Les Ouigours à l'époque des Cinq Dynasties*, Paris 1955).

They now come within the orbit of Muslim writers. According to Iṣṭakhrī, 290, the boundary between the Ķarluķ and the Oghuz was the region of Isfīdjāb on the middle Syr Darya, and the *Ḥudūd al-ʿālam* (372/982), 97, cf. Map v, 279, places them south of the Issik-Köl, *i.e.*, on the southern fringes of the Semirečye. Their ruler now appears in Muslim sources with the title of *yabghu* (Arabic form *djabbūya*, probably reflecting a western Turkish dialectical pronunciation of the word), adopted equally by the chief of the Oghuz [see GHUZZ]. There were also Ķarluķ who had penetrated southwestwards into the upper Oxus basin and Ṭukhāristān, where Arabic sources mention them in connection with the Arab campaigns against the epigoni of the Hephthalites in this region; the prince of the Ķarluķ here also bore the title of *yabghu*.

These Ķarluķ on the northern fringes of Transoxania were long a refuge for political and religious dissidents and refugees fleeing before the Arab advance into Central Asia; thus the Yabghu, together with the local Soghdians and the ruler of Tibet, supported the rebellious Arab governor in Samarķand, Rāfiʿ b. Layth, against the Caliph Hārūn al-Rashīd. Such contacts, however, probably disposed the Ķarluķ to reception of the Islamic faith and culture, whereas the more westerly Oghuz remained at a perceptibly lower cultural level. The campaign of the Sāmānid Amīr Ismāʿīl b. Aḥmad [*q.v.*] against Talas in 280/893 struck into the heart of their lands, and commercial and religious penetration must have followed; the geographers of the 4th/10th century mention the existence of mosques in several towns east of Talas. The comparatively advanced state of the Ķarluķ at this time is reflected in the statement of the *Ḥudūd al-ʿālam* that they were a pleasant-natured people, near to civilized folk in their living standards; the same source describes several of their settlements in the southern part of the Semirečye where some of the Ķarluķ practiced agriculture and whither merchants resorted (97-8, 286 ff.).

The royal family of the Ķarakhānides, who put an end to the Sāmānid amīrate in Transoxania at the close of the 4th/10th century and divided its lands with the Ghaznavids, may conceivably have sprung from the Ķarluķ (this thesis is maintained by O. Pritsak, *Von den Karluk zu den Karachaniden*, in *ZDMG*, ci (1951), 270-300); but equally possible candidates are such groups as the Čigil, Yaghma, Türgesh, etc., and it is strange that Kāshgharī, who sprang from the Ķarakhānid milieu, does not mention a Ķarluķ origin for the dynasty [see ILEK-KHĀNS]. Some Ķarluķ tribesmen certainly remained as a nomadic tribal group within the Ķarakhānid dominions, for in the 6th/12th century we hear of tension between them and the Ķarakhānid khāns; it was the pretext of help for the Ķarluķ at odds with Čaghrī Khān of Samarķand which enabled the Khwārazm-Shāh Il Arslan to invade Transoxania in 553/1158 (see Djuwaynī-Boyle, i, 288-9; Bosworth, in *Cambridge history of Iran*, v, 148-9, 187-8).

At the opening of the 7th/13th century there were Ķarluķ rulers in the region to the north of the Ili River and eastwards from their earlier centre in the southern Semirečye, *e.g.*, in Almalıgh and Ķayalıgh,

where these Khāns were under the suzerainty of the Ķara Khitāy [*q.v.*] (Djuwaynī-Boyle, i, 74-5; Barthold, *Four studies . . . i. History of the Semirechyé*, 103-4). Ķarluķ tribal contingents joined the army of Čingiz-Khān in 616/1219 and took part in the invasion of Transoxania, but after the Mongol period, the name of the Ķarluķ becomes less frequent in the history of Central Asia, without ever disappearing completely. Thus the *Taʾrīkh-i Rashīdī* of Mīrzā Muḥammad Ḥaydar Dughlāt, tr. Elias and Ross, 309, mentions a commander (*sirdār*) of the Ķarluķ tribe in Transoxania involved in warfare of the early 9th/15th century. At the present time, various Turkish groups of northeastern Afghānistān, in the regions of Badakhshān and Ķattaghān, call themselves Ķaluķ or Ķarluķ; see G. Jarring, *On the distribution of Turk tribes in Afghanistan, an attempt at a preliminary classification*, in *Lunds Universitets Årsskrift*, N.F. xxxv/4 (Lund-Leipzig 1939), 71-3 and index.

Bibliography: In addition to works cited above, see Barthold, *Turkestan down to the Mongol invasion*[3], index; idem, *Histoire des Turcs d'Asie Centrale*, chs. iii-v; Bosworth, *The Turks in the Islamic lands up to the mid-11th century*, in *PhTF*, iii, Wiesbaden 1970; *İA* art. *Karluklar* (Rahmeti Arat). The information of the Islamic geographers is utilized in Minorsky's copious commentary to the section on the Ķarluķ in *Ḥudūd al-ʿālam*, 97-8, 286-97. (C. E. Bosworth)

KARM (A.), the vine. To one who knows the official attitude of Islam towards wine [see KHAMR], the vitality of the cultivation of the vine in the majority of mediaeval Muslim countries may appear paradoxical. Nevertheless, it is incontestable, and is explained by the force of tradition in some countries where the vine has long been established, by the multiple uses of the grape (fresh fruit, dried raisin, vinegar, pharmaceutical uses, the lees as fertilizer, etc.), by the survival of non-Muslim communities, and also by the laxity of many Muslims themselves. This vitality is attested in particular, perhaps due to the written tradition, by the very considerable and exceptional place that the Muslim agronomists accord to the vine in comparison with the other species studied, from the easterner Ibn Waḥshiyya or the *Calendar of Cordova* to the Andalusians of the 5th/11th and the 6th/12th centuries, to whom we owe the essential part of that which will be summarized below. Their knowledge resulted from the combination of the data of the ancient authors, rediscovered and assimilated (with, in Spain, Junius = Columella added to the sources known in the Orient) with the intensive day-to-day experience constantly renewed.

To summarize this knowledge is difficult, since one of the principal characteristics of the cultivation methods described is precisely the meticulousness of their application and the multiplicity of the methods followed. Nevertheless, it appears generally that the vines cultivated, more numerous than in our days and transported by the Arabs from one end of their conquered lands to the other, did not remain stabilized and were the object of experiments of selection and acclimatization that we know particularly with regard to Spain (between the plain and the mountain, for example), but that were also tested in the East, where Ibn al-Faķīh (*BGA*, 125) and the Persian agronomists of the Mongol period in particular preserve for us the names of various kinds of vines. The vegetative cycle of each vine-plant being different, the agronomists, applying the principle of the complementary nature of a defect and a quality (such as adaptation to dryness or humidity, etc.) mainly made use of the diversities of the climates and soils of the Mediterranean zone and the Near East.

Some systems of cultivation predominate in the Andalusian treatises: (a) The low vine, planted in holes or trenches (recommended, but little practised) about 1.40 m. apart, supported or in low clumps, thinned out very little in order to protect the grape against the sun: a method of cultivation reserved for warm sites; (b) The climbing vine, classical in the Mediterranean region, where the creeper was used as support for the fruit trees with shallow roots, whose height had to be controlled so that they did not injure the vine; in contradiction to the ancients, the Andalusians rejected the intercalary cultivation that exhausts the vine, and especially the association of the vine and the fig-tree. The best soils were alluvial, humid, but not saturated, according to the westerners, and also sandy according to Ibn Waḥsiyya, but one might also make use of the rich soils for the species that derive nourishment easily; the principle of complementarity took the place of the modern idea of forced cultivation. The choice of sites was adapted to the vines' wants; slopes and hillsides for the low vines, valleys and plains for the climbing ones, mountains in order to test the quality of a vine-plant; it was banned from the marshlands, sources of the vine's diseases. The preparatory work was a deep tillage with the spade, with trenches larger than the furrows of tillage in the earth of mediocre quality and holes for the good localities with a depth of at least 2 cubits (almost a metre) for protection against the sun. The surface work of the end of the first year was a loosening with the pruning knife to spare the roots, those nearest to the surface meanwhile being cut back to strengthen the deepest.

Reproduction in the nurseries was done in the form of taking cuttings, layering (*takbīs*) and sowing in a manner conforming to the practices of our days. The stratification was systematic. As for the shoots, cuttings and layered branches, it is often pointed out that they should not be planted together in the same hole, which proves that it was done. Most authors agree in recommending planting in spring, although the early species might be planted in autumn (hesitations that one would still encounter today); the Egyptian fiscal treatises speak of planting in February or March. The vinestocks, once tested for three years in very poor soil, they were transplanted in the vineyard chosen to receive them.

Well spread out fertilization was especially necessary in the planting and pruning, above all when vines were made to follow another vegetable insufficiently treated with animal manure, usual in the Middle Ages; it was reduced to a powder, and, according to an Aristotelian principle, the ashes of the stems of the plant itself were preferred; this preference for dry fertilizer is a particularly modern aspect of Andalusian viticulture. Irrigation depended on the climate, the soil and the plant chosen; watering by hand was frequently carried out in order to proportion better the quantity of water needed to obtain really syrupy and not-too-full grapes.

Among the measures taken to increase the vine's productivity, pruning (*zabr*) was the principle practised in winter with the iron pruning knife (*mindjal*) already described by Columella; the aim was to draw the sap towards the best developed wood. Grafting, already known to the ancients, was the subject of descriptions and experiments infinitely more varied among the Muslim agronomists. Everything was taken into consideration, form and colour of the

grape, the syrupiness of the juice, the early or late quality of the vine-plant, the degree of alcohol, etc. In order to improve the species for the achievement of precise needs, fantastic means were sometimes adopted (*e.g.*, grafting the vine on the olive-tree). On the technical level it was grafting by terebration (*taṭāʿama* according to Ibn Ḥadjdjādj cited by Ibn al-ʿAwwām).

Like today, the protection of the vine against diseases and bad weather distressed the vine-grower, who was impotent before the scourge. More than the Romans, the Andalusians feared the proximity of the sea and, with good reason, drizzle. The symptoms of diseases, very exactly described by Ibn Waḥshiyya, correspond to anthracosa, rust and jaundice; the remedy prescribed drew its inspiration from the curative panacea, namely a mixture of oil, wine and water applied to the stock of the exposed level; Ibn Ḥadjdjādj added straw there, which moreover protected against frosts.

Without our being able to furnish for all the Muslim countries the same precise details as for Spain and ʿIrāḳ, we can assert, thanks especially to the geographers' information, the presence almost everywhere of the vine, at least until the nomad invasions of the later Middle Ages, and often later: in Arabia, Mesopotamia, Iran, Central Asia, Syria, Egypt; in the Mongol period, Mustawfī Ḳazwīnī was still to see in Turkish Asia Minor the vines inherited from the Armenians and Greeks. The princely courts never had difficulty in providing wine, and the poets who used to sing of it must have had some acquaintance other than theoretical. The Crusaders must have developed the vine on the Syrian coast. There is no doubt, however, that the vine declined at the end of the Middle Ages, as much through the growth of strictness and conversions as through the interference of nomads. On the other hand, without it being possible here to make more than one passing allusion, it is known that the conditions of European colonization and international modern commerce led in certain Muslim lands, in particular in North Africa, to the development of new vineyards on some almost completely new bases, whose monocultural character, often excessive, in its turn presents some difficult problems of readaptation today.

ḲARMAṬĪ, pl. Ḳarāmiṭa, name given to the adherents of a branch of the Ismāʿīliyya [*q.v.*]. Originally it is generally reported to have referred to the followers of Ḥamdān Ḳarmaṭ [*q.v.*], an Ismāʿīlī leader in the *sawād* of al-Kūfa, whose surname Ḳarmaṭ (also Ḳarmaṭūya) is variously explained in the sources as meaning short-legged or red-eyed. It is to be noted, however, that the Imāmī scholar al-Faḍl b. Shādhān of Naysābūr, who died in 260/873-4, already wrote a refutation of the Ḳarāmiṭa (*al-Radd ʿalā 'l-Ḳarāmiṭa*). Thus either the missionary activity of Ḥamdān must have commenced long before the year 261/874-5 or 264/877-8, which the sources give as the date of its beginning, or his surname was itself derived from the name of the sect. The movement directed by Ḥamdān was, in any case, merely part of the general Ismāʿīlī movement of his time whose leadership he recognized. After Ḥamdān's revolt against the leadership in 286/899 and his subsequent disappearance, the term Ḳarāmiṭa was generally used for those Ismāʿīlī groups which joined this revolt and consequently refused to recognize the claims of the Fāṭimid caliphs to the imāmate. Sometimes it was pejoratively applied also to the Ismāʿīlīs supporting the Fāṭimid imāmate. The present article, however, will deal only with the history of the former groups and their relationship with the Fāṭimid Ismāʿīlī movement.

From the schism until *ca.* 300/913. The split of the movement in 286/899 left the Ismāʿīlī communities which repudiated the claim of ʿUbayd Allāh, the later Fāṭimid Caliph al-Mahdī, to the imāmate without united leadership and in a doctrinal crisis. In Mesopotamia Ḥamdān and his chief assistant ʿAbdān [*q.v.*] discontinued all missionary activity. ʿAbdān was consequently murdered by another *dāʿī*, Zikrawayh [*q.v.*], at the instigation of a relative of ʿUbayd Allāh residing in al-Ṭālikān. Zikrawayh, threatened with revenge by the followers of ʿAbdān, had to go into hiding. In 289/902 he sent his son al-Ḥusayn (or al-Ḥasan), known as the *Ṣāḥib al-Shāma*, to the Syrian desert in order to convert the Banū Kalb. Al-Ḥusayn succeeded in winning the support of the clan of Banū 'l-ʿUlayṣ and some of the Banū 'l-Aṣbagh, who adopted the religious name al-Fāṭimiyyūn. He was joined then by the *Ṣāḥib al-Nāḳa*, who according to the account of al-Ṭabarī was al-Ḥusayn's brother Yaḥyā, while according to the account of the sharīf Akhū Muḥsin, he was the aforementioned relative of ʿUbayd Allāh. The *Ṣāḥib al-Nāḳa* assumed the leadership, claiming to be a descendant of Muḥammad b. Ismāʿīl. After he was killed during a lengthy, unsuccessful siege of Damascus in Shaʿbān 290/July 903, the *Ṣāḥib al-Shāma* succeeded him as the leader. He, too, claimed to be a descendant of Muḥammad b. Ismāʿīl and assumed the titles *Amīr al-muʾminīn* and *al-Mahdī*. After vainly attacking Aleppo he occupied Ḥimṣ, Ḥamāt, Maʿarrat al-Nuʿmān, Baʿlabakk, and Salamiyya, the former residence of the leaders of the Ismāʿīlī movement, where he ordered a general slaughter of the Hāshimīs and other inhabitants. According to a Fāṭimid Ismāʿīlī source, he had at first tried to lure ʿUbayd Allāh, who had left Salamiyya earlier in fear of the Ḳarmaṭīs, to return and assume the leadership. When his attempts failed, he pillaged ʿUbayd Allāh's palace in Salamiyya and killed all members of his family and his household who had remained there. After a severe defeat, the *Ṣāḥib al-Shāma* left his followers and tried to reach Mesopotamia, but was captured and executed in Baghdād in Rabīʿ I 291/Jan. 904. In 293/906 Zikrawayh sent another *dāʿī*,

known as Abū Ghānim Naṣr, to his followers among the Banū Kalb. They sacked Buṣrā and Adhriʿāt, again attacked Damascus, pillaged Ṭabariyya and the suburbs of Hīt. In Ramaḍān 293/July 906 Naṣr was killed by some of his supporters who wanted to gain amnesty from the government. Zikrawayh now sent another messenger to his remaining supporters announcing to them that the day of triumph and of his personal appearance was near. Joined by Zikrawayh's supporters in the *sawād*, they entered al-Kūfa in a surprise attack, but were driven out again. In Dhū 'l-ḥidjdja 293/Oct. 906, Zikrawayh came forth from his hiding place in al-Ṣawwān near al-Ķādisiyya. They defeated an ʿAbbāsid army and overwhelmed the caravans of Khurāsānian and western Persian pilgrims on their return from Mecca killing most of the pilgrims. In Rabīʿ I 294/Jan. 907 Zikrawayh was wounded and captured in a battle and died a few days later. Many of his supporters were rounded up and executed. The Ķarmaṭī revolts in Syria came to an end. Some of Zikrawayh's followers in the Sawād denied his death and expected his return. In 295/907-8 a *dāʿī*, Abū Ḥātim al-Zuṭṭī, was active among the Ķarmaṭīs in the Sawād. He forbade them to eat certain vegetables and to slaughter animals. His followers were therefore named Baķliyya [*q.v.*], a nickname which was subsequently applied to the Ķarmaṭīs in the Sawād in general. Most of the Ķarmaṭīs there clung to their earlier belief that Muḥammad b. Ismāʿīl was alive and would return as the Mahdī.

In al-Baḥrayn, Abū Saʿīd al-Djannābī [*q.v.*], sent by Ḥamdān and ʿAbdān, had begun his career in 273/886-7 long before the schism. After the murder of ʿAbdān he sided with the rebels against ʿUbayd Allāh and killed Abū Zakariyyāʾ al-Ṭamāmī, a *dāʿī* with whom he had previously cooperated. Abū Zakariyyāʾ had been sent before him, probably by Ibn Ḥawshab, the *dāʿī* in the Yaman (the *nisba* al-Ṭamāmī seems to refer to Ṭamām, a market town in Lāʿa where Ibn Ḥawshab first resided), and like Ibn Ḥawshab remained loyal to the Fāṭimids. According to the *ķāḍī* ʿAbd al-Djabbār, Abū Saʿīd, after killing Abū Zakariyyāʾ claimed to represent the Mahdī Muḥammad b. ʿAbd Allāh b. Muḥammad b. al-Ḥanafiyya, who would appear in the year 300/912-3.

In the Yaman the two *dāʿīs*, Ibn Ḥawshab [see MANṢŪR AL-YAMAN] and ʿAlī b. al-Faḍl, working separately in the region of Djabal Maswar and in the Bilād Yāfiʿ, at first remained faithful to ʿUbayd Allāh, though the loyalty of Ibn al-Faḍl was not above suspicion and his relations with Ibn Ḥawshab, the senior *dāʿī*, were at times strained. As both endeavoured to expand their territories, Ibn al-Faḍl proved more successful. After reoccupying Ṣanʿāʾ in Ramaḍān 299/May 912 he repudiated his allegiance to the Fāṭimid caliph, abolished the *sharīʿa*, and claimed to be the Mahdī. Rejecting the reproaches of Ibn Ḥawshab he demanded the latter's submission and besieged him on the Djabal Maswar for eight months. The siege ended in failure, though Ibn Ḥawshab was forced to surrender one of his sons to Ibn al-Faḍl as a hostage. Ibn al-Faḍl then turned Ṣanʿāʾ over to the Yaʿfurid Asʿad b. Abī Yaʿfur, who recognized his suzerainty, and returned to his residence in al-Mudhaykhira. After his death in Rabīʿ II 303/Oct. 915 his son al-Faʾfāʾ (?) succeeded him and killed many of his associates. Asʿad b. Abī Yaʿfur revolted and took al-Mudhaykhira after a long siege in Radjab 304/Jan. 917. Four months later he ordered the execution of al-Faʾfāʾ and other Ķarmaṭī leaders and sent their heads to Baghdād, thus extinguishing the movement of Ibn al-Faḍl.

In the area of al-Rayy, the Ismāʿīlī community, known locally after its first *dāʿī* Khalaf al-Ḥallādj as Khalafiyya, was well established before the split. Circumstantial evidence indicates that it did not recognize the imāmate of ʿUbayd Allāh and continued to expect the return of Muḥammad b. Ismāʿīl as the Ķāʾim. The *dāʿī* Ghiyāth, after engaging in disputations with the Sunnīs, was forced to flee to Khurāsān, probably during the last decade of the 3rd century/903-13. There he predicted the coming of the Mahdī at a certain date. As the date passed without the prediction having come true, Ghiyāth, who had returned to al-Rayy, lost the support of his followers and disappeared soon afterwards.

Information about the early Ismāʿīlī movement in Khurāsān and Transoxania is extremely fragmentary. Anti-Ismāʿīlī sources state that the first two *dāʿīs* there were sent successively by ʿUbayd Allāh after his rise to power in the Maghrib in 297/909 and were active in Naysābūr. Yet there is evidence that Ismāʿīlī activity was important in eastern Persia from an early date. The fact that the Imāmī al-Faḍl b. Shādhān in Naysābūr found it necessary to write a refutation of the Ķarāmiṭa may indicate their presence there before 260/874. At the time of the split al-Ṭāliķān was a centre of Ismāʿīlī propaganda from where *dāʿīs* were sent to other eastern regions. A notice of the Imāmī author Saʿd b. ʿAbd Allāh al-Ķummī writing *ca.* 290/903 indicates that at this time ʿUbayd Allāh's doctrine, which traced the imāmate after Djaʿfar al-Ṣādiķ through his son ʿAbd Allāh, rather than Ismāʿīl, had numerous adherents in Khurāsān. On the other hand, Ghiyāth, the *dāʿī* of al-Rayy upholding Ķarmaṭī doctrine, during his stay in Khurāsān converted the amīr al-Ḥusayn b. ʿAlī al-Marwazī in Marw al-Rūdh. As a result, Ismāʿīlism spread throughout the provinces of al-Ṭāliķān, Maymana, Harāt, Ghardjistān, and al-Ghūr, where the amīr al-Ḥusayn was powerful. It is thus likely that both Fāṭimid and Ķarmaṭī Ismāʿīlism were strongly represented in eastern Persia during this period.

From *ca.* 300/913 to the accession of the Fāṭimid caliph al-Muʿizz (341/953). In the first decade of the 4th century/912-23 the Ķarmaṭī movement appears to have regained its ideological unity which prepared it for the great outburst of activity during the following decade. An important role in this process was played by the *Kitāb al-maḥṣūl* of the Transoxanian *dāʿī* al-Nasafī [*q.v.*], which introduced a Neoplatonic cosmology into Ismāʿīlī gnosis and reaffirmed the imāmate of Muḥammad b. Ismāʿīl, who was to return as the Mahdī. The book evidently soon gained wide acceptance in Ķarmaṭī circles. Equally important was the activity of Abū Ḥātim al-Rāzī [*q.v.*], a disciple of Ghiyāth, who took over the leadership of the *daʿwa* in al-Rayy during this decade, dislodging the descendants of Khalaf. Abū Ḥātim displayed great energy, sending *dāʿīs* to Ṭabaristān, Iṣfahān, Ādharbaydjān, and Djurdjān and carrying on a correspondance with Abū Ṭāhir, the leader of the Ķarmaṭīs in al-Baḥrayn. He seems to have claimed to be the lieutenant (*khalīfa*) of the absent imām having superior authority to all other *dāʿīs*, a rank that was also later held by the *dāʿī* of al-Rayy. Aḥmad b. ʿAlī, governor of al-Rayy 307-11/919-24, the Daylamī leader Asfār b. Shīrawayh, and Mardāwīdj, the founder of the Ziyārid dynasty, came at least temporarily under his influence. The success of Abū Ḥātim's *daʿwa* among the Daylam is also indicated by the conversion of Siyāhčashm (killed *ca.* 316/928), Djustānid king of Daylam, in Alamūt.

In al-Baḥrayn, the Ḳarmaṭīs, after the murder of Abū Saʿīd in 300/913, remained peaceful until 311/923. In this year they began under the leadership of Abū Saʿīd's son Abū Ṭāhir al-Djannābī [*q.v.*] a series of devastating campaigns into southern ʿIrāḳ during which they sacked al-Baṣra and al-Kūfa repeatedly and raided pilgrims' caravans. Like Abū Ḥātim, Abū Ṭāhir at this time was predicting the appearance of the Mahdī for the near future, interpreting the conjunction of Jupiter and Saturn in 316/928 as a sign for the end of the era of Islam and the advent of the final religious era. In 313/925 some thirty Ismāʿīlīs, whose *dāʿī* kept up a correspondance with Abū Ṭāhir, were arrested in the mosque of Barāthā [*q.v.*] in Baghdād. With them were found white clay seals bearing the inscription: "Muḥammad b. Ismāʿīl, the imām, the Mahdī, the friend of God". In 315-6/927-9 Abū Ṭāhir led a new campaign threatening Baghdād itself, which he apparently expected to take. While he pushed as far as al-Raḥba, the Ḳarmaṭīs of the *sawād* of al-Kūfa, joined by the Arab tribes of the Banū Dhuhl, Rifāʿa and ʿIdjl, rose under their *dāʿīs*, among them ʿĪsā b. Mūsā, a nephew of ʿAbdān. They ravaged the area of al-Wāsiṭ and entered al-Kūfa by force, but were soon subdued by an ʿAbbāsid army. Those escaping joined Abū Ṭāhir as he returned to al-Baḥrayn. They stayed there and were known as the ʿAdjamiyyūn. Abū Ṭāhir's activity reached its climax in his conquest of Mecca during the pilgrimage season in 317/930. The Ḳarmaṭīs committed a barbarous slaughter among the pilgrims and inhabitants and carried off the Black Stone of the Kaʿba, thus palpably demonstrating the end of the era of Islam.

In Ramaḍān 319/Sept.-Oct. 931, Abū Ṭāhir handed the rule over to a young Persian from Iṣfahān in whom he recognized the expected Mahdī. However, events took a different turn from what had commonly been expected for the advent of the Mahdī. The date was evidently chosen to coincide with the passing of 1,500 years after Zoroaster (= end of the year 1242 of the era of Alexander) for which prophecies attributed to Zoroaster and Djāmāsp predicted the restoration of the reign of the Magians. The young Persian was said to be a Magian and a descendant of the Persian kings. Iṣfahān, his home town, had long been associated by the astrologers with the rise of a Persian dynasty which would overthrow the Arab caliphate. The chief priest of the Magians, Isfandiyār b. Adharbād, was executed a few years later by the caliph al-Rāḍī for his complicity with Abū Ṭāhir. The Persian ordered the cursing of all the prophets and the worship of fire. He then encouraged various extravagant abominations and put some prominent Ḳarmaṭī leaders to death. After some 80 days Abū Ṭāhir was forced to kill him and admit that he had been duped by an impostor. The episode severely demoralized the Ḳarmaṭī movement. The Ḳarmaṭīs from ʿIrāḳ left al-Baḥrayn and many, among them the chief of the ʿIdjl Abū 'l-Ghayth b. ʿAbda, apostatized, disclosing the secrets of the *daʿwa*. Tribal Arab Ḳarmaṭīs came to offer their service in the armies of Sunnī rulers. A group of seventy of them is mentioned for the first time in 320/932 in the army of the ʿAbbāsid general Muʾnis. Later sizable Ḳarmaṭī contingents served in ʿAbbāsid, Barīdid, Ḥamdānid and Būyid armies.

The leading *dāʿīs* were shocked by the episode in al-Baḥrayn, which hurt the reputation of the movement by the accompanying manifestations of libertinism and anti-Arab sentiment and by its disastrous end. The tendencies of Abū Ḥātim's *Kitāb al-iṣlāḥ*, in which he criticized certain aspects of al-Nasafī's *Kitāb al-maḥṣūl*, are best understood on the assumption that it was written after the events in al-Baḥrayn and was meant partially as a veiled censure of them. It uncompromisingly repudiates antinomian tendencies in the *Kitāb al-maḥṣūl*, insisting that the sixth era, that of the prophet Muḥammad and Islam, had not been closed with the first coming of the seventh imām, Muḥammad b. Ismāʿīl, as the *Kitāb al-maḥṣūl* implied. Only after his return would he open the seventh, lawless era. Abū Ḥātim's criticism of the *Kitāb al-Maḥṣūl* was repudiated by other *dāʿīs*, among them Abū Yaʿḳūb al-Sidjistānī [*q.v.*], who in his *Kitāb al-nuṣra* defended most of al-Nasafī's views, including their antinomian implications. Despite such internal dissension the *daʿwa* soon regained strength, though engaging more in literary than in revolutionary activity. ʿĪsā b. Mūsā, who had been captured by the government troops suppressing the Ḳarmaṭī revolt in the Sawād in 316/928, escaped from prison in 320/932 and remained in Baghdād writing philosophically-tinged books which he ascribed to ʿAbdān. This was also the practice of other *dāʿīs* in ʿIrāḳ in this period, like the brothers Abū Muslim and Abū Bakr b. Ḥammād in al-Mawṣil and ʿAlī b. Waṣīf, who resided in al-Raḳḳa and later in al-Mawṣil. The sons of Ḥammād in al-Mawṣil and Ibn Nafīs in Baghdād were, according to Ibn al-Nadīm, high-ranking *dāʿīs* subordinate to Abū Yaʿḳūb, the *khalīfa* of the imām residing in al-Rayy. This Abū Yaʿḳūb was the successor of Abū Ḥātim (d. 322/934) and may well be identical with Abū Yaʿḳūb al-Sidjistānī who at this time did not recognize the Fāṭimid imāmate, as is evident from his *Kitāb al-nuṣra*. The Ismāʿīlī missionary activity in northwestern Persia remained successful in this period. The Sallārid al-Marzubān b. Muḥammad, ruler of Ādharbaydjān (330/941-346/957), and his brother Wahsūdān, ruler of al-Ṭarm, were both converts. On his accession al-Marzubān took ʿAlī b. Djaʿfar, an Ismāʿīlī *dāʿī*, as his vizier and permitted him to preach the doctrine openly. A coin of Wahsūdān minted in 343/954-5 attests his adherence to Ḳarmaṭī Ismāʿīlism. There is no tangible evidence that the Fāṭimid Ismāʿīlī *daʿwa* during this period made any progress in winning over the dissident communities in the east. The story related by the anti-Ismāʿīlī polemicist Ibn Rizām that the *dāʿī* al-Nasafī, who during the last years before his execution in 332/943 was active at the Sāmānid court in Transoxania, imposed a fine on the ruler Naṣr b. Aḥmad, whom he had converted, to be sent to the Fāṭimid caliph al-Ḳāʾim, must be viewed with reserve.

The Ḳarmaṭīs in al-Baḥrayn also returned to their former beliefs, claiming that they were acting on the orders of the hidden Mahdī. Abū Ṭāhir carried out raids on a minor scale to southern ʿIrāḳ and the coast of Fārs and continued to obstruct the pilgrimage. After the failure of earlier negotiations, he reached an agreement with the ʿAbbāsid government in 327/939 under which he promised to protect the pilgrimage in return for an annual tribute and a protection fee to be paid by the pilgrims. The aggressiveness of the Ḳarmaṭīs now subsided. After the death of Abū Ṭāhir in 332/944 his surviving brothers, ruling jointly, continued his peaceful policy. In 339/951 they finally returned the Black Stone of the Kaʿba for a high sum paid by the ʿAbbāsid government, after having rejected earlier offers, including one by the Fāṭimid caliph al-Manṣūr.

After the accession of the Fāṭimid al-Muʿizz (341/953). The fourth Fāṭimid caliph, al-Muʿizz, from early in his reign made determined

efforts to regain the support of the dissident Ismāʿīlī communities in the east for the Fāṭimid cause. For this end he revised the Fāṭimid Ismāʿīlī doctrine so as to accommodate some of their tenets. Thus he re-affirmed the central Ḳarmaṭī belief that Muḥammad b. Ismāʿīl was the Ḳāʾim, whose acts, he maintained however, were to be carried out by his lieutenants (*khulafāʾ*), the Fāṭimid imāms, who were his descendants. These efforts were to a good extent successful, though few specific details are known. Abū Yaʿḳūb al-Sidjistānī, now the chief representative of Ismāʿīlī Neoplatonism, was won over and in his works written after the accession of al-Muʿizz fully supported the Fāṭimid imāmate. Al-Muʿizz permitted the introduction of the Neoplatonic cosmology into Fāṭimid Ismāʿīlī doctrine, including the works of its earlier representatives, al-Nasafī and Abū Ḥātim al-Rāzī. Others of the dissidents, however, resisted his efforts. Ibn Ḥawḳal, writing *ca.* 367/978, refers to the numerous Ismāʿīlī community in Ādharbaydjān as Baḳliyya, indicating their Ḳarmaṭī persuasion. The sharīf Akhū Muḥsin shortly after 372/983 states that the school of ʿĪsā b. Mūsā in Baghdād conserving the doctrinal heritage of ʿAbdān continued to exist in his time. Most notable, however, was the failure of al-Muʿizz to win the allegiance of the Ḳarmaṭīs of al-Baḥrayn.

The encyclopaedia of the *Ikhwān al-Ṣafāʾ* [*q.v.*], composed in al-Baṣra about the middle of the 4th century/*ca.* 960 by a group of secretaries and scholars, should be regarded as an attempt to reunite the non-Fāṭimid Ismāʿīlīs on a common doctrinal basis countering the ideological offensive of the Fāṭimid. While adopting the Neoplatonic cosmology, the authors avoided touching on the points which had previously provoked controversy among the *dāʿīs*. They put their teaching under the auspices of the hidden seventh imām whose reappearance in glory they predicted for the future. They expressly affirmed that the descendants of the seventh imām had "fallen from his rank", thus repudiating the Fāṭimid claim to the imāmate. Written in al-Baṣra, at this time practically a dominion of the Ḳarmaṭīs of al-Baḥrayn, the encyclopaedia must have had at least their passive approval if it was not actually encouraged or commissioned by them.

The latent antagonism between the Ḳarmaṭīs of al-Baḥrayn and the Fāṭimids erupted into an open clash after the Fāṭimid conquest of Egypt in 358/969. The Ḳarmaṭīs had before demonstrated their interest in the Syrian political scene by establishing friendly relations with the Ḥamdānids and the Ikhshīdids. In Rabīʿ II 353/May 964 they had pillaged Ṭabariyya. In 357/968 al-Ḥasan al-Aʿṣam [*q.v.*] invaded Syria at the head of the Ḳarmaṭī army, took Damascus and, after defeating the Ikhshīdid al-Ḥasan b. ʿUbayd Allāh b. Ṭughdj, sacked al-Ramla. That the campaign had not been undertaken on behalf of the Fāṭimids is proved by coins minted in al-Ramla immediately after the withdrawal of al-Aʿṣam, on which the suzereignty of the ʿAbbāsid caliph together with the Ḳarmaṭī rulers of al-Baḥrayn is recognized. In Dhū 'l-ḥidjdja 358/Oct.-Nov. 969, three months after the Fāṭimid army had occupied Egypt, a Ḳarmaṭī army under al-Aʿṣam's cousins Kisrā and Ṣakhr again attacked and defeated al-Ḥasan b. ʿUbayd Allāh at al-Ramla, but then a peace was concluded under which the Ikhshīdid promised to pay annual tribute. As the main body of the Ḳarmaṭī army withdrew, a small force was left and was defeated together with al-Ḥasan b. ʿUbayd Allāh by the Fāṭimid army conquering al-Ramla in 359/970. In 360/971 al-Aʿṣam, aided by the Būyid ʿIzz al-Dawla and the Ḥamdānid Abū Taghlib with arms and men, retook Damascus and al-Ramla, expelling the Fāṭimid army, and everywhere proclaimed the ʿAbbāsid suzereignty. He then besieged Cairo, but after a minor setback in Rabīʿ I 361/Dec. 971 he withdrew and returned to al-Aḥsā, probably because important internal decisions were pending there. By Ramaḍān 361/June 972 he reoccupied al-Ramla, defeating a strong Fāṭimid army. After the arrival of the Fāṭimid al-Muʿizz in Cairo (Ramaḍān 362/June 973), he proceeded to attack Egypt by sea and by land while an ʿAlid ally invaded Upper Egypt. After a defeat before Cairo in Radjab 363/April 974, al-Aʿṣam returned to al-Aḥsā and then concluded a truce promising obediance in order to secure the release of his secretary Abū 'l-Munadjdjā who was captured by the Fāṭimid army in Damascus. The truce, under which al-Muʿizz agreed to pay the tribute formerly paid by the Ikhshīdids, was kept until the death of al-Muʿizz in Rabīʿ II 365/Dec. 975, but immediately after the accession of al-ʿAzīz a Ḳarmaṭī army under Djaʿfar, Kisrā, and Isḥāḳ, cousins of al-Aʿṣam, joined the rebel Alftakīn (Alptegīn) in Damascus and then occupied al-Ramla. Before the advancing Fāṭimid army under Djawhar, they fell back to Damascus. Strengthened by the arrival of al-Aʿṣam, Alftakīn and the Ḳarmaṭīs besieged Djawhar first in Zaytūn al-Ramla and then in ʿAsḳalān for about 17 months, finally permitting him to withdraw to Egypt. They were defeated by a massive Fāṭimid army under al-ʿAzīz near al-Ramla in Muḥarram 268/Sept. 978. The Ḳarmaṭīs under Djaʿfar, who had taken over the command after the death of al-Aʿṣam in Radjab 366/March 977, left for al-Aḥsā and agreed to a peace under which al-ʿAzīz paid a sizable annual tribute to them.

After the death of the Būyid ʿAḍud al-dawla (372/983) the Ḳarmaṭīs of al-Baḥrayn sought to reassert their hold over southern ʿIrāḳ. In 373/983-4 they attacked al-Baṣra and had to be bought off by a tribute. In 375/985 a Ḳarmaṭī army under Isḥāḳ and Djaʿfar occupied al-Kūfa. As the Būyid government tried to reach a peaceful settlement, they began to confiscate crops and money in the country. The government, forced to act, inflicted two humiliating defeats on the awesome enemy near al-Djāmiʿayn. The Ḳarmaṭīs were forced to withdraw and were permanently deprived of their influence in ʿIrāḳ. In 378/988 al-Aṣfar, chief of the Banū 'l-Muntafiḳ of ʿUḳayl, defeated the Ḳarmaṭīs severely, laid siege to al-Aḥsāʾ and pillaged al-Ḳaṭīf, carrying off the booty to al-Baṣra. The Ḳarmaṭīs lost their privilege of escorting and taxing the pilgrims' caravans, claimed now by al-Aṣfar and other tribal chiefs, and were reduced to a purely local, self-contained power. Little is known about their later history. In 382/992 they renewed their nominal allegiance to the Fāṭimid al-ʿAzīz, presumably in return for a resumption of the Fāṭimid tribute, which had been cut off after the victory of al-Aṣfar. These ties cannot have lasted long. During the reign of al-Ḥākim (386/996-411/1021) their relations with the Fāṭimid caliphate were hostile. Nothing is known about their relations with the later Fāṭimids. In religious doctrine they remained permanently apart from the Fāṭimid Ismāʿīlī *daʿwa*. Outside al-Baḥrayn, Ḳarmaṭī communities after the decline of the Ḳarmaṭī state were rapidly absorbed into Fāṭimid Ismāʿīlism or disintegrated. No information definitely concerning such communities after 378/988 is available, though reports about a wealthy sectarian leader named al-Shabbās (d. 444/

1052-3) and his family, who had numerous followers in the *Sawād* of al-Baṣra, among the "Ḳarāmiṭa" and scattered tribes, may indicate a survival of some form of Ḳarmaṭī Ismāʿīlism in southern ʿIrāḳ.

In *ca.* 459/1067 the Ḳarmaṭīs of al-Baḥrayn lost control of the island of Uwāl after an insurrection of the inhabitants and a defeat of the Ḳarmaṭī fleet. Soon afterwards, al-Ḳaṭīf was taken from them by a local rebel. In 462/1069-70 ʿAbd Allāh b. ʿAlī al-ʿUyūnī, chief of the Banū Murra b. ʿĀmir of ʿAbd al-Ḳays residing in the northernmost part of the province of al-Aḥsāʾ, rose against them. After a victory over the Ḳarmaṭīs and their tribal allies, he laid siege to al-Aḥsāʾ for seven years. Aided by a troop of 200 Turkoman horsemen from ʿIrāḳ, he took the town in 469/1067 and subdued a revolt of the Ḳarmaṭīs and the Banū ʿĀmir b. Rabīʿa in 470/1077-8, putting a definite end to the Ḳarmaṭī reign. Probably in order to strengthen his rear against his Turkish allies, he had recognized the suzerainty of the Fāṭimid al-Mustanṣir, who in Rabīʿ II 469/Nov. 1076 appointed the Ṣulayḥid ʿAlī b. Muḥammad as his overlord and protector.

The Ḳarmaṭī state in al-Baḥrayn. Ḳarmaṭī religious propaganda, though promising the replacement of the injustices and oppression of established Muslim society with a rule of justice and equity, did not elaborate a specific social programme. Some early experiments with communal ownership of property remained ephemeral. Historical factors and a concern for the welfare of Ḳarmaṭī subjects combined to produce a state in al-Baḥrayn whose order and justice evoked the admiration of non-Ḳarmaṭī observers like Ibn Ḥawḳal, al-Muḳaddasī and Nāṣir-i Khusraw.

Abū Saʿīd al-Djannābī conferred in major decisions with a ruling council known as *al-ʿIqdāniyya*, which comprised the most important officials of the government. Most prominent among them was al-Ḥasan b. Sanbar (or Shanbar), the head of a powerful family from al-Ḳaṭīf who had become an early supporter and father-in-law of Abū Saʿīd. After the latter's death, his seven sons joined the ruling council. In accordance with the will of Abū Saʿīd his eldest son, Saʿīd, at first succeeded to the leadership and was replaced by the youngest son, Abū Ṭāhir, when the latter reached maturity in 310/922-3. Abū Ṭāhir ruled with the aid of his brothers and a council of seven viziers, most prominent among whom was Sanbar, the son of al-Ḥasan b. Sanbar. After Abū Ṭāhir's death the leadership was held collectively by his surviving brothers, known as *al-sāda al-ruʾasāʾ*. The sons of Abū Ṭāhir, though highly regarded and property owners, remained excluded from the rule. In 358/969 Sābūr, the eldest son of Abū Ṭāhir, demanded the rule in succession to his father, was arrested by his uncles and died, probably murdered. Partisan strife within the ruling family persisted after the incident and in 360/971 the caliph al-Muṭīʿ is reported to have endeavoured diplomatically to restore concord. Numismatic evidence suggests that at least after the death of Saʿīd in 361/972 grandsons of Abū Saʿīd came to be admitted to the ruling council, though a position of pre-eminence was retained by Abū Yaʿḳūb Yūsuf, now the only surviving son of Abū Saʿīd. When Yūsuf died in 366/977, six of Abū Saʿīd's grandsons succeeded to power, perhaps representing the descendants of the six sons of Abū Saʿīd other than Abū Ṭāhir, whose descendants seem to have been permanently excluded. When Nāṣir-i Khusraw visited al-Aḥsāʾ in 443/1051, the ruling council continued to consist of six descendants of Abū Saʿīd, presumably co-opted, and six viziers, now apparently all descendants of Ibn Sanbar (Sanābira). Descendants of Abū Saʿīd called *sāda* were still known in al-Aḥsāʾ in the early 7th/13th century.

In the time of Ibn Ḥawḳal, the income from the fruit and grain estates in al-Baḥrayn was assigned to the members of the Ḳarmaṭī community (*muʾminūn*). This arrangement probably dates back to the time of Abū Saʿīd. The revenues from the customs received on the island of Uwāl on all ships passing through the Persian Gulf was distributed among the male and female descendants of Abū Saʿīd (*ca.* 400). All other revenues from taxes and fees, the tribute of ʿUmān, the protection fees paid by the pilgrims and governments, booty from military campaigns was disposed of by the ruling sons of Abū Saʿīd in agreement with Sanbar. Whatever was not used for purposes of government was divided up annually. One fifth was put into the treasury of the Mahdī, three fifths were distributed among the male descendants of Abū Saʿīd according to a fixed ratio, and one fifth was given to Sanbar for distribution among the members of his family (*ca.* 20). In Būyid times there was a Ḳarmaṭī customs house at the gate of al-Baṣra besides the one of the Būyid government. Permanent representatives of the Ḳarmaṭīs resided in al-Kūfa and al-Djaʿfariyya, a town in the desert near al-Baṣra which they had occupied. They were granted extensive land holdings in the region of Saḳy al-Furāt by ʿIzz al-Dawla and in the area of al-Wāsiṭ by ʿAḍud al-Dawla. During the reign of ʿAḍud al-Dawla and the beginning of the reign of Ṣamṣām al-Dawla a permanent representative of the Ḳarmaṭīs, Abū Bakr b. Shāhūya, resided in Baghdād and wielded considerable political influence.

The able-bodied Ḳarmaṭī sectarians living in al-Aḥsāʾ were well trained militarily and constituted the backbone of the Ḳarmaṭī army. In addition Arab tribal auxiliary troops regularly joined the Ḳarmaṭī campaigns. They belonged chiefly to the Banū Kilāb, who gradually seem to have been fully integrated into the Ḳarmaṭī community, and the Banū ʿUḳayl. In the last phase of the Ḳarmaṭī state the ʿĀmir b. Rabīʿa of ʿUḳayl were charged with the external defence of al-Aḥsāʾ and were paid for their services by a share of the crops of the Ḳarmaṭī farms.

In the time of Nāṣir-i Khusraw, 30,000 purchased negro slaves were employed by the council on the farms. No taxes or tithes were paid by the inhabitants of al-Aḥsāʾ. Anyone impoverished or indebted could obtain a loan until his affairs were re-established. No interest was taken on loans, and all local business transactions were carried out with token money of lead. Any artisan newly arriving in al-Aḥsāʾ was given a loan for the purchase of tools and material needed to establish himself. Repairs of houses were carried out by the slaves of the rulers free of charge. There were mills maintained by the government where grain was ground for the inhabitants without cost. Since the time of Abū Saʿīd prayers, fasting and other Muslim rites had been abolished. A foreign merchant had, however, been allowed to build a mosque for the use of Muslim visitors. People strictly abstained from drinking wine. Fine fabrics were woven and exported to al-Baṣra and elsewhere.

KARMĪSĪN [see KIRMĀNSHĀH].

ḲARMŪNA (today CARMONA), town in Spain situated 40 km. to the North-East of Seville and numbering 24,738 inhabitants. The ancient Roman Carmo was conquered by Mūsā b. Nuṣayr in 93/712 (Ibn al-Shabbāṭ and others say that it was occupied by Ṭāriḳ b. Ziyād), and Ḳarmūna was the name given to a *madīna* and a *kūra* adjacent to those of Ishbīliya and Ḳurṭuba. Of ancient construction, Ḳarmūna was endowed with strong, stone walls, and its fortress was almost impregnable. According to al-Ḳimyarī (*Rawḍ al-mi'ṭār*, text 158-9, tr. 190), it possessed an arsenal, public baths and a great mosque with seven arches supported by marble columns. Situated on a hill, it dominated an extensive and fertile *vega*, amply provided with water and populated with numerous villages; the fields of the *vega* produced wheat and barley; there existed—and still do in our days—some quarries of limestone and clay, as well as garnets "which sparkled there in the night as though they were lamps" (Fagnan, *Extraits*, 62). The mountains of Ḳarmūna being populated by Berbers, the territory felt the effects of the great rebellions which affected the south of al-Andalūs, notably that of the Yemenīs who supported the pro-'Abbāsid al-'Alā' b. Mughīth and who, in 146/763, besieged 'Abd ar-Raḥmān I in the town for two months. In 229/844 Ḳarmūna was the refuge of the Sevillians fleeing the Madjūs [*q.v.*], and, during the years of the agitation of the Muwallads, Berbers and Arabs of Seville against the Amīr 'Abd Allāh (end of the 3rd/9th century), it was one of the centres of the insurrection, and fell in 300/913 and 301/914 to the power of Muḥammad b. Ḥadjdjādj, who held it until the *ḥādjib* Badr was able to subdue in 305/917. Even before the fall of the Caliphate, it was governed by the Berber Banū Birzāl, who made it into a practically independent principality in 414/1023-4. During the war against al-Mu'taḍid, Karmūna was for some time, probably in 459/1066-7, in the hands of al-Ma'mūn of Toledo, who restored it by error to the petty kingdom of Seville. Occupied by the Almoravids in Rabī' I 484/May 1091, it passed to the power of the Almohads in 542/1147. For a certain time (555-6/1160-1) it was dominated by Ibn Hamushk. After its fields had been ravaged by the Christians in the time of Alphonso VIII, it was conquered and repopulated by Fernand III of Castille during the summer of 645/1247.

(J. BOSCH-VILÁ)

KARNĀL, town and district of the province of the Pandjāb.

1. The town is situated a few miles W. of the Djamnā R. in 29°41′ N. 76°59′ E. and 73 miles (117 km.) north of Dihlī. It was in British times the administrative centre of a district of the Pandjāb, but historically and ethnologically it belongs to Hindustān rather than the Pandjāb. It is now in the Ambiala division of the Hariana province of the Indian Republic. In 1961 its population was 72,109.

The language commonly used by the inhabitants is a dialect of Western Hindī. It is no doubt a place of great antiquity, and the name is traditionally derived from Karna of the *Mahābhārata* (Karnālaya = Abode of Karna). But it was not of great importance in early times, and it is not mentioned in the accounts of the invasions of India by Maḥmūd Ghaznawī and Muʿizz al-Dīn. Its prosperity seems to have commenced with the construction of the canal from the Djamnā by Fīrūz Shāh Tughluḳ (see Shams-i-Sirādj, *Tarīkh-i Fīrōz Shāhī*, in Elliot and Dowson, *Hist. of India*, iii, 300). The country became productive and rich, and being on the direct road to Dihlī from the north became an object of attention to invaders and rebels. Thus in 980/1573, while Akbar was engaged in Gudjarāt, Karnāl, Pānīpat, and Sōnpat were plundered by Ibrāhīm Ḥusayn Mīrzā. Djahāngīr halted at Karnāl in 1013/1604 during his pursuit of his rebellious son, Khusraw (Elliot and Dowson, vi, 296, also Beveridge's tr., *Jahangīr's Memoirs*, i). In 1120/1708 during the reign of Bahādur Shāh, Karnāl was attacked and plundered by the Sikh rebels (Elliot and Dowson, vii, 419). But the most noteworthy event in its history was the great victory of Nādir Shāh over Muḥammad Shāh in 1152/1739 which was fought just outside the walls of the town. The imperial army was before the battle encamped on the banks of the canal, where it was re-enforced by the 30,000 cavalry of Burhān al-Mulk, *Nāẓim* of Awadh (Oudh). But Nādir Shāh's army was better disciplined and provided with abundant artillery, and the defeat of Muḥammad Shāh's forces was sudden and complete. After the break-up of the Mughal empire following on this invasion (and those of Aḥmad Shāh Durrānī and the Mahrāttas), Karnāl and the surrounding district again became a prey to the Sikhs. Gadjpat Singh of Djīnd took possession of it in 1763 after the battle of Sirhind, but Nadjaf Khān recovered it in 1775. After this the Sikhs and Mahrāttas contended for its possession with varying results. The intrepid adventurer, George Thomas, drove out the Sikhs in 1798, but only held it for a short time. Gurdit Singh, the Sikh chief of Lādwa, then held it for a space until driven out by a British force under Skinner in 1803, after Lake's defeat of the Mahrāttas at Dihlī.

After these events, Karnāl became the headquarters of a British district and was until 1841 the most advanced military post towards the north-west. When the mutiny of 1857 broke out, Karnāl was held by the British with the assistance of the Sikh Rādjā of Djind and the Muslim Nawwāb of Karnāl, and remained an important link in the chain of communications between the Pandjāb and Dihlī. Its later history is uneventful. The canal originally constructed by Fīrūz Shāh and afterwards extended by ʿAlī Mardān (whose name it bore) in the reign of Shāh Djahān I, was entirely remodelled by British engineers and now irrigates a very extensive tract. The only building of importance is the tomb of the Saint Bū ʿAlī Ḳalandar (d. 725/1323), locally said to have been built by Ghiyāth al-Dīn (probably Tughluḳ), but the actual construction is a much more modern building. Both Pānīpaṭ and Karnāl claim to have this saint's tomb.

2. The district is in the Ambiala division of the province of Hariana lying between 29°11′ and 30°15′ N. and 76°11′ and 77°17′ E. Its area is 3,062 sq. miles (7,930 km.²), and its population in 1961 was 1,490,430. In addition to the Djamnā, the small rivers called Čitāng and Saraswati flowing from N.E. to S.W. traverse part of the district. Towards the end of the 6th century A.D. it became the centre of a powerful kingdom to which Harshavardhana succeeded in 606. He spread his rule over Northern India from the Bay of Bengal to the Satladj and Gūdjarāt and was an enthusiastic supporter of Buddhism. After Harsha's death his empire rapidly broke up. The district was sacked by Maḥmūd of Ghazna, and traversed by Muʿizz al-Dīn Muḥammad b. Sām whose defeat and subsequent victory over Prithwī-Rādj took place at Tirāorī, a small town farther to the south near Karnāl in 588/1192. This place is called Tarāīn and Ṭalāwarī by the chroniclers. At this place there is a fine *sarāy* of the Mughal period converted into a fort by the Sikhs in the 18th cent. A few miles from Karnāl is also the small town of Kundjpura founded by Nidjābat Khān, an Afghān claiming Ghorghushti descent, in the time of Muḥammad Shāh. It was a fort in a marsh, and was called by its founder Kundj-pura, or the Crane's town; hence the family takes its present name of Kundjpuria. Nidjābat Khān afterwards took the side of Nādir Shāh but fought against Aḥmad Shāh Durrānī. All the sovereign powers of the *Nawwābs* were taken from them in 1849. The *Nawwāb* Muḥammad ʿAlī Khān upheld the authority of the British Government during the mutiny of 1857. The *Nawwāb* Aḥmad ʿAlī Khān did good service to the British Government in 1857, and received substantial *djāgīrs*.

In the southern part of the district the principal place is Pānīpat [*q.v.*].

The other principal Muslims of the district of Karnāl are Rādjpūts of the Čawhān, Mandhār, Ghōrēwāha and Juriwar clans. Some of these clans have sections which still retain the Hindū religion. The conversion to Islam is generally asserted to have taken place in the reign of Fīrūz Shāh Tughluḳ.

(M. Longworth Dames)

KARNĀṬAK, properly the Kanarese (Kannaḍá) speaking district of southern India, Sanskrit *karnāṭaka*; the word seems to be derived from Dravidian roots meaning "black country", *i.e.*, the country with the "black cotton soil" which characterizes the south Deccan plateau. The region is approximately that of the modern Mysore (Mahisur) state; but it was already applied in mediaeval times to part of the Telugu-speaking region as well, as in the time of the Vidjayanagara [*q.v.*] kingdom. After the Deccan confederacy had defeated the Vidjayanagara forces at the battle of Tālīkoṭa in 972/1564-5 the Muslims took over the Vidjayanagara Karnāṭak lands, and used the term to apply not only to the plateau lands but also to the coastal lands on the east coast below the Ghāṭs; with European involvement in south India in the 18th century the term came to be erroneously applied, as "Carnatic", to the coastal region alone. In this sense it figures in the title of the *nawwābs* of the Carnatic, more correctly called *nawwābs* of Arkāt.

The town of Arkāt (12°54′ N., 79°20′ E.) became a hereditary holding in the family of Saʿādat Allāh Khān in the early 18th century; Saʿādat Allāh was a Nawāʾit (a Muslim tribe of southern India reputed to be of Hāshimite descent, driven from ʿIrāḳ by al-Ḥadjdjādj in the 2nd/8th century) who had commanded Awrangzīb's forces in the operations against Mysore. His nephew, Dost ʿAlī Khān (1145-53/1732-40), is usually recognized as the first *nawwāb*, nominally a dependent of the first Niẓām of Ḥaydarābād but in practice exercising considerable independence. The town and its surrounding district changed hands many times between Ḥaydarābād, English, French and Ḥaydar ʿAlī's armies, still held by the latter when the *nawwāb* Muḥammad Alī, an ally of the British, assigned the revenues of "the Carnatic" to the East India Company in 1781. In 1801 the full sovereignty of Arkāt and "the Carnatic" was ceded to the company by the *nawwāb* ʿAẓīm al-Dawla. The title of *nawwāb* was abolished under the governor-generalship of the Earl of Dalhousie in the 1850s.

The region is poor in Muslim monuments, except for the ruins of the fort at Arkāt and the *nawwābs*' palace, the *maḳbara* of Saʿādat Allāh Khān (inscr. 1145/1732-3) and the *Djāmiʿ masdjid* in the same town the tombs of Tipū's family at Vellūr ("Vellore") and the palace of the Vidjayanagara rulers at Čandragiri, where their capital was moved after their defeat at Tālīkoṭa, which contains much evidence of the Muslim influence in Vidjayanagara building styles [see HIND, Architecture].

Bibliography: See bibliography to ARCOT; further references in Pearson and Supplements, s.v. *Nawabs of Arcot.* (J. BURTON-PAGE)

KARRĀMIYYA, a sect which flourished in the central and eastern parts of the Islamic worlds, and especially in the Iranian regions, from the 3rd/9th century until the Mongol invasions.

(1). Origins. The founder, Abū ʿAbd Allāh Muḥammad b. Karrām (thus vocalized by Samʿānī, who says that his father was a vine-tender, *karrām*, but there is some support for the readings Karām or Kirām), is known from biographies, in *e.g.* Samʿānī, *Ansāb*, fols. 476b-477a; Dhahabī, *Mīzān al-iʿtidāl*, Cairo 1325/1907, iii, 127; idem, *Taʾrīkh al-Islām*, *sub anno* 255/869 (abridged version in Leiden Ms. 1721, fols. 73b-75a); Subkī, *Ṭabaḳat al-shāfiʿiyya al-kubrā*[1], ii, 53-4; and Ṣafadī, *Wāfī*, iv, 375-7. A prime source for all these, ultimately, was al-Ḥākim al-Bayyiʿ's *Taʾrīkh Nayshābūr*, which gave biographies of the *ʿulamāʾ* of that city.

Allegedly of Arab descent (his remoter ancestry is given in his obituary notice in Ibn al-Athīr, vii, 149, year 255/869), Ibn Karrām was born *ca.* 190/806 near Zarang in Sīstān, whence his *nisba* al-Sidjistānī. From there he travelled to Khurāsān in search of knowledge, studying under Aḥmad b. Ḥarb the Ascetic in Nīshāpūr, Ibrāhīm b. Yūsuf al-Mākiyānī in Balkh, ʿAlī b. Ḥudjr in Marw, and ʿAbd Allāh b. Mālik b. Sulaymān in Harāt. He himself related traditions on the authority of Aḥmad b. ʿAbd Allāh al-Djuwaybārī and Muḥammad b. Tamīm al-Firyānānī, whom he later discovered to be unreliable transmitters; because of his reliance on suspect authorities, the later opponents of the Karrāmiyya asserted that the sect allowed the fabrication of *ḥadīths* for inculcating the fear of God (*tarhīb*) and the desire for Paradise (*targhīb*).

After five years in Mecca as a *mudjāwir*, Ibn Karrām returned via Jerusalem to Nīshāpūr and then to Sīstān, where he sold all his possessions in favour of holy poverty and adopted the ascetic garb of rough skins, spreading the doctrines set forth in his treatise *ʿAdhāb al-ḳabr* (see below). The local governor expelled him from Sīstān for stirring up the common people, so he went to preach to the masses in Ghūr, Gharčistān and the rural areas of Khurāsān, denouncing both Sunnīs and Shīʿīs. Hence when he arrived in Nīshāpūr again with a following of weavers and others from the lower classes, the Ṭāhirid governor of Khurāsān, Muḥammad b. Ṭāhir b. ʿAbd Allāh (248-59/862-73), was justifiably suspicious; the Persian countryside had for long been disturbed by various politico-religious agitators and sectaries. Ibn Karrām was accordingly jailed by the governor for eight years until he was released in 251/865 (some sources state that he had already been briefly imprisoned during his first stay in Nīshāpūr by Ṭāhir b. ʿAbd Allāh, Muḥammad's predecessor as governor). He then left Nīshāpūr and ended his days in Jerusalem, where he died in Ṣafar 255/January-February 869, being buried near the Bāb Arīḥā or Jericho Gate (see Mudjīr al-Dīn al-ʿUlaymī, *al-Uns al-djalīl*, Cairo 1283/1866, i, 263).

(2). Doctrines. Ibn Karrām's theological ideas were set forth in his *ʿAdhāb al-ḳabr* (Punishment of the grave), referring to the questioning of the corpse in its grave by the two angels Munkar and Nakīr, whose identity with the two guardian angels over each living person Ibn Karrām taught [see ʿADHĀB AL-ḲABR]. The work attained considerable currency in its day, but is now known only from citations, principally in Baghdādī's *al-Farḳ bayn al-firaḳ*, Cairo 1328/1910, 202-14, tr. A. S. Halkin, Tel Aviv 1935, 18-30; cf. also Ibn Ḥazm, *al-Milal wa'l-niḥal*, Cairo 1381/1961, i, 108-13, and Shahrastānī, *al-Milal wa'l-niḥal*, ed. Cureton, 79-85, tr. Haarbrücker, i, 119-27. Baghdādī personally disputed with an adherent of the Karrāmiyya, Ibrāhīm b. Muhādjir, before the Sāmānid commander-in-chief in Khurāsān, Muḥammad b. Ibrāhīm b. Sīmdjūr, in 370/980-1, and exposed, so he claims, his abysmal errors. Another of Ibn Karrām's works, the *Kitāb al-Sirr*, is known only from two citations by Ibn al-Dāʿī, a later author.

A salient feature of Ibn Karrām's doctrines was, according to his orthodox opponents, that of literalism and anthropomorphism, so that many heresiologists counted his sect amongst the Mudjassima or Mushabbiha (though Ashʿarī, *Maḳālāt al-islāmiyyīn*, Cairo 1369/1950, i, 205, made it a sub-sect of the Murdjiʾa [*q.v.*]). Ibn Karrām considered that God was a substance (*djawhar*), thus approaching, in Baghdādī's view, the beliefs of the Christians, and that He had a body (*djism*) finite in certain directions when He comes into contact (*mumāssa*) with the throne, thus interpreting the much-discussed ḳurʾānic verse XX, 5, *al-Raḥmān ʿalā 'l-ʿarsh istawā*, "the Merciful One has sat down firmly on the throne"; some of his adherents later substituted the more ambiguous term *mulāḳāt* ("contiguity") for *mumāssa*. Ibn Karrām was also exercised by the questions of the eternity of the world and the ḳurʾānic act of creation, which he reconciled by subtle reasoning. In accordance with the difference between substance and accident, God is subject to certain accidents, such as willing, speaking, perceiving, coming into contact etc., over which He has power, but not over the world and the created object in it, which come into existence not by His power and will but by the divine fiat *kun*! Baghdādī holds this limitation of God's power over created objects which originate in His essence to be an innovation of Ibn Karrām's and to be especially abhorrent. Ibn Karrām also held that God has been eternally qualified by the names attributed to Him

from His acts, *i.e.* that He has been eternally a creator and sustainer of mankind because of an innate, even if unexercised, power of creation (*khāliḳiyya*) and of sustaining (*rāziḳiyya*).

Concerning God's justice, Ibn Karrām held the moderate view that He does not permit the killing of children or of infidels who might come to embrace Islam at maturity or at some later point in their life. He also adopted a moderate view over the Imāmate, allowing that ʿAlī and Muʿāwiya could exist side-by-side as *imāms* requiring the obedience of their partisans, even though ʿAlī was *imām* in conformity with the *Sunna* and Muʿāwiya an usurper. He regarded faith (*īmān*) as constituted simply by a single utterance of the double *shahāda*, enduring for ever and only rendered null and void by apostasy; a person thus declaring his faith remains a *muʾmin* even if he is an unbeliever in Muḥammad's apostleship or is a hypocrite (*munāfiḳ*). Nor were those holding heretical views (*ahl al-ahwāʾ*) to suffer punishment in hell eternally.

Finally, Ibn Karrām held distinctive views on certain legal points, most of these being in the direction of greater flexibility. He taught that the *ṣalāt* could be validly performed in dirty garments and with a dirty body, and he did not require the lesser ablution for contact with unclean objects, *andjās*; furthermore, he regarded the washing of the dead and prayer over them as only a custom (*sunna*) and not an obligation (*farḍ*) like enshrouding and burial.

The ascetic and pietistic strain was very strong in Ibn Kārram's teaching and practice, and did much to win over adherents in Khurāsān; it remained, indeed, a prominent characteristic of the Karāmiyya all through the sect's existence. This emphasis on *taḳashshuf*, self-mortification, and *tawakkul*, utter dependence on God for all aspects of life, derived from his master Aḥmad b. Ḥarb (176/792-234/849), saint and ascetic, and author of a *Kitāb al-Duʿāʾ* mentioned by Ḥādjdjī Khalīfa, so that Ibn Karrām himself acquired the by-name of *al-ʿĀbid*, "the devotee". His preaching in the courtyard of the Dome of the Rock in Jerusalem attracted large crowds, the nucleus of the later strong Karrāmī community there; after his death, his tomb became a retreat-centre for his disciples, the forerunner of a special hermitage (*mutaʿabbad*) in Jerusalem, called by the Persian Ṣūfī term *khānaḳāh* (see Yāḳūt, *Buldān*, ii, 393, s.v. al-Khāniḳa).

In their later theological development, the Karrāmiyya were, like other Islamic sects, to a certain extent fissiparous, without however these sub-sects departing significantly from the central teaching of Ibn Karrām. Baghdādī, 202, tr. 18, enumerates three sub-sects, the Ḥaḳāḳiyya, the Ṭarāʾifiyya (read thus, rather than Ṭarāʾiḳiyya) and the Isḥāḳiyya, but says that they do not regard each other as heretical. Shahrastānī, 79-80, tr. i, 119, says that there were twelve sub-sects, and names six of them as the Isḥāḳiyya again, the ʿĀbidiyya, the Nūniyya, the Zarībiyya, the Wāḥidiyya and the Hayṣamiyya. Finally, Fakhr al-Dīn al-Rāzī in his *Iʿtiḳādāt firaḳ al-muslimīn wa'l-mushrikīn*, Cairo 1375/1956, 67, numbers the sub-sects at seven. The founders of some of these groups are amongst the later scholars of the Karrāmiyya, such as Aḥmad b. ʿAbdūs al-Ṭarāʾifī (d. 347/958) and Muḥammad b. al-Hayṣam (d. 407?/1016-17), who is described by Shahrastānī, 80 ff., tr. i, 120 ff., as the *mutakallim* of the sect, elaborating its theology and its technical vocabulary. The Isḥāḳiyya presumably relate to Abū Yaʿḳūb Isḥāḳ b. Maḥmashādh (d. 383/993), whose family became the mainstay of the Karrāmī cause in Nīshāpūr (see below).

It is not easy to give a just appraisal of the significance of the Karrāmiyya in the development of Islamic religious thought, but the movement was clearly an important one. It is regrettable that we know only of the sect through the eyes of its opponents; the sole surviving Karrāmī work appears to be an anonymous collection of ethical and mystical traditions, British Museum Or. 8049, which Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*[2], Paris 1954, 267-8, tentatively attributed to the Karrāmī leader of Nīshāpūr, Abū Bakr Muḥammad b. Isḥāḳ b. Maḥmashādh (d. 421/1030). Many Sunnī divines, including Ḥanbalīs and Ẓahirīs, were strongly opposed to the sect, and the Shāfiʿī *ḳāḍī* Abū Djaʿfar Muḥammad b. Muḥammad b. Isḥāḳ compiled a polemical work on the errors of its leader, the *Faḍāʾiḥ Ibn Karrām*. However, the geographer Maḳdisī, who in the course of his travels had many contacts with Karrāmī groups, came down firmly on placing them within the bounds of orthodoxy, calling them "an ascetic and God-fearing folk" who derived from Abū Ḥanīfa (*Aḥsan al-taḳāsīm*, 365).

It seems that we should consider the Karrāmiyya as a Sunnī group engaged in defending a central position against the Muʿtazila on one side and the *Ahl al-Ḥadīth* on the other; a later authority like Maḳrīzī considered them to be essentially opponents of the Muʿtazila (*Khiṭaṭ*, ii, 357). Massignon, *op. cit.*, 263-4, speaks of Ibn Karrām as one of the great thinkers in Muslim scholasticism, who supplied a new and profound examination of the theological questions raised by Muʿtazilism, one which was not purely theoretical but which was formed in the light of mystical and moral experience. Notable is Ibn Karrām's introduction of a new philosophical-theological terminology, *e.g.*, *kayfūfiyya*, "the quality of God" and *ḥaythūthiyya*, "the ubiquitousness of God", stigmatized by Baghdādī as *ʿibārāt sakhīfa*, "ridiculous expressions" but which nevertheless show Ibn Karrām's inventiveness and his awareness of need here. Certainly, the sect flourished for some three centuries, and it was suggested by an older generation of orientalists, including Van Vloten and Ribera y Tarragó, that the *khānaḳāh*s and *madrasas* of the Karrāmiyya which sprang up in widely-separated parts of the Islamic world (see below) were centres for instruction and evangelism as well as for the ascetic life, and that they formed a model and stimulus for the Ashʿarī, Ḥanafī and Ḥanbalī *madrasa*-building movement of the 5th/11th century; this link remains, however, unproven [see also KHĀNḲĀH].

(3). Subsequent history. During the course of the 4th/10th century, the Karrāmiyya spread over many parts of the central and eastern Islamic world. In Jerusalem, they had a numerous representation, with their own *khānaḳāh*s and sessions for *dhikr*, and in Fusṭāṭ or Old Cairo they had a special quarter of their own; but the sect was unrepresented in the Maghrib (Maḳdisī, 179, 182, 202, 238). It was Khurasān, Transoxania and the eastern Iranian fringes which became the most enduring stronghold of the sect, and their *khānaḳāh*s were to be found in Gūzgān, Khuttal, Farghāna, Marw and Samarḳand (Maḳdisī, 323). In Harāt, the main *ʿaṣabiyya* or factional strife (probably with some social as well as religious basis) was at this time between the Karrāmiyya and the ʿAmaliyya.

We know most about the Karrāmiyya in Nīshāpūr, where they were a strong and bellicose faction under

the leadership of the Banū Maḥmashādh (see above). Here as elsewhere, the hold of the Karrāmiyya on the populace doubtless stemmed from the exemplary ascetism of their leaders' lives and their evangelistic and teaching activity; Abū Yaʿḳūb Isḥāḳ b. Maḥmashādh is said to have converted large numbers of *dhimmīs* and Zoroastrians by his trenchant preaching. Supported by the secular power, in the shape of patronage from the founder of the Ghaznavid dynasty Sebüktigin and then from his son Sulṭān Maḥmūd, the Karrāmiyya enjoyed a temporary ascendancy over their opponents in Nīshāpūr, comprising the Ashʿarī-Shāfiʿī *ʿulamāʾ*, the ʿAlids and, as appears from the biography of the famous Shaykh Abū Saʿīd al-Mayhanī, the Ṣūfīs. They fell from power, however, after 402/1011-12, when Maḥmūd withdrew his patronage, but they nevertheless continued to be an appreciable element in the city. The local historian of Bayhaḳ, Ibn Funduḳ, and Ibn al-Athīr record civil strife in Nīshāpūr and Bayhaḳ during 488/1095 or 489/1096 between the local Karrāmiyya on one side and the Ḥanafīs and Shāfiʿīs on the other, and this ended in Nīshāpūr with the killing of the Karrāmī leader Maḥmashādh and the razing of their *madrasa* (see on all these events Barthold, *Turkestan down to the Mongol invasion*[3], 289-90; C. E. Bosworth, *The rise of the Karamiyyah in Khurasan*, in *MW*, 1 (1960), 5-14; idem, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040*, Edinburgh 1963, 185-9; R. W. Bulliet, *The patricians of Nishapur, a study in medieval Islamic social history*, Cambridge, Mass. 1972, index).

The last stronghold of the Karrāmiyya was in Ghūr, the mountainous region of central Afghānistān, one not long converted to Islām. According to the historian of the Ghūrids, Djūzdjānī, the Ghūrid sultans Ghiyāth al-Dīn Muḥammad (d. 599/1202-3) and his brother Muʿizz al-Dīn Muḥammad (d. 602/1205-6 were originally adherents of the Karrāmiyya, in conformity with the beliefs of the masses of their subjects, but transferred their allegiance to the Shāfiʿī law school. Sultan Ghiyāth al-Dīn's favour to the great Shāfiʿī scholar Fakhr al-Dīn al-Rāzī [*q.v.*], who disputed in the Ghūrid capital Fīrūzkūh with the popular Karrāmī divine Ibn Ḳudwa, caused a popular uprising there, compelling Rāzī to return to Harāt. Rāzī's polemics with the Karrāmiyya are important evidence for this last phase of the sect's existence, and contain much information on Karrāmī theology. After the Mongol invasions, we hear nothing of the sect, which must have been submerged in the general holocaust in Khurāsān; when later authors like Ibn Taymiyya write against the Karrāmiyya, they are merely drawing on material in the older authorities (see Bosworth, *The early Islamic History of Ghūr*, in *Central Asiatic Journal*, vi (1961), 128-33, and A. Maricq and G. Wiet, *Le minaret de Djam, la découverte de la capitale des sultans ghorides*, Paris 1959, 49-50).

Bibliography: largely given in the article. The most complete and sympathetic account of Ibn Karrām's thought is given in Massignon's *Essai sur les origines du lexique technique de la mystique musulmane*[2], 260-8, 318-19; see also A. J. Wensinck, *The Muslim creed*, Cambridge 1932, index; H. Laoust, *Essai sur les doctrinés . . . d'Ibn Taymiyya*, Cairo 1939, 81, 159; A. S. Tritton, *Muslim theology*, London 1947, index; W. M. Watt, *Islamic philosophy and theology*, Edinburgh 1962, 79, 184; A. M. A. el-Galli, *The history and doctrines of the Karrāmiyya sect, with special reference to ar-Rāzī's criticism*, Edinburgh M. Litt. thesis 1970, unpublished; F. E. Peters, *Allah's commonwealth, a history of Islam in the Near East 600-1100 A.D.*, New York 1973, 426-7, 462-3. The older view of the Karrāmiyya as ignorant anthropomorphists is expressed in D. B. Macdonald, *The development of Muslim theology, jurisprudence and constitutional theory*, New York 1903, 170-2, 195, 291-2.

(C. E. Bosworth)

ḲARRĪ [see ḲERRĪ].

KARS, a garrison town and administrative centre in Eastern Turkey, situated on 40°37′ N. and 43°06′ E., *chef-lieu* of the *il* (province) of the same name, which is bounded by the U.S.S.R. and the *ils* of Artvin, Erzurum and Ağrî and contains the *ilçes* (districts) of Posof, Hanak, Çıldır, Ardahan, Göle, Susuz, Arpaçay, Selim, Digor, Sarıkamiş, Kağızman, Tuzluca and Aralık, with that of Kars itself. In 1960 the population of the provinces of Kars was 543,000; in 1965 (provisional), 606,521, of which 20% was urban and 80% agricultural or rural (*Kars Il yıllığı* 1967, Ankara n.d.).

The etymologies suggested tentatively by Barthold (EI[1])—Georgian—and by Kırzıoğlu (*İ.A*)—Turkish—for Kars cannot be sustained. In mediaeval Armenian sources the forms Karuç (*Karuts*) or Karuç berd are encountered (A. K. Sanjian, *Colophons of Armenian Manuscripts 1301-1480*, Cambridge Mass. 1969, index; N. Adontz, *Armenia in the period of Justinian*, Lisbon 1970, 206). A 16th-century identification of "Chars" with the Chorsa of Ptolomey should perhaps be noted (G. T. Minadoi, *Historia de bello inter Turcas et Persas*, in P. Bizarus, *Rerum persicarum historia*, Frankfurt 1601, 516; cf., however, C. Müller (ed.), *Claudii Ptolomaei geographia*, Paris 1883-1901, i/1, 941 and n.). Byzantine usage (Τὸ Κάρς) is supplied by Constantine Porphyrogenitus, *De administrando imperio*, ch. xliv; Muslim forms are Ḳars in Ibn al-Athīr (ed. Tornberg, x, 27; xii, 169, 295, 300, 306), Ḳarṣ or Ḳārṣ in Yāḳūt (ed. Wüstenfeld, iv, 57), Ghars in al-Fāriḳī (quoted in V. Minorsky, *Studies in Caucasian history*, London 1953, 90-1) and in Djuwaynī, *Taʾrīkh-i Djahān-Gushā* (ed. Mīrza Muḥammad), ii, 161. Ottoman usage favoured the form Ḳārṣ.

From Umayyad times the region of Kars lay on the frontiers of the Muslim world. The decline of Arab power after the middle of the 2nd/8th century gave more independence to Armenia under the Bagratid dynasty and early in the 3rd/9th century the Armenian prince Smbat (held hostage at Sāmarrāʾ from 190/806 to 210/825 and called Abu 'l-ʿAbbās al-Ḳārisī by the Muslims) ruled over Kars as a vassal of the ʿAbbāsids (J. Laurent, *Arménie entre Byzance et Islam*, Paris 1919, 290-1 and n.; cf. the *De administr. imperio*, ii (*Commentary*), ed. R. H. J. Jenkins, London 1962, 158). In 222/837 Isḥāḳ, the amīr of Tiflīs, halted in the vicinity of Kars an army sent by the Byzantine emperor Theophilus as part of an unsuccessful attempt to detach Armenia from Muslim suzerainty (Laurent, *op. cit.*, 211-2).

The importance of Kars in the 4th/10th century derived in part from its situation on the important trade route Ānī-Kars-Ḳālīḳalā (= Erzurum) - Trebizond (Minorsky, *Studies*, 105): Kars shared with Ḳālīḳalā and Malātya the commerce of Armenia and, according to Aristakès of Lastivert (tr. and ed. E. Prud'homme, Paris, 1864, 89), its inhabitants "lived peacefully in the midst of riches of all kinds gathered together by land and sea". Under the ruler Abas (reigned 929-51 (*De adm. imp.*, ii, 179))—and not, as in *ibid.*, i, ch. xliv, under Ashot, who died in 890—Kars became the seat of the Bagratid dynasty. From

962 it served as the capital of the Armenian kingdom of Vanand, which was erected by the ruler of Ānī, Ashot III, for his younger brother Mushegh, and his successors (cf. *EI*[1], ĀNĪ).

By 1022 the kingdom of Vanand was surrounded on three sides by Byzantine territory (Honigmann, *Ostgrenze*, 173); its last ruler, Gagik (1028-64), continued to hold his position even after Ānī had been incorporated into the Byzantine Empire (1044). In face of the Saldjūḳ threat—in 446/1054-5 Tughrïl Beg had destroyed the forces of Gagik and besieged Kars for three days (Honigmann, *op. cit.*, 181)—he was induced to renounce his rights voluntarily in favour of the Emperor Constantine X Ducas, receiving in return a town in the Cilician Taurus.

The early history of Kars as a Muslim town is confused. In 456/1064 its inhabitants appear to have submitted voluntarily to Alp Arslān (Ibn al-Athīr, x, 27); ten years later, however, in 1074, King Giorgi II of Georgia received Kars from one of his vassals. In *ca.* 472-3/1080 he was attacked by a Turkish force under the amīr Aḥmad, who "shortly before" had conquered Kars; subsequently, for much of the 6th/12th century, Kars lay within the Ṣaltūḳid amīrate (cf. Minorsky, Studies, 84, n. 1). In 548/1153 Kars was occupied and destroyed by the Ḳïpčaḳ Turks, but in the same year it was retaken by the Ṣaltūḳid Mālik ʿIzz al-Dīn (cf. the Arabic inscription, commemorating the reconstruction of the citadel in that year, discovered by the Ottomans in the course of their own rebuilding in 987/1579. The text is provided by Ewliyā Čelebī, *Seyāḥat-nāme*, ii (Istanbul, 1314), 330). During the mid-6th/12th century Kars also lay within the sphere of influence of the Shaddādid amīrs of Ānī: in Shaʿbān 556/August 1161 troops furnished by "the lord of Ghars and Surmari" assisted in an attempt by the Shaddādid amīr Faḍlūn b. Minučihr to regain his capital from the Georgian king Giorgi III (Minorsky, *op. cit.*, 88-91, quoting al-Fāriḳī).

Kars remained in Muslim hands until 603/1206-7, when it was taken by the Georgians (Ibn al-Athīr, xii, 169). It was besieged in vain by the Khwārazm-shāh Djalāl al-Dīn in 623/1226; in 636-7/1239 it was occupied by the *noyon* Čormaghun and incorporated into the Mongol Empire. Hethum, king of Little Armenia, who visited Kars *ca.* 649/1251, found there the Mongol camp, from which Baydu governed the territories under his command. According to Ḥamd Allāh al-Ḳazwīnī (*Nuzhat al-Ḳulūb*, ed. Le Strange, 93), at a later period Kars belonged, with Ānī, to the Īlkhānid province of Georgia (Gürdjistān wa Abkhāz): it was described at this time as one of the chief towns of Georgia (Le Strange, 181).

In 759/1358 Kars passed to the Djalāyirids; and in 782/1380 to the Ḳarā-Ḳoyunlu. In 788/1386 the region of Kars, at that time under the local ruler Pirūzbakht, was devastated by Tīmūr and turned into a wilderness (cf. Sanjian, *op. cit.*, 152), while Kars itself, it is said, was levelled to the ground (cf. *Ẓafar-nāma*, ed. Tauer, index). The years 796/1394, 802/1400 and 805/1403 again saw Tīmūr pass by Kars en route for summer pasture in the Bingöl area of Čïldïr, but soon after his death the Tīmūrid province of Ānī, within which Kars was situated, reverted to Ḳarā Ḳōyunlu control. The local ruler Pīr Ḥusayn b. Sahat is said by Armenian sources to have rebuilt and restored Kars in 815/1412; later, in 871-2/1467, Kars passed into the hands of the Aḳ-Ḳōyunlu ruler Uzun Ḥasan.

Kars suffered much from the strife which accompanied the rise to power of the Ṣafawids: for example, in 920/1514, when the Ottoman sultan Selīm I encamped close by Kars on his return from the victorious Čaldirān campaign, the town was said to be once more in a ruinous condition.

By 940/1534 Kars was in Ottoman hands, and in 955/1548 the sultan Sulaymān I ordered work to be done on the fortifications. It was not until the renewal of the Ottoman-Ṣafawid conflict in the late 10th/16th century, however, that Kars fully came into its own as a fortress of vital strategic importance for the Ottoman state, as both a bastion against Ṣafawid incursions into north-eastern Anatolia, and a base forward of Erzurum from which the difficult task of keeping open the road to Tiflīs and holding the new Caucasian conquests could be supported.

In the opening campaign (Djumādā II 986/August 1578) of the long Ottoman-Ṣafawid struggle for the Caucasus, Kars was the scene of the first engagement —"una fiera scaramuzza"—between Ottoman forces under Lālā Muṣṭafā Pasha, and those of the Ṣafawids (Cesare Campana, *Compendio historico, delle guerre . . . tra Christiani, & Turchi* . . . , Venice 1597, f. 20). On 2 Djumādā 'l-Akhir 987/27 July 1579 an Ottoman army under Lālā Muṣṭafā Pasha encamped at Kars, and proceeded rapidly, in the face of acute difficulties caused by a lack of suitable workmen and by the dense fogs and bitter cold which set in after 2 Radjab/25 August (Minadoi, *op. cit.*, 557), to fortify the town for use as a base from which to relieve Tiflīs (Campana, *op. cit.*, f. 25; Pečevi, *Taʾrīkh* ii (Istanbul 1281), 56; Selānikī, *Taʾrīkh*, Istanbul 1283, 153-4. For the relevant European *Flugschriftenliteratur*, see C. Göllner, *Turcica* ii (Bucharest - Baden-Baden 1968), nos. 1706-1835, *passim*).

Under Ottoman rule Kars was raised (988/1580) to be the administrative centre of an *eyālet* of six or seven *sandjāḳ*s. Ewliyā Čelebī, who visited Kars in 1057/1647, variously lists (*op. cit.*, i, 185, 192; ii, 329) the *sandjāḳ*s and their revenues (for other statistical accounts of the revenues and divisions of the *eyālet* of Kars, dating from the mid 11th/17th century, and giving alternative readings, see P. Rycaut, *Present State of the Ottoman Empire*[3], London 1670, 54, and J. von Hammer, *Osm. Staatsverfassung*, ii, 259). The town and its principal monuments at this time are described by Ewliyā Čelebī, *op. cit.*, ii, 329-33, which can be supplemented by J.-M. Thierry, *A propos de quelques monuments chrétiens du vilayet de Kars*, in *Revue des Études arméniennes*, n.s. iii (1966), 73-90, and by the several works of K. M. Fahrettin (= F. Kırzıoğlu). According to Ewliyā Čelebī, the Ottoman forces in Kars, together with those of Vān and Akhiskha, were renowned for their courage and bravery as borderers (*op. cit.*, ii, 331), and in the Ottoman chronicles of the 11th/17th century Kars figures prominently and frequently in the accounts of the wars with the Ṣafawids during this time.

European travellers to Kars were few before the 19th century. G. F. Gemelli-Carreri, who was there in May 1694, described Kars as a "large, but not populous city", with two walls of earth and a good garrison, which sent out forty horse every night to patrol the border with Ṣafawid territory (*A collection of voyages* . . . , iv, London 1704, 109).

During the campaigns of Nādir Shāh, Kars was besieged several times (1735 twice; 1744) (L. Lockhart, *Nadir Shah*, London 1938, *passim*; cf. also the despatches of Stanhope Aspinwall, London, Public Record Office, S. P. 97/32). By the end of the 18th century the *eyālet* of Kars had become one of the poorest in the Ottoman Empire, and was one of several provinces unable to provide sufficient revenue

to support a *wezīr—i.e.*, a pas͟ha of three *ṭug͟hs* (S. J. Shaw, *Between old and new* . . ., Cambridge, Mass. 1971, 168-9; cf. M. d'Ohsson, *Tableau générale*[2], vii (Paris 1824), 306-7).

As part of the administrative reforms of the *Tanẓīmāt* period, the *eyālet* of Kars was reduced to the status of a *sand͟jāḳ* in the *wilāyet* of Erzurum (cf. *Sāl-nāme* for 1292), but the military and strategic importance of the fortress itself was underlined once more by the Russian expansion southward through the Caucasus during the early 19th century. Kars was besieged successfully by Russian forces three times: in 1828, 1855 and 1877 (details and bibliography in W. E. D. Allen and P. Muratoff, *Caucasian Battlefields*, Cambridge 1953). Kars at this time took on a considerable, if specious, significance for both British diplomacy and English public opinion, which regarded it as the "traditional bulwark against Russian expansion southwards" (B. Sumner, *Russia and the Balkans 1870-1880*, Oxford 1937, 516), and for the Russians themselves, as a war objective (*ibid.*, 623-4). By the terms of the abortive Treaty of San Stefano (3 March 1878) and article 56 of the Treaty of Berlin (13 July 1878), the *sand͟jaḳ*s of Kars and Ardahan, and the port of Batum, were ceded to Russia.

The number and composition of the inhabitants of town and province of Kars were seriously affected by the Russo-Turkish wars of the 19th century and by the events of World War I. As early as 1828 the majority of the original Armenian population were said to have deserted Kars after the Russian evacuation, while in the years after 1877 a steady migration of Muslims into Ottoman territory was counterbalanced by the settlement of Armenians and Russians in Kars itself and by massive colonization of the vacated rural districts (the statistics in *Brokhaus-Yefron Entsik. Slovar'* (1895) *svv.* Kars', Karsskaya Oblast', were adapted by Barthold for the *EI*[1] version of this article).

Kars was the scene of fierce fighting in World War I. By the terms of the Treaty of Brest-Litovsk (3 March 1918) it was returned to the Ottoman Empire, but in fact remained in the hands of the Armenian nationalists until Turkish troops entered the town on 25 April 1918. Under the terms of the Mudros armistice (30 October 1918) the Turkish armies were obliged to withdraw to the west of the 1914 Russo-Turkish frontier. The Turks of Kars, however, established (6 November 1918) a provisional government under Fak͟hr al-Dīn Pīrīog͟hlu (Fahrettin Pirioğlu), which claimed suzerainty over the province of Kars and the surrounding Turkish-speaking or Muslim districts as far as Batum and Gümrü (Aleksandropol'). After a period of confused fighting against Armenian, Georgian and British units, the Turkish régime in Kars was overthrown by a British expedition from Batum (19 April 1919) and some of its leaders were deported to Malta. During May 1919 Kars reverted to Armenian control, while the local Turkish leaders who survived took the hills and began to look to the Kemalists for aid. With the British withdrawal from Transcaucasia, and the Turco-Soviet rapprochement (1920), the independent Transcaucasian republics were quickly liquidated, and with the rapid collapse of Armenia the Turkish XVth Army Unit under Kâzim Karabekir Pas͟ha recaptured Kars on 30 October 1920. The *ḳaḍā*s of Čildir and Posof (23 February 1921) and Ardahan (7 March 1921)—all nowadays within the *il* of Kars—also soon came under Turkish control.

By the Treaties of Gümrü (Aleksandropol') with the Armenian Republic (2 December 1920), of Moscow (March 1921) with the Soviet régime, and of Kars (13 October 1921) with the Soviet Armenian, Georgian and Ad͟harbayd͟jānī republics, the present boundary between Turkey and the U.S.S.R. was established. By this time, after seven years of warfare and enforced migration, the non-Muslim population had disappeared, and the province and town of Kars had taken on their present ethnic characteristics.

ḲARṢANA [see ḳurṣān]

ḲARSHI, word for "castle", already attested in ancient Turkish and Uygur (Turfan, the *Kutadg͟hu Bilig*) and perhaps connected with "Kerd͟jiye" in Tokharian B. It was later adopted with this meaning by the Mongols. The town of Nak͟hs͟hab, or Nasaf [*q.v.*], was called Ḳars͟hi after a castle built two parasangs from the town by the Čag͟hatay ruler Kebek K͟hān (1318-26). The stream which flows through the steppes was called Ḳars͟hi-daryā. The town is mentioned in Bābur's [*q.v.*] memoirs and a popular etymology of the name exists. The town was formerly an important trade-centre with more than a thousand houses, sixteen mosques, three caravanserais and twelve *madrasas*; it produced carpets, saddles, bronze wares and later tobacco.

Bibliography: Sharaf al-dīn ʿAlī Yazdī, *Zafarnāme*, ed. M. Ilāḍād, i, Calcutta 1885, iii; G. Le Strange, 470 ff.; R. Rahmeti Arat, in *İA*, s.v. (B. Spuler)

KARS͟HŪNĪ, name of the Syriac script used by the Christians of Syria and Mesopotamia for writing Arabic. The origin of the word is obscure, and neither the place nor date of its first appearance is known. None of the etymologies which have been proposed seems tenable, but it does seem that the original Syriac form of the word was *gars͟hūnī* and that since the Arabic alphabet had no letter corresponding to the Syriac *gomal*, it was transcribed with an initial *kāf*. Since the Arabic alphabet has 28 characters and the Syriac one only 22, each of the following Syriac letters was used to transcribe two Arabic characters: *taw* = *tāʾ* and *t͟hāʾ*; *gomal* = *d͟jīm* and *g͟hayn*; *koph* = *kāf* and *k͟hāʾ*; *dolat͟h* = *dāl* and *d͟hāl*; *ṭeth* = *ṭāʾ* and *ẓāʾ*; and *ṣod͟he* = *ṣād* and *ḍād*. In order to avoid confusion, certain of these characters could be written with a superscript or subscript point, but usage here was not constant. From the 10th century A.D. till the present day, all the Syrian Christians, whether western or eastern, Maronite, Jacobite or Nestorian, have used this writing system, although it seems that the Melkites have never employed it. In India, the name Kars͟hūnī is also applied to the Syriac script used for writing Malayalam, the vernacular language of the Malabar Christians.

(G. Troupeau)

KART (possibly kurt), the name of a dynasty which ruled Herāt from 643/1245 to 791/1389. It was founded by Shams al-Dīn Muḥammad I Kart, who was descended from the Shansabānī house of Ghūr, the family to which the brothers Ghiyāth al-Dīn Muḥammad and Muʿizz al-Dīn Muḥammad b. Sām belonged. As Herāt recovered from the devastating raids of the armies of Čingiz Khān, Shams al-Dīn gradually gained power, and by 643/1245 had established himself as ruler of the state, and used the title of Malik, borne by his descendants. In 649/1251 the Great Khān Möngke, when reorganizing the administration of his empire, confirmed Shams al-Dīn Kart as governor of Herāt, Balkh and the country lying between those provinces and the Indian frontier. During the latter part of Shams al-Dīn's reign his son Rukn al-Dīn acted as his coadjutor, but predeceased him, dying in 682/1283, and when Shams al-Dīn himself died in 684/1285, he was succeeded by Rukn al-Dīn's son, Fakhr al-Dīn. As the power of the Mongol Īl-Khāns of Persia declined, that of the Kart Maliks of Herat increased, and they governed for the first time nearly the same territory as modern Afghānistān, which was protected by them against Mongol devastations. Fakhr al-Dīn befriended the powerful amīr Čoban, who had been regent of Persia during the minority of Abū Saʿīd, the fourteenth Īl-Khān. When Abū Saʿīd, apprehensive of the growing power of his family, attacked it, the amīr Čoban sought asylum with Ghiyāth al-Dīn, who received him, but in 727/1327 treacherously put both him and his son Djalaw Khān to death. Ghiyāth al-Dīn himself died in 728/1328 and his two elder sons, Shams al-Dīn II and Ḥāfiẓ, who succeeded him in turn, died in 729/1329 and 731/1331. The historian Ḥamd Allāh Mustawfī attributes their deaths, following one another at such short intervals, to the divine displeasure incurred by Ghiyāth al-Dīn's treachery towards amīr Čoban.

Ḥāfiẓ was succeeded by a third brother, Muʿizz al-Dīn, who sent an army to the assistance of Malik Ḳuṭb al-Dīn of Kirmān, driven from his capital by the amīr Mubāriz al-Dīn. This army was defeated and a second army sent to the aid of Ḳuṭb al-Dīn was shut up in Kirmān and compelled, at the end of 741/1340, to capitulate. Muʿizz al-Dīn, who died in 771/1370, left two sons, Muḥammad, who held the government of Sarakhs, which he retained after his father's death, and Ghiyāth al-Dīn Pīr ʿAlī, who succeeded him in Herāt. In 782/1380 the Tīmūr sent an envoy to Herāt to claim the allegiance of its ruler and his presence, with a contingent, at the forthcoming muster of his army; but Ghiyāth al-Dīn Pīr ʿAlī detained him on various pretexts while he provisioned the city and completed its defences. The envoy was obliged to return to Samarḳand and report the failure of his mission, and in the spring of 783/1381 Tīmūr marched to Harāt and captured the city, its ruler and his eldest son, Pīr Muḥammad, after a few days' siege. Some of its leading citizens were deported to Shahr-i Sabz and its defences were dismantled, but the Malik and his two sons, the younger of whom had been induced to surrender the strong fort of Ishkalča, were pardoned, and Ghiyāth al-Dīn Pīr ʿAlī was permitted to retain Herāt as a vassal of Tīmūr until 791/1389, when the dynasty was extinguished.

(T. W. Haig-[B. Spuler])

ḲARṬĀDJANNA, a name by which three places are known: Carthage, Cartéia (Ḳarṭādjannat al-Djazīra) and Carthagena. This synonymy seems to be the cause of numerous confusions between the ancient Punic capital and Ḳarṭādjannat al-khalfāʾ (and not al-khuladāʾ as Yāḳūt interprets it). These confusions have been studied by J. Vallve, *Carthage et Carthagène au VIII[e] siècle*. The name of the town, seat of a bishopric, must be the translation of Cartago-Spartaria, alluding to the abundance of esparto grass in the region.

According to al-Ḥimyarī (*Rawḍ al-miʿṭār*, no. 139, who copies al-Idrīsī), "Carthagena is the port of Murcia. It is an ancient town, which dates from antiquity. It possesses an anchorage where large and small ships can anchor. Provisions abound there and are sold there permanently at a cheap rate. In its dependencies is a district by the name of al-Fudūn: there are few places where the soil is of such good quality, and it is reported that a single fall of rain is sufficient to assure the next harvest, and the grain which grows there is excellent. By land it is 40 miles from the town of Carthagena to Murcia. It is near this town of Carthagena that ʿAbd al-ʿAzīz b. Mūsā b. Nuṣayr defeated Tudmīr b. ʿAbdūs, who has given his name to the *kūra* of Tudmīr." The text of the treaty between ʿAbd al-ʿAzīz and Tudmīr is the only one of Muslim Spain which has been preserved *in extenso* and of which we have several versions.

The town, in so far as it was one, does not seem to have enjoyed much importance, despite the enthusiasm of the description which Abu 'l-Ḥasan al-Ḳarṭādjannī gives of it in the 12th-13th centuries (cf. his *Ḳaṣīda maḳṣūra*; a summary analysis in E. García Gómez, *Observaciones sobre la Qaṣīda...*, in *al-And.*, 1933/1, 81-103) and the Arab sources-geographical as much as historical—are exceptionally laconic. A part of the *djund* of Egypt was installed there by Abu'l-Khaṭṭār [*q.v.*] in the district of Tudmīr [*q.v.*], of which we may have a reflection in the *Crónica del Moro Rasis* which placed it under the governorship of ʿAbd al-Malik b. Ḳaṭan. It is in this region that ʿAbd al-Raḥmān al-Ṣiḳlabī disembarked (in 143/763, following the orders of the ʿAbbāsid al-Mahdī), in his attempt to overthrow the Umayyads, at the time of the alliance of Ibn al-ʿArabī [*q.v.*] with Charlemagne. Subsequently, the confrontation for power between the descendants of ʿAbd al-Raḥmān made this place the domain of Sulaymān and later of ʿAbd Allāh al-Balansī. When the continual feuds between Muḍarīs and Yemenīs wearied ʿAbd al-Raḥmān II [*q.v.*], the latter profited from them to found in the year 216/831 an administrative centre, Murcia, which marks the real beginning of his ascendancy over the region.

After the fall of the caliphate, Carthagena always followed the lot of its administrative capital and passed successively in to the hands of the slaves Khayrān and Zuhayr, of ʿAbd al-ʿAzīz b. al-Manṣūr and of Mudjāhid of Denia. According to the *Mémoires of the amīr ʿAbd Allāh*, during the siege of Aledo [*q.v.*], it would appear that the dispute for the possession of the Murcian-Carthagenan region was the apple of discord that made Yūsuf b. Tāshufīn [*q.v.*] resolve to dethrone the petty kings. The province was subdued by Ibn ʿĀʾisha [*q.v.*].

It then passed into the power of Ibn Hamushk and of Ibn Mardanīsh [*q.v.*] and, after its submission to the Almohads, it followed the general decadence and became part of the domains of Sayyid al-ʿĀdil when he rose up in the Levant. It then belonged to Ibn Hūd and finally to Zayyān b. Mardanīsh who, after the loss of Valencia in 635/1238, took refuge in Murcia, from where he was pursued by Bahāʾ al-Dawla. In 1243, the whole region of Murcia-Carthagena surrendered to the future Alphonso the Wise, but there was an uprising there in 1246 and the last indomitable rebels were not exterminated until 1274. Carthagena, judged too coastal in situation and exposed to the attacks of the corsairs and Turks, does not seem to have had so many Moriscos [*q.v.*] as one would reasonably suppose, by contrast with Murcia where there must have been a heavy enough immigration of Granadans deported to Castille, at least those from the region of Cuenca. The port of Carthagena was one of the points via which the expulsion of the Moriscos was effected in 1611.

(P. CHALMETA)

KARŪKH, a town in the region of Bādghīs [q.v.] of modern northwestern Afghānistān and, according to Ibn Ḥawḳal (4th/10th century), the biggest town of the region after the capital Harāt. It had a Friday mosque and was famed for its fruits, especially apricots and raisins. Its particular claim to fame in mediaeval times was as an enduring centre of the Khawāridj on the eastern Iranian fringes. In 259/873 the Ṣaffārid *amīr* Yaʿḳūb b. al-Layth had to cope with a serious rebellion of the eastern Khawāridj centred on Karūkh under their "commander of the faithful" ʿAbd al-Raḥīm al-Mutawakkil ʿalā 'llāh; over a century later, according to Muḳaddasī, Karūkh was still a Khāridjī centre. A modern village with the same name survives at Karūkh.

Bibliography: *Ḥudūd al-ʿālam*, tr. Minorsky, 105; Le Strange, *The lands of the Eastern Caliphate*, 410; C. E. Bosworth, *The armies of the Ṣaffārids*, in *BSOAS*, xxxi (1968), 543-4. (ED.)

ḲĀRŪN, the Biblical Korah (Num. XVI), is mentioned three times in the Ḳurʾān (XXVIII, 76-82, XXIX, 39/38, and XL, 25/24). In the latter two verses, he appears with Hāmān as a minister of Firʿawn, and all three of them behave proudly towards Moses, stigmatising him as a magician and impostor. In the first passage (XXVIII, 76-82), Ḳārūn is one of Moses' people, but treats them in an insolent fashion because of the immense riches which have been given to him, as he believes, because of the knowledge which is in him (*ʿalā ʿilmⁱⁿ ʿindī*). He makes a great public display of his wealth, and is swallowed up by the earth with his palace (*dār*), an example of those who prefer the fleeting wealth of this world to the recompense of Allāh in the next world awarded to those who believe and do good works.

This tale, which alludes vaguely to the rebellion of Korah and, more explicitly, to his punishment (Num. XVI, 31-3, XXVI, 10), is probably an echo of some moralising story. The commentators and the writers on the *ḳiṣāṣ al-anbiyāʾ* have added to it a lengthy legend, in part derived from rabbinical literature (see *Jewish encyclopedia*, vii, 556 ff.; Sale's notes to his Ḳurʾān tr.; and al-Thaʿlabī, *Ḳiṣāṣ*, Cairo 1314, 120 ff.). In this legend, Hāmān and Ḳārūn are bracketed together because of their riches and their avariciousness, thus explaining why the latter has become Pharaoh's minister.

In Islam, the legend of Ḳārūn has had two divergent developments: (1) In order to explain the origin of his proverbial riches, and because of his special "knowledge", he has become one of the founders of alchemy. This role appears early; see, *e.g.*, al-Djāḥiẓ, *Bukhalāʾ*, 41, tr. Pellat, 67, and an allusion in al-Masʿūdī, *Murūdj*, viii, 177 = ed. Pellat, § 3312. Ibn al-Nadīm, *Fihrist*, 352, tr. in M. Berthelot, *La chimie au moyen âge*, Paris 1893, iii, 27, states that the revelation of the "process" was "made by God to Moses and Aaron [sc. in order to gild the *Tābūt al-Tawrāt*, al-Kisāʾī, *Ḳiṣaṣ*, 229] and that it was Ḳārūn who operated in their name. The latter accumulated a vast horde of gold and silver, but at the request of Moses, was punished by God for his arrogance, his pride and the evil behaviour which his recently-acquired riches had led him into". According to al-Ṭabarī, Zotenberg, i, 382-4, he was originally a goldsmith, and according to al-Kisāʾī, *op. cit.*, 229, Moses' sister was Ḳārūn's wife, and it was she who learnt about alchemy in order to teach her husband (according to the commentators, he was Moses' nephew). (2) In Egypt, his name is associated with various lakes. Thus what is left of Lake Moeris in the Fayyūm bears his name (Birkat Ḳārūn; see Guides Bleus, *Égypte*, 1956, 241-2, where a popular etymology Birkat al-Ḳurūn "Lake of the Horns" is erroneously given), and a *Madīnat Ḳārūn* has recently been begun in the neighbourhood. Also, beside the Birkat al-Fīl to the south of Cairo, near the Mosque of Ibn Ṭūlūn, there was formerly a Birkat Ḳārūn which had evidently associations of supernatural legend. Al-Maḳrīzī describes it (*Khiṭaṭ*, Būlāḳ 1325, iii, 261-2) and tells that Kāfūr [*q.v.*] who built beside it a house was said to have been driven from it by djinn. It figures also in the Story of Djudhar the Fisherman in Zotenberg's (cf. *Not. et Extr.*, xxviii, i, 167 ff.) Egyptian Recension of "The 1001 Nights" (Nights 606-24) as a place where spirits take refuge from magicians. Von Hammer suggested (*Der Tausend und Einen Nacht noch nicht übersetzte Märchen*, tr. Zinserling, ii, 32; tr. Trébutien, i, 291) that Ḳārūn had here become confused with the Egyptian Charon.

(D. B. MACDONALD*)

KĀRŪN, the largest river in southern Persia. It rises in the north-eastern part of the district of ʿArabistān (earlier called Khūzistān), a little above Lat. 32° N. on the Zarda-Kūh, which belongs to the Bakhtiyārī mountain system or, to be more accurate, on one of the ranges named Kūh-i Rang, one of the highest mountains in south-western

Persia (estimated at 13,000 feet). The actual source of the river, according to Sawyer (*Bibl.*, *op. cit.*, 486, with a picture), is about 10 miles above the place called Ser-i Česhme-i Kurang "main source of the Kurang (Kuran)". The Zāyinda-Rūd likewise rises on the Zarda-Kūh and flows eastwards towards Iṣfahān. As the source of the Kārūn is only about 100 miles from Iṣfahān, Shāh ʿAbbās I thought of leading the Kārūn into the Zāyinda-Rūd by a tunnel through the mountains. Although almost finished at his death, the work was not continued by his successors; the remains of it may still be seen (cf. Layard, *Bibl.*, *op. cit.*, 50 f.).

The upper part of the river's course extends from its source to its exit from the mountains at Shustar, and the middle course from Shustar to al-Ahwāz or Naṣriyya, where it breaks through the spurs of the Djabal Ḥamrīn; its lower course runs through the alluvial plain formed by the Kārūn system. As a result of its very meandering course, the river covers about 500 miles from its source to its mouth in the Shaṭṭ al-ʿArab, although a straight line between the two points is only about 150 miles. In its upper course the Kārūn makes two great loops in about 32° N. Lat.

A little above Shustar, the Kārūn divides into two navigable arms which unite again about thirty miles away at the village of Band-i Ḳīr (near the mediaeval ʿAskar Mukram) and thus form an island. The western arm is the main stream, the Kārūn proper; it is now called Āb-i Shuṭayṭ (Shuṭayt = little river) and further down also Āb-i Buzurg Shustar (= great water of Shustar). The eastern arm is artificial in origin, and is now called Āb-i Gargar; the Arab geographers of the Middle Ages know it by the name of Masruḳān (Mashruḳān, Musruḳān) which is explained as a corruption of the Persian Ardashīr-Kān (= "Ardashīr's trench"). The form Ardakhshīragān is noteworthy: it occurs in a Syriac chronicle edited by Guidi in the *Actes du 8e Congres des Orientalistes*, Leiden 1891, 32 (and cf. thereon Nöldeke in *SB Ak. Wien*, cxxviii (1893), Abh. ix, 42). The first Sasanian king is said to have been the maker of this watercourse. The Persian geographers of the 9th/15th century call the western branch, which carries the bulk of the water, Čahār Dānika ("four-sixths"), the eastern Dū Dānika ("two-sixths") (cf. Le Strange, 236). These names are still known locally, according to Layard (*op. cit.*, 27). In the 4th/10th century, according to Arabic sources, the Masruḳān canal did not enter the main stream, the Kārūn proper, at ʿAskar Mukram, but ran parallel to it and reached the Persian Gulf by a course of its own.

The Kārūn delta begins a little above the village of Sābla. Three channels break off from the main arm, which continues its course till its junction with the Shaṭṭ al-ʿArab at Muḥammara; these all run South-east to the Persian Gulf and finally end their course in estuaries (*khawr*, *khōr*), which are at times swamps. Their names are: (1) The Shaṭṭ (or Rūd) al-Ḳadīmī (= "the old stream"), which leaves the Kārūn about an hour's journey above Sābla and broadens out into the Khōr Mūsā (also called Khōr Moi Allāh). This is probably the oldest course of the Kārūn; (2) The Shaṭṭ "al-Amaya" (as it is usually written on maps) or al-Aʿmā (= the blind stream), probably so called because its bed is usually choked with mud. It is also called Shaṭṭ Ḳobān (Goban) from the district which lies on its right bank; Portuguese writers of the 17th century reproduced the name as Rio de Gabão (cf. Tomaschek, 75 f.). This second arm begins at Sābla and finally expands into the Khōr Silidj (Selige in Kinneir, 292); it is perhaps the second oldest arm of the Kārūn; (3) The Shaṭṭ Bamishīr (Bahmishīr, Behemshīr), which leaves the Kārūn 6 miles below Sābla and expands into the Khōr Bamishīr before entering the sea. This third branch of the Kārūn is considerably wider and holds more water than the other two. According to the *Persian Gulf Pilot*, 284, it is 54 miles long (40 as the crow flies). This may now be regarded as the natural mouth of the Kārūn.

The two western branches of the Kārūn, the Shaṭṭ al-Aʿmā and the Bamishīr, form two long islands with the Shaṭṭ al-ʿArab, which runs parallel to them, the main Kārūn in the north and the Persian Gulf in the south. The eastern one, bordered by the Shaṭṭ al-Aʿmā (Ḳobān) and the Bamishīr, is called Ḳobān (Gobān, Gobbān); the western, between the Bamishīr and the Shaṭṭ al-ʿArab, is now usually called Djazīrat ʿAbbādān, a name it already had in the Middle Ages, from the town of ʿAbbādān [*q.v.*], which probably originally lay at the mouth of the delta. The latter island is also called Djazīrat al-Khiḍr after the prophet al-Khiḍr [*q.v.*], highly revered in Muslim popular belief especially in ʿIrāḳ as a patron of water, who had or still has a sanctuary near ʿAbbādān ("Chodder Abbadan" in Niebuhr, *Reisebeschreibung*, ii, Copenhagen 1778, 206), which is mentioned as early as the 7th/13th and 8th/14th centuries by al-Dimashḳī (*Nukhbat al-Dahr*, ed. Mehren, 97, 18) and Ibn Baṭṭūta (ii, 19). Alongside ʿAbbādān, the most important place in the Middle Ages seems to have been al-Muḥriza (Muḥrizā) and the island seems occasionally to be called after it. For Muḥrizā see Yāḳūt, i, 502, 712, iii, 598, iv, 709; al-Dimashḳī, 97; al-Ḳazwīnī, *Āthār al-Bilād*, ed. Wüstenfeld, 280. The Persians gave this island the name Miyān Rūdān (= "between the rivers", "Mesopotamia"; see, *e.g.*, Yāḳūt, iv, 708, and Le Strange, 48).

As has been noted, the Kārūn at an earlier period probably entered the sea through the Shaṭṭ al-Aʿmā, apart from the riverbed represented by the Shaṭṭ al-Ḳadīmī, which is perhaps the oldest bed. According to the mediaeval Arab geographers, the different branches and tributaries of the Dudjayl (Kārūn) united at a place called Ḥiṣn al-Mahdī. Whether the Nahr Sidra (= Lotus-river), which also enters there, must be considered the main arm of the Kārūn from al-Ahwāz onwards is doubtful: cf. Le Strange, 237; Schwarz, *op. cit.*, 306. The reunited Kārūn, called Nahr Ḥiṣn al-Mahdī (see Schwarz, *op. cit.*), then enters its estuary (Fayḍ Dudjayl), which ends at Sulaymānān on the coast (for Ḥiṣn al-Mahdī and Sulaymānān cf. Le Strange, 48, 243, and in *JRAS* (1895), 302; Schwarz, *op. cit.*, 306, 329-330, 400). Ḥiṣn al-Mahdī perhaps lay in the neighbourhood of the present Sābla; Sulaymānān is perhaps to be located somewhere in the region of the Khōr Silidj; the end of the course of the Kārūn in the Middle Ages would thus practically coincide with the modern Shaṭṭ al-Aʿmā. In the Middle Ages there must have been several other separate smaller mouths of the river. In these topographical investigations it should not be forgotten that southern ʿIrāḳ and Khūzistān, the delta of the great rivers, have undergone far-reaching changes in their hydrographic structure in the course of thousands of years. In ancient times the Persian Gulf extended much farther into the present mainland, so that the Kārūn, Karkhā, Euphrates and Tigris all had separate mouths; cf. Andreas in Pauly-Wissowa, i, 1394, 2811. During the Middle Ages and in modern times the coastline has steadily advanced southwards.

The bed of the Kārūn from Sābla to Muḥammara seems to be the work of human hands. In the 4th/10th century the Būyid ʿAḍud al-Dawla [*q.v.*] constructed a canal, which was called ʿAḍudī after him, to secure direct communication between the Tigris and Kārūn (from al-Baṣra to al-Ahwāz). As in those days the Kārūn apparently flowed into the Persian Gulf through the Shaṭṭ al-Aʿmā, in its main lines the ʿAḍudī probably corresponded with the present course of the Kārūn between Sābla and Muḥammara. It is very doubtful that that work was something cntirely new; more probably he undertook the restoration of an older channel which had fallen into neglect. A century earlier we have evidence from the Arab geographers of the existence of a canal called Nahr al-Djadīd (= New Canal) which led from Ḥiṣn al-Mahdī (near Sābla?) to the Tigris and may well have coincided with the ʿAḍudī. From a still earlier period we have the Bayān canal, the course of which may wholly or in part have coincided with the ʿAḍudī or Nahr al-Djadīd. Whether there was in ancient times —about the period of Alexander—an artificial channel connecting the Kārūn and Tigris and following the same direction cannot be ascertained with certainty; on this question, see Andreas in Pauly-Wissowa, i, 1394. In modern times, the name Ḥaffār (= "digger", usually spelled Hafar in books of travel and in maps) has come into use for the stretch of the Kārūn between Sābla and Muḥammara, and the name suggests that here too we have the work of human hands, not a natural bed. At the present day, however, this name is limited to the short stretch, only about an hour's journey long, from the beginning of the Shaṭṭ Bamishīr (the mouth proper of the Kārūn at the present day) to Muḥammara. It should also be noted that in the second half of the 12th/18th century, Sulaymān, the powerful *shaykh* of the tribe of Kaʿb (on him see below), destroyed the connexion between the Kārūn and the Shaṭṭ al-ʿArab by placing a dam (*band*) across the Ḥaffār at Sābla and leading the water into the Shaṭṭ al-Aʿmā. The district of Ḳobān thereby soon became very prosperous. But during Karīm Khān's [*q.v.*] second invasion, the dam in the Ḥaffār was destroyed (cf. Kinneir, *op. cit.*, 90). On the communication between the Kārūn and Tigris by the ʿAḍudī, Nahr al-Djadīd, Bayān and Ḥaffār canals see Kinneir, 90, 293-294; Layard, 55-56; Tomaschek, 76-77; Ainsworth, i, 174, 184; *Persian Gulf Pilot*, 296; Le Strange, 48, and *JRAS* (1895), 308-9; Schwarz, 309, 311, 390.

While still in the mountains, the Kārūn receives a number of abundant tributaries, for example, above Sūsan the Āb-i Bāzuft on the right and the Āb-i Bars (Bors) on the left. A little above Čamani Yorgha the Talak joins it. The most important tributary is the river of Dizfūl, the Dizfūl-Rūd or Āb-i Diz. It and its tributary, the Shāwūr, were at one time (and in part still are) connected with the Karkhā and the Kārūn by canals. On the Dizfūl-Rūd and Shāwūr, see Ḥamd Allāh Mustawfī, *Nuzha*, 215, ii; 218, 13, 15; Le Strange, 233, 239, and *JRAS* (1895), 312; Schwarz, 303-305; Ritter, ix, 193 f.; Layard, 56 f.; see also von Bode, ii, 193; Loftus, 329, 342, 346; J. Dieulafoy, *passim*; Sawyer, 490 f.

The Kārūn is not only connected with the Tigris and Karkhā in the west, but in the east it is linked up with the Djarrāḥī of Kurdistān-Rūd or Āb-i Kurdistān (the Ṭāb of the Arab geographers; see Le Strange, 270; Schwarz, 5 f.). At Sābla a canal navigable by boats leaves the Shaṭṭ al-Aʿmā and runs to Dawraḳī (Dōraḳ-Fallāḥiyya [see DAWRAḲ]) on the Djarrāḥ.

The more important towns on the Kārūn in mediaeval as in modern times lay on its central course between Shustar and al-Ahwāz. At the two termini of this stretch stood the two capitals of the mediaeval province of Khūzistān, al-Ahwāz and Tustar (Shustar). Al-Ahwāz [*q.v.*], formerly the capital proper of this district, is situated at the important point where the Kārūn, breaking through its last barrier, the Djabal Ḥamrīn range, enters the plain. For Tustar see SHUSTAR, and on the site (particularly the bifurcation which begins there) Graadt van Roggen, 174 f.

The lower course of the Kārūn from al-Ahwāz to Muḥammara has no places of great importance on its banks. Muḥammara, at the junction of the Kārūn and the Shaṭṭ al-ʿArab, is, however, a place of unusual importance. It was at the beginning of this century the best harbour in Persia, easily accessible at any time.

In the mountainous upper course there are no longer any towns of importance. In late antiquity and in the Middle Ages the most prominent were Sūsan (also called ʿArūdj or ʿArūḥ and Djābaliḳ) on the right bank, and Īdhadj [*q.v.*] or Māl-Amīr opposite. Along the upper course in parts runs a road protected by many forts, now mostly in ruins. The Kārūn in general is historically one of the most interesting rivers in Persia owing to the numerous ruins from ancient times which are everywhere found on its banks.

In the military history of the Middle Ages the Kārūn basin only occasionally occurs as the scene of fighting; cf. Schwarz, 299-300. During World War I possession of this territory became very important on account of its oil-fields; cf. Schweer, 140-4.

As early as the Sasanians, powerful dams (*shadhrawāns*) with the necessary sluices had been erected at various places to enable the water thus dammed to be led by numerous small canals to fields on a higher level, especially on the central stretch of the Kārūn. Throughout the Middle Ages this irrigation system was kept in excellent repair and transformed the land it watered into flourishing gardens. Since then, however, most of these works have fallen more and more into ruin as a result of neglect, and great stretches of once fertile country have become desert again. The most celebrated was the gigantic dam at Shustar, which was regarded in the east as one of the wonders of the world. Its erection is ascribed to the Sasanian king Shāpūr I (241-272 A.D.). On this great system of dam and sluices here, which after considerable restoration is still partly in use to-day, see Ritter, ix, 186 f.; Nöldeke, *Geschichte der Araber und Perser zur Zeit der Sasaniden*, Leiden 1879, 33; Justi, in *Gr.I.Ph.*, ii, Strassbourg 1896 f., 318; Le Strange, 235; Schwarz, *Iran*, 296. At Wāʾis, a few hours' journey below Band-i Ḳīr, the ruins of a great dam may still be seen (cf. Herzfeld, 76). In al-Ahwāz, at the rapids there, considerable remains of a triple ancient system of dams still exist. Band-i Ḳīr (= "Bitumen-dam") took its name from the ancient dam coated with bitumen.

The Kārūn is the only river of Persia that admits of navigation. Communication is maintained with the Persian Gulf through the Shaṭṭ al-ʿArab and the Shaṭṭ Bamishīr. There is evidence that as early as the Umayyad period there was regular traffic up the river as far as al-Ahwāz (cf. Schwarz, 300). The Kārūn was into the 20th century navigable as far as Shustar. The only obstacles were the rapids caused by the gypsum rocks below al-Ahwāz (see the very full description by Wells, 156 f.), which make unloading

and reshipment necessary. Movement along the river has since expanded. The valley possesses rich oil fields in modern times. In 1888 the Kārūn was opened to international navigation.

(M. Streck-[J. Lassner])

KĀRWĀN, a word ostensibly of Iranian origin, later arabicized, whence Eng. "caravan", Fr. "caravane", Ger. "Karawane", etc. Its early form *kārbān*, meaning "supervising work", probably evolved in the Pahlavi period. The Pahlavi form may have been *kārpānde*, in which case it would be a noun made up of *kār* meaning "army" or "war" plus the suffix *-van*, signifying a group of travelling merchants; convoys of provisions, goods and animals also were called *kārbān*. However, this may well be a popular etymology for a word of uncertain origin. The more widespread meaning dates from the early Islamic period (M. Muʿīn, *A Persian dictionary*, iii, 2817; caravans are described in the works of the 5th/11th century poets Firdawsī and Farrukhī [*qq.v.*]).

Caravan routes demonstrate the distribution and direction of trade routes, although the latter existed before the caravan system was developed. Journeys of various kinds were undertaken in caravan-like "convoys". In the pre-Islamic period the Arabs had for long used the word *ʿīr*, and later the more usual word *ḳāfila*, as the equivalent of *kārwān*; the word *ḳāfila* was current at the beginning of the 7th century A.D. for gatherings of traders (cf. Ibn Hishām, *Sīra*, Cairo 1936, i, 253, 312). In Turkish, the word *arkïsh*, meaning caravan, is attested from the 8th century A.D. (Clauson, *Etymological Dictionary*, 216-7).

Caravans were composed of horses, mules, donkeys, and especially camels. Camel-caravans were used over open plainland and deserts, while in the mountainous regions mules, donkeys, and more rarely horses were used. In some regions, however, the nature of the caravan was quite different: in India, caravans made up of 100-200 carts each pulled by 10-12 oxen were used for the bulk transport of grain (J.-B. Tavernier, *The six voyages*..., London 1678, ii, 28 ff.; Peter Mundy, *Travels*..., ii, pp. xxxvii, 45, 249, 250, 281, 283).

HISTORICAL SURVEY

Camel caravans became widespread because of the greater load that the animal could carry (on the domestication of the camel, see BADW). The size of the load a camel can carry varies according to the climate: in hot countries such as India the camel can carry only a small load of 600-650 lbs, whereas those employed between Tabrīz and Istanbul and accustomed to the cold, could carry 1000 lbs (Tavernier, i, 49-50).

The oldest feature in the history of the western Asiatic caravan trade is the so-called "Silk Route". This route connecting China and Central Asia was extended to Farghāna and thence to southern and western Asia, and provided a means of transporting the products of distant countries by means of large caravans consisting of hundreds of camels. In the Islamic middle ages, Baghdād was the point of departure for routes to east and west, the principal itineraries being: (1) From Baghdād northwards along the Tigris to Mosul - Hatra - Ḥarrān - or Sindjār - Nisibis - Raḳḳa - Manbidj - Aleppo - Ḥamā - Ḥimṣ - Baʿlabakk - Damascus - Ramla - Cairo - Alexandria, and thence by ship to North Africa; (2) From Baghdād the route along the west bank of the Euphrates, which it crossed at Hīt, and thence to Damascus, was the shortest route across the desert; and (3) The eastbound route went from Baghdād to Hamadān, thence to Rayy - Nīshāpūr - Marw - Bukhārā and Samarḳand, and so to the western terminal of the silk route at Farghāna, by which China could be reached. One route ran from Khīwa in Khwārazm to the mouth of the Volga, and thence up the Volga to the Baltic countries; another passed north of the Caspian Sea to the northern ports of the Black Sea.

The organization and marching arrangements of a caravan may be illustrated by the account of one consisting of about 600 camels and 400 mules which made the journey from Diyārbakr to Mawṣil in 1838. The camals, tied together with rope in groups of ten or twenty, walked in single file; their owners rode small donkeys or horses, travelling in front, while the servants walked. The camels would not move un-

less led by the donkey. When the caravan came to a site where it was to spend the night, the leader of the caravan would move on ahead and point out the camping-place. The cargo was unloaded and the large bales were arranged to form a rectangular enclosure, within which each traveller prepared his own sleeping quarters. Then the camals and mules were untied and driven out to graze, but the horses were fettered. As it grew dark, the camels were rounded up and tethered in line within the enclosure (*Lettres du Maréchal de Moltke sur l'Orient*, Paris 1872, 229-30).

From early times, commercial journeys had been made at set periods, so that several important cities grew up at the terminals of regular routes: most notably, Mecca's existence depended entirely upon the caravan-trade. Once a year, a caravan was organised to set out in a specific direction, such a caravan comprising some 2500 camels, as well as horses and mules. At this period, a caravan of 1000 camels was regarded as medium-sized, while a caravan of 450 camels and 100 mules and donkeys, operating between Bag̲h̲dād and Aleppo, was considered small. The camels in a caravan might be used as mounts, but generally were beasts of burden. The distances covered each day varied according to the climate. On average, caravans travelled 6, 8, 10 or 12 hours each day, each day's journey being made in two stages: from 3 or 4 in the morning until 10, and in the afternoon from 2 or 3 o'clock until 8. Since a single camel can carry a load equivalent to that of three, four, or even five horses, it was a much cheaper mode of transport. In the Mediterranean region, caravan journeys were closely linked to maritime traffic; during the winter months, when transport by sea was impossible, three caravans, setting out from Sid̲j̲ilmāsa on the northern Saharan fringe, would travel to Cairo via Ḳayrawān, Tripoli and Barḳa. Such caravans operated also in the summer months, covering the distance between Tunis and Cairo in two or three months. Caravans covering long distances were known as "seasonal" (*mawsim*) caravans, in India "monsoon" caravans (S. D. Goitein, *Studies in Islamic history and institutions*, Leiden 1968, 303). Caravans operated in the summer months in Anatolia, in the Balkans and in Ād̲h̲arbāy-d̲j̲ān: thus caravans arrived at Izmir between February and June and in October (Tavernier, i, 46-7); but Anatolia and the Balkans lie outside the desert regions—caravans would arrive in Egypt and in other countries of North Africa in September-October, and even in April, May and June. During the summer, it was quite impossible to cross the desert between Bag̲h̲dād and Aleppo. In *ca.* 1640, caravan traffic out of Hormuz operated between December and March. In north-west Africa, caravans arriving south of Oran (Algeria) in November were of importance in this century (F. Braudel, *The Mediterranean* ..., Eng. tr. London 1972, i, 259-60).

CARAVAN ROUTES AND THE DEVELOPMENT OF THE CARAVAN TRADE

There were along the caravan routes fixed points at which the caravans halted for the night, and in desert regions there were furthermore water cisterns at intervals of 15 km. These halting-places were regarded as "guest-houses", and were often organized by the pious as *waḳf*-foundations, the usual designation for them being *ribāṭ* [*q.v.*]. The establishment of such *ribāṭ*s dates from the 4th/10th century and reached its peak under the Great Sald̲j̲ūḳs. In various works composed in the 6th/12th century, the word *ribāṭ* is used as a synonym for "caravanserai" and spread to Central Asia as a result of the Mongol invasions. The caravanserai reached its highest development in Sald̲j̲ūḳ Anatolia, especially in the 7th/13th century; caravanserais or *k̲h̲ān*s were built at intervals of 30-40 km. along the north-south and east-west routes as international trade increased. Their strong walls and towers provided security; and their facilities might include sleeping-quarters, kitchens, storehouses, baths, mosques, and even hospitals for the sick (O. Turan, *Selçuk kervansarayları*, in *Bell.*, x/39 (1946), 477-95). In this period, the central authorities appointed to each caravan an official entitled *Amīr-i Kārbānsālār*, under whom was an escort commanded by a *rāhdār* or *tutkavul*.

Whatever the object of the caravan, whether trade or the fulfilment of the pilgrimage, its rate of travel varied from period to period. A pilgrimage caravan of 30-40,000 camels could travel from Cairo to Mecca in forty days, helped on its way by its military escort. In the 9th/15th and 10th/16th centuries, in spite of the Portuguese development of the Cape maritime route, trans-Saharan trade developed considerably, although there was some modification of the traditional routes (Braudel, *op. cit.*, i, 181-2). In the 11th/17th century the route between Persia and Izmir was popular, although it took 100 days: the journey to Iṣfahān via Mawṣil and Hamadān took 58 days; the busiest route to Persia, that from Aleppo via Bire-d̲j̲ik, Diyārbakr and Tabrīz, took 42 days, and 66 days to Iṣfahān. Towards the middle of the 11th/17th century, however, the importance of the caravans trading between Persia, India and the Ottoman Empire diminished, as a result of the formation of English and Dutch trading companies operating by sea; the only major commodity left for overland transport was silk. The spice trade continued, but the old spice routes were abandoned (N. Steensgaard, *Carracke, caravans and companies*, Odense 1973, 174, 192).

With the development of other means of communication, the composition of the caravans changed and the number of animals decreased. Yet although the number of animals employed in a single caravan might decrease, the number of caravans organized each year might increase. Commercial caravans travelled between Bag̲h̲dād and Baṣra four times a year in the 10th/16th century and small caravans travelled regularly between Syria and southern ʿIrāḳ: there were three caravans a year between Damascus and Bag̲h̲-dād. The Bag̲h̲dād caravan went to Damascus once a year and to Aleppo twice. This situation continued unchanged until the end of the 12th/18th century. In Anatolia, caravans were organized on a smaller scale; because of the broken terrain, mules and donkeys were used in some regions instead of camels, as was the case in northern ʿIrāḳ.

ORGANIZATION

Security was a vital consideration. Caravans usually had an armed escort, sometimes of professional soldiers, and at every halting-point would be joined by new groups of travellers. During the night a continuous look-out had to be kept against raids by bandits, and at intervals the sentinels would call to one another *k̲h̲aberdār*! and a drum was beaten (P. Mundy, *Travels*, ii, 41-2; Thévenot, part 3, 19). A leader responsible for organizing the whole caravan was known as the *kervān-bas̲h̲ī* (in Persia and India, *kārvān-kes̲h̲* or *kārbānsālār*), and he had one or two assistants. Each group of 15-20 camels under its own leader was under the general supervision of the main leader, who determined the route to be followed, the

halting-places, and the order of the constituent groups in the caravan, and who was responsible for the general security. To travel in a caravan was slower, but safer, since special, additional guards, supplied by the government, were available in desolate areas. In the mid-11th/17th century, the leader of the caravan was sometimes elected by the merchants. If a merchant had six camels, one of the six beasts, and if he had three, one of the three, carried his essential gear. For every horse or camel in the caravan its owner paid a fixed fee to the leader; thus, if the caravan was a large one, the leader might make a great deal of money, part of which he paid to the guards and part of which he spent on necessities along the way. At places where customs duty was collected, 4 *ḳurush* was taken for every camel-load and 2 *ḳurush* for a horse-load (Tavernier, part 1, 7, 8, 9, 10, 45, 46; *Travels of Mirza Abu Taleb Khan in Asia, Africa and Europe during the years 1799, 1800, 1801, 1802 and 1803*, London 1814, i, 112-13).

In desert areas, where water was scarce or unobtainable, paid scouts called *takshīf* were employed to find water. When the wind obscured the track, the *takshīf* had to go on ahead to find the way, so that occasionally he was the first to die (Ibn Baṭṭūṭa, iv, 381-3; cf. Leo Africanus, *The history and description of Africa*, London 1898, i, 173-4). In some places, such as the Western Sudan, blind scouts were used, who found the way by their sense of smell. Caravan-leaders in the Sahara had links with the Berber tribes; here four main routes connected north and east Africa: (1) the route by Sidjilmāsa and Walata to Senegal and the upper Niger; (2) the Ghadamès-Ghat route to Hausaland and Air; (3) the Tripoli-Fezzān-Kawar route to Bornu and Lake Chad; and (4) furthest east, the route Cyrenaica-Kufra-Wadai. The first three routes were completely under the control of the Berbers, who dug wells along them and supplied the needs of passing caravans. These long and dangerous journeys were made only once a year, but by large caravans; thus in 1805 a caravan of 2000 persons and 1800 camels, travelling from Taghaza to Timbuktu, perished of thirst (E. W. Bovill, *The golden trade of the Moors*², London 1958, 52, 235, 236). The traditional caravans continued to operate in Africa into this century: thus in 1908 a caravan of 20,000 camels set out from Air to travel via Ghadamès and Ghat (Bovill, *op. cit.*, 236, 238).

Records of the late 19th century give detailed accounts of caravan travel in the desert. In Tripoli (North Africa), after several merchants who wished to organize a caravan had reached agreement among themselves and obtained permission from the provincial authorities, they would, by the intermediary of a *shaykh* known to be competent and trustworthy, conclude agreements with the *shaykhs* through whose tribal lands they would pass. If the *shaykh* accepted the proposal, he would come to the provincial capital accompanied by men armed *raḳḳāṣūn*, skilled at picking up stragglers, and *khabīr*, who knew the routes and the places where water was to be found. In the capital all details of the wages to be paid, etc., were settled, committed to writing, and confirmed by the provincial authorities; a *manshūr* or formal document incorporating these conditions was given to the *shaykh* who was to act as conductor of the caravan; he was empowered to take all measures to protect the lives and goods of the participants and to determine any legal or criminal questions that might arise. The promoters of the caravan would cause public proclamation to be made. Not all who responded were necessarily professional merchants; private individuals might take part as a speculation, informing the *shaykh* that they needed six camels (three for the goods that they hoped to sell at a profit, one to ride on, one for water, and one for food). On the basis of this information, the *shaykh* would arrange the disposition of the caravan (Müsevvid-zâde Derviş, *Osmanlı Imparatorluğuna ait vesikalar*, in *İstanbul Dergisi*, n.s. i/10-12 (Istanbul 1940), 393-4). The *shaykhs* of the caravan and the leaders of the armed guards were each given a burnous according to rank. Such a caravan travelling to Central Africa, where coinage was unknown, would carry goods for barter.

CARAVAN TRADE BETWEEN THE 9TH/15TH AND 19TH CENTURIES

In the Ottoman Empire, an extensive caravan network satisfied all the requirements of transport and communications. Towards the end of the 9th/15th century the most important caravan route across Anatolia was that between Bursa and Tabrīz; it began with a northern and a southern branch (Kastamonu-Bolu; Ankara-Çorum) and then traversed Amasya, Tokat, Erzindjān, Erzurūm and the Aras valley. This was principally a silk route (H. İnalcık, in *Bell.*, xxiv/93 (Ankara 1960), 45-96). A document of 1019/1610 gives the following information about the composition of a caravan travelling from Baghdād to Aleppo: its 120 merchants had baggage amounting to 942½ *yüks*, one *yük* being the two bales slung across a beast of burden (Başbakanlık Arşiv Genel Müdürlüğü, MM 7499). There were also smaller caravans operating between cities; termed *makkārī* ("for hire"), they would transport merchants and travellers for a fare. In Istanbul in the time of Murād IV, 3000 people were engaged in this business (Ewliyā Čelebī, *Seyāḥatnāme*, i, 520; H. Ongan, *Ankara'nın 1 numaralı şer'iye sicilli*, Ankara 1958, 64; see, for the *makkārīs* operating between Damascus and Baghdād, Muṣṭafā Ḍiyā, *Rehnümā-yi Baghdād*, Damascus 1314, 4-5). Most of the people comprising a caravan were merchants engaged in trade with foreign countries, but travellers would also join a caravan in order to enjoy its security: in the late 11th/17th century it was impossible for small groups of travellers to move about in the Ottoman Empire otherwise, because of the threats from Arab tribesmen and bandits (C. Le Bruyn, *Travels*, London 1718, ii, 329; Başbakanlık Arşivi, MD no. 115, pp. 285, 306). Caravan operations were carried on also in the European territories of the Ottoman Empire, numerous *khāns* surviving in Yugoslavia, Bulgaria, Albania and elsewhere (cf. Hamdija Kreşevljakovic, *Hanovi i Karavansaraji u Bosni i Hercegovini*, Sarajevo 1957). Regular journeys were made between Istanbul and Belgrade by what was known as the "Belgrade caravan"; it continued to function into the 19th century (for a document of 1803, see Başbakanlık Arşivi, Cevdet tasnifi, iktisat no. 2029; see also S. Dimitriyevic, *Les caravans de Dubrovnik dans la Serbie du sud au XVII*ᵉ *siècle*, Belgrade 1958).

Mule caravans operating in Anatolia had their own special characteristics. The leading animal, which kept some way ahead of the others and carried a smaller load, was called *peshek*, the next was called *djindār*, and the next again *peshdār*. All the animals carried small bells around their necks, which could be heard an hour's distance away. Halts were made at *khāns* either to deliver the goods carried or to transfer them to other animals. Cameleers and muleteers formed a trade-guild (see C. Çahit Güzelbey,

Gaziantep'te kervancılık, in *Gaziantep Kültür Dergisi*, v/79 (Gaziantep 1962), 79, 80, 94).

Whereas caravans travelled in Persia by night, in the Ottoman Empire travelling was done by day, for protection against bandits. A leader of a caravan could determine the hour by the position of the stars. He was followed by a *bayrakdār* "standard-bearer", who had a standard wrapped around a staff which he would wave at times of danger in order to warn the musketeers protecting the caravan. The Baghdād-Aleppo caravan also included coffee-makers, a *čawush* who transmitted the leader's orders, a *mu'adhdhin*, and various tradesfolk—shoemakers, barbers, farriers and carpenters. The group of people at the rear was termed *ḥamla* (J. B. L. J. Rousseau, *Voyage de Bagdad à Alep* (1808), Paris 1899; cf. Tavernier, *Voyages*, 47, 60).

According to Peter Mundy (ii, 45), a caravan travelling from Surat to Agra in India in 1630 contained 250-300 carts and about 1800 people; the number increased as it proceeded, since inhabitants of famine-stricken regions would join it in order to escape starvation. There were no *khāns* in India, but in the cities there were public buildings termed *sarāy*. According to Peter Mundy again (ii, p.xxxvii), the last caravan of the season contained 268 camels and 109 carts.

PILGRIM CARAVANS

Caravans of pilgrims travelling to the Holy Cities were under the supervision of the *Amīr al-ḥadjdj* (Ewliyā Čelebi, x, 424-5, 435, etc.). It was the regular practice to make money payments to the Bedouin chiefs through whose territories the caravan passed (Tavernier, 62-3). In Ottoman times, the provisioning, watering and protection of the pilgrim-caravans was a major enterprise (the Cairo caravan consisted of 40,000 people). The Cairo caravan was in two sections; 10,000 people from North Africa formed the rear in the outward journey, but came back first. For descriptions of the pilgrim caravan, see H. Maundrell, *A journey from Aleppo to Jerusalem in 1697*, Beirut 1963, 171-3; F. Hasselquist, *Voyages and travels in the Levant in the years 1749, 1750, 1751, 1752*, London 1776, 77-83; E. W. Lane, *The manners and customs...*, chs. 24, 25; J. L. Burckhardt, *Travels in Arabia*, London 1829, 247-8; and see MAḤMAL.

DECLINE

The caravan trade declined as a result of the great changes in the technology of transport which occurred in the 19th century. In some regions, caravan journeys were discontinued after the introduction of steamships. The opening of the Suez Canal in 1869 brought a swift decline, yet caravans continued until the First World War. Later still, motor transport began to displace the camel. Although the great desert route was scarcely used after the mid-19th century, Damascus continued to be the centre for what remained of this trade—no longer a matter of thousands or hundreds of camels, but small numbers meeting local needs (C. P. Grant, *The Syrian Desert: caravans, travel and exploration*, London 1937, 156-7). The construction of railways also dealt a severe blow to caravan trade in some areas, *e.g.* in Anatolia, from 1859 onwards. Yet so late as 1918, five great caravan routes to the Holy Cities were still travelled—from Baghdād and neighbourhood; from Syria; from the Persian Gulf area; from the ʿUmān district across Arabia; and from Egypt. Three factors may be said to have accelerated the decline: (1) the requisitioning of animals by governments and local authorities; (2) attacks from bandits; and (3) lack of bridges and the foul road conditions after rain.

(CENGİZ ORHONLU)

ḲARWASHA, originally the name of the argot of the Maghribīs practising the trades of sorcerer and treasure-seeker in Egypt, today applied to the *Dakārna* (sing. *Dakrūnī*) of Sudanese origin installed in the Village of the Sudanese close to Madāmūd in Upper Egypt and elsewhere. They are scribes manufacturing amulets at the markets. These are carried under the armpit wrapped in a square red leather case. They are effective, it is said, against the evil eye or diseases, to attract customers into a shop, to obtain the favours of a woman, to keep or regain the love of a husband and to speak "without fear" in front of the judge, the mayor or any another magistrate. The *Dakārna* make use of a secret language among themselves (*ruṭaynā*, in the spoken Arabic of Upper Egypt *ruṭāna*) which is called *ḳarwasha* (from the verb *ḳarwash* "to speak" or again *balhama* from the verb *balham* "to speak in an incomprehensible fashion"). A part of the vocabulary is of Maghribī origin: *mizyān* "good", *bizzāf* "much", *sibsa* "cigarette". They sometimes even affect the Moroccan accent: *žimžima* "head" and not *djimdjima*. The grammar is that of the spoken language of the region of Luxor. The man is called *diyāblu* pl. *diyablāt* (of Spanish origin: *diablo* "devil"). *Budd-i* "I want". *Esh budd-ak* "what do you want?". *Diyāl* (after a vowel *dyāl*), used for forming a possessive genitive, is in current use: *el-yūsufa dyāl-u* "his wife", *el-kabbārī dyāl-ha* "her husband", *es-sutra dyāl el-muksa* "the door of the house". *Bi-dyāl* has become a preposition; *djayyim es-sibsa bi-dyāl en-nūra* "light the cigarette with the match"; *nūḍ bi-dyāl-i* "leave me"; *djayyim el-mimāt min ed-diyāblu lli bi-dyāl-ak* "take the money from

the man who is with you." The prefix *ka* of the verb tends to disappear: *lamma ka-ykūn el-wāḥid fi l-lammām* "if anyone is in the market".

A large number of terms are artificial creations: *alif* "reed, pen" (because of the elongated form which recalls that of the letter *alif*), *mīm* "ink-well" (round like the letter *mīm*), *d̲j̲īm* "excellent" (abbreviation of *d̲j̲ayyid*) with the polyvalent verb *d̲j̲ayyim* "to do. take, cook, manufacture", originally "to do well". Water is called *rāwiya* "that which waters", the "market" *lammām* is the "gatherer" (of people) and *nawwāḍa* (f.) the "road" is the "walker" (from *nāḍ, yinūḍ* "to go off, walk"). *Yūsfa* "woman" recalls Yūsuf, the ideal of a "young and handsome man". The dog is called *nabbāḥ* "that which barks", the pigeon *ṭayyāra* "that which flies", and the female donkey *d̲j̲arrāya* "that which runs". Several terms come from the slang of the Ḥalab: *ʿadwān* "meat", *baṣṣāṣa* "eye", lit. "that which looks", *ṭana* (*yiṭni*) signifies at the same time "to beat" and "to kill", *inṭana* (*yinṭini*) "to die". *Kabbārī*, among the Ḥalab "sheikh" or "mayor", here also designates the "husband". The *ḳarwas̲h̲a* is enriched by adopting numerous *dakūni* words: *d̲j̲agur* "king", *murta* "horse", *lēl* "donkey", *fattā* "white". The origin of several words remains uncertain: *ʿabbu* "fellāḥ" and *ʿabbūwa* "fellāḥa", *ẓarbūn* or *kīr* "black man", *tidiḳ* "small", *wūtiḳ* "to sit down" and *wattaḳ* "to bring". This small vocabulary of several dozen words very frequently employed has ended up in becoming a real professional argot.

Bibliography: Vycichl, *The slang of the Ḥalab of the Sudan*, in *Kush*, vii (Khartoum 1959), 223-8; idem, *Qarwasha*, in *Actes du Congrès d'études des cultures méditerranéenes d'influence arabo-berbère*, Malta 1972. (W. VYCICHL)

ḲARYA, A., pl. ḳurā, "town, village". The various forms used in the Semitic languages to indicate a "dwelling-place, a place where people meet" are best derived from an original biliteral root *ḳ-r*. Phoenician *ḳart*, as in *ḳart-ḥadašt*, "Carthage", represents this basic root with a feminine ending. The same is true of the Hebrew *ḳèret* and the emphatic state *ḳarta* (with *alef*), which occurs in Targumic, Samaritan and Christian-Palestinian texts. In Syrian and in Christian-Palestinian *ḳerē*, a *y* is added to the basic root without the feminine ending, whereas *ḳ-r-y* + *t* is found in the Hebrew construct state *ḳiryat*, Arabic *ḳarya* and South-Arabic *ḳirya*. In Hebrew this construct state often occurs in such place names as Ḳiryat Arbaʿ (Hebron, K̲h̲alīl [*q.v.*]), Ḳiryat Yeʿarīm, Ḳiryat Sefer, the plural being Ḳiryot. A connection with Cirta is rejected by Nöldeke, who argues that a Phoenician place-name is not likely to be found as far inland as Constantine (Ḳusṭanṭīna [*q.v.*]); moreover, Polybius (37, 3, 11) has Σχίρταν.

In the Ḳurʾān, the singular *ḳarya* indicates an important town. Mecca (XLVII, 14), Medina (II, 5), Sodom (*e.g.*, XXI, 74, XXV, 42), Nineveh (X, 98) and the coastal town (VII, 163: *al-ḳarya ḥāḍirat al-baḥr*) are so called. Except for the reference in XII, 82, both singular and plural stand for a town that has been or will be destroyed by Allāh for its inhabitants' rejection of the message of the Prophet or of his predecessors. The dual *al-ḳaryatayn* (XLIII, 30) indicates Mecca and Medina, whereas *umm al-ḳurā*, "the mother of towns" (VI, 91, XLII, 5), designates Mecca. This term was probably already used before Islam because of Mecca's leading position in the religious and economic life of the Ḥid̲j̲āz. The expression is likely to be a translation of the Greek *metropolis*. Abū Manṣūr al-Azharī [*q.v.*] states in his *Tahd̲h̲īb* that every city is the *umm* of the towns around it. Ibn al-Kalbī [*q.v.*], cited by Ibn ʿAbd Rabbih [*q.v.*] (*al-ʿIḳd al-farīd*, ed. Cairo 1321, iii, 97), mentions six *ummahāt al-ḳurā al-ʿarabiyya*: Yat̲h̲rib, al-Ṭāʾif, K̲h̲aybar, Wādī al-Ḳurā, Dūmat al-D̲j̲andal and al-Yamāmā.

Ḳarya may also be used to indicate a *madīna* [*q.v.*], but only if it is qualified by an epithet denoting greatness. Arab philologists derive the word from the roots *ḳ-r-y* or *ḳ-r-w*, "to collect", "to store", or from *ḳarā*, "to collect people for hospitality", "to investigate a country in order to choose a residence" and "to head for some place".

ḲARYA AL-SUFLĀ, a village in north-eastern Arabia (27° 29′ N, 47° 52′ E), about 165 m. above sea-level and having a population of about 970 (1958 estimate). It is popularly known as Ḳurayya, after its larger twin village, Ḳarya, or Ḳarya al-ʿUlyā [*q.v.*], 19 km. to the west-north-west. The settlement of the site as a *hid̲j̲ra* of Ik̲h̲wān [*q.v.*] was contemporaneous, or nearly so, with the founding in 1338/1919 of Ḳarya al-ʿUlyā. The colonists were Muṭayr tribesmen led by Hāyif al-Fug̲h̲m, chief of the D̲h̲awu ʿAwn section of that tribe's ʿIlwa division. For notes on events connected with the founding of both villages and for a bibliography, see ḲARYA AL-ʿULYĀ. (J. MANDAVILLE)

ḲARYA AL-ʿULYĀ, a village in north-eastern Arabia. Situated at 27° 33′ N, 47° 42′ E about 170 m. above sea-level and having a population of 2,200 (1963 estimate), it was founded as a *hid̲j̲ra*, or colony of the Wahhābī Ik̲h̲wān [*q.v.*] by members of the ruling clan of the Muṭayr tribe. From about 1930, it has been a minor Bedouin market centre. It is often called simply Ḳarya, the full name being used to differentiate it from neighbouring Ḳarya al-Suflā [*q.v.*]. The two are sometimes referred to together as Ḳarayāt (a vernacular plural). The establishment of Ḳarya was a major incident in the 1919-20 boundary dispute between ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Suʿūd, known as Ibn Suʿūd, and the ruling house of Kuwayt; it led to the bloody battle of al-D̲j̲ahrāʾ (Muḥarram 1339/October 1920), when the Ik̲h̲wān attacked the forces of Sālim b. Mubārak Āl Ṣabāḥ at al-D̲j̲ahrāʾ, 30 km. west of Kuwayt town.

Ḳarya al-ʿUlyā was a well-known watering place of Muṭayr long before 1338/1919, when Turayḥīb b. Bandar b. S̲h̲uḳayr of the Dūs̲h̲ān clan, Muwaha sec-

tion, of that tribe founded a *hidjra* there with the approval of Ibn Suʿūd. Relations between Nadjd and Kuwayt had already been strained in 1337/1919 by news of Sālim's plans to build a fort at Dawḥat Bilbūl, 110 km. east of Ḳarya on the Gulf coast. Ibn Shuḳayr's building activities at Ḳarya, probably encouraged by Ibn Suʿūd as a counter-measure, led to protests from Kuwayt and finally the dispatch of a 400-man Kuwaytī force, which was routed by Muṭayr at the wells of Ḥamaḍ, north-east of Ḳarya, in Shaʿbān 1338/May 1920. Ibn Suʿūd, whose Ikhwān led by Fayṣal b. Sulṭān al-Dawīsh had attacked before arrival of a letter from their sovereign urging restraint, agreed to return loot taken from Kuwaytī tribes but maintained his territorial claim. The Ikhwān marched on al-Djahrāʾ as negotiations and British mediation broke down and after an abortive move toward Ḳarya by Kuwaytī forces reinforced by Shammar tribesmen. Both Ḳaryas in 1928-29 were important military bases of Muṭayr in raids against Kuwayt and ʿIrāḳ; they were also dissident centres during the concurrent Ikhwān rebellion against Ibn Suʿūd.

After the collapse of the aggressive Ikhwān movement in early 1930, Ḳarya remained as a market for Bedouins and as a customs station on the main motor track between Kuwayt and al-Riyāḍ. A large mud fort which the Saudi Arabian Government ordered to be built there in 1355/1936-37 was in good repair in 1974. The track gradually fell out of use, but the village continued to serve Bedouins on a route into the wells, pastures, and settlements of al-Ṣummān [*q.v.*]. The village is administered by an *amīr* who reports to the governor of the Saudi Arabian Eastern Province in al-Dammām.

AL-ḲAṢĀB, a town in South Arabia in the Wādī Bayḥān and the main town of the area called Bayḥān al-Ḳaṣāb [*q.v.*]. As the population has grown and the inhabited area extended, the town itself has come to be known as Bayḥān al-Ḳaṣāb or Bayḥān al-Ḳaṣab, and it is now usually mapped under one of these names. At the end of the 19th century the town had 12 citadels and 400 houses and was surrounded by palm-groves. Cotton was, and is, an important crop and is used for the manufacture of high-grade cloth in great demand in the area. Indigo has long been extensively cultivated and is used in local dyehouses to produce the dark-blue cloth popular in South Arabia, and is sold for use on the body. The town had a large Jewish quarter, its habitants, as elsewhere in Southern Arabia, specializing in working silver and leather. These people have now gone, emigrating between 1948 and the independence of Southern Yemen. The soil in and around the town is fertile and, in addition to cotton and indigo, it produces barley, red millet, summer millet, grapes, dates and vegetables. Since the end of the Second World War wells have been bored and agricultural development generally has been fostered. Educational facilities have been expanded and health centres opened in the town and the area generally.

ḲAṢĀB, TEODOR (Mod. Turkish TEODOR KASAP), Ottoman Turkish writer, journalist and playwright (1835-1897). He was born in Kayseri, the son of Sarafim Kasaboghlu, a Greek draper. He lost his father at the age of eleven and moved to Izmir where he attended a Greek school and at the same time worked as an apprentice in the store of a relative. A French officer, a nephew of Alexandre Dumas *père*, who was on his way home at the end of the Crimean War, met him there (1856). Struck by his honesty and intelligence he arranged for his further studies in Paris. There Ḳasāb became Alexandre Dumas' private secretary and accompanied him on various trips, particularly in Italy during the Garibaldi campaign (1860). He introduced Namîk Kemāl and other Young Ottomans to Alexandre Dumas. Early in 1870 he was in Istanbul, where he taught French in various schools and founded *Diogène*, a French and Greek language humorous magazine. In November 1870 he began to publish *Diyojen*, the Turkish edition of the same paper and the first humorous magazine in Turkish. Started as a weekly, *Diyojen* was published later twice and finally three times a week. Several leading writers of the time such as Namlk Kemāl, Abu 'l-Ḍiyāʾ (Ebüzziya) Tewfīḳ and ʿAlī Bey (Direktör), contributed regularly to it. The articles and cartoons evincing subtle social and political satire made it a very popular journal but also a target for censorship and *Diyojen* was suspended four times and finally closed in January 1873 after two years of publication. One of the main themes of social satire was ridicule of the westernizing snob, a theme which was taken up and elaborated later by several writers like Aḥmed Midḥat, Redjāʾī-zāde Ekrem and Ḥusayn Raḥmī [see HIDJĀʾ]. In April 1873 Teodor Ḳaṣāb began to publish a new humorous journal, *Činghîraḳlî Tatar*, which was soon suppressed, and in October of the same year a third, *Khayāl*, in which he continued his satirical essays. In August 1875 he founded a political daily, *Istiḳbāl*, which lasted until September 1876. In both journals Ḳaṣāb bitterly criticized the patently pro-Russian policy of the grand vizier Maḥmūd Nedīm Pasha. While the First Constitution was being debated in Turkey, Ḳaṣāb published several articles criticizing its various clauses, and after its promulgation on 23 December 1876, a famous cartoon in his *Khayāl* ridiculed the clause limiting the freedom of the press. ʿAbd al-Ḥamīd II, who bore a personal grudge against him because of an earlier incident (see below), had him tried and sentenced to three years' imprisonment. He fled to Paris, where he published *Lettres à Said Pasha* (1879) in which he criticized ʿAbd al-Ḥamīd's authoritarian régime. From Paris he moved to Naples where, in collaboration with the Young Turk ʿAlī Shefḳatī (d. Paris 1896), he continued to publish *Istiḳbāl* lithographically. When the court of appeal quashed the sentence and the sultan pardoned him, he returned to Istanbul and was later (1882) given a position in the Imperial Library at Yîldîz Palace, where he worked and translated reading material for the sultan "safely" away from press and politics until his death in 1897.

One of his sons, ALEXANDRE, who entered the Ottoman diplomatic service, rose to be head of department in the Ministry of Foreign Affairs in the government of Istanbul which came to an end in 1922.

Apart from his contributions to Turkish humorous

journalism and the literature of political satire, Teodor Ķaṣāb played an important part in the development of Turkish theatre in the 1870s, through his skilful adaptations of French plays and his numerous articles in which he discussed the principles and techniques of the developing modern Turkish theatre. He is the author of the following adaptations: (1) *Pinti Ḥamīd* ("Ḥamīd the Miser"), Istanbul 1290/1873, a successful adaptation, superior to Aḥmed Vefīķ Pasha's better known *Azarya*, of Molière's *L'Avare* (1668). Although Pinti Ḥamīd is a well known popular character who symbolizes stinginess, the prince Ḥamīd Efendi (the future ʿAbd al-Ḥamīd II), suspicious as he was and known to be rather close, tried unsuccessfully to stop the performance of the play at the last minute (for details see the letter of Ķaṣāb's son Diogenes to Ismāʿīl Ḥabīb Sevük quoted in the latter's *Tazimattan beri*, i, Istanbul 1940, 218). (2) *Ishkilli Memo* ("Memo the Suspicious"), Istanbul 1291/1874, from Molière's *Sganarelle ou le cocu imaginaire* (1660), in Roman script *Işkilli Memo*, Istanbul, 1965, ed. Cevdet Kudret with an introduction on Teodor Ķaṣāb; (3) *Para Meselesi*, Istanbul 1292/1875, translated from Alexandre Dumas *fils' La question d'argent* (1857); (4) *Lükresya Bordjiya*, Istanbul 1292/1875, from Victor Hugo's *Lucrèce Borgia* (1833). He also translated many novels, the best known among them being *Monte Kristo*, Istanbul 1288/1871, from Alexandre Dumas *père*'s *Le Comte de Monte Cristo* (1845), the popularity of which inspired Aḥmed Midḥat's famous novel *Ḥasan Mellāḥ* (1292/1875).

Teodor Ķaṣāb contributed considerably to the liberal and reformist movement of the Young Ottomans and advocated a larger use of the techniques and concepts of the traditional Turkish theatre, such as *Karagöz* and *Orta oyunu*, in modern plays. Both in his articles and his plays, Ķaṣāb used colloquial speech and avoided a flowery style.

ĶAṢAB (A.), noun of unity *ķaṣaba*, any plant with a long and hollow stem like the reed (*Arundo donax*), to which the term is especially applied (see *Mukhaṣṣaṣ*, xi, 46). The bamboo is called *khayzurān*, but *ķaṣab* is a component of certain expressions denoting in particular the sugar cane (*ķaṣab al-sukkar*, etc.) [see following article] and the sweet flag (or fragrant rush, *ķaṣab al-dharira*; see H. P. J. Renaud and G. S. Colin, *Tuḥfat al-aḥbāb*, Paris 1934, 152; M. Levey, *The medical formulary ... of al-Kindī*, Madison-London 1966, 316), or even the papyrus reed (*ķaṣab al-bardī* or just *al-bardī* [see PAPYRUS]).

The reed had various uses: for making hurdles and wattles; lattice-work mats, pens [see KALAM] and children's toys (*e.g.* see Ibn Bassām, *Dhakhīra*, i/1, 165). It is further known that it was used in many places for making light huts; at Baṣra, when it was first laid out as a military camp, even the mosque and the governor's residence were made from reeds, which were rolled up before departure in an expedition and used again on return (Ibn al-Faķīh, 188; al-Balādhurī, *Futūḥ*, 346-7; al-Ṭabarī, i, 2384; Yāķūt, i, 640). These structures, susceptible to fire (al-Ṭabarī, i, 2487), were later replaced by ones out of sun-dried brick. It should be noted that reeds were especially abundant in the neighbouring Baṭīḥa [*q.v.*], and their value was such that it was said to Ziyād that "a reed is more valuable than a palm-tree". Al-Djāḥiẓ, who recounts this saying (*K. al-Buldān*, ed. Pellat in *Machriq* (1966), 200-1; ed. Ṣ. al-ʿAlī, Baghdad 1970, 504), adds that "I did my utmost to catalogue the advantages of different kinds of reeds, their uses and the things that can be made out of them, but failed and had to abandon the idea"; it is regrettable that he in fact gave up this plan, since he could have certainly composed a whole monograph about the reed in civilisation.

Amongst the numerous other meanings of *ķaṣab* (see Dozy, *Supplément*, s.v.), one should note that it denotes a coloured linen cloth manufactured at Tinnīs, or a white one made at Damietta, or sometimes a cotton cloth made at Kāzarūn (Mez, *Renaissance*, Eng. tr. 461-2), out of which women's fine veils were woven (Abu 'l-Ķāsim, *Ḥikāya*, 54), some set with precious stones (*ibid.*, 53). Dozy further mentions a silken material, as well as a kind of brocade encrusted with little strips of gold or silver.

Bibliography: Given in the article. (ED.)

ĶAṢAB AL-SUKKAR, sugar cane, also called *ķaṣab al-maṣṣ*, because one sucks it (see below), and *ķaṣab ḥulw* (Gloss. Idrīsī). Cultivated sugar cane may be from a wild variety, but the attempts which have been made to cultivate the wild species which is related to it have not been successful. The country of origin of sugar cane cultivation is Bengal, from where, in the 7th century B.C., it must have passed to China. Herodotus did not know of it, nor did Ctesias, physician of Artaxerxes Memnon (*ca.* 416), but in the age of Alexander the Great, Nearchos, his admiral, and Onesicritos, who composed a history of this ruler's expedition, speak of a reed of India producing "honey without bees", as does Megasthenes, who was the ambassador of Seleucus Nicator. Theophrastos, author of a history of plants who died in 287 B.C., speaks of a *meli kalaminon*, an expression that is translated as "reed honey". Pliny did not know of sugar cane, but Dioscorides mentions a kind of coagulated honey from India and Yemen that is gathered from a reed.

It is not known exactly when the cultivation of sugar cane passed from India to Persia. The scholars of the celebrated School of Medicine of Djundaysābūr, which flourished between 532 and 579 A.D., knew of sugar cane through their relations with India. It is not impossible that they had a part in the introduction of sugar cane into Persia, where it found favourable ground for its cultivation in the hot and humid swampy land of Lower Mesopotamia and Khūzistān (cf. Heyd, *Histoire du commerce du Levant au Moyen-Age*, ii, 680-1). After the conquest of Persia by the Arabs, the cultivation of sugar cane was developed by them fairly rapidly, wherever the conditions of the climate responded to the needs of the plant, and it reached as far as the Muslim West.

I. — MUSLIM EAST

The zones of cultivation of sugar cane in the Eastern Muslim world are quite numerous, for several regions have low ground enjoying a hot and humid climate favourable to its cultivation and able to be irrigated easily. The cultivation of sugar cane has also developed:

in Khūzistān or Ahwāz, in the region of Tustar, watered by the Masruķān canal diverted from the Dudjayl, in that of Djundaysābūr, that of Sūs (Susa)

on the banks of the Karkha, a tributary of the Dudjayl (see al-Iṣṭakhrī, ed. Cairo 1961, 65; Ibn Ḥawḳal², 253-4, 257; *Ḥudūd al-ʿālam*, 130; Le Strange, 236-46; Heyd, *op. cit.*, ii, 680-1);

in the region of Baṣra, in the 4th/10th century, according to Bayhaḳī, who wrote in the age of al-Muḳtadir (*Kitāb al-Maḥāsin wa'l-masāwī*, ed. Schwally, 623);

in Ṭabaristān to the south of the Caspian, in the region of Mīla (*Ḥudūd*, 134);

in Fārs, Makrān, Kirmān (see Ibn Ḥawḳal², 302-3, 232, 313, 325; Le Strange, 329; *Ḥudūd*, 124; cf. Yāḳūt, ii, 6, 346, at Sābūr and Shahrastān);

in Khurāsān, in the region of Balkh (*Ḥudūd*, 108);

in Sind (al-Iṣṭakhrī, 102; Ibn Ḥawḳal, 320; *Ḥudūd*, 91);

in ʿUmān (cf. *EI*¹, art. ʿOMĀN; Lippmann, 151);

in Syria-Palestine, at Kābūl, Tyre, Beirut, cf. Ibn Ḥawḳal², 176 (Beirut); al-Muḳaddasī, 162 (Kābul), 180; Nāṣir-i Khusraw, *Safar-Nāma*, 40 (Tripoli); Tafel and Thomas, *Urkunden zur älteren Handels- und Staatsgeschichte*, ii, 368 (Tyre, plantations in the hands of the Venetians at the time of the Crusades); Foucher de Chartres, at Bulunyās (in Cl. Cahen, *La Syrie*, 473; cf. Mez, *Renaissance*, 410, 439); in the Ghawr of the Jordan valley (Yāḳūt, iii, 822; al-Ḳalḳashandī, *Ṣubḥ*, iv, 87); at Tiberias (al-Muḳaddasī, 161; cf. also Le Strange, *Palestine*, 17; Heyd, ii, 685);

in Egypt, the cultivation of sugar cane has been attested there by some papyri in the 2nd century A.D. (see Mez, *Renaissance*, 410 and n. 2); yet, if this cultivation was not exactly introduced there by the Arabs, it was in fact they who developed it, along the length of the Nile, from Upper Egypt to its mouth, the best ground being the low-lying land watered by the branches of Rosetta and Damietta (Heyd, ii, 678-8, citing Idrīsī-Jaubert, i, 123 ff. and Abu'l-Fidā', ii/1, 140). Al-Masʿūdī, *Tanbīh*, 21, notes the great richness of Egypt in sugar and al-Ḳalḳashandī, iv, 87, says that production far exceeded that of the Ghawr. It may be seen in the article SUKKAR how much this production was developed in the time of the Mamlūk Sultans (see Ibn Ḥawḳal², 137, 138 (Sanhur), 142 (Ṣāfiyya, Damīdjamīl), 164, cf. Nāṣir-i Khusraw, 51; Lippmann, 138, 140);

in Sindjar, the word *ḳaṣab* in al-Muḳaddasī really seems to designate the sugar cane there (cf. Le Strange, 124; but Ibn Ḥawḳal is silent on this subject, 220);

in the Yemen, al-Hamdānī, *Ṣifat Djazīrat al-Arab*, ed. Müller, 198;

according to al-Zuhrī, a geographer of the 6th-7th/12th-13th century, edited by Hadj-Sadok (*B. Ét. O.*, xxi, 184, no. 333), it was also cultivated in Abyssinia.

Sugar cane was cultivated in several of these regions, not only for the manufacture of sugar, as was practised in Khūzistān and Egypt [see SUKKAR], but also to be chewed or sucked, hence the term *ḳaṣab al-maṣṣ*. It is this that al-Muḳaddasī, 161, notes at Tiberias where, he says, the people spent two months of the year "playing the flute", *i.e.* sucking the cane (*yazmirūna: yamuṣṣūn al-ḳaṣab*), cf. Yāḳūt, iii, 510.

It is curious that the Arab geographers do not mention at all the cultivation of sugar cane in a region where it is grown at present, sc. Cilicia; in Tarsus for example, in September, sugar cane is sold in the streets.

In the work *Nuzhat al-anām fī maḥāsin al-Shām* (see below), 355, mention is made of a *ḥadīth* reported by ʿAffān b. Muslim (on this personage, see Brockelmann, I, 157) who says: "The one who sucks sugar cane after his meal will have joy throughout the day". The Prophet doubtless did not know of sugar cane; the author also adds, *wa-llāh aʿlam*. See also in this opuscule, 356, some verses on sugar cane.

Beyond the regions indicated as belonging properly to the Muslim East, the cultivation of sugar cane was introduced by the Arabs, or in imitation of them, not only into the West (North Africa, Morocco, Spain, see below), but also into the following countries:

into Cyprus, where the cultivation of the cane was highly developed in the environs of Limassol, in the south of the island, and at Bafa (Paphos) in the West. In the period of the Crusades, the family of Cornaro, the King and the Knights of St. John had plantations in the region of Colossi (Heyd, ii, 9 and 687-91);

into Rhodes, Crete (Candia) and even Greece in the Morea (Heyd, ii, 689);

into Sicily. The Arab geographers and al-Idrīsī do not speak of the cultivation of sugar cane in this land (the *ḳaṣab fārisī* that Ibn Ḥawḳal, 122, mentions there may not be sugar cane, see *BGA*, iv, 325, although Lippmann, 110, thinks that it does designate sugar cane). Nevertheless, it is certain that, towards the middle of the 4th/10th century, sugar was already being manufactured in Sicily and this sugar was being consumed in Ifrīḳiya, for the *Riyāḍ al-nufūs* of al-Mālikī, dedicated to the scholars of Qayrawān, mentions that a *faḳīh* called Abu'l-Faḍl al-ʿAbbās b. ʿĪsā, who died between 331/943 and 335/947 in the war against Abū Yazīd, refused to eat a cake that he believed to have been made with sugar from Sicily, as a result of rights conceded by the (Fāṭimid) usurper. It is certain that Roger II and his successors encouraged the cultivation of sugar cane in Sicily, and the diploma cited by Amari, *Storia dei Musulmani in Sicilia*, ii, 509, iii, 808, show that this cultivation was flourishing in the 6th/12th century and that sugar was being manufactured at Palermo. This cultivation continued until the end of the 9th/15th century.

We are informed about the cultivation of sugar cane and its complicated technique (repeated ploughing and harrowing, division of the field into small squares —*aḥwāḍ*—which the water reaches by channels, planting, irrigation, measures to bring on growth, struggle against weevils by means of tar, the two successive harvests, the first called *al-raʾs*, the second *al-khilfa*, which usually gives better sugar than the first, etc.), by the Arab treatises on agriculture, and the works relative to financial administration, especially on Egypt. We are unable to give the details here and to explain the technical terms. We will only say that the planting was done in February-March (month of phamenōth) and that the harvest took place in November-December (month of koyak), that three kinds of cane were distinguished, the black, the white and the yellow of which only the two last were pressed (cf. Ibn al-Bayṭār, *Mufradāt al-adwiya wa'l-aghdiya*, ed. Būlāḳ, 1291, ii, 304; al-Dīnawarī, *Kitāb al-nabāt*, cited in Abu'l-Baḳā' ʿAbd Allāh al-Miṣrī, *Nuzhat al-anām fī maḥāsin al-Shām*, Cairo 1341, 354). The details on the cultivation of sugar cane are to be found in the following works:

Ibn al-ʿAwwām, French translation in J. J. Clement-Mullet, *Le Livre d'agriculture d'Ibn al-ʿAwwām*, Paris, i (1865), 365 ff., German translation in E. O. von Lippmann, *Geschichte des Zuckers . . .*, Leipzig 1890, 147 ff.; Maḳrīzī, *Khiṭaṭ*, ed. Būlāḳ, tr. in D. Müller-Wodarg, *Die Landwirtschaft Aegyptens in der frühen Abbasidenzeit*, in *Islam*, xxxi-xxxii, 45-8; Nuwayrī, *Nihāyat al-ʿarab*, viii, 264 ff.; Ibn Mammātī, *Kitāb Ḳawānīn al-dawāwīn*, ed. A. S. Atiya, 221, 226, 242 ff., 246 ff., 266-7; Nābulusī, *Kitāb*

*Luma*ʿ *al-ḳawānīn* . . ., ed. Cl. Cahen in *B.Ét.O.*, xvi (1958-60), and tr. in *Quelques aspects de l'administration égyptienne médiévale*, in *Bull. de la Fac. des Lettres de Strasbourg*, 1948, 116-7; Ma<u>kh</u>zūmī, Ms., tr. in preparation.—For the cultivation at the end of the 12th/18th century in Egypt, whose methods were essentially the same as those of the Middle Ages, see *Description de l'Égypte*, 2nd ed., xvii, 173 ff., cf. M. Jomard, *Recueil d'observations et de mémoires sur l'Égypte*, Paris, n.d., 6 vols., iv (bearing the date 1830). See also A. Mazahéri, *La Vie quotidienne des Musulmans au Moyen-Age* (X-XIIIe s.), 1951, 227 ff.

FILĀḤA (for Iran). (M. CANARD)

II. — MUSLIM WEST

Sugar cane, reached the West (Ma<u>gh</u>rib, Spain, Sicily, the Balearic Islands, Provence, etc.) in the wake of the Arab expansion in the Mediterranean. Greek and Roman antiquity seems, in fact, to have recognized it as a botanical curiosity only (Dioscorides, Pliny, Strabo, etc.). The exact dates of its first appearances in the various Mediterranean lands are not known precisely. It can, however, be presumed that they followed closely on the advance of the Arabs, who had discovered its cultivation in the East (Mesopotamia) and encouraged it for economic and fiscal reasons. The first allusion to it in the Ma<u>gh</u>rib is found in the "Book of Plants" (*Kitāb al-Nabāt*) by the eastern botanist Abū Ḥanīfa al-Dīnawarī (d. 282/895). From the 4th/10th century, its presence is noted by as many of the principal Muslim historians, geographers or voyagers as of European ones. As a result, we have precise evidence in Ibn Ḥawḳal for the 4th/10th century, al-Bakrī for the 5th/11th century, al-Idrīsī and the *Kitāb al-Istibṣār* for the 6th/12th century, al-ʿUmarī for the 8th/14th century, and Leo Africanus and Marmol for the first and second half of the 16th century.

In Spain, where it is described in the reign of ʿAbd al-Rahman I (cf. E. Lévi-Provençal, *L'Espagne musulmane du Xe siècle*, 165-7), during the Muslim period the growing of sugar cane extended from Valencia and Castellón de la Plana to the mouth of the Guadalquivir. Its cultivation suffering from the expulsion of the Moriscos; it was henceforth limited to the area between Malaga and Alméria, which it still occupies at the present time, the principal areas being found around Motril, Almuñecar, Nerja, etc.

In Algeria, Tunisia and Libya, it was noted at Algiers, Aw<u>dj</u>ila, Surt, Ḳasṭīliya and Tozeur.

In Morocco, it spread from north to south, from Tangiers and Ceuta (Balyūna<u>sh</u>) to Goulemine and to Ḳṣābī along the Atlantic coast, with Ul<u>dj</u>a of Salé, Ḥawz of Marraku<u>sh</u> and Sūs as the main localities. For this country, textual evidence can be cross-checked with tradition and especially with recent research and discoveries in archaeology. Fifteen sugar-refinery foundations, of which six have been excavated, have been identified in the Ḥawz of Marraku<u>sh</u> under the Tensift (Sidi <u>Sh</u>iker), the Ḳsob water course (Suwayra ḳadīma) and <u>Sh</u>i<u>sh</u>awa (where two foundations were found), as in Sūs.

The variety cultivated must have been hardy, and because of the region's geographical situation in a semi-arid marginal zone, the cane could only have prospered with the aid of a massive irrigation system and very elaborate cultivation techniques (cf. Ibn al-ʿAwwām). Indeed, some vast irrigation networks comprising numerous remarkable works of art have been uncovered in Morocco at the same time as the sugar refineries. In all regions, canals for carrying water, aqueducts and recovery basins have been uncovered, indicating a use of water both skilful and economical, for it was also used to drive the mills. Today sugar cane cultivation has completely disappeared from Morocco, Algeria and Tunisia. In Morocco, however, a "sugar-refinery plan" envisages the revival of its cultivation alongside that of sugar-beet in regions where water has been dammed up, not necessarily in those where sugar cane was formerly grown. There are various reasons for the disappearance of this plant but, for the whole of the Mediterranean, the primary cause was the disruption of the sugar market following the discovery of new territories and subsequent increasingly valuable investment in the West Indies and America. Burdened by the onerous need for irrigation, only in Spain cane production could withstand the competition of the New World lands; yet it should not be forgotten that sugar cane contributed to the economic prosperity of the Muslim lands of the West for almost eight centuries.

Bibliography: A complete bibliography will be found in P. Berthier, *Les anciennes sucreries du Maroc et leurs réseaux hydrauliques*, Rabat 1966, as well as an account of the research and excavations carried out in Morocco from 1948 to 1960. (P. BERTHIER)

ḲAṢABA. 1. General. Originally the essential part of a country or a town, its heart, and later (a) fortified castle, residence of an authority in the centre of a country or a town; and (b) principal town, chief town.

In the first sense the word occurs especially in the Muslim West, where it designates, outside the towns, the residence of an important personage (particularly in the Atlas) or a garrison billeted in a fortress and, within the towns, the citadel seat of government; in the latter sense it corresponds to the *ḳal*ʿ*a* of the East.

A particularly interesting development of the word, always in the West, is furnished by its application to the most ancient part of a town; in relation to the later urban developments this old town, encircled by walls, has come to be considered as the town "par excellence", the heart of the whole town: *al-madīna*, *al-ḳaṣaba* (*ḳaṣba*, *kasbah*). A final stage in this development is represented by the colonial epoch, which designates by these words the native town as against that of the Europeans.

In the sense of chief town, the best definition of the term is furnished by the geographer al-Muḳaddasī. If the *miṣr*, in relation to the *iḳlīm* (province), or the *madīna* (city), in relation to the *kūra* (district), effectively perform the role of chief town, this role is not conceivable outside the relationship of each of these towns with the district dependent on it. The *ḳaṣaba*, on the contrary, is the chief town in general, the administrative centre whose administrative or geographical entity does not matter; the word then refers to a general function, and not to an exact

situation, which al-Muḳaddasī translates figuratively by saying that if the *amṣār* are like the kings and the *mudun* like the army, the *ḳaṣabāt* are like the chamberlains. The insistence on the function, and not on the actual situation of the town, is so strong that one finds, on occasion, the word *ḳaṣaba* to designate, as in the West, the heart of a town, as in connection with Palmyra where it refers to the central quarter situated in the ruins of the temple of Baal.

2. North Africa. The term in the sense of "fortress-citadel", in the dialectal form *ḳaṣba*, plural *ḳṣābī* (diminutive *ḳṣība*), is widespread in the whole of Northern Africa as far as Timbuktu (Mali). It was none the less so in the Iberian Peninsula where it has survived, until our own days, in the form *alcazaba* (Spanish), *alcaçova* (Portuguese). The word has been gallicised for a long time, in several forms, of which the most commonly accepted by the dictionaries is *casbah*.

Essentially, in origin, the *ḳaṣaba* is a citadel which, while being attached to the wall surrounding a fortified town, remains sufficiently independent to constitute a keep capable of continuing the resistance, even after the fall of the city, or to serve as a refuge for the governor if the population revolts against his personal authority or that of the prince that he serves.

Its position is naturally fixed according to the best strategic situation, and is sometimes blended with that of an older military establishment. It proudly dominates the town from the height of a hill and may be situated on a watercourse, a cliff, a sea front. According to the countries and local means of construction it may be of hewn stone, rubble or puddled clay (*ṭābya*). If on a plain, its plan is generally a fairly regular quadrilateral; if on a mountain it espouses practically all the facilities for defence furnished by the topography and relief. A door, generally the sole one and with a single angle, joins the *ḳaṣaba* to the town that it defends or from which it holds itself aloof. Frequently, an emergency escape postern, called the Gate of Treason (Bāb al-G̲h̲adr), would in the old days connect the citadel directly with the country. It allowed the reception of information, reinforcements and provisions or the secret abandonment of the *ḳaṣaba*, so as to have no need of surrender.

Such were the *ḳaṣabāt* of the network that the caliphs of Cordova set up in Spain or the Mag̲h̲rib, and such were those that the Almoravids built for the defence of their empire in the Atlas and the Rīf and, in particular, at Marrakesh.

Under the Almohads in the 6th/12th century and under the dynasties succeeding them, the Ḥafṣids at Tunis and Marīnids at Fās, the sense of the term was enlarged in proportion to their creations. Al-Ḳalḳas̲h̲andī (*Ṣubḥ*, v, 103) and al-ʿUmarī (*Masālik al-abṣār*, French tr. Gaudefroy-Demombynes, ii, Paris 1937, index) definitely insist that the Mag̲h̲ribi *ḳaṣaba* is equivalent to the Eastern *ḳalʿa* [*q.v.*]), but the term is applied to every fortified town and even to the imperial towns of Marrakesh, Tunis and Fās al-D̲j̲adīd. These enclosed in their walls not only the palace of the sovereign and his confidants and the dwellings of his dependents, but one or more mosques, the fiscal services, the guards' barracks, baths, prisons, shops and even markets. They also had great main squares (*āsārāk* from the Berber *asarag*) where the people could assemble for the festivals and the army participate in ceremonies. Finally, some gardens more or less large (*āgdāl* [*q.v.*], and, then, some princely or private cemeteries completed the new urban complex. The great gates with a single angle, which were then constructed between town (*madīna*) and citadel (*ḳaṣaba*), are among the finest monuments which remain to us from this brilliant period (at Marrakesh: Bāb Agnā; at Rabat: Gate of the Wūdāya).

Under the S̲h̲arīfian dynasties of Morocco, the Saʿdids in the 10th/16th century and especially the ʿAlawids from the 11th/17th century to our own days, the word serves currently to designate small fortresses of a very simple plan erected in places and analogous with the Turkish *burd̲j̲*s and *kunak*s of Algeria, but more solidly constructed. Mawlay Ismāʿīl [*q.v.*] must have had sixty-six *ḳaṣabāt* constructed and had many others restored. Some constituted fortified outposts against hostile tribes, and frequently Berbers, whilst the others, in being spread out the length of the principal roads of the empire, watched over crossing points and bridges and sheltered travellers at the end of a stage (a list of them and the strength of their garrison is to be found in the study of Lt. de la Chapelle, *Le Sultan Moulay Ismaïl at les Berbères Sanhadja du Maroc Central*, in *AM*, xxviii (1931), 25, 29). Finally, in the neighbourhood of certain towns (Meknès, Salé) some fortified surrounding walls had been built which served as a dwelling for the black slaves (*ʿabīd*) or which were reserved for the contingents furnished by the tribes of whom military service was required. A certain number of these *ḳaṣabāt*, after the final disbanding of the troops, have today been transformed into residential quarters.

A very large number of Moroccan agglomerations bear the name of *ḳasba*, or its diminutive *ḳṣība* (P. Lancre, *Répertoire alphabétique des tribus ... et des agglomérations de la zone française de l'Empire Chérifien ...*, Casablanca 1939). The most important is Kasba-Tadla, a small town of 12,000 inhabitants on the Wādī al-rabīʿ, whose bridge has made its fortune.

By extension the Europeans apply the word more or less legitimately to the beautiful and sometimes immense half-civil, half-military dwellings of the important *ḳāʾid*s of the Moroccan Atlas and the Saharan oases. These vast *ḳaṣabāt* express in a material form the power that some powerful chiefs had acquired during the 19th century at the expense of the petty Berber republics, weakened by the strife of the opposed *leff*s [*q.v.*]. The Europeans have in the same way Arabised as *ḳaṣabāt* the *tig̲h̲remtīs* and *āgādīrīs*, defensive forts or fortified granaries of the same regions. These magnificent pieces of architecture, some of which go back to the 18th century, have been judiciously studied by H. Terrasse, Dj. Jacques Meunié and R. Duru (see *Bibl.*). They testify to the vitality of the rural Moroccan civilization, but the fragility of their construction and their decoration and the decadence of the Berber institutions render their conservation difficult.

In certain cities, Algiers for example, all the quarters of the ancient town combined bear the name of Casbah. This toponym, due to historical circumstances, has since 1830 enjoyed a great literary, cinematographic, and especially journalistic fame.

(G. Deverdun)

ĶASAK [see čerkes].

KASALA (variant, Kasalā; conventional spelling, Kassala), a town and province in the east of the republic of the Sudan, extending from the frontier of Egypt to that of Ethiopia. Geographically, the province contains five distinct types of country. (1) A rough triangle in the south, bounded by the railway, the river Rahad and the Ethiopian frontier, where al-Ķallābāt (Gallabat) is the principal town, is a westward extension of the central clay plains of the Sudan. (2) North of this is the Buṭāna, a plain lying between the Blue Nile, the main Nile and the river ʿAṭbarā, which provides grazing for nomadic and semi-nomadic Arab tribes, of which the Shukriyya is the most important. The town of al-Ķaḍārif (Gedaref) on the border between this and the previous region originated as the market of the Shukriyya, and was called Sūķ Abū Sinn from the name of the tribal chief. A section of the Bedja [*q.v.*] tribe of Bishārīn [*q.v.*] has been established in the eastern Buṭāna and on the ʿAṭbarā since the 12th/18th century. (3) The ʿAtbāy consists of the plains lying east and north of the ʿAṭbarā and fringing the Red Sea Hills. This is mostly nomad country, inhabited by Bedja ranging from Ummarār (Amarar) in the north through Bishārīn and Hadanduwa to Banū ʿĀmir in the south. It includes, however, the fertile cotton-producing delta of the river Ķāsh (Gash), at the head of which, beneath the spectacular isolated Djabal Kasala (2,791 ft.), is the town of Kasala, the provincial capital. To this area, inhabited by the Ḥalānka tribe of Bedja, the now obsolete name of al-Tāka was formerly given. (4) The Red Sea Hills, a northern extension of the Ethiopian Highlands, are sparsely inhabited by nomadic Bedja. Sinkāt (Bedja, Ōkāk) is a market-town and administrative centre occupying a strategic position on the route (now followed by the railway) between the Red Sea and the Nile. (5) The coastal plain, while supporting a nomadic Bedja population, has been the site in succession of the ports of Bāḍiʿ, ʿAydhāb [*q.v.*], Sawākin (Suakin) and Port Sudan. The town of Tūkar (Tokar) lies in the delta of the Baraka. Traditionally the granary of the region, it now produces cotton.

Until the 19th century, most of what is now the province of Kasala was tribal territory, open to trade and cultural influences through the Red Sea ports, and, from the 10th/16th century, within the sphere of influence (rather than the effective control) of the Fundj [*q.v.*] sultanate of Sinnār. Holy men played an important part in the region. Ḥasan b. Ḥassūna (d. 1075/1664-5), the grandson of an immigrant from the Maghrib, established a patriarchal lordship in the central Buṭāna, based on the herding of flocks and the export of horses to Sinnār and other Sudanese states; he maintained a slave-household and army (see Yūsuf Faḍl Ḥasan (ed.), Muḥammad al-Nūr b. Ḍayf Allāh, *K. al-ṭabaķāt fī khuṣūṣ al-awliyāʾ waʾl-ṣāliḥīn waʾl-ʿulamāʾ waʾl-shuʿarāʾ fī ʾl-Sūdān*, Khartoum 1971, 133-48; cf. S. Hillelson, *Sudan Arabic texts*, Cambridge 1935, 194-99). In the 12th/18th century, the holy clan of the Madjādhīb, propagators of the Shādhiliyya *ṭarīķa*, acquired great influence among the eastern tribes from their centre at al-Dāmir at the junction of the ʿAṭbarā with the Nile. Burckhardt in 1814 noted the security that they afforded to travellers passing between al-Dāmir and Sawākin (J. L. Burckhardt, *Travels in Nubia*, London 1819, 268). The devastation of al-Dāmir in 1822 by the Turco-Egyptian commander, Muḥammad Bey Khusraw al-Daftardār, and the flight to Sawākin of the chief of the clan, led to a further strengthening of Madjdhūbī influence among the Hadanduwa. In the later 12th/18th century, on the disintegration of the Fundj sultanate, the Shukriyya emerged as the dominant tribe in the Buṭāna. (See H. A. MacMichael, *A history of the Arabs in the Sudan*, Cambridge 1922, i, 250-3.)

The establishment of Turco-Egyptian rule in the riverain areas made possible the conquest of the nomadic tribes. Although the Hadanduwa were raided in 1823 and again in 1831-2, their effective subjugation was achieved by the *hükümdār* (governor-general) Aḥmad Pasha Abū Widān, who invaded al-Tāka in 1840 and established a garrison-post, from which developed the town of Kasala. The resistance of the Hadanduwa was finally broken by his successor, Aḥmad Manikli Pasha, who made a punitive expedition in 1844. Meanwhile, a new Ṣūfī *ṭarīķa*, the Khatmiyya, was being propagated among the Bedja by al-Ḥasan, the son of its founder, Muḥammad ʿUthmān al-Mīrghanī. He established his headquarters at al-Khātimiyya, near the town of Kasala, where he died and was buried in 1869. In 1864-5 he played an important part as a mediator during serious mutinies of Sudanese (*i.e.*, black) troops at Kasala. (See J. S. Triming-

Ḳaṣaba of Telouet (Morocco). Photograph by courtesy of Mme Dj. Jacques-Meunié
ham, *Islam in the Sudan*, London 1949, 231-5.)

The Red Sea littoral, and more specifically the ports of Sawākin and Maṣawwaʿ, had been part of the Ottoman Empire since the 10th/16th century. The two towns were granted to Muḥammad ʿAlī Pas̲h̲a on an annual lease in 1846 but reverted to the *vilayet* of the Ḥid̲j̲āz in 1849. In 1865 they were assigned to the Khedive Ismāʿīl for life, a concession which in the following year was made hereditary. This grant coincided with the boom in cotton resulting from the American Civil War, and the khedivial governor of Sawākin, Aḥmad Mumtāz Pas̲h̲a, established an experimental cotton plantation at Ṭūkar. Appointed in 1870 general governor of the Red Sea Littoral (*i.e.*, Sawākin, Maṣawwaʿ, the Somali coast and al-Tāka) he projected a very extensive development of cotton production in his province, which at first appealed to the Khedive but proved impracticable.

There were no significant developments in the region in the early phase of the Mahdia. The Bed̲j̲a were initially uninterested in a movement promoted by Arabic speakers, while the S̲h̲ukriyya were on friendly terms with the khedivial administration, to which their chief (*nāẓir*), ʿAwaḍ al-Karīm Aḥmad Abū Sinn, gave loyal support. In May 1883 the Mahdī sent as his emissary ʿUt̲h̲mān b. Abī Bakr Diḳna al-Sawākinī (Osman Digna), a member of a trading family of Sawākin and of partially Bed̲j̲a descent. Rivalry between the Mad̲j̲ād̲h̲īb and the K̲h̲atmiyya gave him an ally in the head of the former group, S̲h̲ayk̲h̲ al-Ṭāhir al-Ṭayyib al-Mad̲j̲d̲h̲ūb, who brought over to the Mahdist cause his own adherents among the Hadanduwa. Sinkāt and Ṭūkar were besieged and fell in February 1884. Lacking sea-power, ʿUt̲h̲mān Diḳna was unable to capture Sawākin, which, garrisoned and commanded by the British, remained an enclave in Mahdist territory. Of the Egyptian garrisons in the interior, al-Ḳaḍārif surrendered in April 1884, and Kasala in July 1885 after a long siege, while al-Ḳallābāt and al-D̲j̲īra near the Abyssinian frontier were successfully evacuated.

Two military provinces with their headquarters at ʿAfāfīt near Ṭūkar and al-Ḳallābāt (subsequently al-Ḳaḍārif) guarded the heartlands of the Mahdist state against a hostile periphery—the British in Sawākin, the Italians in Eritrea, and the Christian power of Abyssinia. The effectiveness of the Mahdist forces was diminished by mutual ill-feeling between ʿUt̲h̲mān Diḳna and his Bed̲j̲a followers on the one hand and the Arab commanders and warriors on the other. In spite of a successful Mahdist raid under Ḥamdān Abū ʿAnd̲j̲a, which penetrated to Gondar (January 1888), and the death of the Abyssinian ruler, John IV, after a battle at al-Ḳallābāt (March 1889), the position on this frontier was virtually a stalemate throughout the Mahdia. On the other sectors the situation of the Mahdists deteriorated. A British force took ʿAfāfīt in February 1891, dislodging ʿUt̲h̲mān Diḳna and ending the threat to Sawākin. In July 1894 the Italians captured Kasala by prior agreement with the British, but retroceded the town to Egypt in December 1897. The last effective Mahdist army in the region was withdrawn from al-Ḳaḍārif by Aḥmad Faḍīl, who joined the K̲h̲alīfa ʿAbdallāhi after the decisive defeat of Kararī (September 1898) and died with him at Umm Diwaykarāt (24 November 1899).

Under the Condominium (1899-1955) and the independent republic of the Sudan, the history of the region has increasingly been merged in the general development and modernization of the country. The province of Kasala as originally formed did not include the northern and coastal districts until it was amalgamated with the Red Sea Province in 1930. While the intractable Bed̲j̲a remained a difficult problem for administrators, economic and educational progress assisted their integration into the Sudanese community. Factors of economic change in the province have been the construction of Port Sudan (1906-9) and the extension of cotton cultivation in the Ḳās̲h̲ and Baraka deltas after the First World War. Ancillary to the latter development was the construction of a railway link between Port Sudan and Kasala (1924) and the subsequent extension of this line to Sinnār.

ḲASAM (A.), from the verb *aḳsama*, designates the oath in general. The word has two other synonyms, *yamīn*, and *ḥalf*. Ibn Rus̲h̲d (*Bidāyat al-Mud̲j̲tahid*, i, 394), wishing to emphasize their equivalence from the point of view of terminology, uses the three words without differentiation in the first paragraph of the *kitāb al-aymān* of his *Bidāya*. In fact, when he deals with the judiciary oath, custom has imposed the word *yamīn* [*q.v.*] and the verb *ḥalafa* almost exclusively. But even in that which concerns the extrajudiciary oath, with which the discussion that follows is concerned, the word *yamīn* has a tendency to supplant *ḳasam*. It is also a fact that, in the treatises of *fiḳh*, whichever school is considered, and in the collections of *ḥadīt̲h̲*, the chapter dedicated to [extrajudiciary] oaths is almost always entitled *bāb* or *faṣl al-aymān*.

In the lines that follow, the judiciary oath will not be discussed; nevertheless, there will be occasion to consider, in the field of penal procedure, the *ḳasāma*, an oath pronounced fifty times, which, although connected with the judiciary oath, derives etymologically from the word *ḳasam*.

The extrajudiciary oath is that by which a person binds himself to do or not to do a certain specific physical or juridical act, by invoking the name of God or one of the divine attributes (*al-Raḥmān, al-Ḳādir, al-Nāṣir*, etc.). At least, that is the definition that the works of *fiḳh* give of it, for, in the Ḳurʾān, the word *ḳasam* or the verb *aḳsama*, which figure expressly in the *sūras* of the Meccan period (VI, 109; XVI, 38; LVI, 75; LXVIII, 17; LXXXI, 15; LXXXIX; 5; XC, etc.) or which are implied in many of the other *sūras* of the same period, apply, in general, to the oaths pronounced by God himself, which are known to cause some difficulties for commentators of the Ḳurʾān. Already in the Medinan *sūras*, the word *yamīn* is frequently substituted for *ḳasam* (II, 225; V, 89) and marks the first stage of an evolution leading to the concept which becomes that of *fiḳh* with regard to extrajudiciary oaths which bring about voluntary bonds, while the verb *aḳsama* is still to be found in these Medinan *sūras* (for example, V, 53).

The bond undertaken under oath is not, in general, a juridical obligation, in the sense that the one who has sworn to perform an act cannot be constrained judicially to carry it out. In a case where he did not respect his oath, he would be perjured (*ḥint̲h̲*), but it is then a matter of sin, a moral fault, for which he must account to God alone. Nevertheless, *fiḳh*, following very close to the Ḳurʾānic text (V, 39) pro-

vides him, in the hypothetical case where he has involuntarily broken his oath, with a means to put his conscience in order, that is, by expiation, *kaffāra*. Expiation for a broken oath may be to give sustenance to 10 paupers, to distribute clothing to them or to free a slave; and, if, through lack of resources, any of these expiations is not possible, the perjured man must fast for 3 days. These regulations, having been laid down in the Ḳurʾān, are evidently common to the teaching of all the Schools. The latter are all divided, however, on the methods of application of each of them. For example, should the fast last for 3 consecutive days? Yes, reply the Ḥanafīs and the Ḥanbalīs, but no, according to the Mālikīs and the Shāfiʿīs (Dimashḳī, *Raḥmat al-Umma*, ii, 79-80). The same divergences are found in that which concerns the quantity of food to be given to the poor, or the quality of the clothing which is distributed to them. It must be emphasized that, as with the oath itself, the expiation, which sanctions its non-execution, has no characteristic of juridical obligation, and no-one, not even the public authority, can constrain the perjured man to perform expiation. All this is laid out on a strictly moral and religious plane.

The *fuḳahāʾ* were asked if it was not possible for someone, who had sworn to accomplish a certain act deliberately, to substitute the expiation for the performance of his oath, although nothing prevented him from accomplishing his vow. Strangely enough, the Ḥanafīs and Ḥanbalīs refuse him this option, a prohibition that is not in accordance with the character of vows freely consented to as with the oath and expiation.

The statement of the jurists with regard to oaths (*aymān*) is, in form, very close to that which they adopt in that which concerns a real juridical act. Necessary capacity, conditions of form and substance, null and void formulas, moment of performance of the vow undertaken, effects of the suspensive condition, expedients (*ḥiyal*) to change the law, all would let us suppose that it was concerned with vows which, although unilateral, bound their author by strict juridical obligation. Certainly, a careful examination of the dispositions of each school on the question, and especially the non-juridical sanction, which consists of *kaffāra*, quickly restores to these dispositions their real character of strictly religious and moral rules. That is not to say that all the works of the jurists on the question were devoid of practical interest. Throughout the centuries, the pious Muslim did not generally attach great importance to the distinction, familiar to specialists, between moral and juridical sanction. His concern was to know whether his conduct here below was reprehensible or not, and whether it would bring him chastisement in the next world. So it was that the long discussions dedicated in the books of *fiḳh* to oaths (*aymān*) often associated with vows, *nudhūr* [*q.v.* NADHR] presented him with a very great interest.

It is not possible to enter into detail on the solutions proposed by authors (different, moreover, according to the schools) for particular cases of oaths and all the kinds that were imagined.

Only one example will be given because of the long discussions that the works of *fiḳh* dedicate to this particular case. It concerns the oath called *ẓihār*, which may be translated very vaguely as "incestuous comparison". The word is derived from *ẓahr*, "back". Presumably the husband says to his wife: "You are for me like my mother's back", *ka-ẓahri ummī*, or any other comparison of a part of the body of his wife with that of a woman he could not marry without committing incest. In pre-Islamic Arabia it was a general form of repudiation, but the Ḳurʾān condemned everything of that kind (XXXIII, 4 and LVIII, 2-3). Its pronunciation constituted nothing other than a sin, and a serious one, which could only be wiped out by expiation. This is different from the ordinary expiation for oaths not respected, and consists of freeing a slave, or in default, fasting for 2 months (during the day only, of course). If not, the husband would have to distribute the midday and evening meal to 60 paupers.

In a general manner, the solutions of *fiḳh* hinge on two essential points. In the first place, it is concerned with knowing when one may consider that an oath has been respected, the expressions used by the one who swore being borne in mind. On this point, the replies are very often of a lexicological order and baffle all systemization. The second point concerns expiation; this is not automatically incurred by the simple fact that the oath has not been performed. There are actually some oaths which, due to an actual or theoretical fault, do not call for expiation, although they have not been respected. It is in this category that one places the *yamīn al-ghamūs*, or oath to perform a deed that one knows to have been already performed. There would not be any *kaffāra*, except in the Shāfiʿī school. In the same way, the *laghw al-yamīn*, an oath taken by mistake (through a slip of the tongue) or in a thoughtless manner, does not require expiation (Dimashḳī, *op. cit.*, ii, 73). The same applies, if one follows an oath with an *istithnāʾ*, a reservation, of which the most usual is "If God wills". No more can someone who is not *mukallaf* (fully capable) bind himself validly by oath, but the majority of the schools (except the Ḥanafī school) admit that the oath of the unbeliever (*kāfir*) is valid, and that he will be held liable to expiation if he does not carry out his vow.

During the centuries, the usages, variable according to the regions, have added different ceremonials to the very simple form of the oath that was foreseen by *fiḳh*, in order to render the vow more solemn, and to bind further its author. There were also oaths pronounced in sacred places such as the Kaʿba at Mecca, or simply within a mosque, which conferred on them a higher value in popular belief.

In the same fashion, oaths are sworn by touching the tomb of a saint or holding bread and coffee in the hand, or placing on the heart an excerpt from the Ḳurʾān or the *Ṣaḥīḥ* of Bukhārī. Sometimes this supplementary ceremonial represents a pre-Islamic practice, still strongly marked by paganism, such as pronouncing the oath and throwing salt in the communal fire of the tribe, or within a circle in which cinders and pieces of fabric have been scattered. There are some moments of the day when oaths acquire a particular importance, such as that which follows the evening prayer.

On all these practices which are unknown to *fiḳh*, see Musil, *Arabia Petraea*, iii, 338, 342; Jaussen, *Coutumes des Arabes au pays de Moab*, 311; Landberg, *Arabica*, v, 133-4; Snouck Hurgronje, *Mekka*, ii, 306; Lane, *Manners and Customs*[3], i, 168, 470.

Oaths judicially sanctioned. As has been stated and repeated above, the whole theory of the extrajudiciary oath is placed on a moral and religious plane, and consequently very often means that the question may be treated in the first part of the works of *fiḳh*, dedicated to ritual (*ʿibadāt*). Nevertheless, in two fields of law, *i.e.* enfranchisement and repudiation, the oath involved in the past (and sometimes today) a juridical sanction, in the sense that

the one who swore to free his slave or repudiate his wife was held liable to carry out his vow, without being able to substitute a *kaffāra* or expiation, through which he would have been able to free himself from his obligation.

In the matter of enfranchisement, every declaration to this effect, even not dependent on the fulfilment of an act by the master or the slave or any other person, had the validity of an oath of enfranchisement, *al-ḥalf bi'l-ʿitḳ*) and this oath (which did not, however, mention the name of God) irrevocably entailed the liberty of the slave or the slaves alluded to in the master's declaration.

Ancient *fiḳh* had set up two institutions both based on an oath which, although not having as principal object the breaking-up of marriage, led indirectly to this result. The first of these institutions is the *liʿān*, or "oath of anathema", by which the husband accuses his wife of adultery or disowns the child that she carries in her womb. To this end, the husband prayed five times an oath in the form *as̲h̲hadu bi-llāhi*, and the last oath was followed by the formula "may I be cursed, if I lie".

The *īlāʾ* was an "oath of continence", the husband swearing in the name of God not to have sexual relations with his wife for at least 4 months. When this time had passed without a resumption of conjugal relations, the marriage was not automatically broken up except in Ḥanafī law, the other schools allowing the wife to judge the occasion for the severance, which would take place by a repudiation that the husband would pronounce, or that the *ḳāḍī* would formulate in his place.

Very soon the rules of precedent, especially those relating to the *īlāʾ*, had fallen into desuetude. The jurists do not dedicate very long discussions to them, except on account of the importance of the scriptural evidence relating to these two institutions, and not for their usefulness, which had become practically nil.

The oath of repudiation. On the other hand, the oath of repudiation, *al-ḥalf bi'l-ṭalāḳ* or still more *al-yamīn bi'l-ṭalāḳ*, has always been in very current usage among the Arabic-speaking Muslim populations. In certain circles, notably that of the small traders, it is not rare in the course of a conversation for one of the speakers to swear two or three times, in order to assert his determination or his good faith: "May my wife be repudiated if such a thing does or does not happen, if I am right or if I am wrong, etc.". The matters are of no consequence, each one knowing that he is uttering idle words, pronounced mechanically and without attention being paid to them. The moralists have always severely reproved this bad habit, for, in any case, it leads to a blameworthy result, whether the one who has sworn does not respect his oath on the pretext that he had formulated it without a serious intention to repudiate and he finds himself perjured, often several times a day, or whether he respects it and separates from his wife, from whom he had no intention to separate and whom he had no occasion to reproach.

What juridical validity did the jurists attach to these oaths of repudiation? Only the D̲j̲aʿfarīs (and the Ẓāhirīs in the past) have always denied them all legal validity, for the reason, among others, that they do not contain the name of God in their formulation. The other juridical schools regard them as conditional repudiations, and as such, involving the break-up of the marriage, when the condition is realized. Whether the wife avails herself or not of the oath or the husband respects it in separating from his wife or does not respect it in continuing to live with her, are questions of fact, which do not modify at all the principle itself, *i.e.* the oath of repudiation determines, in law, the repudiation of the wife, if the tacit or explicit condition that it contains is realized. This troublesome solution of the jurists is still applied today in a certain number of Muslim countries.

Egypt is the first Muslim state to have attempted to restrain the execution of the rule of precedent. The Egyptian law of 10 March 1929 declares as null and void conditional repudiations and oaths of repudiation, when these are dependent on an act being done or not done by the wife; but if the condition is different (*i.e.* if it is not dependent on the will of the wife) the oath of repudiation is valid. Several Muslim countries (Sudan, Jordan, Syria) have adopted in their turn the Egyptian distinction. One must turn to the Moroccan Code of the Personal Statute of 1958 and the Iraqi Code of the Personal Statute of 1959 to find a radical condemnation of every oath of repudiation, whatever may be the nature of the condition on which the repudiation is dependent.

ḲASĀMA.—Derived etymologically from *ḳasam*, this differs from it in its mode of being taken and its strict field of application. It is concerned with an oath repeated 50 times, either by the *ʿaṣaba* of the victim of a murder (Mālikī rite), or by the inhabitants of the place of the crime (Ḥanafī rite) an oath by which is asserted the guilt or, on the contrary, the innocence of an individual presumed to have killed someone. This oath dates from the pre-Islamic period, when it always constituted a procedure of accusation, a weapon in the hands of the members of the victim's tribe, seeking to make use of retaliation (*ḳiṣāṣ*) against the man presumed to be guilty. The juridical schools of Islam, in adopting this pre-Islamic custom, do not make it produce the same result. Actually, in *fiḳh*—merely quoting the Ḥanafī and Mālikī doctrines which are clearly opposed—the *ḳasāma* is, in the first of these systems, a procedure for the defence of the one presumed guilty, and, in the second, a procedure of accusation.

According to all the early Ḥanafīs (sc. those of Kūfa), when in a non-public place (which excludes the mosque), quarter of a town, house, boat, etc., the corpse of a person was discovered, when there were not two male witnesses to point out the murderer, and when the *walī al-dam*, the nearest *ʿāṣib* relative of the victim, came to demand justice, 50 people had to be made to swear to having found it in this place, that they were not involved in this crime and that they did not know the murderer. If 50 people could not be gathered (if the crime was committed in a house, for example), it was possible to make the same person swear several times, in such a manner that the total of 50 oaths was reached. In the light of this, the *walī al-dam* could not apply retaliation and had to content himself with the pecuniary compensation (*diya*) provided in such a case.

The Mālikī school, following the teaching of the scholars of Medina, has kept the characteristics of the *ḳasāma* which it had in pre-Islamic Arabia, that is to say, those of a procedure of accusation. It is also a fact that in the hypothetical case of a murder of which the author is unknown, the *ʿaṣaba* relatives of the victim swore a total of 50 oaths (the same person could swear several times provided that this was not more than 25 times) that such an individual, against whom is weighted serious presumptive evi-

dence, was the one who committed the murder. The notion of serious presumption (*lawth*) has acquired thereby in this school, and in those that have adopted the same conception of *ķasāma*, a fundamental importance. Serious presumptive evidence was held to be not only the fact that the victim, before dying, had accused the presumed murderer, but also the presence of this last person, with his blood-stained clothing, not far from the victim, or even the testimony of a single witness to the murder. With these conditions combined, the *walī al-dam* would bring retaliation against the one presumed guilty, such that he could then, as a result, have him put to death. The Mālikī version of the *ķasāma*, in which oaths liable to bring about death were taken by the relatives of the victim who, *ex hypothesi*, were not present at the murder, has formed the subject of some criticisms on behalf of one party, that has nevertheless remained a minority, of the ancient doctrine (Ibn Rus̲h̲d, *Bidāya*, ii, 419).

Finally, it does not appear that this institution functioned much, even in the past when the penal law of Islam had a certain practical application.

(J. Pedersen-[Y. Linant de Bellefonds])

AL-KĀSĀNĪ, ʿAlāʾ al-Dīn Abū Bakr b. Masʿūd, called Malik al-ʿUlamāʾ "King of Scholars" was one of the greatest jurists of the Ḥanafī law school. His *nisba* stems from Kāsān, in Farg̲h̲āna, to the north of the Syr Daryā in Central Asia. He was the pupil of ʿAlāʾ al-Dīn al-Samarķandī (d. 539/1144), the author of a treatise regarded as authoritative in the Ḥanafī school, sc. his *Tuḥfat al-fuķahāʾ* (printed at Damascus in 1964), and married this scholar's daughter Fāṭima, herself well-versed in the legal sciences. Appointed to a position in Aleppo in 543/1148, he taught there till his death in 587/1189, in the famous Madrasa Ḥalawiyya. In Aleppo, he was always treated with respect and consideration by the authorities, who recognised his deep legal knowledge and the orthodoxy of his teaching; he frequently attacked the Muʿtazila and heretical innovators (the *ahl al-bidʿa*).

His main work, and the one which made him famous, is the *Kitāb Badāʾiʿ al-ṣanāʾiʿ fī tartīb al-s̲h̲arāʾiʿ* (Cairo 1327-48, 7 vols.). According to his biographers, this work is a commentary on the *Tuḥfa* of al-Samarķandī; but in reality, neither in form nor content is this a commentary in the usual sense of the term. As the author explains at the outset of his work, he wished to "imitate" the work of his predecessor; this is why each of its chapters begins by stating the plan of the subject matter, a plan to which al-Kāsānī is then rigorously faithful. He also owes to al-Samarkandī a certain tendency towards systematisation. Nevertheless, it must be conceded that the "imitation" is far superior to the original model. In Ḥanafī legal literature, the *Badāʾiʿ* constitutes a master-piece of a quality which was never reached subsequently. The term "commentary" has been attached to al-Kāsānī's work simply because his biographers wished to stress an aspect of his life which they thought worthy of remark, and said *s̲h̲araḥa Tuḥfatahu wa-tazawwad̲j̲a bintahu* "he wrote a commentary on his *Tuḥfa* [of al-Samarķandī] and married his daughter".

Despite his qualities of clarity, methodicalness and learning, al-Kāsānī's work nevertheless did not exercise any great influence on the later development of Ḥanafī law. It does not seem that legal scholars of his own time were particularly impressed with his importance; thus properly speaking, he had no disciples, and the *Badāʾiʿ* was not made the starting-point for numerous commentaries, as was the case with the *Hidāya* of his contemporary al-Marg̲h̲īnānī (d. 593/1197). At a later date, his ideas are hardly mentioned in the great compilations of Ḥanafī law, and even then with no more weight attached to them than to those of other Ḥanafī jurists. The appearance at the beginning of this century (1328/1909) of the first edition of the *Badāʾiʿ* quickly gave rise to a real excitement over this work amongst contemporary jurists, and it can be said that the teaching of Ḥanafī law became then completely polarised around it. Apart from the *Badāʾiʿ*, al-Kāsānī apparently wrote a work called *al-Sulṭān al-mubīn fī uṣūl al-dīn*, apparently lost; and Brockelmann mentions a Ķurʾān commentary called the *Kitāb al-Taʾwīlāt* which exists only in manuscript.

(W. Heffening-Y. Linant de Bellefonds)

ĶAṢAṢ [see ķiṣṣa].

KASB (A.), in economic life, gain. As is well known, in its main trends Islam is not a doctrine of renunciation of the world, but one of respect for the commandments of God according to the uses of the world, which He has given to man for his benefit. There is therefore no objection whatsoever to a man's realising, as long as it is by legal means, the gain necessary to improve his life and that of his dependents. The Prophet was born into a society of merchants, to whom he often spoke in their own language. He himself had been a merchant and never denigrated this period of his life. Among his disciples were many merchants, whose revenues were increased for the maintenance of the young community. Of course, the Prophet did attack the Ķuras̲h̲īs of Mecca, striking specifically at their economic interests, but this was because of their egoism and denial of his Message and was not a condemnation of their commercial activity as such (Ķurʾān, II, 193-4, VII, 28, XII, 9, LXII, 9-10, etc. tr. Blachère, index to the word "fortune"; cf. also Rodinson (ch. 2), W. Ule, Heffening, etc. cited in the Bibl.). In the process of being fixed during the first centuries after the Hid̲j̲ra, the *Ḥadīth* developed the same line of thought, although bypassing some secondary doubts that concealed real problems. This very general article will be restricted to pointing out various directions in teaching and practice, referrring for more detailed analysis to the various methods

by means of which a "gain" might be realised.

Ibn Khaldūn, considering the problem of gain or profit at the end of the classical Muslim period, as it might be presented to a sociologist (although in accord with the Book of God), enumerates (tr. de Slane, ii, 223 f. = Rosenthal, ii, 311 f.) the different means of obtaining it and the two different forms it can take: gain for simple subsistence, or true profit, premium, each resulting to some extent from the application of human effort to the gifts of nature. They can thus be procured, apart from by force or through political power (taxes), by means of agriculture, industry and commerce. This last source is far and away the most respected in Islam.

As would be expected, reflections on the legitimacy of gain became more common from the time of the great economic leap forward of the 3rd/9th century; in fact, it was nearly always the legitimacy of commercial gain which was considered. The affirmation of the legitimacy of gain, as long as it was the fruit of honest toil, was underlined in the face of the ascetic tendencies of some spiritual groups outside Islam, and inside it of the nascent Ṣūfism, which sometimes preached a strict ideal of poverty and sometimes relied on God, that is on begging, on the charity of the faithful, in fact of the efforts of others and not of oneself (unless preaching or intercession with God can be so called) for the acquisition of whatever is necessary for oneself and one's family. It is symptomatic that it was among the Ḥanbalīs, who had most contact with poorer people and with the petite bourgeoisie, that the reaction against anti-economic trends is most pronounced. "Two kinds of food taste best", says a celebrated *ḥadīth* widespread in this milieu, "those produced by your own hands and those carried on your own back". Here, subsistence is in question, but even so, true profits are permitted, though under the strictest regulations. A polemic discovered by S. D. Goitein is highly relevant here. Deriving from a Ḥanafī milieu (always in this period closest to practice), it is a tract attributed, perhaps wrongly, to al-Shaybānī, but one which certainly dates from the 3rd/9th century; it is true that it has come down to us through the medium of a successor, but it is sufficiently clear. In essence, it gathers together all the relevant *ḥadīth*s and therefore all the guarantees legitimising gain. This indicates that the problem was indeed one faced by pious men, but that their conclusion was frankly positive, as it has been in all religions during periods of economic development. The attitude remained the same after the great expansion. H. Ritter has recently drawn attention to the contributions of various authors to the subject, al-Ghazālī in particular (end of the 5th/11th century). As would be expected, al-Ghazālī stresses spiritual values and condemns the dishonest merchant, but he equates the honest merchant with a fighter in the *djihād*, thereby demonstrating his regard for commerce.

Teachings from other sources were combined with those of Islam *stricto sensu*. Ritter and Plessner have demonstrated the importance of the ideas of Neopythagorean Bryson, whose work was translated into Arabic at a fairly early date, in the economic thinking of Islam, both Sunnī and Shīʿī, and of Judaism. Through his works were channelled Platonic and Aristotelian traditions. Incidentally, although this was not their own perspective, the *Ikhwān al-Ṣafā'* also admit work as a source of gain, at least for subsistence (cf. Y. Marquet, in *Arabica*, vii (1961), 225 f.).

Without wishing to lay stress on this aspect, which will be more amply covered elsewhere, we must consider practice alongside doctrine. As has been noted, this is mostly concerned with commerce. The conception of merchants entailed here is one of a permanent accord, which can be traced right back to antiquity: the purpose of commerce, as expounded by the author of the *Tabaṣṣur bi'l-tidjāra* (3rd/9th cent., ʿIrāḳ), by Abū'l-Faḍl al-Dimashḳī (probably 5th/11th century, Fāṭimid region), and by Ibn Khaldūn, is to realise a profit through the difference between the purchase price in one area and the selling price elsewhere. It has therefore an essentially speculative aim; commerce certainly needs production, but it is not its conscious aim to stimulate it, even though only agriculture and industry are, in the material sense, properly productive. Here we must introduce the ideas developed in Islam concerning prices: in one sense they are willed by God and must therefore be left free, but even so a Muslim ruler is obliged to preserve them from excessive speculation, particularly in the case of basic commodities, just as he is obliged to regulate manufacture, weights and measures, currency, etc.

As in all ancient and mediaeval societies, lending an interest, in all the guises by which it was then known, was highly unpopular and officially forbidden. Early Islam stigmatised *ribā*, a term whose exact meaning is unknown. It entailed, evidently, a condemnation, from a moral point of view, of those who grew rich through the misery of others, without the loan granted helping the borrower in any way to retrieve his fortunes, such as lending dates to a starving man, etc. However, as is often the case with sacred texts, this was applied literally to quite different circumstances, especially in proportion as the economic decline of later Islam drew attention to its faults without their being sufficiently analysed. It was therefore concluded, right up to the present day, that all lending at interest was forbidden. In fact, in periods of economic expansion, in the Islamic world as elsewhere, the interdiction was twisted, in the most transparent fashion, by being applied to non-Muslim communities. Thus it was generally accepted that lending at interest was prohibited amongst coreligionists but not between one faith and another, which in the practical life of a multi-confessional society amounted to its reinstatement (see further RIBĀ). Above all, Islam knew, practised and officially ratified customs aimed at securing a profit for money put to work, principally by means of investments in commercial enterprises or domains. This could be done through partnership, *shirka* [*q.v.*], or through capitalist merchant commenda, *ḳirāḍ*, *muḍāraba* [*qq.v.*], the money placed acquiring part of the profit in reward for the service rendered or in compensation for the risk taken. Muslim practice, whatever the original reasons behind it, was considered by merchants of all confessions as preferable to previous traditions (A. Udovitch, *Partnership and profit in Medieval Islam*, Princeton 1969). It was in continual usage, which attests the fact that the Muslim economy certainly relied on profit. The forms it took were those which in large measure soon became general in the Mediterranean and Western world. At the end of the Middle Ages, only the latter gradually outdistanced the Muslim economy.

Bibliography: it is impossible to give here a general bibliography of a subject so amply treated at an elementary level; see the specialised articles, particularly TIDJĀRA (in *EI*[1] by Heffening), RIBĀ, ḲIRĀḌ, BAYʿ, etc.; to the first, while awaiting the new edition, add E. Bussi, *Il concetto*

di commercio e di commerciante nel pensiero giuridico musulmano, in *Studi in memoria di Aldo Albertoni*, iii (1938), 7-53; A. K. S. Lambton, *The merchant in medieval Islam*, in *A locust's leg, Studies in honour of S. H. Taqizadeh*, London 1962, 121-30.

For bibliography of quite a general nature, see C. Becker, *Islam und Wirtschaft*, in *Islamstudien*, i, 54-65; H. Ritter, *Ein arabisches Handbuch der Handelswissenschaft*, in *Der Islam* (1917) (where the author discusses the statements of various writers, al-Ghazālī in particular, on economic themes); M. Plessner, *Der Oikonomikos des neupythagoriers Bryson*, 1928; S. D. Goitein, *The rise of the Middle Eastern bourgeoisie*, in *Cahiers d'Histoire mondiale / Journal of world history* (1957); idem, in *Studies in Islamic history and institutions*, 1966; M. Rodinson, *Islam et Capitalisme*, 1966 (chs. 2-4); Subhi Labib, *Capitalism in mediaeval Islam*, in *Journal of Economic History* (1969); *Studies in the economic history of the Middle East*, ed. M. A. Cook, London 1970 (1967 symposium); W. Ule, *Islam und Wirtschaft*, in *Der Islam* (1971), 136-67 (on its origins).

(Cl. Cahen)

As a theological term *kasb* means "acquisition", "appropriation". The verb *kasaba*, usually in the 1st form and sometimes in the 8th (*iktasaba*), is frequently found in Ḳur'ānic vocabulary, mainly with the sense of "acquiring" those rewards or punishments which are the fruit of moral acts, and so a loose translation could render *kasaba* here as "carrying out an action". Therefore, "Each soul is paid a fair price for whatever has accrued to it" (Ḳur'ān, II, 281; cf. *inter alia*, XIV, 51, XL, 17, LXXIV, 38, etc.). According to the text, this is the very reason for the creation of the world, "God created the heavens and the earth in truth (*bi'l-ḥaḳḳ*), and so that each soul could be rewarded for whatever it had acquired" (XLV, 22). *Kasaba* alludes to the "acquisition" (of the fruit) of each act, good or evil; *iktasaba*, which is very close in meaning, is used in the Ḳur'ān only for human actions in general (IV, 36), or for acts which merit punishment (II, 286, XXIV, 11, XXXIII, 58). Verse II, 286 says: "To each soul (is given) that which it has acquired (*kasabat*) and against each (is recorded) that which it has acquired (*iktasabat*). It should be noted that when discussing this verse, al-Zamakhsharī, followed by al-Bayḍāwī, stresses the meaning contained in the 8th form.

The *maṣdars* of these two verbal forms, *kasb* (pl. *aksāb*) and *iktisāb*, have had a long history in the *ʿilm al-kalām*, especially in the Ashʿarī school, where they were employed to define that which reverted to man in a "freely" accomplished and morally qualified act. The Ashʿarī *kasb* is a narrow margin in which is inscribed the relationship between the act created by God and human responsibility. The school's subtle analyses tend to safeguard both the notion of "free choice" (*ikhtiyār* [*q.v.*]) strongly expressed within the subject, and the just, frequent retribution augured in the Ḳur'ān, while at the same time taking nothing away from God, who "created you, you and that which you do" (*Ḳur'ān*, XXXVII, 96). Some writers prefer to use *iktisāb* (al-Ghazālī); the majority use one term or the other indiscriminately. According to al-Zamakhsharī, commenting on Ḳur'ān, II, 286, it appears that *iktisāb*, in its reflexive connotation, lays stress on psychologically proven reality. The discussions about *kasb* were famed for their very elaborate dialectic, as witness the maxim of their opponents (notably the Ḥanbalīs): "more tenuous than al-Ashʿarī's *kasb*", *adaḳḳ min kasb al-Ashʿarī*. But perhaps this subtlety, or obscurity, can be clarified when the historical evolution of the committed arguments is taken into consideration.

1. *Pre-Ashʿarī* kalām. It was, in fact, from his predecessors that al-Ashʿarī took the concept of *kasb* as the "acquisition" of acts (see W. Montgomery Watt, *The Origin of the Islamic doctrine of acquisition*, in *JRAS* (1943), 234-7; idem, *Free will and predestination in early Islam*, London 1948, *passim*; idem, *The formative period of Islamic thought*, Edinburgh 1973, index).

It seems to have been in Ghaylān's teaching and in Murdji'ī circles that the root *k-s-b* first took on a technical meaning: to distinguish between science and knowledge "acquired" by man's efforts, *ʿilm muktasabī*, and "necessary" science or knowledge, *ʿilm ḍarūrī*. *Kasb* here remains very close to its initial sense of acquisition of profit. *Muktasabī* (associated with *naẓarī* "discursive", "speculative") and *ḍarūrī* (associated with "immediate" and "self-evident") became traditional distinctions in the study of the sources or "channels" (*asbāb*) of knowledge (cf. Gardet and Anawati, *Introduction à la théologie musulmane*[2], Paris 1970, 375-83).

Ḍirār b. ʿAmr was the first to employ the root *k-s-b* in analysing human action, applying it to the problem of man's free choice in the face of divine omnipotence. According to Ḍirār, human action arises from "two agents": God, who creates it, and man, who acquires it (see text *apud* al-Ashʿarī, *Maḳālāt al-Islāmiyyīn*, ed. ʿAbd al-Ḥamīd, Cairo 1369-73/1950-4, i, 313). The stress Ḍirār lays on the *two* agents (*fāʿilān*) tends to indicate that this "acquisition" arises from an intrinsic efficacy of human action, but one which cannot exist without a divine motion operating at that moment. A little later, al-Nadjdjār divorced this union of causes and opposed *khāliḳ* (creator, always God) and *fāʿil*, "agent" (*ibid.*, i, 315). Action comes under God's power in the sense that God wills it at the moment that it is accomplished and does not wish it when it is not brought about, but its actual execution belongs to man. Therefore, man possesses "power over the *kasb*", he is *ḳādir ʿalā 'l-kasb* (*ibid.*, ii, 218). One of al-Nadjdjār's disciples, Muḥammad b. ʿĪsā al-Burghūth, emphasised, on the basis of Ḳur'ānic texts, that the same term could not be applied to man, and to God (*ibid.*, ii, 198): whether *fāʿil* is the province of man, as the texts of the *Maḳālāt* seem to indicate, or whether, as al-Baghdādī says in *al-Farḳ bayn al-firaḳ* (ed. Cairo 1328, 197), God is Agent, the same term cannot be applied to man, who remains no more than the "acquisitor", the *muktasib*, of his action. The Rāfiḍī Hishām b. al-Ḥakam, and after him Djaʿfar b. Ḥarb, also used *kasb* and *iktisāb* to describe the relationship between man and his voluntary actions: it can be said that human action is "free" (*ikhtiyārī*) in the sense that man wills it and acquires it (*iktisābī*); but it remains "constrained" (*iḍṭirārī*) in the sense that man plays no part in its efficient cause, which is created by God (*ibid.*, i, 100).

These early *mutakallimūn* therefore tried, by employing the concept of "acquisition", to retain for man his own part in the act he accomplished. But while for Ḍirār this part remained a positive action, a participant in the single divine creator Action and thus subordinate to It, al-Nadjdjār and al-Burghūth, anxious to preserve the division between Creator and creature, would not allow of such a conception. For them, man possessed nevertheless a "power" (*ḳudra*) over the acquisition of his actions. Judging from this evidence, al-Shahrastānī's dubbing such scholars

Djabariyya in his *Kitāb al-Milal wal-niḥal* (ed. Badrān, Cairo 1370/1951, 138-9) must be revised.

The thesis of man "the acquisitor" (*muktasib*) was certainly opposed to the Muʿtazilī thesis of man "the creator" (*khāliḳ*) of his actions. Al-Djubbāʾī questioned the very notion of *kasb*. His arguments have been preserved, scattered throughout the *Maḳālāt* and more concisely in the writings of ʿAbd al-Djabbār (*Sharḥ al-uṣūl al-khamsa*, ed. ʿAbd al-Karīm ʿUthmān, Cairo 1384/1965, 363-79).

2. *The major trends of Ashʿarī* kalām. Ashʿarism, on the other hand, developed "acquisition" as one of his main directives against the *Iʿtizāl*. There is no mention of it as such in the credos of the *Maḳālāt* or the *Ibāna*, which would suggest that the "theory of *kasb*" was propounded by his disciples rather than by al-Ashʿarī himself. However, the concept does appear in the *Maḳālāt* and the *Ibāna*, and it re-emerges in *Kitāb al-Lumaʿ*, several times in chapter v (on *ḳadar*) and at the beginning of chapter vi (on *istiṭāʿa*): cf. R. McCarthy's ed. and Eng. tr. in *The Theology of al-Ashʿarī*, Beirut 1953, 37-58/53-81, *passim*. This was one of the school's constant themes, and when ʿAbd al-Djabbār (*loc. cit.*) reported al-Djubbāʾī's strictures, he added his own refutation of all the early Ashʿarī formulations. Al-Bāḳillānī died in 403/1013 and ʿAbd al-Djabbār in 415/1025. Right up to the present day, the Ashʿarīs defend the "theory of *kasb*" and refute Muʿtazilī objections to it, both in their major treatises (al-Djuwaynī, al-Ghazālī, al-Djurdjānī, etc.) and in their basic manuals (al-Sanūsī, al-Bādjūrī, etc.). Their definitions and analyses appear always to be linked to the ideas of *ḳudra ḥāditha* (the "contingent power" created by God) and *istiṭāʿa* ([*q.v.*], the ability to act).

Ashʿarī *kasb* and *iktisāb* are undoubtedly heirs to the first trends of *ʿilm al-kalām*, those predecessors whom al-Ashʿarī liked to call the *ahl al-ithbāt*. But the preoccupation with combatting the *Iʿtizāl*, and with allowing man nothing that was not subject to the immediate and sole power of God, which was what al-Ḍirār for example saw as the real and positive nature of *kasb*, or even with al-Nadjdjār's "power over *kasb*", gave way to a pure "attribution" or "imputation" extrinsically created by God in the human subject. The extreme subtlety or obscurity imputed to Ashʿarī *kasb* by opponents like Ibn Taymiyya perhaps derived from the fact that in the direct reference to an act freely completed, which is the basic meaning of the root *k-s-b*, became no more than a psychological semblance, without any reality *ab intra*. In Ḍirār and al-Nadjdjār, *kasb* and *iktisāb* can still be translated as "acquisition" or "appropriation"; but the strict Ashʿarī concept demands that we speak of "extrinsic attribution" and "juridic imputation".

To sum up: Ashʿarī *kasb* or *iktisāb* is the link between the "contingent power" to act and the accomplished action, but with no concommittant intrinsic effect of the first on the second (*e.g.* al-Djuwaynī, *Irshād*, ed. and Fr. tr. Luciani, Paris 1938, 119/191-2). The power, action and *kasb* are directly created by God within the human subject, which is, as al-Djurdjanī states (*Sharḥ al-Mawāḳif*, ed. Cairo 1325/1907, viii, 48), no more than the receptacle, the place (*maḥall*): an expression frequently found in the manuals of this school. Subsequently, *kasb* was conceived of as pure "connection" (*taʿalluḳ*; al-Sanūsī, *Muḳaddimāt*, ed. and Fr. tr. Luciani, Algiers 1908, 70-1), or, following Ibn Ḥazm, as the "positioning in annexation" (*istiḍāfa*, cf. *al-Fiṣal fi'l-milal*, ed. Cairo 1347, iii, 48) of the effect produced and the subject from which it derives, without a man having any efficacity over his act, "without even his being assured of the production of that act" (al-Bādjūrī, *Ḥāshiya ʿalā ... Djawharat al-tawḥīd*, ed. Cairo 1352/1934, 61). In strictest Ashʿarism, this concept of *kasb* attributes to "acquisition" an "imputation" deriving solely from the inscrutable divine Will.

Other analytical essays, perhaps influenced by the legacy of Ḍirār or al-Nadjdjār, or by Māturīdī elucidations (see below), suggest that *kasb* should be defined as a "wish" (*irāda*) which is created as it were by accident (*ʿaraḍ*), but always acknowledging that the three conditions present—contingent wish, contingent power and effect produced—are directly created by God, without their being an intrinsic subordinate link between them. The Muʿtazilīs objected that an accident (the *kasb*) could not be inherent within another accident (the human act). In reply, Ibn Ḥazm asserted that this inherence was possible (*op. cit.*, iii, 51-2). Al-Bādjūrī (*loc. cit.*) discussed both trends and their respective definitions, acknowledging both as valid, but declaring that the theory of *kasb*-will was less "reliable" than that of *kasb*-relation.

3. *The Ḥanafī-Māturīdī tradition* (*including some Ashʿarī thinkers*). The earliest discussions which form the basis of the trends known as Māturīdī ignore the problem of *kasb*. Neither the *Fiḳh Akbar I* nor the *Waṣiyyat Abī Ḥanīfa* makes any mention of it. However, probably influenced by the first Ashʿarī speculations, the *Fiḳh Akbar II* (a.7; Eng. tr. A. J. Wensinck, *The Muslim creed*, Cambridge 1932, 191, where the text is reported at the end of a.6) affirms that all men's actions are in truth their "acquisition" (*kasb*). The later text called the *Fiḳh Akbar* of al-Shāfiʿī, edited by Wensinck as *Fiḳh Akbar III*, states (a.18, *ibid.*, 266) that "God created in man the power of *kasb*".

Just as Ashʿarī *kasb* was related to the school's opinions on the general problem of divine omnipotence and human freedom, so the concept of *kasb* expounded by the *kalām* scholars whom al-Māturīdī refers to was dependent on their explanation of human action. For them, the (ontological) root of an act arises from the power (*ḳudra*) of God, and its (moral) qualification, which obeys or disobeys divine Law, arises from the power (*ḳudra*) of the individual (cf., for example, the brief summary of ʿAbd al-Raḥīm Ibn ʿAlī, *Naẓm al-farāʾiḍ*[2], Cairo n.d., 72). *Kasb* is precisely this qualification, and therefore derives from human "power". Subsequently, some measure of an effect by man on his action was acknowledged, which was a return, beyond al-Ashʿarī, to the older views of Ḍirār and al-Nadjdjār. The definition of *kasb* as *ṣifa*, a moral quality (*ibid.*, 73), is the usual response in tracts of a Māturīdī bent (cf. al-Nasafī, al-Taftāzānī, al-Laḳānī, etc.). Some Ashʿarīs, while adhering to their school's viewpoint on the analysis of human action, especially on the "capacity to act" (*istiṭāʿa*), opted for a theory very close to *kasb-ṣifa*. Among these latter, the Ḥanifīs-Māturīdīs are fond of citing al-Bāḳillānī (*ibid.*); Fakhr al-Dīn al-Rāzī (*Muḥaṣṣal*, ed. Cairo n.d., 143) can also be included here.

Thus we have three appreciably different concepts, all three permitted in the official doctrine of *ʿilm al-kalām*: *kasb*-relation (strict Ashʿarism), *kasb*-will (secondary Ashʿarī trend) and *kasb-ṣifa* (Māturīdīs and some Ashʿarīs). It should be noted that through their theory of *kasb*, however it was defined precisely, the Ashʿarīs, like the Māturīdīs-Ḥanifīs, deliberately opposed Djabariyya as well as Muʿtazila, and on this based their belief in man's responsibility for his own

actions. Whether as pure relation, contingent will or moral quality, it was, they stated, in proportion to *kasb* that God, on the day of judgement, would reward or punish accomplished actions.

Stieglecker, *Die Glaubenslehren des Islam*, Munich, Paderborn, Vienna 1959-62, 103 ff.; L. Gardet, *Les grands problèmes de la théologie musulmane: Dieu et la destinée de l'homme*, Paris 1967, 60-4. (L. Gardet)

KASBAH [see ḲAṢABA].

KASF [see KUSŪF].

KASH, the modern SHAHR-I SABZ ("green town") on account of the fertility of its surroundings), a town in Özbekistān on what was once the great trade route between Samarḳand and Balkh. According to Chinese authorities, Kash (Chinese transcription K'ia-sha or Kié-shuang-na, also K'iusha, as a town Ki-she) was founded at the beginning of the seventh century A.D.; cf. J. Marquart, *Chronologie der alttürkischen Inschriften*, Leipzig 1898, 57; *Ērānšahr* etc., Berlin 1901, 304; E. Chavannes, *Documents sur les Toukiue (Turcs) occidentaux*, St. Petersburg 1903, 146. In 372/982 it is mentioned by *Ḥudūd al-ʿālam*, 113 (§ 25, 15) as well-irrigated and protected by a citadel; it exported mules, manna and red salt. Yāḳūt's statement (*Muʿdjam*, ed. Wüstenfeld, iv, 274; Barbier de Meynard, *Dict.*, 488 f.) on the authority of Ibn Makūlā, who died in 473/1080-1, that in Transoxiana the name was everywhere pronounced *Kiss* is very doubtful. For the later period the pronunciation *Kesh* (Kishsh) is proved by the frequently recurring expression *Kesh-i Dilkesh*. The accounts of the Arab conquest are discussed by Marquart in particular (*Ērānšahr*, see Index). The *Kesh* of the Sāmānid period is described very fully by the Arab geographers (al-Iṣṭakhrī, 324 f.; Ibn Ḥawḳal[2], 501 f.; al-Muḳaddasī, 282). The town in those days was a third of a *farsakh* (about a mile) in length and breadth. The old city (*madīna*, Persian *shahristān*) as well as the citadel (*ḳuhandiz*) were already deserted, and only the outer town (*rabaḍ*) was inhabited; in the vicinity of the earlier Kash a new town was arising. This suggests that the modern town has a site different from that of the Kash which existed before the Muslim conquest. Nothing is known of other transferences of the site. Kash is never mentioned in the history of the Mongol conquest, so that it must have submitted to the Mongols (617/1220) without resistance. The name Shahr-i Sabz first appears—on coins also—about the middle of the 8th/14th century. Many buildings were erected in Kash by Tīmūr, who was born in the district of Kash, and his contemporaries; thereon, cf. W. Barthold in *Zapiski vost. otd. arkh. obshč.*, xxiii, 1 f. Especially famous is the palace Aḳ Sarāy built at the end of 782/beginning of 1380 by builders from Khwārazm; cf. Sharaf al-Dīn Yazdī, *Ẓafar-Nāma*, Calcutta 1887-8, i, 301 f., and the notices by Niẓām al-Dīn Shāmī and ʿAbd al-Razzāḳ Samarḳandī, in Barthold, *Ulugbeg i ego vremya*, Petrograd 1918, 23, Eng. tr. Minorsky, in *Four studies on the history of Central Asia*, ii, Leiden 1958, 26; very little survives of this palace; on the inscriptions cf. N. Sitnyakowskiy in *Protokoll Turk. Kružka Lyub. Arkh.*, v, 114 f. As late as the 10th/16th century Kash or Shahr-i Sabz is described by Ḥāfiẓ-i Tānish (*ʿAbd Allāh-Nāma*, Ms. of the Asiatic Museum, 574 age, f. 87b) as an important town usually governed by a prince of the ruling house, while the administration of Nasaf or Ḳarshī [*q.v.*] could be left to a military official (*Darugha*). In the 19th century, the amīr Naṣr Allāh of Bukhārā (1826-60) tried during the whole of his reign to subjugate the town; he succeeded only in 1860, but his successor lost Kash as early as 1865. In 1870 it was ceded by the Russians to the *amīr* of Bukhārā. At the present day the situation is reversed and Shahr-i Sabz is an unimportant town in comparison with Ḳarshī, the result of the political changes in the 12th/18th century. The district of Shahr-i Sabz is surrounded to the N. by the Hażret-Sulṭān hills, to the S. by the Bay Suntaw-mountains and irrigated by the Ḳara-Daryā with its affluents.

KĀSHĀN (Ḳāsān, Ḳāshān; 33°59′ lat. N., 51°27′ long. E.), a town of the Djibāl, on the ancient N. – S. axial route of central Iran, chief town of a *shahristān* of the central province (*Ustān-i markazī*); it gives its name to an oasis adjoining the Dasht-i Kavīr on the N.E. and on the E., closed on the W. and on the S. by the buffer of the median chain of central Iran (3,900 m. at the Kūh-i Karkas). Despite its altitude (945 m.), the town has a warm climate (average of 38° C. in July, obs. 1881-4), has a bad reputation for scorpions and suffers from lack of water. This has been supplied by the perennial spring of Fīn and by the traditional systems of *ḳanāt*s and *āb anbār*s (cisterns); constructed under Shāh ʿAbbās the Great, the Ḳurūd Dam also supplied the town; and likewise from the Ṣafawid period, the Ḳamsar Dam served for irrigation until the floods of 1958. Today, the sinking of deep wells and water supply works allow a much greater provision of water for drinking and for irrigation. Apart from its craftsmanship and textile industries, the district is renowned for its natural products (figs and pomegranates from Fīn, rose water from Ḳamsar, melons, grapes etc.).

At the S.W. exit of the town, the site of Tepe Sialk/Sīalg testifies to the ancient occupation of the oasis (3 periods from the 5th to the 3rd millenium; a small Indo-European "state" destroyed around the 8th C. B.C.; objects preserved in the Louvre and Tehran Museums; see R. Ghirshman, *Fouilles de Sialk*, i-ii, Paris 1938-9; idem, *l'Iran des origines à l'Islam*, Paris 1951). The region abounds in Sāsānid remains (*čahār ṭāḳ* of Niyāstar/Niyāsar and Naṭanz). Although the name Ḳāsān/Ḳāshān may not be attested before the 4th/10th C. and its origin remains uncertain, the importance of the Sāsānid town is proved, notably by its resistance to the Arab invasion (anecdote of the scorpions: see al-Muḳaddasī, 390; the town furnished soldiers for the Sāsānid army: see H. Narāḳī, *Ta'rīkh-i idjtimāʿī*, 28; the legend of the Magian kings having left from Kāshān for Jerusalem was circulated in an early period: see Monneret de Villard, *Le leggende orientali sui magi evangelici*, Vatican 1952, 83 ff. and index s.v. Qāšān). According to various authors, the Islamic city was founded (or fortified) by Zubayda Khātūn, wife of Hārūn al-Rashīd, and then claimed by the Imāmī Shīʿīs, who are said to have constructed a fortified surrounding wall to protect the town from the attacks of the Daylamīs (*Mir'āt-i Ḳāsān*, 6-7). Subsequently attached to the governorship of Iṣfahān, it then formed with Ḳumm its own governorship, or at times two distinct governorships. Renowned from the Saldjūḳid period for its *madrasas*, its

scholars, its calligraphers, its administrators (known by the *nisba* Kā<u>sh</u>ī, Kā<u>sh</u>ānī, Fīnī, Rāwandī, etc.) and its glazed ceramics (*haft rang* or *minā'ī*), it was relatively spared by the Īl<u>kh</u>ānids, the Tīmūrids and the Turcomans, who derived profit from its craftsmanship (pottery, brassware, textiles). It enjoyed its greatest prosperity under the Ṣafawids; a true cultural capital of Islamic Iran in the 10th/16th century, it was favoured by <u>Sh</u>āh ʿAbbās and his successors who embellished it with a palace, gardens, avenues and covered bazaars. From 4,000 to 5,000 hearths in 1524 (Tenreiro), it counted 5,000 to 6,000 in 1565 (Mestre Afonso), and Chardin enumerates 6,500 houses in 1673 (counting 5 to 6 persons per hearth or house). The town was then renowned for its gold brocades (*zar baft, zarī*), its silks (thread and fabric), its velvets (*ma<u>kh</u>mal*), its wool or silk carpets (sometimes embroidered with gold and silver), its painters and calligraphers, its scholars and theologians and above all its famous *kā<u>sh</u>ī* [*q.v.*] widespread in the Islamic world. After having suffered the Af<u>gh</u>ān and Af<u>sh</u>ārid domination, with their massacres and exactions, the town was destroyed by an earthquake in 1192/1779 in the time of Karīm <u>Kh</u>ān Zand. Although reconstructed by this sovereign and "embellished" by Fatḥ ʿAlī <u>Sh</u>āh Ḳā<u>dj</u>ār, it has only recently recovered a part of its prosperity (modernization of the textile industry, improvement of the roads and railways, of which the Tehran-Zahidan line is in the process of completion). After the depression of the 18th century (*ca.* 15,000 inhabitants at the beginning of the 19th century), the city was repopulated (*ca.* 30,000 inhabitants in 1840, *ca.* 50,000 in 1908). Nevertheless, the development of the oasis has been checked, mainly due to the transfer of the axial N. – S. route to the W. of the median chain. While the census of 1956 reflects the exodus towards Tehran (*ca.* 46,000 inhabitants), that of 1966 seems to indicate an improvement (58,468 inhabitants). Numerous authors have stressed the enthusiasm for work and natural disposition of the Kā<u>sh</u>īs for the arts, literature and philosophy, as well as their spirit of independence. Although their devotion to the *Ahl al-Bayt* and the twelve Imāms may be generally attested since the Sal<u>dj</u>ūḳid period, the majority of the settlements of the district were Sunnī at the time of the conquest of <u>Sh</u>āh Ismāʿīl, and the faith of the people of the town itself also poses a problem (see B. Scarcia Amoretti, in *AIUON* (1969), 263-8; M. Mazzaoui, *The origins of the Ṣafawids, Šīʿism, Ṣūfism and the Ġulāt*, Wiesbaden, 1972, 31, n. 3). The ancient Jewish community of the town, which served as a refuge to the Jews of Iran under Nādir <u>Sh</u>āh, is now in decline (2,000 persons in 1907, 525 in 1956). As elsewhere in Iran, factionalism divided the social body there, practically until the end of the Ḳā<u>dj</u>ār period. Despite natural destructions and sackings, the town has preserved a part of its historic architectural appearance: from the Sal<u>dj</u>ūḳid period, a minaret of the <u>Dj</u>umʿa Mosque dated 466/1074, the solitary Zayn al-Dīn Minaret with a height of 47 m, the remains of the <u>Dj</u>alālī fortress and a part of the fortified double surrounding wall; from the Mongol period, the <u>Kh</u>ʷā<u>dj</u>a Tā<u>dj</u> al-Dīn Mausoleum; built in 867/1463, the Mas<u>dj</u>id-i Mīr ʿImād or Mas<u>dj</u>id-i Maydān-i Fayḍ (constructed over a more ancient building, of which the *miḥrāb* dated 632/1235 is in the Berlin Museum); from the Ṣafawid period, the Imāmzāda Ḥabīb b. Mūsā shelters the tomb of <u>Sh</u>āh ʿAbbās the Great (*miḥrāb* of the ancient mausoleum dated 668/1270 in the Tehran Museum); from the Ḳā<u>dj</u>ār period, the Madrasa-i Sulṭānī or Mas<u>dj</u>id-i <u>Sh</u>āh, the Mosque and the Madrasa-yi Āḳā Buzurg, the present garden palace of Fīn. Among numerous *imāmzādas*, the town notably shelters the mausoleums of the <u>Sh</u>īʿī poet Muḥta<u>sh</u>am Kā<u>sh</u>ānī (d. 996/1588) [*q.v.*] and of the <u>Sh</u>īʿī theosophist Mullā Muḥsin-i Fayḍ Kā<u>sh</u>ānī (d. 1091/1680).

KĀ<u>SH</u>ĀNĪ, Āyatullāh abu 'l-Ḳāsim, an Iranian *mu<u>dj</u>tahid* who played a role of some importance in the events of the early post World War II period. Born in the late 19th century, Kā<u>sh</u>ānī went at an early age to Na<u>dj</u>af, where he studied under two of the *mu<u>dj</u>tahids* prominent in support of the Iranian constitutionalist cause, Muḥammad Kāẓim <u>Kh</u>urāsānī and Mīrzā Ḥusayn <u>Kh</u>alīlī Ṭihrānī. In 1919 he was sentenced to death *in absentia* by the British for opposing the mandate in ʿIrāḳ, but escaped to Iran. Throughout the reign of Riḍā <u>Sh</u>āh he abstained from political activity, but was exiled in June 1942 by the British military authorities for alleged contacts with German agents. His postwar political career began in 1948 with the organization in Tehran of demonstrations against the establishment of a Jewish state in Palestine. With the beginning of the campaign for the nationalization of the oil industry, Kā<u>sh</u>ānī's importance grew as he came to be one of the chief organizers of mass support for Dr. Muḥammad Muṣaddiḳ's National Front. He had, too, a number of representatives in the Ma<u>dj</u>lis, a group known as the *Mu<u>dj</u>āhidīn-i Islām*. Personal differences arose between Kā<u>sh</u>ānī and Muṣaddiḳ, and Kā<u>sh</u>ānī became alarmed, moreover, at the militant irreligiosity that showed itself in the last days of Musaddiḳ's rule. He therefore supported the royalist coup d'état of 19 August 1953 that overthrew Muṣaddiḳ. Kā<u>sh</u>ānī's remaining years were uneventful, and his death in 1962 passed largely unnoticed.

KĀSHĀNĪ, ḤĀDJDJĪ MĪRZĀ DJĀNĪ, the Bābī historian, was a merchant of Kāshān who, with two of his three brothers, Ḥādjdjī Mīrzā Ismāʿīl Ḍabīḥ and Ḥādjdjī Mīrzā Aḥmad, was among the earliest disciples of Mīrzā ʿAlī Muḥammad, the Bāb[*q.v.*]. When in 1847 the Bāb was being conducted from Iṣfahān to his prison at Mākū, the brothers bribed his escort to allow him to be their guest for two days and two nights at Kāshān. In the following year Kāshānī, with Bahāʾ Allāh, Ṣubḥ-i Azal and other prominent disciples, attempted to join the Bābī insurgents of Shaykh Ṭabarsī near Bārfurūsh in Māzandarān, but was captured by the royal troops and imprisoned for some time at Āmul, until ransomed by two merchants of Kāshān. "We find him always impelled, as it would appear, by religious zeal, now at Bārfurūsh, now at Mashhad, now at Ṭihrān." The Bāb was put to death on July 9, 1850, and Kāshānī occupied the next two years in writing his history of the movement, for which task he was qualified by personal acquaintance not only with the Bāb, but with Ṣubḥ-i Azal, Bahāʾ Allāh and almost all the early apostles of the Bābī religion, and by his detailed and accurate information on every event connected with the movement during the first eight years of its existence. His history (which, for some mystical reason not readily comprehensible he styled *Nuḳṭat al-Kāf* "the Point of Kāf"), is accurate, but is disfigured by fulsome and almost idolatrous adulation of his hero and by coarse abuse of his persecutors. When Nāṣir al-Dīn Shāh resolved to strike a blow at the adherents of the new religion, Kāshānī was forcibly removed from the shrine of Shāh ʿAbd al-ʿAẓīm, about six miles south of Ṭihrān, where he had taken sanctuary, and thrown into prison, where he shared the cell of Bahāʾ Allāh. On Sept. 15, 1852, he was put to death at Ṭihrān in company with twenty-seven of his co-religionists. As an act of policy, in order to divert vengeance from himself and his minister, the Shāh handed the heretics over to various communities for execution and Kāshānī was delivered to Āḳā Mahdī, *Malik al-Tudjdjār* ("chief of the merchants"). According to one account he suffered death by the bowstring, and according to another the merchants and shopkeepers of the city inflicted wounds on him until he perished.

Of his brothers Ismāʿīl died at Ṭihrān and Aḥmad, who, after the death of the Bāb, recognised Ṣubḥ-i Azal as his successor, was slain at Baghdād by some Bahāʾīs [*q.v.*], followers of Bahāʾ Allāh.

AL-**ḲĀSHĀNĪ**, AL-ḲĀSHĪ, Abu 'l-ʿAbbās Aḥmad b. ʿAlī, called Ibn Bāba or Bābā, Persian author of the Saldjūḳ period, and boon-companion or *nadīm* by profession. He apparently flourished in the second half of the 5th/11th century and early years of the next one; Bagdatlı Ismail Paşa, *Īḍāḥ al-maknūn*, i, 546, says that he died in 510/1116-7, and this is approximately confirmed by Yāḳūt, who says that he died at Marw. Only Samʿānī, *Ansāb*, ff. 80a, 437b, and Yāḳūt, *Buldān*, ed. Beirut, i, 412, iv, 296-7, have any significant information on him. It seems that he worked in his homeland of Djibāl, then travelled to Baghdād, and ended up in Khurāsān, probably at the court of the Saldjūḳ *amīr* Sandjar.

His only surviving work is the *Kitāb Raʾs māl al-nadīm* "The boon-companion's stock-in-trade", dedicated to a so-far unidentified patron, the *Amīr* and *Raʾīs* Saʿd al-Mulk Abu 'l-Fatḥ Muḥammad b. Bahrām, who was most probably a member of Sandjar's court circle. This *adab* work contains material useful for boon-companions and story-tellers, and draws heavily on such earlier authors as Muḥammad b. Ḥabīb, Ibn Ḳutayba, Kushādjim and Thaʿālibī; the long, closing historical section, however, has valuable and unique information on the Ghaznawids (tr. and comm. in Bosworth, *The later Ghaznavids: splendour and decay* (forthcoming). Ibn Bāba was also the author, according to Yāḳūt, of a book on the sects of the Shīʿa, so far lost.

Bosworth, *Early sources for the history of the first four Ghaznavid Sultans* (977-1041), in *IQ*, vii (1963), 17-18; *GAL*, I, 140, S I, 586 (here wrongly called Ibn Bānī); critical ed. with introd. of the *K. Raʾs māl al-nadīm* by M. S. Badawi, Manchester Ph.D. thesis 1975 (unpublished). (C. E. BOSWORTH)

KASHF, the act of lifting and tearing away the veil [which comes between man and the extra-phenomenal world]. Al-Djurdjānī's *Taʿrīfāt* (ed. Flügel, Leipzig 1845, 193) states that, according to the Arabic lexicon, *kashf* means "to take away the veil", but in technical terminology (*iṣṭilāḥ*) it means "to make appear in a complete and actual realisation the mysterious senses and the realities which are behind the veil". It is worthy of note (see below) that this definition copies word-for-word a text of the Imāmī scholar Ḥaydar Āmulī, some twenty years the senior of al-Djurdjānī. Experience of *kashf* works within and brings about *mukāshafa*, which may be translated as "unveiling" in the sense of "illumination" or "epiphany". Their opposing correlatives are *satr* and *istitār*, the acts of veiling and occultation.

The technical environment of the word's use, as evoked by al-Djurdjānī, is essentially that of *taṣawwuf* and of Shīʿī theology. The verb *kashafa* (but not the *maṣdar kashf*) occurs several times in the Ḳurʾān in its current sense of to uncover (part of the body) and to take away (misfortune, evil, danger, torment). However, two texts serve as the basis for future elaborations: "We have lifted thy covering off thee (*kashafnā*), and today thy sight is sharp" (L, 22) and "The portending [Last Day] is near at hand, Short of Allāh, there is no-one can lift it away" (LIII, 57-8). The first of these two texts is cited by al-Ghazālī at the opening of his *Munḳidh*.

1. *Some examples of Ṣūfī elaborations:*

(a) al-Kalābādhī. It seems that in the first centuries (e.g. in al-Ḥallādj) the opposite (*muḳābal*) of *satr* or *istitār* was not so much *kashf* as *tadjallī* "[divine] irradiation". Al-Kalābādhī, *K. al-Taʿarruf*, ed. Arberry, Cairo 1352/1933, 90, headed his ch. lviii *Fī 'l-tadjallī wa 'l-istitār*. He distinguishes three types of *tadjallī*: that of the essence, that of the attributes of the essence and that of the status

(*ḥukm*) of the essence. He then goes on to state precisely that the *tadjallī* of the essence is *mukāshafa*.

(b) al-Ḳushayrī. This last idea is more clearly set forth by al-Ḳushayrī and according to the distinctions which subsequently became the classic ones (*al-Risāla al-ḳushayriyya*, Cairo n.d. 39-40). He says that there are three stages in the progression towards Reality. The first, *muḥāḍara*, is getting oneself into position vis-à-vis the objective sought. It remains "behind the veil", and pre-supposes the presence of the heart and the transmission of the proof (discursive, *burhān*); the person who restricts himself within the guidance of the intellect (*ʿaḳl*) can only apprehend God through His miraculous signs (*āyāt*). The second stage is that of *mukāshafa*, the lifting of the veil. There is no further need to search for the way; reasoning (*burhān*) gives way to evident proof (*bayān*), and the indirect indications of God disappear before His attributes. But this stage is still only an intermediary one, a kind of "raising of the curtain" on to the world of mystery. It inevitably leads to the third stage, *mushāhada*, direct vision, the "presence of the reality" (*ḥaḳīḳa* [*q.v.*]), without the intermediacy of proof, even intuitive proof (*bayān*), and which opens on to the divine Essence.

(c) al-Anṣārī. *Kashf* and *mukāshafa* are thus like an entrance to an "illuminative" way. This category of an intermediary stage or "entrance to the way" occurs again in other texts. Thus in al-Anṣārī's *Manāzil*, each "halting-place" (*manzil*), or almost each, comprises three progressive degrees. Now in many instances, *kashf* is mentioned in connection with the second degree. E.g. it is at the second degree of *tabattul* ("consecration to God") that he comes back from "watching for the lightning-flash of the unveiling", *shayma barḳ al-kashf* (*K. Manāzil al-sāʾirīn*, ed. and Fr. tr. S. de Laugier de Beaurecueil, Cairo 1962, 25/67). A third degree goes beyond this. There are similar observations (*ibid.*, 37/76; 54/90; 64/97) in regard to *taslīm* ("total submission"), *uns* ("intimacy") and *firāsa* ("sagacity"). But in regard to *ʿazm* ("determination"), *kashf* appears right at the first degree (*ibid.*, 51/87), because there cannot be authentic *ʿazm* except after having seen "the lightning-flash of unveiling". On the other hand, *kashf* marks the ascent to the third degree of *yaḳīn* ("certainty"): for the first degree of certainty (or "certain knowledge") is acceptance of the Word of God; the second degree (or "certain vision") goes beyond the sphere of argument; but the third degree or "real certainty" presupposes "the sudden breaking of the dawn (*ṣubḥ*) of unveiling", which seems to be, in its turn, the first of the three stages of this third degree (*ibid.*, 54/90). "Lightning-flash" or "dawn" is always like an irruption of light coming from "outside" which thus appears in the various stages and spiritual states of the phenomenon of *kashf*. It marks the entrance into a new manner of apprehending reality, a superior manner, the effect of divine *tadjallī*, an immediate and certain knowledge which goes beyond all discursive argument and all argumentative proof, rational or traditional.

(d) al-Hudjwīrī. The writings of *taṣawwuf* almost all evoke the "lightning-flash of *kashf*": in some cases as a first perceiving of the "world of mystery" where argument based on *burhān* gives place, as al-Ḳushayrī insists, to the "evident proof" of *bayān*, and in other cases, as the definite entry into this very world itself, where there is no longer any need for the intermediacy of proof of any kind whatever. Accordingly, al-Djurdjānī (*Taʿrīfāt*, 245) defines *mukāshafa* as "a state which *bayān* cannot in any way describe". *Kashf* and *mukāshafa* are thus freely put into connection with the superior worlds, those beyond the senses, *djabarūt* and *malakūt*, beyond *mulk* [see ʿĀLAM]. Also, some of the general treatises on Ṣūfism employ the term *kashf* in their very titles, as in the famous *Kashf al-maḥdjūb* of al-Hudjwīrī, written in Persian (Eng. tr. by R. A. Nicholson, GMS, Leiden-London 1911). The spiritual steps forward envisaged by al-Hudjwīrī are the destroying of the veils which hide reality. The raising of the veil will be the supreme state of enjoyment in Paradise, and it is only the state of *kashf* "which is the degree of closeness (*ḳurb*)" which makes possible the miracles of saints (*ibid.*, 111, 226). There is thus no question now of any intermediary stage. Al-Hudjwīrī seems to place himself more in the line of al-Sarrādj than in that of al-Ḳushayrī, and does not hesitate to bend into a new sense the borrowings which he makes (without naming any source) from the latter. Thus when he compares *muḥāḍara* and *mukāshafa* (*ibid.*, 374-5), he defines the first as "the presence of the heart in the subtleties of *bayān*", and the second as "the presence of the inner secret (*sirr*)" in the field of intuitive vision (*ʿiyān*). If *muḥāḍara* definitely refers to the miraculous signs (*āyāt*) of God, as al-Ḳushayrī says, then *mukāshafa* is already open to glimpses of direct vision (*mushāhada*); contrary to the analyses of the *Risāla al-ḳushayriyya*, he no longer seems to distinguish them apart. It is described as a continuous and admiring *tremendum* in face of the infinite grandeur of God. A little later, al-Hudjwīrī compares the diurnal state of *kashf* to the nocturnal one of *satr* ("occultation") and suggests that a divine meeting (*wadjd*) cuts across, but according to very different activations, the troubled and burning desire for an "other place", which is that of the *ḥāl al-ḥidjāb* (lit. "state of the veil"), and also the peaceful vision of the *ḥāl al-kashf*.

2. *A certain usage in theology: that of al-Ghazālī.*

Kashf occurs frequently in this scholar's vocabulary. But it is a question here of a usage not merely "mystical" of this term, but of a "theological" one, seeing that spiritual experience becomes for al-Ghazālī in effect an article of faith. References to *kashf* are to be found not only in the *Iḥyāʾ*, but equally in the *Iḳtiṣād*, the *Mustaṣfā* and the *Munḳidh*; *kashf* lays the foundation for *yaḳīn*, the assured certainty of genuine faith (as opposed to faith received purely by being handed down, *taḳlīd*). The *Munḳidh* states that "The key to most of the branches of knowledge is the light (*nūr*) which God shines into the heart". Also, "Whoever imagines that *kashf* depends on logically-arranged arguments reduces the immensely-wide mercy of God to narrow proportions ... *Kashf* must be sought from this [divine] light" (*Munḳidh*, ed. ʿAbd al-Ḥalīm Maḥmūd, Cairo 1372/1952, 55). *Kashf*, the unveiling of the world of mystery, is mentioned several times in the *Iḥyāʾ*; see the main references in Farid Jabre, *Essai sur le lexique de Ghazālī*, Beirut 1970, 244. Also, the *Iḥyāʾ*, ed. Cairo 1352/1933, iv, 218, doubtless in conformity with the tradition from al-Ḳushayrī, places *kashf* and *bayān* in connection with each other.

If *kashf* appears in many of al-Ghazālī's works, *mukāshafa* is found in the vocabularies of the *Iḥyāʾ* and the *Fayṣal* only. As Jabre notes, *op. cit.*, 245-6, this second term is used in a double sense: (a) subjective, an interior state brought about by *kashf*, and (b) objective, meaning "the truths, the objects

of the act of unveiling". Al-Ghazālī's famous distinction between *ʿulūm al-muʿāmala* (ritual observances, social customs and ethical rules) and *ʿulūm al-mukāshafa*, by means of which realities are apprehended, is well-known. The *Iḥyāʾ*, i, 18, says that the *ʿilm al-mukāshafa* is the knowledge of what is concealed (*bāṭin*), and is the aim of all the sciences. It is the science of the saints (*ṣiddīḳūn*) and those "brought near to God". It is a light which shines into the heart if the latter is purified and freed from its reprehensible qualities, a light which bears upon God, His essence, His angels, His acts, the prophets and the future life (cf. *ibid.*, i, 48). It is not argumentation, nor simple acceptance, but an intuitive and sure grasping of the subject. "By *ʿilm al-mukāshafa*, we mean the pulling-aside of the veil so that the Real One shows Himself in all his splendour; and this is effected with a clarity which sets the object present right before the eyes, without any possible grounds for doubt" (i, 18; see other references in Jabre, *op. cit.*, 246, and *idem, La notion de certitude selon Ghazālī*, Paris 1958, index, s.v.). *Mukāshafāt* and *mukāshaf* appear equally all through the *Iḥyāʾ*.

Hence for al-Ghazālī, *kashf* is a light, a freely-bestowed grace from God, which at the same time alone bestows its quality of certain knowledge. In so far as the later *ʿilm al-kalām* was open to influences from al-Ghazālī (or directly from Ṣūfism), *kashf* and *mukāshafa* were sometimes freely accepted; but the most classic treatises hardly ever refer to them.

3. *Brief references in Shīʿism.* In Shīʿism, the spiritual experience of *kashf* inevitably came to form a theological (or "theosophical") dimension. The apprehension of the "hidden meaning" (*bāṭin*), which is the perfection of Islam and which is the prerogative of the great Imāms, led to a high value being placed on *kashf*. To give only one significant example, the two treatises of the Imāmī Sayyid Ḥaydar Āmulī, ed. Henry Corbin and Osman Yahya as *La philosophie shīʿite* (Tehran-Paris 1969), deal with *kashf* as a manner and a method of knowledge. The *Djāmiʿ al-asrār* mentions it, after *waḥy* (revelation though angelic intermediacy) and *ilhām* (divine, interior inspiration), as a participation stemming from the universal intellect and the universal soul (*La philosophie shīʿite*, 448-53). When Āmulī defines *kashf* (*ibid.*, 462), it is in the same lexicographical and technical terms as were to be copied from him by al-Djurdjānī, as already mentioned above. The ending of the chapter distinguishes, among other things, (a) *kashf ṣuwarī* (the "imaginal" perception of reality) whose irradiations (*tadjalliyāt*) reach the senses of sight and hearing; mention is made in this connection of the master Ibn ʿArabī; and (b) *kashf maʿnawī*, which is of the spiritual order (*rūḥī*); the text emphasises strongly *mukāshafāt* received in this fashion (*ibid.*, 464-72). In his *Risāla .. fī maʿrifat al-wudjūd*, Āmulī enumerates three modes of knowledge: by the intellect (*ʿaḳl*), by transmission (*naḳl*) and by *kashf* (*ibid.*, 623), and only the last one leads to the apprehension of Reality.

Hence it is with some justification that, in regard to Ḥaydar Āmulī, the phrase "the method of *kashf*" has been used (cf. Peter Antes, *Zur Theologie der Schiʿa*, Freiburg 1971, 49, 68), this method being an intuitive one in which certainty is sought from spiritual illumination. Āmulī's admiration for Ibn ʿArabī and for the latter's deliberate scheme for "reconciling" the Ṣūfīs and the Imāmīs, is well-known. Āmulī's work was to influence all later Twelver theology, and is in fact the applying of the Ṣūfī *kashf* to the Shīʿī search for the hidden meanings of things. If we bear in mind that his definition of *kashf* was adopted as it stood by the Sunnī al-Djurdjānī, we can accordingly discern, despite the divergencies of various climates of thought, a continuity of viewpoint.

Ismāʿīlī writings put the accent on the idea of the "state" of *kashf* from a double point of view, both gnostic and cosmic. The title chosen by al-Hudjwīrī in the 5th/11th century, *Kashf al-maḥdjūb*, designates equally the 8th/14th century treatise of the Ismāʿīlī scholar Abū Yaʿḳūb al-Sidjistānī, and *kashf* now introduces an ontology and cosmology of gnostic type. Furthermore, the classic opposition or *muḳābal* of *kashf-satr* is frequently found, this time set forth according to wide cosmic perspectives, in the Ismāʿīlī cycles of metahistory. The *aeva* of "proto-history" (Corbin) and of post-history are unfolded according to alternate phases of "unveiling" ("epiphany", as tr. Corbin) and "occultation". The length of these cycles may vary, and may refer indifferently to the "premordial Adam" (the "Perfect Man"), to the "partial Adam" (the Ḳurʾānic Adam) or to the "spiritual Adam" for the intelligible realities. According to al-Ḥusayn b. ʿAlī, a Yemenī *dāʿī* of the 6th/12th century, the cycle of unveiling (*dawr al-kashf*) is 50,000 years, and the cycle of occultation (*dawr al-satr*) is seven millenia. The present age, since the creation of the "partial Adam", is the fourth millenium of a cycle of occultation, which has been preceeded and will be succeeded by a cycle of unveiling (cf. al-Ḥusayn b. ʿAlī, *Risālat al-mabdaʾ wa 'l-maʿād*, ed. and Fr. tr. Corbin, *Trilogie ismaïlienne*, Tehran-Paris 1961, 121-3/181-3).

An exhaustive study of *kashf* in Shīʿī thought—Imāmī and Ismāʿīlī—would in fact require an extensive exposition.

Bibliography: given in the article.

(L. Gardet)

KĀSHGHAR, a town in Chinese Turkestān (Sin Kiang); the same name is still used in Chinese official documents. The name Kāshghar first appears in Chinese transcription (K'iu-cha) in the *T'ang-shu*; cf. E. Chavannes, *Documents sur les Tou-Kiue (Turcs) occidentaux*, St. Petersburg 1903, 121 f. On the pre-Islamic Kāshghar and the ruins of Buddhist buildings in the vicinity, see A. Stein, *Ancient Khotan*, Oxford 1907, i, 52 f.; idem, *Serindia*, Oxford 1921, 80 f. Arab armies did not reach Kāshghar; the story of Ḳutayba's campaign in 96/715 is, as shown by H. A. R. Gibb in *BSOS*, ii (1923), 467-8, a mere legend. Since *ca.* 132/750, Kāshghar was under Ḳarluḳ rule and turkicized by them. On the flight of a prince of Farghāna to Kāshghar in the time of the Caliph al-Manṣūr (136-58/754-75) see the article farghāna. In the Sāmānid period a *Dihḳān* of Kāshghar with the name or title Ṭughān Tigīn is mentioned (Ibn al-Athīr, viii, 37), with whom the rebel prince Ilyās b. Isḥāḳ took refuge; whether this *Dihḳān* had already adopted Islam is not mentioned. At a later date Satuḳ Boghrā Khān is mentioned as the first Muslim Khān of Kāshghar; in the oldest reference to him that we have (Djamāl Ḳurashī in Barthold, *Turkestan*[2], 255, 257) the date of his death is given as 344/955-6. This story already contains features which are certainly legendary; in the story of the building of the first mosque we have the well-known folklore motif of the cutting of an ox-skin into strips. The later legend, reproduced by F. Grenard (*JA*, Ser. 9, vol. xv, 1 f.), has not this feature but

contains many other legendary traits and absolutely false dates. The year 344 A.H. is perhaps too early, as probably the story of the adoption of Islam by a numerous Turkish people (200,000 tents) in 349/960 must be referred to the Turks of Kās͟hg͟har; this story is found not only in Ibn al-At͟hīr (viii, 396) but also in Ibn Miskawayh (*The Eclipse of the ʿAbbasid Caliphate*, ed. Margoliouth and Amedroz, Oxford 1921, text, ii, 181, tr. v, 196); the original source is probably T͟hābit b. Sinān al-Ṣābiʾ (cf. Ibn al-At͟hīr, viii, 476, 491; *The Eclipse* etc., *Index*). The tomb of Satuḳ Bog͟hrā K͟hān is in Artūč (now pronounced Artus͟h) north of Kās͟hg͟har, where it is still shown.

Under the rule of the Ilig-K͟hāns [see ILEK-K͟HĀNS], who confessed Islam since *ca.* 950, Kās͟hg͟har was politically the most important town in the Tarim basin; perhaps it was also the most important from the point of view of culture. In the 5th/11th century there was already in existence a work in Arabic on the history of the town, composed by Abu 'l-Futūḥ ʿAbd al-G͟hāfir (or ʿAbd al-G͟haffār) b. Ḥusayn al-Almaʿī al-Kād͟jg͟harī (*sic*); the author's father, who survived his son (according to al-Samʿānī by about ten years), died in 486/1093. On father and son and the works of the latter, see al-Samʿānī, *Kitāb al-Ansāb*, ed. Margoliouth, Leiden-London 1912, ff. 470a, 472a; D͟jamāl Ḳuras͟hī in Barthold, *Turkestan*, i, 123 f. The rulers—since 1130 under the overlordship of the Ḳarak͟hitay—were in a special mausoleum (Arabic *al-d͟junbad͟ha al-k͟hāḳāniyya*) on the bank of the Tümen; the first prince buried there died in Muḥarram 424/Dec. 7 1032-Jan. 5 1033, and the last in Rad͟jab 601/22 Feb.-23 March 1205. During their rule, Maḥmūd al-Kās͟hg͟harī [*q.v.*] wrote his great Turkish dictionary in Bag͟hdād, and Yūsuf K͟hāṣṣ Ḥad͟jib his *Ḳutadg͟hu bilig* in Kās͟hg͟har. During Mongol rule a *madrasa* was built in Kās͟hg͟har by Masʿūd Beg (see BUK͟HĀRĀ); in its library was the copy of the *Ṣiḥāḥ* of al-D͟jawharī used by D͟jamāl Ḳuras͟hī for his translation (E. Sachau and Éthé, *Cat. of the Persian. . . . Manuscripts of the Bodleian Library*, Oxford 1889, col. 983). Kās͟hg͟har was later under the rule of the Dūg͟hlāt Amīrs [see DŪG͟HLĀT]; the last of them, Abū Bakr, reigned till 920/1514, according to the statement of his relative Ḥaydar Mīrzā [*q.v.*] for forty-eight years (Mīrzā Ḥaydar Dug͟hlāt, *Taʾrīk͟h-i Ras͟hīdī*, tr. E. Denison Ross, London 1895, 253, 326); but this is contradicted by the author himself, who says that Kās͟hg͟har was not conquered by Abū Bakr till 885/1480-1. Abū Bakr is the founder of the modern town. He destroyed the old fortress and in the last years of his reign rebuilt it on a new site, on the other side of the Tümen on the tongue of land between this river and the Ḳīzīl Ṣū (*ibid.*, 286-7, 295).

Under the rule of the "Mongol" K͟hāns (cf. the *Bibliography* to ČAG͟HATĀY-K͟HĀN) and later under that of the Kalmücks and Chinese (since 1759) the capital of the district was no longer Kās͟hg͟har but Yārkand. It was only since the reconquest of the country by the Chinese in 1877 that Kās͟hg͟har again attained considerable importance as the residence of the Tao-Tʾai, who was over the western and southern part of Chinese Turkestān as far as the oasis of Čerčen, and as the one-time residence of the Russian and English consuls. On Kās͟hg͟har in 1873 see H. W. Bellew in Sir T. D. Forsyth, *Mission to Yarkand in 1873*, London 1875. On conditions at the turn of the present century, see especially L. Kornilow, *Kas͟hg͟hariya*, Tas͟hkent 1903 (review by Barthold, in *Zapiski vost. otd. ark͟h. obs͟hč.*, xv, 131 f.) with plan of Kās͟hg͟har on p. 268, and M. Hartmann, *Chinesisch-Turkestan*, Halle a/S. 1908, especially 45 f., 89 f., with a plan of the town from Kornilow. The most important building in Kās͟hg͟har and vicinity is Ḥaḍrat Apāḳ, the tomb of the famous saint of the 11th/17th century. Kās͟hg͟har has now approximately 70,000 inhabitants (mostly Sunnī Uyg͟hur Turks).

(W. BARTHOLD-[B. SPULER])

AL-**KĀS͟HG͟HARĪ**, MAḤMŪD B. AL-ḤUSAYN B. MUḤAMMAD, Turkish scholar and lexicographer of the 5th/11th century whose work, the *Dīwān lug͟hāt al-turk*, is one of the most significant records of the Turkish languages and also an important source for the history of the Turkish peoples. The only information which we possess on his life comes from his own work, and that much is only fragmentary. It seems that he came from Barsg͟hān on the southern shores of the Isik-Köl (cf. *Ḥudūd al-ʿālam*, tr. Minorsky, 98, 292-3), and was born into a noble family connected with the Ḳarā-K͟hānids [see ILEK-K͟HĀNS]. Kās͟hg͟harī was deeply grounded in Islamic culture and learning, and he himself states that he had travelled extensively and visited many of the Turkish lands before journeying to Bag͟hdād. It may well be that internal conflicts within the Ḳarā-K͟hānid confederation led him to undertake these travels and to go to Bag͟hdād. In the latter city he mingled with the circles of scholars, and realised that there was a great interest in the Turkish peoples and their languages; hence he was stimulated to compose two works on them. He began to write his *Dīwān lug͟hāt al-turk* in 464/1072. According to the information in the book itself, he wrote four redactions of it during the period 464-76/1075-94). The original of the *Dīwān* is lost, but the unique surviving manuscript, dated 27 S͟hawwāl 664/1 August 1266, is a good copy, though not entirely free from errors. Kās͟hg͟harī's second work, a Turkish grammar called the *K. D͟jawāhir al-naḥw fī lug͟hāt al-turk*, has been lost, and is known only from the author's own reference to it.

Kās͟hg͟harī's work is of particular importance for the Turkic languages, and also for the history, geography and folklore of the Turkish peoples, for this linguistic corpus consists not of coherent texts in one particular Turkic language, but of a comparison-oriented explanatory dictionary and a modest grammatical outline of the language. In fact, it represents the first scholarly approach, and thus the first description of the linguistic material by a particular method, to these languages. At the same time, both in its introduction and in the individual entries, Kās͟hg͟harī's work contains a number of facts and remarks —occasionally supported even by personal experience and observation—about the process of the differentiation and spread of Turkic languages, cited in order to elucidate the situation in the 5th/11th century. The information he gives on the writing of Turkic peoples (sc. the Uyg͟hur script) is also useful from a linguistic point of view.

Although he aims at a fairly comprehensive coverage of the Turkic languages, and includes several of them in his dictionary, the linguistic material in the work is primarily a record of the 5th/11th century

Turkish spoken in Kāshghar, which he terms Khāḳānī Turkish. Kāshgharī's work is related essentially to Ḳarakhānid linguistic records. Aside from the material on Kāshghar, the linguistic date from the Oghuz and Ḳïpčaḳ are of considerable value. The dictionary was originally designed as a language-manual for scholars in Baghdād who had some contact with Turkic peoples. Hence he deliberately adopted the methods of Arabic grammar and lexicography in describing his linguistic material. While Arabic grammar served, to some extent, as a guideline, the products of Arabic lexicographic literature also furnished him with a complete entry-word list, a sort of lexicographic questionnaire, with which he confronted the Turkic word-stock, his own mother-tongue. It is highly probable that this starting point considerably enlarged the word-stock in his work. The fact that the Turkic linguistic material had to be fitted into the categories of Arabic grammar certainly impelled Kāshgharī carefully to study his material. Yet the fact that the work was prepared in Baghdād—at a great distance from the homeland of the Turkic peoples—made him unable to complement and control his linguistic material to the fullest extent; and it is open to question how far he grasped those modest opportunities for such control which were probably available in Baghdād. Also questionable is the extent to which the—assumed—repeated redactions of the work enhanced or diminished the authenticity of the linguistic material. Since we do not possess the autograph manuscript of the work and the copyist was not a Turk, the relation of the copy to the original raises similar questions.

Kāshgharī's dictionary pays particular attention to place names, tribal names, proper names, ranks and titles. Explanatory notes in the work include historical data and personal experiences as well as specimens of Turkic folklore, verses, proverbs, etc., which make the work an important source for these last, which are of particular significance as coherent Turkic texts, in addition to their historical-folkloristic value. Kāshgharī's comparative remarks are also highly instructive, though his material is less rich in this respect. The elements in the author's mother-tongue included in his work should be regarded as a record of the standard usage of local scholars, for, as we have noted, Kāshgharī's main aim was to make Arab scholars acquainted with the Turkic languages. He rightly regarded his mother-tongue as one representative idiom of this language-group. At the same time, and understandably enough, he refused to include those Arabic loan-words which he considered irrelevant in this context. However, those words already played an important role in the *Ḳutadghu bilig*, the most significant literary monument of the period, and it seems highly probable that they had also found their way into the spoken language. One major merit of Kāshgharī's work, however, lies precisely in the fact that he tends to focus his attention on the word-stock of the "everyday" spoken Turkic languages. His dictionary thus complements our knowledge of the Ḳarakhanīd language, obtained mainly from the *Ḳutadghu bilig*.

Although Kāshgharī's knowledge of the difference between the individual Turkic languages moves within certain objective bounds and his remarks are sometimes contradictory, he must be given credit for using the comparative approach to the full in his work. His main concern is with the language of Kāshghar, the Oghuz and Ḳïpčaḳ areas; he established as fact the separation of these two language groups, and the related data may well be considered as the first surviving evidence of them. In the case of certain extinct Turkic languages without any written record, his data are their only documentation.

Though in evaluating Kāshgharī's facts and data, certain errors (the background of the manuscript, the author's knowledge, etc.) must always be taken into account, comparative linguistic folkloric, historical and geographic studies have often emphasized the particular value of the work as a source. His dictionary is a product of the intellectual sphere of the early Arab-Turkic symbiosis, when the methods of Arab linguistics were applied to the material of Turkic languages, which until then had been barely documented, thus creating a source of unprecedented value to comparative and historical linguistics and to the study of the history of the Turkic peoples in this period. As well as contributing greatly to the extension of our knowledge of the early Turkic word-stock and of the various Turkic languages, the work is also a valuable guideline in the chronology of the early Turkic records, the majority of which are chronologically uncertain Uyghur texts. Like the other Ḳarakhānid linguistic records, Kāshgharī's dictionary is classified chronologically as Middle Turkic—a term deriving from the practical classification of the Common Turkic linguistic monuments—on the basis of its chronological place between the runic inscriptions, the early Uyghur texts and the later Turkic linguistic records.

(G. HAZAI)

KĀSHĪ, a Persian word designating the tiles or trimmed pieces of faïence serving to cover completely or partially the main fabric of buildings in a design principally decorative but also, at times, to protect them against humidity. This term, which also exists in Turkish, is an abbreviation of *Kāshānī*; the town of *Kāshān* [*q.v.*] was in effect the most important and most famous centre of production in Iran. It appears already in Abū'l-Ḳāsim, author of the first treatise dedicated to this subject (*ca.* 700/1300) in the form *kāshī-garī*, which means literally "the art of making the *kāshī*", but for this author it had a wider sense and designated the art of faïence. (See J. W. Allan, *Abū'l-Qāsim's Treatise on ceramics* in *Iran*, xi (1973), 111-20). In the Arab authors this term becomes *ḳāshī* (Yāḳūt, iv, 15) or *Ḳāshānī* (Yāḳūt, *ibid.*; Ibn Baṭṭūṭa, i, 415, 463, ii, 130, 225, 297, iii, 79).

The origin of the *kāshīs* is linked with the techniques of pottery and with that of baked brick. So it has connections with a very ancient art. The excavations of Čughā-Zanbil (Khūzistān) have brought to light several types of dappled tiles (13th century B.C.). (See P. Amiet, *Elam*, Paris 1966, pl. 261). There have also been discovered (*ibid.*, pl. 383-92) some polychrome-coated tiles with zoomorphous decoration at Susa (*ca.* 8th and 7th centuries B.C.). The famous Frieze of the Archers (Louvre, 5th century B.C.) is a well-known example of the enamelled brick of the Achaemenids (M. Rutten, *Les arts du Moyen Orient ancien*, Paris 1962, pl. xxx) that the Assyrians and Babylonians also knew about (Assyrian Palace of Khorsābād, 722-705 B.C.; Gate of Ishtār at Babylon 6th century B.C.). Later on, in the period of the Parthians and Sāsānids, this art experienced a certain decline and appears to be represented only by mosaics (Bīshāpur, 2nd half of the 3rd century, see R. Ghirshman, *Parthes et Sassanides*, Paris 1962, pls. 180-6).

Moreover, it is this technique which prevailed at the beginning of the Muslim period and the mosaics of this era are of Hellenistic or Byzantine inspiration. They were also much used for floors (rest room of the bath of Khirbat al-Mafdjar; D. and J. Sourdel, *La civilisation de l'Islam classique*, Paris 1968, pl. 124), as well as on the walls (Dome of the Rock, dated 691, above, art. ARCHITECTURE, pls. IV-VI; Great Mosque of Damascus, dated 775, Sourdel), *op. cit.*, pl. iv), but the use of *kāshīs* in the form which later spread seems to emerge in the 5th/11th century. One of the first examples of its tentative appearance is to be found at the top of the minaret of the *masdjid-i djāmiʿ* of Dāmghān (2nd half of the 5th/11th century, C. Adle and A. S. Melikian Chirvani, *Les Monuments du xi^e s. du Dâmqân*, in *Studia Iranica*, i/1 (1972), pl. xxvii). The enamel was also applied, according to A. Godard, *L'Art de l'Iran*, Paris 1962, 366, to render the characters of the inscription more visible, *i.e.* more legible, on the exterior of buildings (cf. also *ibid.*, pl. 132; M. B. Smith, *The Manārs of Iṣfahān*, in *AI*, 1936/2, fig. 212). Approximately at the same period points of turquoise blue enamel appeared on buildings (Gonbad-i Surkh, dated 1147 at Marāgha, A. U. Pope, *A Survey of Persian Art*, repr. Tokyo 1964, viii, pl. 341). This new type of insertion of quite small enamelled tablets drew its inspiration from the embossed joints of plaster which are already in existence on the buildings of the 5th/11th century. The arrangement of these small tablets then developed without interruption and various decorative schemes were adopted (funerary tower of Muʾmina Khātūn, dated 1186, at Nakhdjavan, *ibid.*, pl. 345; Gūr-i Amīr, dated 1405, at Samarḳand, *ibid.*, ix, pls. 541-3). Emanating from these first productions, two techniques saw the light of day: that of the faïence mosaic or *kāshī-yi muʿarraḳ-kārī*, and that of the faïence tile or *kāshī-kārī*.

Kāshī-yi muʿarraḳ-kārī (or simply *muʿarraḳ-kārī*): this technique consists of cutting, according to precise forms, pieces of monochrome *kāshī* of different colours to compose a polychrome design (technique described by Godard, *op. cit.*, 383-4; H. E. Wulff, *The traditional crafts of Persia*, Cambridge Mass. 1966, 121-5, figs. 188-94; Pope, *op. cit.*, pl. 546). One of the

first examples of the use of this process in Iran is the Imāmzāda Dja'far (dated 1325) at Iṣfahān (Godard, 384). Perfection was achieved at the Imāmzāda Darb-i Imām (dated 1453), situated in the same town (*ibid.*, 386) and especially at the Blue Mosque (Masdjid-i Kabūd, 1453) of Tabriz (*ibid.*, pls. 145, 146; Pope, *op. cit.*, viii, pls. 452-6).

Kāshī-kārī: by contrast with the above, in this process the design is reproduced on tiles of baked earth which are then painted, generally with different metal oxides, to become polychromatic, then rebaked. This technique, which varied widely according to periods and places, has given birth to two great schools, the *kāshī-yi falazzī-rang* (glazed) and the *kāshī-yi haft-rang* (polychrome/seven colours).

The first are from the 3rd/9th century at Baghdad and at Sāmarrā. They were even exported as far as Ḳayrawān (D. Talbot Rice, *Islamic Art*, London 1965, fig. 35) to be used in the Great Mosque (*ca.* 862). But it was the *kāshīs* manufactured principally at Kāshān, from the 7th/13th to 9th/15th centuries, that were the most famous. Their metallic glints were produced by "a thin film of metal obtained by reducing in the kiln a metallic oxide applied on the enamel" (J. Sauvaget, *Introduction à l'étude de la céramique musulmane*, Paris 1966, 36-8; Wulff, *op. cit.*, 119-20). Two categories of glazed tiles exist: first, the flat *kāshīs* in the form of a star or a cross (cf. panel of the Louvre dated 1267; *Art de l'Islam, catalogue de l'exposttion de l'Orangerie des Tuileries*, Paris 1971, pl. and no. 58), and then much greater *kāshīs*, often modelled in a manner to constitute the elements of a *miḥrāb* (cf. that of the sanctuary of the Imām Riḍā at Mashhad, dated 1215, and that of the Mosque of the Maydān of Kāshān, dated 1226; M. Bahrami, *Recherches sur les carreaux de revêtement lustré dans la céramique persane du xiii*[e] *au xv*[e] *s.*, Paris 1937; Pope, *op. cit.*, iv, 1569-90, x, pls. 702, 704, 721-7).

The *kāshī-yi haft-rang* were particularly in favour from the reign of Shāh 'Abbās I (1588-1629). This sovereign, a great builder, judged the *kāshī-yi mu'arraḳ* too slow and costly to produce, and replaced them on certain buildings with painted tiles (interior of Masdjid-i Shāh, dated 1612-28, at Iṣfahān; Godard, *op. cit.*, 393-4; *Iran-Shahr*, ii, 1827-31; Pope, *op. cit.*, ix, pls. 547-9; A. Lane, *Later Islamic Pottery*[2], London 1971, pl. 63).

The manufacture of *kāshī* fell into decline from the 17th-18th centuries onwards, and the notable productions were not numerous (Madrasa Mādar-i Shāh, Iṣfahān, dated 1706-14; Masdjid-i Sipahsālār, Tehran, dating from 1879). At present, this art has experienced, in Iran, a certain revival. Some architects have attempted, sometimes successfully, to incorporate this fundamental element of Iranian decoration in the new architecture of the country (tomb of Khayyām at Nishāpūr, constructed by Sayhūn).

The Persians also took this industry to Syria. These *ḳishānīs* were produced at Damascus. However, it is in the Turkish lands that this art experienced a great development; the Saldjūḳid Palace of Ḳubādābad (7th/13th century) had very fine faïence tiles in the form of stars and crosses (Talbot Rice, *op. cit.*, fig. 185; Cl. Cahen, *Pre-Ottoman Turkey*, London 1968, figs. 61-2). The Mosque of 'Alā' al-Dīn (dated 1220) at Konya displays a very elaborate technique of faïence mosaic (Lane, *op. cit.*, 39). The Ottomans were also interested from the beginning in this art (Yeşil Cami at Bursa, 1419-24; Talbot Rice, *op. cit.*, fig. 189). The best *kāshīs* were produced at Iznik, which was an extremely important and active centre from about 1490 to the beginning of the 18th century (see, *e.g.* Mausoleum of Sultan Sulaymān (dated 1566) at Istanbul; *ibid.*, figs. 194-5; see also A. Lane, *op. cit.*, 39-65, pl. 32; C. E. Arseven, *Les arts décoratifs turcs*, Istanbul 1952, 148-75; O. Aslanapa, *Turkish Art and Architecture*, London 1971, 270-8).

Bibliography: given in the article.

(C. Adle)

AL-KĀSHĪ or AL-KĀSHĀNĪ, GHIYĀTH AL-DĪN DJAMSHĪD B. MAS'ŪD B. MAḤMŪD, Persian mathematician and astronomer who wrote in his mother tongue and in Arabic. Few biographical details are available, but it is known that during his lifetime he witnessed three eclipses of the moon, the first being visible at Kāshān on 14 Dhu 'l-Ḥidjdja 808/2 June 1406. Dates occurring incidentally in his works mark a few stages in his life; in 809/1407 he finished his *Risāla kamāliyya* or *Sullam al-samā'*, which deals with the size or distances of the celestial bodies; in 816/1413 he completed the *Zīdj-i khāḳānī*, perhaps dedicated to Shāh Rūkh at Harāt, in which he improves the Ilkhānid tables of Naṣīr al-Dīn al-Ṭūsī, employing differences of the second order in the case of interpolation of *buht* (see E. S. Kennedy, in *Studies in honour of S. H. Taqizadeh*, London 1962, 117-20).

The year 819/1419 seems to have been the most decisive of his life: it was then that he completed a brief treatise on astronomical instruments (ed. and tr. E. S. Kennedy, in *JNES*, xx/2 (1961), 98-108), dedicated to Prince Iskandar of the Ḳara-ḳoyunlu, in which he describes briefly but accurately many of the instruments mentioned in the *Almagest* (5, 1; 5, 2, etc.) as well as others devised by earlier Muslim astronomers. In this same year he finished the first version of his *Nuzhat al-ḥadā'iḳ* and, accepting the invitation of Ulugh Beg [*q.v.*], probably proffered at the instigation of Ḳāḍī-zāda al-Rūmī, he settled in Samarḳand. From this town he wrote to his father (Eng. tr. E. S. Kennedy, in *Orientalia*, xxix/2 (1960), 191-213) describing the lifestyle of the court, his relationship with Ulugh Beg and Ḳāḍī-zāda al-Rūmī, and the problems with which the latter was particularly concerned. This document is of exceptional scientific interest; in some passages he brings to mind, in quite a different context, the tests undergone by poets when they were admitted to the sovereign's court. He assisted in the establishment of Ulugh Beg's tables and took part in the construction of the great observatory, the ruins of which can still be seen and which, in the opinion of Sayılı (*The observatory in Islam*, Ankara 1960, 260-89), probably influenced the first European observatories.

In 826/1423 he completed his *al-Risāla al-Muḥīṭiyya* (ed. with Ger. tr. by P. Luckey, *Der Lehrbrief über den Kreisumfang*, Berlin 1953; Russ. tr. by. B. A. Rosenfeld, V. S. Segal and A. P. Yushkevič, Moscow 1956) in which he established the value of π with extraordinary exactitude, so that $2\pi = 6; 16, 59, 28, 1, 34, 51, 46, 14, 50$ in sexagesimal notation and 6.2831853071795865 in decimal notation. Allied to the algorithmic methods of this work is the determination of sine 1° worked out by an iterative method (cf. A. Aaboe, in *Scripta Mathematica*, xx (1954), 24-9). This problem, one with which Ḳāḍī-zāda was preoccupied, was recorded by his grandson, Mīram Čelebi, in his commentary on the tables of Ulugh Beg entitled *Dastūr al-'amal wa-taṣḥīḥ al-djadwal*. It can be seen here that al-Kāshī employed the equation: $\sin d = 3 \sin d - 4 \sin 3d$, which was used in the Western world by F. Viète (1540-1613)

and established the value of sine 1° = 0.017 452 406 437 283 571.

In 829/1426, he completed the second version of the *Nuzhat al-ḥadāʾiḳ*, in which he described an equatorium similar to that of Chaucer (see D. J. Price, *The equatorie of the planets*, Cambridge 1955); this, which he called a *ṭabaḳ al-manāṭiḳ*, was designed to determine the position of the planets by manual means; the first references to such an instrument appear in the work of the Hispano-Arab Azarquiel [see AL-ZARḲALĪ]. In the same year he composed a *Lawḥ al-ittiṣālāt*, enabling the rapid calculation of linear interpolations. These two works are edited and translated by E. S. Kennedy, *The planetary equatorium*, Princeton 1960.

In 830/1427 he dedicated to Ulugh Beg's library his *Miftāḥ al-ḥisāb* (ed. with Russ. tr. B. A. Rosenfeld, V. S. Segal and A. P. Yushkevič, Moscow 1951). In the prologue to this work he gives an (incomplete) list of his works and in the explanatory part expounds the arithmetical operations, teaches the method of extracting roots by the system which today is called after Ruffini-Horner, calculates the Tartiglian triangle [see AL-KARADJĪ], demonstrates that he knew the proof by 9, works out the sum of series up to the fourth power of natural numbers (cf. F. Woepcke, *Sommations de séries*, in *Journal de mathématiques pures et appliquées*, x/2 (Paris 1865), 32-6), develops, like the ancient Babylonians, the absolute sexagesimal system, and devises decimal fractions which, despite the endeavours of Emmanuel Bonfils of Tarascon (14th century), were not recognised in Europe before Stevin of Bruges (1585); he also indicates the rules for passing from one system to another, gives auxiliary tables for various computations, deals with trigonometry and algebra and solves some undetermined systems [see AL-KARADJĪ].

Al-Kāshī died on 19 Ramaḍān 832/22 June 1429 at Samarḳand.

Bibliography: Apart from references in the text, Brockelmann, II, 231, S II, 294; Suter, 173, no. 429; Kaḥḥāla, *Muʿdjam al-muʾallifīn*, iii, 158, viii, 43. (J. VERNET)

KĀSHIF, MUḤAMMAD SHARĪF B. SHAMS AL-DĪN AL-SHĪRĀZĪ (*ca.* 1001/1592-after 1063/1653), a Persian prosewriter and poet with the *takhalluṣ* Kāshif (the forms Kāshif-i Kumayt, cf. Rosen, loc. cit., and Sharīfā Kāshif, cf. *Tadhkira-i Naṣrābādī* in the synopsis by A. Sprenger, *Cat. Oudh*, 91, are also mentioned). He lived in Iṣfahān and later in Ray, where he was a *ḳāḍī* for 15 years. His brothers Ismāʿīl Munṣif and Muḳīma were also known as poets. Only two works by Kāshif seem to have survived. Both deal with ethical questions and were written in the ornate style current in the Ṣafawid period. *Sirādj al-Munīr*, completed in 1030/1621 or slightly earlier, is modelled on Saʿdī's *Gulistān* but is more religious in character than the latter work. *Khazān u Bahār* is chiefly an adaptation of the Persian version of al-Tanūkhī's *al-Faradj baʿd al-shidda* by Ḥusayn b. Asʿad al-Muʾayyadī al-Dihistānī (7th/13th century). These works were still frequently copied in the 13th/19th century and have been lithographed several times both in Iran and India (cf. Khānbābā Mushār, *Fihrist-i kitābhā-i čāpī-i fārsī*, Tehran 1337-1342 sh., i, 945, ii, 2138). Other works, recorded in the *Khātima* of *Khazān u Bahār* are the prose works *Durr-i Maknūn* and *Ḥawāṣṣ-i bāṭin*, the *mathnawī*s *Laylā u Madjnūn*, *Haft Paykar* and *ʿAbbās nāma*, and lyrical poetry.

Bibliography: autobiographical notice in the epilogue (*khātima*) of *Khazān u Bahār*, cf. the description in V. Rosen, *Les manuscrits persans de l'Institut des langues orientales*, St. Pétersbourg 1886, 285 f.; Ch. Rieu, *Cat. of the Persian Manuscripts in the British Museum*, ii, 861 f., *Supplement*, 250 f.; al-Shaykh Āḳā Buzurg al-Ṭihrānī, *al-Dharīʿa ilā taṣānīf al-Shīʿa*, Nadjaf-Tehran 1355 ff., vii, 151 f., viii, 108, xii, 161 f.; Aḥmad Munzawī, *Fihrist-i nuskhahā-i khaṭṭī-i fārsī*, ii/2, Tehran 1349 sh., 1601 f., 1628 ff. (J. T. P. DE BRUIJN)

KĀSHIF AL-GHIṬĀʾ, surname of the Imāmī scholar SHAYKH DJAʿFAR B. KHIḌR B. YAḤYĀ AL-MĀLIKĪ AL-DJANĀDJĪ AL-NADJAFĪ. Shaykh Djaʿfar was born in al-Nadjaf in 1154/1741 or, more likely, in 1164/1751, according to conflicting records. His father, whose family belonged to the Arab clan of Banū Mālik, had come from Djanādjiyā (Ḳanāḳiyā), a village in the region of al-Ḥilla, to al-Nadjaf, where he won a high respect for his piety and religious learning. Shaykh Djaʿfar studied in al-Nadjaf and Karbalāʾ under the most famous Imāmī scholars of the time, among them the Āḳā Muḥammad Bāḳir al-Bihbihānī and the Sayyid Mahdī Baḥr al-ʿUlūm al-Ṭabāṭabāʾī. After the death of the latter in 1212/1797, Shaykh Djaʿfar was recognized as his successor in the leadership of the Imāmī community.

Shaykh Djaʿfar was actively engaged in the local affairs of al-Nadjaf as well as in the concerns of the Imāmī community at large, and entertained close relations with both the Ottoman authorities in Baghdād and the Ḳādjār ruler Fatḥ ʿAlī Shāh (1212-50/1797-1834) of Persia. In reply to a pamphlet of the Wahhābī ruler al-ʿAzīz b. Saʿūd (d. 1218/1803) espousing Wahhābī doctrine and attacking Shīʿism, he wrote a rebuttal *Risālat manhadj al-rashād li-man arāda al-sadād*. During the siege of al-Nadjaf by the Wahhābīs in 1220/1805, he led the successful resistance of the inhabitants. In 1221/1806 he served the Ottoman governor of Baghdād, ʿAlī Pasha, as an envoy to the Persian army advancing on that city and brought about a peaceful settlement. To Fatḥ ʿAlī Shāh, during whose reign he visited Persia frequently, he dedicated his general *fiḳh* work *Kashf al-ghiṭāʾ ʿan mubhamāt al-sharīʿa al-gharrāʾ*. The book became popular with students of Imāmī law and earned him his surname Kāshif al-Ghiṭāʾ. He repeatedly authorized Fatḥ ʿAlī Shāh to lead *djihād*.

In treatises and in public debates in ʿIrāḳ and Persia he vigorously supported the Uṣūlī doctrine of *idjtihād* [*q.v.*] against the Akhbārī position. This brought him into sharp conflict with the Akhbārī leader Mīrzā Muḥammad al-Naysābūrī al-Akhbārī. When the latter found refuge at the court of Fatḥ ʿAlī Shāh in 1223/1808 and tried to defame him personally, he wrote a scathing attack on him entitled *Kashf al-Ghiṭāʾ ʿan maʿāyib Mīrzā Muḥammad ʿaduww al-ʿulamāʾ* and sent it to the shah. Towards the end of his life he became involved in a bloody conflict between the Zuḳurt and the Shimirt, two factions of the inhabitants of al-Nadjaf, which led to a feud lasting over a century. He died at the end of Radjab 1227/early August 1812 and was buried in al-Nadjaf. Several of his descendants have distinguished themselves in scholarship.

Algar, *Religion and state in Iran 1785-1906*, Berkeley and Los Angeles 1969, index s.v. Najafī, Shaykh Jaʿfar.
(W. MADELUNG)

KĀSHIFĪ, kamāl al-dīn ḥusayn b. ʿalī, surnamed al-Wāʿiẓ ("the preacher"), Persian writer and preacher. Born at Bayhaḳ or Sabzawār, where he spent part of his youth, Kāshifī then lived in Nishābūr, Mashhad, and for about 20 years at Harāt, during the reign of Abu 'l Ghāzī Sulṭān-Ḥusayn Bāyḳarā [*q.v.*]. There he received encouragement from the sultan and from ʿAlī Shīr Nawāʾī [*q.v.*]. He was well-known as an eloquent preacher with an exceptionally beautiful voice and as a profilic writer of Persian prose. Kāshifī lived to a ripe old age, dying in 910/1504-5 at Harāt. Because he was born at Bayhaḳ, a Shīʿī centre, he was regarded as a Shīʿī in Harāt, but his relationship with Djāmī [*q.v.*] and his companionship with ʿAlī Shīr Nawāʾī resulted in his being considered a Sunnī in Bayhaḳ. His famous son, Fakhr al-Dīn ʿAlī Ṣafī (d. 939/1532-3) in his *Rashaḥāt ʿayn al-ḥayāt* (lith. Lucknow 1308/1890) mentions his father's adherence to the Naḳshbandīs [*q.v.*], who were Sunnīs. However, some of Kāshifī's works, such as his *Rawḍat al-shuhadāʾ*, attest that the author was an Imāmī Shīʿī. In any case, the *Laṭāʾif al-ṭawāʾif*, written by Fakhr al-Dīn ʿAlī Ṣafī (Tehran 1336/1957), and different works by Kāshifī, express the authors' devotion to the *Ahl al-Bayt* [*q.v.*] "the family of the Prophet". In some of Kāshifī's books, such as *al-Risāla al-ʿaliyya fi'l-aḥādīth al-nabawiyya* (Tehran 1966) and *Futuwwat-nāma-yi sulṭānī* (Tehran 1971), his tendency towards Ṣūfism is obvious. Ḥusayn Wāʿiẓ occasionally wrote Persian poems under the pen name of Kāshifī. His only known child was the above-mentioned Fakhr al-Dīn ʿAlī Ṣafī, the author of several books, who succeeded his father as a celebrated preacher in Harāt.

The following list of Kāshifī's works is not in chronological order, as the dates of many of his writings have not been established. Of the author's works, the best known are the *Anwār-i Suhaylī* and *Rawḍat al-shuhadāʾ*: (1) The former, which is the basis of Kāshifī's fame in the East and the West, is a new version of *Kalīla wa-Dimna* [*q.v.*], translated into Persian by Abu 'l Maʿālī Naṣr Allāh. Kāshifī's aim in recasting these fables, done at the suggestion of Niẓām al-Dīn Amīr Shaykh Aḥmad al-Suhaylī (d. 907 or 908/1501-3), a Turkish amīr at the court of Sultan Ḥusayn, was to simplify the difficult style of Abu 'l-Maʿālī. Kāshifī omitted Abu 'l-Maʿālī's first two chapters, reducing the book to 14 chapters. But the *Anwār-i Suhaylī*, "The Lights of Canopus" or rather "The Lights of Suhaylī", written in a very decorative style, cannot compare with the first Persian translation of *Kalīla wa-Dimna*, and Kāshifī did not achieve his object. The book has been published several times: in Calcutta 1804 etc.; Hertford (by Ch. Stewart) 1805, (by J. W. Ouseley) 1851; Bombay 1853; and repeatedly since then in India, Iran and Europe. A versified version of the work exists, entitled *Shakaristān* and made by Amīr Khusraw Dārāʾī (Tehran 1947). The Ottoman Turkish translation of the work, entitled *Hümāyūn-nāme* by ʿAlī Čelebi (d. 950/1543-4), became widely known in Europe; its translation into French is one of the sources of La Fontaine's Fables. The *Anwār-i Suhaylī* has also been translated into English (by E. B. Eastwick, Hertford 1854, and by A. N. Wollaston, London 1878). Parts of the book have been printed in text and translation in Europe (see Ethé, *Cat. Pers. Mss., India Office*, No. 757). Having achieved fame in India, the work found an imitator, Abu 'l Faḍl b. Mubārak, minister of the Emperor Akbar and author of the *Āyīn-i Akbarī*, who compiled the *ʿIyār-i dānish* (996/1588); (2) *The Rawḍat al-shuhadāʾ*, "Garden of the Martyrs", a Persian martyrology of ʿAlī and his family, particularly of the Imām Ḥusayn [*q.v.*], was written at the wish of Prince Murshid al-Dīn ʿAbd Allāh, called Sayyid Mīrzā, in 908/1502-3. It comprises ten chapters (*bābs*) and a conclusion (*khātima*). It has been published many times; abridgments entitled *Dah madjlis* and *Muntakhab-i Rawḍat al-shuhadāʾ* are also available (see Storey, i, 212, 1261). Popular among Shīʿīs and used in the commemorative speeches of Muḥarram, the book has left a lasting mark on the mourning ceremonies called *rawḍa*. The work was translated into Turkish, with additions, by Fuḍūlī [*q.v.*] of Baghdād (d. 970/1562-3) under the title *Ḥadīḳat al-suʿadāʾ* (see Storey, i, 213; Gibb, *Ottoman Poetry*, iii, 90). There is a metrical paraphrase in Dakhanī: the *Rawḍat al-shuhadāʾ* by Walī, composed in 1130/1718 (Storey, i, 213). Translations in Urdu and Hindī also exist (see Ḥaydar-Bakhsh Ḥaydarī, *Gul-i maghfirat*, Lahore 1965, Introduction by Nāẓir Ḥasan Zaydī, 8, 9, 19).

Other works are: (3) *Djawāhir al-tafsīr li-tuḥfat al-Amīr*, an extensive Persian commentary on the Ḳurʾān, written at the request of ʿAlī Shīr Nawāʾī in 890/1485. Kāshifī intended to compile it in four volumes, but discontinued his work after finishing the first volume, which included the first three *sūras* and part of the fourth. Later, he wrote a shorter commentary. *Djawāhir al-tafsīr* has a detailed introduction dealing with the 22 branches of ḳurʾānic sciences. Manuscripts of the work are extant (see Rieu, *Cat. Pers. Mss., British Museum*, i, 11; Ethé, No. 2680; Storey, i, 12, 1195; Aḥmad Munzawī, *Fihrist-i nuskhahā-yi khaṭṭī-yi Fārsī*, Tehran 1969, i, 42); (4) the *Mawāhib-i ʿaliyya* is a shorter commentary on the Ḳurʾān, composed in 897-9/1491-4 and dedicated to ʿAlī Shīr Nawāʾī, from whose name the work's title is derived. It is also called *Tafsīr-i Ḥusaynī*, after the author. The book has been lithographed several times in India (Storey, i, 13), Iran, and printed in four volumes in Tehran 1938-50. There is a Turkish translation by Abu 'l Faḍl Muḥammad b. Idrīs Bidlīsī (d. 982/1574-5) and also an adaptation, *Mewākib tefsīri*, by Ismāʿīl Ferrukh Efendi (d. 1256/1840), Istanbul 1959. Urdu and Pashtu translations also exist (Storey, *loc. cit.*); (5) the *Akhlāḳ-i Muḥsinī*, a book on ethics, was completed in 900/1494-5 as an offering for Abu 'l Muḥsin, a son of Sultan Ḥusayn. It comprises 40 chapters, and has been published several times in India, Tehran, Hertford, London, etc. Translations exist in English by H. G. Keene, Hertford 1851; in Turkish, under the title *Anīs al-ʿārifīn*, by ʿAẓmī, 974/1566-7; and extracts from the latter translated into German, published by R. Peiper, Breslau 1848, *Das Kapitel von der Freigebigkeit*, etc.; (6) *al-Risāla al-ʿaliyya fi'l-aḥādīth al-nabawiyya*, a Persian commentary in eight chapters on the 40 *ḥadīths*, compiled in 875/1470-1. It was influenced by the *Maṣābīḥ al-ḳulūb* of Abū Saʿīd al-Ḥasan b. al-Ḥusayn al-Sabzawārī (d. 854/1450), one of the Shīʿī *ʿulamāʾ*, and dedicated to Shams al-Dīn Abu 'l Maʿālī ʿAlī al-Mukhtār al-Nassāba al-Naḳīb. A Turkish translation was made by Kamāl al-Dīn Muḥammad Ṭāshköprüzāde (d. 1030/1620-1) for Sultan Aḥmad I (see *ʿOM*, i, 349-50; A. Karahan, *İslam-Türk edebiyatında Kırk Hadis*, Istanbul 1954, 109-11 and index s.v. Ḥusayn Vāʿiẓ; (7), (8) Two anthologies from Rūmī's Mathnawī: the first entitled *Lubāb-i maʿnawī fī intikhāb-i Mathnawī*, and the second a rearrangement of this entitled *Lubb-i Lubāb-i maʿnawī*. The latter was

compiled at the suggestion of Musayyib, one of the eminent officials at the court of Harāt, in 875/1470-1 (lith., Bombay 1885, Lucknow; printed, Tehran 1940); (9) *Risāla-yi Ḥātimīyya*, a short Persian treatise including the story of Ḥātim Ṭāʾī [*q.v.*], compiled for Sultan Ḥusayn Bāyķarā in 891/1486 (printed, Ch. Schefer, *Chrest. Pers.*, Paris 1883, i, 174-203; Tehran 1941); (10) *Makhzan al-inshāʾ*, a treatise on the art of Persian epistolography, containing all a secretary must know: forms of address, forms of answer, topics which must be stated, forms of prayer used in letters. It was completed in 907/1501-2, in the name of Sultan Ḥusayn and the author's patron, Mīr ʿAlī Shīr Nawāʾī; (11) *Ṣaḥīfa-yi shāhī*, another treatise, including some epistolary writings in Persian and a few in Arabic, is dedicated to Sultan Ḥusayn (lith., Lucknow 1844, Cawnpore 1848); (12) *Badāʾiʿ al-afkār fī ṣanāʾiʿ al-ashʿār*, a work on figures of speech and errors, particularly in poetic usage (see A. Munzawī, iii, 2126); (13) *Futuwwat-nāma-yi sulṭānī*, printed in Tehran 1971, is one of Kāshifī's most valuable works. As well as having a fluent style, the book is the most detailed of all the Arabic and Persian treatises written on *futuwwa* [*q.v.*]. Kāshifī compiled all the information about *fityān* handed down from earlier generations and never before mentioned in books. At the same time, he used important written sources. Some special aspects of the mediaeval history of Iran, *i.e.* about the *fityān* and their social organisation, are fully described; (14) the *Asrār-i Ķāsimī*, a short Persian treatise on witchcraft, spells and alchemy, in five parts, is written in the name of Amīr Sayyid Ķāsim, one of the eminent personalities of the period (lith. Bombay 1872, etc.). Kāshifī's son wrote a commentary on this book, entitled *Kashf-i Asrār-i Ķāsimī* (lith., Bombay 1894, 1910; printed in Berlin); (15) *Tuḥfat al-ṣalāt*, with eight chapters and a conclusion; (16) *Marṣad al-asnā fī istikhrādj asmāʾ al-ḥusnā* (lith., Bombay 1893, 1905); (17) *Zād al-musāfirīn* (*mathnawī*, lith., Lucknow 1885); (18) *Sabʿa Kāshifiyya*, completed in 878/1473-4, containing seven treatises on astronomy and astrology, entitled *Mawāhib al-Zuḥal, Mayāmin al-Mushtarī, Ķawāṭiʿ* (or *Sawāṭiʿ*) *al-Mirrīkh, Lawāmiʿ al-Shams, Mabāhidj* (or *Mafātīḥ*) *al-Zuhra, Manāhidj al-ʿUṭārid* and *Lawāʾiḥ al-Ķamar* (or *Ikhtiyārāt-i nudjūm*); (19) *al-Tuḥfa al-ʿaliyya fī ʿilm al-ḥurūf wa-bayān asrārihā*, compiled in the name of Shaykh ʿAbd Allāh Naķshbandī; (20), (21) Two more commentaries on the Ķurʾān, entitled *Mukhtaṣar al-Djawāhir*, "abridged from *Djawāhir al-tafsīr*", and *Djāmiʿ al-sittīn*, Kāshifī's dictated commentary on the *Sūrat Yūsuf* (ch. xii), which is probably identical with the *Tafsīr-i sūra-yi Yūsuf* by Tādj al-Dīn Abū Bakr Aḥmad b. Muḥammad b. Zayd of Ṭūs (Tehrān 1967; see Storey, i, 29, 1195, 1210; A. Munzawī, i, 38); (22) *Sharḥ-i Mathnawī*; (23) *Risālat al-ʿulwiyya*; (24) *Risāla dar ʿilm-i aʿdād*; (25) *Risāla dar awrād-u adʿiya*; (26) *Fayḍ al-nawāl fī bayān al-zawāl*; (27) *Mafātīḥ al-kunūz* on alchemy; (28) *Mayāmin al-iktisāb fī ķawāʿid al-iḥtisāb*; (29) *Āʾīna-yi iskandarī* or *Djām-i Djam*; (30) *Mā lā budda fi 'l madhhab*; (31) *Minhādj al-wilāya*; (32) *Faḍl al-ṣalāt ʿala 'l-nabī*; (33) *Mirʾāt al-ṣafā fī ṣifāt al-Muṣṭafā*; (34) *Sharḥ-i Kitāb al-Surūr fī ʿilm al-ṣanʿa* by Sufyān al-Thawrī (lith. Bombay); (35) *al-Naķāwa fī ādāb al-tilāwa*, on the method of reading the Ķurʾān (A. Munzawī, i, 120); (36) *Dīwān-i Kāshifī* (*ibid.*, iii, 2490); (37) *Ṭabaķāt-i Khwādjagān-i Naķshbandiyya* (*ibid.*, ii, 1274); (38) *Maʿārif al-Yaķīn* (*ibid.*, ii, 1394); (39) *Manāķib al-awliyāʾ* (*ibid.*, ii, 1423; Storey, i, 213); (40) *Madjālis-i waʿẓ* (A. Munzawī, ii, 1678), etc.

KASHĪSH-DAGHĪ [see ULU DAGH].

KASHĪNĀ, KASHNĀ [see KATSINA].

ĶĀSHĶĀY, the name of a Turkish people living in the Fārs province of Iran. Persian works refer to this people as Ķashķāʾī. The exact origin of the name is not known. In western Turkish *ķashķa* is the name given to a blaze on the forehead of animals such as horses, sheep and cattle; in Čaghatay the word also means "brilliant" and "gallant". It is probable that the name Ķāshķāy is related to one of these meanings, especially the former, *i.e.* a blaze. It is impossible to agree with the claims of the chroniclers of the Ķādjār period that the word is derived from *kačmak* "to flee, escape". The Ķāshķāy are a comparatively recent community, not referred to in works earlier than the 18th century. A branch of the Khaladj [*q.v.*], whose original territory was the Sāwa region, used to live in Fārs during the 19th century, and whilst we have no knowledge of the causes leading to the formation of the Ķāshķāy, it is probable that many Turcoman communities living in Fārs gathered around the strong Shāhilu tribe of the Khaladj during the Afghan invasion, thus forming this people. It seems also that some small tribes belonging to such peoples as the Lurs, Kurds and Shuls also joined this union.

The territory of the Ķāshķāy extended from the northwest of Fārs to the southeast, comprising Shash Nāhiya, Čahār Danke, Kāmfīrūz, Ardahān, Kāzarūn, Farrāshband, Maḥall Arbaʿa, Fīrūzābād, Maymand, Afraz, Khundj and Mahūr Milānī. Of these, the first five were their grazing grounds, while the rest were their winter quarters. The khāns generally wintered in Fīrūzābād. Until recently the territory of the Ķāshķāy was considered a separate administrative region under the name of the Vilāyat-i Ķashķāʾī.

The tribal organization of the Ķāshķāy was similar to that of other Turkish peoples, *i.e.* they were divided into the *boy* (*ṭāʾifa*), the *boy* into the *oba* (*tīra*), and the *oba* into families (*odjak*). The tribal head was the *ilkhān*, while the *boy* was headed by the *kalantar* (*boy begi*), and the *oba* by the *katkhuda*. The *il begi* was the deputy ilkhān and the actual ruler. He was elected from among the close relatives of the ilkhān, such as his son or brother. The ilkhān,

always a member of the ruling family of Khans, was appointed by the Shāh. Among the many *boys* and *obas* of the Ķāshķāy people, the following were of the greatest historical importance: Bayāt (from the Oghuz tribe), Igdir (Oghuz tribe), Beg Dili (Oghuz tribe), Čarīkhlu (Čarīklu, an Oghuz tribe?), Shāmlu, Aghač-Eri (of the Ķarā-Ķoyunlu), Khaladj, Musullu (of the Aķ-Ķoyunlu), and Oryad (Mongol?). These sub-tribes were not very populous. One characteristic of the Ķāshķāy people was that it had a strict tribal code, which determined all conduct and was obeyed by every member, from the Khān down to the simplest member of the community.

The great majority of the Ķāshķāy led a nomadic life, raising horses, camels and cattle. An important number of these nomadic people, however, had fields near their pastures, which were watered and protected by peasants living in the neighbourhood. In return for these services, the peasants, called *raʿiyyat-i Ķashķāʾī*, received two sheep and some share of the crop each year. Being servants of the Ķāshkāy was regarded as good fortune by the peasants of Fārs, for in this way they enjoyed the help and protection of the Ķāshķāy and were free from the molestations of government officials. The Ķāshķāy exported sheep, longhaired lambskins similar to the Kara Köl sheep of Bukhārā, wool, carpets and rugs. Ķāshkāy carpets woven from pure wool, decorated with traditional motifs and dyed with natural dyes, are still in high demand both in Iran and abroad.

The Ķāshķāy women occupied an important place in the social life of their community, and as among the ancient Turks, the Ķāshķāy observed the rule of demanding *bashlīk* (*bashluk*) in marriage.

Ķāshķāy Turkish is a dialect of Oghuz, i.e. southwestern, Turkish. Like the *ozans* of the Oghuz, the Ķāshķāy had their *ʿāshīķs*, who sang songs of love and bravery and recited the legend of Köroghlu.

Dupré (1807-9) gives their number as 12,000-15,000 (*Voyage en Perse*, Paris 1819, ii, pp. 463-4), while Lady Sheil (mid-19th century) writes that they had 30,000-40,000 tents (*Glimpses of life and Manners in Persia*, London 1856, 398-9). Curzon (1889), on the other hand, gives their number as 25,000 (*Persia and the Persian Question*, London 1892, ii, 112-3) but he mentions that formerly they had comprised 60,000 tents and were capable of raising 120,000 horsemen. This figure is greatly exaggerated, since the Ķāshķāy were in fact never able to raise more than 15,000 horsemen. They put 5,000 horsemen in the field against the British during World War I.

Their first important chiefs were Ḥasan Khān and his brother Ismāʿīl Khān, who both lived during the time of Karīm Khan Zand [*q.v.*] (d. 1193/1779), but for reasons unknown, Ḥasan Khān's hand was cut off, and Ismāʿīl Khān's eyes put out towards the end of the Zand period. Djānī Khān (d. 1239/1823-4), the son of the latter, and Muḥammad ʿAlī Khān (d. 1268/1851-2), the son of Djānī Khān, his brother Muḥammad Ķulī Khān (d. 1867-8), and his son Sulṭān Muḥammad Khān, were the most prominent Ķāshķāy chiefs during the 19th century. Of these, Muḥammad ʿAlī Khān and his son Djihāngīr Khān took wives from the Ķādjārs. One of the main rivals of the Ķāshķāy dynasty was the Hādjdjī Ibrāhīm family living in Shīrāz. This family ruled over the five large tribes (Khamsa) in Fārs with the support of the government. Another enemy of the Ķāshķāy were the Bakhtiyārī, their northern neighbours. When constitutional monarchy was established in Iran, by law the Ķāshķāy were represented in parliament by Hādjdjī Karīm Khān of the ruling family. Although the Ķāshķāy, with the secret encouragement of the government, fought the British in Fārs towards the end of World War I, they were defeated. Like the other tribes, the Ķāshķāy were disarmed by Riḍā Shāh in 1930 and brought under government control. During the operations carried out for this purpose, the Il-Khān Ṣawlat al-Dawla was brought to Tehran and imprisoned there, and his sons were forced to leave Iran. During World War II, and after the removal of Riḍā Shāh from the throne, the sons of Ṣawlat al-Dawla, who had himself died in prison, returned from exile. Of these, Nāṣir was elected Il-khān and started administering the Ķāshķāy. When the Ķāshķāy, according to their tribal tradition, refused to surrender to the British the German agents who had taken refuge in Ķāshķāy, they were faced with the danger of being crushed as a possible consequence of an armed expedition against them. They were fortunately saved from this plight by the intervention of the Turkish ambassador (1943). In 1963 the government of Iran decided to carry out land reform in Ķāshķāy territory and to subject the Ķāshķāy people to the authority of the central government Ķāshķāy resistance was overcome by force, the tribesmen disarmed and the family of khāns forced to leave Iran for the second time.

Bibliography: For detailed information and bibliography on the Ķāshķāy see F. Sümer, *Kaçarlar devrinde Türk oymakları*, in *Selçuklu Araştırmaları Dergisi*, V, Ankara 1973. (F. SÜMER)

KASHKŪL, a Persian word denoting an oval bowl of metal, wood or coconut (calabash), worn suspended by a chain from the shoulder, in which the dervishes put the alms they receive and the food which is given them. The etymology of this word is obscure; a popular one is given by the Persians: *kash* "draw" (imperative) and *kūl* "shoulder", "what one draws over the shoulder"; but as we find a form *khačkūl* attested in the older poets (Anwārī, Sayf Isfarangī), this explanation can hardly be accepted. The dictionaries give as the first sense "beggar" and then "beggar's bowl"; it seems impossible to decide how correct they are.

This term passed at a late date into Arabic, and appears in the title of the *Kitāb al-Kashkūl* of Bahāʾ al-Dīn al-ʿĀmilī (953-1030/1547-1621) [see AL-ʿĀMILĪ], which is a collection of passages taken from various sources. It is sometimes used in modern Arabic in this sense, in which, as well as denoting "beggar's bag", it denotes a kind of album or collection of press cuttings. In Algerian colloquial Arabic, it has retained the sense of "begging bowl, bowl made of wood or of esparto grass" (Beaussier, s.v.); in Dozy, *Supplément*, s.v., we also find the forms *kashkul* and *kashkala*.

KASHMĪR (Sanskrit: Kashmīra; Persian: Kashmīr; Kashmīrī: Kashīr), a region of northern India.

I. BEFORE 1947

1. Geography. It is situated in the western Himālayas about 5,000 ft. above sea-level, and is shaped like an elliptical saucer with a similarly-shaped level

valley in the centre. This valley, comprising an area of 1,800 or 1,900 sq. miles, is about 84 miles in length, from south-west to north-east, while its width varies from 20 to 25 miles. It is surrounded by high mountain ranges, whose highest peaks rise up to 18,000 ft. The inner slopes of these mountains possess lateral valleys, some quite large and very picturesque. The whole area within the mountain boundaries is about 3,900 sq. miles. Through the central plain flows the Djehlam (Vitastā), which is joined by numerous rivers and streams which drain the slopes of the mountains. The high mountains which surround the valley are pierced by a number of passes through which it has, over the ages, maintained contact with the outside world. The most important passes are the Bānihāl, the Būdil, the Pīr Pandjāl, the Tōshmaidān, the Ḥādjdjī Pīr and the Zōdjī-Lā. According to an ancient legend mentioned by Kalhaṇa and the Nīlamata, Kashmīr was once a lake; there is a certain geological basis for this in the lacustrine deposits found in the alluvial plateaus called *karēwas* or *uḍars*.

The name Kashmīr does not occur in Vedic literature. Its earliest reference is found in Pāṇini's grammar. Later the *Mahābhārata* and some of the Purānas also refer to it. There is no mention of Kashmīr by Herodotus or in the accounts of Alexander's invasion, but Ptolemy's use of Kaspeiria definitely refers to Kashmīr. It is not clear when the Chinese first used it, but when Hiuen Tsiang visited Kashmīr in 631, he called it the kingdom of *Kia-shi-mi-lo*. Muslim historians and geographers like Abu 'l-Fidā and Ibn Baṭṭūṭa omit mention of Kashmīr altogether. Al-Muḳaddasī and al-Idrīsī refer only to its geographical location. Al-Masʿūdī's account of Kashmīr, which he calls Ḳashmīr and its capital the "town of Ḳashmīr", is on the other hand long, but not always reliable. It is, however, al-Bīrūnī who gives a detailed and authentic description of Kashmīr. Although he never visited Kashmīr, he obtained his information in the Pandjāb and in Ghazna from reliable sources, and describes the habits and customs of the people of Kashmīr. He refers to the passes leading out of the valley and traces the course of the river Djehlam with considerable accuracy.

Nothing is known of the aboriginal inhabitants of Kashmīr. The present Kashmīrīs are probably a mixture of different races—Aryan, Mongol, Turkish and Afghān. The total population of Kashmīr, according to the 1971 census, is 2,435,701, out of which the Muslims are 2,289,530.

The staple food of the inhabitants of Kashmīr is rice, which is also the most important crop. The winter in Kashmīr is very severe, but from May to October it is very pleasant. This, combined with the picturesque scenery of the Valley, attracts tourists from all over the world.

The Kashmīrī language, according to Grierson, belongs to the Dardic group, though it has been considerably influenced by Sanskrit and Persian and, latterly, by Urdū; it is now written in Persian characters. Kashmīr's language of court and culture was Sanskrit until it was replaced by Sulṭān Zayn al-ʿĀbidīn in the 9th/15th century. Persian then continued to flourish, but in 1889 Urdū was made the court language. Although efforts are being made to develop Kashmīrī, Urdū remains the official language as well as the language of culture.

2. History to the 14th century. The early history of Kashmīr is shrouded in legend until we come to the time of Aśoka the Great who, according to the records of the Chinese pilgrims, erected many monasteries and stupas and Śaivite shrines in the Valley. It was also he who laid the foundation of Srīnagarī, which was near the present Srīnagar, and which has given a name to it. However, the medieval Muslim chroniclers of Kashmīr refer to Srīnagar as the "town of Kashmīr" (Shahr-i Kashmīr).

Kashmīr's history again assumes a legendary character until the time of Kaniṣka, the Kushan ruler of north-western India, who was a Buddhist and who organised the Fourth Buddhist Council in Kashmīr. In 178 A.D. the Kushan rule was replaced by the Gonanda dynasty, under which Buddhism declined because of the policy of persecution followed by some of its rulers.

Ca. 528 A.D., Kashmīr came under the rule of Mihirakula, the White Hun ruler, who, according to the tradition preserved by the Chinese pilgrim Hiuen Tsiang, encouraged Brahmanism and persecuted Buddhism. Towards the middle of the 6th century, the Kashmīr ruler Matrgupta acknowledged the sovereignty of Harsha-Vikramāditya of Udjdjayn. But beyond this, nothing is known of Harsha's connection with Kashmīr.

In 627 was laid the foundation of the Kārkō'ta dynasty (the origin of this designation is uncertain) by Durlabhavardhana, a man of obscure origin. Hiuen Tsiang, who arrived in Kashmīr during his reign, says that Buddhism was in decline but that the country was peaceful and prosperous. The greatest ruler of the Kārkō'ta dynasty was Lalitāditya-Muktāpīda, who reduced Kāng'ra, Pūnč, Radjaurī and Djammū, but Kalhaṇa's account of his conquests round the whole of India is legendary. In 733 Lalitāditya sent an embassy to the Chinese Emperor Husan-tsuang (713-55), seeking help from him against the Arabs who were pressing from the south and the Tibetans and Turkish tribes from the north. He was a great builder, his greatest building being the temple of Mārtand, which owes a great deal to the Gandhāra school and which became a model to all subsequent temples in the valley. Lalitāditya also carried out extensive drainage works, reclaimed large areas for cultivation and established law and order. Ou-K'ong, who visited Kashmīr a few years after Lalitāditya's death, found Buddhism in a flourishing condition.

Since the successors of Lalitāditya were worthless, his dynasty was replaced by the Utpala dynasty founded by Avantivarman (855-83), grandson of Utpala, who was related by marriage with the Kārko'tas. Avantivarman founded the town of Avantipūr, which still bears his name, and built great temples there. His able engineer Suyya, whose name still survives in the modern town of Sōpūr (old Suyyapura), constructed irrigation channels, and by measures designed to prevent floods, reclaimed land from the river and marshes and thus made Kashmīr prosperous. Avantivarman's son and successor, Shaṁkaravarman (883-902) imposed heavy taxes, and introduced the system of forced labour (*bēgār*) which remained, until recent times, a characteristic feature of Kashmīr life. He was succeeded by weak rulers who were puppets in the hands of Tantrins or feudal chiefs. In 950 Kshēmagupta ascended the throne. But he too was weak and the real authority was exercised by his wife Diddā, who was the daughter of the ruler of Lohara. On her husband's death, she herself ascended the throne in 981 after destroying her son and her grandson one after another. She ruled ably until 1003, when she appointed Saṁgrāmarādja, her nephew, as her successor.

Under the Lohara kings, who were mostly incompetent, social and political conditions in Kashmīr

greatly deteriorated; the people were subjected to corvées and to all kinds of oppressive taxes. The Damaras or feudal chiefs grew powerful and by their constant revolts plunged the country into confusion. Since Rāmadeva (1252-73), the last ruler of the dynasty, had no child, he adopted Lakshmanadeva, the son of a Brahman, as heir-apparent. It was under Lakshmanadeva's son, Sūhadeva (1301-20) that the Mongols, led by Zuldjū, invaded Kashmīr in the spring of 720/1320. The origin of Zuldjū is obscure, but he appears to have been a Mongol from Turkistān. He entered Kashmīr by the Djehlam valley route; Sūhadeva did not offer any resistance but fled to Kishtwār. The Mongols continued their ravages in the valley for 8 months and then withdrew before winter. The anarchy that followed the invasion and withdrawal of the Mongols paved the way for the establishment of the Islamic Sultanate.

3. The foundation of the Sultanate. It was in the 2nd/8th century that Kashmīr came for the first time in contact with the Muslims. Two governors of Sind, Djunayd and Hishām b. Amr al-Taghlibī, attempted to invade the fringes of Kashmīr, but they could only reach as far as the southern slopes of the Himālayas.

Maḥmūd of Ghazna in 404/1014 and again in 412/1021 tried to conquer Kashmīr but did not succeed. When finally Muslim rule came to be established, it was not the result of a foreign invasion but of a palace revolution. Taking advantage of the chaos into which Kashmīr was plunged after the Mongol withdrawal, Riñchana (Lhachen rGyalbu Riñchana), the son of a Ladākhī chief, who had sought refuge in Kashmīr, made himself master of the country. He embraced Islam under the influence of a Suhrawardī saint, Sayyid Sharaf al-Dīn, commonly known as Bulbul Shāh, and adopted the name of Ṣadr al-Dīn. He was the first Sultan of Kashmīr.

At the death of Riñchana, his widow Kō'tā Rānī, on the advice of the nobles, married Udayānadeva, the brother of Sūhadeva, and made him king; and when he died, she herself became ruler. But her authority was challenged by Shāh Mīr, a soldier of fortune, who was most probably of Turkish origin.

Turkish adventurers began to enter the Valley from the end of the 5th/11th century, and were employed by Hindū kings in their armies. Shāh Mīr also came in search of fame and fortune and was employed by Sūhadeva. He gradually became so powerful that when Udayānadeva died, he refused to acknowledge Kō'tā Rānī's authority. He defeated her and, in 739/1339, ascended the throne under the title of Sulṭān Shams al-Dīn, thus laying the foundations of his dynasty which ruled Kashmīr until 968/1561.

4. The Sultanate Period. Very little is known of the two successors of Shams al-Dīn, Djamshīd and ʿAlāʾ al-Dīn. But the latter's son Shihāb al-Dīn (755-75/1354-73) appears to have been an able ruler. After consolidating his position at home, he was able to reduce Djammū, Pūnč, Radjaurī, Čamba, Baltistān and Ladākh; but the accounts in the Kashmīr chronicles that he conquered Multān, Kābul, Badakhshān and Samarḳand and that he defeated Fīrūz Shāh Tughluḳ are apocryphal. An important event that had considerable impact on the social and religious life of Kashmīr was the arrival of Sayyid ʿAlī Hamadhānī, a Kubrawī saint, once during his reign in Rabīʿ I 774/September 1372 and again in the reign of his younger brother and successor Ḳuṭb al-Dīn in 781/1379 and 785/1383. Sayyid ʿAlī is said to have come with 700 Sayyids and to have made large-scale conversions to Islam.

During the reign of Ḳuṭb al-Dīn's son, Sikandar (792-816/1389-1413), there came Sayyid Muḥammad, the son of Sayyid ʿAlī Hamadhānī. Under his influence, Sikandar tried to enforce the *Sharīʿa* and established the office of the Shaykh al-Islām, and he began to persecute the Hindus by forcibly converting them to Islam and destroying their temples. But the accounts given in the chronicles of the wholesale destruction of temples have been greatly exaggerated, for there is evidence to suggest that the massive temples of Mārtand and Avantipūr were destroyed by earthquakes and not by Sikandar, for gunpowder was unknown in Kashmīr in the 8th/14th century.

The policy of religious persecution pursued by Sikandar was reversed by his son, Zayn al-ʿĀbidīn (823-75/1420-70), who is popularly called "Budshāh" or the Great King. He virtually abolished the *djizya*, gave money to Hindus to rebuild their temples, and allowed those who had been forcibly converted to Islam to return to their old religion. This, however, did not check the progress of Islam because, although the successors of Zayn al-ʿĀbidīn followed a policy of religious toleration, yet through the efforts of Ṣūfīs and *rishīs* conversions continued, so that by the end of the 9th/15th century, a majority of the inhabitants of Kashmīr had embraced Islam. But at the same time, Islam itself became diluted with non-Muslim usages and practices, and it has retained this character to this day.

History and tradition combine to credit Zayn al-ʿĀbidīn with the introduction of various arts and crafts for which Kashmīr has become famous. He sent Kashmīrīs to Iran and Turkistān to learn the arts of book-binding, wood-carving and papier-mâché, and those of making shawls, carpets and paper. He also invited craftsmen from these countries to instruct his people in various skills. Of all the arts in which the Kashmīrīs achieved excellence, that of book-binding and paper-making has since the 19th century disappeared, but the other crafts are still flourishing and provide employment to a large number of people.

The Hindu *rādjās* had built their temples in stone, but the Sulṭāns popularised the constructional use of wood. Sikandar's two buildings which have survived, the Khānḳāh-i Muʿallā (Mosque of Shāh Hamadhān) and the Djāmiʿ Masdjid, are constructed in wood. Zayn al-ʿĀbidīn, on the other hand, built both in wood and brick. His mosque of Madanī is constructed in wood, but the tomb of his mother and the tomb of Madanī represent the masonry style, and their chief feature is the use made of Persian tiles. The chief feature of the wooden style of architecture is that the pyramidal roof projecting over the whole structure is built in three tiers, and is surrounded by an open pavilion for the *muʾadhdhin*, over which rises the steeple with its final.

Under Zayn al-ʿĀbidīn, the Shāh Mīr dynasty reached the zenith of its power and glory. But after his death, succession disputes, incompetent rulers and refractory and intriguing nobles brought about its downfall. In consequence, Kashmīr was subjected to foreign invasions. In Rajab 947/November 1540, Mīrzā Ḥaydar Dughlāt, a cousin of Bābur, who was in Humāyūn's service, invaded Kashmīr and seized power. At first he ruled with ability and justice, but later he failed to protect the Kashmīrīs from the high-handedness of the Mughals. Moreover, he banned Shīʿism and all Ṣūfī orders, and compelled every Muslim to accept the Ḥanafī law school. The result was that the Kashmīr nobles united against him and brought about his defeat and death in Ramaḍān 958/October 1551. But this did not bring peace to the Valley, because a struggle for power began among the

nobles belonging to the Raina, Māgre and Čak families. In the end, the Čaks emerged victorious. They had migrated from Dardistān in the reign of Sūhadeva, and were, according to al-Bīrūnī, of Turkish origin. They were converted to Shīʿism by Mīr Shams al-Dīn, a Nūrbakhshiyya dervish, who visited Kashmīr from Persia in 886/1481 and 907/1502. The Čaks ruled the Valley from 968/1561 to 994/1586, when it was conquered by Akbar.

The Mughals had invaded Kashmīr in the reigns of Bābur and Humāyūn. Akbar, who claimed Kashmīr because it had been conquered by Mīrzā Ḥaydar on behalf of Humāyūn, had also sent an army to the conquest of Kashmīr in the summer of 968/1561. But it had been defeated by Sulṭān Ghāzī Shāh Čak (968-70/1561-3). It was not until 993/1585 that Akbar found himself sufficiently free to direct his attention once again to Kashmīr. On 3 Muḥarram 994/20 December 1585 he despatched Rādjā Bhagwān Dās to invade the valley. The Kashmīr forces offered serious resistance at the pass of Būliāsa. But Sulṭān Yūsuf Shāh (988-94/1580-6), being weak and indolent and convinced that it would be impossible to defeat the Mughals, secretly visited the Mughal camp on 3 Rabīʿ I 994/14 February 1586 and concluded a treaty with Bhagwān Dās. By this treaty he was to retain his throne, but coins were to be struck and the *khuṭba* recited in the name of the Emperor. Akbar, however, did not honour the treaty, and when Yūsuf Shāh was presented to him he ordered his imprisonment.

Meanwhile, betrayed by Yūsuf Shāh, the Kashmīr nobles set up his son, Yaʿḳūb Shāh, on the throne. Yaʿḳūb was brave and resourceful, but he was a religious fanatic and tried to make Shīʿism the state religion. In consequence of Yaʿḳūb's intolerance, a number of Sunnī nobles, headed by Shaykh Yaʿḳūb Ṣarfī, proceeded to Akbar and requested him to annex Kashmīr. Akbar sent a large army, first under Ḳāsim Khān and then under Yūsuf Khān Riḍwī. Yaʿḳūb carried on a valiant struggle, but, betrayed one by one by his followers, he finally surrendered towards the beginning of Ramaḍān 996/end of July 1588, whilst Akbar had arrived in the Valley in Djumādā II 996/May 1588.

5. The Mughal Period. Akbar visited Kashmīr three times. During his first visit, he abolished the *djizya* and corvée and deputed officers to assess land revenue. But as the assessment was heavy, the Čaks, who had not reconciled themselves to Mughal rule, caused an abortive rising. Akbar, who arrived in Kashmīr for the second time in Muḥarram 1001/October 1592, treated the rebels generously, and tried to conciliate the Kashmīrīs by reducing the taxes and by entering into matrimonial alliances with the Čak nobles. But in spite of this, the Čaks remained sullen and rebellious.

Djahāngīr and his queen Nūrdjahān loved Kashmīr and visited it eight times. They built palaces and laid out beautiful gardens at Ačabal, Vērnāg, Nishāṭ and Shālimār. Twice during Djahāngīr's reign the Čaks, anxious to recover their lost power, took up arms but they were crushed. In 1044/1632 Shāhdjahān appointed Ẓafar Khān governor of Kashmīr. Ẓafar Khān laid out gardens and ruled with justice. He secured a *farmān* from the Emperor, abolishing all oppressive taxes, and this was inscribed on a stone-slab and fixed on the southern gate of the Djāmiʿ Masdjid in Srīnagar. Kishtwār had been occupied under Djahāngīr, and now Ẓafar Khān conquered Baltistān and Ladākh.

The rule of the Great Mughals, from Akbar to Aurangzīb, was, on the whole, just and benevolent. Kashmīr, at the time of the Mughal conquest, was torn by religious strife and feudal rebellions. The Mughals gave peace and promoted trade, industry and agriculture. Kashmīr, however, lost her separate identity and became like any other province of the Empire. The Kashmīrī ruling families of the Čaks, Māgres and Rainas were replaced by a hierarchy of Mughal officers who were responsible for the administration of the country. Moreover, Kashmīr, which had achieved a high degree of culture under the Sulṭāns, was intellectually impoverished: because of the absence of local patronage, poets, painters and scholars left the valley and sought employment at the Mughal Court.

6. The Afghans and the Sikhs. Mughal rule after the death of Aurangzīb became inefficient and corrupt and failed to maintain law and order. Hence in 1160/1747, some of the Kashmīrī nobles wrote to Aḥmad Shāh Abdālī Durrānī [*q.v.*] inviting him to annex Kashmīr. He accordingly despatched a large force in 1165/1752. The Mughals were defeated and Kashmīr passed into the hands of the Afghāns. The Afghān rule was harsh and oppressive, however, and the burden of taxation was heavy. The Shīʿīs were persecuted by the Afghān governors and there were constant Shīʿī-Sunnī riots.

In 1819 Kashmīr was conquered by Randjīt Singh, the Sikh ruler of the Pandjāb. The Sikh rule, which lasted from 1819 to 1846, was also oppressive. The famous Djāmiʿ mosque of Srīnagar was closed to public prayers and, in addition, several mosques were declared to be the property of the state. The slaughter of cows was declared punishable by death. Butchers, bakers, boatmen, scavengers and even prostitutes were taxed. Heavy taxation of the shawl trade led to the decay of this industry. The effect of all this was the impoverishment of the people and their emigration to the Pandjāb and northern India.

7. The Dōgrās and Modern Kashmīr. Sikh rule over Kashmīr came to an end after their defeat in the First Anglo-Sikh war. By the treaty of Amritsar (16 March 1846) the British transferred Kashmīr for a sum of 75 lakh of rupees to Rādjā Gulāb Singh, the Dōgrā ruler of Djammū. Gulāb Singh's rule was better than that of the Sikhs, but no improvement took place in the condition of the people. The high price of rice, which was made a government monopoly, and the high-handedness of officials brought great suffering to the people. The Muslims, who formed over 90% of the population of Kashmīr, had to pay a tax for the Dharmarth, a Hindū religious trust, established by the Mahārādjā. They could not slaughter cows and some of their mosques continued to be in possession of the government.

Ranbīr Singh, who succeeded his father Gulāb Singh in February 1856, was an able ruler. He tried to revive the shawl industry which had been declining. He began the construction of the cart road between Srīnagar and Rāwalpindī and built a track between the Valley and Djammū. A telegraph and postal service was also introduced. However, he made no efforts to redress the grievances of the Muslims.

At the death of Ranbīr Singh on 15 September 1885, his eldest son, Pratāp Singh, succeeded him. Since Pratāp Singh was an imbecile and strong government was necessary in view of the threat of a Russian invasion of India, he was deprived of all authority, and his state was placed in the hands of a Council of Regency under the control of the British Resident. It was not until March 1921 that Pratāp Singh was restored to full powers. During this period, valuable reforms were introduced under the direction

of the Resident. But in one respect they were deficient. The interests of the Muslims were ignored. The Muslims, influenced by the pan-Islamic, Khilāfat and Non-co-operation movements, had become politically conscious and were demanding their rights. In 1924, when the Viceroy, Lord Reading, visited Srīnagar, some members of the Muslim community submitted a Memorial demanding the complete abolition of corvée, larger representation of Muslims in government service, and the restoration of mosques in possession of the government. The Mahārādjā's response to this was to exile the signatories of the Memorial and to confiscate their property. This, however, only served to increase the discontent among the Muslims. On 13 July 1931, open demonstration against the despotic rule of Harī Singh, who had succeeded his uncle Pratāp Singh in 1925, took place under the leadership of Shaykh Muḥammad ʿAbd Allāh, who from now onwards begins to play a dominant role in Kashmīr politics. Harī Singh's government replied by floggings, arrests and shootings in various parts of the Valley. However, owing to the pressure of the Government of India, a Commission was appointed under the presidentship of B. J. Glancy to inquire into the grievances of the Muslims. The report of the Commission did not, however, satisfy them. In October 1932 the Djammū and Kashmīr Muslim Conference was set up, and in March of the next year it launched a Civil Disobedience Movement, demanding a constitutional government. This led the Mahārādjā to appoint a Constitutional Reforms Commission under the presidentship of Glancy. But since its recommendations, too, failed to satisfy the Muslims, the agitation against the government continued.

Meanwhile, Shaykh ʿAbd Allāh and his close associates realized that in order to achieve their goal, it was necessary to win over the Hindu and Sikh inhabitants of Kashmīr. So they converted the Muslim Conference into the National Conference. But some members did not approve of this and decided to keep the old organisation alive and drew closer to the policy and programme of the All-India Muslim League. The National Conference on the other hand, subscribed to the aims and aspirations of the Indian National Congress. In October 1939 it passed a resolution demanding responsible government and in May 1946 it launched the "Quit Kashmīr Movement" under the leadership of Shaykh ʿAbd Allāh. The Kashmīr government arrested ʿAbd Allāh and his colleagues and unleashed a reign of terror.

ii. SINCE 1947

The project of partitioning the Indian Peninsula announced on 3rd June 1947 by the British Prime Minister affirmed that the ancient princely states should be free to choose their future destiny; yet on 25th July 1947 Lord Mounbatten, Viceroy and Governor-General, advised the princes to ask to be joined to India or Pakistan, while taking into consideration the religious distribution of the populations and the peoples' wishes.

With regard to Kashmīr, two factors militated in favour of annexation to Pakistan: the population having a Muslim majority (77% in the census of 1941) and the geographical situation of the region. However, the Mahārādjā refused to choose, although he consented to sign a provisional agreement with the Pakistani Government which was to take effect on and after 15th August 1947.

In October 1947, some men of the Pathan tribes who had come from Pakistan began to give aid to the Muslims who had revolted in the region of Pūnč and approached within a short distance of Srinagar, capital of Kashmīr. On 26th October, the Mahārādjā requested military aid from India and signed the annexation of Kashmīr to the Indian Union. The Indian Government accepted, while stipulating that this accession of Kashmīr to India should be ratified ultimately by popular consultation. Yet, since 1947, this consultation has never taken place.

The war which followed between India and Pakistan came to an end on 1st January 1949, and, on 17th July 1949, agreement was reached on the demarcation of the ceasefire line in Kashmīr.

In the part under Indian control, the constituent Assembly elected in October 1951 adopted a project for a constitution which safeguarded, thanks to the ability of Shaykh ʿAbd Allāh, the autonomy of the State of Djammū and Kashmīr, but abandoned to the central government of Delhi the fields of Defence, Foreign Affairs and Communications. On 9th August 1953, Shaykh ʿAbd Allāh was arrested and his government replaced by that of Bakhshī Ghulām Muḥammad, who sought to reinforce the links with the Indian Union. On 17th November 1956, the Assembly adopted the definitive Constitution of the State which declared its integration with India. This

Constitution, accepted by the central government, took effect on 26th January 1957. In October 1963, the Indian Government forced the resignation of Bakhshī Ghulam Muḥammad, accused of the mishandling of administrative and social affairs. The year 1964 was marked by the accession to power of G. M. Ṣādiḳ and the freeing of Shaykh ʿAbd Allāh.

In the part of Kashmīr under Pakistani control (Āzād Kashmīr), Sardār Muḥammad Ibrāhīm took charge of the local government on 24th October 1947; he was replaced in May 1950 by Ghulām ʿAbbās, who retired at the end of the year 1951 to make way for Colonel Shēr Aḥmad Khān in June 1952. The latter resigned in June 1956. There then succeeded to the Presidency of the local government Mīr W. Yūsuf Khān for a very short time; ʿAbd al-Ḳayyūm from 1956; Sardār Muḥammad Ibrāhīm from 1957; and K. H. Khurshīd from 1959.

Relations between India and Pakistan on the subject of Kashmīr worsened seriously after an agreement on the delimitation of the frontier between Sinkiang and Pakistani Kashmīr was signed on 26th December 1962 between China and Pakistan. Despite a certain détente during the year 1964, the situation became critical from the beginning of 1965. Incidents multiplied in the month of August in the territory of Kashmīr. On 5th September, the Pakistanis crossed the ceasefire line in the direction of the town of Djammū and the Indians replied on 6th September by launching an attack on Lahore (in the Pakistani Pandjāb). Hostilities came to an end on 22nd September 1965, the two belligerents accepting the ceasefire order imposed by the United Organization. Thanks to the repeated efforts of the U.S.S.R., India and Pakistan signed on 10th January 1966 the Tashkent Agreement which stipulated the withdrawal of troops to their positions prior to 5th August 1965 and which envisaged negotiations to resolve the differences which brought India and Pakistan into opposition over Kashmīr. Since this date the situation has not developed much and the theses of the two contestants have not changed.

In Kashmīr under Pakistani control the President of the Government of Free Kashmīr, ʿAbd al-Ḥamīd Khān, promulgated in September 1968 a new constitution fixing the method of electing the head of the government and the composition of the council of ministers. In Kashmīr under Indian control, which has become a State of the Indian Union, G. M. Ṣādiḳ, head of the local government was deposed on the 12th December 1971 and was replaced by S. M. Ḳāsim in the post of Prime Minister.

The Indo-Pakistani conflict of December 1971, which led to the independence of Banglā Desh, has had scarcely any repercussion on the problem of Kashmīr, although India wishes to take advantage of her recent victory and intends to ask Pakistan to proceed with some readjustments of the ceasefire line.

KASHMĪRĪ is the most important member of the Dardic sub-group of Indo-Aryan languages, with 2,000,000 speakers in Jammū and Kashmīr in India and about 250,000 in the adjacent region in Pakistan in 1961. While prolonged cultural influence from Northern India has brought Kashmīrī closer than the other Dardic languages to the rest of Indo-Aryan, it exhibits many of the characteristic phonological features of Dardic resulting from the separate development of the group in the Middle Indian period. Kashmīrī has also developed a complex vocalic system, involving vowel-harmony, which has made the satisfactory adaptation of the Perso-Arabic script difficult. This script is now, however, in standard use for writing the language, which is officially recognized under the Indian constitution.

There are minor phonetic differences between the language of Hindus and that of Muslims, who constitute the majority of Kashmīrī speakers; educated Muslim speech is distinguished by the preference for Arabic and Persian rather than Sanskrit words. Muslim Kashmīrī literature, less extensive than the Hindu in the earlier period, reached its first flowering only in the 19th century with adaptations of Persian themes: later, the influence of Urdū predominated, and is still to be observed in the increasing quantity of Kashmīrī writing produced since 1947.

AL-KASHSHĪ, Abū ʿAmr Muḥammad b. ʿUmar b. ʿAbd al-ʿAzīz, Imāmī traditionist flourishing in the first half of the 4th/10th century and author of one of the basic Imāmī *ridjāl* works dealing with the reliability of the transmitters from the imāms. Though his place of origin is not specified in the biographical sources, it can safely be identified as Kishsh in Transoxania [see kash] since most of the informants from whom he transmitted were from this or other towns in Transoxania and the neighbouring regions. His *nisba* thus should more properly be read al-Kishshī, though traditionally it was later read al-Kashshī in accordance with the less correct reading of the town's name as Kashsh. He studied in Samarḳand under Muḥammad b. Masʿūd al-ʿAyyāshī, the outstanding Imāmī scholar and disseminator of Imāmism in Transoxania in the early 4th/10th century. There is evidence that he visited ʿIrāḳ, since he related directly from some western Persian and ʿIrāḳī transmitters and some Imāmī scholars in Baghdād transmitted his book from him without an intermediary.

Like his teacher al-ʿAyyāshī, al-Kashshī was later criticized by Imāmī scholars for relating on the authority of weak (*ḍuʿafāʾ*) transmitters and of non-Shīʿīs (*ʿāmma*). His *Kitāb maʿrifat al-nāḳilīn ʿan al-aʾimma al-ṣādiḳīn*, which differs from other early *ridjāl* works in that it fully quotes the biographical reports of earlier sources with their chains of transmission, was abridged and expurgated by the Shaykh al-Ṭāʾifa Abū Djaʿfar al-Ṭūsī (d. 460/1067). Only this abridged version of the book is extant. Along with the *Kitāb al-ridjāl* and the *Kitāb fihrist kutub al-shīʿa* of Shaykh al-Ṭūsī and the *Kitāb al-ridjāl* of al-Nadjāshī, it is considered one of the four basic Imāmī *ridjāl* works.

(W. Madelung)

ḲASHTĀLA, Arabic name for Castile in Spain. The first, and not the least problem, is that of the original name of the territory called, from the 9th century onwards, Castilla. This name appears to be derived from Latin *castellum*, and would have been given to the region because of the abundance there of fortified places. Arabic *al-Kilāʿ* would accordingly be the expected translation, but many sources (Yāḳūt, al-Idrīsī, al-ʿUdhrī, al-Ḥimyarī, Ibn ʿIdhārī, al-Maḳḳarī, etc.) have Ḳashtāla, Ḳashtīla, or Ḳasṭīlya. Above all, al-Rāzī on several occasions mentions enemies *min aḳṣā Banbalūna wa-Alaba wa 'l-Ḳilāʿ wa-ahl Ḳashtīliya* (cf. al-ʿUdhrī, *Masālik*, who also uses al-Ḳilāʿ and Ḳashtīla). This excludes the identification al-Ḳilāʿ/Ḳashtīliya explicit or implicit in modern historians (cf. Lévi-Provençal, *Hist. Esp. musulmane*, i, 143, 204); hence one must seek another etymology, different from the Spanish late Latin (which uses predominantly *castrum*) and look for an Arab-Islamic borrowing.

One thinks naturally of the Tunisian Ḳasṭīliyya [*q.v.*], and it seems that one should follow the opinion of J. Oliver-Asín in his *En torno a los orígenes de Castilla, su toponimia en relación con los árabes y beréberes*, Madrid 1974, who cites, with phonetic equivalences, the frequency of Arabic and Berber toponyms in a region whose ancient centre was called Medina Castella. This hypothesis is partly confirmed by the frequency of "Ifrīḳiyan" toponyms in al-Andalus, cf. idem, *Les Tunisiens en Espagne à travers la toponomie*, in *Cahiers de Tunisie*, xviii (1970), 15-20. Hence according to Oliver-Asín, there must have been an "African latinisation" of the region, brought about by the latin-speaking Berbers of Tunisia (which would explain the peculiarities of this "Castilian", different from other Hispanic Roman dialects).

Al-Rāzī's text points to a juxtaposition of al-Ḳilāʿ and Ḳashtīliya under the rule of the Count Fernan Gonzalez (Fardhiland Gundishalb), which makes investigation of the relationship between the two toponyms necessary. The first known mention in Christian sources is in a Castilian document of the Abbot Vitula in 800, in the Mena valley, who speaks of the *territorio Castelle*, whilst the *Crónica Albeldense* speaks specifically of *Bardulia qui nunc vocatur Castella*. This is a region which is progressively extended, as it becomes organised as an autochthonous unit, on the topographical and juridical margins of the kingdom of Oviedo; this has led S. de Moxó, *¿Castilla, principado feudal?*, in *RUM* (1970), 229-57, to speak of an "autonomous territory". This situation away from the centre of royal power led to its constitution as a "frontier march" and the need for an immediate and local authority in the shape of a *comes* or Count (Alava, Mijangos, Oca, Barga, Pancorbo, Cellorigo, Castrogeriz, Lara, Cerezo). We now have a document drawn up in 852 *in territorio Castellense* which speaks of a *Rodericus comite in Castelle*. Castile had to fight in order to expand. This fighting comprised mainly attacks, but also replies to expeditions by the Banū Ḳasī [*q.v.*] and the Banū Dhū 'l-Nūn [*q.v.*], as well as the campaigns of ʿAbd al-Raḥmān III [*q.v.*] in 917, 920 and 924 (San Esteban de Gormaz, Mitonia, Valdejunquera). On the other hand, the famous *ghazwat al-khandaḳ* of 939 was repulsed with heavy losses by a coalition of Leonese, Castilians and Navarrese. It was at this time that Fernán Gonzalez, *comes totius Castelle*, either carried along by a feeling of Castilian autonomy or himself provoking it, obtained from the king of Leon the right to pass on his country hereditarily to his descendants. The campaigns of Ibn Abī ʿĀmir [*q.v.*] ruined the region of Leon and the Catalonian-Aragonese region, but largely spared Castile, then in revolt against Garci Fernandez, and in vassalage to Cordova; this in part explains why, after the fall of the ʿĀmirids, the initiative passed almost wholly to this region.

This primitive region of Bardulia, Castella Vetula, was to pass on not only its dialect of Spanish and some of its institutions to the neighbouring regions (above all, New Castile), but also an ideology of conquest (reflected by the "chansons de geste") which in the end monopolised in effect the war against the Hispano-Arabs and imposed a political supremacy which involved the extinguishing of the "mudéjar" [*q.v.*] tolerance of Aragon. At one and the same time, Castile brought about, to its own profit, the unification of Spain.

(P. Chalmeta)

BANŪ **ḲASĪ**, one of the important *mawālī* families who figure prominently in the history of al-Andalus. Together with the Banū Ṭawīl and the Tudjībids [*qq.v.*], they divided between them effective power in the region of Aragon. The history of this region only becomes clear when considered in the light of the centripetal-centrifugal struggles which are a constant feature of Spanish history. The Banū Ḳasī followed an opportunistic policy in order to preserve their virtual autonomy, but they were at the same time relatively faithful to the Umayyads and served in a very real fashion as a shield against pressure from the Christians of the North in the period of the beginning of the Reconquista and from the Carolingians. Their heyday was thus in the 3rd/9th and 4th/10th centuries.

According to Ibn Ḥazm, *Djamharat ansāb al-ʿArab*, 502, "Ḳasī was Count of the [Upper] March in the time of the Goths. When the Muslims conquered al-Andalus, he went to Syria and became a Muslim at the hands of al-Walīd b. ʿAbd al-Malik, a bond of patronage of which he was very proud. This is the reason why the Banū Ḳasī always took the side of Muḍar in their fights with Yemen. This Ḳasī gave birth to Fortūn . . .". The first really well-known member of this family was Mūsā b. Fortūn, who vanquished Saʿīd b. al-Ḥusayn al-Anṣārī who had rebelled against Hishām I in the region of Tortosa and Saragossa in 172/788-9. On his death, his widow remarried with Iñigo Arista, the first ruler of Pamplona. One can readily discern in the links arising from this union a major cause of the intermediary role played by Mūsā b. Mūsā, kinsman to the Basques, who gave himself out as the "third king of Spain" (see on him Cl. Sanchez Albornoz, *La auténtica ba-*

talla de Clavijo, in *CHE*, ix (1948), 96-116, and idem, *El tercer rey de España*, in *ibid.*, xlix-1 (1969), 5-49).

In *ca.* 226/840-1, Mūsā b. Mūsā, at that time at Arnedo (as governor?) was ill-treated by the *wālīs* of Saragossa and Tudela (thus according to al-ʿUdhrī's version) and rebelled, capturing the commander Ḥarīth b. Bazīʿ. An expedition sent by ʿAbd al-Raḥmān II forced him to submit, but he retained Arnedo, and in this peace agreement the *amīr* confirmed his half-brother Yannaḳo b. Yanniḳo (= Iñigo Iñiguez) in possession of his lands for a tribute of 700 dīnārs per annum; this marks the birth *de jure* of the kingdom of Pamplona. The raids which followed with the aim of bringing him to submission were systematically directed against his Basque allies, showing the importance of their support. In 230/844 Mūsā marched down with his troops as far as Seville in order to repulse an invasion of the Northmen. In *ca.* 236/851 he captured Emenon, Count of Périgord and the Duke of Gascony, in what seems to have been a "proto-Crusade" and in what was fierce fighting. This important victory explains to a considerable extent why the succession of Muḥammad I in 238/852 marks a new stage in relations with the central government and why Mūsā became governor of Huesca, Tudela and Saragossa. In 242/856 he raided the region of Barcelona on the *amīr*'s orders and conquered Tarrasa. It is at this time that he began to style himself "tertium regem in Spania". According to the *Crónica de Alfonso III*, between 243/857 and 245/859 the rebels in Toledo involved Mūsā's help, and he sent to them his son Lubb as governor. But *ca.* 245/859 he was decisively defeated by Ordoño I of Leon and lost the fortress of Albelda which he had just built; hence the *amīr* deposed him from the governorship of the Upper March in 246/860-1. The end of Mūsā, mortally wounded by his son-in-law Azrāḳ b. Mantīl, is given in detail by Ibn al-Ḳūṭiyya.

For ten years after 248/862-3 the Banū Ḳasī were completely quiescent. Then in 257/870-1 Lubb b. Mūsā b. Mūsā occupied Saragossa, Tudela and Huesca. After his death in 258/872, his brother Ismāʿīl b. Mūsā seized the town, whilst Fortūn b. Mūsā occupied Tudela. The *amīr* Muḥammad sent several unsuccessful expeditions against him. The rebel was captured in 270/883 by Muḥammad b. Lubb, who then took his place, but who had to sell the town in the following year to the Umayyads because he was unable to withstand the pressure from the Tudjībids stirred up by the *amīr*. In exchange he received the governorship of Arnedo, Tarazone and Djarīsh, and later that of Tudela. He was killed whilst besieging Saragossa in 276/890; it has been suggested that he was conniving with ʿUmar b. Ḥafṣūn [*q.v.*], but al-ʿUdhrī says nothing of this. His son Lubb b. Muḥammad was governor of Tudela and Tarazone and died fighting the Navarrese in 294/907. The decay of the Banū Ḳasī henceforth became accentuated. Muḥammad b. Lubb occupied Lérida, but was expelled by its inhabitants in 315/927, and in 317/929 he was murdered as a result of the ambitions of his brother-in-law Raymond, lord of Pallars.

ḲĀṢID [see safīr].

ḲAṢĪDA.

1. In Arabic. — *Ḳaṣīda* collective *ḳaṣīd* is the name given in Arabic to some poems of a certain length. It is derived from the root *ḳaṣada*, "to aim at", for the primitive *ḳaṣīda* was intended to eulogize the tribe of the poet and denigrate the opposing tribes. Later it was concerned with the eulogy of a personality or a family from whom the poet was soliciting help or subsidies. Although the funerary elegy (*marthiya* or *rithāʾ*) does not seem to have been included originally under the same designation, the form of the *ḳaṣīda* may nevertheless be classified in this poetic genre. On the other hand, the poetic satire (*hidjāʾ*), which, furthermore, does not go beyond insult in verse, is often called *ḳaṣīda* by the ancient poets, even though it does not present all the characteristics of the *ḳaṣīda*.

The classical *ḳaṣīda*, represented ideally by the pre-Islamic or at least archaic poems [see muʿallaḳāt], collected and perhaps also given their form during the first centuries of Islam, has been defined by Ibn Ḳutayba in a famous passage many times translated and commented upon (see Gaudefroy-Demombynes, *Introduction au Livre de la poésie et des poètes*, Paris 1947, xvi-xviii, 13-15, 54-55), and then by the various literary critics who pronounced their judgments (particularly Ibn Rashīḳ, see A. Trabulsi, *La critique poétique des Arabes*, Damascus 1955, *passim*). It contains a series of successive developments whose conventional character implies a tradition already immemorial. The *ḳaṣīda*, which numbers at least seven verses, but which generally comprises far more, consists essentially of three parts of variable length: (1) a prologue in which the poet sheds some tears over what was once the camping place of his beloved now far off (*bukāʾ ʿalā ʾl-aṭlāl*), then describes the charms of the latter, which he forebears to pursue (the *nasīb* [see ghazal]). (2) The poet's narration of his journey (*raḥīl*) to the person to whom the poem is addressed. This part of the *ḳaṣīda* is a pretext for descriptions of the desert and the hero's mount, as well as for lyrical flights of eloquence, for example on the insignificance of man. (3) As a general rule, this *raḥīl* leads without any great transition into the central theme, constituted by the panegyric of a tribe, a protector or a patron, or in satire of their enemies.

The Arabic *ḳaṣīda* is a very conventional piece of verse, with one rhyme, whatever its length, and in a uniform metre. Consequently, the charm and originality of certain of the themes employed cannot prevent boredom and monotony from reigning over these never-ending poems. These formal constraints were moreover resented by the poets themselves; they are without doubt the cause of the fragmentary character of many of the pieces, which took a particularly long time to compose. Tradition reports numerous examples of poets paralysed by the tyranny of the form. Furthermore, this situation can no doubt provide a good explanation for the hesitations with regard to the original structure of a given poem: a poet could well have recited a *ḳaṣīda* on different occasions with more or less important variants, additions or suppressions. A number of *ḳaṣīdas* have doubtless never contained all the essential parts of the ideal piece, and it is always very unwise to assert that such a poem has been lost or truncated on the pretext that one knows only a part of the work. Certain ancient pieces, nevertheless describable as *ḳaṣīdas*, do not even contain the essential part, praise or satire.

At the end of the 2nd/8th century, the classical *kaṣīda*, while it continued its triumphant reign among poets with a classical tendency, on the other hand bursts forth among the "modern" poets and gives birth to a whole series of autonomous poetic genres, which are however already present in embryo form in the themes employed by the classical *kaṣīda*; thus the *nasīb* gives birth to the erotico-elegiac genre, directly associated with the Bacchic genre; the description of the desert becomes description of nature and gardens; the description of the mount and the ride results in the poetry of war or hunting; etc.

All these genres are represented in independent pieces, to which the name of *kaṣīda* continues often to be given, even though incorrectly. The long classical metres become shorter, and lend themselves better to musical adaptation.

The tripartite form of the *kaṣīda* survived through the agency of the post-classical poets who did not always observe it strictly (see notably R. Blachère, *Abou ṭ-Ṭayyib al-Motanabbī*, Paris 1935, *passim*), until the modern period in its neo-classical form. The Bedouin or partially sedentarised societies—as in Mauritania—still cultivate it with delight.

The classical or neo-classical *kaṣīda* can in certain cases be a vehicle for information of a historical nature. It is always advisable to use it in this respect only with the greatest prudence (see further M. Canard, *Les allusions à la guerre byzantine chez Abū Tammām et Buḥturī*, in A. A. Vasiliev, *Byzance et les Arabes*, i, Brussels 1935, 397-403).

The collective *kaṣīd*, designating in the aggregate these ample and elaborate pieces, was in ancient times opposed to the *radjaz* [*q.v.*] which is a rough and everyday verse form, in a rudimentary metre of constant structure.

Bibliography: The classical bibliography is immense. It is to be found, in an almost exhaustive state, in R. Blachère, *HLA*, as much in the "general references" i, XVIII-XXXIII, as at the end of the chapters or paragraphs dedicated to archaic poetry; see especially i, 82-186, ii, 243-453, iii, 455-716. See also, ʿARŪḌ, GHAZAL, HIDJĀ, SHIʿR.

Among the more recent studies, one should see especially: M. C. Bateson, *Structural continuity in Poetry*, Paris-The Hague 1970; R. Jacoby, *Studien zur Poetik der altarabischen Qaṣīde*, Wiesbaden 1971; J. E. Bencheikh, *La création poétique à Bagdad de 200 à 250. Modes et procédés* (forthcoming).

On contemporary survivals, see M. el-Moktar Ould Bah, *Introduction à la poésie mauritanienne*, in *Arabica*, xviii (1971), 1-48.

2. In Persian. — The Persian *kaṣīda* is a lyric poem, most frequently panegyric, which appears in this form in the earliest Persian poetry (G. Lazard, *Les premiers poètes persans*, i, Paris 1964, 12). Later theorists of this poetry codified its forms with undeviating constancy. In their view, the *kaṣīda* is one of the realisations of the rules they imposed on poetry, which, according to Naṣīr al-Dīn al-Ṭūsī (*Miʿyār al-ashʿar*, written in 649/1251, ed. Tehran 1942, *faṣl* 1 of the introd.), consists of metre and rhyme, which provided him with the sections of his treatise. His predecessor Shams-i Ḳays (*al-Muʿdjam fī maʿāʾīr ashʿār al-ʿadjam*, completed after 630/1232, ed. Tehran 1960, 196) even insisted: "even if the discourse has a metre, if it is not in rhyme it is not poetry". The first theorists whose work is extant (al-Rādūyānī, *Tardjumān al-balāgha*, written in the 5th/11th century, Istanbul 1949; Rashīd al-Dīn Waṭwāṭ, *Ḥadāʾiḳ al-siḥr fī daḳāʾiḳ al-shiʿr*, written in the 6th/12th century, Tehran 1961; for the others, see Ḳazwīnī, intro. to the *Muʿdjam* of Shams-i Ḳays, 11) were still rhetoricians, and their writings reveal the essential norms imposed on the Persian panegyric lyric. More than a mere knowledge of rhyme, prosody and rhetoric were needed for the composition of a *kaṣīda*: the author had to be well-versed in the learning of his day so that he could make timely use of it and had to possess, above all, what Niẓāmī ʿArūḍī called *badīha*, the ability to improvise (*Čahār maḳāla*, written in the mid-6th/12th century, Tehran 1963, 48), which was worth a fortune to many of the poets at court. The golden age of the *kaṣīda* was also the great era of poetic theory, so much so that each found in the other its main field of activity. The theoretical works produced after the 7th/13th century, which are still best known in the West through translations (by Blochmann, Garcin de Tassy, Gladwin and Rückert), have little to teach us about the *kaṣīda*.

The theorists of Persian poetry borrowed their terminology from Arabic, but none, at least of those whose work has been cited, ever omitted to point out the difference between the two types of poetry of which they were aware. The *ʿarūḍ*, that is the ending of the first hemistich (*miṣrāʿ*) of the first distich (*bayt*) of the *kaṣīda*, had to supply the one single rhyme for the whole poem. The rhyme was repeated in each *ḍarb*, the final part of the second hemistich of each distich, according to complex rules. No study has yet been made of these rules, but fortunately we do have P. N. Khānlarī's basic study of Persian metre (*Wazn-i shiʿr-i fārsī*, Tehran 1969). Quantitatively, a poem cannot be a *kaṣīda* unless the number of its distichs exceeds 15 and does not exceed 30. As a general rule, the poet must ensure that the meaning of each *bayt* is independent of its neighbours; in Persian poetry, *taḍmīn* [*q.v.*] is an error unless it is dictated by a rhetorical figure. The *kaṣīda* comprises three parts; The first, the exordium, must command attention by touching the hearts of the listeners, an effect which is often achieved by a *ghazal*, a courtly song, either by describing the beauty of the beloved and the state of the lover (*nasīb*), or through the amorous poet making his listeners share in his condition (*tashbīb*); by the time of Shams-i Ḳays, these distinctions no longer existed, as he himself remarks (*Muʿdjam*, 413), because of the wealth of the subjects treated in the exordium: mainly love, nature and wine. The *kaṣīda* is first and foremost a poem composed for a princely festival, especially the spring festival (*nawrūz*) and the autumn one (*mihrigān*); it can also be a poem on the occasion of a funeral, a victory or an earthquake, the themes being adapted according to the circumstances. The *madḥ*, eulogy for a prince or protector, is the central portion of the *kaṣīda*; put into a sensitive frame of mind by the exordium (*tashbīb*), the listener will be carried away by the poet's skill; all that is required is a degree of rhythm in the eulogy, a strong effect of *balāgha* (a wealth of meaning in a few words) but an uncontentious one, and the transport of the soul out of its ordinary element (cf. *Čahār maḳāla*, 42). After the eulogy comes the petition: the poet must know how to "wrap up" his request, says al-Rādūyānī (*op. cit.*, 128), stirring the person being praised to reward him by the charm of his poem and the renown it engenders. Three *bayts* require particular care: the first (*maṭlaʿ*), because it opens the poem and signals all the areas of expression; the transitional *bayt* (*makhlaṣ*) between *tashbīb* and *madḥ*, which must

skilfully introduce the name of the person being eulogised; and the last bayt (*maḳtaʿ*), which must be of a quality that redeems any mediocrities in the work.

Among the variations in the *ḳaṣīda* and its components with which have emerged through the ages two types of poem that appeared very early on are especially significant: the *tardjīʿ*, a *ḳaṣīda* (cf. *Muʿdjam*, 400) written in a single metre composed of parts which each have their own rhyme and are separated by a distich (*tardjīʿ band*) that often serves as a refrain; and the *musammaṭ*, a *ḳaṣīda* (cf. *Tardjumān*, 104-5) made up of rhyming figures.

From the outset, the *ḳaṣīda* was connected with courtly life in Iran, where it perpetuated poems recited in honour of the Sāsānid kings, and it had almost as many schools as there were important dynasties, at any rate until the arrival of the Mongols. This latter precipitated a group of phenomena which had begun earlier, principally the breaking up of the "feudal" system and a liberalisation of city life and the extension of the religious way of life and expression to differing sectors of society. The *ḳaṣīda* was in turn philosophic, mystic, meditative, then hymnodic under the Ṣafawids, and panegyric once more when it returned to the ancient style under the Ḳādjārs. In fact, it ceded to the *ghazal* [*q.v.*] its privileged place in Persian lyric poetry.

The Persian *ḳaṣīda*, a homogenous phenomenon of a great culture, is a largely unexplored field open to the modern study of mediaeval poetry. Its authors were acutely aware that the poetic ethos was embodied in form (in the sense employed by P. Zumthor); regardless of its later destiny, the *ḳaṣīda* made a definitive mark on Persian poetry.

3. In Turkish. — It was under the influence of classical Iranian literature that the Muslim Turks adopted and developed the *ḳaṣīda*, a verse form very different from their own traditional poetry. The Turkish *ḳaṣīda* has the same rhyme scheme and metric patterns as the *ḳaṣīda* in Arabic and Persian and at first appears very similar, though in fact, a study of the subject matter, the *nasīb*s, and the organisation of the poems shows that there are considerable differences. At first the Turks tended to use the *mathnawī* and quatrain (*ḳiṭʿa*) which, to some extent, resembles their own older verse forms, rather than the *ḳaṣīda* and *ghazal*. The fact that the earliest verse works in Islamic Turkish literature, such as *Kutadgu bilig*, *ʿAtabat al-ḥaḳāʾiḳ* or *Dīwān-i ḥikmat*, are written in the *mathnawī* and *ḳiṭʿa* forms, supports this view.

Variation in the form and nature of the *ḳaṣīda* were inevitably the reflection of the geographical, social, economic and cultural differences between the Arab, Iranian and Turkish worlds. It is easy to see these differences in the first and best-known section of the *ḳaṣīda*, the *nasīb* or the *tasbīb*. In this opening section, the Arabs usually chose love themes or descriptions of desert life, while the Persians and above all, the Turks tended to rhapsodise on the beauties of their native lands or to describe geographical phenomena or social events.

Theoretically, a complete Turkish *ḳaṣīda* should contain six sections: *nasīb*, *taghazzul*, *girīzgāh*, *madḥiyya*, *fakhriyya* and *duʿāʾ*. The *nasīb* is the *ḳaṣīda*'s longest section, and the subject which it describes often gives its name to the whole poem. A great variety of subjects is possible: religious fervour, love, nature, wise or moralising thoughts, buildings, war or peace, descriptions of towns, holy days and festivals, mourning or rejoicing. If a *ḳaṣīda* has a section embracing subjects more often found in *ghazal*s, such as love or wine, then this section is called *taghazzul*. The passage marking the transition from the *nasīb* to the main part of the *ḳaṣīda* consists of one or more couplets and is called *girīz* or *girīzgāh*.

The couplets known as the eulogy or *madḥiyya* comprise the central part of the *ḳaṣīda*, and it is here that the poet praises the person to whom the *ḳaṣīda* is addressed. The recipients of *ḳaṣīda*s were usually men who held high office in the state, such as sultans, viziers or *shaykh al-islām*s or they might be palace officers, men of religion or men of wealth. This section is always fairly long, and usually comprises the real reason for writing the poem. In cases where the poet hopes to ingratiate himself with influential people and receive in return favours or office, then the exaggerated praise usually exceeds reasonable bounds and detracts from the sincerity of the works. The *fakhriyya* is the last but one section of the *ḳaṣīda* where the poet praises himself; and in the final section, the *duʿāʾ*, the poet implores God for the prosperity of the Sultan or person to whom the *ḳaṣīda* is addressed, and expresses his thanks for the completion of the work.

However, Turkish *ḳaṣīda*s do not invariably contain all these sections. Very often, one or more are left out, the most frequent omissions being the *taghazzul*, *fakhriyya* and *duʿāʾ* sections. For example, the greatest Turkish *ḳaṣīda* writer, Nefʿī of Erzurum ([*q.v.*], 979/1572?-1044/1635) wrote some *ḳaṣīda*s which contain all these sections, and so did Fighānī of Trabzon ([*q.v.*], 920/1505?-937/1532) and Nedīm of Istanbul (1092/1681-1142/1730). Nevertheless, the *dīwān*s of these and many other poets contain *ḳaṣīda*s with no *taghazzul* or *fakhriyya* and some even with no *nasīb*. The subject and arrangement of the Turkish *ḳaṣīda* has thus varied according to the poet, the era, the place, and the social conditions.

In Turkish, as in Arabic and Persian *ḳaṣīda*s, the first couplet is *muṣarraʿ*, that is, the first two hemistiches are rhymed. Thereafter, the second hemistich in each couplet rhymes with the first couplet. The first couplet is called the *maṭlaʿ* and the one towards the end where the poet reveals his pen-name (*makhlaṣ*) is called the *tādj bayt*. Turkish also adopted the term *bayt al-ḳaṣīd* for the couplet considered the finest in the poem. The usual length of a Turkish *ḳaṣīda* is between 15 and 99 couplets, but in fact, some longer ones exist.

*Ḳaṣīda*s may take their name from the general subject matter. One inspired by the unity and existence of God and describing His qualities and acts is called *tawḥīd*, while a supplication and prayer to God is called *munādjāt*. *Naʿt* is the name for a *ḳaṣīda* praising and expressing devotion to the Prophet Muḥammad. A *ḳaṣīda* in praise of a great man describing his virtues and achievements is called *madḥiyya*, while a satirical *ḳaṣīda* attacking an enemy or someone of whom the poet disapproves is called *hidjwiyya*. Also, it is common in classical Turkish literature to name the *ḳaṣīda* after the subject of the

nasīb. Hence *ķaṣīdas* describing spring, summer, autumn or winter are called *bahāriyya*, *ṣayfiyya* (or *tammūziyya*), *khazāmiyya* and *shitā'iyya* respectively. If the *nasīb* describes a festival or New Year's Day, then the *ķaṣīda* is called *bayramiyya* (or *'īdiyya*) or *nawrūziyya*. A Ramaḍān *ķaṣīda* is a *Ramaḍāniyya*; *ķaṣīdas* commemorating a royal accession, circumcision or wedding, or a death are *djulūsiyya*, *sūriyya* and *marthiyya*. *Ķaṣīdas* can also take their name from the letter of the rhyme or from the word repeated after each rhyme (*radīf*). If, for example, the rhyme letter is *lām*, *mīm* or *rā'*, then the *ķaṣīda* is a *lāmiyya*, *mīmiyya* or *rā'iyya*. Similarly, if the *ķaṣīda* has a *radīf* such as *ṣu*, *sünbül* or *kerem*, then it would be named accordingly. Some *ķaṣīdas* describe particular cities which then gave their name to the poem, such as the Edirne, Istanbul or Baghdād *ķaṣīdas*. Others describe things, places or events such as appointments or removals from office, and hence one finds the *Nile ķaṣīda*, the *Polish Campaign ķaṣīda*, *ķaṣīda on the return from the German Campaign*, *ķaṣīda on the building of the mosque* or *pavilion*, the *ḥalwā-party ķaṣīda*, congratulatory *ķaṣīdas* (*tabrīkiyya*), appointment *ķaṣīdas* (*tawdjī'iya*) or dismissal *ķasīdas* (*'azliyya*). Even after the Tanẓīmāt, *ķaṣīdas* continued to be written in accordance with modern thoughts and feelings, cf. Nāmıķ Kemāl's [*q.v.*] *Freedom ķaṣīda*.

Ķaṣīda writing in Turkish began to develop in the 7th/13th century with Dehhānī and in the 8th/14th with Aḥmadī, Aḥmad-i Dā'ī and Shaykhī. In the 9th/15th century, with such poets as Aḥmad Pasha, Mihrī Khātūn, Nedjātī and Mesīḥī, it became a widely accepted and popular form. In the 10th/16th century, the golden age of classical Turkish verse, it reached a high level of accomplishment through the efforts of such poets as Revānī, Lāmi'ī, Fighānī, Ḥayretī, Dhātī, Khayālī, Fuḍūlī, Fevrī, Nev'ī and Bāķī. But the greatest Turkish *ķaṣīda* writer, Nef'ī, lived in the following century. The other famous 11th/17th century poets—Waysī, 'Azmī-zāde, Ḥāletī, 'Aṭā'ī, Ṣabrī, Nā'ilī, Neshātī and Nābī—never reached the same standard as Nef'ī, but nevertheless show great maturity in technique and in handling of the subject matter. In the 12th/18th century, the *ķaṣīda* partly managed to retain its old status, thanks to the poetic genius of Nedīm at the beginning and Shaykh Ghālib at the end of the century, but in general it lost its old artistry, scope of subject matter and novelty of expression. Poets like Thābit, Naẓīm, Sāmī, Sayyid Wehbī and Ḥāmī-yi Āmidī kept the form alive, but the *ķaṣīda* was by this time becoming outmoded; it was a form tied to a single rhyme and could hardly help being repetitious. In these circumstances it could only die out.

However, the generation following the Tanẓīmāt (122/1839) continued to express the new thought in this form. Shināsī ([*q.v.*], 1239-1288/1824-1871), Ḍiyā Pasha ([*q.v.*], 1240-1297/1825-1880) and Nāmıķ Kemāl all occasionally wrote *ķaṣīdas*. Today the form has disappeared; modern social and cultural conditions are hardly favourable.

4. In Urdu. — In Urdu poetry, it is the *ghazal* that takes pride of place, both quantitatively and qualitatively, and the *ķaṣīda* is less important. It is the generally accepted view that only two Urdu poets, Sawdā and Dhawķ [*qq.v.*], composed *ķaṣīdas* of a standard comparable with that achieved in Persian by Anwarī and Khāķānī [*qq.v.*]. Most Urdu *ķaṣīdas* are, formally speaking, encomia addressed by the poet to his actual or intended patron; in this aspect, they are designed above all else to display both his virtuosity in the craft of poetry and the range of his learning. A more lasting value derives from the fact that the form also offers the poet scope for the extended expression of his feelings on any poetic theme that inspires him; and some *ķaṣīdas* are definable as such only in terms of form (length and rhyme-scheme). Thus one of Sawdā's most famous poems in *ķaṣīda* form is a *shahrāshūb*, a bitter and indignant commentary on the political, social, economic, cultural and spiritual degeneration of society in the Mughal Empire of his day. Ghālib [*q.v.*] who, however, wrote most of his *ķaṣīdas* in Persian and only a few in Urdu, in general dispenses with the praise of his patron in a few lines, and devotes the bulk of the *ķaṣīda* to the elaboration of his views on life and love and poetry.

(R. RUSSELL)

ĶĀSIM, the name of several Ottoman princes.

1. ĶĀSIM, son of the second ruler of the Ottoman dynasty, Orkhān. All that is known of him is that he died in 748/1347.

2. ĶĀSIM ČELEBI or Ķāsim Yūsuf, one of the seven sons of Bāyezīd I, b. 792/1390. Since he was too young to take part in the battle of Ankara (1402), he remained at Bursa. After the defeat and capture of his father there began a struggle for power amongst his elder sons, Sulaymān, 'Īsā, Muḥammad and then Mūsā. When Sulaymān retreated towards the Ottoman territories in the Balkans, he passed through Bursa and took with him Ķāsim and his sister Fāṭima. Shortly afterwards Ķāsim was sent as a hostage to the Byzantine emperor Manuel II and remained at Constantinople till his death in 820/1417. According to certain traditions, he was buried in the church of the monastery of St. John of Studion (which became the Imrahor Djāmi' after the Ottoman conquest).

3. ĶĀSIM, son of Sultan Meḥemmed I, died in 809/1406 at the age of one or two years only.

4. ĶĀSIM, son of prince Aḥmad and grandson of Bāyezīd II. Born *ca.* 906/1501, died in 924/1518. Soon after his accession, in March 1512, Selīm I put to death his brothers, but met the resistance of two of his nephews, Murād and Ķāsim, sons of Aḥmad. They speedily fled abroad, Murād to the Persian ruler Shāh Ismā'īl I (he may have been one of the causes behind Selīm I's Persian campaign; he escaped from him after the battle of Čaldirān, and died in 1517, possibly poisoned or possibly murdered; certain accounts further identify him with the Ottoman pretender who suddenly appeared at Amasya in 1519). Ķāsim (whom Von Hammer calls 'Alā' al-Dīn and whom he makes die of the plague soon after his arrival in Cairo) fled to Egypt and the Mamlūk sultan; after the conquest of Egypt, Selīm tried to seize Ķāsim, and although he succeeded temporarily in eluding the

Ottoman sultan, he was captured in January 1518 and immediately killed.

5. ḲĀSIM, one of the nine sons of Sultan Aḥmad I, born in 1022/1613 of the same mother as Sultans Murād IV and Ibrāhīm I, the famous Kösem Māh-peyker; he lived in confinement within the Palace till his death. Murād IV, afraid of the possibility of his brothers' seizing power or being raised to the throne in a revolt, had them all killed successively, with the exception of Ibrāhīm; Ḳāsim was executed on 2nd Shawwāl 1047/17th February 1638.

(R. Mantran)

al-ḲAṢĪM, a district in northern Nadjd in the central part of the kingdom of Saudi Arabia. Lying west of the northern end of the long scarp of Ṭuwayḳ [*q.v.*], the district is intersected by the lower reaches of Wādī 'l-Rumah [*q.v.*] shortly before that great watercourse loses itself in the eastern sands.

In classical Arabic the term *ḳaṣīm* (nom. unit.: *ḳaṣīma*) is applied to sandy areas where the *ghaḍā* bush abounds. This description fits the district, which has large masses of sand to the north (ʿIrḳ al-Maẓhūr), the east (Nafūd al-Thuwayrāt), and the south (Nafūd al-Sirr), all of which curve round the contour of the Arabian Shield [see DJAZĪRAT AL-ʿARAB, ii]. The district also contains smaller stretches of sand running contrary to the Shield's contour, such as Nafūd al-Ghamīs, which trends from west to east.

The twin cities of Burayda (the present capital) and ʿUnayza [*qq.v.*] form the heart of al-Ḳaṣīm. Farther up Wādī 'l-Rumah is al-Rass, the main outpost of the district on the side towards al-Ḥidjāz. North of al-Rass are al-Khabrā', al-Bukayriyya with its neighbour al-Hilāliyya (both originally colonies of the tribe of Subayʿ), al-ʿUyūn (ʿUyūn al-Djiwā') and Ḳuṣaybā'. Along the eastern edge of al-Ḳaṣīm in a line from north to south are the oasis settlements of Aba 'l-Dūd, al-Tannūma and ʿAyn Ibn Fuhayd, which, along with other places, are known collectively as al-Asyāḥ ("the Plains"). This line is continued farther south by al-Shamāsiyya, al-ʿAwsadjiyya (or al-ʿAwshaziyya) and al-Midhnab.

Among the districts of Nadjd, al-Ḳaṣim stands out for the relative richness of its natural and human resources. When stockraising was one of the principal occupations of Arabia, al-Ḳaṣīm was known abroad for the fine quality of the horses brought to market there by the nomad breeders. The Ḳuṣmān (pl. of Ḳaṣīmī) are a talented and industrious people whose trading branches as far away as Egypt and India made them for a long time the most cosmopolitan of the inhabitants of Nadjd (on the caravaneers of al-Ḳaṣīm, see ʿUKAYL).

References in the Arab geographers and the old poets indicate that the district has borne the name of al-Ḳaṣīm since pre-Islamic times. The inhabitants supported Khālid b. al-Walīd as Islam established its ascendancy in central Arabia. Among the tribes once roaming there were ʿAbs of Ghaṭafān, Banū Asad and Tamīm [*qq.v.*]. Of these, only Tamīm is still present in force, the others having been succeeded by members, sometimes settled, of Subayʿ, Muṭayr, Ḥarb, Banī Khaḍīr, etc.

In the 5th/11th century Dārim of al-Rass built up a state including other parts of Nadjd as well, but its decline was fairly rapid after his death. No authentic records attest to the founding of any of the main towns now existing before the 10th/16th century. The district was preoccupied with local affairs and petty conflicts until 1182/1768-9, when Āl Suʿūd of al-Dirʿiyya in al-ʿĀriḍ [*q.v.*] to the south, bent on securing the adherence of the rest of Arabia to the doctrines proclaimed by Muḥammad b. ʿAbd al-Wahhāb [*q.v.*] by force of arms if necessary, dispatched the first expedition into al-Ḳaṣīm. Many of the Ḳuṣmān enthusiastically accepted Ibn ʿAbd al-Wahhāb's interpretation of Islam, but others stubbornly clung to their ingrained beliefs and practices. A leading figure in the ultimate winning over of al-Ḳaṣīm to the unitarianism (*al-daʿwa ila 'l-tawḥīd*) of Ibn ʿAbd al-Wahhāb was Ḥudjaylān b. Ḥamad of the ʿAnāḳir of Tamīm, governor of Burayda for Āl Suʿūd from the late 12th/18th century until the invasion of Nadjd by Ibrāhīm Pasha of Egypt. On his way back home in 1234/1818 Ibrāhīm took Ḥudjaylān to Medina, where he died an octogenarian.

After the destruction of Āl Suʿūd's capital al-Dirʿiyya [*q.v.*] by Ibrāhīm's forces, its place was taken by al-Riyāḍ [*q.v.*]. For nearly a century afterwards al-Ḳaṣīm, as the key intermediate district, was the bone of contention between Āl Suʿūd of al-Riyāḍ and the new rival power of Āl Rashīd with its base at Ḥā'il in Djabal Shammar [*q.v.*] northwest of al-Ḳaṣīm. Whichever side held al-Ḳaṣīm tended to dominate the other side, and the tide of battle kept flowing back and forth. Internal dissensions in al-Ḳaṣīm, particularly between Burayda and ʿUnayza as well as between contending aspirants to political control in both cities, prevented the district, despite its resources, from effectively resisting for long the hegemony of one or the other of the opposing houses. The issue between the two protagonists was finally decided in the early 14th/20th century with the defeat of Āl Rashīd in al-Ḳaṣīm by ʿAbd al-ʿAzīz Āl Suʿūd, even though Āl Rashīd then had the support of regular Ottoman troops.

In recent times many of the Ḳuṣmān, above all the people of Burayda, have been among the most devout and energetic proponents of Ibn ʿAbd al-Wahhāb's unitarianism. Great progress in communications, education and other fields has, however, somewhat tempered the severity of the puritanical spirit of the Ḳuṣmān.

ḲĀSIM b. AṢBAGH b. MUḤAMMAD b. YŪSUF b. NĀṢIḤ b. ʿAṬĀ' AL-BAYYĀNĪ, ABŪ MUḤAMMAD, famous traditionist, philologist, historian and genealogist, *mawlā* of the Spanish Umayyads,

who was born at Baena (Bayyāna) in the *kūra* of Cordova in 244/859 or 247/862 and died in the capital in 340/951-2. At Cordova, he was the pupil of Muḥammad b. Waḍḍāḥ, al-Khushānī and other noted scholars. In 274/887, he made an extended trip to the Orient, and in Mecca, Baghdād, Egypt, Ḳayrawān and other cities acquired an education in tradition, the Ḳurʾānic sciences, poetry and history from the various renowned specialists in these subjects; amongst his masters were a son of Aḥmad b. Ḥanbal, Thaʿlab, al-Mubarrad and Bakr b. Muḥammad al-Tāhartī. He acquired also a knowledge of the numerous works of Ibn Ḳutayba. On his return to Spain, people flocked to him from all parts to hear his instruction; ʿAbd al-Raḥmān III and his son al-Ḥakam were amongst his numerous pupils.

Ḳāsim b. Aṣbagh introduced into Spain the works of Ibn Ḳutayba and other *adab* works, including the *Maʿārif*, the *Adab al-kuttāb*, which was highly regarded and much commented upon, as well as the *Gharīb al-Ḳurʾān* and *Mushkil al-Ḳurʾān*. For his part, he wrote a *muṣawwaf* based on the *Sunan* of Abū Dāwūd and following the plan (*abwāb*) of Ibn al-Djarūd's *al-Muntaḳā*, and an abridgement of this last called *al-Mudjtanā*, dedicated to al-Ḥakam and containing 2,490 traditions divided into 6 volumes. He also wrote a fine work on genealogies, one on the honorific titles of the Umayyads, Ḳuraysh and Kināna, a *Kitāb fi'l-nāsikh wa'l-mansūkh*, and another work on the rare *ḥadīth*s of Mālik b. Anas not found in the *Muwaṭṭaʾ*; but none of these seem to have survived. Accordingly, the most important of Ḳāsim b. Aṣbagh's works is for us his translation of Orosius's *Historiarum libri septem adversus paganos*, which he did in collaboration with a Mozarab; this work, of both historical and geographical interest, was of immense importance in the development of geographical literature in al-Andalus, and Aḥmad al-Rāzī, Ḳāsim b. Aṣbagh's disciple, utilised it to a considerable extent.

AL-ḲĀSIM B. **ʿĪSĀ** B. IDRĪS, ABŪ DULAF, Arab military commander, poet and musician, d. at Baghdād between 225/840 and 228/843. His tribe of the ʿIdjl was part of the great confederation of the Bakr b. Wāʾil and of the Rabīʿa group. The fortunes of the family seem to have been linked to the spread of the ʿAbbāsid propaganda by an accident of birth, in that Abū Muslim [*q.v.*], the future *dāʿī* for the dynasty, first saw the light in the house of ʿĪsā b. Maʿḳil, brother of Idrīs, the grandfather of Abū Dulaf.

This family settled at Karadj [*q.v.*], near to Nihāwand, where it possessed vast estates. Abū Dulaf's father began to construct the palaces and fortresses of a compact ʿIdjlī fief, of which Abū Dulaf himself was to be the brilliant representative at the caliphal court in Baghdād. However, we know comparatively little about his military career. On 15 Djumādā II 195/15 March 811 he commanded, on the orders of the caliph al-Amīn, the right wing of the army led by ʿAlī b. ʿĪsā against Ṭāhir b. al-Ḥusayn; but this army dispersed without fighting when its commander was killed in an assassination incident. This participation clearly affected adversely Abū Dulaf's interests. When al-Maʾmūn became caliph, he gave orders for measures against him; later, he reproached him for allowing panegyrics considered semi-blasphemous to be addressed to himself by the poet ʿAlī b. Djabala al-ʿAkawwak [*q.v.*], who was executed. This hostility had at least one further motive behind it; the ʿIdjlī chief was a fervent partisan of the ʿAlids. At a time when the régime was taking up an attitude well away from the Shīʿī ideology, it was obviously disturbed about the existence of a vassal firmly installed in a difficult region.

Abū Dulaf is then found as governor of Damascus for al-Muʿtaṣim. He led against Bābak a contingent of volunteers raised from his dependents. He was part of the group of Arab chiefs whom the Iranian general al-Afshīn attempted to eliminate in order to gain an ascendancy over the caliph and to retain power. On this occasion, the caliph's attitude was extremely ambiguous; he gave his agreement to al-Afshīn, but at the same time warned Ibn Abī Duʾād about what was afoot, and the chief *ḳāḍī*, who was allied on the maternal side with the ʿIdjl, intervened in a decisive fashion.

Abū Dulaf has left behind the reputation of being a warm, intelligent and extremely generous personality. Himself a littérateur, musician and poet, he managed to form around himself an important circle of scholars and artists. From amongst his own poetry, there is extant only a small number of short poems written in a simple but powerful language, and in his *fakhr* poems, in a style with elements of nobility and strong martial touches. He was also the author of works on hunting, military and political themes, none of which have survived.

Abū Dulaf was a much-sought after Maecenas, and he entrusted the presidency over his salon to his brother Maʿḳil, himself a poet and impassioned music-lover, a man of great refinement and sensibility. He brought into his elder brother's circle ʿAlī b. Djabala and Bakr b. al-Naṭṭāḥ, and he secured invitations for Abū Tammām and Diʿbil and for such celebrated singers as Mukhāriḳ. Many other poets and artists of lesser fame also found a welcome in Djibāl and a congenial environment, e.g. Djuʿayfirān al-Muwaswas, the powerful satirist Manṣūr b. Bādhān al-Iṣbahānī and Muḥammad b. Wuhayb. An examination of this list confirms the fact that membership of this circle revolved round either tribal alliances or adhesion to Shīʿism. For these professional poets, the attraction of largesses was multiplied here by an assurance of finding with a powerful patron a mind occupied with common sympathies and feelings.

The historical sources record several descendants of Abū Dulaf. His grandson Bakr b. ʿAbd al-ʿAzīz tried to recover the principality of his forefathers, but was put to flight and then poisoned in 285/898 during the caliphate of al-Muʿtaḍid; Abū 'l-Ḳāsim Hibat Allāh b. ʿAlī was vizier to the Imām al-Ḳāʾim bi-amr Allāh; Hibat Allāh's brother Abū ʿAbd Allāh al-Ḥusayn b. ʿAlī was chief *ḳāḍī* of Baghdād; and his son Abū Naṣr ʿAlī b. Hibat Allāh, known under the name of Ibn Mākūlā, was a learned traditionist and author of highly-esteemed works.

ĶĀSIM (QASSEM), **ʿABD AL-KARĪM** (1914-63). ʿIrāķi officer and dictator, born in Baghdād of poor parents. His father was a Sunnī Arab and his mother possibly of Fayli (Shīʿī-Kurdish) descent; he himself claimed to be purely Arab. After working as a teacher Ķāsim entered military college and was commissioned in 1934. By 1955 he was a brigadier. Early in the 1950s he set up one of the cells then proliferating in the army in clandestine opposition to the Western-orientated monarchy, and in perhaps half-conscious imitation of the Egyptian example. By dint of his shrewdness, his gift for dissimulation and, most important, his independent operational command (of a brigade group near Baghdād) he became chairman of the Free Officers Central Committee in about 1956—though he never reached anything like the position of ʿAbd al-Nāṣir at a comparable stage of his career. An army movement ordered in support of Jordan gave Ķāsim his chance. In the night of 13-14 July 1958 a brigade taken over by Ķāsim's protégé ʿAbd al-Salām ʿĀrif occupied the capital almost without opposition. King Fayṣal II, the crown prince ʿAbd al-Ilāh and, a day later, Nūrī al-Saʿīd were killed and the republic proclaimed. Immediately afterwards a "Republican Decree" declared Ķāsim commander-in-chief, prime minister and acting minister of defence, with ʿĀrif as his deputy and minister of the interior. The cabinet was mainly civilian and represented most shades of political opinion—proof of the initial popularity of the revolution. From then and until his murder Ķāsim was virtual dictator, though a provisional constitution was promulgated within a fortnight of the revolution.

Ķāsim's one fixed political principle was his jealous regard for the independence of ʿIrāķ, vis-à-vis Arab unity. In the summer of 1958 this meant disappointing an important sector of ʿIrāķī opinion headed by his own deputy, as well as deeply offending ʿAbd al-Nāṣir then at the peak of his career. By August the fronts were clear; by the end of September ʿĀrif had been ousted from all his posts (and was under suspended death sentence three months later). Further escalation of Arab nationalist resentment led in March 1959 to a revolt led by the commander of Mosul garrison, Brigadier ʿAbd al-Wahhāb al-Shawwāf. Ķāsim rode the storm, chiefly through a working alliance with the Communists who, on the Syrian precedent, stood to lose all through the absorption of ʿIrāķ into the United Arab Republic. With the revolt crushed, and the nationalist menace temporarily suppressed, Communist ambitions became a threat to Ķāsim's rule. In the following confrontation Ķāsim proved infinitely superior to the Communists in determination and tactical ability; moreover, in this contest he could count on solid army support. After the summer of 1959 the Communist situation deteriorated until they had been edged out of every position of consequence they had acquired during their advance, and they became a barely tolerated marginal group. Ķāsim had first staved off the Communists' importunities by promising the legalization of political parties. The law was duly promulgated in January 1960, but after a brief spurt its effects petered out, and ultimately none remained legally active except a phantom pseudo-Communist Party tolerated by Ķāsim. From about the spring of 1960 all genuine political life degenerated into disgruntled torpor, plotting or, in the case of the Kurds, open warfare (from September 1961). Externally, Ķāsim upset the West by his disputes with the oil companies and by his inept attempt to seize Kuwayt after it had become independent (June 1961). Relations with the Soviet Union cooled because of Ķāsim's treatment of the Communists, though not before he had virtually re-equipped the army with Soviet supplies. On the Arab front Ķāsim never lived down his reputation as an enemy of the nationalist cause. Ķāsim may be fairly described as politically bankrupt long before a coup, engineered by a combination of Baʿthist and nationalist anti-Communist officers (not all of them committed to ʿAbd al-Nāṣir) put a bloody end to him and his régime on 8-9 February 1963.

For all his failures, Ķāsim cannot be written off as negligible. He was comparatively chary of violence. He was genuinely interested in social progress, at least at the beginning of his rule; the Agrarian Reform Law of 30 September 1958 is a milestone in the social history of ʿIrāķ. He was one of the most secular-minded rulers in the Arab world in recent times. Though he occasionally paid lip-service to the excellence of Islam, religion really had no place in his scheme of things, and his usual adroitness deserted him when he dealt with men and matters of religion. This trend of his was well known. It is instructive that Ķāsim's "atheism" caused in all probability deeper resentment among far wider circles than more narrowly defined issues of a more "modern" nature. His Personal Status Law (1959), applicable to Sunnīs and Shīʿīs alike, was repealed after his overthrow.

(U. DANN)

ĶĀSIM AGHA, b. ? 978/1570 architect-in-chief at the Ottoman court. His proper name was Meḥmed Ķāsim but he was known as Ķodja. He was born in a village between Awlonya (Valona) and Berat (Byelograd) in Albania (Ewliyā Čelebi, *Seyāḥatnāme*, viii, 695). Collected through the *devshirme* and brought to the Imperial Palace, he was accepted in the courts of gardeners of the Imperial Household (*khāṣṣ-bāghče ghulāmī*) where he grew up. During the great promotion (*čiķma*) which took place at Meḥemmed III's accession to the throne, he was made an apprentice with the court architects (Zarif Orgun, *Hassa mimarları*, Istanbul 1939, 7). In 1032/1623 he was made court architect-in-chief (*Sidjill-i ʿOthmānī*, iv, 49). He became good friends with the Grand Vizier Ķara Muṣṭafā Pasha, an Albanian like himself. On the latter's execution he was dismissed as court-architect-in-chief, an office until then conferred for life, and

was exiled to Gelibolu. However, through the solicitations of *ḳāḍī-ʿasker* Djindji Ḥusayn Efendi, he returned to Istanbul and was again appointed court-architect-in-chief in Rabīʿ al-Ākhir 1055/June 1645 (Naʿīmā, *Tārīkh*, v, 35, 112, 167). In Dhu 'l-Ḳaʿda 1061/October-November 1651 he was made *kedkhüdā* of the Wālide Sulṭān (Naʿīmā, *Tārīkh*, v, 51). However, at the instigation of the *dār ül-seʿāde aghasi* Sarī Süleymān Agha, he was dismissed in Muḥarram 1062/December 1651-January 1652 and exiled to Cyprus, but through the intervention of the Wālide Sulṭān enabled to return to Istanbul (Naʿīmā. *Tārīkh*, v, 179). After long service, he died in Istanbul at *ca.* one hundred years of age.

Ḳāsim Agha is known both as an artist and as a politician. As court architect-in-chief he built the Činili Djāmiʿ in Üsküdar, the pavilion of the Balṭadjīs in the Palace of Üsküdar, the Sepetčiler Ḳaṣrī of the Palace of Topḳapu and the Yeñi Wālide Djāmiʿi in Istanbul. His mastery as an architect is apparent from the Činili Djāmiʿ and from the ʿAtīḳ Wālide Djāmiʿi. The pavillion of the Balṭadjīs and the Sepetčiler Ḳaṣrī no longer exist. As a politician, Ḳāsim Agha was one of the influential personalities of the 12th/18th century, with activities falling in the reigns of Sultans Ibrāhīm and Meḥemmed IV. He established friendships with prominent people, such as Ḳara Muṣṭafā Pasha, the *Sheykh ül-Islām* Bahāʾī Efendi [*q.v.*], Čelebi Kedkhüdā Bey, Sarī Süleymān Agha, Djindji Ḥusayn Efendi, Khadīdje Turkhān Wālide, and his recommendations and suggestions influenced the affairs of state. With Kösem Wālide Māhpaykar Sulṭān and Melek Aḥmed Pasha, he was on bad terms, and his meddling in political affairs caused his exile on two occasions. However, his most important function in Ottoman political history was to pave the way for Köprülü Meḥmed Pasha to become Grand Vizier and obtain power.

Bibliography: Naʿīmā, *Tārīkh*, Istanbul 1281, iv, 35, 52, 72, 112, 117; v, 169, 178, 250; vi, 218, 220. Aḥmed Refīḳ, *ʿĀlimler we ṣanʿatkārlar*, Istanbul 1924, 205. For Ḳāsim Agha's Sepetčiler Ḳaṣrī, see *TOEM*, v. (İSMET PARMAKSIZOĞLU)

ḲĀSIM AMĪN, Arab publicist and writer on social topics, was the promoter, in Egypt, of the emancipation of the Arab woman and upheld her right, as well as her corresponding obligations, to participate in the renaissance of the Arab-Islamic world which saw the light of day at the end of the 19th century.

He was born in Alexandria in 1863 (cf. Aḥmad Bahāʾ al-Dīn, preface to *Taḥrīr al-marʾa*, ed. Dār al-Maʿārif, Cairo 1970, 10; but the sources do not all agree as to the date and place of his birth), of an Egyptian mother and a father of Turkish origin; his family settled in Cairo, where Ḳāsim, after his secondary studies, registered at the Khedival school of law (*Madrasat al-ḥuḳuḳ al-khudawiyya*) and gained his "licence" in 1881. After a period of instruction by a great lawyer of the Egyptian capital, he went to complete his studies of law in Paris where he continued to follow, with the passion and restlessness that had been his since the first signs of them appeared in Cairo, the new developments of the Egyptian political reality, *i.e.* the British intervention of 1882 which led to the occupation of Egypt by the English and the failure of the revolt of ʿUrābī Pasha [*q.v.*].

Ḳāsim Amīn made his first contribution to the programme of reform already partially put into practice in Egypt and the most advanced regions of the Arab-Islamic world, by renewing contacts already established in Cairo with the two greatest reformers of modern Islam, Djamāl al-Dīn al-Afghānī and his disciple Muḥammad ʿAbdūh [*q.vv.*]; these latter had taken refuge in Paris where they had undertaken the publication of the Arabic language weekly *al-ʿUrwa al-wuthḳā*, financed by a secret Muslim society of the same name, of which only eighteen issues appeared and in which Ḳāsim Amīn offered his collaboration.

Ḳāsim Amīn died when still young, in 1908, without having had the satisfaction of seeing realised the reforms in favour of the Arab woman for which he had fought and which continued to be the object of the struggle in Irāḳ of the poet Djamīl Ṣidḳī al-Zahāwī [*q.v.*], in Tunisia of al-Ṭāhir al-Ḥaddād [*q.v.*] and in Egypt, notably, of the woman writer Malak Ḥifnī Nāṣif [*q.v.*], surnamed Bāḥithat al-Bādiya.

It was during his stay in Paris that, thanks to his contacts with a milieu always very clearly oriented towards socio-cultural progress, and perhaps equally, according to certain sources, under the influence of a sentimental attachment to a young Frenchwoman, his conviction matured that it was necessary to awaken public opinion, in Egypt and in the Arab world in general, to one of the most urgent social problems, that of raising the living conditions of women. It is evident that every attempt at reform in this field involved a persistent struggle against the partisans of the traditionalist current in the country, enemies of every change, even if it had a clearly social character, because they considered every innovation as an affront and outrage to tradition and the memory of the ancestors.

Ḳāsim Amīn fully realised the difficulties of the task and worked towards the achievement of his objective by using not only the weapons of juridical dialectic with which his profession as a lawyer supplied him abundantly and effectively, but also an argument of an emotional and moral character to which he was predisposed by his own temperament; this action aimed at assuring women of a more dignified social situation by means of instruction, equality of rights with men, abolition of the wearing of the veil, and revision of the matrimonial law with its two scourges of polygamy and repudiation.

The resistance of Egyptian conservatism was so obstinate that it was only in *ca.* 1922 (about a quarter of a century after the appearance of *Taḥrīr al-marʾa*, and solely in the upper classes) that the suppression of the veil was allowed and, in 1925, that the first secondary school for girls was created with a programme and subject matter similar to those of the equivalent for boys.

His patriotic feeling is to be found in his book *Les Égyptiens*, Paris 1894, that he wrote in French in reply to the Duc d'Harcourt who, in *L'Égypte et les Égyptiens* (1893) judged the country, and especially its social structure, from an exaggeratedly "colonialist" point-of-view, and he attempted to discredit him; but it is his two works, *Taḥrīr al-marʾa* ("The emancipation of women") and *al-Marʾa al-djadīda* ("The new woman"), that he dedicated to the social advancement of the woman. The first provoked the reaction of the most ardent representatives of Egyptian conservatism, among them Ṭalʿat Ḥarb and ʿAbd al-Madjīd Gharyān, who replied, the first in his *Faṣl al-khiṭāb fi'l-marʾa wa 'l-ḥidjāb* (Cairo n.d.) and the second with *al-Dafʿ al-matīn* (Cairo n.d.). The other work by which Ḳāsim Amīn intended to answer precisely the attacks of these despisers of every innovation, gave rise to a reply not only from the same Ṭalʿat Ḥarb, in *Tarbiyat al-marʾa wa 'l-ḥidjāb*, but also from the scholar and publicist Muḥammad Farīd

Wadjdī in *al-Marʾa al-muslima* (Cairo 1319/1901).

It is with these two works that Ḳāsim Amīn's name has been linked, as an apostle of the rights of the woman, far more than with the Parisian work which has been discussed above and with the collection of meditations and maxims entitled *Asbāb wa-natāʾidj wa-akhlāḳ wa-mawāʿiẓ*, Cairo 1898 (reprinted 1913 under the title *Kalimāt fiʾl-akhlāḳ* in an appendix to the edition of the *Risāla fī Mudāwāt al-nufūs* of Ibn Ḥazm (cf. Brockelmann, S I, 696-7).

Bibliography: *Taḥrīr al-marʾa*, Cairo 1899 (German trans. of O. Rescher, Stuttgart 1928); *al-Marʾa al-djadīda*, Cairo 1901; the two works have been made the subject of numerous other editions whose prefaces supply biographical information on Ḳāsim Amīn and his social activities. It is hardly necessary to draw attention to the study of R. Paret, *Zur Frauenfrage in der arabisch-islamischen Welt*, Stuttgart 1934, for the historical account of the social situation of the woman in Islam, a fundamental work. For specific bibliographical information on most of the works mentioned in Brockelmann, S III, 330-1, see I. Y. Kračkovskiy, *Kasim Amin, sovetnik appellyutsionnogo suda. Novaya ženshčina. Perevod so 2-go arabskogo izdaniya i predislovie*, in *Mir Islama*, i (1912), app., 119 ff.; *OM*, v (1925), 606, ix (1929), 237-42 *passim*; Ḥusayn Haykal, *Tarādjim miṣriyya wa-gharbiyya*, Cairo 1929; Doria Ragaï (Shafik), *La femme et le droit religieux de l'Égypte contemporaine*, Paris 1940; A. Khākī, *Ḳāsim Amīn*, Cairo 1944; F. S. Fuʾād, *Taʾrīkh ḥayāt al-marḥūm Ḳāsim Amīn*, Cairo n.d.; U. Rizzitano, *La funzione della donna orientale*, in *Oriens '44*, ed. J.T.L.O., Rome 1945. Some pages of *Taḥrīr al-marʾa* have been translated in Anouar Abdel-Malek, *Anthologie de la littérature arabe contemporaine*, ii (*Les essais*), Paris 1965. (U. Rizzitano)

ḲĀSIM-I ANWĀR, the *laḳab* of MUʿĪN AL-DĪN ʿALĪ ḤUSAYNĪ SARĀBĪ TABRĪZĪ, mystic, poet and leading Ṣafawid *dāʿī*.

Born in 757/1356 in the Sarāb district of Tabrīz in Ādharbāydjān, Muʿīn al-Dīn ʿAlī became at an early age the disciple (*murīd*) of the shaykh of the Ṣafawid *ṭarīḳa* Ṣadr al-Dīn Mūsā [*q.v.*], who bestowed on him the *laḳab* of Ḳāsim-i Anwār, "Distributor of Lights", as the result of a vision experienced by his disciple. Muʿīn al-Dīn ʿAlī saw himself standing in the Masdjid-i Djāmiʿ at Ardabīl, holding in his hand a great candle from which the members of the congregation lit their own candles, the light of which illumined the whole mosque (a fuller, and variant, version of the vision is contained in the *Madjālis al-ʿUshshāḳ*; see Nafīsī, cited in bibliography, 23 ff.). Ṣadr al-Dīn Mūsā, who had recognized at an early stage the peculiar intensity of the devotional powers of Ḳāsim-i Anwār, interpreted this vision to mean that his disciple was destined to distribute among the other novices the divine light with which he was endowed.

After the completion of his training at Ardabīl, Ḳāsim-i Anwār received from the hands of Shaykh Ṣadr al-Dīn Mūsā the *khirḳa* which entitled him to proselytize and give spiritual guidance (*irshād*). At some later stage, Ḳāsim-i Anwār is said, by Djāmī [*q.v.*] and sources based on Djāmī, to have become the disciple of a certain Ṣadr al-Dīn ʿAlī Yamanī (for reasons for doubting the authenticity of this tradition, see the article of Savory cited in the bibliography). After a period of missionary activity in Gīlān, Ḳāsim-i Anwār went to Khurāsān. Opposition from the *ʿulamāʾ* forced him to move from Nīshāpūr to Harāt, which became his base of operations for half a century. According to his own statement, Ḳāsim-i Anwār was established at Harāt by 779/1377-8, and he remained there until his expulsion from the city in 830/1426-7.

In that year, Ḳāsim-i Anwār was implicated in the attempted assassination of the Tīmūrid ruler, Shāhrukh [*q.v.*], by a Ḥurūfī [see ḤURŪFIYYA] named Aḥmad the Lur. Ḳāsim-i Anwār was not, himself, a member of the heretical Ḥurūfī sect. In the present writer's view, his alleged complicity in the assassination plot was a convenient excuse for the Tīmūrid political and religious authorities to rid themselves of a man whose missionary activities had become a source of embarrassment to them. The sources alternatively allege that Ḳāsim-i Anwār was expelled from Harāt because (a) Mīrzā Bāysunḳur b. Shāhrukh [see BĀYSONGHOR, GHIYĀTH AL-DĪN] bore him a personal grudge; (b) he did not show proper respect toward Shāhrukh and his sons; (c) the majority of the young men of Harāt had become his disciples, and his popularity with these elements constituted a source of possible mischief. (A) and (b) may be dismissed; (c) more probably goes to the heart of the matter (the charge of moral turpitude made against Ḳāsim-i Anwār in connection with his association with these young men is unlikely to have been the sole reason for his expulsion). The Tīmūrid authorities took action against Ḳāsim-i Anwār because his activities as a *dāʿī* had been too successful; he had become too popular with admittedly heterodox elements, and Shāhrukh was fearful of a possible revolt. There is no doubt that Ḳāsim-i Anwār was closely associated at Harāt with followers of the Khalwatī [*q.v.*] *ṭarīḳa*, and the Khalwatīs, together with the Niʿmat Allāhīs, Naḳshbandīs [*qq.v.*] and other Ṣūfī *ṭarīḳas*, played an important part (not yet adequately investigated) in preparing the ground for the Ṣafawid revolution. There is evidence that Ḳāsim-i Anwār's success as a proselytizer was not confined to the young men of Harāt. Many notables of the city, and sons of Tīmūrid *amīrs*, are also said to have become his disciples; this, of course, would have given Shāhrukh additional grounds for anxiety.

After his expulsion from Harāt, Ḳāsim-i Anwār resided at the court of Shāhrukh's son, Ulugh Beg, at Samarḳand. Some years later, he returned to Khurāsān, and died at Khardjird in Rabīʿ I 837/Oct.-Nov. 1433.

Ḳāsim-i Anwār was the author of a number of mystical treatises, and of a *dīwān* comprising *ghazals*, *rubāʿīs*, several *mathnawīs*, and occasional pieces. Some of his poems are in Turkī, and others in the local dialect of Gīlān. E. G. Browne claimed to have found "unmistakable" traces of Ḥurūfī influence in one of his poems, but such a connection cannot be proved on the evidence of his poems. The language of these is rather the conventional stock-in-trade of Ṣūfīs, and the style reminds one of Djalāl al-Dīn Rūmī [*q.v.*]. Like Rūmī, he was more concerned with meaning than with elegance. Ḳāsim-i Anwār normally used the *takhalluṣ* (*nom-de-plume*) Ḳāsim or Ḳāsimī, but sometimes also the full form of his *laḳab*, Ḳāsim-i Anwār.

Bibliography: For further details, and a fuller. discussion of the problems involved, see R. M. Savory, *A 15th-century Ṣafavid propagandist at Harāt*, in the *Semi-Centennial Volume of the Middle Western Branch of the American Oriental Society*, Bloomington, Indiana 1969, 189-197. For a full bibliography of the Persian sources, and a valuable analysis of the historical and literary evidence, see

Saʿīd Nafīsī's introduction to his edition of the collected poems (*Kulliyyāt*) of Ķāsim-i Anwār, Tehran 1337/1958. On Ķāsim-i Anwār's Turkish poems, see G. M. Meredith-Owens, *The Turkish verses of Qāsim al-Anvār*, in *BSOAS*, xxv/1 (1962), 155-61. (R. M. Savory)

ĶĀSIM PASHA, Djazarī, Ottoman officer and poet of the 9th/15th century; he belonged to a family who had come from Egypt and entered Ottoman service. His father was Meḥmed Djazarī, who had worked in the Imperial Dīvān and had become *nishāndji* in 869/1464-5. (*Külliyât-ı Divan-ı Kabulî*, ed. İ. Hikmet Ertaylan, Istanbul 1949 p. 304 f.). Ķāsim, like his father, entered the Dīwān-ī Humāyūn and served in various offices, rising to the position of *defterdār*, and was for a time in Amasya with Bāyezīd II (before his accession) and served as his *defterdār*. Djazarī Ķāsim, who is known to have been *nishāndji* in 886/1481, attained the rank of vizier, holding the post for about three years; he also served for a time in Salonika. He died in 887/1485, and was buried beside the *medrese* which he had built near the tomb of Emīr Sulṭān in Bursa.

Djazarī Ķāsim Pasha achieved fame in his own day as a competent poet, using the *makhlaṣ* Ṣāfī. Although it is known that his poems were collected in a *dīwān*, no manuscript has yet come to light; however, an incomplete text of his versified discourses exists in the Ali Emiri library in Istanbul (*manzum eserler*, no. 1000/1). ʿĀshiķ Čelebi [*q.v.*] states that he was influenced by Aḥmed Pasha [*q.v.*] and that he wrote competent *ghazal*s (ed. G. M. Meredith-Owens, London 1971, p. 214 a).

He established several pious foundations: a mosque in the Čaghaloghlu quarter of Istanbul (*Istanbul vakıfları tahrir defteri, 953/1546 tarihli*, ed. Ö. L. Barkan and E. H. Ayverdi, Istanbul, 1970, p. 53); a *medrese* and bath in the Emīr Sulṭān quarter of Bursa (*Güldeste*, 66); a mosque at Kefe (Başbakanlık Arşiv Genel Müdürlüğü, Kefe tahrir defteri, no. 370).

Bibliography: Bibliographical works have confused three Ķāsīm Pashas: Djazarī, Ewliyā, and Ķodja (for whom see ʿAṭāʾī, 104); thus Meḥmed Thüreyyā makes Djazarī Ķāsim live until 950 (*SO*, iv, 47; cf. also Aywānsarāyī, *Ḥadīķa*, i, 79, 80, 280). According to Sehī, 24, Djazarī Ķāsīm died and was buried in Salonika.

Additional information may be found in the following works: ʿĀshīķpasha-zāde, ed. ʿĀlī, Istanbul 1332, 192, 193; Neshrī, ed. Taeschner, i, 231; Saʿd al-Dīn, *Tādj al-tawārīkh*, Istanbul 1279, i, 216; Ķodja Ḥusayn, *Badāyiʿ al-waķāyiʿ*, ed. I. S. Tveritinova, Moscow 1961, ii, fol. 414 a; Ewliyā Čelebi, *Seyāḥat-nāme*, i, 335, 340, ii, 17; M. Tayyib Gökbilgin, *XV-XVI. asırlarda Edirne ve Paşa livâsı*, Istanbul 1952, 153, 433, 434; Koyunluoğlu Memduh Turgut, *İznik ve Bursa Tarihi*, Bursa 1935, 155, 164, 196. (C. Orhonlu)

ĶĀSIM PASHA, Ewliyā, Ottoman officer of the second half of the 9th/15th century. It is conjectured that he was the son of Todor Muzak, the great Albanian lord (ʿĀshīķpashazāde, ed. ʿĀlī, Istanbul 1332, 191; Neshrī, ed. Taeschner, i, 230; H. İnalcık, *Fatih devri üzere tetkikler ve vesikalar*, Ankara 1954, 162). It is not known at what date he was taken by the *devshirme* to be brought up in Ottoman service; however, as he came to prominence during the reign of Meḥemmed II, this probably occurred towards the end of Meḥemmed I's reign. The most important post he had was that of Beglerbegi of Rūmeli, and it is known that he spent a part of his life at Edirne. In 883/1478, he caused to be built a domed mosque, a hospice (*ʿimāret*) and a double *ḥammām* near the district of Selkhāne on the Tundja river (Hibrī, *Anīs al-musāmirīn*, ed. S. İlgürel, unpubl. Ph.D. thesis, Istanbul 1972, 33, 41, 67; for the *waķfiyye* dated 1 Shaʿbān 883/28 October 1478 relating to this pious foundation, see Topkapı Sarayı Müzesi Arşivi, N.E. 7744/B). Ķāsīm Pasha died in 890/1485 and was buried near his mosque. His *laķab* Ewliyā is attributed to the fact that he had previously had a dervīsh convent built in Edirne.

Bibliography: in addition to works mentioned in the text: Oral Onur, *Edirne kitabeleri*, Istanbul 1972, 129; Osman Nuri Peremeci, *Edirne Tarihi*, Istanbul 1939, 66, 67, 145; M. Tayyib Gökbilgin, *XV-XVI asırlarda Edirne ve Paşa livâsı*, Istanbul 1952, 48 (n. 58), 434 (n. 688), 524; Başbakanlık Arşiv Genel Müdürlüğü, Tapu-tahrir defteri, no. 370, p. 546. (C. Orhonlu)

ĶĀSIM PASHA, Güzeldje, Ottoman vizier in the reign of Süleymān the Magnificent, after whom a quarter of Istanbul is called. The facts given about his life in historical records are few and scanty. The earliest historical reference to him concerns his appointment to Ḥamā as *sandjaķ beg* following the victory of Mardj Dābiķ. During his term of office, Ķāsim Pasha suppressed the revolt of Ibn Ḥafsh, a rebel Arab amīr. Having been appointed *Anadolu beglerbegi* on Süleymān's succession to the throne, Ķāsim Pasha took part in the expedition against Rhodes (928/1522), and was made governor of Egypt in 930/1524. As he was unsuccessful in this office he was dismissed, but before long he was appointed *kapudan-ī deryā* (commander of the navy), and then governor of Istanbul (*muḥāfiẓ*) during the Hungarian expedition in 932/1526. He was later appointed *Rumeli beglerbegi*, and the third vizier in 935/1529. As such, he took part in the siege of Vienna in the same year, and the ʿIrāķ expedition in 941/1535. His prestige, however, did not remain high for long; for unknown reasons, he was dismissed from office as third vizier and was appointed *sandjaķ beg* of the Morea, a position of lesser rank, before 944/1537. Ķāsim Pasha remained in this office until 948/1541, when he retired, but he was not allowed to return to Istanbul, indicating that he was still held in disfavour by the sultan. Contemporary historians do not give his year of death, but he probably died after 959/1552. Although more recent writers claim that he is buried in Gelibolu (Gallipoli), his grave has not been located.

Among his contemporaries, Ķāsim Pasha was no more than second-rate. He rose rapidly in office, but his fall was equally abrupt. However, he was interested in both building and charitable concerns. He started reconstructing the quarter of Istanbul named after him during his term as third vizier, and had the architect Sinān build a mosque a *madrasa*, an *ʿimāret* and a bath-house. He is also known to have built a mosque at Boz Burun. He had a daughter called Nafīsa Khānum, who built a *masdjid* and a school in the quarter named after her father.

Bibliography: given in İA s.v. (F. Sümer)

ĶĀSIMIYYA, a neo-Mamlūk household and faction in Ottoman Egypt in the 11th/17th and 12th/18th centuries. The eponym, Ķāsim Bey the Defterdār, is an obscure figure, who apparently flourished in the early 11th/17th century, although an origin-legend given by al-Djabartī places him in the reign of Sultan Selīm I. The household, in which there appears to have been originally a Bosniak element, emerged as an effective force in politics about the middle of the 11th/17th century, its power

resting on accumulated wealth and an alliance with the older indigenous faction of Ḥarām, just as its opponents, the Dhu 'l-Faḳāriyya [*q.v.*], allied with the rival faction of Saʿd. Hostility between the two groups manifested itself in 1057/1647, when the Ottoman viceroy combined with the two leaders of the Ḳāsimiyya, Ḳānṣawh Bey and Māmāy Bey, to overthrow the powerful ***amīr al-ḥadjdj*** Riḍwān Bey al-Faḳārī. A countercoup by the Dhu 'l-Faḳāriyya was, however, successful, and in the resulting proscription of the Ḳāsimiyya, Ḳānṣawh and Māmāy were put to death. After Riḍwān's death in 1066/1656, the fortunes of the Ḳāsimiyya gradually revived under their leader, Aḥmad Bey the Bosniak. In a revolt of the Dhu 'l-Faḳāriyya in 1071/1660, Aḥmad Bey gave strong support to the viceroy Gürdjü Muṣṭafā Pasha, and was personally responsible for the killing of three beys who had received a safeconduct. His own assassination was procured by the next viceroy (1072/1662). Thereafter until the early 12th/18th century, factional hostility between Ḳāsimiyya and Dhu 'l-Faḳāriyya was unimportant. In 1123/1711 a clash between rival corps of the Ottoman garrison in Cairo, the Janissaries and ʿAzabs (*ʿAzebān*), involved the Mamlūk factions, the Ḳāsimiyya supporting the ʿAzabs. By their victory in this insurrection they re-established their ascendancy in Egypt, but at the same time reopened the fatal vendetta with the Dhu 'l-Faḳāriyya. Ismāʿīl Bey b. Īwāẓ Bey, the head of the Ḳāsimiyya, as the holder of supremacy (*al-riʾāsa*) was entitled "commander of Cairo" (*amīr Miṣr*), a term synonymous with the better known ***shaykh al-balad***. Conflicts between the adherents of Ismāʿīl, the Īwāẓiyya, and a rival Ḳāsimi household, the Shanabiyya, resulted in the assassination of Ismāʿīl in 1136/1724, and gave the Dhu 'l-Faḳāriyya an opportunity to gain the supremacy. In 1142/1730 they finally broke the power of the Ḳāsimiyya. Surviving members of the faction took service under Shaykh Humām of Hawwāra [*q.v.*], who at this period dominated Upper Egypt, and they became assimilated to his tribesmen. The last Ḳāsimi notable, Ṣāliḥ Bey, played a part of some importance in the relations between Humām and ʿAlī Bey [*q.v.*], who procured his assassination in 1182/1768.

(P. M. HOLT)

ḲĀSIMOV, the chief town of a district of the province of Ryazan (USSR), which was the capital of a khānate whose sovereigns bore in Russian the title of "tsar" or "tsarevitch" and whose existence is a historical curiosity.

The khānate of Ḳāsimov was founded between 856/1452 and 860/1456 by Ḳāsīm, the son of Khān Ulugh Muḥammad of Ḳāzān, who was driven from his *ulus* by his brother Maḥmūdek in 850/1446. Ḳāsīm escaped to Moscow and entered the service of Grand Prince Vasili II, who conceded to him the small town of Gorodets (or Gorodok Meshčerskiy), which later received the name of Ḳāsimov (in Tatar, Khān Karmān) in his honour.

It was a small principality—a feudal, Tatar vassal of Moscow, whose tsar nominated or confirmed the khāns; their position vis-à-vis Moscow was comparable to that of the khāns of the Crimea vis-à-vis their overlords, the Ottoman pādishāhs, but their autonomy was more limited. The internal affairs of the khānate were in fact administered by a Russian *voyvoda* named by the *Posol'skiy Prikaz*. The khāns received a salary from Moscow and collected the *yasaḳ* of the local population, composed mostly of Finns, Mordvins and Meshčerans and some Russian colonists; the Muslim Tatars formed only a minority. Ḳāsīm remained a Muslim, but served the grand prince of Moscow faithfully; this was the first time that a Čingizid had become his vassal. After this, and almost throughout its entire history, Ḳāsimov served as a place of refuge for the various Čingizid princes driven from their *ulus*. They were used by the Russians against their cousins and co-religionists of the Golden Horde and of Ḳāzān.

In 872-3/1468, after the death of Maḥmūdek in Ḳāzān, Ḳāsīm, at the head of a Muscovite army, tried to seize power in Ḳāzān, but failed. His son Dāniyār succeeded him in 873/1469 and reigned until 891/1486. He took part, on the side of the Muscovites, in the war against Aḥmad Khān of the Golden Horde. At his death, Ivan III offered the *ulus* of Ḳāsimov to Khān Nūr Dawlat Girāy, who had been chased from the Crimea in 883/1478. Nūr Dāwlat reigned at Ḳāsimov until his unexpected death between 903/1498 and 908/1503; like Ḳāsīm, he was a loyal subject of the grand prince of Moscow, whom he served devotedly. After his death, the throne of Ḳāsimov was occupied for some time by his sons, Satīlghan and Djanay. *Ca.* 918/1512, the Girāy were replaced by another Čingizid branch. The first ruler was Shaykh Awliyār (grandson of Khān Küčük Muḥammad, descended from Orda, brother of Batu and the first khān of the "White" (or "Blue") Horde and cousin of Khān Sayyid Aḥmad). In 922/1516, his young brother, Shāh ʿAlī (the "Shigaley" of Russian sources), succeeded him and remained intermittently the khān of Ḳāsimov until his death on 10 Shawwāl 974/21 April 1567.

The period between 927/1521 and 959/1552 is that of the struggle between Moscow and the Crimea for the possession of the *ulus* of Ḳāzān. In this conflict, Shāh ʿAlī played a very active role. Twice he was placed by the Russians on the throne of Ḳāzān—between 925/1519 and 927/1521, then again in 953/1546. While he was governing Ḳāzān, he was replaced at Ḳāsimov by his brother Djān ʿAlī—who also was khān of Ḳāzān between 938/1532 and 941/1535 (he died in a popular uprising).

Shāh ʿAlī, who died childless, had as a successor a distant cousin, Sāyin Bulāt, the great-grandson of Khān Aḥmad of the Golden Horde, who was converted to Orthodox Christianity in 981/1573, took the name of Simeon Bekbulatovič and reigned in Ḳāsimov until almost 991/1583. In 982/1574, Ivan the Terrible named him in his place "tsar and grand prince of all the Russias". The next two years, during which Russia was ruled by a Čingizid prince was a period unique in Russian history.

Simeon Bekbulatovič died in 1616; but between 981/1573 and 991/1583, he had been replaced in Ḳāsimov by Muṣṭafā ʿAlī, another Čingizid prince, who was also descended from Khān Aḥmad of the Golden Horde. During the period of troubles, the throne of Ḳāsimov was occupied by other Čingizids: at first by a member of the dynasty of the khāns of

Kirgiz Ḳazaḳ, Uraz Muḥammad, who took part in the civil war and was killed in 1610, and then, under the Romanovs, by the descendants of Kučum, the last khān of Siberia. His grandson Arslān is mentioned as "tsar" of Ḳāsimov in 1023/1614; the son of the latter, Sayyid Burhān, seems to have ascended the throne towards 1036/1627. This prince was baptized under the name of Vassili and ruled until his death, which occurred suddenly in 1678. He was the last sovereign of Ḳāsimov. For a few years after his death until 1092/1681, his mother, Fāṭima Sulṭān, who apparently remained a Muslim, was still mentioned as "princess" of Ḳāsimov. The town was then annexed administratively to the crown domains.

(A. Bennigsen)

ḲĀSIYŪN (Djabal), mountain which forms part of the Anti-Lebanon and rises to the north-west of Damascus [see dimashḳ]. Two tributaries of the Baradā [*q.v.*], the Nahr Thawra and the Nahr Yazīd, up until the middle of the 20th century used to irrigate the orchards of Nayrab, which rose in tiers on its southern flank.

This mountain has a sacred character because God is said to have spoken to it and also due to ancient traditions which relate to some grottoes opening in the midst of the slope. Three of them, Muṣallāt al-Khiḍr, Maghārat al-Djawʿ and Maghārat al-Dam, which marks the place where the blood of Ḥabīl was shed and where people used to come and pray for rain, today constitute a modern oratory known by the name of Ḳubbat al-ʿArbaʿīn in memory of forty prophets—seventy according to certain traditions—who died of hunger there; a legend speaks of Yaḥyā b. Zakariyyā having allegedly stayed there forty years with his mother. Slightly to the south-west of this oratory, is situated the Grotto of Adam, also called Kahf Djibrīl or al-Kahf, an oratory dedicated to the Aṣḥāb al-Kahf, the Seven Sleepers of Sūra XVIII. This grotto is a place of pilgrimage frequented in our own time.

There existed formerly on the slopes of Ḳāsiyūn two famous Christian monasteries, Dayr Murrān and Dayr Samʿān. In the 6th/12th century some refugees, who had come from Jerusalem after the capture of the Holy City by the Crusaders, founded the quarter of al-Ṣāliḥiyya; then mosques, *madrasas* and cemeteries multiplied there. At the beginning of the 7th/13th century, the Kurds established there the suburb of al-Akrād. After 1898, some Muslim refugees from Crete had the quarter of al-Muhādjirīn constructed in its western part. In our days, these suburbs, which have become integrated with the city, continue to develop, while a radio-television station functions at the summit of the mountain.

(N. Elisséeff)

KASKAR, the name of a town in ʿIrāḳ. When al-Ḥadjdjādj [*q.v.*], the governor of ʿIrāḳ appointed by the caliph ʿAbd al-Malik had put down the rebellion there, he began in 83-6/702-5 to build a new town which was called Wāsiṭ ("centre") because it was midway between the two older Arab capitals of this province, al-Kūfa in the north and al-Baṣra in the south. For the site of the town he chose the vicinity of Kaskar, on the Tigris, which had played a not unimportant part in the Sāsānian period. The new Muslim town was built on the east bank of the Tigris, while Kaskar lay opposite it on the west side; a bridge of boats linked the two halves of the city. Neither Wāsiṭ nor Kaskar exist at the present day, and until modern times their exact situation was uncertain as the Tigris bed has changed its course, bypassing the sites and rendering them obsolete by the 8th/14th century. The exact relationship between Kaskar and Wāsiṭ is not clear. Recent excavations at Wāsiṭ indicate the administrative importance of the city as the centre of Umayyad rule (F. Safar, *The Sixth Season's Excavations*, Cairo 1945). The remarkable similarity of the administrative buildings to those of the Round City at Baghdad (O. Grabar, *Al-Mushatta, Baghdad, and Wasit*, in *The World of Islam, Studies in Honor of Phillip K. Hitti*, London 1959, 98-108) raises the question of whether Kaskar was originally intended to serve as the residential area for the general populace as distinct from Wāsiṭ, which would then have housed the administration and perhaps military garrison. A similar situation apparently prevailed at al-Raḳḳa-al-Rāfiḳa (Yāḳūt, *Muʿdjam*, ii, 734). In the course of time, Kaskar was subsumed by the more famous site. For further information on wāsiṭ, see the article.

Kaskar probably dates back to the Assyrian period. A Babylonian town, Ka-as-ka-ri, appears to be mentioned in a fragment of an inscription probably of the time of Assur-banipal in the British Museum ([18] 82:3-23:128; see Bezold, *Catalogue*, 1824; cf. Streck, *Assurbanipal*, Leipzig 1916, pp. lxxxviii, 790). The place is perhaps also mentioned in the Babylonian Talmud (*Yōmā*, fol. 10a, where Bashkar should probably be amended to Kashkar; see Marquart, *Ērānšahr*, *Abh. G. W. Gött.*, New Series, iii/2, Berlin 1901, 164). In any case Kaskar, called Kashkar in Syriac and Christian Arabic sources, is one of the oldest Christian towns in Babylonia. It frequently appears in the ecclesiastical history of this region. The episcopal diocese of this name was considered second in importance within the Nestorian church. Its occupant was the right arm of the patriarch of Seleucia-Ctesiphon [see al-madāʾin] and his representative when the office was vacant.

Among the signatories to the acts of the Syriac councils from the period 410-790 were bishops of

Kas̲h̲kar (Guidi in *ZDMG*, xliii, 411, and Chabot in *Notices et extraits*, xxxvii (Paris 1902), 675). According to the Syriac "Chronicle of Arbela" there was a bishop in Kas̲h̲kar as early as the first half of the 3rd century A.D. The Christian Arabic "Chronicle of Seʿert" also mentions an occupant of the episcopal see there of the period before 410 A.D. On the bishopric of Kas̲h̲kar and for a list of its occupants, see J. Labourt, *Le Christianisme dans l'empire Perse sous la Dynastie Sassanide*, Paris 1904, passim (see the index s.v.); Sachau, *Die Chronik von Arbela* (= *Abh. Pr. Ak. Wiss.*, 1915, no. 6), 21; Sachau, *Zur Ausbreitung des Christentums in Asien* (= *Abh. Pr. Ak. Wiss.*, 1919, no. 1), 30-1.

The town of Kas̲h̲kar, like the bishopric which bore its name, was the home of many founders of monasteries, as may be seen from the work compiled in the 8th century by Yes̲h̲ūʿdenaḥ, entitled *Keṯābā de Nak̲h̲pūtā* (ed. Chabot in *Mélange d'archéol. et d'histoire de l'École Française de Rome*, xvi (Paris 1896), 225 f.); the Great Abraham (d. 588) was especially famous (see Yes̲h̲ūʿdenaḥ, no. 14; Labourt, *op. cit.*, 315; A. Baumstark, *Gesch. der syrisch. Litteratur*, Bonn 1922, 130). One of the most influential personalities at the court of the Sāsānian King K̲h̲usraw II Parwēz (590-628) was Ābā of Kas̲h̲kar; on him see Baumstark, *op. cit.*, 123. On other Syriac writers who belonged to Kas̲h̲kar (ʿAbdīs̲h̲ōʿ, Grig̲h̲ō, Eliyā) see Baumstark, *op. cit.*, 30, 128, 420. For the Syriac sources on Kas̲h̲kar, see also the indices in Wright, *Catalogue of the Syriac Manuscripts in the British Museum*, London 1870, and idem, *Cat. of the Syriac manuscripts in Cambridge*, Cambridge 1901, 1284, also in Sachau, *Katalog der syrisch. Handschr. in Berlin*, Berlin 1899, 923.

In the Arsacid period, there seems to have been a little kingdom of Kaskar, which was destroyed by the first Sāsānian, Ardas̲h̲īr I; cf. Nöldeke, *Gesch. der Arab. und Perser zur Zeit der Sāsāniden*, Leiden 1879, 13 n. 5. In the Sāsānian province of ʿIrāḳ, Kaskar is mentioned as one of the 72 administrative districts; see Streck, *op. cit.* (see *Bibl.*), 15, 18. It probably—as later under the Muslims—comprised roughly the district east of the Tigris, from the modern Kūt al-Amāra in the north to the region of the mouth of the Tigris. Sometimes it is mentioned as equivalent to the district of Maysān [*q.v.*]. On this, cf. Schaeder in *Isl.*, xiv (1924), 17 f. The bishopric of Kas̲h̲kar must have coincided pretty much with the Sāsānian district of the same name; cf. the map in Sachau, *Die Chronik von Arbela*, 16.

Kaskar is also given as the name of the capital of Daylam, which was usually called Dūlāb; cf. G. Le Strange, *The Lands of the East. Cal.*, 174; de Morgan, *Mission scientifique en Perse*, i, Paris 1894, 276.

Bibliography: *BGA*, *passim*; al-Balād̲h̲urī, *Futūḥ*, 582; Yāḳūt. *Muʿd̲j̲am* iv, 274; al-Ḳazwīnī, *Āt̲h̲ār al-Bilād*, ed. Streck, *Babylonien nach den arab. Geograph.*, ii, Leiden 1902, 318 f., 321 f.; Ritter, *Erdkunde*, x, 191.

(M. Streck-[J. Lassner])

KASR, from the root KSR, with the sense in Arabic of "to break", as a mathematical term means "fraction". Ibn al-Bannāʾ [*q.v.*] in his *Talk̲h̲īṣ aʿmāl al-ḥisāb* gives the following definition: "A fraction is the relationship between two numbers when it is a part or several parts. The relationship between the part and the number which bears the same name is called a fraction". The part or the numerator is called *basṭ*; the number with which it is in relationship (*samī*) is called *imām* (*Talk̲h̲īṣ*, *Kas̲h̲f al-d̲j̲ilbāb*). Bahāʾ al-Dīn al-ʿĀmilī (9th/15th century) uses the terms *ṣūra* and *maḳām*, as do al-Kās̲h̲ī (ms. Tunis 2039, f. 7a) and the Revue de l'Académie du Caire, 1957; *mak̲h̲rad̲j̲* or *muk̲h̲rad̲j̲* is also found (the Ik̲h̲wān al-Ṣafāʾ), connecting the idea of the fraction to that of division (*k̲h̲ārid̲j̲*, the term being specialised to translate "quotient"). The idea of the part, by definition less than the whole, led the Arabic authors to consider the fraction as being, by its very essence, inferior to the idea of the unit; at the base of this is the concrete idea of dividing up a given amount. Ibn al-Bannāʾ is very explicit here: "The addition of fractions stops when one arrives at a fraction whose numerator is less by a unit to its denominator". Al-Ḳalaṣādī says in a precise fashion that "One does not say four fourths or five fifths" (*Kas̲h̲f al-astār*, ms. Tunis 3292, f. 39b).

For denoting fractions whose denominator lies between 3 and 10, the paradigm *fuʿl* or *fuʿul* is used; for "half" or "equal part", however, *niṣf* is used. This category of fractions is called *muntaḳ* "pronounceable" or *maftūḥ* "open", cf. al-Kās̲h̲ī, *Miftāḥ al-ḥisāb*, ms. Tunis 10301, ff. 73b-74a. The rest are called *aṣamm* "deaf"; they are expressed by using the expression *d̲j̲uzʾ min* ... ("a part of ...", "a part from amongst ...").

For the notation of fractions, it was al-Ḳalaṣādī who first used the symbols still in use today, sc. writing the numerator above the denominator and separating the two terms by a horizontal line (*Kas̲h̲f al-asrār*, f. 17b). Since this notation was new, al-Ḳalaṣādī seems to stress its explanation, using the expressions *ʿalā raʾsihi* ("placed above it") and *mā fawḳ al-k̲h̲aṭṭ* ("that which is above the line"); see the commentary on the *Talk̲h̲īṣ*, ms. Tunis 307R, f. 111b.

From the time of Ibn al-Bannāʾ onwards, the Arab mathematicians distinguish five kinds of fraction:

(1) simple or ordinary fractions (*mufrad*);

(2) fraction of relationship (*muntasib*), as in this example from al-Ḳalaṣādī

$\frac{3\cdot 1\cdot 4\cdot 5\cdot}{4\cdot 3\cdot 7\cdot 9\cdot}$ which is written in modern notation:

$$\cfrac{5+\cfrac{4+\cfrac{1+\frac{3}{4}}{3}}{7}}{9}=\frac{5\times7\times3\times4\quad 4\times3\times4\quad 1\times4\times3}{9\quad\times\quad7\quad\times3\quad\times\quad4}=\frac{480}{756}$$

(3) disjunct fractions (*muk̲h̲talif*), which do not have the same denominator

(4) subdivided fractions (*mubaʿʿaḍ*), or fractions of fractions, noted by al-Ḳalaṣādī

$\frac{6\ 4\ 1}{7\ 5\ 3}$ or $\frac{6}{7}\times\frac{4}{5}\times\frac{1}{3}=\frac{24}{105}$, the numbers making up the numerator and denominator being separated, but without using any dots

(5) excepted fractions (*mustat̲h̲nā*), separated by the substraction sign.

In geometry, the idea of the fraction is usually conveyed not by *kasr*, but by the terms *nisba* "relationship" or *tasmiya* "denomination". However, words derived from the root *K S R* are used to translate the concept of area: *kassara*, *taksīr* "area", *mukassar* "square of a unit of linear measure" (al-

K͟hwārazmī, *Kitāb al-D̲j̲abr wa 'l-muḳābala*, 55; *Murs̲h̲ida*, ms. Tunis 2042, f. 28b; *Rasāʾil Ik̲h̲wān al-Ṣafāʾ*, 60). This usage may be connected with the idea of the fraction; thus in effect, in order to calculate the area of a field, it is divided up into a certain number of squares equal to the unit of surface. It may be accordingly noted that the Arab authors made a distinction between the concept of area (number, arithmetical concept) and that of surface (geometrical concept).

In the work of al-Kās̲h̲ī (d. 840/1436), *al-Fawāʾid al-bahiyya fi 'l-ḳawāʾid al-ḥisābiyya*, known as the *Maḳālāt D̲j̲ams̲h̲īd* (mss. Tunis 169, 2039), we have the first text concerning the introduction of decimal fractions (*kusūr aʿs̲h̲āriyya*). Al-Kās̲h̲ī, writes W. Hartner, "anticipates by more than a century and a half the theory of these fractions, introduced into Europe, no doubt independently, by the Flemish scholar Simon Stevin in 1585".

(M. SOUISSI)

ḲAṢR [see Suppl., *s.v.* BALĀṬ].

ḲAṢR FIRʿAWN [see WALĪLĪ].

ḲAṢR AL-ḤAYR AL-G̲H̲ARBĪ, Umayyad castle in the Syrian desert at 60 km. SSW of Palmyra (Tadmur [*q.v.*]) on the track connecting this oasis to Damascus via Ḳaryatayn and the one leading from Ḥimṣ [*q.v.*] to al-D̲j̲awf [*q.v.*] through the pass of Harbaḳa. The whole of the Umayyad ruins include a *ḥammām*, a *k̲h̲ān*, a large garden (*bustān*), a zone of cultivable lands irrigated by canalizations connected with a *birka* and with the Roman dam of Harbaḳa, and a residential palace which occupies an important place in the history of Umayyad architecture and environment in the Near East.

Before the organization of this *bādiya* [*q.v.*], sedentaries had already settled there in the Roman period. In the middle of the 6th century A.D. al-Ḥārit̲h̲, the G̲h̲assānid phylarch, ordered the construction of a Jacobite monastery, the dam was repaired and the site was occupied again. In 109/728, four years after his accession to the caliphate, His̲h̲ām b. ʿAbd al-Malik [*q.v.*] had a residential palace constructed by workmen from Ḥimṣ on this site, which could be al-Zaytūna (the olive-garden). He lived there before constructing Ḳaṣr al-Ḥayr al-S̲h̲arḳī [*q.v.*] to the east of Tadmur. During the ʿAbbāsid period the site was abandoned, but it was reoccupied under the Ayyūbids and the Mamlūks.

The dam of Harbaḳa, constructed by the Romans in the 1st century A.D., brought about the development of a rich oasis. The Roman construction is situated at some 16 km. south of the site of the northern slopes of the D̲j̲abal al-Rawāḳ, at a distance of 1500 m. from the well of ʿAyn Barda. A lake 1550 m. long and 800 m. wide, fed by water flowing down from the mountains, was held back behind a massive rectilineal wall, closed in between two facings formed by large steps of huge stones running from the base to the top. This artificial reservoir is now filled up. Through three inlets the water flowed into a mainly subterranean canalization which brought it to a cultivated area where was found, at about 600 m. to the west of the palace, a *birka*, 60 m. long and 3.65 m. deep, surrounded by an embankment and fed by the canal. Further on the water arrived at the *bustān* to the east of which there was a dam that retained the water. The orchard measured about 45 hectares in area and was surrounded by a large enclosure of bricks, whose substructure consisted of limestone and which had semi-cylindrical buttresses, built alternately inside and outside the wall. The orchard, provided with an irrigation system consisting of water-distributors and sluices, had two entrances. The traces of the watchman's house can still be seen. Upstream, on a lateral drain, are the ruins of a water-mill. Close to the *birka* rise the vestiges of an almost square construction, about 55 m. long, none of its angles is a right angle. This is the *k̲h̲ān al-milḥ*, "whose walls had been of mud brick resting on a base of well cut stone." On the eastern side was a large gateway which has now been removed to the National Museum at Damascus. Its lintel carried an inscription dated Rad̲j̲ab 109/Oct.-Nov. 727. The entrance was framed by two wings which stood out 18 m. from the façade along the northern and southern walls. In the southern wing was a mosque, as can be concluded from a still-existing *miḥrāb* with small columns; the northern wing contains a drinking-trough. Inside there is a central court-yard 22.50 by 23 m., surrounded by a portico 2.50 m. deep. On the northern, western and southern sides are three rooms 48 m. long and 4.80 m. wide, possibly stables or cattle sheds. On the eastern side there are six rooms of various size and a vestibule.

Lying 30 m. north of the palace there was a bath of classical type, dating from the Roman-Byzantine period. It had four cool rooms, the southern one containing a *miḥrāb*, and a suit of three warm rooms constructed over hypocausts.

Externally the palace was of a square construction 70 m. long—the equivalent of 200 Roman feet—, with a wall of limestone of 2 m. surmounted by mud brick which rests upon a zone of burnt brick. This wall has a semi-circular buttress in the middle of each side, except the oriental one, where two half-towers flank the entrance-gate. The corners are protected by round towers, except at the north-western angle, where the enclosure incorporates a Byzantine tower, which on its southern side has a machicolation defending a gate. Later, this tower served as watch- and relay-tower for the fire-signals between Bayḍa and Ḳaryatayn. The rounded buttresses of the wall, unknown in Roman and Byzantine fortifications, are Sasanian elements.

Through a round-arched gate, 3 m. wide, provided with a semi-circular tympanum built in brickwork covered with cubes of glass and two jambs of 4 m. decorated with leafwork of vine-tendrils, one enters a large entrance passage 11 m. long, cradle-vaulted and provided with small benches on each side. It leads into a courtyard of 37 m. square, paved with a small basin in the centre. The portico has columns with Corinthian capitals, the bases of which consist of Doric capitals. At the angles of the portico, which is 4 m. deep, are square-sectioned piers.

The palace is a residence on two floors. The ground-floor consists of six independent sets of rooms (*bayts*), accessible through the portico. According to Creswell, their disposition originates from the palace of the Roman governor at Boṣrā [*q.v.*]. The plan of the

upper floor repeated that of the ground-floor, with which it is connected by two staircases. All around ran a gallery with small columns and balustrades. The residence, which had no windows on the outside, received light through the doors and through stucco grilles in the tympanums of the doors, none of which was found undamaged on the spot during the excavations. It has been possible to replace a great number of these window-grilles (*claustra*), made in stucco and then bored out with a trepan. They now give an idea of the richness and variety of the geometrical and floral motifs. Creswell has remarked that Ḳaṣr al-Ḥayr is the first example of the use of stucco ornament in Muslim architecture.

It has been possible to reconstruct many elements of figurative art: human beings or animals in bas-relief in one of the divisions of the semi-towers of the entrance, and on the panels of the interior balustrade. There are even genuine sculptures, among which figures the statue of a man, almost life size, sitting on a throne, with a crown (*tādj*) on his head, knees wide apart and heels close together, generally identified as Hishām b. ʿAbd al-Malik. Human beings and animals are also represented in the large compositions which are painted in fresco on the floor of the two staircase rooms of the palace. One, 5 by 4.58 m., is divided horizontally into three parts. On the upper one two musicians are depicted, on the second one a hunting scene, representing "the caliph on horseback with bow and arrow and using stirrups, which is almost the oldest known record of their use" [see ARCHITECTURE, I, 613a]; on the lower part, badly preserved, one can distinguish animals and a human being leading a bovine. On the second painting, 5.24 by 4.43 m., there is in the centre a great medallion with a large bust of a woman on a background of foliage, with on upper side there are marine centaurs and on the lower animals, including a fox and two crested stilt-legged aquatic birds.

On the walls of the rooms on the ground floor there have been discovered simple geometrical motifs, in which the lozenge dominates, and imitations of marble facing, painted in fresco-colours and executed schematically. The central part of the eastern wing, the most decorated of the palace, has been reconstructed in the National Museum of Damascus.

Ḳaṣr al-Ḥayr is particularly important, not only because it has the characteristics marking Umayyad castles, as defined by Henri Stern (*Note*, 81): "A rectangular fence with rounded, buttressed towers and *bayt*s within it and a mosque are the centre of an area of agricultural exploitation irrigated by means of a big dam", but the variety of its various architectural elements and the riches of its decorations make it a first-class piece of evidence for the study of art and civilization in the Umayyad period.

(N. ELISSÉEFF)

ḲAṢR AL-ḤAYR AL-SHARḲĪ, important Umayyad agricultural settlement in the Syrian desert at the foot of the Djabal Bishrī, about 100 km. NE of Palmyra and 65 km. S of Ruṣāfa-Sergiopolis. It lies at the intersection of the road joining Mayyadīn on the Euphrates to Palmyra and Ḥimṣ with the one leading from Ḥalab to Rusāfa and permitting to reach Baghdād and Baṣra by crossing the pass of Tayyibe, situated at 14 kms. to the N–NE. The village of Tayyibe is usually identified with Oriza mentioned in the Annals of Assurbanipal (ʿUrḍ of the Middle Ages).

Many travellers who took that route between the 14th and the beginning of the 19th centuries, have been able to see the ruins of Ḳaṣr al-Ḥayr. Later, towards 1840, the desert route to India was abandoned in favour of the "Overland Road" and the site was mentioned no more.

The ruins, visited by A. Musil in 1908, were rediscovered and studied on the surface by Albert Gabriel in 1925 and by K. A. C. Creswell in 1928 and 1930, before being excavated by Oleg Grabar in 1964, 1966 and 1969.

The whole of the settlement covers an area of over 6 × 3 km., surrounded by a wall 17 km. long. The southern part comprises a curious system of canalizations and openings which have been variously interpreted. At the northern angle, down stream from a large artificial *wadī*, are two square enclosures, reinforced by semi-circular towers, the small one being called *al-Ḳaṣr*, the big one *al-Madīna*. Their fronts are orientated perpendicularly to the cardinal points, whereas the eastern and western axes are not in even line with each other, there being a difference of 10 m. These are the oldest fortified Muslim enclosures that exist.

The small enclosure has a side-line of 70 m., the eastern front not being parallel to the western front, which is the only one to have a gate. The wall, 2.03 m. thick and *ca.* 14 m. high, is built with pieces of limestone, in courses 0.35 m. thick and strongly joined with gypsum. Each angle of the wall is reinforced by a round tower 4.43 m. in diameter and two semi-circular towers on each front; altogether 12 towers all covered with a small cupola of bricks. On the western front the disposition is different because of the monumental gate which is flanked by two semi-towers 4.15 m. in diameter, jutting out 2.95 m. The entrance, 3 m. wide, is surmounted by a round arch and a tympanum of masonry. The higher parts of the towers have a decoration of bricks and of stucco panels with vegetative motifs, representing the oldest decoration of this kind in Islam. In the centre above the entrance a parapet consisting of three consoles form the oldest Muslim example of a machicolation (*saḳḳāta*) being used as an element of defence and no longer as latrine.

To enter the inner side of the fence, one passes through a flagged vestibule 5.30 m. wide and 7 m. deep, flanked by two rooms facing a courtyard with sides of 37 m., and is surrounded by a portico 5 m. wide with arcades resting on columns 0.55 m. in diameter and a shaft of 3.70 m., surmounted by capitals of acanthus leaves. This portico gives access to many rooms with cradle vaulting, 12 m. deep but of different width. On the upper floor, under the gallery, are rooms with flat wooden ceilings whose

disposition corresponds to the plan of the ground floor. Nothing is known about the use of these rooms. The building was constructed at two periods: begun under Hishām [*q.v.*] and finished in the early ʿAbbāsid period. Fragments of ceramics indicate that it was occupied from the 5th-7th/11th-13th centuries.

The big enclosure with sides of 160 m. has a stone wall 2.12 m. wide which is in a very bad condition. On each front are towers with rounded corners 4 m. in diameter, and 6 semi-circular towers, altogether 28 towers, standing at a distance of 26.25 m. from axis to axis, except those which flank the entrance constructed in the middle of each front. To be noted are two sally-ports on the eastern front and some inside staircases which lead one to imagine that there was once a gallery facing the interior front of the wall. At the top of the towers, which are crowned with a cupola in bricks, is a room with three loop-holes permitting shooting to the front and sideways. The entrances are all identical: 3 m. wide, surmounted by a lightly broken arch, with a tympanum in masonry and a parapet with two openings. The parapet of the northern gate has five machicolations and covers the space between the two flanking towers. In the middle of the enclose extends a vast open space, the *Mīdān*.

At the southeastern corner survive the vestiges of eight big pillars, some of which support arcades. Creswell has discovered there a mosque, the plan of which shows close analogy with that of the Great Mosque in Damascus. This sanctuary is dated by an inscription of 110/728-9. The prayer-room, 22 m. deep and 37 m. wide, has a central nave with pillars in T-form while the remains of arcades mark off three aisles. The room faces a courtyard with a cistern fed by water from a canalization.

The arch at the southeastern corner of the court-yard is slightly broken and in shape a Norse arch: it is the oldest example of this type actually known.

According to O. Grabar there is, to the south-west of the mosque, an official building, the *dār al-imāra*, with a courtyard surrounded by a portico, rooms and a reception-hall, the back wall of which leans against the enclosure wall.

To the north of the mosque, in the extension of the western wall, a street 3.50 m. wide is bordered, on its eastern side, by installations with ovens and presses, that reveal the existence of soap-works. In the same area, a bath faced the *mīdān* and not towards the south-west; an enormous cistern should also be noted there.

The vestiges of the northwestern part of the en-closure suggest that it may have been destroyed during the Ķarmaṭī expeditions of the beginning of the 4th/10th century.

In the space of 42 m. which separates the two en-closures there rises a square tower with sides of 2.94 m. and 10 m. high. An entrance on the south side gives access to a spiral staircase. The analysis of the construction permits us to date it to the same period as the enclosures, with a post-Umayyad re-construction. Why does the tower stand isolated? There is no minaret attached to the mosque, hence possibly it served as minaret for both enclosures. If so, it would be the third known minaret in the history of Islam.

To the south of the *Ķaṣr* and the *Madīna*, a vast polygonal enclosure 17 km. long covers an area of 850 hectares. One can distinguish a wall to retain water, alternately reinforced on both sides with four rows of stone 0.30 m. high, above which there are rows of mud bricks at a height of about 2 m. and a row of stone to protect it. There is also a wall for lock-gates, the buttresses of which have a diameter of 2 m. and are at 10 m. distance from each other; they frame a series of four locks, 1.11 m. wide and 1.55 m. high, with double vaults of bricks. The locks worked through a system of sliding-doors. The water arrived from the region of Tayyibe through two subterranean aqueducts. This enclosure poses prob-lems of interpretation: accordingly some have considered it a lake to store water for irrigation, others that it was a reserve for animals. H. Seyrig considered it to be a large garden protected against Bedouin razzias.

To epitomise the history of the site: it may be recalled that an installation, dating from the 7th century B.C., is mentioned in the contemporary texts; the Roman occupation in the Palmyran period was followed by a Christian period, the Umayyad con-structions and finally building activities at the be-ginning of the ʿAbbāsid period. Destroyed by the Ķarmaṭīs in 289/1002, the complex became part of the *iķṭāʿ* [*q.v.*] of Shīrkūh and his successors, the *amīrs* of Ḥimṣ; it was devastated by the Mongols in Radjab 702/March 1303. It was certainly reoccupied before being ruined in 1048/1638 by order of Murād IV, in order to prevent the creation of a Bedouin centre of rebellion. From the end of the 19th century onwards, the ruins have been giving shelter to nomad encampments.

The site of Ķaṣr al-Ḥayr poses identification problems: most of the authors identify Tayyibe with Oriza-ʿUrḍ while Ķaṣr al-Ḥayr, according to Ptolemy, followed by A. Musil, is identified with Adada, an ancient Roman camp. In 1939 J. Sauvaget positively identified the ruins with Ruṣāfat Hishām, built on the site of al-Zaytūna; later he abandoned this hypothesis which had already been weakened by the excavations of K. Otto-Dorn at Ruṣāfa-Sergio-polis in 1952. O. Grabar proposes to identify the site with ʿUrḍ and to consider the vestiges of the "castle" as being those of a caravanserai, which in that case would be the oldest *khān* [*q.v.*] of Muslim architecture.

ĶAṢR IBN HUBAYRA, town in ʿIrāķ. Situated half way between al-Kūfa and Baghdād, the town was founded by Yazīd b. ʿUmar b. Hubayra, the last Umayyad governor of ʿIrāķ (Balādhurī, *Futūḥ*, 287; Muķaddasī, 53, 115, 121, 130; Iṣṭakhrī, 85; see also Ibn Ḥawkal, 166, ed. Kramers, 243; Yāķūt, *Muʿdjam*, iv, 946 (confused with Madīnat b. Hubayra: Reite-meyer, *Die Städtegründungen der Araber im Islam*, Leipzig 1912, 49). The site should not be confused

with Madīnat b. Hubayra, which was situated closer to al-Kūfa, where the same Yazīd began building until forced to abandon the site by order of the Umayyad caliph Marwān II (Balādhurī, *Futūḥ*, 287; Ṭabarī, iii, 80, 183; Yāḳūt 1, 680; 3, 280; 4, 123, 946; see also Le Strange, *Baghdad*, 6 n. 1; *Lands*, 71). Yāḳūt reports that the ʿAbbāsid caliph al-Saffāḥ established his capital at Ḳaṣr b. Hubayra, completing the construction begun by Yazīd, and named it al-Hāshimiyya, but as the populace persisted in calling the town by its original name, he felt compelled to abandon the site for a location nearby. This account apparently confuses the report of Balādhurī which indicates that al-Saffāḥ settled at Madīnat b. Hubayrah (Yāḳūt, iv, 546; Balādhurī, 287; see also AL-HĀSHIMIYYA, where Yāḳūt's account is given greater credence). The 4th-5th/10th-11th century geographers report that it was the largest town between Baghdād and al-Kūfa and was situated close to the Euphrates and the bifurcation of various water channels which brought wares to its many markets. With its decline some time before the 6th/12th century, al-Ḥilla became the major town of the area [see AL-ḤILLA]. (J. LASSNER)

AL-ḲAṢR AL-KABĪR, Alcazarquivír, a town in Northern Morocco, about 50 miles south of Tangier on the right bank of the Wādī Lukkus; at one time, this ran through it, but the course of the stream was diverted to prevent inundations. Lying in a vast plain commanded on the east by heights, it is divided into two parts, al-Sharīʿa in the north and Bāb al-Wād on the south, between which lies the market-place. The only buildings of any importance are the great mosque which is pre-Almohad, the mosque of Sīdī al-Azmīrī and the Djāmiʿ al-Sayda, finished in 1100/1689. Within and around the town are many *ḳubba*s dedicated to local saints. The most venerated marabouts are Abu 'l-Ḥasan al-Ḳurshī (Ḳurashī), a native of Spain who came towards the end of his life to teach in al-Ḳaṣr, where he died in 568 or 573/1172-73 or 1177-78; Sīdī Ben Aḥmed, Sīdī ʿAlī b. Khlef b. Ghālib, usually called Mūlāy ʿAlī Bū Ghālem and regarded as the patron saint of the town; and lastly Sīdī Bel-ʿAbbās, who is really a Jewish rabbi, Yūda Yabalay.

At the beginning of the 20th century, the population was about 9,000, belonging for the most part to the Khlot, Ṭlīḳ and Djbala. It also included Rīfans, a few families originally from Tetwān and Fās as well as Algerians who left Tlemcen and Oran as a result of the French occupation. The Jews numbered 2,000. Industry, at one time flourishing, is limited to the manufacture of cloths for local needs. Agriculture, on the other hand, is prosperous in the country around as a result of the system of co-operation between townsmen and tribesmen. Al-Ḳaṣr is thus a busy market for corn, barley, beans and flax.

History. The site of al-Ḳaṣr perhaps corresponds to that of a Roman town (Oppidum novum?) which had already disappeared by the time of the first Muslim invasions. In the 2nd/8th century a fortress was built in these regions by the Danhādja, a branch of the Kutāma. According to al-Ziyānī, it was built in 102/720-721 by the Amīr ʿAbd al-Karīm al-Kutamī, whence the name Ḳaṣr ʿAbd al-Karīm (al-Idrīsī, *Description de l'Afrique*, ed. Dozy and de Goeje, text 78; tr. 89; *Kitāb al-Istibṣār*, ed. von Kremer, Vienna 1852, 78; tr. Fagnan, Constantine 1900, 140; also Ibn Khaldūn, *Hist. des Berbères*, ed. de Slane, i, 401; tr. ii, 323) or Ḳaṣr Kutāma, which the town kept for several centuries. Al-Bakrī, however, makes a distinction between Sūḳ Kutāma "a large and magnificent town situated on the river Lukkus with a *djāmiʿ* and a very busy market" and Ḳaṣr Danhādja "a castle built on a hill and commanding a large river". Ibn Khaldūn, on the other hand (*op. cit.*, text i, 188, tr. ii, 291), connects Ḳaṣr Kutāmī with the Danhādja (cf. also *Kitāb al-Istibṣār*). Sūḳ Kutāma was the capital of the state governed by Idrīs b. al-Ḳāsim b. Ibrāhīm. Al-Muḳaddasī, 219, ed.-tr. Pellat, 7, mentions Sūḳ al-Kutāmī among the towns dependent on Fās (al-Sūs al-adnā). Although eclipsed by the rapid development of Fās, al-Ḳaṣr seems to have retained a certain amount of commercial importance. Al-Idrīsī mentions its very busy bazaars. But it was only under the Almohads that the town rose out of the semi-obscurity in which it was vegetating. Yaʿḳūb al-Manṣūr surrounded it with a fortified wall and made a hunting-ground and a hospital called Ḥārat al-Mudjārīn. This is perhaps why he was regarded by Leo Africanus and Marmol as the actual founder of al-Ḳaṣr. Under the Marīnid dynasty, the town was given a *madrasa* by Abū ʿInān which attracted many students and was still frequented in the 10th/16th century. Al-Ḳaṣr recognised the authority of the Marīnids from 620/1223-1224 onwards. In 687/1288-1289 the latter appointed as its governor the *Raʾīs* Abu 'l-Ḥasan b. Ashḳīlūla, whose descendants for long remained lords of the town. The memory of this local dynasty, whose members, in alliance with the Banu 'l-Aḥmar of Granada, distinguished themselves in the holy war, is still alive to-day.

The period following the disappearance of the Banū Ashḳīlūla was one of calamities. The Portuguese, established on the coast, threatened the town. The inhabitants did not dare to cultivate the soil more than six miles from the walls. In 1503 the governor of Açila, Don Juan de Menecez, attempted to take it but without success. In the century following, al-Ḳaṣr became the most advanced post of the "volunteers of faith" (*Mudjāhidīn*) who harassed the Christians settled on the coast. During the period of anarchy that preceded the establishment of the ʿAlawī dynasty, the town became the residence of the *Ḳāʾid* Ghīlān, who had gained possession of all Gharb. Driven from his capital by Mūlāy al-Rashīd in 1078/1668, Ghīlān was able to return to it on the death of this prince. He held out there till 1084/1673 when he was defeated and killed by Mūlāy Ismāʿīl. Al-Ḳaṣr fell again, this time finally, into the hands of the Sharīf, who dismantled its walls.

(G. YVER)

AL-ḲAṢR AL-ṢAGHĪR, a town in Morocco, now in ruins. It lay on the south bank of the Straits of Gibraltar, 14 miles W. of Ceuta, 23 miles

E. of Tangier, at the head of a bay sheltered by a spur of the Djebel Ghomāri at the mouth of a navigable river.

In ancient times this site was perhaps occupied by a Phoenician factory and then by a Roman town (Lissa or Exilissa of Ptolemy). A fortress was erected there quite early in the period of Muslim occupation, in 90/708-9, according to al-Ziyānī, in *Archives Marocaines*, vi, 494, on the territory of the Maṣmūda, whence the name of Ķaṣr Maṣmūda (cf. Ibn Khaldūn, *Hist. des Berbères*, ed. de Slane, i, 280, 13, tr. ii, 134) which is given it by the author of the *Kitāb al-Istibṣār* and by al-Idrīsī. Al-Bakrī calls it al-Ķaṣr al-Awwal to distinguish it from al-Ķaṣr al-Kabīr [*q.v.*]. According to him, it was inhabited by the Banū Ṭarīf and surrounded by great plantations. Under the Almohads it took the place of Marsā Mūsā as the port of embarkation for Spain. Many authors call it therefore Ķaṣr al-Madjāz (*Geogr. d'Aboul-féda*, tr. Reinaud, II/i, 185; Ibn Khaldūn, *loc. cit.*), or Ķaṣr al-Djawā "Castle of the crossing" (Ibn Abī Zarʿ, *Rawḍ al-Kirṭās*, ed. Tornberg, 138, 143, 146). The Almohads erected important buildings in it and established naval dockyards there. But the prosperity of the town declined in proportion as the rulers of the Maghrib lost their hold on Spain. Deprived of the income which the transport of the armies had assured them, the inhabitants turned to piracy. Al-Ķaṣr therefore became one of the first towns that the Portuguese sought to capture. In 1458 King Alfonso V attacked it with a fleet of 80 ships and an army of 17,000 men; after repelling two assaults, the Muslims, overwhelmed by the Christian artillery, capitulated. They were, however, granted permission to retreat with their arms and baggage. Alfonso V entered the town on Oct. 19, 1458. The great mosque was turned into a church, the fortifications were strengthened and a garrison installed under the command of Don E. de Minecez. Two attempts made by the Sulṭān of Fās in 1458 and 1459 to recapture the town did not succeed. In 1463 the tribes of Andjerra recognised the suzerainty of Portugal and in 1471 Sulṭān Mūlāy Saʿīd signed a treaty by which he ceded al-Ķaṣr to the king of Portugal.

Al-Ķaṣr remained in Christian hands till 1540 but during this period it was continually being attacked by the Moors. John III therefore decided to evacuate it after previously dismantling it. Some years later (1559) a French prince, Antoine de Bourbon, king of Navarre, obtained al-Ķaṣr in exchange for the men-at-arms that he was to supply to the Sharīf of Fās, but the intrigues of the king of Spain, Philip II, prevented the treaty from being carried out. Since that date no attempt has been made to rebuild the town. The inhabitants abandoned it and the harbour became silted up and no longer used except by smugglers. The site is marked by the ruins, still imposing, of the Portuguese fortress, by ditches, and by the remains of the wall and the ruins of the gate through which the citadel communicated with the town proper.

(G. YVER)

ĶAṢR-I SHĪRĪN, town in the south-western part of the district of Ardilān or Persian Kurdistān in 34°30′ N. lat. and 45°30′ E. long. (Greenwich) on the right bank of the Ḥulwānrūd. To the west and south-west of Ķaṣr-i Shīrīn lies the great range of Agh-Dagh; in the S.E. also on the left bank of the river run imposing mountain chains. Ķaṣr-i Shīrīn was an important caravan station from the earliest times. The most important route through it is the very old road from Baghdād to the Iranian highlands—the Ṭarīķ Khurāsān of the Arabs of the Middle Ages. Ķaṣr-i Shīrīn lies about half-way between the two stations of Khāniķīn [*q.v.*] in the south-west and Sar-i-pul (in mediaeval times Ḥulwān, south of Sar-i-pul) in the east. Less important roads also branch off here to the north, north-west, and south-east.

The modern Ķaṣr-i Shīrīn (1600 feet above sea-level) is an insignificant town surrounded by a wall of earth and stone. Outside the walls on the east is a commodious caravanserai; to the west is a fort in modern style which, according to Aubin (*op. cit.* in *Bibl.*), Djowān Mīr built at the beginning of the 19th century, using it to plunder passing pilgrims to Karbalāʾ and merchants. Opposite the town on the left bank of the river lies the Bāgh-i Shāh, "King's Gardens", a park laid out with date-palms and orange and pomegranate trees by Naṣr al-Dīn Shāh on the occasion of his pilgrimage to Karbalāʾ.

The most remarkable feature of Ķaṣr-i Shīrīn, which makes it one of the most interesting places in Persia to the historian or archaeologist, is the extensive system of ruins dating from the Sāsānian period in its vicinity. The name Ķaṣr-i Shīrīn, "Shīrīn's Palace", dates from the later period of the Sāsānian empire. Shīrīn, a Christian, was the favourite wife of Khusraw II Parwēz (560-628 A.D.), who called the great palace he built as a summer residence after her. Ķaṣr-i Shīrīn and the neighbourhood was the scene of the unhappy love-story of Shīrīn and the royal architect Farhād [see FARHĀD WA-SHĪRĪN]. A rock tomb south of Ķaṣr-i Shīrīn is popularly known as Ūtāķ-i Farhād, "Farhād's chamber"· see Sarre and Herzfeld, *Iranische Felsreliefs*, 10. The famous lute-player, Bārbud (on him see Vullers, *Lexicon Persico-Latinum*, i, 168, and Justi, *Iranisches Namenbuch*, 63), also spent some time at the imperial court at Ķaṣr-i Shīrīn.

The period of Ķaṣr-i Shīrīn's glory was only brief. Ten years after the death of Khusraw II the Sasanian empire collapsed before the Arabs, and in the Muslim period the palaces of Ķaṣr-i Shīrīn seem no longer to have been inhabited. They fell quickly into ruins. Yaʿķūbī, *Buldān*, 270, mentions the ruins as early as 278/891. Ibn al-Athīr, viii, 388, mentions that as a result of an earthquake in 345/956 the walls of Ķaṣr-i Shīrīn cracked. Such Arab and Persian authors as Ibn Rusta, Yāķūt, al-Ķazwīnī and Ḥamd Allāh Mustawfī emphasize the great scale of Ķaṣr-i Shīrīn, with its halls, hermitages, treasure houses, etc. and the splendid gardens containing very rare animals, but give no detailed descriptions. Yāķūt and al-Ķazwīnī give especially the story of the origin of the palace, which the former (iv, 113) actually regarded as one of the wonders of the world.

We owe the most accurate description of the modern ruins to the French expedition of J. de Morgan. The main ruins lie on a broad plateau north-east of the modern town. Near the latter is the rectangular citadel flanked by six round towers (called Ḳalʿa or Ḳaṣr-i Khusraw, also Ḳalʿa-i Khusrawī) surrounded by a ditch. North of the Ḳalʿa are further mounds of ruins whose object is unknown. About 500 yards to the N.E. is the wall of a gigantic park, enclosing the summer-residence proper of the king, which measures, according to de Morgan, 300 acres. The wall round it, which also served as an aqueduct, reaches 20 feet at the highest part and is about 6,000 paces in extent. Another aqueduct-wall divides the park into two parts. The water for the irrigation of the gardens was brought from the Ḥulwān-Rūd; the aqueduct can still be traced in the Ḥulwān-Rūd valley until it is lost in the maze of ruins of Ḥawsh Kurī. In the centre of the whole scheme is the main palace, now called ʿAmārat-i Khusraw ("house of Khusraw") or Ḥādjdjī Ḳalʿasi ("pilgrim's palace"). In front of the palace still exists a 600-yard long stretch of the aqueduct flanked by two kiosks. West of the ʿAmārat-i Khusraw stands a smaller, similar vaulted building with four doors and a square principal chamber. It is now called *Čuār Kapu* or *Čār Darvāza* "Four Doors", or *Ḳalʿa-i Čuār Kapu*, "Palace of the four "Gates"." The purpose of this building is obscure.

About 3 miles E. of Ḳaṣr-i Shīrīn is another late Sasanian ruined palace, popularly believed to have contained the stables belonging to the palace of Ḳaṣr-i Shīrīn. These ruins, which consist of a palace 600 feet long with annexes and another mound of ruins, are the latest of all the palaces of Parwēz so far known.

Ḳaṣr-i Shīrīn is, of course, a site of much greater antiquity, but it has not been ascertained what ancient city stood here.

(M. STRECK-[J. LASSNER])

ḲAṢR YĀNĪ [see KAṢRYĀNNIH].

KASRA, the Arabic grammatical term denoting the vowel *i*: *kasra* designates the written sign itself, *kasr* the sound in question (Wright, *Ar. Gr.*[3], I, 8A). This distinction corresponds, for example, with the text of al-Dānī, *al-Muḥkam fī naḳṭ al-maṣāḥif*, Damascus 1379/1960, 42, ll. 4-7, and *Ḳitāb al-Naḳṭ* (Bibl. Isl., 3, 1932), 137, ll. 8-11, but *kasr* can also have another interpretation: the verb *kasara* (*i*) "to break", can be used to mean: "to provide [a *ḥarf*] with a *kasra*", the mouth being considered "broken" at the time of the pronunciation of the *kasra* (according to Abu 'l-Aswad al-Duʾalī, see below). *Kasr* can also be the infinitive (*maṣdar*) of the verb, as in genealogical works, for example, al-Suyūṭī, *Lubb al-lubāb*, Leiden 1840, 211, l. 11: *al-Ḳifṭī bi 'l-kasr wa-sukūn al-fāʾ*, "al-Ḳifṭī, with the *kasra* [under the *ḳāf*] and the *sukūn* of the *fāʾ*". The verbs *fataḥa* (*a*) "to open" and *ḍamma* (*u*) "to bring together the parts [of a thing]" have been similarly used, the first for the *fatḥa*, the second for the *ḍamma*, with the same remark for the *fatḥ* and *ḍamm* and likewise referring to the words of Abu 'l-Aswad (see below).

The first notation of the *kasra* and the two other *ḥarakāt*, *fatḥa* and *ḍamma*, was made by means of full points (al-Dānī, *Muḥkam*, 23, l. 11; 42, l. 12), in order to remedy the deficiencies of ḳurʾānic script and at first to indicate the *iʿrāb*, and its invention is invariably attributed to Abu 'l-Aswad al-Duʾalī (d. 69/688-9 [*q.v.*]): "When you see that I have opened (*fataḥtu*) my mouth with the *ḥarf*, mark a point above the *ḥarf*. If I bring together (*ḍamamtu*) [the lips of] my mouth, mark a point before the *ḥarf* [on the left, in the middle]. If I break (*kasartu*) [my mouth], put the point under the *ḥarf*. And if I make one or the other follow a nasal sound (*ghunna*) [nunation], place two points instead of one point" (al-Sīrāfī, *Akhbār al-naḥwiyyīn*, Bibl. Arabica, ix, Algiers 1936, 16, ll. 8-12). This legendary account at least shows some degree of observation of the physiology of the mouth during the pronunciation of the *ḥarakāt* and favours a purely Arabic origin for the technical terms applied to them [see ḤARAKA WA-SUKUN]. The Muslim references agree in crediting the readers of Baṣra, Naṣr b. ʿĀṣim and Yaḥyā b. Yaʿmur with the invention of the vowel points (see R. Blachère, *Introduction au Coran*[2], Paris 1959, 80-2, 89-90); this innovation was not imposed without long resistance (*ibid.*, 95-98), but at the time of al-Dānī (d. 444/1053) it was still in use (*ibid.*, 98).

Care must be taken in distinguishing the vowel points in the body of ḳurʾānic script. They are characterized by the use of red points; a green point is used for the *hamza* (the unvoiced glottal occlusive); and a yellow point for the *tashdīd* (gemination) (Abū Bakr b. Mudjāhid, cited by al-Dānī, *Muḥkam*, 23, ll. 9 ff.; see also, *ibid.*, 19-20, for other old practices in the use of colours). All these points constitute *al-shakl al-mudawwar*. But the diacritical points of the *ḥurūf* are *bi 'l-sawād* "in black" (*ibid.*, 22, l. 11; 43, l. 15), like ḳurʾānic script, and according to al-Dānī (43, l. 16) serve to establish a distinction between the diacritical marks and the *ḥarakāt*; see his chapter (35-41) on the diacritical marks. In matters of *iʿrāb*, the *kasra* was the sign of *djarr* (or *khafḍ*) [see IʿRĀB]. On the nature of the *kasra* and the other *ḥarakāt*, see ḤARAKA WA-SUKŪN. For the way in which the presence of the *kasra* is explained, in the second term of the *iḍāfa*, see IḌĀFA.

Some further points: (1). The points indicated concern *al-ḥarakāt al-mushbaʿāt*, the normal ones (literally "satisfied"). The latter are opposed to the *ḥarakāt*, not *mushbaʿāt*: sounds reduced by the *ikhtilās* or the *rawm* (see H. Fleisch, *Traité*, i, 36 f.,

49 g), or deviations through *ishmām*: *innamā huwa imālat al-kasra naḥwa l-ḍamma ḳalīlan* (al-Dānī, *K. al-nuḳaṭ*, 136, l. 13), "it is merely a weak inflexion of the *kasra* towards the *ḍamma*", *i.e.* an inclination of *i* to *ü* (see also H. Fleisch, *ibid.*, 1 36 g, 49 h). For the notation of these particular sounds, see the chapter of al-Dānī, *Muḥkam*, 44-8, more briefly: *K. al-Nuḳaṭ*, 136, l. 10 - 137, l. 3.

(2). In the first three chapters of the *Muḥkam* (2-13), al-Dānī has collected the Muslim traditions on the first form of the Ḳur'ān, the inventions of vowel points, and the resistance to that innovation or the concessions to it.

(3). Why were points employed? *Al-īdjāz wa 'l-taḳlīl*, "concision and brevity" was sought (al-Dānī, *Muḥkam*, 43, l. 17). In fact, there was very likely an influence of the usage of non-Islamic communities (see R. Blachère, *loc. cit.*, 79). For the Syriac, "the vowel point or the diacritical point known from the 4th century has served as the vocalization in most manuscripts" (L. Costaz, *Grammaire syriaque*[2], Beirut 1964, § 11).

Bibliography: In the text. (H. Fleisch)

KASRAWĪ TABRĪZĪ, sayyid aḥmad, Iranian historian, linguist, jurist and ideologist. Born on 29 September 1890 and educated in Tabrīz, he entered the theological profession in 1910, but soon left it because of his liberal ideas and modernistic tendencies. In 1919, he entered the Ministry of Justice, which he left in 1929 to practise law, soon after returning a verdict against Riḍā Shāh's royal court in favour of a group of peasants. He also taught history in the University of Tehrān, which he left in 1934 on an issue involving academic freedom.

Kasrawī wrote several books on history and on language and linguistics. Among these are his history of the Iranian Constitutional Revolution, in which he had been a participant; a detailed study of the pre-Saldjūḳ dynasties of north-western Iran (*Shahriyārān-i gumnān*, 3 vols., Tehrān 1928-30), and a monograph on the Ādharī language. He also expounded his views on "reforming" the Persian language—in grammar as well as vocabulary.

In 1933, Kasrawī began a critical study of life and society, with particular emphasis on the Iranians, whom he found decadent, morally corrupt and unfit as citizens. They were, he believed, ignorant of the "truths of life", because of centuries of "evil teachings" (*bad-āmūzī*), whose harmful effects should be shown to them so that they could perceive the truths, thus finding salvation. He tried to accomplish this task in the periodicals *Paymān* (7 vols., 1933-42) and *Parčam* (1941-2), some sixty books, and frequent lectures. A book in four parts, *Wardjāwand bunyād*, was to sum up his views, but only three parts appeared (Tehrān 1943).

Kasrawī's strongest attack was on Shīʿism, which he considered the source of much evil, on the grounds that it teaches *taḳiyya* and *tabarru'* [*qq.v.*], the *imām*s' power of intercession, and belief in an ever-living hidden *imām*; that it places undue and destructive emphasis on past issues and events irrelevant to current life, *e.g.*, the succession to Muḥammad, and the martyrdom of Ḥusayn and others; and that it encourages harmful acts, such as pilgrimages to the graves of the *imāms* and others and the Muḥarram rituals. All this, he maintained, makes the Shīʿī unfit for a useful and constructive life. For similar reasons, he combated Bahā'ism, Ṣūfism, materialism (i.e. the doctrine of "the survival of the fittest" and its implications), and superstitions (fortune-telling, belief in good and bad omens, amulets, divination, etc.).

He also attacked much of Persian poetry, concentrating on Khayyām, Saʿdī, Rūmī, and particularly Ḥāfiẓ. This poetry, he asserted, is replete with doctrines such as fatalism, Ṣūfism and *kharābātīgarī* (as in Khayyām's ideas), with excessive praise of wine and shameless talk of homosexuality. It encourages beggary, flattery, cowardice, hypocrisy and the like.

As an act of confession, and to draw attention to their activities, Kasrawī and his supporters instituted a festival, on the first day of winter, to destroy harmful writings which they had owned before joining the group. Called *Djashn-i Kitāb-sūzān*, "festival of book-burning", this activity attracted considerable hostility.

In Kasrawī's view, there are two opposing forces or "essences" (*gawhar* or *sirisht*) within each individual. *Djān* is the source of egoism; from it emanate self-interest, greed, injustice, jealousy, etc. *Rawān* is the source of altruism; from it emanate self-sacrifice, justice, sympathy, honesty, truth-seeking, etc. Related to *rawān* is *khirad*, the faculty of distinguishing right from wrong, good from evil. *Djān* and *rawān* are constantly at war. The duty of religion, and of similar institutions, is the strengthening of *rawān*. Religion means "learning the truths" and living by the dictates of the *khirad*. It should help man to subdue his *djān*, and find happiness. Recent progress in science and technology should be matched by progress in the "way of life", especially religion. Islam has lost its effectiveness, cannot meet the challenges of modern times, and needs to be brought up-to-date.

Among Kasrawī's constructive teachings were those on government, economics, education, and the status of women. He advocated representative government and a modified capitalism. Each individual should partake of the pleasures of life, including its material rewards, in proportion to his merit and his labour. The individual's working capital should be limited, to prevent unfair competition, and to assure the priority of merit over money. Machines should be small enough, where possible, to be operated by individual owner-operators. Large enterprises should be owned only by partnerships. "Land should be owned by him who tills it, who keeps it cultivated". Failing this, he should sell it or hand it over to others. Few middlemen should intervene between the producer and the consumer. The government's functions should be limited chiefly to legislation, national security and defence, foreign relations, education, public health. It should not engage in agriculture, commerce, and, in general, industry.

Education means preparing for life, and the strengthening of *rawān*. Compulsory education should include literacy and basic science, in the elementary school, and the "truths of life", including civics. Vocational and professional education and work in advanced science should follow. "Evil teachings" should not be taught under any circumstances, unless they are clearly exposed as harmful.

Women should not enter certain professions, e.g., law, engineering and politics, but should vote. Bigamy should be permitted only when the first wife is barren. Those with contagious diseases should not marry. *Kābīn* ("marriage portion"), *shīrbahā* (bride price), and *djahīz* ("dowry") should be eliminated. Divorce should be available to women as well as to men, and on the same grounds.

Kasrawī denied that he claimed to be a prophet (*payghāmbar*). He termed his ideology *Pākdīnī* "purity-of-religion" (occasionally *Āzādigī*), and referred

to it as a *rāh*, "road, path", not a *dīn* "religion". "*Pākdīnī* is Islam's successor and its continuation", although he was rarely very explicit on the relationship between the two.

Kasrawī's writings created a widespread intellectual movement, particularly among the youth. He formed a fraternal organization, called the *Pākdīnān*, "the pure of religion", or the *Āzādigān*, preaching this doctrines with missionary zeal and in the teeth of intense antagonism. The numerical strength of his followers is not known.

Kasrawī's bold and outspoken views, particularly those on religion and literature, met with vehement and violent opposition: some of his books were banned; his supporters were often persecuted and socially ostracized; and, finally, charges of "slander of Islam" were brought against him. On 11 March 1946, at the last session of the preliminary hearings on those charges held in the Palace of Justice in Tehrān, he was assassinated by the Fidāʾiyyān-i Islām [*q.v.*], who had only wounded him in an earlier attempt in April 1945. His followers continue, however, to be active.

Bibliography: The only detailed account of Kasrawī's life is found in his own *Zindigānī-yi man* (Tehran 1945) and *Dah sāl dar ʿadliyya* (Tehran 1945), covering his life up to about 1929. A bibliography (neither complete nor always accurate) of his books is found in K͟hānbābā Mus͟hār, *Muʾallifīn-i kutub-i čāpī-yi fārsī wa ʿarabī az āghāz-i čāp tā kunūn*, i, Tehran 1961, cols. 437-46; and a partial bibliography of his articles on language and history is in Īrad̲j̲ Afs͟hār, *Index Iranicus*, i, Tehran 1961. A selection of his scholarly articles has been collected by Yaḥyā D̲h̲ukāʾ, in *Čihil maķāla-yi Kasrawī*, Tehrān 1956. (M. A. Jazayery)

ĶAṢRYĀNNIH, Arabic version of the mediaeval Sicilian place name *Castrum Ennae*, itself already deformed in local speech usage; the Arabised form itself gave rise to *Castrum Iohannis* and thence the Italian Castrogiovanni (modern Enna). Situated at the altitude of 2,950 ft./988 m. in the centre of Sicily, it is the highest town of the island. Amongst numerous versions of the name given in the Arabic sources, Ķaṣryānnih seems to be the most acceptable; it appears in Yāķūt's *Mus͟htarik*, with the exact pronounciation, including the geminated *nūn*, specified, although it does not appear in his *Muʿd̲j̲am*.

It was besieged from 214/829 onwards by the Arab-Berber army of Asad b. al-Furāt [*q.v.*], who had landed two years previously at Mazara, and this fortified rock became the symbol of Christian resistance in the island after the capitalution of Palermo in Rad̲j̲ab 216/August-September 831. For a period of thirty years, the town and citadel underwent various vicissitudes, and the fortunes of war went backwards and forwards until the Byzantine stronghold surrendered in Ramaḍān 243/January 859. The concluding military operations were prepared and led by al-ʿAbbās b. al-Faḍl, *amīr* of Sicily 236-46/851-61, who during the preceeding years had sapped the resistance of the defenders by continuous assaults. Nevertheless, according to the sources, it was a Christian captive who brought on the surrender through his showing the Muslims, in order to save his own skin, a secret way into the fortress. Certain Arabic chronicles say that al-ʿAbbās celebrated this victory by building a mosque in Castrogiovanni, and immediately afterwards, he went on to restore the citadel's fortifications.

The rule of the Kalbid *amīrs* came to an end *ca.* 431/1040, and in the general state of anarchy which followed and which continued to rack the island till the arrival of the Normans, Ķaṣryānnih, together with Girgenti and Castronuovo, formed part of the possessions of the *ķāʾid* Ibn al-Ḥawwās [*q.v.*]. Some months after the Normans landed in Sicily (Muḥarram 453/February 1061), Robert Guiscard laid siege to the fortress, whose garrison had meanwhile been reinforced by new troops sent by the Zīrids from Africa, but difficulties made him give up the attempt. The Count Roger made a fresh attempt, and after some temporary successes, he finally compelled it to capitulate. Western chroniclers place the capture of the stronghold, thanks to Altavilla, at dates which vary between the middle of 480/1087 and the opening months of 481/1088, whilst the Arabic chroniclers place it three years later. The local ruler Ibn Ḥammūd surrendered himself without resistance, and according to the Norman historian Malaterra, became a convert to Catholicism.

The Arabic sources all agree that Ķaṣryānnih constituted not only a stronghold which was powerfully fortified and difficult to dismantle, but was also an important town in a fertile and well-irrigated region, with commodious markets, a lively commercial activity, abundant provisions and an excellent urban organisation.

Bibliography: The Arabic sources with information on Ķaṣryānnih have virtually all been brought together by M. Amari in his *Biblioteca arabo-sicula*, Ar. text, Leipzig 1857, Ital. tr. Turin-Rome, i-ii, 1880-1; see also for other details Amari, *Storia dei musulmani di Sicilia*[2], Catania 1933-9, index, and see further U. Rizzitano, *L'Italia nel* Kitāb ar-rawḍ al-miʿṭār fī ḫabar al-aqṭār *di Ibn ʿAbd al-Munʿim al-Ḥimyarī*, Cairo 1958, also in *Bull. of the Fac. of Arts, Cairo University*, xviii/1 (May 1956), 170-1.
(U. Rizzitano)

ĶĀṢṢ (a.), pl. *ķuṣṣāṣ*, "popular story-teller or preacher, deliverer of sermons" whose activity considerably varied over the centuries, from preaching in the mosques with a form of ķur'ānic exegesis to downright charlatanism. This term does not appear in the Ķurʾān, although the verb *ķaṣṣa* is quite often used (see Flügel, *Concordantiae*) always, except in VI, 57, with the meaning "to recount, to relate, to report" a generally edifying narration [see ķiṣṣa] and frequently in the first person, when the narrator is God Himself. The *LA* (root *ķṣṣ*) reproduces *ḥadīt͟h*s in which appear the word *ķāṣṣ* (*al-ķāṣṣ yantaẓir al-maķt*) and the verb *ķaṣṣa*, in the absolute use, with the meaning "to tell, to recount stories" and also "to preach" (*ķaṣṣa ʿalā l-nās*); the Prophet is reported to have said "None but an *amīr*, a subordinate [of an *amīr*] or a proud man shall preach" (*lā yaķuṣṣu illā amīr aw maʾmūr aw muk͟htāl*), where we have translated *ķaṣṣa* by "to preach" because it probably concerns the *k͟huṭba* [*q.v.*]. It would be difficult to date precisely the intransitive use of the verb in the sense of "to perform the function of a popular story-teller or deliverer of sermons" which was to become current (e.g. al-D̲j̲āḥiẓ, *Ḥayawān*, iii, 24·5 and *Bayān*, i, 367-9) for it seems likely that the *ḥadīt͟h*s cited in the *Lisān* may be later and may date from the time when the men of religion and the mystics had reacted against the *ķuṣṣāṣ*.

Indeed, if it is reasonable to suppose that all pious Muslims early deemed it their duty to improve the religious sentiments of the uninformed majority, the function of the *ķāṣṣ* did not yet exist at the

time of the Prophet; according to al-Maḳrīzī, *Khiṭaṭ*, ii, 253-4, there was a distinction between the private *ḳāṣṣ* and the official one, instituted by Muʿāwiya who, after morning prayer, was supposed in particular to curse the enemies of Islam and all the infidels and, after the *khuṭba* on Fridays, to explain the Ḳurʾān; however, only in Egypt are there traces of the existence of this function, which was occupied firstly by the *ḳāḍī*, then little by little fell into disuse. From the 4th/10th century onwards this *ḳāṣṣ* was replaced by the *mudhakkir* and by the *wāʿiẓ* [*q.vv.*].

Otherwise the office was loosely defined. At its inception it was supposed to consist of commenting on the ḳurʾānic narratives concerning the fates of extinct peoples, the example of biblical characters and on the whole, the edifying features scattered among the *sūra*s, not without, in the case of certain "sermonisers", going as far as real exegesis. The tradition according to which Tamīm al-Dārī (d. 40/660) was allegedly the first to dedicate himself to this activity is subject to caution because Tamīm [*q.v.*] became a legendary figure. On the other hand, in his chapter on the *awāʾil* (*Maʿārif*, 557; copied by Ibn Rusta-Wiet, 225), Ibn Ḳutayba hesitates between ʿUbayd b. ʿUmayr al-Laythī (d. 68/687-8) and al-Aswad b. Sarīʿ al-Tamīmī (d. 36/656), whom al-Djaḥiẓ quotes chiefly in his exposition on the *ḳuṣṣāṣ* (*Bayān*, i, 367-9).

The first popular preachers were certainly admitted to the mosques to carry out their activity, particularly in ʿIrāḳ, since ʿAlī b. Abī Ṭālib is said to have expelled them from the one in Baṣra, nevertheless making an exception in favour of al-Ḥasan al-Baṣrī (al-Makkī, *Ḳūt al-ḳulūb*, Cairo 1310, ii, 21, 25, 28; Ibn al-Ḥādjdj, *Madkhal*, Cairo 1348, ii, 13, 145); this last detail is, however, suspect, for al-Ḥasan was only fifteen years old when ʿAlī entered Baṣra, and it is probable that the later Ṣūfis who quote him as their authority, but do not, however, number him among the *ḳuṣṣāṣ* (whom they detested), wanted to claim in this privilege further evidence of his prestige and of the quality of his preaching. Wherever the truth may lie, it is conceivable that the ʿAlī's decision, if it was real, was inspired by the desire not to make in any way official ideas foreign to Islam. Even those *ḳuṣṣāṣ* motivated by the best intentions would mix in with their commentary the edifying narratives drawn from the Ḳurʾān, Judaeo-Christian legends and stories from the *Djāhiliyya* (cf. Ṭaha Ḥusayn, *Min ḥadīth al-shiʿr wa'l-nathr*, Cairo 1936, 48-9), before beginning to falsify the concepts of the first religious authorities and to appeal to the ideas of the Iranian tradition in order to make a greater impression on their hearers. Eventually prohibitions followed (see al-Makkī and Ibn al-Ḥādjdj, *op. cit.*), and there are more attestations of this in 279/892 and 281/894 (al-Ṭabarī, iii, 2131, 2165) in a period, it is true, when the function of the *ḳāṣṣ* had changed in character.

The repetition of official measures would lead one to believe that they were ineffective; even if they were banished from the mosques, the "sermonisers" in fact enjoyed great success with the uneducated masses, and gathered round them a more attentive, more eager and often denser audience than that of the *fuḳahāʾ* and other scholars, who tended to adopt a disdainful attitude towards them, more especially as in any discussion they were sure of carrying the day, thanks to their easy flow of speech. There were, however, among them men of great learning and Ibn al-Djawzī, who is still nevertheless hostile towards them, very rightly stresses this (*Talbīs Iblīs*, Cairo, 1340, 131); the list which al-Djāḥiẓ provides (*Bayān*, i, 367-9; used by L. Massignon, *Essai*, 141 ff. and Ch. Pellat, *Milieu*, 108 ff.) is instructive in this respect. It includes, among others, al-Ḥasan al-Baṣrī, his brother Saʿīd and his son Djaʿfar, Ibrāhīm al-Taymī, and in particular, Mūsā b. Sayyār al-Uswārī (see *Lisān al-Mīzān*, vi, 120, 136; al-Samʿānī, *Ansāb*, 37), who commented on the Ḳurʾān in Arabic and Persian, as well as another *ḳāṣṣ*, Abū ʿAlī al-Uswārī (d. after 200/815; see *Lisān al-Mīzān* iv, 372-3), who at the age of 36 did not manage to exhaust his flow of commentary and who, in addition, expressed himself in very correct language. These two people are described as Ḳadarīs [see ḲADARIYYA], as was another well known *ḳāṣṣ*, Ṣāliḥ al-Murrī (d. 172/788-9; cf. Abū Nuʿaym, *Ḥilya*, Cairo 1351-6/1932-7, vi, 165-77); the Raḳāshīs equally distinguished themselves by their talent in this field.

L. Massignon (*Essai*, 143-4) considers that the 2nd/8th century is "especially at Baṣra, the century of "sermonisers" who, without any official mandate, and before the ʿAbbāsid rules and regulations for the Friday sermons, delivered *ḥuṭbas* to arouse the fervour of the faithful. This spontaneous movement ... is the origin of the apologetic catechesis in Islam". Probably the activity of a great number of *ḳuṣṣāṣ* was quite disinterested to begin with, each *zāhid* or *nāsik* feeling an obligation to preach, even to the point where later mystical theology claimed several of them; but if some strove by their narrations to edify the faithful, and to arouse their religious zeal, others were not slow to be employed by the supporters of the various political and religious doctrines, which were emerging at that time.

From the year 65/685, in the course of the affair of the Tawwābūn [*q.v.*], there were in the crowd gathered to avenge the murder of Ḥusayn, three *ḳuṣṣāṣ*. Al-Ṭabarī (ii, 559) records their names and their speeches designed to sustain the zeal of the fighters; other examples have been collected by Goldziher (*Muh. St.*, ii, 162), who thought, however, (ii, 168-9) that these "sermonisers" had no partisan tendencies. Again in the 4th-5th/10th-11th centuries, Shīʿīs and Ḥanbalīs did not overlook this useful means of reaching the masses (cf. G. Makdisi, *Ibn ʿAqīl*, Damascus 1963, 323); it is true that the representatives of the two rival factions sometimes came together and shared the takings (*Muh. St.*, ii, 165-6). The names of three Ḳadarīs are cited above, and it seems legitimate to believe that from the 2nd/8th century the Muʿtazilīs themselves had used "sermonisers" to spread abroad their opinions. This partly explains that interest which al-Djāḥiẓ takes in them, who was, moreover, always ready to admire eloquence even in the common people.

It appears therefore that the prohibitions were also justified by the care which the authorities were taking to limit propaganda carried on by word of mouth by the opposition parties, knowing well that they were provoked in the first place by the complaints of religious figures anxious to put an end to these abuses. Indeed, to enliven their narratives, the *ḳuṣṣāṣ* did not hesitate to quote the apocryphal traditions (and it is probable that they contributed to the propagation of the *ḥadīths* put together from all sorts of different fragments), fabulous deeds and marvellous stories which the credulous masses took for gospel truth, thus placing

the authentic Islamic tradition in real jeopardy. Because of this conduct, they incurred the theoretical and practical condemnation of the religious authorities. Al-Ghazālī (*Iḥyā'*, xix/3) protests against the reprehensible doings of *ḳuṣṣāṣ* and the *wu''āẓ* [see WĀ'IẒ] who mixed heresies with their subject-matter; Ibn al-Djawzī (*Talbīs*, 131) and the mystics gave strong advice not to join their congregations because they lacked integrity. In Spain, where they were less numerous (al-Muḳaddasī, 236), for the Mālikīs would scarcely tolerate them, the word *ḳāṣṣ* had become synonymous with "storyteller", and the authors of works of *ḥisba* do not fail to express a desire that the activity of the *ḳuṣṣāṣ* should be limited. Ibn 'Abdūn (cf. Lévi-Provençal, *Séville musulmane*, Paris 1947, § 54) wished to forbid them, as fortune tellers were forbidden, to install themselves in the cemeteries, and they were also prohibited from telling stories in which the Prophet was mentioned. Ibn 'Abd al-Ra'ūf (cf. R. Arié in *Hespéris-Tamuda*, i/3 (1960), 362) calls the *ḳāṣṣ* a mere story-teller of the streets.

At this period, and already for a long time in the Orient, it was indeed difficult to distinguish a "sermoniser" from one of those narrators of whom al-Mas'ūdī speaks (*Murūdj*, v, 86; viii, 161 ff.); al-Djāḥiẓ himself (*Rasā'il*, ed. Sandūbī, 129) shows the poor and the *ḳuṣṣāṣ* begging at the doors of the mosque, whilst Ibn Ḥanbal is reported to have said, "the most mendacious of men are the *ḳuṣṣāṣ* and the beggars" (al-Makkī, *Ḳūt*, ii, 25; Ibn al-Ḥādjdj, *Madkhal*, ii, 146); The author of the *Kitāb al-Tādj* (40; tr. *Le livre de la Couronne*, 68) speaks of the "wiles of *ḳuṣṣāṣ* and men who go round with performing monkeys". So, after having been a popular exegete of the Ḳur'ān and a "sermoniser", the *ḳāṣṣ* became a sort of buffoon who mainly replaced edifying narrations by comical and often improper stories especially ridiculing biblical characters (see for example the story of the wolf that did not eat Joseph; Ibn Abī l-Ḥadīd, *Sharḥ Nahdj al-balāgha* iv, 260). Some became veritable mountebanks, who contrived to "play to the gallery", provided that the collection afterwards produced a substantial reward. From the rivalry among these comedians sprang the *muwallad* proverb "a *ḳāṣṣ* loves not another *ḳāṣṣ*" (al-Maydānī, ii, 76). It is understandable therefore that the discredit thrown on an otherwise respectable function rebounded on the serious preachers of popular sermons, and they were replaced by more or less official preachers.

All things considered, passing from edifying narrations to profane stories was very easy, and the *rāwī* [*q.v.*] or the *meddāḥ* who narrates the episodes of *The Thousand and One Nights* or chivalric romances—not without playing the rôle of a political agent if the opportunity presents itself—is easily comparable to the later *ḳāṣṣ*, whereas the *mukaddī* [*q.v.*] who recounts his own adventures and foreshadows the Spanish *pícaro* is not far removed from him. [See also MAḲĀMA].

Bibliography: Largely given in the text. I. Goldziher (*Muh. Studien*, ii, 161-70; tr. L. Bercher, 198-208) has largely exploited the *K. al-Ḳuṣṣāṣ* of Ibn al-Djawzī, and the pages which he devoted to the "sermonisers" represent the most thorough study of this social group. See further, L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*; Ch. Pellat, *Milieu* (on the *ḳuṣṣāṣ* of Baṣra); A. Mez, *Renaissance*, index; M. S. Ṣabbāgh, Beyrouth 1973. (CH. PELLAT)

KASSALA [see KASALA].

ḲASSĀM, the title given in Ottoman law to the trustee who divided an estate between the heirs of a deceased person. Ottoman law recognised two types of *ḳassām*, those under the *ḳāḍī'asker* [*q.v.*] and the others employed locally in each *ḳāḍī*'s [*q.v.*] court (*Ḳānūn-nāme*, Veliyüddin Efendi 1970, ff. 66 a-b). The earliest references to the post date from the 9th/15th century.

The *ḳassām* received a fee from the heirs called *resm-i ḳismet* in payment for the trusteeship of the estate. *Resm-i ḳismet* levied from a member of the military (*'askerī*, [*q.v.*]) class was entered in the *ḳāḍī'asker*s' accounts, so that in places where the military class was numerous, *ḳassām*s appointed by the *ḳāḍī'asker*s divided inheritances (*Ḳānūn-nāme-i Āl-i 'Othmān*, *TOEM* suppl., Istanbul 1329/1911, 40). These military *ḳassām*s recorded their transactions in separate registers, called *ḳassām* registers (*ḳassām defterleri*) (Ö. L. Barkan, *Edirne askerî kassamına ait tereke defterleri 1545-1659*, *Belgeler*, in *Türk Tarih Belgeleri Dergisi*, iii/5-6, Ankara 1966). The local *ḳassām*s, called *shehrī* or *beledī* and acting in the name of the *ḳāḍī*, kept registers recording the *resm-i ḳismet* levied from non-military townspeople and villagers. There was a separate *ḳassām* register for each *ḳāḍī*'s district. In the division of inheritance *ḳassām*s were obliged to respect the rights of orphans and the law forbade them to overvalue goods or to levy *resm-i ḳismet* where this was not the legal requirement (*Ḳānūn-nāme*, Veliyüddin Efendi 1970, f. 66b; cf. also the *Ḳānūn-nāme* of 'Abd al-Raḥmān 'Abdī Pasha, *MTM*, iii, Istanbul 1331/1913, 541). The *ḳassām*'s register of 924/1518 from the court of Bursa shows the procedure in the division of inheritance. The belongings of a deceased person were first examined in the presence of the *ḳassām* and entered in the register. An expert then valued their worth which was recorded on each item, before the *ḳassām* assessed the proportion to which the husband, wife or others heirs were entitled. After the deduction from the total of the *ḳassām*'s fees and the deceased's funeral expenses, the remainder was handed over to the heirs (İ. H. Uzunçarşılı, *Osmanlı devletinin ilmiye teşkilâtı*, Ankara 1965, 124).

Occasionally, the government appointed inspectors to examine the proceedings of the military *ḳassām*s and to collect the *resm-i ḳismet* levied in the name of the *ḳāḍī'asker*s. *Ḳassām*s from the three wings of the cavalry (*süvārī*) divisions were despatched to Anatolia and Rumelia for this purpose. These mounted inspector-*ḳassām*s took delivery from the *ḳāḍī*'s treasury of the *resm-i ḳismet* that had been raised, and had the registers sealed by the *ḳāḍī* or deputy who transferred the money. The mounted *ḳassām*s had the authority to remove a local military *ḳassām* and appoint another in his place (İ. H. Uzunçarşılı, *op. cit.*, 121 ff.).

The question of who had the right to the *resm-i ḳismet* led occasionally to disputes between the local and the *ḳāḍī'asker*s' *ḳassām*s. A major factor in these disputes was the tendency of the military *ḳassām*s to extend the military class in order to increase the revenue on the *ḳāḍī'asker*s' account for which they worked. To prevent this, the government intermittently issued decrees to define who belonged to the military class, but they were never able to stop

the practice altogether (Başbakanlık Archives, Istanbul, *Dīwān-i hümāyūn mühimme defteri*, vol. iv, 120; vol. lxx, 35). There was a *ḳassām* in the covered market in Istanbul and another in Galata, whose duty it was to deputise for the *ḳāḍī'asker* of Rumelia in settling disputes concerning the division of inheritances (Hezārfenn Ḥusayn, *Talkhīṣ al-bayān fī ḳawānīn-i Āl-i ʿOthmān*, Bibliothèque Nationale, Paris, f. 140 a).

The functions of the *ḳassām*s began slowly to diminish in the 19th century. After the Tanẓīmāt [*q.v.*]the separate offices of the *ḳāḍī'askers*' and *ḳāḍīs*' *ḳassām*s were abolished, to be replaced by a single office in Istanbul called the Treasury *ḳassām*'s office (*bayt al-māl ḳassāmlighi*), which combined the functions of all the others (Luṭfī, *Ta'rīkh*, Istanbul, 1290/1873, vi, 30). The court concerned with inheritance, known as the *ḳismet-i belediye maḥkemesi*, was, at about the same time, united with the lower *bāb* court. Thereafter, the *bāb* courts supervised the division of inheritance among the heirs (*Dīwān-i hümāyūn mühimme defteri*, no. 261, serial nos. 36, 440).

In the years 1333-34/1915-16 there was a section called the general *ḳassām* (*ḳassām-i ʿumūmī*) in the Courts Department of the Office of the *Shaykh al-Islām* [*q.v.*]. At the head of the section was an official called the General *ḳassām* (*ḳassām-i ʿumūmī*) with two assistants as first and second advisory *ḳassām* (*ʿIlmiye teshkīlātī*, Istanbul 1334/1916, 155 ff.). With the abolition of the *sharīʿa* courts under the Turkish Republic, the civil section of the court of first instance (*asliye mahkemesi hukuk dairesi*) replaced the *ḳassām* court.

AL-**ḲAṢṢĀR**, ABŪ ʿABD ALLĀH MUḤAMMAD B. ḲĀSIM B. MUḤAMMAD B. ʿALĪ AL-ANDALUSĪ, Moroccan scholar of Ḳaysī origin and born in Fās in 938/1531-2. He is said to have been called al-Ḳaṣṣār ("the fuller") because one of his ancestors had had a fuller as his tutor.

He became *Muftī* of Fās and preacher at the Ḳarawiyyīn mosque, and was very well versed in the sources of *ḥadīth* and the science of genealogy. He had numerous, outstanding pupils, including for instance Abu 'l-ʿAbbās al-Murābī, who wrote a book about him called the *Tuḥfat al-ikhwān*. Al-Ḳaṣṣār left behind several valuable collections of papers, and there are attributed to him hagiographical works on Idrīs I and Idrīs II, two *fahrasas* and a biography of Abū ʿAbd Allāh Muḥammad Ṭāhir al-Ṣiḳillī al-Ḥusaynī, called *al-Rawḍ al-zāhir fī nasab sayyidī Muḥammad Ṭāhir*.

He died whilst travelling from Fās to Marrākush in either Shaʿbān or Ramaḍān 1012/January-February 1604, and was buried near the mausoleum of Abu'l-ʿAbbās al-Sabtī in Marrākush, one of the seven saints of that city.

Bibliography: E. Lévi-Provençal, *Shorfa*, 101 and n. 4, 244-5, 394; M. al-ʿArabī al-Fāsī, *Mir'āt al-maḥāsin*, 148; Ifrānī, *Nuzha*, ed. ḲAṢṢĀRA, ABU 'L-ḤUSAYN ʿALĪ B. IDRĪS B. ʿALĪ AL-ḤIMYARĪ, jurist, poet and historian of Morocco, who was born and lived in Fās, where he put together a *Dīwān*, in one volume; a history called *Taḥḳīḳ al-akhbār ʿamman māta min ʿulamā' al-ḳarn al-thālith ʿashar*; and above all, three commentaries, the most important being the one on the *Sharḥ Bannānī ʿalā Sullam al-Akhḍarī*, the second on Ibn Hishām's *al-Muwaḍḍiḥ* and the third on the *Bahrām al-Ṣaghīr*. He died at Fās on 13 Radjab 1259/9 August 1843, and was buried in that city.

Bibliography: E. Lévi-Provençal, *Chorfa*, 369 and n. 4; Kattānī, *Salwa*, ii, 265; ʿA. Ibn Sūda, *Dalīl*, i, 255, ii, 390. (M. LAKHDAR)

AL-**ḲASṬALLĀNĪ**, ABŪ 'L-ʿABBĀS AḤMAD B. MUḤAMMAD B. ABĪ BAKR AL-KHAṬĪB SHIHĀB AL-DĪN AL-SHĀFIʿĪ, an authority on tradition and theologian, born on 12 Dhu 'l-Ḳaʿda 851/20 January 1448 in Cairo, where he spent his life as a preacher —apart from two stays of some duration in Mecca —and died on Friday, 7 Muḥarram 923/31 January 1517. He owed his literary fame mainly to his exhaustive commentary on the *Ṣaḥīḥ* of al-Bukhārī entitled *Irshād al-Sārī fī Sharḥ al-Bukhārī*, which exists in numerous manuscripts and printed copies; of these latter, the earliest may be that of Būlāḳ of 1267 and next the Lucknow edition of 1869 (others in Brockelmann, I, 165, S I, 262-3). The Cairo edition in 1325-6 gives the glosses of Yaḥyā al-Anṣārī and the Cairo edition of 1279 those of Ḥasan al-ʿIdwī (d. 1203/1887). In the field of *Ḥadīth* he wrote a *Muḳaddima* which was printed at Cairo (n.d.) with the commentary of ʿAbd al-Hādī al-Abyārī (d. 1305/1883). Great popularity is enjoyed in the Muslim world by his history of the Prophet entitled *al-Mawāhib al-laduniyya fī 'l-Minaḥ al-Muḥammadiyya*, which he completed on 15 Shaʿbān 899/21 May 1474 and which caused him to be accused of plagiarism by al-Suyūṭī. It exists in numerous manuscripts and has also been printed several times, *e.g.* Cairo 1281, several times commented on, *e.g.* by al-Zurḳānī (d. 1122/1710), printed in 8 vols., Bulāḳ 1278, 1291, and translated by ʿAbd al-Bāḳī into Turkish, printed Istanbul 1261; al-Nabhānī published a synopsis of it entitled *Al-Anwār al-Muḥammadiyya min al-Mawāhib al-Laduniyya*, Beirut 1310-12. Finally in the same field, he prepared a commentary on the *Kitāb al-Shamā'il* of al-Tirmidhī (Brockelmann, I, 170, S I, 268). Besides studying the science of tradition, he worked also at the readings of the Ḳur'ān. His principal work on the subject is entitled *Laṭā'if al-Ishārāt li-Funūn al-Ḳirā'āt*. He also wrote a biography of the teacher of Ḳur'ān reading, Abu 'l-Ḳāsim al-Shāṭibī (Brockelmann, I, 520, S I, 725), and a commentary on the *Muḳaddima* of al-Djazarī on *Tadjwīd* (*op. cit.*, II, 259). Finally, he also wrote on mysticism and

personal piety; among his works in this sphere are his *Maḳāmāt al-ʿĀrifīn*, *Masālik al-Ḥunafā' ilā Mashāriʿ al-Ṣalāt ʿala 'l-Nabī al-muṣṭafā*, and his commentary on the *Burda* of al-Buṣīrī (Brockelmann, I, 310).

Bibliography: ʿAlī Bāshā Mubārak, *al-Khiṭaṭ al-tawfīḳiyya*, Būlāk 1306, vi, 11; Wüstenfeld, *Die Geschichtsschreiber der Araber*, no. 509; Brockelmann, II, 87-8, S II, 78-9.

(C. Brockelmann)

ḲASṬALLANĪ (kestelī, kestellī), muṣliḥ al-dīn muṣṭafā, Ottoman theologian and Ḥanafī jurist, d. 901/1495-6. He was a native of Kestel (Latin *Castellum*), a village near Bursa, where later in his career he built a mosque; from this village comes his *nisba* of Kestel(l)ī or, more grandiloquently, Ḳasṭallānī. He studied at Bursa under the famous scholar Khiḍr Beg, *mudarris* at the Sulṭān *madrasa* there, and after concluding his legal and theological studies became himself a teacher in Mudurnu, in the Urudj Pasha *madrasa* at Dimetoḳa (Demotica), and then in one of Meḥemmed II's newly-founded "eight *madrasas*" in Istanbul. Later he became *ḳāḍī* in Bursa, Edirne and (in 886/1481) in Istanbui. In this latter year he also became *Ḳāḍī-ʿAsker* [*q.v.*] of Rūmeli, the first man to hold this office after the division of this important post into two, Ḥādjdjī Ḥasanzāde Meḥmed Efendi becoming *Ḳāḍī-ʿAsker* in Anatolia. He was dismissed with a pension in 891/1486 during the reign of Bāyezīd II, and died in 901/1495-6 in the capital, being buried in the Eyyūb cemetery.

Ḳasṭallānī was the author of a number of highly-esteemed legal works in Arabic, including glosses to al-Taftazānī's commentary on the *ʿAḳā'id* of Nadjm al-Dīn al-Nasafī (cf. Ḥādjdjī Khalīfa, iv, 226, Brockelmann, I, 549); a work on seven difficult problems (*ashkāl*) in al-Djurdjānī's commentary on al-Īdjī's *K. al-Mawāḳif fī ʿilm al-kalām* (Ḥādjdjī Khalīfa, vi, 240); an epistle on the orientation of the *ḳibla*, *R. fī Djihat al-ḳibla* (*ibid.*, iii, 387); and a work called *Yaḳaẓa dhawī 'l-iʿtibār* (*ibid.*, vi, 511).

Bibliography: Tashköprüzāde, *Shaḳā'iḳ al-nuʿmāniyya*, Tkish. ed. by Medjdī, Istanbul 1269/1853, 161 ff.; Meḥmed Thüreyyā, *Sidjill-i ʿOthmānī*, iv, 491 f.; ʿĀshīḳpashazāde, *Ta'rīkh*, Istanbul 1332/1914, 224.

(F. Babinger)

ḲASṬAMŪNĪ, modern Turkish form kastamonu, a town (pop. 1970, 29,338) situated in the western Pontic zone of northern Turkey (41°22'N, 33°47'E), the provincial capital (*il merkezi*) and a busy market town for the surrounding region. The *il* (province) of Kastamonu—an area roughly equivalent to the ancient Paphlagonia—which is divided at present into fourteen administrative sub-divisions (*ilče*), is bounded by the Black Sea on the north, and by the *il*s of Zonguldak, Čankırı (Ḳanghrī), Čorum and Sinop, and had a population (1970) of 446,601.

The town of Kastamonu lies on both sides of a narrow valley (Kastamonu deresi or Kara-čomak deresi) which has been formed by a minor tributary of the upper Gökırmak. The centre of the town, situated on the left (west) bank, is dominated by the precipitous mass of the citadel. This, the "lofty stronghold of the Turkomans" of Ibn Saʿīd, is a congeries of Byzantine, Saldjūḳ, Čandarid and Ottoman work, lacking in inscriptions, ungarrisoned and deserted since the reign of Maḥmūd II, and finally almost destroyed by an earthquake in 1943.

The toponym of Kastamonu remains obscure in its origins. As Ramsay long ago pointed out, although Kastamonu was situated on "the most important Roman road in the north of Asia Minor" (sc. Nicomedia Iznikmid/İzmit)—Pompeiopolis (Tashköprü, near Kastamonu)—Amaseia (Amasya)), and was evidently an important city in later Byzantine times, it is never mentioned in Roman or early Byzantine documents. Consequently attempts to identify Kastamonu with, e.g. Germanicopolis (Ainsworth, Boré, and many later writers) or with Sora (Doublet, *Bull. Corr. Hell.*, 1889), or to supply specious derivations from even the Hittites (Gas-Tumanna > Kastamonu) (Yücel, ch. vii) or from its known association with the Comneni, must founder on the fact that no form earlier than the 11th century Byzantine usage of κασтάμων has yet been traced.

From this form (or, rather, as commonly in such direct transfers, from the accusative κασταμόνα—cf. P. Wittek, *BZ* (1935), 49-50) derive the various forms of Arabic and Turkish usage. Most commonly, from the Saldjūḳs down to and throughout the Ottoman period, the name is given as Ḳasṭamūnī. Cf. however, the variants Ḳashtamūnī (Idrīsī, cf. Miller, *Mappae Arabicae* i/2, sheet 4; iii/1, p. 4); Ḳasṭamūnīyā (al-Dimashḳī, *K. Nukhbat al-Dār*, ed. Mehren, 228); Ḳaṣṭamuniya (al-ʿUmarī, ed. Quatremère, 340; ed. Taeschner, 23, 39-40), and also the various western corruptions: civitas Constamnes (Albertus Aquensis); Castamea (Clavijo); Castamina, Castamena (Promontorio de Campis (c. 1475), ed. Babinger); Chastarmina, Casstimana (Benedetto Dei); Castemol (Menavino); for the 19th century: Castemboli, Castemouni (Boré, 1838); Costambone (Murray, *Handbook for Asia Minor* [c. 1870]).

The political history of Kastamonu during the four centuries which lie between its first seizure by the Turks in the aftermath of Manzikert (463/1071) and its second and final absorption into the Ottoman state, as a *sandjāḳ* in the *eyālet* of Anadolu (866/1461-2), is often confused, and the establishment of the exact sequence of political authority has not, despite efforts by Cl. Cahen and others, been satisfactorily achieved. Until the expansion of the Ottoman state in the first part of the 8th/14th century, and the consequent shift westwards of the frontier between *dār al-Islām* and *dār al-ḥarb*, the town and fortress of Kastamonu formed the centre of a vast province, which was dominated by the Turkomans of the *udj*, and formed a battleground for the conflicting and successive claims of Byzantine, Dānishmend and Saldjūḳ rulers, and of various more or less local autonomous dynasties, of which the Isfendiyār-oghullarī or Čandarids [*q.v.*] were the most significant.

As early as 1073-4 the Byzantine emperor Alexis Comnenus had great difficulty in escaping from some Turkomans in the vicinity of Kastamonu: according to a dubious tradition the city is said to have been conquered by a certain ʿOthmāndjīḳ Beg, one of the commanders of the Dānishmend Malik Aḥmad Ghāzī, shortly before the latter's death (Ḥusayn Hezārfenn, *Tanḳīḥ al-tawārīkh*, tr. A. D. Mordtmann, *ZDMG*, xxx (1876), 470)—a tradition which attributes to Kastamonu the former name of Aklanos. A slightly different version is given by Kātib Čelebī, *Djihān-numā*, 629. In 1101 the Lombards and Turks clashed near and at Kastamonu, but Dānishmend rule seems to have endured until the invasion of Paphlagonia by John Comnenus (?1126 or 1132), by the winter of which latter year Kastamonu was again in Muslim hands. By the latter

part of the 6th/12th century, Kastamonu had passed under the control of the Saldjūḳs of Rūm. Clearly Kastamonu belonged to the dynasty, who established there—possibly as early as 608/1211, and certainly by 625—the enigmatic figure of Ḥusām al-Dīn Čupan (Čoban) as their *beglerbegi*. The political role of the Turkomans during this period is a matter of conjecture; one possibility is a *de facto* division of authority between the provincial authorities of the Saldjūḳs, controlling the town itself, and the Turkoman amīrs, in virtual control of much of the hinterland of the province. At a lower level, it is clear that a Greek or Hellenized (and Christian) population continued to exist under Saldjūḳ rule; the province was also a source for Greek slaves, obtained in razzias on the *udj*, and destined for the Saldjūḳ army.

The history of Kastamonu during the period of Īlkhānid domination in eastern and central Anatolia is also not entirely clear. At first under the rule of one Yavtash, as *beglerbegi*, by c. 660/1262 the town was controlled by a creature of the Mongols, one Tādj al-Dīn Muʿtazz, to whom it was secured as an *iḳṭāʾ*. He died in 676/1277: his son Mudjīr al-Dīn Amīrshāh (d. 701/1302), succeeded to his offices. Also during this period, Kastamonu was held at times, and for short periods, by the son (Ḥusām al-Dīn Alp Yörük) and the alleged grandson (Muẓaffar al-Dīn Yavlaḳ Arslan) of Ḥusām al-Dīn Čuban. The grandson certainly founded the second oldest surviving Muslim monument in Kastamonu, the so-called Atabeg Djāmiʿi (672/1273), held political power before 679/1290, and died in the disturbances of 691/1292. Furthermore, before 671/1271 Kastamonu had been administered by a son of the *pervāne* Muʿīn al-Dīn, whose son Meḥmed Beg once more reconquered it in 1295-9.

Cahen has argued that there was no connexion between the descendants of Čupan and the family which, in the last years of the shadowy Saldjūḳ sultanate of Rūm, founded the most notable of Kastamonu's dynasties, the Isfendiyār oghullarl/Čandarids. By 715/1314 Čandar's son, Sulaymān Pasha, was already master of Kastamonu, apparently as a vassal of the Īlkhānid ruler Abū Saʿīd. Certainly Īlkhānid coins were struck there in 725/1325 (Lane-Poole, *Cat. B.M.*, vi (uncertain); Yaman i, 105) and apparently as late as 740/1339 (Zambaur, *Münzprägung*, 195). Around this time Kastamonu was visited by Ibn Baṭṭūṭa (winter of 1331/2 or 133/4), who stayed there forty days and described it as one of the largest and finest cities [?of Rūm], where commodities were abundant and prices low. Ibn Saʿīd (*apud* al-Ḳalḳashāndī, *Ṣubḥ*, v, 342) described Kastamonu as a stone-built town of medium size, possessed of mosques, markets and baths, but without walls, and situated in a region of streams and abundant gardens—terms which have been applied, *grosso modo*, by most Muslim travellers and their western successors down to the 20th century.

Kastamonu was incorporated into the Ottoman state by Bāyezīd I in 794/1392; restored to its native dynasty by Tīmūr after Ankara, and once more conquered, this time by Meḥemmed II, in 866/1462. The supersession of the old dynasty was symbolised by the appointment of Djem Sulṭān as provincial governor of Kastamonu in Radjab 873/January 1469, a post which he held until the middle of Shaʿbān 879/late 1474. What seems to be the earliest (*ca.* 1469-74) notice of Kastamonu under restored Ottoman rule—the "Capitaneati dui di Castamina"—is given by the Genoese man of affairs Promontorio de Campis: "magna citta; . . . prouincia degna et utilissima", with revenues of 14,000 ducats and the obligation of sending 2550 men into the field.

The geographical position of Kastamonu in relation to the Ottoman military and courier road network—it lay to the north of the great road of the *orta ḳol* from Üsküdar to the east, which, linking Gerede, Tosya and ʿOthmāndjlḳ (Osmancık), left Kastamonu relatively isolated on the far side of the lofty Ilgaz (Olygassus) range—perhaps explains in part its relative obscurity under Ottoman rule and the paucity of travellers to it until the 19th century. Evliyā Čelebi's description of the town is lacking, and in the 12th/18th century Kastamonu seems to have been unvisited by any major traveller, although it is known that Aḥmed Pasha Bonneval was briefly exiled there in the middle of the century.

The first report by a western visitor is that of J. M. Kinneir, who passed through in 1814. He computed the town to possess 30 mosques with minarets, 25 *ḥammāms*, six *khāns* and a Greek church. The baazars were well-supplied, but the inhabitants were described as being frequently exposed to famine, particularly after a severe winter had impeded local agriculture. A more extensive description was given by the French traveller Eugène Boré (1838), who was the first to give an account of the *ḳalʿe*, "elévant hardiment dans les airs ses tours et ses remparts en lambeau", and who found the local administration in the hands of the new men of the Tanẓīmāt. More scrupulous in his observations, in the year following Boré, was W. F. Ainsworth, who laid down a plan of the fortress.

The population of Kastamonu, in later centuries at least, was preponderately Muslim. According to Ainsworth the Christian inhabitants were expelled *ca.* 1730 to a village on the Göklrmak, but were later permitted to return. Ainsworth speaks of 160 Greek and 20 Armenian households out of a total of 12,000 and a manifestly exaggerated population of 48,000; Kinneir, a quarter of a century earlier, had estimated 300 Greek and 40 Armenian families in a *population* of 12,000. At the end of the 19th century Cuinet, working on published Ottoman statistics, estimated the population to be 13,200 Muslims, 1,795 Greeks and 572 Armenians.

By the early 19th century Kastamonu, like much of Ottoman Asia, had fallen into economic decay. Kinneir regarded the commerce as "trifling", and noted the lack of manufactures; Boré, likewise, "L'appauvrissement et la gêne" of the inhabitants, and the great decline in trade, with only tanning being carried on actively. Ainsworth, however, one year later, speaks of "the crowded and bustling city" of Kastamonu, with a large trade in wool of a quality almost equal with that of Ankara; in copper wares, and in cotton cloth. The cotton was brought up from Adana and worked up in the town.

The economic and political collapse of Turkey after the First World War reduced the fortunes of Kastamonu to a low ebb. Not lying on a railway, it had not shared in the opening up of Anatolia at the end of the 19th century. More recently, however, the rapid expansion of road transport in Anatolia has brought a new prosperity to the Kastamonu, which now presents an appearance reminiscent of Ainsworth's description, in a setting still little changed from those days.

Bibliography: Apart from works cited in the text, Mehmed Behcet, *Kastamoni āthār-i*

ḳadīmesi, Istanbul 1341; T. M. Yaman, *Kastamonu tarihi*, i, Istanbul 1935; A. Gökoğlu, *Paphlagonia ... eski eserleri ve arkeolojisi*, i, Kastamonu 1952; V. Cuinet, *La Turquie d'Asie*, Paris 1894, iv, 462 ff.; J. M. Kinneir, *Journey through Asia Minor* ..., London 1819, 28 ff.; Eugène Boré, *Memoire d'un voyageur en Orient*, Paris 1840, 273-82; W. F. Ainsworth, *Travels and researches in Asia Minor*, 1842, i, 76 ff.

A map of the sandjāḳ of Kastamonu, and a panoramic photograph of the town as it appeared at the end of the 19th century, were tipped into some examples of the *Ḳasṭamūnī vilāyet sāl-nāmesi 1310* (Kastamonu, n.d.).

In the absence of any exhaustive published survey of the monuments of Kastamonu (cf. the three works in Turkish, at the head of this bibliography, and the summary description of the monuments included by B. Darkot in his art. Kastamonu in *İA*), reference must be made to unpublished sources. A modern survey, at a scale of 1:1000 (three sheets), and showing in detail all historical sites, is in the possession of the Kastamonu *Belediye* (municipal authority). Cf. also an unpublished *Rapor* of 20 Ocak 1975 on the (Muslim) antiquities of Kastamonu, drawn up for the Eski Eserler ve Müzeler section of the Turkish Ministry of Culture. An extensive photographic survey of the monuments was undertaken by Besim Çeçener, Güzel Sanatlar Enstitüsü, Fındkılı, Istanbul. Reference should also be made to a report by Doğan Kuban (*Kastamonunun tarihı yapısı ... ilgili rapor*, Istanbul, 1967, 21 8 pp., duplicated. All this material is in the custody of Bay Hüseyin Aydın, Fen işletleri müdürü, Belediye Sarayi, Kastamonu, who kindly allowed reference to be made to it.

Cahen, *Pre-Ottoman Turkey*, London, 1968 (consolidates recent research on the pre-Ottoman period); and, to supplement the bibliography s.v. Čandar, the articles by M. Yaşar Yüçel, *AÜDTCFD* xxiii/1-2 (1966) and *Belleten*, xxxiv (1970).

(C. J. Heywood)

ḲASṬĪLIYA. 1. A district, and originally, the *chef-lieu* of the *kūra* of Ilbīra in Muslim Spain, which should not be identified and confounded with Granada (Ilbīra). The Arab authors who describe Granada, Ilbīra and Ḳasṭīliya (*ḥāḍirat Ilbīra*) stress the fertility of its soil, comparing it to the Ghūṭa of Damascus and mentioning the existence of marble quarries; these descriptions all apply to the zone including Granada and its *vega*, bounded on the north by the Sierra Elvira. The exact identification of Ḳasṭīliya, the *ḥāḍirat Ilbīra* of Ibn Ḥayyān, Ibn al-Khaṭīb, and before them, probably of al-Rāzī, has been a subject of sharp contention since the 19th century (see Fray Angel Custodio Vega, in *España sagrada*, liii and liv: *De la Santa Iglesia Apostólica de Iliberri* (*Granada*), Madrid 1961, and especially the conclusions noted on pp. 63-4). We believe that Ḳasṭīliya was an ancient fortress which became the first residence of the *wālī* or *ʿāmil* of the *kūra* of Ilbīra and which remained there from the conquest till 400/1010, when it was destroyed by the Berbers, causing the displacement of the political centre of the *kūra* to Granada. Its site must therefore lie between Atarfe and Pinos Puente, in any spot or spur of land at the foot of the Sierra Elvira.

The Ḳasṭīliyas of Ifrīḳiya [see below, 2] and al-Andalus—not to be confused with Ḳashtāla, Ḳashtīla or Ḳashtīliya, the Castile of the Christians [see ḲASHTĀLA]—must be connected with Latin *castella* (pl. of *castellum*), since there existed strongholds in the Djarīd, a land of *ḳuṣūr*, just as in the *Municipium Florentinum Iliberritanum*, which became the diocese of Iliberri (Granada); the Iberian etymology put forward by Dozy in his *Recherches*[3], i, 335, looks improbable.

Bibliography: (in addition to the references in the article, and especially Fray Angel Custodio Vega's book and the bibliography there): Rāzī-Lévi-Provençal, *La "Description de l'Espagne"*, in *And.*, xviii (1953), 66-7; Ibn al-Khaṭīb, *Iḥāṭa*, ed. ʿInān, Cairo n.d., i, 99, 104; Yāḳūt, iv, 97, Ibn Ḥayyān, *Muḳtabis*, ed. M. M. Antuña (mentions p. 55 Ḳasṭila (*sic*), and p. 100 Ḳasṭīla, *ḥāḍirat Ilbīra*); F. J. Simonet, *Descripción del Reino de Granada*, Madrid 1861, 27-37; although Ḳasṭīliya is not expressly mentioned there, see also Ḥimyarī-Lévi Provençal, *al-Rawḍ al-miʿṭār*, text 24, tr. 30; art. GHARNĀṬA. For Ḳasṭīliya in both al-Andalus and in Tunisia, see now especially J. Oliver Asin, *En torno a los origines de Castilla: su toponimia en relación con los árabes y los beréberes*, in *And.*, xxxviii (1973), index. (J. Bosch-Vilá)

ḲASṬĪLIYA, or ḲAṢṬĪLIYA, or ḲASṬĪLA. 2. A place name of Tunisia which in the Middle Ages sometimes designated a town (Tawzar or Tūzar), but more often the district of which this town was the chief centre. It is the modern region of the Djarīd, which now forms part of the governorate of Ḳafṣa [*q.v.*] (population 321,000, density of pop. 17.45 per km², according to the 1966 census), and forms the region of the Shotts. As in the past, the region's main resource is the date palm: one million trees, of which 31% are of the highly-esteemed "degla" variety (1962 enquiry). Tourist development of the Sahara, helped by the provision of hotels which are sometimes most luxurious, has brought to this region, at present a somewhat deprived one, an additional resource.

History. Ḳasṭīliya was probably first reduced to submission by ʿUḳba b. Nāfiʿ [*q.v.*], and definitely conquered for Islam *ṣulḥ*[an] and without resistance, by Ḥassān b. al-Nuʿmān [*q.v.*], whence the relatively favourable status awarded to its Christian inhabitants. In its subsequent history, it naturally suffered from the troubles which racked the rest of Ifrīḳiya, and especially from the Khāridjī rebellions of the mid-2nd/8th century, the revolts of the *djund* under the Aghlabids, the warfare against the Fāṭimid *dāʿī* and the rising of Abū Yazīd al-Nukkārī [*q.v.*]. As a result of these troubles, Ibrāḍism gained numerous followers there, and Shīʿism had some success, especially at Nafṭa. The invasions of the Banū Hilāl in mid-5th/11th century, moreover, favoured the rise of a little independent principality, which was soon absorbed by that of the Banu 'l-Rand of Ḳafṣa. Ḳasṭīliya was then disputed and the Almohad position there attacked by the adventurer Ḳarāḳūsh and the Banū Ghāniya [*qq.v.*]. Under the Ḥafṣids, there was constituted at the beginning of the 8th/14th century another petty principality, governed by the Banū Yamlūl and an assembly of notables (*mashyakha*), which had a highly-troubled existence until it was finally eliminated, at the same time as were other local dynasties, by Abū Fāris (802/1400). Later on, the anarchy of the 19th century much aggravated the misery of the region, which was left virtually unprotected against the exactions of the nomads and the oppressive taxation of the central government.

Historical geography. The toponym Ḳasṭīliya is not found exclusively in Tunisia. Apart from the variant Ḳas̲h̲tāla for Castile, Yāḳūt, iv, 347-8, cites Ḳasṭalla in Spain, and Ḳasṭīliya in the district of Elvira [see preceeding art.]. He also mentions al-Ḳasṭal, a place name between Aleppo and Damascus. The ancient citadel of Mesarfelta, between Tobna (Thubunae) and Biskra (Vescera) also bore the name of Ḳasṭīliya. We have here clearly a toponym of Latin origin, derived from *castella*, pl. of *castellum* "citadel". The incoming Arab conquerors used it to denote first of all Tūzar (= Thusuros), the main fortress of the *limes* backed by the oasis, and then the whole region dependent upon it.

According to al-Yaʿḳūbī (d. *ca.* 282-92/895-905), this region comprised four oases: "The main one is called Tūzar, and is the residence of the governors the second is Ḥāmma; the third, Taḳyūs; and the fourth, Nafṭa" (tr. Wiet, *Les Pays*, 212). Only Taḳyūs (= Thiges) has now vanished today and given place to Dégache. This division is given by most of the later Arab geographers, and especially by al-Bakrī and Yāḳūt. Ibn Ḥawḳal, al-Muḳaddasī and al-Idrīsī merely give descriptions of the towns without giving information on the extent and boundaries of the region. But in later authors, Ḳasṭīliya, now called the Bilād al-D̲j̲arīd, spills over to include Ḳafṣa in the north and the region of Nafzāwa to the south of the Shotts (Ibn K̲h̲aldūn, *ʿIbar*, vi, 199), and even Biskra, Gabès and the island of Djerba (John-Leo Africanus, *Description de l'Afrique*, ii, 442-3). The place name Bilād al-D̲j̲arīd ("Land of the Palms"), or simply al-D̲j̲arīd, appears for the first time after the middle of the 8th/14th century, from the pen of Ibn K̲h̲aldūn, who henceforth uses it as much if not more than Ḳasṭīliya to designate this region. The ancient term of Ḳasṭīliya gradually disappeared, and is today completely unknown except to specialists. Already al-Tid̲j̲ānī (wrote in *ca.* 706/1306), Ibn Abī Dīnār (*ca.* 1110/1698) and al-Wazīr al-Sarrād̲j̲ (1149/1737) only use it when citing material from earlier authors. John-Leo Africanus, who visited Tunisia in 1517, knew nothing of the term.

Until the 3rd/9th century, there was no appreciable Arab element in Ḳasṭīliya. Al-Yaʿḳūbī writes that "The inhabitants are non-Arabs, descendants of the ancient Romans, Berbers and Afāriḳa" (*loc. cit.*), *i.e.* Latinised and Christianised Berbers. Ibn K̲h̲aldūn, speaking of the disturbances of 224/839, mentions Zuwāg̲h̲a, Luwāta and Miknāsa Berbers (*ʿIbar*, iv, 428). The ethnic map cannot have varied much till the middle of the 5th/11th century, sc. till the Hilālian invasions which brought into the region the Sulaym, and especially the Kuʿūb section of this latter tribe. From this moment, the ethnic picture began to change noticeably, and Christianity, which had maintained itself there, began to disappear. In 706/1306 al-Tid̲j̲ānī noted a large number of ruined and abandoned churches (*Riḥla*, 162), and he also commented with horror on the practice of eating dogs, which had not yet quite disappeared.

Mediaeval Arabic authors unanimously describe Ḳasṭīliya as a rich and prosperous land. According to al-Bakrī, the tax-yield reached 200,000 *dīnārs* in the middle of the 5th/11th century, compared with a mere 50,000 for Ḳafṣa. In the 8th/14th century, Ibn K̲h̲aldūn marvelled at the density of population there (*mustabḥirat al-ʿumrān*, *ʿIbar*, vi, 199). There was there an ingenious irrigation system, which struck all observers, and the region produced a vast quantity of dates. Al-Yaʿḳūbī mentions an important cultivation of olives, subsequently vanished. In the 4th/10th century, according to Ibn Ḥawḳal, sugar cane was one of the richest products of the region, but by the next century, says al-Bakrī, was yielding only a mediocre crop, nor was the banana flourishing very well. On the other hand, citrus fruits (*al-muḥammaḍāt*), and above all the citron (*al-utrud̲j̲*), were of unsurpassed quality. Also cultivated were flax, henna, cumin and caraway, and the fennec-fox, esteemed for its fur, was trapped. Ibn Ḥawḳal further states that Ḳasṭīliya was in his time an important commercial focal point, bustling with merchants from all countries. Its main import was corn, traditionally fetching a high price, and it exported dates, at the rate of a camel's load for two *dirhams*, says al-Muḳaddasī, and wool—implying the existence of extensive sheep-rearing—and all sorts of woollen products. Trans-Saharan trade to the countries of black Africa was certainly one of the reasons for the region's prosperity in the Middle Ages, and it is known that Abū Yazīd al-Nukkarī's father, who was originally from Taḳyūs or Tūzar, took part in this (Ibn K̲h̲aldūn, *ʿIbar*, iv, 84).

KASTORIA [see Kesriye].

ĶĀT (A; the form *dj̲āt* is also found, Amharic *čāt*), the name of a smooth-stemmed shrub (*Catha edulis*, Forskål; *Methyscophyllum glaucum*, Ecklon and Zeyher) which reaches a height of 12 feet and belongs to the family of Celastraceae. It grows in the eastern part of Africa, from the Cape to north of Lake Ṭānā (Ṣānā), and in southwestern Arabia. The leaves and the young shoots of this shrub contain an alkaloid, katin, which produces a euphoric, stimulating, exciting but finally depressing, effect when chewed or drunk in a decoction. It is widely used in Ethiopia, Djibouti, East Africa and the Yemen. The bunches of twigs or shoots (*kilwāt*, pl. *kalāwīt*) of the *ķāt* shrub can only be utilised a short time after being gathered, hence in order to transport them and to keep them fresh as long as possible, they are bound up in fresh, moist foliage. *Ķāt* addicts choose young and tender leaves and branches, and chew them up to form a ball about as big as a nut; they then keep on chewing this for hours, especially during social gatherings. In this respect, *ķāt* is a factor making for social cohesion and peace, but this is outweighed by its harmful effects. Whilst the state of euphoria induced may be accompanied by a certain feeling of intellectual expansion, this happy feeling is soon succeeded by a state of anxiety which is alleviated by drinking a decoction of coffee husks (*ķis̲h̲r*); all reports state unanimously that the habitual use of *ķāt*, despite its supposed prophylactic qualities, ruins the physical and mental health of people and, from an economic point of view, causes widespread damage. The 7,900 lbs. of it officially exported by air every year from Ethiopia to Djibouti (not counting the large quantities of *ķāt* shoots smuggled illegally) take up 40%-60% of people's salaries (J.-C. Guillebeau, in *Le Monde*, 2 April 1974). It has been calculated that in the Yemen, 300 million dollars' worth of it is consumed each year, with the price of a bunch of *ca.* 250 gr. taking up roughly the salary of a skilled workman, in a land where 90% of the men and almost 60% of the women are more or less regular addicts. The ravages caused by this narcotic have engaged the attention of the World Health Organisation (cf. *Medical aspects of the habitual chewing of khat leaves*, Doc. APD/127, Rev. I, 1964), and some economists have put forward remedies which seem, however, hard to apply (see M. S. el-Attar, *Le sous-développement économique et social du Yémen. Perspective de la révolution yéménite*, Algiers 1964).

Because of the widespread consumption of *ķāt* leaves, the raising of this shrub, which is propagated by means of cuttings, plays a great role and gives a considerable income to its cultivators on the plateaux, and above all to the middlemen dealing in it.

Ķāt is mentioned for the first time in a work dating from 1332-3 A.D. (see A. Dillmann, *Die Kriegsthaten des Königs ʿAmda Ṣion*, in *SB Ak. Berlin* (1864), 1012-13); al-Maķrīzī (d. 846/1442) cites in his *Ilmām bi-ak̲h̲bār man bi-arḍ al-Ḥabas̲h̲ min mulūk al-Islām*, ed. Rinck, Leiden 1790, 11, *ķāt* as a plant found at Awfāt (Eth. Īfāt, in eastern S̲h̲oa) and whose leaves are eaten. ʿAbd al-Ķādir al-Dj̲azīrī, who wrote in 996/1587, says that ʿAlī b. ʿUmar al-S̲h̲ād̲h̲ilī al-Mak̲h̲āʾī (d. 827/1424) was said to have introduced coffee [see kahwa] into the Yemen, and this took the place of *kafta*, sc. *ķāt* leaves, which had previously been used; however, the use of the latter soon revived, when coffee began to be exported on a large scale. A document called the *Ķānūn Ṣanʿāʾ* (given in *RIMA*, 1964) and containing two decrees regulating the town in 1164/1748 and 1234/1819 respectively, shows that in the interval between these two dates, the price of a bunch of *ca.* 280 gr. and of the best quality went down by a half and corresponded at the beginning of the 19th century to one-quarter of a workman's salary, *i.e.*, it was comparatively cheaper than today. This document also shows that the consumption of *ķāt* was officially authorised, although Ibn Ḥadj̲ar al-Hayt̲h̲amī (d. 974/1567) had written—in reply to questions about its use which had come from people in Ṣanʿāʾ and Zabīd, and without taking up a definite attitude towards the contradictory opinions of reputable scholars on the effects of *ķāt*—that its use fell into the category of *s̲h̲ubuhāt* which ought to be avoided (*Taḥd̲h̲īr al-t̲h̲iķāt min akl al-kafta wa 'l-ķāt*, in *al-Fatāwī al-kubrā al-fiķhiyya*, Cairo 1308, iv, 223-34).

ĶAṬʿ (A), cutting off. The Arabic verb *ķaṭaʿa* has been very widely used in a variety of literal and metaphorical senses; this diversity is often of interest for both religious and cultural history.

The infinitive *ķaṭʿ* does not occur in the Ķurʾān, but the finite verb occurs both in the literal and in a rather metaphorical sense: Sūra V, 42 (38): "Cut off the hands of the thief and the female thief"—the well-known prescription which has passed into *fiķh* and is sometimes briefly designated as *ķaṭʿ al-liṣṣ*; Sūra VIII, 7: "and [Allah] may cut off the root of the Infidels", *i.e.*, extirpate them. Sūra II, 25 and XIII, 25 (27) "[those who] cut up what Allah has ordered to join"; Sūra XXIX, 28 (29) "will you cut the road?", *i.e.*, commit highway robbery; Sūra XXVII, 32 "I decide nothing".

To the early reciters of the Ķurʾān (*ķurrāʾ*), *ķaṭʿ* or *waķf* was the pause in reading, based on the sense or otherwise. Later a distinction was made between the short pause for breath, and the other pauses,

based on the sense; according to some, *ḳaṭʿ* indicated only the first; according to others only the second.

The grammarians use *alif al-ḳaṭʿ* for the disjunctive *hamza* which, opposed to the so-called *hamzat al-waṣl*, cannot be elided [see ALIF]. *Ḳaṭʿ* further indicates the deliberate cutting, for a special purpose, between elements of a sentence which syntactically are closely connected, *e.g.* instead of *al-Ḥamdu li 'llāhi 'l-Ḥamīdı* one might say *al-Ḥamdu li 'llāhi 'l-ḥamīdu* (= *wahuwa 'l-ḥamīdu*), or ... *'l-ḥamīda* (= *aʿnī 'l-ḥamīda*).

In prosody, *ḳaṭʿ* indicates cutting short the ending of certain metrical feet, *e.g.*, the shortening of the metrical foot *fāʿilun* to *fāʿil* = *faʿlun* or of *mustafʿilun* to *mustafʿil* = *mafʿūlun*. This shortened form is then called *maḳṭūʿ*.

For mathematicians, *ḳaṭʿ al-makhrūṭ*, the conic section, is of importance; specifically *ḳaṭʿ zā'id* is the hyperbola, *ḳaṭʿ nāḳiṣ* the ellipse, *ḳaṭʿ mukāfī* the parabola and *ḳaṭʿ mukāfī mudjassam* the paraboloid.

In astrology, *ḳaṭ* indicates scission = ἀναίρεσις, specifically κλιμακτήρ, climacteric.

Ḳaṭʿ (*al-waraḳ*), in the sense of format of paper, has had a certain importance in the history of official administration. The Arabic papyri are of many different formats, but according to Grohmann the Arabs seem to have adopted both the dominations and sizes from the Greeks. In any case, one can recognize a certain continuity in the dimensions of the format. An ordinary roll of papyrus of 20 leaves, about 5 metres long, was called *ḳirṭās* (from Greek χάρτης, Aramaic קירטס) and the sixth part of it, *ṭūmār* or *ṭūmār ḳirṭās* (τομάριον χάρτου). In the papyrus texts parts of the roll are mentioned frequently, *e.g.* 2/3 roll (*thuluthay ḳirṭās*), 1/3, 1/6 (*ṭūmār*) and also 1/2 and 1/3 of a *ṭūmār*. The surviving documents emanating from the Egyptian provincial chancellery of Ḳurra b. Sharīk (90-96/709-714) [*q.v.*] are distinguished by an exceptionally large format and wide spacing between the lines. Documents emanating from the government chancellery of the Umayyads in Damascus have apparently not survived but it seems that as early as Muʿawiya's reign distinctions of format were known according to the rank of the addressee. This information comes from a lost *Kitāb al-ḳalam wa'l-dawāt* of Muḥammad ibn ʿUmar al-Madā'inī, who is perhaps identical with Muḥammad b. ʿUmar al-Madīnī (d. 581/1185, Brockelmann S I, 604, 10c). According to this work, caliphs were addressed on 2/3 *ṭūmār* (*li 'l-khulafā' fī ḳirṭās min thuluthay ṭūmār*), governors on 1/2, finance directors and secretaries on 1/3, merchants on 1/4, bookkeepers and geometricians on 1/6. Apart from these distinctions, it is worth noting that literary papyri have an almost square format whereas an oblong format, later on called *safīna*, was reserved for the Ḳur'ān. According to a statement by Ibn ʿAbdūs (d. 331/942), al-Walīd I (86-96/705-715) was the first Umayyad caliph who was addressed on *ṭawāmīr* and who introduced a larger format and a more elegant writing (*wa-amara bi-an tuʿaẓẓama kutubuhu wa-yudjallala 'l-khaṭṭ*). But ʿUmar II (99-101/717-720) was opposed to such extravagance and ordred the clerks to write closely (*bi-djamʿ al-khaṭṭ*); his own writings were only one span wide (*fa-kānat kutubuhu innamā hiya shibran*).

The state chancellery of the ʿAbbāsids had also a distinction of formats, described by al-Ṣūlī (d. 335/946); he mentions the sizes of the sheets (*al-maḳādīr allatī yuktab fīhā min al-ḳarāṭīs*). The formats are the same as those used under the Umayyads, to which was added a 2/5 format for special (*khāṣṣ*) documents, autographed or dictated by the vizier. Al-Ṣūlī's informant on this point was Aḥmad b. Ismāʿīl b. al-Khaṣīb al-Anbārī, an intimate of the caliph of one day al-Murtaḍā (296/908) = Ibn al-Muʿtazz [*q.v.*].

From the Mamlūk period we have no less than three lists which show some development in the formats. The oldest is that preserved by Shihāb al-Dīn Ibn Faḍl-Allāh al-ʿUmarī (d. 749/1349) in which he describes the sizes of the formats of the sheets (*maḳādīr ḳaṭʿ al-waraḳ al-ladhi yuktab fīhi*). Here also there are five formats, which however include only three of the early ones: 2/3, 1/2 and 1/3. The largest is an in-folio (*al-ḳaṭʿ al-kāmil*) used for treaties and the smallest is an ordinary format (*ḳaṭʿ al-ʿāda*) used for decrees and appointments of the lowest rank. The latter was therefore the format most commonly used and corresponded with the two early formats 1/4 and 1/6. The author adds that the formats are thus sufficiently explained and that the rest may be inferred by analogy (*tafṣīl lā'iḳ ḳis ʿalayhi wa-bi 'llāhi 'l-tawfīḳ*).

Al-Ḳalḳashandī (d. 821/1418), the greatest authority on the secretarial art, also deals thoroughly with the formats and their history. His lists contain nine Egyptian and six Syrian formats. Besides the five ancient Egyptian sizes, he mentions three in-folios: two from Baghdād, a larger and a smaller, and a third from Syria. He also adds a particularly small size for use with carrier-pigeons (*al-ḳaṭʿ al-ṣaghīr min waraḳ al-ṭayr*). The four Syrian sizes were intended for the chancelleries in the province of Syria: *kāmil*, *1/2 ḥamawī*, *ʿāda* and *waraḳ al-ṭayr*. From al-Ḳalkashandī's explanations, it is clear that he does not conceive the names of the format as indicating parts of the sheet, but as indicating the width in Egyptian ells as used for measuring cloth, *e.g.*, 2/3 = *thuluthā dhirāʿ bi-dhirāʿ al-ḳumāsh al-Miṣrī*.

After al-Ḳalḳashandī, the number of formats increased still further and resulted in an excess of formats too numerous to systematize. An anonymous description of Egyptian chancellery procedure, dating from the end of the 9th/15th century, is preserved in a Paris manuscript under the title *Dīwān al-inshā'*. Quatremère used this in his introduction to his *Histoire des Mongols*, while Karabacek used it to try and introduce some order into the scattered data. In assuming that the Egyptian textile ell was 48.886 cm. and that the relationship of breadth to height was on average two to three, he was able to calculate all the formats in centimetres. His findings are put together in a table comprising fifteen formats, including the classical five formats, and in addition, no less than seven folio formats. Despite the enormous effort involved, the findings are somewhat uncertain, and an edition of the text would be desirable. This Egyptian development came to an abrupt end with the Ottoman conquest in 1517. As an Ottoman province, Egypt had no state chancellery.

Ottoman documents, according to Fekete, were always long and narrow, but the so-called Imperial Letters to foreign rulers had very varied and sometimes huge formats. The Arabic formats were apparently not known, but many styles of writing had names like *sülüs* and *ṭumar*. In the Mongol state chancellery also, paper was long and narrow, on the Chinese model. In the Arab east, *ḳaṭʿ* as a format is still not entirely forgotten (cf. the dictionaries of Belot, Elias, Wehr), while in Turkish the word *ḳiṭʿa* is in common use (cf. Samy, Heuser, Ağakay).

In religious history, the expression *ḳaṭaʿa yamīnan* = "to swear an oath", which Pedersen (*Der Eid bei*

den Semiten, 46 and 12 n. 5) compares with the Hebrew *ḳārat berīt* = "to make a covenant". As in other Semitic languages, *ḳaṭaʿa* acquires the meaning of "resolve", "decide". In logic, it means "to assert something decisively or refute someone completely" or, *e.g.* *ʿalima ḳaṭʿan* or *ʿala 'l-ḳaṭʿi*, "to know something with absolute certainty", *dalīl ḳaṭʿī*, "a conclusive proof". Compare further titles of books listed in Brockelmann, such as *al-Burhān al-ḳāṭiʿ*, *Ḳawāṭiʿ al-burhān*, *al-Barāhin al-ḳāṭiʿa* or *al-Ḳaṭʿiyya*.

A small Shīʿī sect is known as the *Ḳaṭʿiyya* because they "cut off" the line of Imāms with the death of Mūsā al-Kāẓim.

ḲAṬʿ AL-ṬARĪḲ [see ḳatl, ṣuʿlūk].

ḲAṬĀ (a.) is a collective noun (noun of unity: *-a*, pl. *ḳaṭawāt*, *ḳaṭayāt*) denoting the ornithological family of Pteroclididae or, with their Spanish name, *gangas* (English, sandgrouse), but without distinguishing species. This term, onomatopaeic for the cry of these birds, is a typical example of the language ingeniously adapting itself to the norms of Semitic triliteralism. It is given the root Ḳ-Ṭ-W/Ḳ-Ṭ-Y from which is derived the diminutive *ḳuṭayy* and to which are connected all the dialectal forms like *ḳṭāya/gṭāya*, *ḳṭawiyya/gṭawiyya*, *gaṭwa*, *gāṭū*, *gaṭṭū*.

In Islamic lands six species of sandgrouse are known; they are scattered among a score of geographical races but confined to the semi-desert and steppes. Out of six types the Arabs have distinguished just three, to which the others have been assimilated. The rather precise descriptions which encyclopaedists have given to these three different species make them easily identifiable (see al-Damīrī, Cairo 1356/1937, i, 252-6; Kushādjim, *Maṣāyid*, Bagdad 1954, 277-9; al-Ḳalḳashandī, *Ṣubḥ*, ii, 71). First of all they identify the *kudrī* (pl. *-iyya*, *kudr* and rarely *kadārī*, also called *ʿarabī* and *awraḳ*) corresponding to Lichtenstein's or the Close-Barred Sandgrouse (*Pterocles Lichtensteini*) which is the smallest of them. It has black spots and lacks a pointed tail. The male has a double yellow pectoral band clearly defined by a black bar. It lives not only in Africa (in the Ahaggar, the Aïr, the Sudan, Ethiopia and Somalia) but also all along the western seaboard and in the south of Arabia as far as ʿUmān. It is unknown in central Arabia, but reappears in ʿIrāḳ and in Iran. Very similar to this sandgrouse is the Crested Sandgrouse (*Pterocles coronatus*) which has the same distribution in Africa apart from Ethiopia and Somalia. It reappears from the south of Sinai to the south of Palestine and from ʿIrāḳ as far as Balūčistān.

The second type recognised by the desert peoples is the *djūnī* (pl. *djūn*; also called *ghadaf* and *ghatmā'*, Persian *siyāh sīnah*, Turkish *bāḳir ḳarā*, Maghribī *guṭṭār*, *gaṭā ḥurr*, Berber *tigernāḍ*), which is the Black-bellied sandgrouse (*Pterocles orientalis*). It is found only in a zone between the 30th and 40th parallels north; in Africa only in the Maghrib from the Atlantic to the frontier of Cyrenaica (it is evenly distributed throughout southern Spain); in the east from Turkey to India; and in the north as far as the Tarbagatai. It is not recorded in the Sahara or Arabia. This sandgrouse, which is about the size of a large pigeon, and perhaps a third bigger than the *kudrī*, is recognizable by the velvety black of its abdomen, its dark wing quills, its cream pectoral band, its short tail and its light rasping cry, very different from the hoarse and sonorous "kata".

Two other sandgrouse have a dark belly, and from a back view may be confused with the former. They are on the one hand the Chestnut-bellied or Small Pintailed Sandgrouse (*Pterocles exustus*), which is found in Egypt, from Fayyūm to Luxor; in Africa, from Senegal to the Red Sea; in the south of the Sahara in a narrow band as far as Somalia; then in the South of Arabia except in the Yemen. In the north it is common in the Near East, and in the east, from Palestine to India. On the other hand, the Spotted Sandgrouse (Pterocles Senegallus; Sahara *gaṭṭū*, *gāṭū*) occupies broadly all the African Sahara between the lines Tiznit to Gabès in the North and Cape Juby to Somalia in the south; it is absent from the Maghrib. To the east of the Red Sea it occurs in all of Arabia, and in the north it is recorded from Jordan to Afghānistān and to the Punjab. It is the most widely distributed of the sandgrouse and is distinguished by the absence of a pectoral band and has, like the Black-bellied Sandgrouse, a blue supercilium. In the Sahara the Touareg population who, not without reason, liken the sandgrouse to the Columbidae, confuse under the same names the Crested Sandgrouse and Lichtenstein's Sandgrouse: *tamahaḳḳ*, from *tikadiwt* pl. *tikadewin*, (= "little stone") in the Adrar; *tagidūk* in the Aïr; and *idebir/tidebirt* pl. *idbar/tidbar*, *idberen/tidbirin* in the Ahaggar.

The last of the species of sandgrouse and the third distinguished by the Arabs is the *ghaṭaṭ*, (from its guttural cawing), the Large Pintailed Sandgrouse (*Pterocles alchata*, a taxonomic preservation of the

Arabic generic name). Its geographical distribution is the same as that of the Black-bellied Sandgrouse but extending also to Cyrenaica. As big as the latter, the cata has a white belly with a broad bright red band bordered by a black stripe across the chest. In the female, this breast plumage is bright yellow transversely crossed by a black streak like that of the male Lichtenstein's Sandgrouse. Both sexes have their eyes camouflaged with black.

The nomads could well be excused for having differentiated only three species of sandgrouse out of six, on account of the close similarity of the plumage of each one. All are predominantly sandy-yellow, with fine speckles giving a pearl-grey tone (*māriyya*) which assures complete mimesis, and all the species also display identical behaviour. With the added factor of sexual dimorphism, only a skilled ornithologist could draw up an inventory of this rather homogeneous family. On the other hand, few observers other than these desert people have known in detail the biology of the sandgrouse which, placed between the Columbidae and the Gallinaceae, are essentially granivorous and live principally at ground level. On the ground they look like little partridges with short legs, but in flight they resemble pigeons (see above, the Touareg names, which apply to the Columbidae also). Because their habitat is the semi-desert regions they are obliged to cover long distances (sometimes 50 km. or more) in order to quench their thirst. For this purpose they assemble in large flocks (*sirb*, pl. *asrāb*, *raʿla* pl. *riʿāl*) and reach the watering place in a great turmoil of cries in order to keep in contact; they cleave the air rapidly and some bathe while the mothers gorge themselves with water so that on their return they can regurgitate it into the parched gullets of their chicks. Their stop at the water source is very short and the birds hurry to get back to their own grounds.

From the earliest times in their life in solitary places, the Bedouin have had the time to notice all the details of the behaviour of the sandgrouse and to incorporate them into the dicta which the pre-Islamic poets turned to account (see al-Maydānī, *Amthāl*, ii, 110; al-Damīrī, ii, 252-6; al-Djāḥiẓ, *Ḥayawān*, v, 217, 287, 573-81 and index). The sandgrouse, which is very fierce, flees at the slightest alarm and cries out in its distinctive manner. Therefore it is said: *ansab min al-ḳaṭā*, "more easily recognisable than the sandgrouse" or *aṣdaḳ min al-ḳaṭā*, "more plainly revealing itself than the sandgrouse". At night they are always alert and it is difficult to surprise them in their sleep; hence the nickname *ghaḍāra* (after Ibn Siduh) and the adage *law turika l-ḳaṭā laylan la-nām*, "if you leave the sandgrouse at peace at night, he will go back to sleep".

Kur'ānic law recognises the delicate flesh of this bird as licit for consumption, and it is a choice prey for the flesh-eaters and rapacious predators who relentlessly search it out, as another dictum demonstrates: *bīḍ al-ḳaṭā yaḥḍunu-h l-adjdal*, "It is the Saker falcon which sits on the eggs of the sandgrouse". The back hallux of the foot of the sandgrouse is very atrophied, hence to describe something very minute it can be said *aḳṣar min ibhām al-ḳaṭā* "shorter than the sandgrouse's thumb". The female lays her eggs right on the ground, in a tuft of grass (*ufḥūsa*), two or three eggs speckled with brown (*ʿurm*), from which comes her nickname *umm thalāth* "mother of three eggs". This extraordinary instinctive ability to come straight back to her nest, among the hundreds of nesting-places of the colony, after each "watering party", and then to recognise her own hatched chicks (*djawzal* pl. *djawāzil*) in order to give them water, this maternal solicitude joined with the attachment of the mate which shares all the tasks of educating the young, were such good examples that the admiration of the nomad was expressed in the saying *ahdā min al-ḳaṭā* "with a better sense of direction than the sandgrouse". Exposed and defenceless in a hostile world, where "the survival of the fittest" is the rule, these little chicks of the sandgrouse are unable to do without the protection and experience of their parents, from whom they have much to learn in the art of self-preservation, amid the many perils which threaten them; but in such a good school, they soon manage to acquire this permanent mistrust which is the secret of survival of the species. The tent dwellers, in their laconic way, knew how to crystalise all the wisdom to be drawn from this contrast of powerful and weak in this saying: *laysa ḳaṭān mithl ḳuṭayy* "Sandgrouse old and sandgrouse young make a pair".

It is of course round these watering points that man has at all times lain in wait for and captured the sandgrouse as a source of food, using in the process all the tricks and inventions born of his ingenuity in the art of birdcatching. Nooses, trip-nets, snares and all kinds of booby-traps are set up for them at the watering place, as a number of pre-Islamic verses prove. Very few poets indeed of the *Djāhiliyya* and the beginnings of Islam have omitted to cite the sandgrouse and its daily visit to the pool, which exposed it to the greed of the stalker. There are, first of all, these verses poignant with reality from the famous *Lāmiyyat al-ʿArab* (verses 36-42) attributed to Shanfarā. The poet, having returned to a life close to nature, overtakes at the watering place the parched flights of sandgrouse and contends with them for the vital element. Ḥumayd b. Thawr knew how to present the bird in its habitat (*Dīwān*, Cairo 1371/1951, 53 no. 6, verses 16-27), while Zuhayr b. Abī Sulmā shows it fleeing before the attack of the falcon (*Dīwān*, ed. Ahlwardt, 36 no. 10, verses 13-24), a theme taken up again by al-Akhṭal (*Madjānī ḥadītha*, ii, 96). Also touching is the composition variously attributed to the Madjnūn of the ʿĀmir, to Ḳays b. Dharīḥ and to Tawba b. al-Ḥumayyir (al-Damīrī, ii, 253; Aghānī, ii, 40; *Ḥayawān*, v, 577), which is thus conceived: (metre *wāfir*, rhyme *-āḥū*): "My heart, on the evening when it learned that he should go away with Laylā of the ʿĀmir on the morrow, in the morning or in the evening, was like a sandgrouse which had fallen into a snare and which struggled ceaselessly throughout the night, but in vain, its wing caught fast in the mesh."

The treachery of the nets did not escape Zuhayr when, comparing the speed of his charger with that of the sandgrouse in flight, he said (*Dīwān*, Tunis 1323/1905, 44 verse 13, metre *baṣīṭ*, rhyme *-kū*); "He is as swift as one of these [untiring] sandgrouse of the pools, but one which the drawers of water have chased, and whose companion the snares have ravished." In his turn, ʿUbayd (d. 90/709) evokes the same picture in this verse (*LA*, s.v. *SH-B-K*, metre *baṣīṭ*, rhyme *-dū*. "Or a flight of sandgrouse of Fayḥān which the snares and stalkers chased from the watering place of Yathriba".

Another characteristic of the sandgrouse which the poets have brought into relief is its embarrassed gait, caused by the smallness of its feet; it walks,

waddling along with measured step, head and tail erect and with its chest thrown out, evoking rather well the portly and majestic bearing of the woman of ample form, the ideal of feminine beauty for the Arabs. Al-Kumayt, among others, knew how to exploit this comparison (see *Ḥayawān*, v, 576); but it would not be possible to mention here all those who include the sandgrouse in their rhymes without making the list too long.

In the more concrete domain of the hunt, with the development under the ʿAbbāsids of the sport of hawking [see BAYZARA], an attempt was made to attract the goshawk to the sandgrouse, but without great success. Access to the grounds of this bird was already difficult, and the sandgrouse was little inclined to fly off individually. It was impossible to dislodge it from the dense thickets where it took refuge without recourse to a hunting dog (*zag̲h̲ārī*); bustards, partridges and francolins were put to flight more easily. As for falcons, they were too noble for this low flying. On the other hand they perfected the methods of capture with the net by joining to the swinging trip net the contrivance of a live calling bird (*daʿwā*) with a young pigeon disguised as a sandgrouse. ʿĪsā al-Asadī (7th/13th century) indicates in his vast cynegetic encyclopaedia (*al-D̲j̲amhara fī ʿulūm al-bayzara*, ms. Escurial, Ar. 903, fols. 159b-160a) the way to transform this pigeon by dyeing its plumage with saffron or henna, and by docking its tail, to make it look like a sandgrouse. The stalker at the hut (*kawwāk̲h̲*) would set up his net upwind on days of high wind and place the pigeon a few metres in front, being able to make it move with the aid of a leash. When the flock of sandgrouse arrived flying very low in the wind, the hunter would make the calling bird jump about. To complete the resemblance, he would make the cry of the young sandgrouse by means of a decoy call made with a fine tongue of leather which vibrated between two wooden plates with the wind. The birds would begin their descent and would immediately see themselves covered by the clap net which dropped down. This method of hunting was very much in favour in ʿIrāḳ, and al-Asadī adds that the bird-netters of Bag̲h̲dād rivalled each other in exploits, sometimes going so far as to capture in this way more than fifty sandgrouse at a stroke.

Finally a third procedure, rather less sporting, consisted of going to the nesting sites, stretching above each nesting group a little net which was firmly fixed all around, only leaving a narrow access corridor to the eggs. The sitting bird (it was the male by day), which had fled on the arrival of the hunter, would come back very quickly to the nest to pursue its task and would reach the breeding place by using the corridor. The stalker, hiding not far away, would wait until all the nests were occupied again and getting up suddenly would come running and shouting loudly; the sandgrouse, panic-stricken, would rush into the meshes which stopped their flight. In modern times, firearms in most Muslim countries have supplanted most of these stratagems. As for the Touareg, they neither hunt nor eat the sandgrouse or even the pigeon any more; to them, catching this game is an amusement left to the children.

All things considered, it must be recognised that if it had not been for the ancient desert poets and the sporadic attention which they accorded the sandgrouse in their animal descriptions, which served as a setting for their *ḳaṣīda*s (see R. Blachère, *HLA*, ii, 449), this bird would have been completely unknown in literature.

ḲAʿṬABA, a small town close to the southern boundary of the Yaman Arab Republic (Northern Yaman) in the administrative district of Ibb [*q.v.*]. A short distance to the south of the other side of the boundary lies al-Ḍāliʿ, formerly the capital of the ʿĀmirī amīrate [*q.v.*] and now a forward base of the People's Democratic Republic of the Yaman (Southern Yaman).

Ḳaʿṭaba is located between the upper reaches of the Wādīs Tuban and Banā. Terraced fields in the surrounding rocky terrain produce cereals, fruit, coffee and *ḳāt* [*q.v.*]. At an altitude of over 1200 m. Ḳaʿṭaba is still much lower than D̲j̲abal D̲j̲iḥāf to the south and "the mighty rampart of the Yemen mountains" to the north. Although travellers can go from Aden to Taʿizz via Ḳaʿṭaba, the main route swings westwards before reaching al-Ḍāliʿ and Ḳaʿṭaba. The way north from Ḳaʿṭaba towards Yarīm and Ṣanʿāʾ is very difficult to traverse. Ḳaʿṭaba's importance derives primarily from its position as a border stronghold.

Ḳaʿṭaba is not mentioned by the older geographers such as al-Hamdānī, though they speak of the tribe of D̲j̲aʿda [*q.v.*] as dwelling in this region. In the 12th/18th century Ḳaʿṭaba was fought over by Yāfiʿ [*q.v.*] and other peoples in the vicinity. After the opening of the Suez Canal in 1286/1869, the Ottoman government reinforced its authority in the Yaman and stationed a garrison in Ḳaʿṭaba. British influence having spread from Aden into the hinterland, a joint Anglo-Ottoman commission worked from 1319/1902 to 1323/1905 in demarcating a boundary line that left Ḳaʿṭaba just inside Yamanī territory. This line still divides Northern Yaman from Southern Yaman.

During World War I, Ottoman forces advanced from the Yaman against Aden, which they failed to capture after a long siege. After the close of the war, the Turks withdrew from the Yaman, and the Imām Yaḥyā b. Muḥammad Ḥamīd al-Dīn [*q.v.*] acquired full sovereignty over the country. As Yaḥyā claimed that the areas under British protection south of the boundary rightfully belonged to the Yaman, clashes took place along the line, with Ḳaʿṭaba being one of the most sensitive spots. Although Yaḥyā and Britain concluded the Treaty of Ṣanʿāʾ in 1352/1934, providing for the maintenance of "the situation existing in regard to the frontier [*al-ḥudūd*]", the troubles did not cease. Yaḥyā was assassinated in 1367/1948. When a revolution overthrew his grandson Muḥammad al-Badr in 1382/1968, the new Yaman Arab Republic adopted the old territorial claims of the imamate,

but the republican government was diverted by the civil war aginst al-Badr and his supporters.

In 1383/1963 the National Liberation Front, a leftist party in Aden and its hinterland, began an armed struggle against the British in Djabal Radfān south of Ḳaʿṭaba. This struggle culminated with the Front seizing power when the British evacuated Aden in 1387/1967 and establishing what is now called the People's Democratic Republic of the Yaman. Relations between the two Yamans have been strained, and the Aden government has charged that Northern Yaman uses Ḳaʿṭaba and other places as bases for subversive activities against its territory.

ḲATABĀN, a pre-Islamic people of southwest Arabia, for knowledge of whom we are dependent on the ancient native inscriptions. They were known to the Greek and Latin geographers, under the names Κιτιβαῖνιται, Cattabanenses and other variants, but the data available from that source need to be controlled against the background of the primary epigraphic sources. Muslim writers had no knowledge of them as a people, though Yāḳūt records Ḳitbān as a simple place-name "in the region of Aden".

The distinctive culture of pre-Islamic southwest Arabia was that of a settled farming population, having at the base of its social structure the village community. A plurality of such communities formed a social unit described by a term corresponding to the Arabic word *shaʿb*; the cohesion of this unit was fundamentally economic, secondarily political and social, but it was not a kinship-group. At a third level of grouping we find cases where one *shaʿb* gained a dominance or hegemony over several neighbouring *shaʿb* groups. Finally, there is a fourth level of differentiation within the culture area as a whole, based on linguistic criteria: the language of the inscriptions is classifiable into four main dialects, and when the Greek geographers tell us that there were four principal "nations" in the area, it is clear that they are using the linguistic criterion of differentiation.

The existence of these various levels of grouping has led to some confusion in the use of the term Ḳatabanian, for scholars have not always been careful in distinguishing the levels at which the term is applicable. It is certain from the inscriptions that Ḳatabān was a *shaʿb*, whose territory consisted of the present-day Wādī Bayḥān [*q.v.*], and probably also the Wādī Ḥarīb [*q.v.*] parallel to it on the west; in ancient times, Bayḥān had been the name merely of one of a number of village communities which together constituted the *shaʿb* Ḳatabān. At certain periods in its history, however, the *shaʿb* Ḳatabān was the dominant element in a hegemony which extended over the highland plateau south of the Wādī Bayḥān (now the Yemeni province of al-Bayḍāʾ, anciently Awsan), and beyond that into Dathīna [*q.v.*], the lowland area at the foot on the escarpment which forms the southern boundary of the plateau. The classical geographers tell us that the Ḳatabanians extended as far as the Red Sea and Indian Ocean coasts: but in so doing they were probably referring to the linguistic "nation", *i.e.* the ethnic group which used the same dialect as the *shaʿb* Ḳatabān, for there is no epigraphic evidence to show that the latter ever exercised real political control over so wide an area. The most we can say is that there were certain social linkages between the Ḳatabanian heartland and the isolated highland massif in the extreme southwest of the peninsula of which today Taʿizz is the administrative centre, for the township of *Harbat* in the Wādī Ḥarīb was founded by immigrants from Sawwa, not far from Taʿizz.

There are some indications that, in the earliest phase of our historical records, it was the *shaʿb* Awsan which was the dominant partner in a confederacy covering to some extent the same area as the later Ḳatabanian confederacy. This is the most probable interpretation of the Ṣirwāḥ inscription (RES 3945), which records that Saba crushed Awsan and liberated Ḳatabān from Awsanian domination. F. Hommel supposed this to mean that Awsan then vanished completely and finally from the map, which is certainly wrong, since mention of Awsan occurs again much later— probably when the Ḳatabanian confederacy had in its turn broken up.

The chronology of Ḳatabān is still in some dispute. An American school, of which the protagonists are W. F. Albright and A. Jamme, hold that its history stretches from the 6th century B.C. or even earlier, down to the early years of the Christian Era. A continental school, headed by J. Ryckmans and J. Pirenne, dates the whole process some two centuries or so later. The only certainty at the moment is that there is no mention whatever of Ḳatabān in inscriptions from the 4th century A.D. onwards; and we are forced to believe that by this time Ḳatabān had disappeared from the political and social map. This is why Muslim writers knew nothing of it as a social entity, for such knowledge as they had of pre-Islamic affairs extends only to the couple of centuries immediately preceding Islam. It could also be surmised that it was the disappearance of Ḳatabān that paved the way for the rise of Bayḥān from being a mere village community to a social entity giving its name to the whole Wādī, but at the same time speaking of the king of Ḥaḍramawt as overlord: this suggests that Ḳatabān may have been overthrown by a Sabaean-Ḥaḍramī alliance, which assigned the former lands of the *shaʿb* Ḳatabān to Ḥaḍramī overlordship.

Apart from the uncertainty of the absolute chronology, a diversity of attempts have been made at establishing an internal relative chronology; but it is doubtful whether even the best of these can yet be regarded as definitive.

Archaeology. In this respect, the Wādī Bayḥān is better known than any other area of comparable size in the culture area, thanks largely to the intensive research campaigns of 1950-51 under the auspices of the American Foundation for the Study of Man. These concentrated much of their attention on a site now known as Hadjar Kuḥlān, anciently Θοῦμνα, Thomna, etc., and inscriptionally *Tmnʿ*. It lies at the far northern end of the Wādī, and though now engulfed in desert sands, was formerly a highly prosperous settlement. There was a rectangular walled town, one quarter of the area of which was an open market space, wherein stands a stela of ancient date containing the market regulations; a temple outside the walled town; and a burial ground at a small rocky outcrop now called Ḥayd Bin ʿAḳīl some few kilometres north-east of the town. This site was the metropolis of the Ḳatabanian confederacy in its

heyday; but it came to a violent end, being destroyed by fire. There are, however, indications that the original headquarters of the *s͟haʿb* Ḳatabān, before it emerged into paramountcy over the confederation, may have been at the site now called Had͟jar Bin Ḥumeyd, approximately halfway between Had͟jar Kuḥlān and the present administrative centre at Bayḥān al-Ḳaṣāb, for the stratigraphic evidence here seems to indicate a very high antiquity indeed for the site.

Three possible routes link the Wādī Bayḥān with the Wādī Ḥarīb. One can skirt the northern end of the mountain range separating the two *wādīs*, but this route must always have been insecure, exposed as it is to attacks from desert tribesmen. Somewhat further there is a pass known as Naḳd Marḳad, devoid of inscriptional records but having on the eastern approach two stone walls which start from the sides of the valley and gradually converge, as they ascend, to a narrow opening at the summit of the pass; this ensures that caravans could only cross the pass at that precise point, thus facilitating customs control. Further south again there is a much more impressive relic. Due west of Had͟jar Bin Ḥumeyd, the Wādī Mablaḳa strikes up into the dividing mountain chain. At the head of this, one ascends by a steep zigzag climb up the mountainside, along a finely paved path of pre-Islamic date; at the very summit of the col, a way has been cut deep into the natural rock. The construction of the whole route is recorded in an inscription at the summit.

Another portion of what was evidently the same plan crossed a similar pass-road named Ẓr in an inscription; the exact location of this is unknown, but it certainly led westwards out of the Wādī Ḥarīb towards the Wādī D͟jūba and Mārib.

The whole Wādī Bayḥān was in ancient times agriculturally exploited by an elaborate irrigation system which has been studied in detail by a member of the 1950-51 expedition, G. van Beek.

In the Wādī Ḥarīb, the only site that has been inspected (though not yet systematically excavated) is that of the previously mentioned township *Harbat*, now called Had͟jar Ḥinu al-Zurayr, slightly north of the western exit from the Mablaḳa pass. The part of the Wādī further north has for political reasons been, until quite recently, inaccessible to scientific research. The same is true of the Wādī Mark͟ha, to the east of the Wādī Bayḥān, with its important site of Had͟jar al-Nāb, from which one could hope for considerable accretions to our knowledge of Ḳatabān.

Other sites in the Wādī Bayḥān itself which might repay further investigation include Maryama, situated at a point where the Wādī bifurcates some 8 km. south of Bayḥān al-Ḳaṣāb, and just west of a pass leading towards the Wādī Mark͟ha.

The market regulations of *Tmnʿ* attest the keen interest of Ḳatabān in trade. A further index of this interest is the existence of a well-documented series of Ḳatabanian coins, starting in the 3rd century B.C. with imitations of Athenian "owl" coinage, and later developing into native types. *Tmnʿ* must to some extent have been a centre of international trade, for the Minaeans, who seem to have monopolized the traffic in aromatics, hae a resident colony there supervised by their own official called the "*kabīr* of the Minaeans in *Tmnʿ*"; and one type of Ḳatabanian coinage has a legend not in the usual "monumental" script of the settled populations, but in a north Arabian script style.

Ḳatabān in its later phase showed a very high degree of artistic achievement; and its art is mani festly greatly influenced by Greek models.

Religion. The History of Ḳatabān lies wholly within the polytheistic period, and its pantheon, as elsewhere in the culture area, was dominated by a triad of principal deities. Firstly, a lunar god called in the Ḳatabanian speaking territory by the name ʿAmm (in the other linguistic nations he had different names). Secondly, ʿAt͟htar, so named throughout the culture area, the male counterpart of north Semitic Ashtaroth/Astarte, and usually considered to be the Venus-star. Thirdly, a solar goddess with no distinctive name but referred to simply as "sun", or by one or more of a series of feminine epithets. All the major deities, in fact, embrace a number of hypostases distinguished by varying epithets. There were also minor deities, whose functions and characteristics it is difficult to define.

About actual religious practices we know very little, for the Ḳatabanian language texts are as a whole markedly more secular in tone than the Sabaean ones. One interesting sidelight is that part of Dat͟hīna was farmed by *métayers* of the *s͟haʿb Kḥd*, while the proprietorial rights were vested in two clans of the *s͟haʿb* Ḳatabān: and this landlord-tenant relationship expressed itself in a common allegiance to a hypostasis of ʿAmm with the distinctive epithet "of Labak͟h" (this last the name of a prominent mountain on the west side of the Wādī Bayḥān)—see Beeston, *Qahtan*, ii.

Institutions. The titular head of the *s͟haʿb* Ḳatabān was a king, *malik*; but he was by no means an autocrat. Legislative enactments were passed in the name of the king together with other functionaires having a variety of titles impossible to interpret with any precision, but who may have been grouped together under a name etymologically related to Arabic *sayyid*. The composition of the body probably varied according to the business in hand; in the market regulations a prominent role is played by the "overseer" (*ʿhr*) of the market, in irrigation texts by the landlords. The king was not supreme legislator but rather chief executive. His functions were to register, promulgate and secure the carrying out of the acts of the legislative body; to initiate major public works; and to act as commander in war.

He had moreover a dual role. By virtue of being head of the *s͟haʿb* Ḳatabān he was also head of the confederacy in which the *s͟haʿb* Ḳatabān was the dominant member—in rather the same way that the Queen of England is also "head of the British Commonwealth". As head of the confederacy, he used formally the title *mkrb* (vocalization unknown) of Ḳatabān, *i.e.* in this context, the Ḳatabanian confederacy. It must be stressed that a theory propounded by F. Hommel, and still unfortunately being given currency, has in the last few decades been proved conclusively to be unfounded and is not now believed by any expert: namely, that *mkrb* was the title of the "priest-ruler" (Accadian *ensi*) of a theocratic state anterior to the establishment of a secular state headed by a king.

The crucial evidence on this point is the inscription at the head of the Mablaḳa pass. This is in two parts: in the first (RES 2550) the credit for sponsoring the work is claimed for an individual styling himself *mkrb* of Ḳatabān; in the second (Ryckmans 390, not published until 1949), the director of public works states that he superintended the work "on behalf of his lord the king of Ḳatabān". King and *mkrb* are the same individual. It is clear that, to a member of the *s͟haʿb* Ḳatabān, his superior was simply "king of

Ḳatabān", but the latter, in sponsoring a major public work for the benefit of, and probably financed by, the whole confederacy, used the title *mkrb* which stressed his position as head of the confederacy and not merely of the *sha*ʿ*b*.

While it is possible that every *mkrb* may have been also a king, the reverse is not true. There are several instances of two brothers, or a father and son, being designated "joint kings of Ḳatabān", but the title *mkrb* never occurs in dual or plural. It would be safe to conclude, at least provisionally, that when there were two joint kings of the *sha*ʿ*b*, only one could be formal head of the confederacy.

Certain holders of the *mkrb* office list and elaborate series of other formal titles, among which two phrases deserve note. The *mkrb* is tax-collector (*qẓr*, cf. Tigrinya *taqʷāṣāri*), chief administrator (*qyn*), and priest, of the tutelary deity of the confederacy, ʿAmm; he was thus responsible for federal tax-collection and other administration, and for the maintenance of the federal cultus. Further, he is "first-born" (*bkr*) of that deity: this expression has to be evaluated in the context of the fact that all members of the Ḳatabanian confederacy are collectively the "children of ʿAmm", that is, under the special protection of the tutelary deity of the confederacy; there is no reason to think that "first-born" implies anything more than the primacy of status enjoyed by the head of the confederacy in relation to the other "children of ʿAmm".

One institution which emerges with greater clarity in Ḳatabān than elsewhere is the *corvée*. The maintenance of the great irrigational installations which served a number of properties was the responsibility of the landowners concerned, and the latter were obliged to provide for this purpose one day's *corvée* labour in each period of fifteen days (RES 3854 as reinterpreted in Beeston, *Calendars*, 6-7).

Language. The dialects of the culture area constitute an independent language within the southern branch of the Semitic languages, as distinct from Arabic as is, on the one hand Aramaic, and on the other Ethiopic (albeit in the later, post-Ḳatabanian, phase a good many Arabic lexical items begin to creep in). Of the Ḳatabanian dialect itself, the most noteworthy features are: (a) the prefix of the causative verb-system, and the base of the third person independent and affixed pronouns, are sibilants, as they are in Minaean and Ḥaḍramī, whereas Sabaean has *h* in these forms; (b) the imperfect indicative of verbs has a *b*-prefix, contrasting with absence of the prefix in subjunctive and jussive.

The script is the South Semitic alphabet used throughout the culture area (either directly ancestral to, or at all events closely related to, Ethiopic script), but with a fairly distinctive Ḳatabanian ductus, which in the earlier phases resembles Minaean ductus and in the latter phases evolves its own characteristic style of great beauty. The alphabet contains 29 consonantal symbols, representing the 28 consonant phonemes of Arabic plus an extra unvoiced sibilant phoneme.

(A. F. L. Beeston)

ḲATĀDA b. **DIʿĀMA** b. ḲATĀDA AL-SADŪSĪ, ABU'L-KHAṬṬĀB, a Successor, who was blind from birth and who became proverbial (see, *e.g.*, Ibn Bassām, *Dhakhīra*, i/1, 2) for his prodigious memory and his knowledge about genealogies, lexicography, historical traditions, Ḳur'ānic exegesis and the readings, and *ḥadīth*. Of Bedouin origin, he spent his life in Baṣra, where he is said to have gone about without a guide. He was the pupil of al-Ḥasan al-Baṣrī and Ibn Sīrīn, and also transmitted the Ṣaḥīfa of Djābir b. ʿAbd Allāh (Goldziher, *Muh. Stud.*, ii, 10, Eng. tr. ii, 23). He was considered to be a proponent of the doctrine of free will [see ḲADARIYYA], and it was he who gave their name to the Muʿtazila, but it is also said that he later renounced his Ḳadarī views. His exegetical teaching was written down by Saʿīd b. Bashīr (*Fihrist*, 51), who died in 168/784-5, according to Ibn ʿImād, *Shadharāt*, i, 265-6. He was supposedly born in 60/680, and died of plague at Wāsiṭ in 117/735, but the information on the place and date of his death is contradictory.

(Ch. Pellat)

ḲATĀDA b. **IDRĪS**, usually known as Abū-ʿUzaiyyiz, the ancestor of the *sharīf*s of Mecca from the beginning of the 7th/13th century. He was born in the district of Yanbuʿ, probably soon after 540/1145-6. Yanbuʿ, a fortress, on the Mecca-Medina road, was then dominated by the Ḳatāda family, one of the ʿAlawī families which belonged to the branch of al-Ḥasan b. ʿAlī. At the beginning of the 7th/13th century Mukaththir b. Ḳāsim, *sharīf* and ruler of Mecca, died. He was succeeded by his son Muḥammad, the last *sharīf* from the ruling family of the Hawāshim. Ḳatāda b. Idrīs, who had earlier succeeded in uniting his tribe with the other tribes of the district of Yanbuʿ under his leadership, captured Mecca and killed Muḥammad b. Mukaththir. The last *sharīf*s of the Banū Hāshim had lived in an atmosphere of constant family strife and quarrels. Meanwhile, Ḳatāda had established himself in Yahbuʿ and extended his power southwards in the direction of Mecca, thus preparing his attack on the holy city.

Ḳatāda was a man of political genius. He pursued the idea of founding an independent state in Arabia, recognizing the weakness of both the ʿAbbāsids of Bag͟hdād and the Ayyūbids of Egypt and Syria. Since neither they nor the Zaydīs of Yaman presented any real threat, he endeavoured to capture the whole of the Ḥid͟jāz. After repairing the ruinous walls of Mecca, he captured al-Ṭāʾif and brought the T͟haḳīf tribes under his dominion. Ḳatāda rebuilt the fortress of Yanbuʿ, organized his army and then tried to capture Medina, but Sālim b. Ḳāsim, the *s͟harīf* of Medina, and a member of the Ḥusaynī branch of the ʿAlawī family, thwarted his purpose.

Although Ḳatāda was a S͟hīʿī, he acknowledged the suzerainty of the ʿAbbāsid caliph al-Nāṣir. On the whole, however, his relations with the caliph were frequently strained and sometimes broke into open hostility. Nevertheless, the caliph, who was working to reunite the Muslim world under his leadership, once invited him to visit Bag͟hdād. It is said that Ḳatāda started on his journey to the capital, but returned to his own country when he was met by an embassy of the caliph which had in its train fettered lions. Be this legend or fact, this much is certain, that Ḳatāda embodied his idea of the "splendid isolation of Ḥid͟jāz" in verses which are a typical illustration of his negative attitude towards foreign powers. Probably his encouragement of the Zaydī occupation of Yaman is to be viewed in the same light.

In 609/1212-13, the mother of D͟jalāl al-Dīn, leader of the Assassins, lord of Alamūt and the ally of al-Nāṣir, the ʿAbbāsid caliph, went to Mecca on the pilgrimage. Her visit coincided with the murder of Ḳatāda's cousin. Ḳatāda, who greatly resembled his cousin, was sure that he himself was the intended victim and that the murderer was an Assassin sent against him by the caliph. Greatly angered, he attacked and looted the ʿIrāḳī pilgrims and imposed a heavy fine on them, much of which was paid by the lady of Alamūt.

In his last days Ḳatāda undertook an expedition against Medina. Illness, however, induced him to return to Mecca, where he was killed in 618/1221 by his son Ḥasan, who suspected him of favouring one of his relatives as candidate for the throne. His descendants were ruling *s͟harīf*s in Mecca until 1916, when Ḥusayn converted the sharīfate into a kingdom.

(A. S. Wensinck-[S. Zakkar])

KATAHR, a district of India to the east of Dihlī lying between the Rāmgangā and S͟hāradā rivers and hence the eastern part of the tract which, in the first third of the 18th century, came to be known as Rohilkhanḍ [*q.v.*]; but in Mug͟hal times the name seems to have been applied loosely to the whole of that tract. The name (*Katahr* in the oldest Muslim sources, but *recte Kaṭahr*) is variously derived: W. Crooke, *Tribes and castes of the North West Provinces* and *Oudh*, Calcutta 1896, iii, 176, takes it as the name of the common soil of the tract, "a brownish loam of a thirsty tenacious nature requiring copious rain for irrigation"; others from the Kaṭehriyā Rād͟jpūts of the region, who may derive their name from the characteristic soil, although a local tradition takes it from their putative original home in Kāṭhīāwāṛ.

The Hindū tribes of the region had a reputation for turbulence and intransigence, and there are several accounts of operations against them in the sultanate period: in 652/1254 by Nāṣir al-Dīn Maḥmūd, as a reprisal for the murder of a Muslim officer (Minhād͟j al-Sirād͟j D͟jūzd͟jānī, *Ṭabaḳāt-i Nāṣirī*, s.v. 9th regnal year); by Balban in 665/1267, after reports that the inhabitants were plundering all around them without restraint and that the local *iḳṭāʿdār* could no longer control them—his severe measures are said to have kept the region quiet for the next 30 years (Ḍiyāʾ al-Dīn Baranī, *Taʾrīk͟h-i Fērōz S͟hāhī*, ed. Bib. Ind., 55-9); Baranī (*op. cit.*, 288) includes the whole of Katahr in the regions affected by ʿAlāʾ al-Dīn K͟hald͟jī's revenue reforms (*ca.* 701/1301); in about 779/1377-8 the murder of the governor of Badāʾūn by Rāy Khaṛgū, the chief of the Kaṭahriyā Rād͟jpūts, led to a terrible vengeance by Fērōz b. Rad͟jab ("Fērōz S͟hāh Tug͟hluḳ"), who laid waste the district, slaughtered thousands of Hindūs and enslaved some 23,000 more, and issued an order of regular punitive raids for the next five years, himself hunting regularly at Sambhal, "leaving nothing but the game" (Yaḥyā Sirhindī, *Taʾrīk͟h-i Mubārak S͟hāhī*, 140). Under the weak "Sayyid kings" of Dihlī, especially K͟hiḍr K͟hān and Mubārak S͟hāh [*qq.v.*], Katahr was in practically a continuous state of rebellion (*Taʾrīk͟h-i Mubārak S͟hāhī, passim* after p. 182). Thereafter Katahr seems to have changed hands frequently between the Dihlī sultanate and the S͟harḳī [*q.v.*] sultanate of D͟jawnpur, although it appears seldom in the chronicles. The last recorded rebellion from the region is that of one Ḳanbar Beg, shortly before Humāyūn's death, in 963/1555.

Under Akbar the *sarkār* of Badāʾūn, the principal town in the Katahr region, became part of the *ṣūba* of Dihlī; later the importance of Badāʾūn declined, and under Shāhd͟jahān the chief town of the region was Barelī ("Bareilly"). Awrangzēb later included the more western town of Sambhal in the *sarkār*, thus extending the connotation of "Katahr" to the region now generally known as Rohilkhanḍ. For its later history, see s.v. rohilkhanḍ

KATAK [see orissa].

KATANGA (now Shaba), region in the south-east corner of the modern Republic of Zaïre, formerly Congo (now Kinshasa). Here, between the Congo-Zambesi watershed and the forests of the central Congo basin, the land slopes gently down, hundreds of miles of open bush country, relatively heavily populated, producing corn, rice, sugarcane and other crops. Falls on the Lulaba River cut Katanga off from water transport on the Congo; the

region's main avenues of approach were from Benguela via Bihé on the west, and from Lakes Tanganyika and Nyasa on the east. The principal highway of Islamic penetration in eastern Africa, however, from the coast to Lake Tanganyika, where by 1840 a permanent trading centre had been established at Ujiji, continued thence due east to Maniema and the Luapula valley, where Islam has struck its deepest roots in Zaïre. Only a branch route turned southwards. Tippu Tip, the most outstanding of the so-called "Arabs" from the east coast of Africa, in the Congo, may perhaps for a time, about 1870, have operated in conjunction with Msiri, ruler of Katanga, against the Lunda of Kazembe; but later it was reported that Msiri had plundered one of Tippu Tip's lieutenants. Tippu Tip travelled through Urua, in northeast Katanga, early in his career, but found the area disappointingly sparse in ivory, the main export item, together with slaves, to the east coast, and his attention was finally diverted northwards. For these reasons, the story of Islam in Katanga remains but a minor theme in the general development of Islam in Zaïre.

A state called Garenganze had grown up in the Katanga region under Msiri, a Nyamwezi immigrant. Nyamwezi trade with Katanga may have begun as early as 1800; Msiri's father, Kalasa, had often visited the region to buy copper. Msiri was once able, with the aid of a few guns, to render valuable help to the local Sanga chief, and became his heir. Both the Sanga and the Lamba over whom Msiri also became ruler, had been vassals of neighbouring Kazembe; Msiri successfully beat back an attempt by Kazembe to re-assert his authority. Msiri, strengthening his position as much as possible by encouraging immigration, welcoming refugees, amassing slaves, and building up an armoury, came to rule an area the size of Great Britain, from the Lualaba to Lake Mweru and the Luapula, and from the Luvua to the Congo/Zambesi watershed.

Such a state was attractive to traders, and these came from all quarters, Zanzibar, Uganda, Nyamwezi country, the Zambesi, Lake Nyasa, Angola and the Congo basin. Some of the incoming traders Msiri tempted to stay on, with gifts of land and women. Ivory, salt, slaves, iron and copper were exported. Copper, crosses of which served as currency in the region, was particularly important. The Arabs introduced brassworking at Ujiji, one part of zinc from the coast to two of Katanga copper. Arab influence grew at Bunkeya, Msiri's capital; the "Arabs" had reception days at court, when their master traders presented Msiri with gifts. Msiri depended upon these traders, above all for his arms supply; but he was envious of their wealth and fearful of their power. When in 1886 the first Christian missionary, F. S. Arnot, arrived, Msiri welcomed him, in part as a counterweight to the "Arabs". At Arnot's first interview with Msiri, he was introduced to several "Arab" traders from Zanzibar. The "Arabs" had evidently promulgated infamous stories about the English, to prejudice Msiri against them, but he suspended judgment, remarking that he did not yet know the English while he did know the "Arabs". Arnot visited a camp of "Arab" traders at the capital, where he saw numerous slaves, mostly full-grown men and women. He watched a man being bought for ten yards of calico, and was told that a woman or a young lad might fetch from twelve to sixteen yards. Grown men, untameable and liable to escape, were less valuable. Slave sticks were in use. Slave babies were often killed. Arnot, of the Plymouth Brethren, was followed by other Brethren missionaries. Rivalry grew between the missionaries and the "Arabs": the latter ridiculed reading the Bible from left to right, the material poverty—in accord with strict Brethren principles —of the missionaries, and their failure to supply Msiri with munitions. The extent of Islamic religious influence in Katanga is hard to gauge, but was almost certainly very slight: Muslim written charms were evidently prized for healing; some immigrants from the east recommended that Msiri punish theft by amputating the hand, but he demurred, preferring the death penalty; he did prohibit smoking and snuff. But these are only scraps of evidence, and may not all even reflect Islamic influence.

Until the end of 1891, Msiri steadfastly refused to acknowledge the claim of the Congo Free State of King Leopold of the Belgians, to the territory, and in December of that year he was killed by a State agent. These events happened in relative isolation from the mainstream of Muslim development further north. There, in 1887, Tippu Tip accepted appointment as governor by the Congo Free State, placing his domains nominally under the State. This rapprochement did not last long: in 1892 war between the State and the "Arabs" broke out, and by 1895 the power of the latter was broken, their main leaders dead or fugitives. In Katanga, there was confusion, unchecked "Arab" slave-raiding and famine; Msiri's authority had begun to crumble even before his death, and the State was only very gradually able to impose control. The State introduced, incidentally, a new Islamic element, for some of the State troops were Hausa Muslims.

Following the consolidation of the Congo Free State, later the Belgian Congo, the natural links eastwards of Congolese Muslims were for a time dislocated. The Belgian authorities were generally more suspicious of, and hostile to, Islam than were French and British colonial governments in several other, more Muslim, part of black Africa. Contacts with East Africa recovered, partly as a result of German employment of coastal Muslims as government servants in the interior of German East Africa. In 1932-5, the Ķādirīya *ṭarīķa* was observed spreading among the Muslims of the Congo. The first national Muslim Congress met in Kasongo in March 1964.

ĶATANIYA [see ṢIĶILIYYA].

ĶAṬAR, in the local pronunciation Giṭar, a peninsula of some 4,000 square miles in area which juts out into the Arabian Gulf. It is about 115 miles long and 55 miles broad at its widest part. The discoveries of the Danish archaeological expeditions from 1956 to 1964 show that Ķaṭar had been inhabited since prehistoric times, the earliest object found, a pair of hand-axes, dating from about 4,000 B.C. The earliest Arabic prose source to mention it is the *Kitāb al-masālik wa 'l-mamālik* of Ibn Khurradādhbih, who notes it briefly as one of the stops on the route from Baṣra to ʿUmān; this despite the fact that it is believed to have provided the *nisba* of the Azraķī Khāridjī Ķaṭarī b. al-Fudjāʾa. It is briefly mentioned by al-Hamdānī in a list of Arabian place-names and elsewhere as a halt on a route. Even much later, neither Yāķūt nor Ibn Manẓūr gives significantly more information

on Ḳaṭar. It is mentioned in Umayyad poetry; indeed, Yāḳūt cites a reference from Djarīr. Ibn Ḥawḳal makes an early mention of Ḳaṭarī pirates, and Masʿūdī mentions the waters of Ḳaṭar as a source of pearls.

For such a prominent physical feature, it attracted strangely little notice from European travellers in the Gulf area. Early maps show Ḳaṭar only as a slight bulge on the mainland and the first representation of it as a peninsula is on Arrowsmith's map of 1825. Although by 1825 two ships of the Indian Navy had surveyed this whole area, it was not until comparatively recently that the complete outline of Ḳaṭar was accurately mapped.

Yāḳūt mentions Ḳaṭar as a settlement (*ḳarya*) and Pedro Teixeira at the end of the 16th century calls it "a port of Arabia". Whether or not it was a "settlement" or a "port", much of the history of Ḳaṭar does centre around settlements on or near the sea rather than round a country. It was only under the ruling Āl Thānī dynasty that the various city states were finally united.

In 1766 the Āl Khalīfa clan of the ʿUtūb immigrated from Kuwayt and occupied Zubāra on the western shore of the peninsula. With their arrival begins the modern period in the history of the country and the only one for which we have adequate information. At this time there were already settled in Ḳaṭar the Āl Musallam clan of the Banū Khālid in Ḥuwayla, the Maʿāḍīḍ and other Āl b. ʿAlī in Fuwayriṭ, and in Dawḥa (then called Bidʿ) (cf. above), Suwaydī refugees (Sūdān) from that part of eastern Arabia later called Trucial Oman.

A little later, ʿUtbī kinsmen of the Āl Khalīfa, the Djalāhima, joined them at Zubāra. Dissension arose between them, and the latter removed to Ruways where they took to piracy. Although they were later nearly exterminated by the Āl Khalīfa and their allies, their piracies combined with their feud with the Āl Khalīfa were an important factor in the history of the area.

The occupation of Baṣra by the Persians from 1776-9 brought an influx of merchants to Zubāra and it became for some time the centre of the pearl trade and of trade in general in eastern Arabia. It successfully defended itself against a number of Persian attacks and after the failure of the 1783 expedition, the Āl Khalīfa, together with ʿUtūb from Kuwait, mounted a successful expedition against Baḥrayn and Aḥmad b. Khalīfa became the first ʿUtbī ruler of those islands.

The Djalāhima, by this time at Khawr Ḥassān (now called Khuwayr), began to play a dominant role in Ḳaṭar and, by 1809, under the famous Raḥma b. Djābir, then in alliance with the Wahhābī power, they controlled even Zubāra. Indeed in 1810-11, through the alliance with the Djalāhima, a Wahhābī, ʿAbdallāh b. ʿUfayṣān, governed Ḳaṭīf, Ḳaṭar and Baḥrayn. In 1811 after a successful expedition by Sayyid Saʿīd of Muscat against Zubāra and Khawr Ḥassān, the Wahhābīs withdrew from Baḥrayn and Ḳaṭar and the Āl Khalīfa returned to power. Raḥma withdrew to Dammām and pursued his feud with the Āl Khalīfa from there and from other centres in the Gulf. During all of this time he was careful in his piracies not to attack British ships, and this policy gave him immunity from their reprisals. Indeed, in 1817 he fought successfully against the Ḳawāsim, the pirates of Raʾs al-Khayma and al-Shāriḳa, who so successfully harried the ships of the area, including those of the British.

Meanwhile Bidʿ (later Dawḥa) was destroyed by a British cruiser in 1821 as a reprisal for acts of piracy committed by some of its inhabitants, but by 1823, under the Āl Bū ʿAynayn, was still the only port in the peninsula to possess trading ships. Though still in this period and until 1840 nominally subject to the *Shaykh* of Baḥrayn, in fact, though not openly contested, his suzerainty was not accepted, though for a time Shaykh ʿAbd Allāh did indeed reside in Ḳaṭar.

It is a feature of all of the earlier history of Ḳaṭar that the inhabitants of its city-states would remove or be removed within the area. Many of these migrations are of importance later when they are used as proofs in the kind of territorial disputes which were important to the area after 1918. Thus in 1828 the Āl Bū ʿAynayn were removed after a revolt to Ruways and Fuwayriṭ and the inhabitants of Ḥuwayla were re-settled in Baḥrayn after a revolt in 1835. More important for Ḳaṭar, however, were movements of the Banī Yās from the area of Abū Ẓabī [*q.v.*]. The Banī Yās under Suwaydān, by their maritime depredations from Dawḥa, brought the then ruler of Abū Ẓabī close to war with Baḥrayn. This raiding ceased when Suwaydān returned to Abū Ẓabī in 1828, but the Banī Yās had fines for piracy laid on them in 1835 and many emigrated to Khawr al-ʿUdayd to avoid payment of these, leaving only in 1878. In this period this group was the cause of much friction between Ḳaṭar and Abū Ẓabī. The piracies of one of these emigrants, Djāsim b. Djābir, continued despite energetic attempts to apprehend him. In 1841, however, his ship was seized and burnt at Dawḥa, although Djāsim himself escaped.

The Ḳaṭarīs were also involved to some extent in the hostilities of 1840-9 between the rival Baḥraynī *shaykh*s, ʿAbd Allāh and Muḥammad. The Ḳaṭarīs went to the aid of Muḥammad, who had seized Murayr and Fuwayriṭ in Ḳaṭar, when he used them as a base for the successful attack on Muḥarraḳ in Baḥrayn, which established him firmly there in 1843. But for the peace agreed in 1851 between the Shaykh of Baḥrayn and the Suʿūdī Amīr, Fayṣal b. Turkī would have occupied Dawḥa, Wakra and Fuwayriṭ. He was in the position to do so and it seems sure that their inhabitants would have preferred this to the Baḥraynī connection. Certainly, after this time the *shaykh* of Baḥrayn paid a yearly tax to the Suʿūdīs to ensure the safety of Ḳaṭar from attacks by tribes within their sphere of control. However, late in 1867 Baḥrayn and Abū Ẓabī launched a joint attack on Dawḥa and Wakra, totally destroying them and removing their population. From then to the present day, relations between Ḳaṭar on the one hand and Baḥrayn and Abū Ẓabī on the other have remained uneasy.

One of those who had fled from Dawḥa was Muḥammad b. Thānī of the Āl Thānī of the Maʿāḍīḍ. He was induced, because of his great influence, to sign an agreement in September 1868 with the British, by the terms of which he was virtually established in Dawḥa. Although this was in effect the beginning of the rule of the Āl Thānī, little is known of them before this date other than that a kinsman, ʿĪsā b. Ṭarīf, had emigrated from Ḳays Island to Dawḥa in 1843 and was killed in battle four years later near Fuwayriṭ.

In mid-1871 a deputation was sent to Dawḥa by the Turks, who had recently occupied Ḳaṭīf, and Shaykh Djāsim (perhaps better Ḳāsim) b. Muḥammad of the Āl Thānī was persuaded to accept the Turkish flag. Despite this Bedouin and Wahhābī forces

driven out of al-Ḥasā began to use Ḳaṭar as a base for military harassment of the Ottomans. The Turks as a result landed troops and guns at Dawḥa in 1872 and stationed themselves nearby; but the Āl Thānī nevertheless remained the paramount *shaykhs*: in 1876 Djāsim was appointed *ḳāʾimmaḳām* of Ḳaṭar, and in 1879, after the death of his father, governor of Dawḥa. Relations were no longer good, however. By 1890 Djāsim had attempted to resign his responsibilities and there were outbreaks of hostilities between the big tribal alliances.

In 1878, however, Djāsim was able to evict the Naʿīm from Zubāra, which they had settled some years earlier, their repeated piracies having provided adequate pretext. This action had far-reaching repercussions, since the Naʿīm were the last tribal group in Ḳaṭar to accept the writ of Baḥrayn consistently, and this acceptance of their suzerainty gave substance to Baḥraynī claims to rule all or part of Ḳaṭar. Zubāra remained an uninhabited place long after this engagement. This event caught the imagination of the Ḳaṭarīs and they have much oral literature on this theme and on the theme of the hostilities between Ḳaṭar and Abū Ẓabī in the years immediately following.

The Banī Yās had left ʿUdayd in 1878; then in 1880 the Ḳubaysāt removed to Abū Ẓabī, and the consequent loss of Ḳaṭarī influence in ʿUdayd caused further bitterness in Djāsim. The next ten years were marked by some maritime raids but more by raids on land between these two principals. The raids increased in scale and one of the engagements, a raid against Dawḥa in 1888, ended in the death of Shaykh Djāsim's son ʿAlī.

Relations with the Turks were also worsening, and in early 1893 Djāsim refused a summons from the visiting *wālī* of Baṣra. The Arabs were provoked into an engagement to the north of Dawḥa. In this, however, the Turks were forced to withdraw in poor order, although their losses were much lighter than those of the Arabs. Peace was soon restored, and a later rising in 1898 seems to have been a small affair in comparison. The jurisdiction of the Turks still extended not much beyond Dawḥa.

In 1895 two *shaykhs* of the Āl b. ʿAlī, Sulṭān b. Salāmah and Nāṣir b. Mubārak, made an attempt to seize Baḥrayn. These *shaykhs* had removed from Baḥrayn and gathered a sizeable armada in the north of Ḳaṭar. They had the support of the local Ottoman *mudīr* and also apparently of Shaykh Djāsim, though the latter claimed that he was not concerned. Peace was made only after a large number of ships had been seized or destroyed by the British.

Shaykh Djāsim died in 1913, shortly after the conclusion of the convention by which Turkey renounced any claims to Ḳaṭar. Then during 1916 Britain's relations with Ḳaṭar were regulated by a treaty on the same lines as those with Baḥrayn and Trucial Oman. Some of its clauses, however, were not put into effect at that time; and no resident Political Agent was appointed, responsibility falling to the Political Agent in Baḥrayn.

The status of Zubāra would still seem to have been a matter of dispute. Shaykh ʿAbd Allāh (1913-49) occupied it in 1937, and though this was not accepted by Baḥrayn, the matter has been left largely in abeyance. In 1949 Saudi Arabia raised a claim to a strip of land in South Ḳaṭar, but although these claims were discussed in 1952 they were not pursued. Boundary disputes in Eastern Arabia have assumed a different complexion since the discovery of oil in the area. Oil was discovered in Ḳaṭar in 1940, the discovery well having an estimated production capacity of 5,000 barrels a day. War shortages, however, inhibited further development. By 1969 output had however reached nearly 17 m. tons and there has been considerable development, especially off-shore, since 1969.

Meanwhile the population of Ḳaṭar, although it has increased greatly, is still relatively small (about 150,000 in 1970) and concentrated largely around the capital Dawḥa. The British role in Ḳaṭar after the end of hostilities in 1945 was related increasingly to specialist and technical aspects of external and defence affairs and the country has been since September 1971 an independent Arab country.

(T. M. Johnstone)

ḲAṬARĪ B. AL-FUDJĀʾA, the last chief of the Azraḳī Kharidjīs [see AZĀRIḲA], celebrated both as poet and as orator. He belonged to a clan of the Tamīm (the tribe which furnished one of the most noteworthy contingents to these rebels), the Banū Kābiya b. Ḥurḳūṣ b. Māzin (Ibn al-Kalbī-Caskel, Tab. 82). The name of his father, al-Fudjāʾa, is said to have been a surname and his real name was Djaʿwana. Like other Arab chiefs, al-Ḳaṭarī had a double *kunya* (cf. Goldziher, *Muh. Studien*, i, 267, Eng. tr. i, 242): Abū Muḥammad in peace and Abū Maʿāma in war (Djāḥiẓ, *Bayān*, ed. Hārūn, i, 342, iii, 264). Of his youth we only know that he took part under the command of ʿAbd al-Raḥmān b. Samura, along with several other chiefs, among whom was al-Muhallab b. Abī Ṣufra al-Azdī, destined later to become his bitter enemy, at the submission of Sidjistān in 42/662 (al-Balādhurī, *Futūḥ*, 396; Ibn ʿAbd al-Barr, *al-Istīʿāb*, Ḥaydarābād 1318, 405; Ibn Ḥadjar, *Iṣāba*, Cairo 1325, iv, 161). He must have reached a fairly mature age when, in 69/689,

he was acclaimed "Caliph" of the Azraḳīs when the latter, defeated by al-Muhallab and his lieutenants, were passing through a very serious crisis. Ḳaṭarī, endowed with tremendous energy and indifferent to danger, was able to arouse the enthusiasm of his partisans, and after leading back the remnants of the army into the mountains of Kirmān, reorganised them; he then went down again into ʿIrāḳ, occupied Ahwāz and threatened Baṣra. Kept for a long time in check by al-Muhallab, he nevertheless succeeded in maintaining his position on the left bank of the Dudjayl even after ʿIrāḳ, as a result of the defeat of Muṣʿab b. al-Zubayr at Maskin (72/691), had fallen into the hands of ʿAbd al-Malik. Finally al-Ḥadjdjādj b. Yūsuf, appointed governor of ʿIrāḳ, decided to reappoint al-Muhallab to the command against the Azraḳīs, in which he had been replaced without success by other chiefs. Al-Muhallab soon drove the rebels across the Dudjayl and assuming the offensive, pursued them into the very centre of their power, Kirmān. Ḳaṭarī nevertheless was able to hold out for a long time in his lines (it is to this period that a silver coin with a legend in Pahlavi and Arabic of the year 75/694 struck in the name of Ḳaṭarī as *Amīr al-Muʾminīn*, refers [see *ZDMG*, xii (1858), 52, no. 303]). The dissensions that broke out within the Azraḳī army between Arabs and *Mawālī* resulted in a split: Ḳaṭarī had to leave the town of Djīruft which was the Azraḳī headquarters and take refuge along with the Arabs in Ṭabaristān, while the *Mawālī* continued to hold Djīruft under the command of their chief, ʿAbd Rabb or ʿAbd Rabbihi (there are two individuals of this name among the *Mawālī*, distinguished by the epithets *al-Kabīr* and *al-Ṣaghīr*, and the sources give the rank of commander sometimes to one and sometimes to the other, or even distinguish two groups of the *Mawālī* which separated successively from al-Ḳaṭarī and were led by ʿAbd Rabbihi the Great and the Less respectively). This division proved fatal, for al-Muhallab had no difficulty in routing the *Mawālī* and killing their chief; al-Ḥadjdjādj sent the Kalbī warrior Sufyān b. al-Abrad against Ḳaṭarī: or rather the latter (according to a tradition recorded by al-Yaʿḳūbī) as governor of Rayy received the appeal which the *iṣpahbādh* [*q.v.*] addressed to him on behalf of the people of Ṭabaristān who were exasperated by the rigid application of the *djizya* by Ḳaṭarī. The Azraḳīs, surprised by Sufyān's troops in a defile in the mountains, suffered a decisive defeat. Ḳaṭarī, who fell under his horse and was abandoned by his followers, was discovered and killed by a local inhabitant. His head was cut off and borne in triumph to Kūfa and then to Damascus to be presented to the caliph. The remnants of the Azraḳīs under ʿAbīdā b. Hilāl al-Yashkurī fled to Sadhawwar, a stronghold near Kūmis (Yāḳūt, iii, 62) where they sustained a long siege from Sufyān; having exhausted their supplies, they made a desperate sortie and were wiped out. The chronology of these events is far from certain: the sources which say that Ḳaṭarī was in command for 13 or even 20 years are of no value. According to Wellhausen (see *Bibl.*), the election of Ḳaṭarī as caliph probably took place at the end of 69 A.H. and his death in 78 or 79.

Ḳaṭarī b. al-Fudjāʾa represents in striking fashion the type of Khāridjī intransigeant and also that of Arab *sayyid*, half-cavalier and half-brigand. Like the other Azraḳīs, as a result of his fanatical zeal, he preached and practised *istiʿrāḍ* [*q.v.*] and declared the *ḳaʿada* or quietists to be infidels. On the other hand, he was proud of his Arab blood and of his Bedouin character.

Like several other illustrious Khāridjīs, he had a real talent as orator and poet. One of his alleged orations is recorded by Djāḥiz, *Bayān*, ii, 126-9; *ʿIḳd*[1], ii, 195-6, *Fihrist*, 125, but R. Blachère (*Hist. de la Lit. arabe*, iii, 734) thinks that it might have been written in the 3rd/9th century. A few pieces in which he celebrates his wife Umm Ḥākim, who was also a convinced and brave Khāridjī, have been preserved. But amongst the most famous of his poems is the fragment given in the *Ḥamāsa* of Abū Tammām (i, 333, see also i, 44, 286), and often cited with numerous variants. His poems of a politico-religious character are remarkable for the elevated style and a heroic contempt for death and place their author in the first rank of Khāridjī poets.

KĀTH, the ancient capital of Khwārazm [*q.v.*], situated on the east bank of the main channel of the Amū Daryā or Oxus a short distance from modern Khīwa. According to Yāḳūt, *Buldān*, iv, 222, Kāth meant in Khwārazmian a wall or rampart within the steppe, even if it enclosed no buildings, but there is nothing in what we know of Khwārazmian to confirm this; it is conceivable that there is some connection with Sogdian *kath*, *kanth*, "town", though this is wholly conjectural. The site of Kāth was affected by changes in the channels of the river, and was accordingly moved at various times.

Little is known of Kāth in the pre-Islamic period. Markwart conjectured that in the early 5th century A.D. Bahrām Gūr's brother Narseh may have been established in Kāth as *marzbān* or warden of the northeastern Iranian territories newly conquered from the Turkish Ḳaghan (*A catalogue of the provincial capitals of Ērānshahr*, ed. G. Messina, Rome 1931, 44-5). It became the capital of the Afrīghid dynasty of Khwārazm-Shāhs, and at the time of Ḳutayba b. Muslim's invasion of Khwārazm in 93/712 it is described, under the name of al-Fīl, as one of the three cities of that region (Balādhurī, *Futūḥ*, 423; Ṭabarī, ii, 1237-8). As well as being the centre of the old Khwārazmian culture—a culture impaired by the destructions of the Arabs—it was also, according to an 8th-century *Notitia episcopatum*, the seat of a bishopric of the Christian church, χουάλης; this bishopric was probably Orthodox or Melkite, and had links with the Khazar lands on the lower Volga (see Tolstov, *Auf den Spuren der altchoresmischen Kultur*, 246-7, 359). The caliphal envoy Aḥmad b. Faḍlān came to the Khwārazm-Shāh's court at Kāth in 309/921-2 en route for Gurgāndj and the journey across the steppes to Bulghār (A. Z. V. Togan, *Ibn Faḍlāns Reisebericht*, Leipzig 1939, §§ 7-8).

It is to the geographers of the 4th/10th century that we owe the most detailed descriptions of Kāth at the time of its florescence, in particular to Iṣṭakhrī, Ibn Ḥawḳal, Maḳdisī and the *Ḥudūd al-ʿālam*.

Maḳdisī, 287-8, calls it Shahristān, *i.e.*, the capital of the province, and describes its splendid bazaars and Friday mosque and its community of scholars, whilst commenting unfavourably on the filthiness of its streets, which were probably often waterlogged because of the numerous canals or *ariḳs*. The city had been dominated by the ancient citadel, with its triple enceinte and palaces, of the Afrīghids called Fīl or Fīr (the latter form in Bīrūnī), but this fortress and the older city itself were gradually undermined by the river waters and in the early 4th/10th century had to be abandoned. The vestiges were, however, still visible in 384/994 to Bīrūnī [*q.v.*], himself a native of the *bīrūn* or environs of Kāth (*al-Āthār al-bāḳiya*, ed. Sachau, 35). A new town had therefore to be built further eastwards, away from the encroaching river. The *Ḥudūd al-ʿālam* (completed 372/982), tr. 121, cf. 370-1, spells the city's name as Kāzh and calls it "the gate of the Turkistān of the Ghūz and the emporium of the Turks, Turkistān, Transoxania and the Khazars". The author mentions amongst its products textiles and mailed or quilted coats, and names one of its exports as snow; its people, he says, are celebrated for their warlike qualities and their zeal as *ghāzī*s or fighters for the faith against the pagan Turks.

The end of Kāth's great days as the political centre of Khwārazm came in 385/995 when the Afrīghids were overthrown by the Maʾmūnid amīrs of Gurgāndj [*q.v.*], long the political and commercial rival of Kāth; Kāth was now eclipsed and sank into a subordinate position (on these events, see KHWĀRAZM and KHWĀRAZM-SHĀHS). Ibn Baṭṭūṭa passed through al-Kāt, as he calls it, in 732/1332-3, and describes it as a small place and as being the only settlement on the road from the city of Khwārazm (sc. Kunya-Urgenč, older Gurgāndj) to Bukhārā (*Riḥla*, iii, 20, tr. Gibb, iii, 549-50). During the early 8th/14th century, Kāth and Khīwa, one day's journey from it, fell within the Čaghatayid Khānate; and in 773/1372 Kāth was devastated by Tīmūr during his warfare with Toḳtamīsh, but subsequently had its walls restored by him. By the 11th/17th century it was on a dry canal, hence the ʿArabshāhid Khān of Khīwa, Anūsha b. Abī 'l-Ghāzī (1074-98/1663-87) built a new Kāth on the western side of the Oxus. The ruins of old Kāth became known as Shaykh ʿAbbās Walī, after a local saint, and are now known as Shabbaz (Tolstov, *Auf den Spuren*, 83); a modern village and fort occupy part of the ancient site.

Sachau, *Zur Geschichte und Chronologie von Khwârazm*, in *SBWAW*, lxxiii (1873), 489 ff.; Barthold, *Turkestan down to the Mongol invasion*, 144-6, 185, 275 ff.; and S. P. Tolstov, *Auf den Spuren der altchoresmischen Kultur*, Berlin 1953, 246-7, 253 ff. The accounts of the Islamic geographers are resumed in Le Strange, *The lands of the Eastern Caliphate*, 446-8. (C. E. Bosworth)

ḲĀṬHIYĀWĀṚ [see DJUNAGAṚH].

KAʿTI, MAḤMŪD B. AL-ḤĀDJDJ AL-MUTAWAKKIL, Soninke scholar and *ḳāḍī* who died at Arkiya near Tinbuktū on 1 Muḥarram 1002/27 September 1593. His date of birth is not known, though he is said to have been born during the reign of Askia al-Ḥādjdj Muḥammad I (898-934/1493-1528). The few details we have of his life appear in scattered references in the *Taʾrīkh al-fattāsh* and al-Saʿdī's *Taʾrīkh al-Sūdān*. Among his teachers was Aḥmad (b. Muḥammad) b. Saʿīd (d. 976/1568), who was active in Tinbuktū from 960/1553. He received favours from Askia Dāwūd (reigned 956-90/1549-82) and married one of his daughters. In 996/1588 we hear of him as *ḳāḍī* of Tindirma, a town on the Niger south of Lake Fati.

Maḥmūd Kaʿti wrote a work of history concerned with Songhay (and perhaps also the earlier states of the Western Sūdān). His historical interests were inherited by his sons, Ismāʿīl (also a *ḳāḍī*), Yūsuf and Muḥammad al-Amīn, who appear to have made some written notes, perhaps adding to their father's work. Maḥmūd's son-in-law, al-Mukhtār Gombele (? - text *k-n-b-l*), also shared these interests and passed them on to an unnamed son who drew on the Kaʿti family's materials and other sources written and oral in compiling the *Taʾrīkh al-fattāsh* some time after 1075/1654-5.

The *Taʾrīkh al-fattāsh* may have been begun by an earlier Kaʿti (also called Maḥmūd) in 925/1519, but Levtzion has argued that the attempt to link the work with the reign of Askia al-Ḥadjdj Muḥammad I arises from the 19th-century manipulation of the text by (or at the behest of) Aḥmadu Lobbo [*q.v.*]. The historicity of the earlier Maḥmūd Kaʿti and the precise history of the text itself remain problems as yet unsolved.

Bibliography: The *Taʾrīkh al-fattāsh* was published with a French translation by O. Houdas and M. Delafosse, Paris 1913-4 (Publ. de l'École des Langues Orientales Vivantes, Ve série, vol. X). Problems of the work's authorship and textual history have been studied by J. Brun, *Notes sur le Tarikh el-Fettach*, in *Anthropos*, ix (1914), 590-6; J. O. Hunwick, *Studies in the Taʾrīkh al-Fattāsh: (1) Its authors and textual history* in *Research Bulletin* (Centre of Arabic Documentation, Ibadan) v (1969), 57-65; N. Levtzion, *A seventeenth-century chronicle by Ibn al-Mukhtār: a critical study of the Taʾrīkh al-fattāsh*, in *BSOAS*, xxxiv (1971), 571-93; idem, *Maḥmūd Kaʿtī fut-il l'auteur du Taʾrīkh al-Fattāsh?*, dans *Bull. IFAN*, xxxiii/4 (1971), 665-74. (J. O. Hunwick)

ḲAṬĪʿA, pl. *ḳaṭāʾiʿ*, a Muslim administrative term designating, on the one hand, those concessions made to private individuals on state lands in the first centuries of the Hidjra (see ḌAYʿA), and, on the other hand, the fixed sum of a tax or tribute, in contradistinction to taxation by proportional method or some variable means. The verb *ḳaṭaʿa* is also used to mean "to impose", normally followed by *ḳaṭīʿatan*. (C. Cahen)

KĀTIB (A.) pl. *kuttāb*, secretary, a term which was used in the Arab-Islamic world for every person whose rôle or function consisted of writing or drafting official letters or administrative documents. In the Middle Ages this term denoted neither a scribe in the literary sense of the word nor a copyist, but it could be applied to private secretaries as well as to the employees of the administrative service. It can denote merely a "book-keeper" as well as the chief clerk or a Secretary of State, directly responsible to the sovereign or to his vizier. The use of *kātib* is therefore essentially allied to the institution of the *dīwān* [*q.v.*], which mainly derives from the administrative traditions of the Sasanid and Byzantine empires.

i. In The Caliphate

There were probably already secretaries in Arabia at the time of the Prophet. A "merchant republic" could not do without its accountants, and the mention of "documents" in the Ḳurʾān confirms that writing was used. The recension of the Ḳurʾānic text could not have been effected without the help of men capa-

ble of writing down the message conveyed by the Prophet. This explains why the lists of *kuttāb* which have been handed down to us generally begin by referring to the secretaries of the Prophet. Finally, the lists of fighting men with the right to an allowance, which were instituted from the reign of Caliph ʿUmar, could have been drawn up only by secretaries.

However, it was only after the first conquests and after the establishment of the capital at Damascus that administrative services, chancery and finances developed, as much in the capital itself as in the provinces controlled by the central authority. It is known that in the first years of the Umayyad caliphate they continued to use the language of the conquered country; Greek in Syria and Pahlavi in ʿIrāḳ and Iran. This implies that the secretaries working in these offices, whether converted to Islam or not, were autochthonous. Moreover, the rôle played by the Christian administrators in Damascus at the time of the first Umayyad caliphs is well known; Sardjūn, the father of John of Damascus, was in all probability chief of the Treasury in the reign of ʿAbd al-Malik.

When the *dīwān*s were arabicised at the time of the caliph ʿAbd al-Malik, the secretaries were still recruited from the local population, among whom the Muslims were becoming more and more numerous. This Arabicising and Islamicising movement, far from pushing the indigenous peoples out of public service, confirmed their position. The development of bureaucracy in its different aspects compelled the Umayyad rulers and then the ʿAbbāsids to use the *mawālī*. They most certainly had an excellent knowledge of Arabic, but had picked up from their forefathers a whole administrative tradition connected in particular with calculating the taxes due from the different types of land, irrigated or unirrigated. The land tax [see KHARĀDJ] instituted by Muslim law seems really to have been very closely inspired by the previous financial system and the administrative practices adapted by the nascent Muslim state were also inherited from the states which it had supplanted.

Only when a scribe made a career on account of other qualities and capabilities did his functions begin to gain in an importance which was independent of his person. Such a *kātib* was, *e.g.* Ziyād b. Abīhi. His high intelligence and great talent for organisation had drawn people's attention to him as scribe and registrar (Ṭabarī, Ī, 2465). When later he made himself responsible for the security and the government of ʿIrāḳ, he introduced there, with the help of a group of *kuttāb* whom he himself taught and controlled (Djahshiyārī, *Wuzarā*ʾ Cairo 1357/1938, 22), a system of administration which was considered exemplary. As in Sasanid times, the rank and position of the secretaries begin to be marked by certain privileges, and discernible in a certain standard of dress, residence and food and also in social intercourse. This improved situation, however, was mostly acquired through the relationship of dependency. The *kātib* had to submit himself to his master and comply with his moods. A beautiful hand, a faultless orthography and a correct text after dictation were postulated. In accuracy, offences against the language, errors in writing or understanding might result in loss of position (J. Latz, *Das Buch der Wezire und Staatssekretäre von Ibn ʿAbdūs al-Ğahšiyārī, Anfänge und Umaiyadenzeit*, Bonn 1958, 38-46). The scribe as such played a subordinate rôle.

In reality, little is known of the secretaries who were the direct assistants of the Umayyad caliphs. During the Umayyad period the caliphs, who had no viziers in their employ, administered the central services directly by means of secretaries of state. Certain of these had the privilege of presenting the letters to the sovereign and of thus playing a political rôle. Of these the one about whom most is recorded is the *mawlā* Sālim, the secretary of the caliph Hishām [*q.v.*], to whom is attributed a treatise about *siyāsa*, which is probably the oldest one of its kind written in Arabic and proves the strength of the Iranian political traditions. But the personal secretary of the last caliph, Marwān II [*q.v.*], called ʿAbd al-Ḥamīd [*q.v.*], is equally well-known for his literary activity and is thought to have been one of the founders of Arabic prose.

Out of this situation two types of clerks and secretaries began to develop, according to function, talent and character: on the one hand there was the secretary who, in his quality of expert official and linguist, gave the written documents the form as required by the orders received; on the other hand there was the secretary who, on top of that, exerted on his own account an influence on the contents, being his master's adviser and right hand. While the latter was preparing the way for the functions of the later vizier, the former became the main representative of literary culture (*adab*). Already during the period of the first ʿAbbāsids this public secretary was considered the *adīb* par excellence. The undeniably subtle sense of linguistic expression and its nuances, already natural to the Arabs, had found a vast field of activity in the governmental and administrative correspondence, continuously increasing with the growing expansion of the chancellery's activities within a complex system of government. Official documents were increasingly often judged by the elegance of the wording and the allusions and references hidden behind this. Peculiar distinction was thus imparted to the writings because they presented instructions, enactments, orders or notices in a form which aroused surprise and admiration in the receiver. It is evident that specialists in this branch were called upon, and also that the *kātib* needed the qualities not only of a diplomatic stylist but also of an encyclopaedist in order to cope with these and similar requirements. It was essential for him to possess what was later formulated and commented upon by the well-known critic, vizier and head of a chancellery Ḍiyāʾ al-Dīn Ibn al-Athīr (d. 637/1239) [*q.v.*] in eight concise phrases at the beginning of his *al-Mathal al-sāʾir* (2nd *faṣl*): 1. a thorough knowledge of the *ʿarabiyya*, its grammar and 2. its vocabulary; 3. a familiarity with the proverbs, the accounts of the *Ayyām* and similar stories; 4. wide reading in all branches of prose and poetry; 5. sound knowledge of the theory of state and administration; 6. absolute familiarity with the Ḳurʾān and 7. the traditions going back to the Prophet; 8. command of prosody and poetics (see G. E. von Grunebaum, *Der Islam im Mittelalter*, Zürich-Stuttgart 1963, 323 ff.).

In the ʿAbbāsid era, when the seat of central administration had been moved to ʿIrāḳ, the secretaries of Iranian origin undeniably played an ever more important rôle. The typical example of these Iranian *mawālī* who, according to certain accounts, thronged the courts of the first ʿAbbāsid caliphs, was the famous Ibn al-Muḳaffaʿ [*q.v.*]. He did not have a position in the central administration, but at the caliph's wish drew up a memorandum in which he showed his

perfect knowledge of the problems of government which prevailed at that time of change. He also composed a treatise for the courtiers on the art of pleasing the sovereign, a treatise directly inspired by Iranian or Indo-Iranian literature and one which highlighted the personal nature of relations existing at that time between the secretaries and the sovereign.

If in the ʿAbbāsid era (as indeed already in the Umayyad one) the *kuttāb* were for the most part non-Arab, they did not form a closed corps. The *kātib* needed a solid training as much in the art of letter-writing as in the world of finance. At an early stage, families of *kuttāb* began to arise, although it was not necessary to be the son of a *kātib* to practise this profession. Thanks to their own intelligence and aptitude, sons of merchants and land-owners appeared as directors of important services in central administration and even as viziers. Yet the *kuttāb* in the 3rd/9th and 4th/10th centuries had a class-consciousness which could be seen in their costume (the gown called a *durrāʿa*) and also in a certain intellectual orientation. Al-Djāḥiẓ, in particular, in a famous *risāla* stigmatizes the arrogance of secretaries and their sympathies towards Iranian traditions; he even accuses them of lukewarmness towards Islam. In this direction the secretaries, in spite of the obscurity surrounding the question, were certainly supporters of the *shuʿūbiyya* movement [*q.v.*]. Brought up on Iranian literature and admirers of the Muʿtazilī thinkers, they were apt to consider that their culture did not need the Islamic "leaven" in order to develop, and ought, on the contrary to be inspired by ancient (notably Persian) models.

Despite this tendency to restrict the influence of the religious message of Islam, they were none the less faithful servants of the caliphate. It seems that no real accusations of treason could be brought against the famous Barmakīs [see BARĀMIKA]; they were guilty only of having too great authority and of having practised a policy of conciliation with regard to certain opposition factions, which soon the caliph thought would be dangerous. But from the end of the 3rd-4th century onwards, the *kuttāb* had financial responsibilities which grew as treasury difficulties were increasing for the caliphs. At the same time they often belonged more or less secretly to the Shīʿī movement which used them to control the caliphate. Their loyalty was not as great as it was before, state secretaries of Christian religion or origin being excepted.

Nevertheless they played a large part at the end of the 3rd/4th century in working out the formula of government by the caliph which was then put into practice, but not without many risks, and which could never be finally worked out in detail. If the *kuttāb* of Shīʿī views were trying to diminish the might of the caliph with the intention of seizing power for themselves and disposing of the resources of the treasury, the others were striving to strengthen the authority of the caliph, while at the same time subjecting it to the control of the chiefs of the departments.

In the era of the great *amīrs*, the *kuttāb* were eclipsed by the military chiefs who virtually laid hands on the government. They were no less indispensable to the running of business and to the administration of finance, which demanded technical knowledge, than to the drawing up of official documents such as letters. In the epistolary field, where in that time there was the most excessive affectation of mannerism, the secretaries drew up documents which were useful propaganda instruments. There are thus preserved different collections of official correspondence which appeared to contemporaries as examples of *balāgha* and are often precious documents for historians. The most famous is one left by the Sabian secretary Ibrāhīm al-Ṣābiʾ [*q.v.*], and see also INSHĀʾ. But there were also among the secretaries genuine specialists in financial affairs, whose merits were often compared with those of the "drafters of documents" (see in particular, al-Tawḥīdī, *Kitāb al-Imtāʿ*, i, 96-7).

The rôle of secretaries in Baghdād in the Saldjūḳ period is not very clear. What at least is known is that the central services were, for the early part, under the control of the sultans, just in the same way as it was before, during the Buwayhid period. But the caliph had in his service his own team, more or less important, of secretaries, as in the Buwayhid period. These secretaries were always predominantly Iranian in origin, yet in the period of the Saldjūḳs the function of the *kuttāb* tended to merge with that of the *ʿulamāʾ* insofar as all officials of the state were formed in the same establishments, the *madrasas*. The taste of the former *kuttāb* for Iranian literature and the sympathies of the secretaries in the Buwayhid period for Muʿtazilī thought faded away and from the 5th/11th century onwards, the secretaries, confronted with foreign elements of Turkish origin, belonged to the same social sphere as the men of religion but had slightly different preoccupations. During this period, the *ḳāḍīs* came to fulfil functions previously reserved for the *kuttāb*, to become involved in governmental affairs and to draw up chancery documents. At the time of the Mamlūḳs, this tendency to unify the two spheres became much more accentuated; secretaries and men of religion constituted what were called "the men wearing turbans".

There is an abundance of literature referring to the secretaries, and this is of three distinctive types: the didactic treatises on the training required for secretaries; the collections of anecdotes relating to secretaries; and the polemical treatises. It is clear that in certain works, these three types could exist together.

The didactic treatises are the most important. The oldest is probably the *Risāla ilā 'l-kuttāb* of ʿAbd al-Ḥamīd [*q.v.*]. Later came *al-Risāla al-ʿadhrāʾ*, attributed to Ibrāhīm b. Muḥammad al-Shaybānī and written in the middle of the 3rd/4th century (published by. M. Kurd ʿAlī, *Rasāʾil al-bulāghā*), the *Kitāb al-Kuttāb wa-ṣifat al-dawāt wa'l-ḳalam*, composed in the same period by ʿAbd Allāh al-Baghdādī (see D. Sourdel, *Le "Livre des Secrétaires de ʿAbdallāh al-Bagdādī"*, in *BEO*, xiv (1952-4), 128-52) and the *Adab al-kātib* of Ibn Ḳutayba [*q.v.*], which, although it contains solely philological advice, has a very instructive introduction (G. Lecomte, *L'Introduction du "Kitāb adab al-kātib" d'Ibn Qutayba*, in *Mélanges Louis Massignon*, iii, Damascus 1957, 45-64). As for the *Kitāb al-Kharādj wa-ṣināʿat al-kitāb* of Ḳudāma b. Djaʿfar [*q.v.*], this is a good work which deals with the various technical questions, a knowledge of which was essential for the secretaries. The different treatises on the land-tax and the first geographical works were also intended for secretaries. The *Adab al-kuttāb* of al-Ṣūlī (d. 335/946), edited in Cairo in 1341/1923, specially teaches calligraphy and the formulae of protocol; the *Kitāb al-kuttāb* of Ibn Durustawayh (d. 346/957), edited in Beirut in 1927, deals only with orthography and calligraphy whilst the *Risāla fī ʿilm al-Kuttāb* of Abū

Ḥayyān al-Tawḥīdī [*q.v.*] is equally concerned with calligraphy.

Among the collections of anecdotes, besides the *Kitāb al-Wuzarā' wa'l-kuttāb* of al-Djahshiyārī [*q.v.*], edited in Cairo in 1357/1938, the *I'tāb al-kuttāb* of Ibn al-Abbār (d. 688/1289), edited in Damascus in 1961, deals with circumstances in which the secretaries of different periods were out of favour. One polemic treatise against secretaries was written by al-Djāḥiẓ (see C. Pellat, *Une charge contre les secrétaires d'État attribuée à Ǧāḥiẓ*, in *Hespéris* (1956), 29-50.

Finally, in a later period encyclopaedic works appeared, intended in the first place for chancery secretaries. The model is the famous *Ṣubḥ al-a'shā fī ṣinā'at al-inshā'* of al-Ḳalḳashandī (d. 821/1418) [*q.v.*].

ii. In Persia.

From the fall of the Īl-Khāns to the end of the Ṣafawids.

A characteristic change of the *kātib*'s position, already noticeable under the Īl-Khāns, took place in the successor states of Mongol Persia. The Mongolian and Turkish terms remained to some extent the same as before, although not necessarily with the same meaning. New terms were of course also introduced, partly for institutions that continued as such or were slightly modified. Fluctuating usage, in which obsolete and current expressions were used simultaneously, makes understanding of the technical terminology difficult. It goes without saying that here only the most important outlines can be sketched of a development which has not yet been studied sufficiently.

The great number of secretaries in the Djalā'irid administration should be related to two different facts: the tripartite division of the administration into a military, a civilian and a religious section on the one hand, and the specific ethnic composition of the army, most of the soldiers being Turks or Mongols, on the other. Following the Īl-Khānid tradition, there thus existed, especially in the military administration, a class of secretaries especially knowledgeable in Turkish or Mongolian. It was their task to translate into these two languages original documents probably written in Persian, and in 'Irāḳ also in Arabic. Though counted among the *kuttāb*, they were called by the Turkish term *bitikči*, probably to distinguish them from the Persian-speaking secretaries. The most important secretary in the military administration was called *bitikči-yi aḥkām-i mughulī* or *kātib-i mughulī-niwīs*. But the continuance of Īl-Khānid usage brought about the fact that even the secretary of the governmental financial administration, who served under the *mustawfī al-mamālik* or state treasurer, was counted among the *bitikčīyān*, with the title of *ūlūgh bitikči-yi mamālik*. However, the local financial secretaries who served under him did not belong to the *bitikčiyān*. It is still dubious whether the last-mentioned were in fact of Turkish or Mongolian origin, or whether they were local inhabitants who has mastered Turkish or Mongolian. The first place among the Persian-speaking *kuttāb* was held by the *munshī al-mamālik*, who was in charge of the *dār al-inshā'* (the "State Chancellery"), a subsection of the Great *Dīwān* (*dīwān-i a'lā*, *dīwān-i buzurg*) directed by the grand vizier. In the different sections of the *munshī al-mamālik*'s chancellery, two classes of *kuttāb* were employed: the *munshīyān* whose task it was to draft documents, and the so-called *muḥarrirān* charged with preparing fair copies; among the latter very skilled calligraphers were found. The archives formed a separate department of the *dār al-inshā'*.

The nomination of secretaries was probably reserved to the grand vizier. The *kuttāb* in general, and the *munshī al-māmālik* specifically, were expected to be trustworthy, to be masters of protocol and to possess both stylistic and calligraphic qualities. In the religious administration, mainly concerned with the maintenance of the religious law and the interests of pious foundations, a number of *kuttāb* were also to be found, *e.g.* the *kātib-i dār al-ḳaḍā'* (secretary of the supreme court) and the *mu'arrikh-i ḥudjadj wa-ḳabālāt*, an archivist who kept a permanent register of legal evidences and contracts of sale.

We may draw conclusions about the organization of the chancelleries in Tīmūr's time from the situation under his successors. In their time, specific linguistic expressions continued to indicate the difference between the various groups of *kuttāb*. Under Ḥusayn Bāyḳarā, the secretaries of the so-called "Turkish *dīwān*" had the title of *bakhshī* or *niwīsandagān-i turk*. This *dīwān* dealt with affairs concerning the army and the Turkish subjects. Distinct from them were the *wazīrān* or *niwīsandagān-i tādjīk*, the Persian speaking *kuttāb*, who were the secretaries of the *dīwān-i māl*, the "Persian *dīwān*", responsible for finances and the affairs of the non-Turkish population. On no account could a *kātib* of the Turkish *dīwān* be called *wazīr*. It seems that relations had been similar under the Turcoman dynasties, as may be deduced from a remark of Ḥasan Rūmlū, a *ḳizilbāsh* chronicler, who says that one of his ancestors had served as *bakhshī* under the Aḳ-Ḳoyunlu.

Under the Ṣafawids also, the head of the State Chancellery was called *munshī al-mamālik* (under the Tīmūrids, as well as having this title, he is said to have also been called *ṣāḥib-dīwān-i inshā'*). The Ṣafawid administration was characterized by a duality in the civil service—the State Chancellery and the Treasury—, which had already existed before. Each single department of the Ṣafawid treasury (*daftarkhāna*), which was headed by the *mustawfī al-mamālik*, consisted of the financial section proper and a chancellery. The *lashgar-niwīs*, head of one of the most important subsections of the *daftar-khāna*, corresponded to the Īl-Khānid and Djalāyirid *ūlūgh bitikči-yi mamālik*. He was the paymaster of the troops of the provincial governors and also of the court and provincial officials, and had an imposing chancellery at his disposal. On the other hand, the *dār al-inshā'*, the State Chancellery of the *munshī al-mamālik*, was in charge of the state correspondence such as diplomatic letters and all kinds of charters. When under 'Abbās I a special royal administration (the *sarkār-i khāṣṣa-yi sharīfa*) was set up at the side of the already existing governmental administration, a special chancellery had of course to be created

for this purpose. A number of duties were transferred from the *munshī al-mamālik* to the head of the new chancellery, the *wāḳiʿa-niwīs* or *madjlis-niwīs*. In the course of the 11th/17th century, the *madjlis-niwīs* surpassed the *munshī al-mamālik* both in rank and sphere of competence. Moreover, the *madjlis-niwīs* enjoyed to a much greater extent the confidence of the ruler. Only in so far as the number of the subordinate *kuttāb* was concerned was the *munshī al-mamālik* superior to the *madjlis-niwīs*.

A handbook of administration, the *Tadhkirat al-mulūk*, shows that in the early 12th/18th century, 28 *kuttāb* were subordinate to the *munshī al-mamālik*: one *munshī-yi dīwān* who prepared drafts, and 27 *muḥarrirān* who wrote out the fair copies. In the chancellery of the *madjlis-niwīs*, the *raḳam-niwīs-i dīwān-i aʿlā* corresponded to the *munshī-yi dīwān*; he was assisted by three assistants. In this chancellery a further six *kuttāb* were also employed, among whom was a registrar and a *nāma-niwīs*, who was most probably responsible for the fair copies of the diplomatic letters (*nāma* or *maktūb*). Thus ten *kuttāb* were subordinate to the *madjlis-niwīs*. The *daftar-khāna* too was influenced by the division of the administration into a governmental and a royal demesnial sector. Although the division within the *daftar-khāna* was not complete, the interests of state and crown were assigned to different subsections. Under the Ṣafawids, charters were occasionally written in Turkish, but nothing is known about a classification of the *kuttāb* according to linguistic criteria.

iii. IN INDIA.

The term *kātib* does not occur in Indo-Muslim chancellery usage in the sense of a secretary; here *kātib* is merely the writer or the scribe. The equivalent of "secretary" in Indo-Muslim nomenclature is *dabīr* in the sultanate period and *munshī* in the Mughal period. Ibn Baṭṭūṭa, because of his Arab background, is the only writer to use the term *kātib* in relation to the court of Delhi. Under the Ghaznawids, whose administrative practices constitute an essential strand of Indo-Muslim tradition, the Correspondence Department, known as the *dīwān-i risālat*, was already one of the three principal ministries and had a large and trained staff with a sizable salary bill. The minister in charge, known as the *ṣāḥib-i dīwān-i risālat*, was a trusted adviser of the sultan. It is also clear that during the Ghaznawid period, and especially during Abū Naṣr Mishkān's long stewardship of the *dīwān-i risālat*, the norms of drafting and rules of departmental administration had become well-established. A unit of the *dīwān-i risālat*, equipped with official papers and registers, "accompanied the Sultan on his campaigns and progresses round the realm" (Bosworth, *The Ghaznavids*, 42-3, 60-4, 91-7, quotation from 91; Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, 142-4).

With the foundation of the sultanate of Delhi, there seems to have been a change of nomenclature. The term *dīwān-i risālat* now came to designate the Department of Religious Affairs (this view of I. H. Qureshi, *Administration of the Sultanate of Delhī*, Karachi 1958, 175, though contested by several writers including A. B. M. Habibullah, seems to be sound, as it is clearly supported by Ḍiyāʾ al-Dīn Baranī, *Taʾrīkh-i Fīrūz Shāhī*, 153, 558, and ʿAfīf, *Taʾrīkh-i Fīrūz Shāhī*, 279). The Correspondence Department was re-designated the *dīwān-i inshāʾ* (Baranī, 153, 337; Amīr Khusraw, *Khazāʾin al-Futūḥ*, 184; Amīr Khusraw, *Iʿdjaz-i Khusrawī*, 44, 124). The term *dabīr-khāna* also appears in the *Inshāʾ-i Māhrū*, 166, and may have signified the office of the *dīwān-i inshāʾ*. The head of the ministry was known as the *dabīr-i khāṣṣ* (ʿAfīf, 224; see also evidence cited by Qureshi, *op. cit.*, 86). The designation appearing in the *Inshāʾ-i Māhrū*, 117, namely *ṣāḥib-i dīwān-i mamālik-i inshāʾ* (in a letter to the holder of the office) seems to be a descriptive and not an official title. Similarly the phrase *dīwān-i dabīr*, occurring in the *Iʿdjāz-i Khusrawī*, i, 66, does not appear to have been the official appellation of the ministry.

It seems certain (though monographs on the subject ignore it) that the chief *dabīr* had the title of *ʿumdat al-mulk*. In the list of dignitaries given by Ḍiyāʾ al-Dīn Baranī at the commencement of the account of each reign, this title appears four times in connection with the names of *dabīrs* (*Tāʾrīkh-i Fīrūz Shāhī*, 24, 240, 379, 454), during four different reigns. A study of these entries also suggests that the chief secretary was as well known as *ʿalāʾ dabīr* as *dabīr-i khāṣṣ*. Baranī rarely if ever uses the designation *dabīr-i khāṣṣ*. That *ʿalāʾ* in *ʿalāʾ-dabīr* was not a personal name becomes clear from the fact that Baranī mentions an *ʿalāʾ-dabīr* in the reigns of Balban (p. 25), Kayḳubād (p. 126; *ʿalāḳa-dabīr* is evidently a miswriting for *ʿalāʾ-dabīr*) and ʿAlāʾ al-Dīn Khaldjī (p. 240). It therefore seems that *ʿalāʾ-dabīr* was the name of the office of the chief secretary and *ʿumdat al-mulk* his official title. For *ʿumdat al-mulk* as the title of the chief secretary there is additional and conclusive evidence in the *Inshāʾ-i Māhrū*, where Malik Aʿazz al-Dīn Ḥādjdjī *Dabīr* of Fīrūz Shāh's reign (Baranī, 528) is frequently called *ʿumdat al-mulk* (*Inshāʾ-i Māhrū*, *passim*). Māhrū's letter to this official on the conferment of the title

of *ʿumdat al-mulk* also suggests that it was given to him on his appointment to the office of the chief *dabīr*. (*Inshāʾ-i Māhrū*, 192-3). However, the title *malik al-umarāʾ* attached by Māhrū to the name of this *dabīr* need not be taken seriously, for he does so in the case of several other high officials.

It is remarkable that when Īltutmish had to issue an important proclamation nominating his daughter Raḍiyya as his successor, he assigned the task to his *mushrif* (*Tabaḳāt-i Nāṣirī*, ed. Nassau Lees, 185). This either means that the Correspondence Department was for some time called the *dīwān-i ishrāf* (as Habibullah, *Foundation of Muslim Rule in India*, Lahore 1945, 223, suggests), or indicates the continuation of the tradition of the Ghaznawids under whom the *mushrif* (as stated by Bosworth, 94-6) looked after a variety of matters connected with the king's affairs.

The *dabīr-i khāṣṣ* had many *dabīr*s, calligraphers and clerks under him. Some who performed specific duties had corresponding designations, *e.g.* the *khāṣṣa-niwīs* and the *shab-niwīs* (*Inshāʾ-i Māhrū*, 160, 164, 166). The *khāṣṣa-niwīs* was the secretary attached to the court or on court duty (cf. the *munshī-i-ḥaḍrat* of ʿUtbī, in Qureshi, *op. cit.*, 86n). The *shab-niwīs* was evidently the secretarial officer on night duty in the palace. The *dāwātdār* was the keeper of royal inkpot or inkhorn (*Tab. Nāṣirī*, 242). The relationship of the *dāwātdār* with the *dīwān-i inshāʾ* is not clear. The *dabīr-i sarā* has been described by Qureshi (*op. cit.*, 65) as the registrar of the palace. The *dabīr-i sarā* invites comparison with Ibn Baṭṭūṭa's *kuttāb al-bāb* in his account of the sultan of Delhi's court (*Riḥla*, iii, 219), rendered by Gibb, *Travels*, iii, 659, as "the scribes of the door", and by Mahdi Husain, 57, as "the gate secretaries".

It seems that the chief *dabīr* and his staff were highly paid (as they had been in the Ghaznawid days). The following statement in the Masālik *al-abṣār fī mamālik al-amṣār* of Shihāb al-Dīn al-ʿUmarī (pp. 31-2), though possibly touched by hyperbole, does indicate that the salaries of the secretarial staff were high: "He (the sultan) has four *dabīrs*, *i.e.* private secretaries (*kātib al-sirr*), and everyone of them has a city on the coast yielding large revenue. Everyone has about 300 scribes of whom the lowest and the less paid has 10,000 *tanka*s as (annual) salary. As regards the highest of them, they have villages and estates and some of them have fifty villages".

The princes had their own *dabīr*s (Amīr Khusraw, *Fawāʾid al-Fuʾād*, 127, cited in K. A. Nizami, *Some aspects of religion and politics in India during the 13th century*, London 1961, 214). The same practice obtained during the Mughal period, see below.

During the period of the sultanate of Delhi, the *dīwān-i inshāʾ* was counted as one of the four principal ministries of the central government (Barani, *Tāʾrīkh-i Fīrūz Shāhī*, 153). The duties of the chief secretary and other officers of this ministry were the same as under the Ghaznawids. They composed *fatḥ-nāma*s, royal letters addressed to other kings, important letters or proclamations issued in the king's name, and the like. Important documents received at the court, such as a letter from a foreign dignitary or an *ʿarḍ-dāsht* from a minister or a high noble, were read out to the sulṭān by the *dabīr-i khāṣṣ* or one of the *dabīrs* (ʿAfīf, 223-4). The practice common among the Mughal emperors of having important documents drawn up by any high minister (and not by the chief secretary alone) was not unknown in the pre-Mughal period. Thus ʿAyn al-Mulk Multānī, who was a great *munshī* but never an office-holder in the *dīwān-i inshāʾ*, drafted numerous state documents during the reigns of Muḥammad b. Tughluḳ and Fīrūz Shāh; particular mention may be made of the manifesto issued by Fīrūz Shāh to the religious classes, the officials and nobles, and the common people of Lakhnawtī (Bengal) when launching an invasion of the territory (*Inshāʾ-i Māhrū, passim*; for the manifesto, see pp. 15-17). Similarly Amīr Khusraw, one of the greatest masters of style in Persian *inshāʾ*, appears never to have occupied a position in the *dīwān-i inshāʾ*, but one may assume that his services were utilised in drafting important documents by contemporary sultans from Kayḳubād (acceded 686/1287) to Ghiyāth al-Dīn Tughluḳ Shāh (died 725/1325). The *fatḥ-nāma* written by Amīr Khusraw on the occasion of Balban's victory over a rebellious governor of Lakhnawtī is given in his *Iʿdjāz-i Khusrawī* (v, 4-14); Amīr Khusraw claims this as his first *fatḥ-nāma*, and since he was not till then in the service of the court of Delhi, it is not clear if he was commissioned to draft the document.

The Indian Mughals followed a more active foreign policy than did the sultans of Delhi, and sent out and received many more embassies than their predecessors. It is therefore all the more surprising that for a long time they did not have a proper chancellery and a secretary of this. We do come across frequent mentions of *munshī*s (*e.g.*, *Āʾīn-i Akbarī*, i, 4; *Tūzuk-i Djahāngīrī*, Aligarh 1863-64, 185; ʿAbd al-Ḥamīd Lāhawrī, *Pādshāh-Nāma*, i/1, 148, s.v. *dabīr*), bur for a long time there is no mention of a correspondence department. (The position has been recognized both by I. H. Qureshi, *Administration of the Mughul Empire*, Karachi 1966, 82, and by Momin Ibrahim, *The Mughal contribution to Persian epistolography*, Edinburgh University Ph.D. thesis, 1958 (unpublished), chapter i). From the time of Shāh Djahān onwards "frequent mention is made of the *dār al-inshāʾ*" (Momin Ibrahim). Ibrahim also opines that the bureau of correspondence was attached to the office of the *bakhshī* which "handled the administrative side of the secretariate only".)

This lack of concern for a correspondence department becomes to some extent understandable when we consider the fact that it was common practice with the Mughal emperors to assign the drafting of important documents to ministers and dignitaries other than the official *munshī*s. Thus Akbar's royal letters were drafted mostly by Abu 'l-Faḍl, who did not occupy an official position as a secretary, and occasionally by other distinguished personages attached to the court (*e.g.* Akbar's letter to Shāh ʿAbbās I, drafted by Āṣaf Khān Mīrzā Djaʿfar, see *Bayāḍ* 1995, Oriental Public Library, Bankipore, fol. 133b; for other sources and a full discussion, see Riazul Islam, *Calendar of Documents on Indo-Persian Relations* (unpublished), Document no. A.41). In one instance, two drafts were prepared for Akbar's reply to ʿAbd Allāh Khān Uzbeg, one by Abu 'l-Faḍl and the other by Ḥakīm Abu 'l-Fatḥ Gīlānī (see Bhagčand, *Djāmiʿ al-Inshāʾ*, B.M.Or. 1702, fols. 201a-202a; for a full discussion see *Calendar of Documents on Indo-Persian Relations*, Document no. TX.330). The practice of having important letters drafted by high officials other than the *munshī* continued under Shāh Djahān, even though by this time a *dār al-inshāʾ* had come into being. Shāh Djahān's letters to foreign potentates were drafted mostly by Saʿd Allāh Khān, chief *dīwān* (*i.e.* the *wazīr*) of the empire (*Maktūbāt-i Saʿd Allāh Khān*, ed. Nāẓir Ḥusayn Zaydī, Lahore 1968, *passim*; Riazul Islam, *Calendar of Documents on Indo-Persian*

Relations, section on Shāh Djahān, *passim*). Indeed there is a petition from Shaykh Abu 'l-Fatḥ Ḳābil Khān, *munshī* of Awrangzīb ʿĀlamgīr, complaining that this work was being appropriated by the imperial *dīwān* (*Ādāb-i ʿĀlamgīrī*, ed. ʿAbd al-Ghafūr Čawdhrī, Lahore 1971, 834).

The head of the *dār al-inshāʾ* was known variously as *mīr munshī*, *dārūgha-i dār al-inshāʾ* and *munshī al-mamālik*. As the same officer, Muḥammad Sharīf Ḳābil Khān, is mentioned in the *Maʾāthir-i ʿĀlamgīrī*, (Bib. Ind. 1871) as *darūgha-i dār al-inshāʾ* on p. 140 and *mīr munshī* on p. 190, it can be assumed that the two designations stood for the same post. It is remarkable that Shaykh Abu 'l-Fatḥ Ḳābil Khān, though generally called *munshī al-mamālik* (see the MSS of his *Ādāb-i ʿĀlamgīrī*) is nowhere alluded to as such in the *Maʾāthir-i ʿĀlamgīrī* or the *ʿĀlamgīr-Nāma*; nor indeed is his brother Muḥammad Sharīf Ḳābil mentioned as *munshī al-mamālik* in the *Maʾāthir-i ʿĀlamgīrī*.

Some idea of the status and emoluments of a Mughal *mīr munshī* may be had from the fact that the annual stipend given to Abu 'l-Fatḥ Khān on retirement was Rs. 5,000 (*Maʾāthir-i ʿĀlamgīrī*, 26), and that his brother Muḥammad Sharīf Ḳābil Khān, who became *darūgha-i dār al-inshāʾ* in 1085/1675, had the rank of 1000/70 (*i.e.*, 1000 personal rank, 70 troops) when he was dismissed from the office in 1090/1680 (*Maʾāthir-i ʿĀlamgīrī*, 190). Thus neither the rank nor the salary of the post seems to have been high. But the post, with its privilege of *taḳarrub* ("proximity") to the person of the emperor, gave an immense influence to the incumbent, so that Muḥammad Sharīf was able to amass twelve laks of rupees in cash alone in five years—a circumstance which eventually brought about his fall (*ibid.*).

As pointed out earlier the Mughal princes used to have their own official *munshīs*. Indeed, Abu 'l-Fatḥ Ḳābil Khān made his career as the *wālāshāhī munshī* (a prince's secretary) of Prince Awrangzīb; he served the Emperor Awrangzīb ʿĀlamgīr for only a very short period (*Maʾāthir-i ʿĀlamgīrī*, 140, 190; for some other instances, see *ibid.*, 91; Khāfī Khān, *Muntakhab al-lubāb*, I, 740).

The Hindūs produces many *munshīs* and Hindū *munshīs* wrote numerous *inshāʾ* works, the most well-known being the *Inshāʾ-i Harkaran* of Djahāngīr's reign. From the period of the Afghān Sūrs onwards they attained increasing proficiency in Persian epistolography, and soon came to occupy a strong position in secretarial and clerical cadres. The most celebrated of the Hindu *munshīs* were Čandr Bhan Brahman whom Shāh Djahān gave the title of *Rāy-i Rāyān*, and Ānand Rām "Mukhliṣ", *mīr munshī* of the Emperor Muḥammad Shah (Jadunath Sarkar, *Mughal Administration*, Calcutta 1935, 227-9; Momin Ibrahim, *op. cit.*; Riazul Islam, *Calendar of Documents on Indo-Persian Relations*, Intro., 56).

Bibliography: Among the Persian sources, the chronicles of the sultans of Delhi and of the Mughal emperors contain only scanty and occasional references to the subject. Even Baranī, though full of detail on general administration, does not say much about the *dabīr* or the *dār al-inshāʾ*. It is remarkable that two celebrated treatises on *inshāʾ*, Amīr Khusraw's lengthy *Iʿdjāz-i Khusrawī* and Maḥmūd Gāwān's *Manāẓir al-Inshāʾ*, contain next to nothing about the position and functions of the *dabīr*. Mughal works too seldom discuss the subject at length and systematically. The following primary sources nevertheless contain useful pieces of information on the subject: Minhādj b. Sirādj Djuzdjānī, *Ṭabaḳāt-i Nāṣirī*, Calcutta 1863-4; Ḍiyāʾ al-Dīn Baranī, *Taʾrīkh-i Fīrūz Shāhī*, Calcutta 1862; Amīr Khusraw, *Khazāʾin al-Futūḥ*, Aligarh 1927; Id., *Iʿdjāz-i Khusrawī*, Lucknow 1867; ʿAyn al-Mulk Māhrū Multānī, *Inshāʾ-i Māhrū*, ed. Shaykh Abdur Rashid, Lahore 1965; Shihāb al-Dīn al-ʿUmarī, *Masālik al-abṣār fī mamālik al-amṣār*, tr. Otto Spies and others, published in the *Muslim University Journal*, Aligarh (1936); Ibn Baṭṭūṭa, *Riḥla*, Paris 1853-59; Eng. tr. H. A. R. Gibb, iii, Cambridge 1971, and by Mahdi Husain, Baroda 1953; Shams Sirādj *ʿAfīf*, *Tāʾrīkh-i Fīrūz Shāhī*, Calcutta 1888-91; Abu 'l-Faḍl, *Aʾīn-i Akbarī*, Calcutta 1867-77; *Ruqʿāt-i Ḥakīm Abu 'l-Fatḥ Gīlānī*, ed. M. B. Husain, Lahore 1968; *Maktūbāt-i Saʿd Allāh Khān*, ed. N. H. Zaidi, Lahore 1968; Shaykh Abu 'l-Fatḥ Ḳābil Khān, *Ādāb-i ʿĀlamgīrī*, ed. Abd al-Ghafūr Čawdhrī, Lahore 1971; *Tūzuk-i Djahāngīrī*, Aligarh 1863-64; ʿAbd al-Ḥamīd Lāhawrī, *Pādshāh-Nāma*, Calcutta 1866-72; Muḥammad Ḳāẓim, *ʿĀlamgīr-Nāma*, Calcutta 1865-73; Shāh Nawāz Khān (Ṣamṣām al-Dawla), *Maʾāthir al-Umarāʾ*, tr. Beveridge and B. Prashad, Calcutta 1911-52; Sāḳī Mustaʿīd Khān, *Māʾathir-i ʿĀlamgīrī*, Calcutta 1871; Khāfī Khān, *Muntakhab al-Lubāb*, Calcutta 1860-74; Bhāgčand Munshī, *Djāmiʿ al-Inshāʾ*, B.M.Or. 1702; Sayyid ʿAlī Naḳī, *Kitāb-i Haft Ḍābiṭa*, MS National Museum, Karachi. For a fuller list of *inshāʾ* sources, see bibliography in Riazul Islam, *A calendar of documents on Indo-Persian relations* (unpublished).

Modern studies: Muḥammad Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931; Jadunath Sarkar, *Mughal administration*, Calcutta 1935; A. B. M. Habibullah, *Foundation of Muslim rule in India*, Lahore 1945; Sri Ram Sharma, *Mughal government and administration*, Bombay 1951; I. H. Qureshi, *Administration of the Sultanate of Dehlī*, Karachi 1958; idem, *Administration of the Mughal Empire*, Karachi 1966; C. E. Bosworth, *The Ghaznavids: their empire in Afghanistan and eastern Iran*, Edinburgh 1963; Ibn Hasan, *Central structure of the Mughal Empire*, Karachi 1967; Riazul Islam, *Indo-Persian relations: A study of the political and diplomatic relations between the Mughal Empire and Iran*, Tehran 1970; Momin M. M. Ibrahim, *The Mughal contribution to Persian epistolography*, Edinburgh Ph.D. thesis, 1958 (unpublished); idem, *Calendar of documents on Indo-Persian relations*, 1500-1750 (unpublished). (Riazul Islam)

KĀTIB ČELEBI, appellation of MUṢṬAFĀ B. ʿABD ALLĀH (1017-67/1609-57), known also (after his post in the bureaucracy) as ḤĀDJDJĪ KHALĪFA (Khalfa), historian, bibliographer and geographer, the most conspicuous and productive scholar, particularly in the non-religious sciences, of the 11th/17th century Ottoman Empire. He was born on Dhu 'l-Ḳaʿda 1017/February 1609 in Istanbul, his father being a soldier. He began his education at the age of five or six, and at 14 was apprenticed to the *Anadolu Muḥāsebesi*'s office, where he learned accountancy and *siyāḳat* [*q.v.*]. In 1033/1624 he went with the army in the campaign against Abaza Pasha (*Fedhleke*, ii, 55), and two years later was present on the Baghdād campaign (*Fedhleke*, ii, 83), his father dying at Mawṣil on the way back. In that year he was appointed to a post in the *Süvārī Muḥāsebesi* office. Returning to Istanbul in 1038/1628-9, he attended

the lectures of Ḳāḍī-zāde, which greatly impressed him (*Fedhleke*, ii, 182). In 1038-40/1629-30 he was present on Khusrew Pasha's campaign against Baghdād; and in 1043/1633-4, when the army wintered at Aleppo, he took the opportunity to make the Pilgrimage. In 1044-5/1635 he took part in the campaign against Erivan. After these ten years of service with the army, a legacy enabled him to settle in Istanbul and devote himself to study, attending the lectures of various scholars, principally Aʿradj Muṣṭafā Ef. (*Fedhleke*, ii, 392). Having failed to receive promotion, he resigned from his post in the Finance Department and spent three years in retirement, until in 1058/1648 his writing of the *Taḳwīm al-tawārīkh* (no. 4 below) and the intervention of his patron ʿAbd al-Raḥīm Efendi, then *Shaykh al-Islām*, procured him the rank of *ikindji khalīfe*. Many of his works were composed in the ensuing years, among them translations made from Latin texts with the help of a French convert, Shaykh Meḥmed Ikhlāṣī. He died suddenly, on 27 Dhu 'l-Ḥidjdja 1067/ 6 October 1657, and was buried by the Zeyrek Djāmiʿi (photograph of his gravestone, since renewed, in *Keşf-el-zunun* (no. 12 below), i, introd., between cols. 18 and 19). His contemporaries described him as good-tempered, taciturn and philosophic, leading an unambitious life with no passion except for study; he would mix both with ascetics and pleasure-lovers, and he neither smoked nor drank. Naturally grave, he disliked satire and there is little humour in his works. One of his hobbies was growing flowers. He is always measured in his criticisms and his relation of events; and his prose style is simple, unencumbered by grandiloquent similes and clichés.

Works. 1. *Fadhlakat aḳwāl al-akhyār fī ʿilm al-taʾrīkh wa'l-akhbār*, or *Fadhlakat al-tawārīkh*, a universal history in Arabic, to 1049/1639. The *muḳaddima* is in four *faṣl*s, of which the second deals with the significance, the scope and the uses of history; the third, which was to list the 1300 sources, is lacking in the unique MS.; the fourth deals with the rules which the historian must follow. Unique MS. (author's draft); Bayezit 10318 (dated 1052/ 1642). Summary of scope in *İncelemeler* (see *Bibl.*), 40-3, and see also M. Halil Yinanç, *ibid.*, 93-100; Turkish tr. of brief passages in *Seçmeler* (see *Bibl.*), 187-94. —2. *Fedhleke*, a chronicle of Ottoman history, in Turkish, from 1000/1591 to 1065/1654-5. Among the sources are Ḥasanbegzāde, Pečevī [*qq.v.*] and ʿAbd al-Ḳādir (Topčular Kātibi); it was extensively used by Naʿīmā [*q.v.*]. Autograph MS.: Atif Ef. 1914; edn. in 2 vols. Istanbul 1287. See *İncelemeler*, 43-5. — 3. *Tuḥfat al-kibār fī asfār al-biḥār*, a history of Ottoman naval engagements to the year 1067/1656, in Turkish, with recommendations and criticisms on naval affairs and information on the fleet and its armament. MS. Revan 1192 (Karatay, no. 787) has marginalia in the author's hand, maps and pictures, and three *taḳrīẓ* (by the *Shaykh al-Islām* and the *Ḳāḍīʿaskers*). Edns.: Müteferriḳa Press 1141/1729; Istanbul 1329/1913. Eng. tr. (to p. 70 of the 1329 edn.), James Mitchell, *The history of the maritime wars of the Turks*, London 1831. See *İncelemeler*, 45-8: *Seçmeler*, 80-113. —4. *Taḳwīm al-tawārīkh*, chronological tables of events from the creation of Adam to the year 1058/1648, to serve "as an index to the *Fadhlaka*" (no. 1 above) Autograph MS. (?): Esad Ef. 2399; edn. (with continuation to 1146): Müteferriḳa Press 1146/1733. Ital. tr. by Rinaldo Carli, *Chronologia historica* ..., Venice 1697. Continued, with commentary, to 1191/1777 by Shamʿdānīzāde [*q.v.*] as *Murʾi al-tawārīkh* (edn. of first vol. to 926/ 1520, Istanbul 1338 h.). See *İncelemeler*, 48-54; *Seçmeler*, 114-8. —5. *Rawnaḳ al-salṭana*, excerpts on the history of Constantinople translated into Turkish from *Historia rerum in Oriente gestarum* ..., Frankfurt 1587 (see V. L. Ménage, in *BSOAS*, xxvi (1963), 173-4). Unique MS.: Konya, İzzet Koyunoğlu Libr. See *İncelemeler*, 56. —6. *Taʾrīkh-i Firengī*, a Turkish translation, made in 1065/1654-5, of Johann Carion's *Chronicle* (probably the Latin edn., Paris 1548, see V. L. Ménage, in *Iran and Islam*, ed. C. E. Bosworth, Edinburgh 1971, 423). Unique MS.: Konya, İzzet Koyunoğlu Libr. Excerpts published in the newspaper *Taṣwīr-i efkār* from no. 55 (1279/1863) onwards, whence three passages in *Seçmeler*, 175-7. See *İncelemeler*, 54-6. —7. *Irshād al-ḥayārā ilā taʾrīkh al-Yūnān wa'l-Rūm wa'l-Naṣārā*, a short compilation, from the *Atlas Minor* (see no. 10) and other works, on the religion, the systems of government and the dynasties of Christian Europe. See *İncelemeler*, 57; B. Flemming, *Verzeichnis ... Deutschland*, xiii/1 = *Türkische Handschriften*, Teil i, Wiesbaden 1968, no. 117; V. L. Ménage, in *Iran and Islam*, 421-3. —8. *Sullam al-wuṣūl ilā ṭabaḳāt al-fuḥūl*, a compendium of biographies in Arabic, arranged alphabetically (part one: by personal name; part two: by *nasab*, *kunya* or *laḳab*), in effect a companion work to no. 12 below, compiled from over 100 sources and completed in 1058/1649. Autograph (draft) MS.: Şehit Ali Paşa 1877. See *İncelemeler*, 57-61; *Seçmeler*, 195-204. — 9. *Djihān-nümā*. This work, planned to be a great cosmography, was never completed. In the first version, begun in 1058/1648, the author dealt with the seas, Muslim Spain, North Africa, and the Ottoman provinces of Rūmeli, Bosnia and Hungary; the second version, begun in 1065/1654 after he had acquired a copy of the *Atlas Minor* (see no. 10), covers Asia, from Japan to the Ottoman borders (Van). Most of the first version was translated by J. von Hammer as *Rumeli und Bosna* ..., Vienna 1812; the second version was the basis for the Müteferriḳa Press text of 1145/1732. For the complex textual history, see the articles of Fr. Taeschner, Pearson, *Index islamicus 1906-1955*, nos. 8860, 18345, 18643 and (a summing-up) 8861 = *Imago Mundi*, i (1935), 44-8; and *İncelemeler*, 61-73. For partial translations, see Babinger, 200. —10. *Lawāmiʿ al-nūr fī ẓulmat Aṭlas Minūr*, a Turkish translation, with many marginal comments, of the *Atlas Minor* of G. Mercator and L. Hondius. Autograph MS.: Nuruosmaniye 2998. See *İncelemeler*, 73-6; *Seçmeler*, 178-83. —11. *Ilhām al-muḳaddas fī fayḍ al-aḳdas*, a short treatise on the solutions, in the light of *fiḳh*, to three astronomical problems. See Bedi N. Şehsuvaroğlu, in *Incelemeler*, 141-76; *İncelemeler*, 76-7; *Seçmeler*, 143-5. —12. *Kashf al-ẓunūn ʿan asāmī 'l-kutub wa'l-funūn*, the great bibliographical dictionary in Arabic. The introduction deals with the importance of learning and the classification of the various branches of knowledge; the main text lists some 14,500 titles in alphabetical order, with some commentary. Principal edns.: G. Flügel, *Lexicon bibliographicum et encyclopaedicum* ..., 7 vols., Leipzig and London 1835-58 (Ar. text with Latin tr. and indexes); ed. Şerefettin Yaltkaya and Kilisli Rifat Bilge, *Keşf-el-zunun*, 2 vols., Istanbul 1941-3 (using the autograph fair copy of the first third, MS. Revan 2059 [Karatay, no. 6566], and the autograph draft for the rest, MS. Carullah 1619. See *İncelemeler*, 77-9; *Seçmeler*, 205-45. —13. *Tuḥfat al-akhyār fi 'l-ḥikam wa'l-amthāl wa'l-ashʿār*, a commonplace book drawn mainly from Arabic, but also from Persian and Turkish sources, containing passages on literature and philosophy,

family-life and good government, curious information on animals and plants, tales, poems, proverbs, etc. See *İncelemer*, 79-81; *Seçmeler*, 246-65. —14. *Dürer-i müntes̲h̲ire ve g̲h̲urer-i müntes̲h̲ire*, a collection of passages from biographical works. Unique (autograph) MS.: Nuruosmaniye 4949. See *İncelemeler*, 81-2; *Seçmeler*, 146-52. —15. *Dustūr al-ʿamal fī iṣlāḥ al-k̲h̲alal*, a memorandum setting out the causes for the deficits in the state finances and suggesting remedies. Edn.: Istanbul 1280 (appended to ʿAyn-i ʿAlī, *Ḳawānīn-i Āl-i ʿOt̲h̲mān*); *Seçmeler* (complete text), 153-61. German trans.: W. F. A. Behrnauer, in *ZDMG*, xi (1857), 111-32. See *İncelemeler*, 82-4; B. Lewis, in *Isl. St.*, i/1 (1962), 78-81. —16. *Rad̲j̲m al-rad̲j̲īm bi'l-sīm wa'l-d̲j̲īm*, a collection of curious questions in *fiḳh* and of odd *fatwās*; apparently lost. See *İncelemeler*, 84-5. —17. A *s̲h̲arḥ* of the *tafsīr* of al-Bayḍāwī [*q.v.*]; perhaps never completed, no. MS. known. See *İncelemeler*, 85. —18. *Ḥusn al-hidāya*, a *s̲h̲arḥ* of the *Muḥammadiyya* of ʿAlī Kus̲h̲čī [*q.v.*]; apparently lost. See *İncelemeler*, 85. —19. *D̲j̲āmiʿ al-mutūn min d̲j̲all al-funūn*, abridgements of and comments on 27 works which the author taught: a compendium of "general knowledge" for the man of culture. Unique MS. (in part autograph): Topkapı Sarayı, Emanet Hazinesi 1763. See *İncelemeler*, 85-6; *Seçmeler*, 266-7. —20. *Muk̲h̲taṣar D̲j̲āmiʿ al-mutūn*, an abridgement of the above- no. MS., known (see *Kas̲h̲f al-ẓunūn*, Flügel, no. 3952). *İncelemeler*, 86 and n. 3. —21. *Mīzān al-ḥaḳḳ fī 'k̲h̲tiyār al-aḥaḳḳ*, a discussion of various questions which at the time were causing violent controversy (see Naʿīmā, vi, 229-30 (*sub anno* 1066); İ. H. Uzunçarsılı, *Osmanlı Tarihi*, iii/1, Ankara 1951, 364-6), with the author's solutions, composed in 1067/1656. Edns.: Istanbul 1281, 1286, 1306. Eng. tr.: G. L. Lewis, *The Balance of Truth*, London 1957 (see J. R. Walsh, in *IQ*, v/1-2 (1958), 63-79). See *İncelemeler*, 87-90; *Seçmeler*, 162-71. —22. *Ḳānūnnāme-i tes̲h̲rīfāt*, known only from a mention in *Mīzān al-ḥaḳḳ*; see *İncelemeler*, 54.

Bibliography: The principal source for Kātib Čelebi's life, his studies and his works is the autobiographical *k̲h̲ātime* to the *Mīzān al-ḥaḳḳ* (*Seçmeler*, 165-70; tr. G. L. Lewis, pp. 135-47), with some further details in the *Sullam al-wuṣūl* (*Seçmeler*, 202-3). Earlier studies: Bursalı Meḥmed Ṭāhir, *ʿOt̲h̲mānlı mü'ellifleri*, iii, 124-31; Brockelmann, II, 427-9, S II, 635-7; A. Adnan-Adıvar, *La science chez les Turcs ottomans*, Paris 1939; expanded version; *Osmanlı Türklerinde ilim*, Istanbul 1943, 115-32. The fullest study is by O. Ş. Gökyay, in *Kâtip Çelebi: hayatı ve eserleri hakkında incelemeler*, Ankara (TTK) 1957, 3-90 (an expanded version of the article in *İA*, s.v. Kâtib Çelebi). Add now also *ʿUšâqîzâde's Lebensbeschreibungen* ... (*Zeyl-i Šaqâ'iq*), ed. H. J. Kissling, Wiesbaden 1965, no. 158. Selections from 15 of his works, in the original Turkish or translated from Arabic, in O. Ş. Gökyay, *Kâtip Çelebi'den seçmeler*, Istanbul 1968.

For MSS. in the libraries of Turkey, see *İncelemeler*; of Europe, see Babinger, 195-203 (some further references, for nos. 2, 3, 4, 7, 21 above, in B. Flemming, *Verzeichnis* ..., xiii/1, nos. 162, 160, 36, 117, 379, respectively).

(Orhan Şaik Gökyay)

KĀTIB-i RŪMĪ [see sīdī re'īs].

al-**KĀTIBĪ**, nad̲j̲m al-dīn abu'l-ḥasan ʿalī b. ʿumar (d. 657/1276), known by the title of Dabīrān, was a philosopher and logician of the Shāfiʿī school. He came from Ḳazwīn and although K̲h̲ʷānsārī, quoting Kutubī, called him Kās̲h̲ī, sc. from Kās̲h̲ān, this is not correct; and he was a pupil of At̲h̲īr-al-Dīn Abharī. It is known that he helped establish the Marāg̲h̲a [*q.v.*] observatory along with Naṣīr al-Dīn Ṭūsī [*q.v.*] and several other scholars, including Mu'ayyid al-Dīn ʿArūḍī, Fak̲h̲r al-Dīn Marāg̲h̲ī and Muḥyī al-Dīn Ak̲h̲lāṭī. He is the author of many works and treatises, two of which are particularly important. The first is *al-Risāla al-s̲h̲amsiyya* (*The Logic of the Arabians*, original Arabic with Eng. tr. by A. Sprenger, appended to Tahānawī, *Kas̲h̲s̲h̲āf*, 1856), which he wrote for S̲h̲ams al-Dīn Muḥammad D̲j̲uwaynī. This was commented upon by several scholars, the most important of whom are Saʿd al-Dīn Taftāzānī [*q.v.*] and Ḳuṭb al-Dīn Rāzī. Rāzī's commentary, entitled *Taḥrīr al-ḳawāʿid al-manṭiḳiyyah fī s̲h̲arḥ al-risāla al-s̲h̲amsiyya* (Tehran lith. ed. 1304) is still used as a text book in traditional Islamic schools.

His second major work, *Ḥikmat al-ʿayn*, deals with metaphysics and natural sciences. This work too has attracted many commentaries, among them that of Muḥammad b. Mubārak S̲h̲āh, known as Mīrak-i Buk̲h̲ārī (St. Petersburg 1904), who has also quoted Ḳuṭb al-Dīn S̲h̲īrāzī's marginal notes on the same work. ʿAlī b. Muḥammad al-D̲j̲urd̲j̲ānī, known as al-S̲h̲arīf, Kamāl al-Dīn Masʿūd S̲h̲īrāzī and Mīrzā D̲j̲ān Bāg̲h̲nuwī, each wrote marginal notes on the above commentary. Ḥasan b. Yūsuf al-Ḥillī, known as ʿAllāma, also wrote a commentary on *Ḥikmat al-ʿayn*, called *Īḍāḥ al-maḳāṣid* (Tehran 1959).

Kātibī was influenced in his thinking by Fak̲h̲r al-Dīn al-Rāzī [*q.v.*] and wrote commentaries on his *al-Muḥaṣṣal* and *al-Mulakhkhaṣ*, which he called respectively *al-Mufaṣṣal* and *al-Munaṣṣaṣ*. He also had some correspondance and discussions with Naṣīr al-Dīn Ṭūsī on problems of logic, such as predication and contradiction, and on philosophical problems, like the proof of necessary existence. In this respect he rejects the proofs of necessary existence based on the falsity of the circle of infinite regress and demonstrates another kind of proof in his *al-Risāla fī it̲h̲bāt al-wād̲j̲ib* (ʿAlī Yāsīn, *Muṭāriḥāt falsafiyya*, Baghdad 1956). His arguments, which became known as *S̲h̲ubuhāt*, were discussed by various scholars, and Kamāl al-Dīn Husaynī Fasā'ī wrote a book called *Ḥall s̲h̲ubuhāt al-Kātibī*.

Bibliography: Kutubī, *Fawāt*, Cairo 1951, ii, 134; K̲h̲ʷāndmīr, *Ḥabīb al-Siyar*, Tehran 1333, iii, 107; Ḥamdallāh Mustawfī, *Tārīk̲h̲-i guzīda*, Tehran 1339, 590, 706; K̲h̲ʷānsārī, *Rawḍāt al-d̲j̲annāt*, litho ed.[2], Tehran 1367, 479; Muḥammad ʿAlī Ḥazīn, *Tad̲h̲kira*[2], Iṣfahān 1334, 30; Ṭās̲h̲köprüzāde, *Miftāḥ al-saʿāda*, Cairo, Dār al-kutub edn. n.d., i, 299, 302; *Kas̲h̲f al-ẓunūn*, i, 685, ii, 1063; *Īḍāḥ al-maknūn* (suppl. to *Kas̲h̲f al-ẓunūn*), i, 415, ii, 56; Brockelmann, I, 466, S I, 845; ʿAbbās Ḳumī, *al-Kunā wa' 'l-alḳāb*, Sidon 1939, iii, 801; ʿAbbās Iḳbāl, *Tārīk̲h̲-i Mug̲h̲ūl*, Tehran 1341, 191, 503, 507, 511; ʿAlī Naḳī Munzawī, intro. to *Īḍāḥ al-maḳāṣid*, Tehran 1959, 4-10. (M. Mohaghegh)

KĀTIBĪ, s̲h̲ams al-dīn muḥammad b. ʿabd allāh, a Persian poet. According to Dawlats̲h̲āh, he was born in a village between Turs̲h̲īz and Nīs̲h̲āpūr. Through most of his life he sought in vain the patronage of Tīmūrid amīrs in Herāt, Astarābād and S̲h̲arwān, and finally that of the Turcoman ruler Iskandar b. Ḳarā Yūsuf in Ād̲h̲arbāyd̲j̲ān. Eventually he returned to Astarābād, where he died of the plague about 839/1435-6, apparently at a young age. Besides a *dīwān* of *g̲h̲azal*s, *ḳaṣīda*s, etc., he left a number of *mat̲h̲nawī*s, viz. *Tad̲j̲nīsāt* or *Dah Bāb*, *D̲h̲ū Baḥrayn* or *Mad̲j̲maʿ al-Baḥrayn*, *D̲h̲ū Ḳāfiyatayn*, *Ḥusn u ʿIs̲h̲ḳ*, *Nāẓir u Manẓūr*, *Muḥibb u Maḥbūb*, and

Bahrām u Gul-andām. Towards the end of his life he undertook to compose a *kh͟amsa* in imitation of Niẓāmī of Gand͟ja, but did not complete it.

Notwithstanding Nawāʾī's lavish praise of Kātibī, and the lengthy accounts of him given by Dawlatsh͟āh and Browne, he is a mediocre poet. D͟jāmī rightly describes (in his *Bahāristān*) his verses as *sh͟utur gurba*, "camels and cats", *i.e.*, uneven and unequal in quality. His poetry is characterized by excessive use of rhetorical artifice, imitation (mainly of Amīr Kh͟usraw and Ḥasan of Dihlī), commonplace and bizarre ideas, and clumsy and immature diction. Perhaps because of these failings, very few of his verses have been published.

Bibliography: Dawlatsh͟āh, *Tadh͟kirat al-Sh͟uʿarāʾ*, ed. Browne, London-Leiden 1901, 381-91; Browne, *LHP*, iii, 487-95; Amīr ʿAlī-Sh͟īr Nawāʾī, *Mad͟jālis al Nafāʾis*, ed. ʿA. A. Ḥikmat, Tehran 1323; Dh͟. Ṣafā, *Gand͟j-i Sukh͟an*, ii, Tehran 1340², 271-3. (I. Dehghan)

KATIF (A.) "shoulder"; *ʿilm al-katif* or *al-aktāf* denotes scapulomancy or omoplatoscopy, *i.e.* divination by the use of the shoulder-bones. This art forms a part of the practices of physiognomy. It is universal in scope, inasmuch as it provides for the foretelling of what will happen in the different regions of the earth towards which the four sides of the scapula are pointed according to the signs revealed by it. From this point of view the *ʿilm al-aktāf* is to be linked with the practice of cleromancy of the *d͟jafr* [*q.v.*] and the *malāḥim* (cf. T. Fahd, *La divination arabe*, 219 ff.).

How was this skill practised? Three methods are known to us. The first is to lay the scapula on the ground before cooking it, to examine it and to deduce from it indications of future events (war, fertility, drought) according to the shades of colour on it. It may be yellowish, leaden, red or greenish and the meanings of these colours are applied to the regions towards which the four sides of the scapula point (cf. Ḥād͟jd͟ji Kh͟alīfa, ed. Flügel, i, 387).

The second method consists of taking the scapula with the flesh stripped off and exposing it to the rays of the sun. The special lines and shapes which then appear are examined by the physiognomists and they deduce from them signs of universal events, but rarely of individual cases (cf. Y. Mourad, *La physiognomonie arabe*, Ar. text, 12). "Neither the age nor the sex nor the colour of the sheep are important ... There is no fixed moment for the ceremony of divination. It is performed at any time and in any place." (Letter from P. Anastase al-Karmalī to Alfred Boissier, in *Mantique babylonienne et mantique ḥittite*, 52).

A third method involves cooking the scapula before using it. This is described in a *Risāla fī l-aḥkām al-katifiyya* (ms. Cairo 4451; cat. v, 338; anon.): "If anyone wishes to practise scapulomancy, he must take a sheep and before cutting its throat, he must formulate in his mind the question to which he would like to obtain an answer. Then he will slaughter it and broil its scapula."

This third method seems to have prevailed in North Africa, where it could have been connected with the practices of the ancient haruspices (cf. Mauchamp, *Sorcellerie*, 148; Doutté, *Magie et religion*, 371 f.; for details see *Divination arabe*, 396 f.). According to the only example of a divination by scapulomancy found in ancient literature, which goes back to the period of ʿUmar b. al-Kh͟aṭṭāb, the observation was made in the East on the fresh, raw scapula (cf. al-Ṭabarī, i, 2575-6, quoted above, art. ISTISḲĀʾ). It is the same in the *Risāla fī ʿilm al-aktāf* attributed to al-Kindī (mss. Nuruosmaniyye 2412, 42 fol.; Şehîd ʿAlī Paşa, 1812, 51 fol.; Bursa, Ḥusayn Çelebi, 882 fol. 84ᵃ-89ᵃ; cf. M. Plessner, *Deux manuscrits d'Istanbul attribués à al-Kindī*, in *Islamica*, iv (1931), 557). The introduction states that al-Kindī translated this treatise from the Greek; it was attributed to Hermes the Sage.

Apart from this *risāla* and the anonymous one from Cairo, no other writings on scapulomancy have appeared, despite the affirmation of P. Anastase that "there is an entire literature on the science of scapulae which would require deep study" (*apud* Boissier, *op. cit.*, 53). He himself had only a copy of the *risāla* attributed to al-Kindī (*ibid.*, 51). No writings of ʿAlī b. Abī Ṭālib, thought to have been the originator of scapulomancy, have yet come to light.

Finally, according to P. Anastase, "To-day there is no family or tribe which knows this science ... but it is studied in specialist books. There is", he writes, "a special terminology which is not found in Arabic dictionaries, even the most extensive" (*ibid.*).

AL-**ḲAṬĪF**, a large oasis in Saudi Arabia on the southern shore of the Persian Gulf.

1. Geography and demography. The oasis fronts on Tārūt Bay, named after the island facing its centre. Although al-Ḳaṭīf was for centuries a seaport of considerable importance, it is now, due to the shallowness of its waters, used only by small craft. Most of the maritime traffic had been diverted to the oil-shipping port of Raʾs Tannūra (Ras Tanura) on the narrow peninsula which forms the north side of the bay and to the commercial port of al-Dammām [*q.v.*] at the southern extremity of the bay.

The oasis stretches about 22 km. from north to south along the coast of the bay. In the far north the town of Ṣafwā and its girdle of date palms are cut off from the bay by Ṣabkh͟at D͟jāwān (*ṣabkh͟a* = "salt flat"), from the main body of the oasis by Ṣabkh͟at Ṣafwā and the sands of al-D͟jabd͟jūb, and from the inland village of Umm al-Sāḥik by the sands of al-Dawāgh͟ir. In the centre of the oasis is the town of al-Ḳaṭīf proper, popularly called al-Ḳalʿa after the old Ottoman (not Portuguese) fort razed in recent times. The more important villages in its vicinity are al-Ḳudayḥ and al-ʿAwwāmiyya to the north, and al-D͟jārūdiyya, Umm al-Kh͟amām, al-D͟jish͟sh͟, and ʿAnik to the south. Separated from the rest of the oasis by the sands of al-Badrānī is the interior village of al-Ād͟jām (pronounced *lod͟jām*). The oasis ends in the south with the flourishing town of Sayhāt on the coast.

The sands mentioned above and other sands hem in the oasis on its inner side from north to south and in many places are encroaching on the palm groves. A remarkable string of *ʿayn*s or springs lies along the north-south axis just west of the eastern edge of the sands. Many other *ʿayn*s are scattered throughout the groves between the sands and the bay.

The island of Tārūt has five main villages, the largest of which are Tārūt near the centre and Dārīn at the southern tip of the island. Dārīn, mentioned in a verse by al-Aʿsh͟ā, was the name commonly given

to the island in ancient times. A causeway now joins the island to the mainland.

The great majority of the people of al-Ḳaṭīf consists of Dja'farī Shī'īs. The suggestion, sometimes made, that traces of Ḳarmaṭian doctrines survive there seems to be completely baseless. It is to be hoped that ampler details of the history of this ancient Dja'farī community and the related Dja'farī community of al-Baḥrayn [*q.v.*] can some day be uncovered.

2. History. The finding of ancient South Arabian and Aramaean inscriptions bears witness to the great antiquity of al-Ḳaṭīf as an inhabited oasis. Unfortunately, the extensive use of the land by the current dwellers impedes the carrying out of thorough archaeological operations. H. von Wissmann has argued persuasively for the identification of al-Ḳaṭīf as the site of the renowned city of Gerrha described by Strabo and other classical sources, but this identification is not yet proved beyond doubt.

In the early 4th century A.D. the Persians under Shāpūr II established themselves in al-Ḳaṭīf and along the adjoining Arabian coast, the hinterland of which was then known as al-Baḥrayn. This occupation, interrupted at times by the Lakhmids, did not end until three centuries later. For a sketch of the events of that time see the article on 'ABD AL-ḲAYS, then the dominant tribe in al-Baḥrayn. The subtribe of Djadhīma b. 'Awf inhabited the oasis of al-Ḳaṭīf but kept its capital at nearby al-Zāra, the location of which is uncertain. The population also included Magians, Jews, and Christians (many members of 'Abd al-Ḳays were Christians before Islam). The persistence of Christianity is illustrated by the fact that a Nestorian synod was held at Dārīn as late as 56-7/676.

As Islam spread eastwards in the Peninsula, al-'Alā' b. al-Ḥaḍramī reached al-Baḥrayn in 8/629-30, and 'Abd al-Ḳays sent an embassy to the Prophet in Medina. During the *ridda* some of 'Abd al-Ḳays rebelled; in 11/632-3 al-Ḥuṭam b. Ḍubay'a seized al-Ḳaṭīf, but in the next year he was defeated and killed by the forces of al-'Alā'. The Muslims then forced the Persian garrison of al-Zāra to capitulate, after which they crossed over to the island of Dārīn (Tārūt). The rebellion against the caliphate continued until 19/640, but it is not known whether al-Ḳaṭīf was involved in the later stages.

In 67/686-7 the Khāridjī Nadjda b. 'Āmir al-Ḥanafī won a victory over 'Abd al-Ḳays at al-Ḳaṭīf and made the oasis his headquarters, only to be overcome not long afterwards by his fellow-Khāridjī Abū Fudayk.

The history of al-Ḳaṭīf for the next two centuries or so remains obscure. In 286/899 the Ḳarmaṭian Abū Sa'īd Ḥasan b. Bahrām al-Djannābī [*q.v.*] invaded the oasis and put many of the inhabitants to the sword, thereby inaugurating an independent Ḳarmaṭian state in eastern Arabia with its capital in the oasis of al-Aḥsā' to the south. The Ḳarmaṭians suffered a temporary setback four years later when Ibn Bānū, the governor of al-Baḥrayn, inflicted severe losses on them in a battle at al-Ḳaṭīf, but they soon recovered the oasis and regained power.

The tribe of 'Uḳayl, which in the late 3rd/9th century was moving into the region, in time took over supremacy there from 'Abd al-Ḳays. In al-Hamdānī's time (early 4th/10th century), however, the inhabitants of al-Ḳaṭīf were still described as belonging to Djadhīma b. 'Awf of 'Abd al-Ḳays under a chief named Ibn Mismār. Ibn Ḥawḳal (mid-4th/10th century) lists al-Ḳaṭīf as one of the Ḳarmaṭian cities. In 378/988-9 al-Aṣfar and his tribesmen of al-Muntafiḳ waged war against the Ḳarmaṭians and plundered al-Ḳaṭīf, carrying off abundant booty to al-Baṣra.

The Persian traveller Nāṣir-i Khusraw in 433/1051 met an Arab dignitary in al-Ḳaṭīf whose ambition was to drive the Ḳarmaṭians, "men without religion", out of their capital al-Aḥsā'. Seventeen years later Abu 'l-Bahlūl al-'Awwām b. al-Zadjdjādj, master of the islands of al-Baḥrayn, who was loyal to the 'Abbāsids, defeated the Ḳarmaṭian adherents among 'Uḳayl in a naval battle off al-Ḳaṭīf. The final destruction of Ḳarmaṭian power in this region came at the hands of the 'Uyūnids [*q.v.*] of 'Abd al-Ḳays, whose base was in al-Aḥsā'.

Rabbi Benjamin of Tudela, who visited Jewish communities in the East between 554/1159 and 569/1173, gave the number of Jews in al-Ḳaṭīf as 5,000, a figure no doubt exaggerated (the Rabbi does not seem to have reached al-Ḳaṭīf itself). He also reported that the pearl fisheries there were controlled by a Jewish official.

About 598/1201-2 Abū Bakr b. Sa'd, the Salghurid Atābeg of Fārs, took over al-Ḳaṭīf and al-Aḥsā'. By the first half of the 7th/13th century the 'Uyūnids were yielding to pressure by the Salghurids and by the new dynasty of the 'Uṣfūrids of 'Uḳayl, which was usurping authority in al-Aḥsā'.

From the 8th/14th century, Hormuz on the Persian side of the Gulf rose to prominence in trade and politics. In 731/1330-1 Ḳuṭb al-Dīn Tahamtan, King of Hormuz, is said to have occupied al-Ḳaṭīf and other places on both sides of the Gulf. In the following year, however, Ibn Baṭṭūṭa found that al-Ḳaṭīf was ruled by a family founded by one Djarwān of 'Uḳayl, a family described by al-Sakhāwī as "remnants of the Ḳarmaṭians". Ibn Baṭṭūṭa characterised the various clans of Arabs living in al-Ḳaṭīf as "extremist Rāfiḍīs" (the common term among Sunnīs in the Gulf for Shī'īs).

In the mid-9th/15th century the Djabrids, a branch of the 'Uṣfūrids, became dominant in al-Aḥsā'. The Djabrid Adjwad helped the fugitive prince Salghur of Hormuz secure the throne of his homeland, in return for which Salghur granted Adjwad, on payment of tribute, control over al-Baḥrayn and al-Ḳaṭīf, whose profits from trade made them the richest possessions of Hormuz.

After the Portuguese conquest of Hormuz in 913/1507, the Djabrids kept their hold on al-Ḳaṭīf for a time. The Djabrid Muḳrin made the pilgrimage in 926/1520, bringing with him pearls, amber, aloes wood, and other costly products; he is said to have distributed 50,000 dīnārs to the poor in the Holy Cities. On his return he discovered that the Portuguese were invading the islands of al-Baḥrayn, and he met his death in resisting them. The King of Hormuz, subject and ally of the Portuguese, sent an underling to besiege al-Ḳaṭīf. The final blow to the Djabrids came from Shaykh Rāshid b. Mughāmis of al-Baṣra in 931/1524-5.

The chief of al-Ḳaṭīf swore allegiance to Sulaymān the Magnificent in Baghdād in 941/1534, and in 958/1551 Ottoman forces built a new citadel in al-Ḳaṭīf. After Portugal lost Hormuz to the British and Persians in 1031/1622, al-Ḳaṭīf became a more important centre for Portuguese trade in the Gulf. The finest Arabian horses were exported from there to India, being brought to the port by Bedouins from the interior. Large quantities of pearls from the beds of al-Baḥrayn were shipped from al-Ḳaṭīf, as many of the fishers came from the oasis. The Portuguese paid for the horses and pearls with cloth from Sind

and Cambay and with silver money. Another item for export was dates, inferior in quality to those of al-Baṣra, but better and more lasting when dried. In 1036/1637 the Portuguese admiral Ruy Freyre came to the rescue of al-Ḳaṭīf when it was threatened by Persia.

The Ottoman grip on this distant part of Arabia proved weak, particularly as the Āl Ḥumayd, the paramount chiefs of the tribe of the Banū Khālid, gained strength and expanded their dominion. The Banū Khālid had special ties with al-Ḳaṭīf, where nomads of the tribe owned date groves at ʿAnik and numbers of them came there to camp during the harvesting season. Barrāk b. Ghurayr Āl Ḥumayd expelled the Ottoman governor from al-Aḥsāʾ in 1074/1663-4. As one of the principal seaports for the Banū Khālid (the other being al-ʿUḳayr farther south), al-Ḳaṭīf won favour from merchants for its moderate customs duties and the protection it provided for their persons and property.

In 1202/1788 the Banū Kaʿb of southern al-ʿIrāḳ plundered al-Ḳaṭīf, which was just recovering from a devastating plague that had made its way south from al-Baṣra.

The Banū Khālid could not withstand the onslaughts of the Āl Suʿūd [*q.v.*], the paladins of the reform movement of the Wahhābiyya [*q.v.*], who routed the army of the tribe in the battle of Ghuraymīl south of al-Ḳaṭīf in 1204/1789-0. Two years later Suʿūd b. ʿAbd al-ʿAzīz Āl Suʿūd captured the strongholds of Sayhāt and ʿAnik in al-Ḳaṭīf and meted out harsh treatment to the Shīʿī inhabitants, whom he looked upon as the worst of heretics. The payment of many pieces of gold induced Suʿūd to spare the port (*al-furḍa*) and the people who had taken refuge there. In this fashion, the Āl Suʿūd subdued all this part of eastern Arabia and incorporated it in their realm. During the reign of Suʿūd, the *ḳāḍī* he assigned to al-Ḳaṭīf was an immigrant from Persia (a Shīʿī converted to Sunnism ?).

The Sublime Porte delegated Muḥammad ʿAlī, its Viceroy in Egypt, to deal with the threat to Ottoman suzerainty posed by the Āl Suʿūd and the Wahhābiyya. The Viceroy's son Ibrāhīm Pāshā, took the Āl Suʿūd's capital, al-Dirʿiyya [*q.v.*] in 1233/1818, after which Ibrāhīm sent a detachment on to al-Ḳaṭīf in search of supplies. When Captain Sadleir, the emissary of the British government in India coming to congratulate Ibrāhīm, reached al-Ḳaṭīf in 1234/1819, the detachment was preparing to pull out. Accompanying it on its way westwards, Sadleir became the first Western explorer to traverse the whole breadth of Arabia.

Although the chiefs of the Banū Khālid were in charge once more, the most striking figure in the region of al-Ḳaṭīf in the next few years was the celebrated seadog Raḥma b. Djābir, who finally lost his life in 1242/1826 in a naval battle off al-Ḳaṭīf against the Āl Khalīfa of al-Baḥrayn, against whom he had long been waging war.

After the Turco-Egyptian evacuation of central Arabia, Turkī b. ʿAbd Allāh reintroduced the rule of the Āl Suʿūd, and the chiefs of al-Ḳaṭīf gave him the *bayʿa* in 1245/1830. Four years later he ordered his son Fayṣal to al-Ḳaṭīf to suppress dissident elements in Sayhāt supported by the Āl Khalīfa. While there, Fayṣal received news of his father's assassination in al-Dirʿiyya, and as the new Imām he hastened back to the capital.

Muḥammad ʿAlī again adopted a forward policy in Arabia in 1254/1838. Fayṣal was defeated and carried off to Egypt as a prisoner. A Turco-Egyptian force was quartered in al-Ḳaṭīf. Ibn Bishr describes the administration as "[benevolent] rain at first, but in the end hail and thunderbolts". The force, however, stayed only two years. The new head of the Āl Suʿūd, ʿAbd Allāh b. Thunayyān, appointed Fayṣal's slave Bilāl b. Sālim al-Ḥarḳ as his first representative in al-Ḳaṭīf in 1258/1842. In the following year, Fayṣal escaped from Cairo and returned to Arabia, where this second reign of his lasted for the next twenty-two years. The probity of his government was illustrated by his anger over what he at first considered the unjustified action of his Amīr of al-Ḳaṭīf in having the leading Shīʿī there beaten to death, though he later pardoned the Amīr. Fayṣal in at least some of his campaigns was joined by levies of the people of al-Ḳaṭīf.

In 1288/1871 Midḥat Pasha, the Ottoman *Wālī* or governor of Baghdād, dispatched an expedition that landed at Raʾs Tannūra and quickly moved on to al-Ḳaṭīf. During this final Ottoman occupation, al-Ḳaṭīf formed one of the three *ḳaḍāʾ*s of the misnamed *Sandjaḳ* of Nadjd (the *Sandjaḳ*, with its capital at al-Aḥsāʾ, consisted of territory lying east of Nadjd proper). But ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān, who was restoring the fortunes of Āl Suʿūd, swooped down on the Sandjaḳ in 1331/1913 and drove out all the Ottoman garrisons, including the one in al-Ḳaṭīf. Since then the oasis has belonged to the domains of the Āl Suʿūd.

In 1357/1938 oil was first discovered in Saudi Arabia at al-Ẓahrān (Dhahran) not far south of al-Ḳaṭīf. With the expansion of operations a new oilfield was found straddling the oasis, after which it was named the Qatif Field. Large numbers of the people of the towns and villages there work for the oil company or in businesses connected with the oil industry. With production and revenues from oil soaring, the oasis is enjoying new prosperity and undergoing a reshaping of its economic and social life. It still lies half-hidden by its cloak of millions of palms, which produce abundant harvests of dates, a crop supplemented by fruits and vegetables, the variety of which has been diversified by great improvements in the irrigation and drainage systems and by the introduction of modern agricultural techniques.

KATĪN [see KHĀTŪN].

ḲĀṬĪRDJĪ-OGHLĪ MEḤMED PASHA (?1010-79/?1601-68) a statesman descended from the Turcomans of Ḥamīd [*q.v.*] who rose to fame from a career of brigandry. Since he always spoke his local dialect, he acquired the nickname *Türkçe Bilmez* ("he who knows no Turkish") (Muṣṭafā Naʿīmā, *Taʾrīkh*, Istanbul 1280/1863-4, iv, 382). He was the

son of Aḥmed Agha called *ḳāṭirdjī* (the muleteer) on account of his profession. Ḳāṭirdjī Meḥemmed spent his childhood on the family farm in Ağlasun and when he was 19, in 1029-30/1620-21, he joined his father's caravan journeys. He later separated from his father to operate his own caravan between Afyon [*q.v.*] and Čivril and later, after his father's death, he took over his business (Hikmet Turhan Dağlıoğlu and Nuri Katırcıoğlu, *Katırcıoğlu kimdir?*, in *Isparta Halkevi Ün Mecmuası*, iii, no. 25 (Isparta 1936), 356, 357). Ḳāṭirdjī-oghlī came to be much loved in the region, and the people of Isparta sent him to relay their complaints and wishes to a tax-collector who had perpetrated great injustices and irregularities. The tax-collector, however, instead of taking an understanding attitude inflamed the people further by throwing Ḳāṭirdjī-oghlī into prison. Thereupon the people rebelled, freed him from goal, removed the tax-collector and took the administration into their own hands. Ḳāṭirdjī-oghlī let the course of events carry him along. For a while he disappeared and then, in 1057/1647, appeared again operating with the brigand Ḳara Ḥaydar (Ewliyā Čelebi, *Seyāḥat-nāme*, Istanbul 1314/1896-7, ii, 416 ff.). After Ḳara Ḥaydar's capture in 1059/1649, he gathered around himself the scattered groups of brigands and, joining forces with Gürdjü ʿAbd al-Nabī, marched on Üsküdar with the intention of procuring his pardon. However, in the clash with government troops, ʿAbd al-Nabī's hesitancy led to his defeat. He was compelled to retire first to Söğüt (Naʿīmā, iv, 428) and then in the direction of Isparta. Through the medium of ʿĪsā Agha who was at that moment in the town of Čay, he sought a pardon; and through him he received a conciliatory letter from the Grand Vizier Ḳara Murād Pasha indicating that he would be pardoned (*ibid.*, iv, 452). He came to Istanbul towards the end of 1059/1649 and, after an audience with Meḥemmed IV, he received the long-desired pardon and, moreover, was appointed *sandjaḳ begi* of Beyshehir (Wedjīhī, *Ta'rīkh*, Süleymaniye, Hamidiye Library 917, f. 36; Ḳara Čelebi-zāde ʿAbd al-ʿAzīz Efendi, *Dhayl-i rawḍatu'l-abrār*, Istanbul University Library, Turkish manuscripts, 3272, f. 38; Naʿīmā, iv, 452). He was later appointed *beglerbegi* of Ḳarāmān and sent against Abaza Ḥasan Agha. In 1061/1651 he was appointed governor of the *eyālet* of Shahrizūr, but refused the post and stayed in Ḳarāmān. Although this was an act of disobedience, the Grand Vizier was more concerned with the removal of his rival Ipshīr Muṣṭafā Pasha and did not worry him, pretending not to have known of his actions. Shortly afterwards Ḳāṭirdjī-oghlī was appointed to the governorship of his native *sandjaḳ* of Ḥamīd. However, the intervention of Murād Pasha, who was *ḳapudan-i deryā* [*q.v.*] prevented a clash between the two men. After this, Ḳāṭirdjī-oghlī approached the Grand Vizier and, tendering his obedience, received a pardon (*ibid.*, vi, 17, 32). In 1065/1655 he was ordered to the Crete campaign and achieved great distinction in the fighting there between 1067/1657 and 1069-70/1659. In 1077-78/1667 he was on Crete with the title of *beglerbegi* of Ḳarāmān. He was appointed *beglerbegi* of Anadolu on 3 Rabīʿ al-Akhir 1078/22 September 1667 and died in action at the siege of Candia on 13 Rajab 1079/17 December 1668 (ʿOthmān Dede, *Ta'rīkh-i Fāḍil Aḥmed Pasha*, Süleymaniye, Hamidiye Library 909, ff. 44, 45, 62; Rāshid, *Ta'rīkh*, Istanbul 1282/1865, i, 179, 216; Silaḥdār Meḥmed Agha, *Ta'rīkh*, Istanbul 1928, i, 447, 492, 493). Ḳāṭirdjī-oghlī had a son called Shapčī-Bashī Ḥusayn Agha, whose descendants still survive today.

ĶATL (A.), killing, putting to death, used in the two principal meanings of the word, sc. the crime of murder and the punishment of execution.

i. AS A CRIME

(1). In the Ḳur'ān unlawful slaying is forbidden in a series of verses, which date from the second Meccan period to nearly the end of the Medīna period. The passages may be arranged chronologically as follows (cf. Th. Nöldeke-Fr. Schwally, *Geschichte des Qorāns*, i, and H. Grimme, *Mohammed*, ii; when the exact order in the particular periods cannot be ascertained, the passages are here arranged in the order of the sūras and verses):—XVII, 33, 35 (second Meccan period; according to O. Procksch, *Über die Blutrache*, 74, 4, later than VI, 152): "Kill not your children for fear of being brought to want; We will provide for them and for you; verily the killing them is a great sin ... Neither slay the soul which God hath forbidden you to slay unless for a just cause; but whosoever shall be slain unjustly, We have given his next of kin (*walī*) power (to demand satisfaction) but let him not exceed the bounds of moderation in the killing; indeed he is protected"; XXV, 68 f. (second Meccan period):—(and the servants of the Merciful are those) "who slay not the soul, which God hath forbidden to be slain unless for a just cause ... for he who does this commits sins (or: will bring retribution upon himself); his punishment will be doubled on the day of the Resurrection and he shall remain in it covered with ignominy for ever; except him who repents and believes and performs good works; for them God will change their evil deeds into good" ... (here killing and unbelief are considered together so that the question, what happens to a believer who kills unlawfully, is left quite out of the question); VI, 152 (third Meccan period; similar to XVII, 33, 35); IV, 94 f. (about the years 3-5; according to Procksch, *op. cit.*, 80, to be dated between the treaty of al-Ḥudaybiyya and the capture of Mecca): "it is not lawful for a believer to kill a believer unless by mistake (by *khaṭa'*); but if anyone kill a believer by mistake he shall set free a slave who is a believer and pay a *diya* to the next of kin of the dead man, unless they waive it ... ; but if the person slain belong to a people hostile to you, but a believer, a slave who is a believer shall be released; but if he belong to a people with whom ye have a treaty, a *diya* must be paid to his relatives and a slave who is a believer set free; if anyone cannot afford to do this, he must fast for two successive months so that Allāh may

look upon him again . . . ; but if anyone kill a believer deliberately (*ʿamd*) his reward is hell in which he shall remain for ever and Allāh wrathful against him and curse him and shall prepare a great punishment for him". (The true interpretation is undoubtedly this, that every Muslim who kills another Muslim with *ʿamd* is condemned to eternal hell-fire and that Allāh will not accept his repentance, a view which is ascribed to Ibn ʿAbbās, Ibn Masʿūd, Zayd b. Thābit and al-Ḍaḥḥāk; the view held by ʿIkrima and others that the verse refers to the particular case of a *murtadd* who has killed a believer is not to be accepted; this is already a transition to the view that has finally prevailed, which tones down the literal wording of the passage, either by adding with Mudjāhid "unless he repents" or by holding, as has become usual, that Allāh will not leave a Muslim eternally in hell, and can even remit entirely the threatened punishment of hell-fire; but this is only the result of speculation and combination with other passages in the Ḳurʾān (*e.g.* XI, 108-10; XXXIX, 54) and is therefore to be rejected; IV, 33 f. (from about the same time; similar to IV, 95); LX, 12 (probably dates from soon after the treaty of al-Hudaybiyya; similar to XVIII, 33).)

There are two further passages, in which it is asserted that Allāh forbade the Jews to kill: II, 78 ff. (from about the first half of the year 2 A.H.) and V, 35 (probably of the year 6 or 7; according to Grimme, to be dated before the battle of Badr).

There are also a number of verses in which killing is not exactly forbidden but is more or less strongly deprecated and represented as a mark of the unbeliever, just as committing no murder is a sign of the believer, *e.g.*, LXXXI, 8 f. (first Meccan period); II, 28 (probably third Meccan period; according to Grimme, Medinan, before the battle of Badr); VI, 138, 141; XVI, 61; XL, 26 (same time); VIII, 30 (after the battle of Badr); V, 33 (shortly before the capture of Khaybar). In numerous passages in this connection the unbelievers are reproached with the slaying of prophets, *e.g.* II, 58, 81, 85 (from the first half of the year 2); IV, 154 (after the outbreak of open war with the Jews of Medīna); III, 177, 180 (probably soon after the battle of Uḥud); XX, 108 (shortly before the war with the Banu 'l-Naḍīr?); V, 74 (later Medinan period).

(2). Supplements to the Ḳurʾān passages from the *Sīra*, accounts of the life of Muḥammad. In the so-called ordinance of the community, which dates from the first Medinan period, it is laid down that no believer may kill a believer on account of an unbeliever; in another passage it is said: "If anyone kill a believer and is convicted, then vengeance for bloodshed must be done, unless the *walī* of the man slain waive it". In all probability Muḥammad had in mind in the murderer a non-Muslim member of the community (Procksch, *op. cit.*, 71): this agrees with the development given above. In the *bayʿa*, the initiation into the community, the initiate had to pledge himself, among other things, not to commit an unlawful act of slaying (cf. Ḳurʾān, LV, 12). Once Muḥammad cursed a murderer [see ḲIṢĀṢ]. In the so-called first Kaʿba oration (of the year 630), the genuineness of which is not absolutely certain, however, on every point and which seems doubtful on this particular point, there appears the by no means exactly defined conception of *Ḳatl shabah ʿamd* (see below, 5c); Muḥammad is also said to have declared there that all blood-guilt attached to a Muslim dating from the period of paganism was to be cast off, which extends the corresponding passage of the ordinance of the community. Finally, it is to be mentioned that the *Sīra* knows of several cases of deliberate and of unpremeditated slaying; so far as they are liable to be punished, they are dealt with in the article ḲIṢĀṢ.

(3). Comparison of the views of authoritative circles in the Muslim community in the older period as preserved in *Ḥadīth*. It is obvious that in the *Ḥadīth* also the slaying of a Muslim is strictly forbidden; by the adoption of Islām (and of monotheism at all) life and property are protected. The life and property of a Muslim are as inviolable (*ḥarām*) as the day of sacrifice in Dhu 'l-Ḥidjdja in the sacred territory of Mecca (al-Bukhārī, *Diyāt*, *bāb* 8, etc.). All blood-guilt, which has weighed a man down from an earlier period, is thus wiped out by the adoption of Islām, even if the crime was committed just before conversion to Islām. Only if a Muslim kills another, or, to be more exact, if he commits a crime worthy of death, can he be slain. Everyone is perfectly agreed that killing with *ʿamd* is one of the deadliest sins (*kabāʾir*); it is usually considered the gravest sin, along with the *shirk* (polytheism, *e.g.* al-Bukhārī, *Diyāt*, *bāb* 1, 2), whether it is asserted of killing with *ʿamd* in general or of the killing of newborn girls usual among the heathens. Therefore many *ḥadīths* express disgust at killing; *e.g.* "the slaying of a Muslim is to Allāh like the cessation of the world" or "the cessation of the world is even less to Allāh than this"; "if someone is killed in the east and another in the west approves of it, he is guilty of the person's blood"; "man is a work of Allāh; cursed be he who destroys Allāh's work". The first murder which introduced killing into the world is the subject of special condemnation: Cain is accessory to every later murder. Murder is punished in the next world as well as on earth; on the Day of Judgment cases of the shedding of innocent blood will be judged first. As to the punishment itself, a whole stratum of *ḥadīths* reflects the already mentioned view of Ibn ʿAbbās and others regarding the eternalness of punishment in hell for slaying with *ʿamd*; *e.g.* "whosoever sheds blood in an unlawful way, for him there exists no way for escape"; "whosoever contributes, though only by a word, to the slaying of a Muslim must despair of the mercy of Allāh". In several passages the deliberate murder of a Muslim is considered equivalent to unbelief (*ḥadīths* in which a warning is simply uttered against murder being a sign of the unbeliever are, of course, not dealt with here). It is even said: "if two Muslims attack one another with swords and one kills the other, both go to hell (unless it was a case of legitimate self-defence), the slayer for his deed and the slain because he wished to kill the other" (see *e.g.* al-Bukhārī, *Diyāt*, *bāb* 2); and: "if all the inhabitants of heaven and earth together had killed someone, they would all go to hell". In these two passages it is not exactly demonstrable that eternal punishment in hell is meant, but it is very probable. In several of the traditions mentioned, Ibn ʿAbbās appears as the authority. Such *ḥadīths* were naturally rendered harmless by "interpretation" by the representatives of the other view, if they were not entirely suppressed, which did happen to not a few. Thus the description of deliberate murder as unbelief is sometimes interpreted to mean that it is a very grievous sin and sometimes taken as a reference to the refusal of the protection of Islamic law, which occurs in both cases, to the life of the slayer or of the unbeliever. This was not found sufficient, however, but traditions were put into currency to prove the contrary, namely that Allāh would accept the repentance of a murderer,

even if he had committed several murders; one of these traditions is provided with a grotesque story, the object of which is quite apparent, as corroboration. In one tradition the *kaffāra*, especially the liberation of a slave, is represented as a means to save the murderer from the merited punishment of hell, obviously by someone who demanded it even in the case of *ḳatl* with *ʿamd* (see below *sub* 6a). It is even asserted in public controversy against the views of the other side that after the Day of Judgment no Muslim will go to hell and that, on the contrary, all sins will be forgiven them. The killing of a *muʿāhad*, a non-Muslim under the protection of the Islamic state, is threatened with punishment in the next world (*e.g.* al-Bukhārī, *Diyāt*, *bāb* 30; al-Dārimī, *Siyar*, *bāb* 60; the Ḳurʾān is silent on the question); but, as might be expected, the view is very rarely expressed that this punishment is eternal. The prohibition of suicide, which we do not find laid down in the Ḳurʾān, is given in the *Ḥadīth*, and the suicide is threatened with eternal punishment in the next world.

As an appendix to the above we may briefly mention the connection of several kinds of animals with *ḳatl*, which is also dealt with in tradition. Muḥammad had, as is related, recommended the slaughter of dogs but later withdrew the order, although the dog always remained subject to certain exceptional regulations (cf. KALB); the *sunna* further orders the killing of the *wazagh*, a kind of lizard, but if possible it should be done with one blow: on the other hand the killing of ants and of cats is forbidden (among the authorities for this last tradition is Abū Hurayra); on the killing of snakes cf. Guillaume, *The Traditions of Islam*, 116 f.

As regards the value of the traditions just quoted, the genuineness of none of them can be proved; while the falsity of those, which seek to save the murderer of a Muslim from hell, is apparent, it is also probable of those which hold the contrary view.

(4). The controversy regarding the punishment of the murderer of a Muslim centres round a passage in the Ḳurʾān, which in itself could and must form a foundation for it, and is in part at least independent and original. This controversy and the conception of *ḳatl* in general are, however, very closely connected with the disputes aroused by the Khāridjīs, Ḳadarīs and Muʿtazilīs; for details see these articles; here it is sufficient to recall the following questions:—"is the committing of deadly sins—and killing with *ʿamd* is certainly one of them—unbelief?"; "Does man create his own actions, including sins, himself, or do they happen through *ḳadar*?"; and "Can man by his intervention interfere with Allāh's decision, for example, by killing another, shorten the period predestined for the latter's life?" We have more than one example of these questions being applied to *ḳatl*, and they have been cited in discussing *ḳatl* (see *e.g.* Goldziher, *Vorlesungen über den Islam*[1], 98 f.; 2nd ed., 92 f., Fr. tr. *Le dogme et la loi d'Islam*, 78-9). But the Muʿtazilī view of the eternalness of hell-punishment for him who commits a deadly sin and does not repent, is specially important in this connection; al-Zamakhsharī gives an explanation of the verse of the Ḳurʾān in question from this point of view. Finally, the consensus of orthodox opinion agreed that the deliberate killing of a Muslim is certainly a deadly sin, but the slayer, on the other hand, if he repents and voluntarily submits to the punishment prescribed, will not be further punished in the next world and, even if he does not repent, will in no case remain in hell eternally (agreement was reached on this point even before the rise of the *Fiḳh*-schools; therefore there is no *ikhtilāf* of the *madhāhib* on this question); this view has found its way into all textbooks of *Fiḳh* and of doctrine.

(5). A statement of the prevailing Ḥanafī views on killing. *Ḳatl* in the *fiḳh* is the act of a man whereby the life of a fellow-man is brought to a close (the death need not immediately follow the act). It may be qualified by any of the five "legal categories": duty or necessity (*wādjib*), *e.g.* the killing of the *murtadd*; recommended (*mandūb*), *e.g.* when the *ghāzī* kills his unbelieving kinsmen if they insult Allāh or his Prophet; permitted (*mubāḥ*), *e.g.* when the Imām kills the unbelieving prisoner of war, in the case when the reasons for killing him exactly balance those for granting his life; killing in self-defence is also allowed, *i.e.* in defending oneself against an illegal attack on one's life, person or property, in defending oneself or someone who comes to help, if the attack cannot otherwise be averted (on further questions there is *ikhtilāf*, also on the question whether a man who surprises another in adultery with his wife or endeavouring to see into his harem, and kills or mutilates him, is acting legitimately or not; one tradition on the subject is interpreted in different ways); disapproved (*makrūh*), *e.g.* when the *ghāzī* kills his unbelieving kinsmen without their having insulted Allāh or his Prophet; illegal and therefore forbidden (*ḥarām*).

Illegal killing as the result of actions in themselves legal may take place in five ways:

(a) as *ʿamd*, *i.e.* someone wilfully makes another the direct object of an action in general fatal, so that the other dies as a result; according to one view, the intention of killing is necessary for the conception of *ʿamd*, which, however, is always presumed in the case of any act generally fatal in its result, which is illegally inflicted on another. Thus for example, any one, who strikes a blow at the hand of another with an instrument adapted in general for killing, but inadvertently hits his neck and kills him, is *ceteris paribus* unanimously regarded as equally guilty with the man who strikes another in the neck with the same instrument, wilfully intending to kill him and slays him. This killing is a sin (*maʾtham*) and in general is punished by *ḳiṣāṣ*, or else the slayer is bound to pay the heavier *diya* and to lose any possible legacy from the deceased to himself;

(b) as *khaṭʾ* (or *khaṭaʾ*), *i.e.* there is no intention of committing an act illegally on the other as in the case of (a), while the action itself is premeditated: two kinds are distinguished, according as the *khaṭʾ* (mistake or misadventure) which shows that the killing is not wilful, is in the intention of the doer (*fi 'l-ḳaṣd*) or in the carrying out of the action (*fi 'l-fiʿl*). The former is the case when someone treats another as a wild beast or a *ḥarbī*, (an infidel not enjoying the protection of the Islamic state, against whom the *djihād* is to be waged) the killing of whom is not illegal, and kills him; the latter when someone unlucky hits another, while shooting at a target or at a *harbī*, so that he dies, or strikes at the hand of another person but inadvertently hits the neck of a third person and kills him; this killing is not sin but brings with it (without *ḳiṣāṣ*) the obligation upon the *ʿāḳila* of the killer to pay the smaller *diya* and to lose any claims to any inheritance from the deceased as in (a); besides the obligation of the killer to perform the *kaffāra*;

(c) as *shabah* (or *shibh*) *ʿamd* = similar to *ʿamd*, *i.e.* someone intentionally makes another the direct object of some action, not always but sometimes fatal, and death results. Actions which experience has

shown not to be fatal at all are thus quite excluded, such as striking the hand with a reed pen; if anyone dies as a result of such an action as this, it is an unfortunate accident, which is not followed by any penal consequences. This killing is a sin and brings with it (without *ḳiṣāṣ*) the obligation upon the *ʿāḳila* of the slayer to pay the heavier *diya* and to lose any possible inheritance from the deceased as in (a), and in addition the slayer is bound to perform the *kaffāra*. This category only exists in cases where death actually results; in cases of bodily injury, which by the way, are similarly classified, the action is regarded as *ʿamd*;

(d) as *djārī madjrā 'l-khaṭ'* (or *mudjrā madjrā 'l-khaṭ'* or *ḳā'im maḳām al-khaṭ'*) "equivalent to *khaṭ'*", *i.e.* the factor of deliberation is lacking in the action (and also the intention of directing the action illegally against another) in the circumstance of (b) and (c), for example: someone falls upon another in his sleep or falls from a roof upon him and kills him; the legal results are the same as in (b);

(e) as *ḳatl bi-sabab* "indirect killing", *i.e.* someone brings about the death of another without doing anything directly against him; *e.g.* he digs a well and someone falls into it and dies as the result; sometimes this category is treated as a subdivision of (d); but it is a matter of indifference, whether the act, which indirectly results in the death of another, is deliberate or not, intentional or unintentional; even if the action has been planned in some very cunning way, such as setting a savage beast on another person with the intention of causing his death, it does not alter the situation. The legal consequences are in any case limited to the obligation upon the *ʿāḳila* of the doer to pay the lighter *diya*; larger works on *fiḳh* usually discuss very fully the question what acts are to be considered direct causes of death and which are *ḳatl bi-sabab* and in which there can be no question of a causing of death so that no legal consequences result.

Two cases are especially dealt with in the *fiḳh* books: (α) The causing of a premature birth or abortion and (β) killing through giving false evidence.

(α) If in causing an abortion or premature birth, the embryo—which must be sufficiently developed to be of human form—is brought into the world dead or dies after the birth or the mother dies, it is not a case for the application of *ḳiṣāṣ*; there is in any case no *ḳatl ʿamd* in the mother whose killing is dealt with under the above rules and the embryo before completion of birth is legally not in full possession of its powers but is usually regarded as a limb of the mother. Hence we have the following law: if the head of a child appears out of the mother's womb at birth and the child cries (and is therefore certainly alive) and then someone cuts off its head, it is not a case for *ḳiṣāṣ* and only the punishment prescribed for producing an abortion is to be inflicted. Different amounts are to be paid for the embryo according to the different cases, and if it comes alive into the world and then dies the person who causes its death is liable to *kaffāra*; he also loses any inheritance that might have come to him.

(β) If anyone is killed on evidence which shows that a crime deserving death has been committed and then the witnesses recall their evidence or in other ways it is proved that their testimony was false, *ḳiṣāṣ* cannot be executed on the witness; the *diya* must be paid, the heavier if the false evidence was deliberately given, the lighter if otherwise.

(6). We may add the following—taking only the most important points—to the above exposition of the Ḥanafī system, with reference to *ikhtilāf* (difference of opinion among the schools).

(a) On *ʿamd*: the difference of opinion within the Ḥanafī school already mentioned, regarding the part of the intention to kill in *ʿamd* is also found outside the Ḥanafī school; among the Shāfiʿīs the view which does not demand the existence of the intention to kill has become predominant, and the evidence for the other views is sometimes interpreted as meaning a presumption of intention. Abū Yūsuf and al-Shaybānī, in agreement with Mālik, al-Shāfiʿī and Aḥmad b. Ḥanbal, assume *ʿamd* if the action is as a rule fatal; Abū Ḥanīfa, on the other hand, limits it to the use of a weapon or of a thing which can be used like a weapon to cut off limbs; among such he includes fire; deliberate killing, for example with a large unsharpened stone, or a big stick, which in the ordinary way would kill, or by drowning in water, which would be generally regarded as of sufficient depth to do so, is therefore considered by the former as *ʿamd*, but by Abū Ḥanīfa as *shabah ʿamd*, relying on a passage in the so-called first temple speech of Muḥammad, which the champions of the other view naturally interpret otherwise, and this view was later considered the better by the Ḥanafīs. The qualification of the various actions generally differs sometimes considerably and the Ḥanafīs often make use of *istiḥsān*, exercise of discretion. In the Mālikī and Ḥanafī view no *kaffāra* is to be performed for *ʿamd*; al-Shāfiʿī, on the other hand, demands it if the *ḳiṣāṣ* is not executed and both views are given on the authority of Aḥmad b. Ḥanbal.

(b) On *khaṭ'*: that *khaṭ'* is not a sin is more exactly explained to mean that it is neither permitted nor forbidden, but that this killing is rather *fiʿl al-ghāfil*, "action of a thoughtless person", and is to be judged in the same way as the act of a mentally defective person or of an animal. Except in the Ḥanafī *madhhab*, categories (d) and (e) [sub 5] are not distinguished from *khaṭ'* which also was the earliest Ḥanafī view (*ZDMG*, lviii, 338) and *ḳatl bi-sabab* has generally the same legal consequences as *khaṭ'*; we thus have three kinds of *ḳatl*: *ʿamd*, *shabah ʿamd* and *khaṭ'*, of which *shabah ʿamd* is considered to be composed of *ʿamd* and *khaṭ'*.

(c) On *shabah ʿamd*: this category is also called *ʿamd khaṭ'*, *khaṭ' ʿamd* or *khaṭ' shabah ʿamd*; in contrast to it, *ʿamd* is also called *ʿamd maḥḍ* and *khaṭ'* also *khaṭ' maḥḍ* (pure *ʿamd* or *khaṭ'*); the application of *ḳiṣāṣ* is said to be permissible by al-Shāfiʿī if the killer, for example, repeats the blow with an instrument not normally adapted for killing so frequently that the person attacked dies; the act is then considered *ʿamd*; one of the two opinions handed down on the authority of Abū Yūsuf and al-Shaybānī is to the same effect while the view that became predominant in the school was to the contrary. Mālik allows *ḳiṣāṣ* in *shabah ʿamd* in general.

(d) On *ḳatl bi-sabab*: Mālik, al-Shāfiʿī and Aḥmad b. Ḥanbal demand *kaffāra* in addition, if the placing of the cause of the death was illegal.

(e) Different views also prevail as to the amount to be paid for the killing of an embryo.

(f) On causing death through false witness: if the false evidence was deliberately given, according to al-Shāfiʿī and the better-known opinion of Mālik, *ḳiṣāṣ* can be executed on the witnesses.

Notes on the question of permission, request, compulsion and assistance in illegal killing.

(*a*) If someone kills another by his request or with his permission there is neither *ḳiṣāṣ* nor obligation to pay *diya*.

(*b*) No definite punishment is laid down for the case of a request to kill someone; such a request does not mean the exculpation of the slayer; only if the person requested is a minor or a slave claims may be made from the *ʿāḳila* of the minor, or from the proprietor of the slave.

(*c*) A forces B to kill C; then, according to Abū Ḥanīfa, the *ḳiṣāṣ* is executed on A, according to Mālik and Aḥmad b. Ḥanbal on B; as to al-Shāfiʿī's view, there is no doubt that A is liable to *ḳiṣāṣ*; as regards B both possible views are transmitted, of which the one that ultimately became predominant in the school makes him also liable to *ḳiṣāṣ*. Mālik further makes A also liable to *ḳiṣāṣ* if the compulsion comes from a person having authority, or from a master to a slave.

(*d*) A holds B and C kills him while he is held; in this case Abū Ḥanīfa and al-Shāfiʿī make C liable to *ḳiṣāṣ* and A to *taʿzīr*, which is more definitely defined as imprisonment. According to Mālik, both are to be regarded as culprits and therefore liable to *ḳiṣāṣ* if the holding was necessary to facilitate the slaying and B was not able to escape after being held. Aḥmad b. Ḥanbal's opinion is given in two versions; according to the one, *ḳiṣāṣ* is executed on C and A is punished with imprisonment for life, according to the second opinion, A and C are both liable to *ḳiṣāṣ*.

ii. AS PUNISHMENT

The punishment of death may be described quite generally as *ḳatl*; in the following account cases in which it is applied are given seriatim; in contrast to *radjm* and *ṣalb* (cf. below) *ḳatl* is also used in the narrower sense of execution with the sword.

(1). In the cases of illegal killing described in detail above, the nearest relative of the dead man, who in this capacity is called *walī al-dam*, is entitled to kill the culprit in retribution if certain definite conditions are fulfilled. This punishment is called *ḳiṣāṣ* or *ḳawad*, names which also cover retribution exacted for wounds which are not fatal; for further information, see ḲIṢĀṢ.

(2). There are special regulations regarding sorcerers (*sāḥir*), about whom there are also various traditions. Mālik, al-Shāfiʿī and Aḥmad b. Ḥanbal recognise sorcery (*siḥr*) as an actual force. Abū Ḥanīfa disputes this, but there is a consensus of opinion that it is forbidden to study it; it is even described as unbelief (*kufr*) almost as a general rule. Māik and Aḥmad b. Ḥanbal say that the sorcerer is to be killed with the sword simply for studying, teaching and practising magic; al-Shāfiʿī limits this punishment to the case in which someone has been killed by sorcery (*i.e.* he makes it a case for *ḳiṣāṣ*, which in practice is only justified by the confession (*iḳrār*) of the guilty person; while the punishment in Abū Ḥanīfa, Mālik and Aḥmad b. Ḥanbal is regarded as *ḥadd*); two different, more lenient views are credited to Abū Ḥanīfa. Opinions differ on particular questions, such as whether the conversion of the sorcerer effects a remission of the punishment, whether a woman is to be punished equally with a man, how sorcerers of the *Ahl al-Kitāb* are to be treated, how far soothsaying is to be considered sorcery.

(3). The punishment of death by stoning (*radjm*) —in certain circumstances also by the sword (*ḳatl*)— occurs as *ḥadd* in certain cases of immorality; on this see ZINĀʾ.

(4). Highway robbery (*ḳaṭʿ al-ṭarīḳ*) may also in certain circumstances be punished with death. The authority for this is Ḳurʾān V, 37 f. (from about the year 6 or 7, before the capture of Khaybar; Grimme puts the verse before the battle of Badr): "The punishment of those who fight against Allāh and His prophet and create ruin upon the earth is that they shall be slain or crucified or have their hands and feet cut off on the opposite sides or be banished from the country. This is their humiliation in this world and in the next world they shall be severely punished—unless they repent before ye have them in your power . . . ". It can be asserted with certainty that this refers to the unbelievers, very probably to the Jews; ruthless war is ordered to be waged on them and their repentance is the adoption of Islam. There are still traces of this interpretation in the commentaries. But in general this passage is connected with Muḥammad's attitude to certain *murtadd*s which will be dealt with in section (5); this cannot be correct, if only because the procedure there practised does not entirely conform to these rules, so that they were forced to restore harmony in a different fashion. Those *murtadd*s were considered as highway robbers, from the point of view of the later definition rightly and only in this way could a law for the punishment of highway robbers be found in the Ḳurʾān.

The more important laws of the *Sharīʿa* are the following. Only such persons as are adults in full possession of their faculties and who are able to be dangerous to travellers are to be considered highway robbers. According to Abū Ḥanīfa, highway robbery can only take place in the open country, according to Mālik, al-Shāfiʿī and Aḥmad b. Ḥanbal in the town also. Mālik gives the Imām—and this is certainly the correct interpretation of the passage in the Ḳurʾān, which is also found in the commentaries—absolute freedom in the choice of punishment, even in the contingency of a cumulative application, whatever form the robbery may have taken; but if the person concerned has killed someone (in this connection killing implies a murder to which *ḳiṣāṣ* might be applied), he must at least be executed with the sword The three other Imāms grade the punishment to fit the different forms of robbery on the highway; according to Abū Ḥanīfa, the criminal is put to death if he has caused the death of his victim; if he has also robbed him (and in such a way, it must always be understood, that the *ḥadd* for theft can be carried out; see SĀRIḲ), he may be further punished by cutting off his hands and feet on alternate sides and with crucifixion (*ṣalb*) which in that case takes the place of killing with the sword; if he has only committed a robbery, we have only the cutting off of hands and feet on alternate sides; according to al-Shāfiʿī and Aḥmad b. Ḥanbal, he is killed, if he has killed his victim; if he has also committed a robbery, he is crucified after being put to death; if he has only committed a murder, he is punished by cutting off his hands and feet on alternate sides; if he has only made the neighbourhood unsafe, then, according to Abū Ḥanīfa, al-Shāfiʿī and Aḥmad b. Ḥanbal, he is put in prison; whether this must be done in another place is a debated point. In Abū Ḥanīfa and Mālik (also in some Shāfiʿīs, but their view is rejected by the school) crucifixion consists in the criminal being tied alive to a cross or a tree and his body ripped up with a spear so that he dies, and this is certainly the more original form; according to al-Shāfiʿī and Aḥmad b. Ḥanbal, he is first killed with a sword and then his corpse is ignominiously exposed on a tree or cross. All these punishments are *ḥadd* and a right of Allāh; therefore any renunciation by the *walī al-*

dam of the *ḳiṣāṣ* is of no avail even though it is he who has the right to carry out the *ḳatl*. If the criminal repents before he falls into the hands of the authorities (what exactly is meant by repentance is disputed) these *ḥadd* punishments are dropped; but claims by individuals to *ḳiṣāṣ* etc. can still be enforced against him.

(5). The *murtadd*, that is the renegade from Islām, is liable to the death-penalty if his apostasy is proved. If we leave out the passages dealing with the *munāfiḳ*s [*q.v.*] who are separately dealt with—their execution is, however, described under certain conditions in Ḳur'ān, IV, 91—there is no such law in the Ḳur'ān referring specially to the *murtadd*, although XVI, 108 (third Meccan period), II, 214 (of the year 2), III, 80-4 (Medīna; placed by Grimme shortly before or after the battle of Uḥud), 102 (soon after the battle of Uḥud), IV, 136 (of the same period) threaten the eternal punishment of hell for all those who apostasise from Islam and do not repent, as well as for all unbelievers, and in III, 95 f., 142, and IX, 67, a warning against apostasy is uttered. Among the traditions we find in various forms the story that Muḥammad, contrary to the rules of the *Sharīʿa*, cruelly mutilated and killed some *murtadds*, who had killed one or more of his herdsmen and driven away the camels, but the tradition is probably correct just for this reason. This contradiction was felt and an endeavour was made in the *ḥadīth*s to justify the cruelty of the punishment, and even the text was altered. Of ʿAlī also a cruel act, of another kind, however, is recorded in a similar case, but Ibn ʿAbbās is said to have protested against it. Two *murtadds*, each of whom had killed a Muslim, were executed by Muḥammad's orders after the capture of Mecca; a third man, against whom there was nothing but his apostasy, was also placed on the list of the proscribed; his foster-brother ʿUthmān, however, obtained security (*amān*) for him although Muḥammad would gladly have seen someone kill him before immunity was granted; he later became a Muslim again. There is also a saying of Muḥammad's: "Slay anyone who changes his religion" or "He who secedes from you shall die", and others similar, *e.g.* that the blood of a Muslim could only be shed for apostasy, *zinā* and *ḳatl ʿamd*; there is also a story that Muʿādh b. Djabal killed a *murtadd* because Allāh and His Prophet had so ordained; Muḥammad is also said to have ordered that conversion should first of all be attempted and a period of three days allowed for this; but all this can hardly be genuine. There are also the traditions regarding the *Ahl al-Ridda* [see RIDDA] who refused the *zakāt* and were treated as apostates by Abū Bakr. The tradition "He who is a good Muslim will not be punished for his sins from the pagan period, but he who is a bad Muslim will have them counted against him" does not refer to the *murtadd*, as it is usually said to do.

The punishment of death laid down by the *Sharīʿa* for the *murtadd* is sometimes described as *ḥadd*, sometimes not; in the latter view he is simply killed as an unbeliever (*kāfir*) and the punishment need not be carried out in every individual case. Only an adult in full possession of his faculties and not acting under compulsion can become an apostate from Islam; opinions are divided regarding a man who apostasises while intoxicated or a minor (on the verge of his majority) capable of discernment (*murāhiḳ*, *mumayyiz*). There is also difference of opinion regarding the attempt at conversion and the granting of a period, usually fixed at three days, for reflection. If the *murtadd* does not repent, he is to be beheaded with the sword; torture and cruel methods of execution are forbidden. According to al-Shāfiʿī, his punishment is left to his owner, if he is a slave. Abū Ḥanīfa and his school limit the punishment of death to male apostates and the consensus of opinion excludes the minor; a woman (and also a minor) is imprisoned and beaten every three days till she repents; according to Abū Ḥanīfa (contrary to Abū Yūsuf and al-Shaybānī) she may also be made a slave and this is recognised as right by the school. Anyone who puts to death a *murtadd* of whatever kind without powers granted by the authority, is generally liable not to *ḳiṣāṣ*, but only to *taʿzīr*. The same rules generally hold for repeated apostasy.

Similar to the punishment of the *murtadd* is that of the *zindīḳ*, *i.e.* anyone who, professing to be a Muslim, is really an unbeliever or anyone who belongs to no religion (cf. Massignon, *Al-Hallâdj*, i, 186 ff.). The conversion of a non-Muslim to another non-Muslim religion is similarly dealt with, although such a one is not called *murtadd*. He can only escape punishment by adopting Islam; on the whole of this cf. Goldziher, *Muhammedanische Studien*, ii, 215 f., Eng. tr. ii, 199 ff.

How exactly one becomes an unbeliever and therefore a *murtadd* is disputed in particulars, especially the question how far this is the case with irreverent utterances regarding Allāh or one of His prophets; there are various special enactments regarding the latter, which threaten the death penalty to non-Muslims and in part allow a Muslim no remission of punishment if he recalls the words.

For further information, see MURTADD.

(6). There is no law in the Ḳur'ān for dealing with a man who omits the *ṣalāt* (ritual prayer) (*tārik al-ṣalāt*), where its performance is, on the other hand, often strictly enjoined, and not a single unequivocal *ḥadīth* on the subject can be found—quite apart from any question of genuineness. The *Sharīʿa* lays down the law as follows. Anyone who does not perform the *ṣalāt*, as in duty bound, without denying its obligatoriness (anyone who does this is *murtadd*) and has no—even invalid—excuse for this, then according to Mālik, al-Shāfiʿī and the more popular of the two views credited to Aḥmad b. Ḥanbal, if he does not atone, *i.e.* makes good his omission and says he will never commit the fault again, he is to be executed with the sword. This punishment is also sometimes described as *ḥadd*. According to Abū Ḥanīfa, the culprit is imprisoned till he again performs the *ṣalāt*. In all these views he is considered a Muslim, while the other view attributed to Aḥmad b. Ḥanbal deals with him entirely as an unbeliever, *i.e.* a *murtadd*; but these regulations are modelled on those for apostasy (cf. the remarks on the *Ahl al-Ridda* above).

There are two more cases in which the suppression (*ḳitāl*) of the enemies of orthodox Islam is prescribed; killing, of course, plays the main part and therefore we must discuss this aspect of the process here.

(7). Firstly, the fighting of the *bughāt* is prescribed. It is said in Ḳur'ān, XLIX, 9 (late Medinan period): "If two parties of the believers contend with one another, make peace between them; but if one oppresses the other (*baghat*—from which *bughāt* is the plural of the active participle), fight against the party which oppresses until they again obey Allāh's command; and if they do this, make peace between them with equity and act with justice" (this refers to a quarrel among the Anṣār). Oppression is often forbidden and disapproved of elsewhere. But Muḥammad at any rate did not know the later conception of *bughāt*, although its development begins at a point closely connected with this. Some traditions on the

bug͟hāt are in agreement with the legal enactments. The *S͟harīʿa* understands by *bug͟hāt* sectarian-minded Muslims who reject the authority of the Imām, are able-bodied, so that they might offer resistance, and justify their attitude, although erroneously, with their dogmatic conviction (they are to be distinguished from highway robbers, for example—individual *bug͟hāt*, who are guilty of breaches of the law are punished like them—on the one hand, and unbelievers on the other). If they do not attack the orthodox community, they need not be attacked; otherwise their suppression is a duty of the Imām (the head of the Islamic community) and a *farḍ al-kifāya* for the Muslims [see FARḌ]. This punishment is also sometimes called *ḥadd*. In general, the rule is that only participants in the actual battle can be killed during the fighting. Fugitives, wounded, those who surrender and prisoners, as well as women and children, cannot be put to death. According to Abū Ḥanīfa, the Imām may kill a prisoner if he knows that he would again join the *bug͟hāt* if spared; according to him, a captured slave who has been fighting by the side of his master can also be killed.

(8). Regarding *Dj̲ihād* [*q.v.*], there are also traditions regarding the following regulations. If the unbelievers with whom war is being waged are not among those from whom the *dj̲izya* can be taken—and who exactly those are is a matter in dispute—the men are killed, if they do not adopt Islam and the women and children enslaved. If, on the other hand, they refuse Islam and will not pay the *dj̲izya*, they are to be fought. All able-bodied men can be killed so long as they are not taken prisoners; men incapable of bearing arms, as well as women and children, cannot in general be so dealt with unless they take part in the fighting or assist in it some way; they are to be taken prisoners and enslaved. The free, able-bodied prisoners may be (*a*) executed with the sword if they will not now adopt Islam; (*b*) made slaves; (*c*) exchanged for Muslim prisoners; (*d*) ransomed; or (*e*) set free without a ransom being paid (in all these cases by the Imām). Anyone who kills a prisoner without authority is only punished with *taʿzīr*.

Every unbeliever who does not pay the *dj̲izya* or does not belong to a people which has a treaty with the Muslim community or is not a *mustaʾmin* [see ḲIṢĀṢ] is *ḥalāl al-dam* (to be killed with impunity) and may at any time be killed by any Muslim without his being liable to *ḳiṣāṣ* or to pay any *diya* or perform *kaffāra*. This enactment is only the natural consequence of the *dj̲ihād* law and Muḥammad himself not infrequently made use of it.

(9). The views of the S͟hīʿīs on all the points dealt with above agree almost entirely with one or other of the Sunnī views.

(10). The infliction and execution of the death penalty was in practice very often in strong contradiction to the regulations laid down in the *S͟harīʿa* [see ʿADHĀB; Snouck Hurgronje, *Verspreide Geschriften*, ii, 200, etc.]. The historians afford many examples for the actual practice and so do accounts of European travellers; on the conditions in the empire of the caliphs in the 4th/10th century, see Mez, *Die Renaissance des Islâms*, 347 ff., also Massignon, *Al-Hallâdj*, i, especially 220 ff., 292 ff.; on those in Egypt in the first half of the 19th century see Lane, *Manners and Customs of the Modern Egyptians*, end of the chapter on *Religion and Law*; on those in Persia in the same period see Polak, *Persien*, i, 328 f.; on those in the Ottoman empire of the 18th century see Mouradgea d'Ohsson, *Tableau Général de l'Empire Ottoman*, esp. vi (1824), 244 ff.; for Turkey the *Ḳānunnāmes* [*q.v.*] are also useful (cf. *Mitteilungen zur osmanischen Geschichte*, i, 13 ff.); among the published sources quoted there are of special importance: Digeon, ii, 245, 262; v. Hammer, *Staatsverfassung*, i, 125, 133, 143-50; *TOEM*, iii (1328), Appendix i, 27 f., ii, 1-4, 7, 9; *MTM*, i/2, 341 f.) and from the *Ḳānunnāme* itself (edited there; 19-21, 32-4).

Bibliography: The *fiḳh*-books, the works given in the article ʿADHĀB, especially Juynboll, *Handbuch des islāmischen Gesetzes*, 284-309, and the literature there given; the articles MURDER and EXECUTION in T. P. Hughes, *A Dictionary of Islam*. Besides the articles already referred to, the article ʿADHĀB and those dealing with the Arabic expressions not explained above should be consulted; and see further Bahnasī, *al-ʿUḳūba fi 'l-fiḳh al-islāmī*², Cairo 1961; L. Bercher, *Les délits et les peines de droit commun prévus par le Coran*, Tunis 1926 (excellent work); Arévalo, *Derecho penal islamico, escuela malekita*, Tangier 1939; Mensing, *De bepaalde straffen in het Hanbalitische Recht*, Leiden 1936; Anderson, *Homicide in Islamic law*, in *BSOAS*, xiii/4 (1951), 811-28; Gräf, *Probleme der Todesstrafe im Islam*, in *Z. f. vergl. Rechtswiss.*, lix (1957), 83-122; A. Turki, *Situation du "tributaire" qui insulte l'Islam*, in *Stud. Isl.*, xxx (1969), 39-71; J. SCHACHT)

ḲAṬRĀN (*ḳiṭrān*, *ḳaṭirān*) is 1. tar obtained by dry distillation (*taṣʿīd* "vaporisation") of organic substances; 2. the residuum left after the distillation of tar, *i.e.*, liquid pitch; 3. cedar-oil (in Dioscorides κεδρία, Ar. *ḳadriya*) extracted from cedarwood. The substance is obtained from several kinds of coniferous trees, especially the Cedrus Libani (Ar. *s͟hadj̲ar al-s͟harbīn*), but also from the Oxycedrus L. and various kinds of cypresses. The substance was already widely used in antiquity for many technical and therapeutic purposes and was not unknown in ancient Arabia: scabby animals were smeared with *ḳaṭrān* (see the references in M. Ullmann, *Die Medizin im Islam*, 1970, 217). On the mention of *ḳaṭirān* in Ḳurʾān, XIV, 50, see A. Jeffery, *The Foreign Vocabulary of the Qurʾān*, 241 ff. *Ḳaṭrān* smells strongly; as a medicine, it is hot and dry in the third degree; applied to the skin it kills lice and ticks, and is beneficial against scratches, itching, elephantiasis and dropsy. It is also of value against the sting of venomous serpents and promotes the growth of flesh in ulcers.

(A. Dietrich)

ḲAṬRĀN, a Persian poet. The recorded details of his life are meagre. ʿAwfī gives his full name as Ḥakīm Sharaf al-Zamān Ḳaṭrān al-ʿAḍudī al-Tabrīzī. Hidāyat refers to him as Ḥakīm Ḳaṭrān Abū Manṣūr al-Djabali al-ʿAḍudī. His father's name, according to Dawlatshāh, was Manṣūr, but this is not supported by any earlier authority. That he was born in Shādi-ābād, near Tabrīz, seems certain from one of his verses. Therefore, the *nisbas* Tirmidhī, Djabalī, Djīlī, Urmawī, ʿAdjalī, etc., given by different sources, must be false. The epithet ʿAḍudī, despite Hidāyat and others, is not derived from the Buwayhid ʿAḍud al-Dawla. ʿAḍud al-Dawla's death occurred in 372/983, but judging from the reference made in one of his *ḳaṣīdas* to the return of his patron, Faḍlūn, to Tabrīz in 481/1088, our poet lived at least until that year. (Accordingly, the date 465/1072 given for his death by Hidāyat and others is wrong). Nafīsī suspects that ʿAḍudī is a corruption of Azdī (p. 473). If so, it could well be related to the name of the Arab tribe of which the Wahsūdanids (see below) were descendants. Ḳaṭrān's patronage came chiefly from: a) the Shaddādid amīrs of Gandja, especially Abu 'l-Ḥasan ʿAlī b. Mūsā Lashkarī, and Faḍlūn b. Abi 'l-Suvār. These two, particularly the latter, were so generous to Ḳaṭrān that he is said to have fled from the excessive bounty of Faḍlūn (Djāmī, *Salāmān u Absāl*; Khāḳānī, *Dīwān*); b) the Wahsūdānid or Rāwwādid *amīrs* of Ādharbāydjān, descendants of Rāwwād b. Muthannā 'l-Azdī, especially Abū Manṣūr Wahsūdān b. Muḥammad and his son Abū Naṣr Mamlān.

Ḳaṭrān was the first Ādharbāydjānī poet to write in the Persian of Khurāsān (*i.e.* Darī). Nāṣir-i Khusraw met him in Tabrīz in 438/1046, and remarked that "He wrote good poetry, but did not know Persian well. He came to me bringing the *dīwāns* of Mundjīk and Daḳīḳī, which he read with me, questioning me about every passage in which he found difficulty . . ." (*Safar-nāma*, Berlin 1341, 8).

Ḳaṭrān's difficulty in Persian apparently led him to write a Persian lexicon, which according to Ḥādjdjī Khalīfa was entitled *Tafāsīr fī lughat al-Furs* (*Kashf al-Ẓunūn*, i, Istanbul 1941, 296). Ḳaṭrān's contemporary, Asadī Ṭūsī, referred to this book in the preface to his own lexicon, *Lughat-i Furs* (ed. ʿA. Iḳbāl, Tehran 1319). However, the book has not been preserved. The *mathnawī* called *Ḳaws-nāma*, dedicated to Amīr Muḥammad b. Ḳumādj, attributed to Ḳaṭrān by Dawlatshāh and later sources, is not his (Ṣafā, 421-3). Ḳaṭrān's poems have long been taken for Rūdakī's (d. 329/941), mainly because of the similarity of names of the Sāmānid Naṣr b. Aḥmad (Rūdakī's patron), and Abū Naṣr Mamlān. Even in his now published *Dīwān*, consisting of over 8,000 *bayts*, there are 951 *bayts* from Rūdakī (Nafīsī, 473). Ḳaṭrān ranks among the greatest poets of 5th/11th century Iran. He displays in his poetry an astonishing fluency and euphony of language—although his excessive use of rhetorical artifices contrasts with the simplicity of his predecessors and enables a connoisseur of Persian poetry particularly to distinguish his work from that of Rūdakī.

(I. Dehghan)

KATSINA (Katsena, Kashna, Kashina, Casena), a name applied to several Nigerian localities, the earliest of which had its ancestry with the "Hausa [*q.v.*] *bakwai*". Two more Katsinas emerge with Leo Africanus (*ca.* 1513): "Casena", a rather poor country, and "Guangara" (Wangara), identified with Katsina-Laka (N.W. of Zaria) and associated with Muslim learning. Katsina attracted the celebrated *ʿālim*, al-Maghīlī (d. 910/1504), who taught *Ḳurʾān* and *fiḳh*: Muḥammad al-Tāzakhtī (known as Ayda-Aḥmad, d. 935-6/1529); and Makhlūf . . . al-Bilbālī al-Marrākushī (d. 939-40/1533).

The coming of the Wangara (especially under Muḥammad al-Korau, d. 948-9/1541-2?) signalled a shift in succession (matrilineal to patrilineal), leadership (Wangara Muslims displace Durbawa pagans), in religion and in ethnic composition. Birnin-Katsina (the walls of which date from 976/1568) was distinguished for its tobacco and leather; it contained over 100 principal quarters (each of which generated its own peculiar artisan and ethnic quality), a circuit of about eight miles, stretching to nearly 14 miles (1853), and a metropolitan population of 300,000.

Katsina waxed and waned within the shadow of stronger powers (Mali, Songhay, Bornu, Sokoto), achieving its pinnacle of power in the 17th and 18th centuries. Here, in Barth's phrase, ". . . that state of civilisation which had been called forth by contact with . . . Arabs seems to have reached its highest degree . . . the Hausa language . . . attained the greatest richness of form and the most refined pronunciation, and the manners of Katsena were distinguished by superior politeness from those of the other towns of Hausa". During this "golden age", Katsina emerged as the entrepôt of Hausaland and gave birth to some of the most renowned scholars of Sūdānī Islam: Shaykh al-Shuyūkh al-Bakrī of Yandoto (*ca.* 1009/1600); the poet Muḥammad al-Kashināwī (Ibn al-Ṣabbāgh, Hausa: Dan Marina, d. 1065-6/1655); the jurist Abū ʿAbd Allāh . . . al-Barnāwī (Hausa: Dan Masanih, d. 1078/1667); the numerologist and astrologer (who entered the learned circle of the Egyptian historian ʿAbd al-Raḥmān al-Jabartī) al-Ḥājj Muḥammad b. Muḥammad al-Fulānī al-Kashināwī (d. 1154/1741); the astronomer, mathematician and astrologer Muḥammad b. Muḥammad al-Kashnāwī (*ca.* 1145/1732); and al-Ṭāhir b. Ibrāhīm al-Fallātī, who wrote a scholarly treatise on the treatment of haemorrhoids (d. 1190?/1776?), and seems to have emanated from the long line of scholars in the Yandoto tradition of al-Bakrī.

With the rise of Sokoto and the submission of Katsina (1807), the ruling lineage sought refuge in a new city, Katsina-Maradi (Niger Republic). The abandoned city, which became an *imārat* in Sokoto's gift, underwent a rapid decline. The British administration (from 1906) encouraged an economy of groundnuts and cotton. The scholarly tradition of Katsina, though but a shadow of its former brilliance, gained fresh impetus with the establishment of Katsina Training College (1921), and through its walls passed two of Nigeria's most famous sons, Sir Ahmadu Bello and Sir Abubakar Tafawa Balewa.

(J. R. Willis)

KATTĀN, Arabic word denoting both flax and linen.

The Arabs already knew and esteemed linen fabrics in pre-Islamic times. In this early period these were usually called *ḳubāṭī*, *i.e.* Coptic stuff, since they were imported from Egypt. Until the later Middle Ages Egypt remained famous for its flax and its linen fabrics. The Geniza documents, which mainly date from the 5th/11th century, contain copious documentation on the flax trade. From these documents it appears that flax was mainly grown in Upper Egypt. There were many kinds of flax: S. D. Goitein has found no less than 22 varieties, mostly called after particular localities, mentioned in Geniza documents. Consequently, the prices of flax varied a great deal. In Fāṭimid times the province of Fayyūm was an important centre of flax-growing and Būṣīr Ḳūrīdis was a large market for this commodity. In this period Egypt exported great quantities of flax to Tunisia and Sicily and even to southwestern Persia.

The Muslims inherited from the Byzantines a flourishing linen industry, which was located in Lower Egypt. The most important centres were Tinnīs, Damietta, Dabīḳ and Shaṭā, but linen was also manufactured in many small towns and villages surrounding these places. In all these towns, Coptic weavers produced white and coloured linen, *ḳaṣab* and *sharb*, two kinds of very fine linen, and *diḳḳ*, brocaded linen; Arab writers also mention gold-embroidered linen. The fabrics, and garments made from them, were exported both to Muslim and to non-Muslim countries. The Egyptian linen industry began to decline in the first half of the 7th/13th century, when the factories of Tinnīs, Damietta and Dabīḳ were closed; their decline was probably the consequence of the increasing import of European textiles.

Another region which produced flax and had a linen industry was the Persian province of Fārs. There the towns Sīnīz, Kāzarūn and Tawwadj had in the 4th/10th and 5th/11th centuries linen factories which were famous for their products. Shīrāz, Djannābā and the small towns of Darīz and Furdj exported linen fabrics to other provinces of Persia.

In Egypt linen was the staple textile for many centuries, as is borne out by hundreds of inventories of trousseaux found in the Cairo Geniza. During the flourishing period of the Egyptian linen industry its products were used not only for making garments, but also as table-cloths, for tents and even for the covering of the Kaʿba.

(E. Ashtor)

AL-**KATTĀNĪ**, the name of an important and celebrated family of Fās, belonging to the Sharīfian branch of the Idrīsids [*q.v.*]. The Kattāniyyūn are descended in effect from Muḥammad, the son of Idrīs II, the one who shared out his kingdom amongst his brothers. They accordingly held power in Fās until they had to flee, but returned in the 10th/16th century. Their family house was situated in a quarter named after a certain Ibn Ṣawwāl, and fronted a steeply-sloping street; for this reason, one of their first biographers, Muḥammad al-Ṭālib Ibn al-Ḥādjdj (d. 1273/1857), who was a *ḳāḍī* in Marrākush and in Fās, gave to his work on them the title *Naẓm al-durr wa 'l-laʾālī fī shurafāʾ ʿaḳabat Ibn Ṣawwāl*.

Morocco owes to this family a remarkable succession of scholars, jurists and literary men, the latter mainly distinguished in the biographical field. Above all, the family attained its greatest fame at the end of the last century and the beginning of this one, not only through the intellectual and moral qualities of its members, but also, after 1890, through the influence which it exercised in the region of Fās, in Meknès and in other large towns of Morocco as the founder of a religious order.

Amongst the best-known members of the family one may mention:

ʿUmar b. Ṭāhir al-Kattānī (d. 1309/1891-2), author of a work on the families of Fās converted to Islam.

Abū ʿAbd Allāh Djaʿfar b. Idrīs al-Kattānī (1240-1323/1824-1905), known both as a scholar and also for his disinterested conduct, author of numerous works on his family.

Muḥammad b. Djaʿfar, son of the preceding, b. at Fās 1275/1858-9. Drawn to the east, he went to live in Medina *ca.* 1910 after having twice made the Pilgrimage; he then returned to his native town in 1926 and died there *ca.* 1927. He threw special light on his family by his *Salwat al-anfās wa-muḥādathat al-akyās bi-man uḳbira min al-ʿulamāʾ wa 'l-ṣulaḥāʾ bi-Fās*. This work, a model of its kind, is a far-reaching survey of the *shurafāʾ*, *fuḳahāʾ*, *ʿulamāʾ*, teachers and holy men of the city of Fās. It is at the same time a treatise on the cult of saints and a source of prime importance for the religious history of Fās, its development, its topography and its toponomy.

The last of the great and well-known Kattānīs, who had to shoulder the responsibilities of head of the family during the years in which Morocco came to independence, is the Shaykh Abu'l-Asʿad Muḥammad ʿAbd al-Ḥayy. Like his predecessors, he was an erudite scholar and the possessor of a fine library. He had travelled in the east and studied there. He wrote a great number of books and articles, amongst which may be mentioned a family history *al-Maẓāhir al-sāmiya fī 'l-nisba al-sharīfa al-kattāniyya* and a *Fihris al-fahāris*, published in 2 vols. at Fās in 1346/1927-8. He was Keeper of the Library of the Ḳarawiyyīn before the Protectorate, and he took part in compiling the first catalogue of the books scattered about the various places of this ancient university when an inventory was decided upon in 1915. However, Muḥammad ʿAbd al-Ḥayy not only kept up his noble family tradition of Islamic scholarship, but he

also retained with them, as an Idrīsid *sharīf*, a violent hatred of the reigning ʿAlawī dynasty. He was imprudent enough to become involved with el-Glaoui in the plot which in August 1953 ended in the deposition and temporary exile of Sīdī Muḥammad. When the latter returned to power and Morocco received its independence, Muḥammad ʿAbd al-Ḥayy had to go into exile in France, where he died on 28 September 1962 at the age of 77.

(A. FAURE)

KAVAKLI. [see ÇAKMAK, MUSTAFA FEVZI].

KĀWAH transliteration according to the *EI* rules of the name of a person who is supposed to have played an important rôle in the Iranian epic, in Persian Kāveh < Kāvagh, in Arabic Kāwah, Kāwī, Kābī. This person was a blacksmith who, after having had his son put to death by the tyrant Zohak (in Arabic, al-Ḍaḥḥāk; see ZUHĀK), raised the population of Iṣfahān against the usurper, taking as a banner his leather apron, which as the *drafsh-i Kāwiyān* became the Iranian national flag. Having thus brought about the fall of Zohak, he set up Farīdūn [*q.v.*] on the throne and was himself nominated commander of the army and then governor of Iṣfahān. Christensen has shown that in the expression denoting this flag, *Kāwiyān*, is connected not with Kāveh but with *kavi* "king, prince" [see KAYĀNIDS] and that the legend is of late, Sāsānid origin.

Whatever the truth, the Arabic historians frequently reproduced the legend, especially as the *drafsh-i Kāwiyān* is associated with a glorious episode in the history of Islam. The tale goes that the emblem of the Iranian rulers fell into the Muslims' hands at the celebrated battle of al-Ḳādisiyya [*q.v.*], although an author like Masʿūdī, who calls the blacksmith here Kābī, has the honesty to cite equally the capture of al-Madāʾin or even of Nihāwand [*qq.v.*] (*Tanbīh*, ed. Ṣāwī, 76).

The *drafsh-i Kāwiyān* involved here cannot have been the blacksmith's apron, which must have become worn out in the course of the centuries, but a flag which is described by the historians differently. According to al-Ṭabarī, i, 2175, it was 12 cubits long and 8 wide and made out of panther skins, and Masʿūdī, *Murūdj*, iv, 224 = § 1556, cf. Balʿami-Zotenberg, iii, 395, adds that it was encrusted with precious stones and mounted on poles fitted one into the other; al-Khwārazmī, *Mafātīḥ*, 115, says that it was made from a bear or lion skin, and al-Maḳdisī, *Badʾ*, v, 184, from that of a kid or lion, and later, from brocade and gold; and Ibn Khaldūn, *Muḳaddima*, ed. Quatremère, iii, 135, tr. Rosenthal, iii, 168-9, adds that a talismanic device of numbers was woven on the flag.

There emerges from these few references that no author had been able actually to see the flag, for the simple reason that it had long before ceased to exist. According to one tradition—to be regarded with caution—it was Ḍirār b. al-Khaṭṭāb [*q.v.*, and add the capture of the *drafsh*] who got hold of the flag and who received in return for it 30,000 [*dīnārs*], when it was in fact considered to be worth 200,000 (*Murūdj*, *loc. cit.*) or 2,000,000 (*Tanbīh*, *loc. cit.*); Saʿd b. Abī Waḳḳāṣ then sent it to ʿUmar b. al-Khaṭṭāb, who had it cut up into pieces and divided amongst the Muslims (al-Thaʿālibī, *Histoire des rois de Perse*, ed. and tr. Zotenberg, Paris 1900, 38 f.).

Bibliography: In addition to the references in the article, there is a description of the flag in A. Christensen, *Sasanides*, 502-4; see also idem, *Kayanides*, index; Carra de Vaux, *Le livre de l'avertissement*, 123-5; Ṭabarī-Zotenberg, i, 117 ff.; Djāḥiẓ, *Tarbīʿ*, 77 and index.

(ED.)

AL-**KAWĀKIBĪ**, ʿABD AL-RAḤMĀN B. AḤMAD B. MASʿŪD, a pioneer in the theory of Panarabism, was born in (?) 1849 into a family of notables long settled in Aleppo, and died in Cairo in 1902. Orphaned at an early age, he was brought up by an aunt in Antioch, where he became a pupil of his mother's maternal uncle, said to have been sometime tutor to Prince ʿAbbās Ḥilmī (1874-1944) [*q.v.*]. He also attended *al-madrasa al-kawākibiyya* in Aleppo. He perfected Turkish and Persian as well as Arabic, and acquired some knowledge of secular subjects but not of a European language. He led an active literary and political life, editing the official Aleppo paper *Furāt* in its Arabic and Turkish sections from 1875-1880 (?). In collaboration with Hāshim al-ʿAṭṭār, he brought out in 1878 the first private Arabic weekly in Aleppo, *al-Shahbāʾ*, which lasted for only 15 issues. This, as well as a second paper, *al-Iʿtidāl*, were closed by order of the *wālī* in 1879. He was involved in the municipality and in other commercial and political ventures, particularly in the Régie des Tabacs. After quarrelling with the *wālī*, he was tried and found guilty, but appealed in Beirut and was acquitted. His property was confiscated, however, and he was forced to emigrate to Cairo in 1898 or 1899. From Egypt he toured various Muslim countries and went as far as Karāčī; his sudden death stopped another planned tour into the heart of Arabia. In Cairo he is said to have received the monthly salary of 50 guineas from the Khedive ʿAbbās Ḥilmī in order to win for him the suffrages of the *shaykh*s of Aden and the Nine Protectorates for the caliphate which he wished to assume.

Al-Kawākibī published two books, drafted while he was still in Syria, both of which have been convincingly shown to derive from Western models. He used two pseudonyms: al-Sayyid al-Furāti and al-Raḥḥāla K. *Umm al-Ḳurā*, which echoes the views expressed by W. S. Blunt in *The Future of Islam* (1882), was written in the guise of the proceedings of a secret society and was first published under a pseudonym in 1899, almost certainly clandestinely, the place of publication being given as Port Said. It was not until Rashīd Riḍā [*q.v.*] serialised it in *al-Manār* [*q.v.*], April 1902-February 1903, that the book became widely known. The book makes the first sure and permanent transition in Arabic from Panislamism to Panarabism. It discusses the caliphate and argues that the problems of Islam would be solved by transferring the caliphate from the house of ʿUthmān to Ḳuraysh. An Arab caliph would be installed in Mecca and would exercise, with the concurrence of a special council of consultation (*shūra*), political authority over the Ḥidjāz only. This caliphate would be devoid of all other political and military powers; its spiritual nature, as well as the special position of the Arabs within Islam, are greatly stressed. *Ṭabāʾiʿ al-istibdād wa-maṣāriʿ al-istiʿbād* first appeared as a series of anonymous

articles in *al-Mu'ayyad* of ʿAlī Yūsuf in 1900. It is to a large extent a faithful rendering in Arabic of *Della Tirannide* (1800) by Vittorio Alfieri. Notes for other publications were destroyed or lost.

(SYLVIA G. HAIM)

ĶAWĀLA, Kavala, port on the Aegean Sea coast opposite the island of Thasos, on the frontier between Macedonia and Thrace. In classical times, there was on this site the town of Neapolis, which served Philippi (P. Lemerle, *Philippes et la Macedoine Orientale*, Paris 1945, 529, 544). In the Byzantine period, the town was known as Christoupolis, but the Ottoman sources always refer to it under the name Ķawāla. It was conquered in Murād I's reign at a date which is difficult to determine; in August 1373 it was still in the possession of the grand primicius Alexis, who had just repulsed an attack by Turkish pirates of unspecified origin and obedience (*Diplomatarium Veneto-Levantinum sive acta et diplomata res veneto-graecas atque Levantis illustrantiae*, ed. R. Predelli, ii, 164-6; Lemerle, *op. cit.*, 209 ff.). It probably fell into Turkish hands shortly after the fall of Serres in 1383, since it was situated on the route of penetration into Macedonia.

At the time of Meḥemmed II, in *ca.* 883/1478-9, the district of Ķawāla comprised the town and 11 villages, with 546 non-Muslim hearths, 23 Muslim hearths, 25 unmarried persons and 28 widows; its revenue was 34,136 aspers. The town itself was made up of 75 non-Muslim hearths, 12 Muslim hearths, 8 unmarried persons and 8 widows. The district's natural resources included cereal cultivation, silk worm rearing, and above all, silver mining, the mines for which formed part of the sultan's personal domains. Ethnically, there were in the district Turks, Greeks and Slavs, notably Serbs, judging by their onomastic. The Muslims in the mining villages were all artisans (Census returns for eastern Macedonia, Başbakanlık archives, tapu and tahrir registers no. 7, pp. 88-98; M. T. Gökbilgin, *XV.-XVI. asırlarda Edirne ve paşa livası*, Istanbul 1952, 145; N. Beldiceanu, *Les actes des premiers sultans conservés dans les manuscrits de la Bibliothèque Nationale à Paris*, ii, *Règlements miniers 1390-1512*, Paris-The Hague 1964, 215-17; Ö. L. Barkan, *894 (1488/89) yılı cizyesinin tahsilâtına âit muhasebe bilançoları*, in *Belgeler*, i/l (Ankara 1964), 115). The town of Ķawāla had been surrounded by walls towards the time of the high Middle Ages (Lemerle, 141). At the time of the Rhodes campaign, Sulaymān the Lawgiver fortified the town and repaired the aqueduct there, whilst the Grand Vizier Ibrāhīm Pas͟ha had a mosque and other charitable works constructed there (Ewliyā Čelebi, *Seyāḥat-nāme*, viii, Istanbul 1328, 118).

Ķawāla was the centre of a *sand̲jaḳ* of the *D̲jazāʾir eyāleti* under the administration of a *deryā begi*; its district included 12 *ziʿāmet*s and 235 *tīmār*s; the *sand̲jaḳ* was divided into seven *ḳāḍāʾ*s. In the town resided an *alay-begi*, a *s͟hayk͟h al-islām*, a *naḳīb al-as͟hrāf* and a *ḳāḍī* (with a salary of 150 *aḳčes*). Ewliyā Čelebi describes its fortress, built on a hill, mentions five *maḥalles* with 500 houses, and enumerates the religious foundations.

In 1095/1684 Francesco Morosini laid siege to Ķawāla without success. In 1133/1721 *armatoloi* (*martolos*) are mentioned for the last time in the *ḳaḍāʾ* of Ķawāla, and in other districts as well. During the 12th/18th century and in the first half of the 19th, the *sand̲jaḳ* of Ķawāla was usually granted to the pas͟ha of Salonika for him to enjoy its revenue and was governed by one of his representatives (*mütesellim*) (see I. Vasdravellis, Ἱστορικά Ἀρχεῖα Μακεδονίας i-ii, Salonika 1952-4, *passim*). In the 12th/18th century there was a French vice-consulate at Ķawāla, and from 1159/1746 a Venetian one also. In 1215/1800, or a short time before, the town had 3,000 inhabitants, and the produce of Egypt, Izmir and Thasos, destined for the hinterland, were brought to its harbour; iron cannon-balls, made in Pravista, and Macedonian tobacco were exported to Istanbul. Thus its harbour was fairly busy, but because of its small extent it could not be used as anchorage for warships.

After the administrative re-organisation of 1864, Ķawāla constituted a *ḳāḍāʾ* of the *sand̲jaḳ* of Drama, which belonged to the *vilāyet* of Salonika. At the end of the 19th century its population increased and reached well over 10,000, the Muslim and Greek elements being predominant. In ecclesiastical administration, Ķawāla was subordinate to the bishop of Xanthi.

In the 18th and 19th centuries, the cultivation of cotton, and above all tobacco, constituted the district's main source of wealth (F. Beaujour, *Tableau du commerce de la Grèce*, i, Paris Year VIII, 91). Ķawāla also derives much fame from the fact that it was the birthplace of Muḥammad ʿAlī Pas͟ha (D̲j. Zaydān, *Mas͟hāhir al-s͟harḳ*, Cairo 1910, i, 1; E. Z. Karal, *Osmanlı tarihi*[8], Ankara 1970, v, 125 ff.). He built there a school (*mühendis-k͟hāne-yi k͟hayriyye*), a *madrasa*, a mosque, a library and a soup-kitchen (*ʿimāret*), and assigned the revenues of the island of Thasos for the upkeep of his pious foundations (*Ķāmūs al-aʿlām*, Istanbul 1314/1896, v, 3704-5). Today, his house is a museum.

One of the clauses of the Treaty of San Stefano (March 1878), made at the end of the Russo-Turkish War, envisaged the cession of Ķawāla to the Bulgarians, but this was never put into practice, and a few months later the treaty was replaced by that of Berlin (13 July 1878). At the time of the First Balkan War, Ķawāla fell into Bulgarian hands (November 1912), but during the Second Balkan War, the Greek fleet seized it (July 1913); by the Treaty of Bucarest (10 August 1913), the town was ceded to Greece (Nicolaides, *Griechenlands Anteil an den Balkankriegen*, Vienna-Leipzig 1914, 367 ff.; E. Z. Karal, *Osmanlı tarihi*, Ankara 1962, viii, 57-80; Y. H. Bayur, *Türk inkilabı tarihi*, Istanbul 1940, i, 13; T. Bıyıklıoğlu, *Trakyada millî mücadele*, Ankara 1955, i, 8 ff.). As part of the exchange of populations between Greece and Turkey, the Turks of the Ķawāla district were settled in western Anatolia.

(I. BELDICEANU-STEINHERR - J. G. GIANNOPOULOS)

KAWĀR, a group of oases in the southern Sahara, in the Republic of Niger, situated between the Tibesti Mountains in the east and the Aïr in the west, halfway between Fezzān in the north and Lake Chad in the south. The administrative centre is Bilma, which lies at 18° 41′ N and 12° 55′ E. Kawār is a chain of oases 75 km. long from north to south, but only one to five km. wide, where water flows in abundant springs on the eastern edge of the Ténéré. It has naturally been utilised by the caravan route from Fezzān to Chad. Its 3,000 to 4,000 inhabitants, who are divided into 14 frequently fortified villages, are a mixture of Kanouri (the dominant language is Kanouri), Teda and Touareg. They live by exploiting some 100,000 palm trees and the salt marshes, most important of which is Kalala near Bilma. The salt, pressed into loaves, is exported by the *azalay*s [*q.v.*] of the Touaregs, who transport it to Agades and then to Hausa territory.

These oases do not seem to have been known to classical antiquity, despite the proximity of Fezzān and the representations of chariots engraved on the rock at Dj̲ado and Latouma.

The history of Kawār is obscure. Ibn ʿAbd al-Ḥakam mentions it first, telling of its conquest in 46/666 by ʿUḳba b. Nafiʿ. Al-Idrīsī, in 549/1154, devotes a whole passage to it but his description is so confused that, with the exception of Ankalalas = Kalala, the toponyms cited cannot be identified. He lays stress chiefly on its important alum mines, whose produce, he says, was exported to the Mediterranean. Perhaps he has confused this with salt, for alum of soda, which is in fact very abundant at Kawār, has very little commercial use, unlike alum of potassium, which is not found there.

The very important Chad-Fezzān caravan route through which slaves from Hausa territory were exported was controlled from the 7th/13th century by the Kanem-Bornou, who extended their domination over the Kawār and the Fezzān.

Precise written reports on the region date only from the 19th century: Denham, Clapperton and Oudney (1823) then Vogel, Rohlfs, Nachtigal and Monteil in succession explored the great track traversing it. They report that the people obtained their livelihood from the sale of dates, salt-mining and the slave caravans which passed northwards, and were hard-pressed by the Touareg and Teda.

The Sanūsiyya established a *zāwiya* there and the Turks of Tripoli tried to establish their authority, as in Dj̲anet and Tibesti. Kawār was occupied in 1906 by the French, who installed a military post at Bilma, putting an end to the pillaging which periodically victimised the inhabitants.

AL-**ḲAWĀSIM** (sing. Ḳāsimī), the ruling family of al-S̲h̲āriḳa (Sharjah) and Raʾs al-K̲h̲aymā [*qq.v.*], two of the member states of the United Arab Emirates. The Ḳawāsim, who claim to be *s̲h̲arīf*s, are an offshoot of the Huwala, Arabs long established on the Persian side of the Persian Gulf, some of whom have returned to their original homeland. It is not known when the Ḳawāsim came back. Raʾs al-K̲h̲ayma under its older name Dj̲ulfār was the native town of the noted Arab pilot S̲h̲ihāb al-Dīn Aḥmad b. Mādjid [see IBN MĀDJID]. Writing in the late 9th/15th century, he also mentions al-S̲h̲āriḳa, but he does not indicate whether there were Ḳawāsim in either place.

References to the Ḳawāsim in the historical records become frequent in the 12th/18th century. In 1131/1719 the Portuguese, who still had a factory at Kung on the Persian side of the Gulf, retaliated for Ḳāsimī attacks on their shipping by driving Ḳāsimī vessels into the port of Raʾs al-K̲h̲ayma and enslaving the prisoners they took. Rās̲h̲id b. Maṭar, the first Ḳāsimī figure to emerge from the shadowy past, may have been the ruler of Raʾs al-K̲h̲ayma as early as that time. He was said to be a grandson of Ḳāsim, the eponym of the family. During the civil war that split the people of ʿUmān apart in the years immediately following, the Ḳawāsim sided with the G̲h̲āfirī faction (Northern Arabs) against the Hināwīs (Southern Arabs). A few years later, the ruler of Raʾs al-K̲h̲ayma built a port at Bāsidū on the island of Ḳis̲h̲m which drew trade away from the British factory at Bandar ʿAbbās, whereupon the British Agent in Persia in 1139/1727 forced this ruler to make good the loss suffered by the East India Company. In 1149/1737 Nādir S̲h̲āh's forces launched an amphibious invasion of ʿUmān, and a Persian garrison stayed in Raʾs al-K̲h̲ayma (still often called Dj̲ulfār) for over a decade afterwards, but by 1176/1763 the Persian admiral in the Gulf was reported to have exhausted his resources in paying subsidies to the ruler of Raʾs al-K̲h̲ayma.

When the German explorer C. Niebuhr passed through the Gulf in 1178/1765, he learned that Rās̲h̲id b. Maṭar al-Ḳāsimī of Raʾs al-K̲h̲ayma held other territories as well, including some on the Persian coast. This region had not long before recognised the suzerainty of the Ibāḍī Imāms of ʿUmān but had regained independence and was often at war with its former overlords. Rās̲h̲id had a considerable fleet, and his trading vessels were active even beyond the Gulf. According to Niebuhr, almost all Rās̲h̲id's subjects were Ḥanbalīs, which meant that they would be fertile ground for the Ḥanbalī proselytising of the Wahhābiyya [*q.v.*] of Nadj̲d in the years to come.

With the British consolidating their control of India, the Persian Gulf became one of the main avenues for communications with the home country, and the transit of British vessels over its waters grew more frequent. In 1192/1778 the Ḳawāsim seized a small British ship and held it for ransom, an incident that helped to touch off a long conflict between the

two parties in the Gulf. The British were prone to describe an act such as this as simple piracy; the Ḳawāsim were inclined to regard it as consonant with the Islamic precept for waging *d̲j̲ihād* against the infidels.

In the early 13th/late 18th century Wahhābī influence burgeoned along the coast where the Ḳawāsim were based. Rās̲h̲id b. Maṭar's son Ṣaḳr acquired the title of Amīr of ʿUmān under Āl Suʿūd, the religious and secular chiefs of the Wahhābiyya. After a victory over the Ibāḍīs of ʿUmān, Ṣaḳr's son Sulṭān turned over a fifth of the spoils for dispatch to the Wahhābī capital al-Dirʿiyya.

Further British commercial penetration into the Gulf brought about clashes, in a number of which British merchantmen were captured. The British took to using the name Ḳawāsim in the corrupted English form Joasmee as a generic term for all Arabs in the Gulf who harassed their shipping. Suʿūd b. ʿAbd al-ʿAzīz Āl Suʿūd deposed Sulṭān b. Ṣaḳr for reasons that remain obscure, but Sulṭān's successor continued harrying the British. In retaliation, a British fleet in 1224/1809 sailed to Raʾs al-K̲h̲ayma, burned many Ḳāsimī craft in the harbour, and sent troops to occupy the town for a day, during which they plundered it and set it on fire. This British blow did not long deter the Ḳawāsim, who proceeded to add an American, a French, and some Hindu ships to their prizes. A new British expedition took Raʾs al-K̲h̲ayma in 1235/1819, and a detachment of sepoys under a British officer held it for three months before turning it over to Sulṭān b. Ṣaḳr, who, having incurred the displeasure of Āl Suʿūd, was in the good graces of the British. The British then imposed a general treaty of peace on the Arab chiefs of the lower Gulf, referred to in the text as "the friendly (literally "pacified") Arabs". Sulṭān signed as chief of al-S̲h̲āriḳa, though in later agreements he was designated chief of Raʾs al-K̲h̲ayma and al-S̲h̲āriḳa or chief of the Ḳawāsim.

In 1251/1835 the British induced four of the chiefs of the lower Gulf, including Sulṭān, to adhere to a maritime truee for six months, covering the season for pearl diving in the summer. This truce was renewed repeatedly, and the stretch of coast to which it applied, formerly called by the British the Pirate Coast, came to be known as the Trucial Coast. The last limited truce, which was good for ten years, was superseded in 1269/1853 by a treaty of peace in perpetuity, which provided for "a perfect maritime truce ... for evermore", which was to be watched over by the British government.

British control over the Trucial States was strengthened by the exclusive agreement of 1309/1892, signed by the Ḳāsimī rulers of al-S̲h̲āriḳa and Raʾs al-K̲h̲ayma among others, which bound the Arab signatories not to enter into any agreement or correspondence with any power other than Britain.

In 1322/1904 Persia, which not long before had taken over the former Ḳāsimī possession of Lind̲j̲a on the Persian side of the Gulf, tried to annex the island of Abū Mūsā and one of the two islands named Tunb, which the British regarded as belonging to al-S̲h̲āriḳa. Thanks to British intervention, this attempt was thwarted.

After the death of Sulṭān b. Ṣaḳr in 1282-3/1866, the position of leadership long enjoyed by the Ḳawāsim on the Trucial Coast slipped away into the hands of their southern neighbours, Dubayy and Abū Ẓabī [*qq.v.*]. Dubayy became the foremost Trucial port for trade, and Abū Ẓabī under its energetic ruler Zāyid b. K̲h̲alīfa (d. 1326/1908) built up substantial political and military strength. Abū Ẓabī then declined somewhat during the period when Zāyid's four sons followed each other as his successors, but under his grandson S̲h̲ak̲h̲būṭ, oil was discovered in its territories in commercial quantities in 1379/1959, the first such discovery on the Trucial Coast. As the oil industry developed, Abū Ẓabī outdistanced its sister Trucial States in an almost incredible fashion, achieving thanks to its small population the highest per capita income of any country in the world. In 1386/1966 oil was found off the shore of Dubayy, which took second place as a Trucial Coast producer, though still far behind Abū Ẓabī.

Towards the end of 1391/1971 the British relinquished the dominance they had maintained over the Gulf for well over a century, withdrawing all their military forces and giving up the RAF base at al-S̲h̲āriḳa. Just before they left, Iran occupied the islands of Abū Mūsā and Greater and Lesser Tunb inside the mouth of the Gulf. The occupation of Abū Mūsā was carried out in agreement with al-S̲h̲āriḳa, but Raʾs al-K̲h̲ayma attempted to resist the Iranian landings on the Tunbs. In 1392/1972 oil was struck in the waters off Abū Mūsā, with the profits from its exploitation to be divided equally between al-S̲h̲āriḳa and Iran.

As the British moved out, the seven Trucial States banded together in the new United Arab Emirates. Abū Ẓabī and Dubayy, the richest members, acquired respectively the presidency and vice-presidency of the union. Sulṭān b. Muḥammad b. Ṣaḳr al-Ḳāsimī, the ruler of al-S̲h̲āriḳa, and his distant cousin Ṣaḳr b. Muḥammad b. Sālim al-Ḳāsimī, the ruler of Raʾs al-K̲h̲ayma, joined the Supreme Council. Other members of the Ḳāsimī family received portfolios as Minister of Labour and Labourers, Minister of Electricity and Water, Minister of Justice, and Minister of State for Supreme Council Affairs. Britain terminated all its existing treaties with the Trucial States and concluded a new treaty of friendship with the United Arab Emirates.

KAWKAB [see NUD̲J̲ŪM].

KAWKAB AL-HAWĀʾ, the Compass Dial, mediaeval fortress in Palestine whose name has been corrupted into "Coquet" by the Frankish authors who also cite it by the name of Belvoir. Constructed not far from Mount Tabor (al-Ṭūr) on a promontory 297 m above the Valley of the Jordan and situated 4 km to the south of the Lake of Tiberias and 14 km to the north of Baysān [*q.v.*], a watchpost in the G̲h̲awr, it controlled the province of

the Jordan and guarded the fords into Galilee, notably below the confluence of the Yarmūk, the Djisr al-Madjāmiʿ (Bridge of the Confluence).

The castle presents a plan of Byzantine type; it "consisted of a rectangular keep enclosed in a surrounding wall 160 m by 120 m flanked by square towers, with a salient and door let into it in the midst of each front" (Deschamps, 121-3), and there are ramps at the base of the openings. The northern front dominates perpendicularly the Wādī'l-Bira, the three other fronts are bordered by ditches cut twenty metres into the rock.

It was reinforced in 534/1140 by the King Fulk. The Hospitallers acquired it in 563/1168 and added to the defences. In 578/1182, the troops of Saladin were repelled by the Franks on the neighbouring plateau of Kawkab, but after his success at Ḥiṭṭīn [*q.v.*], the Kurdish prince contemplated the conquest of Galilee, and on the 15th Dhu'l-Ḳaʿda 584/5th January 1189, aided by the contingents of his brother al-ʿĀdil, he approached to seize Kawkab, bastion of the Crusaders' resistance in the Holy Land.

In the reign of al-ʿĀdil, Kawkab was occupied by the *amīr* Ṣārim al-Dīn Ḳaymaz al-Nadjmī; then ʿIzz al-Dīn Usāma received it as an *iḳṭāʿ*. He kept the castle until the day when al-Muʿaẓẓam ʿĪsā, younger brother of al-Kāmil and prince of Damascus, took it from him (609/1212). In 616/1219, the Franks occupied Damietta, and al-Muʿaẓẓam gave the order to dismantle Kawkab; the work was suspended during the diplomatic discussions between the Sultan al-Kāmil and the Legate Pelagos, then resumed, and al-Muʿaẓẓam completed the dismantling of the place in Dhu'l-Ḳaʿda 624/October 1227, so that the Franks of Frederick II might not eventually take advantage of it. At the beginning of 638/end of 1240, the Hospitallers recaptured the castle from the Ayyūbids. At the end of 638/beginning of 1241, with peace restored, Kawkab was confirmed as Frankish territory, but at the beginning of 645/summer of 1247, when al-Ṣāliḥ Ayyūb resumed operations, the Franks, who had not been strong enough to defend the place, had to surrender it. Under the Mamlūks, Ḳalʿat Kawkab was part of the province of Ṣafad. In our time there is a village near the ruins of the castle which bears its name.

(N. Elisséeff)

KAWKABĀN, the name of several places in south Arabia.

1. The name of a sanctuary mentioned in the inscription Halévy No. 686, 3—4, copied from a building in ʿAden by J. Halévy (*miḥrābān Kawkabān*). Cf. also F. Hommel, *Grundriss der Geographie und Geschichte des alten Orients*, ii, Leipzig 1925, 707.

2. The name of a castle near Ẓafār north of Nāʿaṭ. It was called Kawkabān, "the two stars," i.e. star-castle, because it was adorned with silver stripes outside, the roof was covered with white slabs of stone, the interior panelled with cypress wood and paved with mosaic, different gems, onyx and corundum, which shone like stars at night. This marvellous building was naturally ascribed to the Djinn. This castle is perhaps also mentioned in the inscription Glaser No. 238, 3 (*Bayt wa-Kawkabān*), which comes from Bayt Ghufr in the vicinity. The castle is said to be still standing.

3. A little village on a great cliff on the right side of the Wādī Salāma, N. E. of Ḥadja and called Kawkabān-Ḥadja to distinguish it from other places of the same name.

4. Capital of the province of the same name, N.W. of Ṣanʿā'. The town of Kawkabān lies at a height of 8,750 feet above sea-level in 15° 31′ 42″ N. Lat. on the southern part of the ridge which begins about half a mile S. E. of the town of Kawkabān at the left towards Ṭawīla and runs S. E. to N. W. for several hours' journey. It is part of the great Maṣānaʿa plateau and is called Djabal Ḍulāʿ. The south-eastern part of the range, the especially precipitous part, is separated from the main massif by an almost straight ravine, the Wādī Nabhān, which runs from Shibām past the one gate of the town of Kawkabān (Bāb al-Ḥadīd) to the Wādī Naʿīm west of the Djabal Kawkabān. Two roads run over this mountain, cut off only by the ravine of the Wādī Nabhān, the one through the town of Shibām, following the very deep ravine of Nabhān which is bridged over, an old winding narrow path of steps hewn out of the rock, and the second, an easier one, running in the Ḳāʿa Ḍulāʿ and crossing a bridge over the Wādī Nabhān just before reaching the Bāb al-Ḥadīd. The town of Kawkabān stretches from the Bāb al-Ḥadīd to the S. E. and runs quite close to the eastern slope of the cliff all along that side. This part seems to be the oldest. Not very far from the gate on the great open square in the centre of the town (in the northern part) is a double wall for the most part now in ruins. Between the two walls a great number of skilfully walled pits have been cut out of the ground, which served as granaries for the old inhabitants. Similar granaries, but of more recent date, are to be found in the southern part and outside the town. The town itself consists of a large number of excellently built houses of red stone the architectural effect of which is often striking; the doors of the houses are often ornamented with fine iron work. The houses of the former Imāms now for the most part decayed or shot to pieces are particularly striking with their splendid façades. Besides the principal mosque with minaret, the only one in the town, there are seven small mosques. The water supply is provided from two huge and finely built reservoirs; the one, called Muṣallā, lies in the south, exceedingly deep and enclosed on the west side by a wall 60 to 80 feet high. The second, to the east of it, begun but not quite finished by Sayyid ʿAbd al-Karīm about 1840, is called Barīk al-Ziyādī. There are also four smaller cisterns. This water-supply would suffice for a town three times the size of Kawkabān. The Jewish quarter lay E. S. E outside the town but consisted almost entirely of low stone houses with little windows and doors.

A stone bridge with huge arches led across the Wādī Nabhān to the Bāb al-Ḥadīd but it was blown up by the Arabs in 1872.

Kawkabān is an ancient city dating from the Ḥimyar period, as inscriptions found there show. Al-Hamdānī mentions a stronghold of Kawkabān on the summit of the Djabal Dhukhār which is certainly identical with the old town of the modern Kawkabān. In troubled times its strength made it a desirable place of refuge—in 1569 the Turks besieged the stronghold in vain—and for centuries Kawkabān has been important as a capital and residence of the Imāms of the principality of the same name. The latter comprised in addition to Kawkabān the towns of Shibām, Ḥadja, Ṭawīla, the Khabt Mirwāḥ (between Kawkabān and Ḥarrāz), the lands of Miswar, Sāriʿ, Ḥofās, Milḥān, Ahdjir, ʿArūs, Banū Khayyāṭ, al-Shahdhiya Lāʿa, a part of the Banū Ḥubaysh, the Banū Nāshir and of al-Aḥmar. The old dynasty of the country, which traced its descent from the Imām Hādī of Ṣaʿda, was able to retain its imāmate even during Turkish rule and to maintain its independence from the Imāms of Ṣanʿāʾ after the Turks were driven out in 1630. C. Niebuhr (*Beschreibung*, 256; see the *Bibliography*) has given a genealogical survey of the princes of Kawkabān. When the Turks again invaded Yaman in 1872 and subjected the country, Kawkabān after a seven months' severe siege also passed to the Turks but only after capitulation. The last ruler of Kawkabān, Sayyid Aḥmad b. ʿAbd al-Raḥmān, who had bravely defended the town against the Turks, afterwards lived in Ṣanʿāʾ on a pension given to him by the Sublime Porte. At Glaser's visit in 1883 his brother Sayyid Yaḥyā still lived in the old ancestral home in Kawkabān, which is remarkable for the splendid stucco-work of the interior and the rich ornamentation of its façade. The windows and doors had all sorts of varied shapes, colours and ornaments.

Kawkabān was in the early 20th century almost depopulated; although the houses, which in spite of much destruction were still imposing, afforded accommodation for some 30,000 people, there were then barely 100 in the town; from the town one gets a splendid view over the fertile fields and valleys of the country around, especially the plain of Shibām, a part of the plain of Ṣanʿāʾ and the surrounding hills.

5. Kawkabān al-Sbāʿa is in Maḥwīd, west of the town of Kawkabān (4), but belongs to Ṭawīla, a small place of no special importance.

ḲAWM (A.), plural *aḳwām*, *aḳāwim*, *aḳāyim*, people. The word occurs also in Nabataean, Palmyrene and Ṣafaitic inscriptions in the name of the deity Shayʿ al-Ḳawm "support of the people", see Lidzbarski, *Ephemeris für semitische Epigraphik*, i, Index s.v. According to some lexicographers, the word applies in the first place to men; evidence for this opinion is afforded by passages from literature where *Ḳawm* is used in opposition to *nisāʾ* (women). The term does not primarily suggest the meaning of nation. A man's *Ḳawm* are his *shīʿa* and his *ʿashīra*. In this limited sense, the word occurs also in the well-known tradition: "Who clings to a *Ḳawm* without the permission of his *mawālī* (*patroni*), is cursed by Allāh, the angels and the prophets" (Bukhārī, *Faḍāʾil al-Madīna*, *bāb* 1). Used without the article, it has the same meaning as English "people", French "gens" and German "Leute", *e.g.* Sūra V, 63: "People who do not understand"; cf. IX, 61 (also with the article, XII, 87). The plural has the same meaning. In a tradition it is said: "There will be people (*aḳwām*) in my community, who will proclaim licentiousness regarding women and wine" (Bukhārī, *Ashriba*, *bāb* 6).

In the Ḳurʾān the term is chiefly used in connection with the prophets, Muḥammad's predecessors: the people of Ibrāhīm, Lūṭ, Nūḥ (*e.g.*, VII, 146; II, 91; XXII, 43; XXVI, 105, 160; XXXVIII, 11), *i.e.* their unbelieving contemporaries. In this sense it is also used in connection with Muḥammad himself: "Thy people declare Him a lie, though He is the Truth" (VI, 66). The same use of the term is to be found in the *Ḥadīth*, *e.g.* Bukharī, *Anbiyāʾ*, *bābs* 19, 31, 54 etc.

Ḳawm is, however, also used in a sense that comes nearer to the modern conception of "people", *e.g.* in the tradition referring to one of the festivals: "Every *Ḳawm* has its festival, and this is ours" (Bukhārī, *ʿĪdayn*, *bāb* 3). *Al-Ḳawm* with the article has sometimes an emphatic meaning, *e.g.* Aḥmad b. Ḥanbal, *Musnad*, v, 72, where Ṭufayl, one of

ʿĀʾis̲h̲a's brothers, relates a dream which he had. He dreamt that he passed by some Jews and said to them: "Verily, you would be the people, were it not that you pretend that ʿUzayr (Ezra) is the son of Allāh". They answered: "And you would be the people, were it not that you say: *Mā s̲h̲āʾ Allāh wa-mā s̲h̲āʾ Muḥammad*", etc.

In Atchin (Atjèh) the term has acquired a peculiar form and use: *kawôm* has here the genealogical meaning of "all those who descend from one man in the male line", see Snouck Hurgronje, *The Achehnese*, Index s.v. *kawôm*.

For special meanings of the word see Dozy, *Supplément*, s.v.; and see also GŪM.

(A. J. Wensinck)

ḲAWMIYYA (A.), nationalism.

1. In the Arab world east of the Mag̲h̲rib.

The term derives from *ḳawm*, a term of tribal provenance used to denote a group of people having or claiming a common ancestor, or a tribe descended from a single ancestor. One's *ḳawm* is simply one's people, either genealogically determined or mythologically and folklorishly depicted. In this century, *ḳawmiyya* refers to the movement of nationalism among the Arabs of the Ottoman dominions in the Fertile Crescent that were conquered by the Allies in the Great War. The use of the term has spread since the Second World War to other parts of the Arabic-speaking world. After the mid-20th century, *ḳawmiyya* became the expression of a purported economic, political and social Arab revolution. Essentially, though, *al-ḳawmiyya al-ʿarabiyya* is the term widely used for the movement of Arab nationalism. Arab intellectuals since the last war have tried to formulate theoretical and philosophical foundations as well as historical and ideological premises for this nationalism. Most active among them were Syrian, Lebanese and Iraqi politicians, teachers, journalists, writers and publicists. Prominent among the more recent exponents and advocates of Arab nationalism have been the Baʿt̲h̲ (Baath) party, founded in 1943, and its antecedents among smaller radical Arab youth movements in Iraq and Syria in the nineteen-thirties. In 1955, D̲j̲amāl ʿAbd al-Nāṣir (Nasser) of Egypt took up the banner of *ḳawmiyya* in connection with his drive for hegemony in the Arab Middle East.

Briefly, the advocates of Arab nationalism argue the existence of an Arab nation (*umma ʿarabiyya*) which, though actually divided into separate states, ought to be united in a single, organic sovereign political entity. What binds the members of the Arab nation together is a common faith, Islam, a common language, Arabic, a single culture, Islamic, and a shared history. Economic and other practical grounds for unity have, until recently, rarely been formulated or proposed. Religious sentiment, common identity and an aspiration to political unity, that is, have been the fundamental ingredients of the movement of Arab nationalism, Arabism and Pan-Arabism—all aspects or variants of *ḳawmiyya*—in this century.

In a "Memorandum respecting Pan-Arabism" to the then British Foreign Secretary Anthony Eden, dated May 27, 1936, Gilbert Mackereth, HM Consul in Damascus, opined:

> There is no doubt of the existence of an Arab movement, but there is considerable doubt regarding its potentialities.
>
> (F. O. 371/19980, Public Record Office).

Even in 1936 one of the movement's objectives was Arab unity, the creation of an Arab state which would comprise the whole of the Arab nation. But its exponents at that time were confined to Iraq, Lebanon and Syria, all of them new states under British or French mandate. It was also a period when advocates and leaders of the movement were engaged in defining the Arab nation geographically and ideologically. Egypt was still distant from the concerns of *ḳawmiyya*, occupied as she was with the question of her relations with Britain. The Arabs in the Peninsula were strongly anchored in an Islamic perception of things political and in a basically tribal social ethos, neither concerned nor particularly interested, nor in need of a secular national identity.

However, 1936 provided a fresh external stimulus to the Arab movement of *ḳawmiyya* in the form of the Palestine problem, involving an Arab-Jewish antithesis in Palestine under the British mandate. Yet, forty years later today, the movement's aspiration of unity remains unfulfilled, and the same ambivalence regarding the meaning, importance and existential form of *ḳawmiyya* continues to plague it. Instead of one Arab nation-state, there are several Arab states.

As elsewhere in the world, the only definition basic to the several existing Arab states is a territorial one. *Ḳawmiyya*, as an all-encompassing concept of Arab nationalism, is a self-contradictory, unrealistic doctrine. Not only because the Arab nation is dispersed in several states, but also because it is difficult anywhere in the world to have a complete, or perfect, nation-state, *i.e.* one where the state is co-extensive with one nation. Nor is there a satisfactory criterion of nationality based on race, language and religion, or culture and history. Yet *ḳawmiyya*, like nationalism elsewhere, remains a potent doctrine and a powerful political myth. Even though the only absolutely clear division between countries is territorial, there is some substance to the "idea of the nation" to the extent that there is a deeply felt urge or need to identify with a group. To this extent also, *ḳawmiyya* must be viewed as a psychological concept.

The most powerful basis of *ḳawmiyya* among the Arabs in the last thirty years has been an emotional one, deriving from an idealised religious culture, Islam, and a more recent historical experience under Ottoman rule and European influence. In societies where for many centuries identity was religiously determined or based, and ethnically distinguished in a mosaic of co-existing religious and ethnic communities, corporate loyalties are scarce and difficult to develop.

Ḳawmiyya may be viewed as a compensatory movement among the Arabs on two levels. Firstly, as a reaction to prolonged Ottoman domination, under which the question of national identity within the *umma*—community of believers—did not arise. Secondly, as a response to territorial-political arrangements that were imposed by European powers upon the dissolution of the last Muslim empire in 1920, *ḳawmiyya* provides a potential integrative force against the fragmentation of political reality.

Because Arab societies did not experience a movement for the secularisation of political identity, life and perceptions comparable or parallel to that of Europe beginning in the Middle Ages, the very concept of the nation-state and the movement of nationalism remained an extrapolation, the transposition and extension of an essentially religious-based political culture. Their members have always

been conscious of their Islamic identity. *Ḳawmiyya* has been an attempt to make them conscious of their *Arab* identity. The tradition of communal, ethnic and religious differentiation has been an obstacle to the integrative assumptions and aspirations of *ḳawmiyya*. More recently, the proliferation of sovereign independent territorial Arab states has been a powerful trend. Consequently, nationalist ideology drifted into being a rationalisation of primordial Islamic sentiments and became particularly useful as a rallying sentiment against external threats or enemies. *Ḳawmiyya*, in short, has so far failed to give the Arabs, politically organised in several states, a secular identity separate from their Islamic-based one.

One precondition of *ḳawmiyya* emerged in the 19th century, namely, the historical consciousness or recognition of a difference, an exclusiveness, from others, *i.e.* from non-Arabs. This occurred with the rapid, forceful European military, economic and political penetration of the East, and the impact of the political ideas and institutions which this brought with it. The revival of the Arabic language, notions and schemes of religious reform, the over-apologetic and intellectually weak defence of Islam against the onslaught of European modernity were all consequences of this re-awakening or renaissance (*nahḍa*). It provided the requisite mythological and other justification for first, Islamic, and later Arab, opposition to alien rule, preparatory to demands for self-determination. Modern reform in the Ottoman State itself, leading to the adoption of nationalist doctrines by the Turkish ruling classes—a radical departure from the integrative universalism of the *umma*—eventually provoked movements of Arab separatism, culminating in the British promotion of an Arab Revolt in the Ḥid̲j̲āz against the Ottoman sultan-caliph in the First World War. More important was the development of fairly modern state administrations in several of the Arab provinces, providing the foundations of and habituation for local-national autonomy. The rise of native élites concerned with the development of secular institutions of government, administration, legislation, adjudication, education and the economy, gave added impetus to this trend. The experience in several Arab states was not, however, uniform, giving rise to disparities and differences between them, which in turn, rendered the unity aspirations of *ḳawmiyya* more difficult to realise.

Ḳawmiyya presupposes the existence of an Arab nation, its solidarity, exclusiveness—and its unity. But all these assumptions are founded on an essentially religious base; on Islam the faith, on Arabic, the language of its Holy Book, on the *s̲h̲arīʿa*, its revealed sacred law, and on the history of its glorious conquests and empire. It also overlooks the ethnic and sectarian diversity that existed under an Islamic universalism. The particularism of modern nationalism therefore remained opposed to the universalism—and tolerance—of its source of inspiration, so that the efforts of the advocates of *ḳawmiyya* have been mainly directed at reconciling the difference and seeking (unsuccessfully so far) a symbiosis between *ʿurūba* (Arabism, which is at the heart of *ḳawmiyya*) and *dīn* (religion). The best they have been able to achieve has been to translate the solidarity of the Islamic *umma* into the unity of the Arab nation. But in order to do that they had first to construct a special role for the Arabs in Islam in counter-distinction to that of other, non-Arab, Muslims. This was the major preoccupation, for example, of ʿAbd al-Raḥmān al-Kawākibī [*q.v.*] (d. 1902) and S̲h̲ayk̲h̲ Muḥammad Ras̲h̲īd Riḍā [*q.v.*] (d. 1935) earlier in this century. More recently, ʿAbd al-Raḥmān al-Bazzāz (d. 1971) tried to argue that there was no contradiction between Islam and Arab nationalism. Theoretically, the relation between religion and state did not constitute a particular problem in Islam. As a religious movement, Islam founded a state and acquired an empire by conquest. The modern fusion of Islam and Arabism therefore is not surprising. Moreover, just as the unity of Islam and the solidarity of the faithful has been a doctrinal tenet but only a political myth, so also Arab unity today is a potent myth of *ḳawmiyya* though politically non-existent. It is a prescriptively ideological, substitute reality. The *wiḥda* of *ḳawmiyya*'s Pan-Arabism has been as elusive and problematic as the ideal of Pan-Islamism before it, or for that matter, the ideal of other, non-Muslim pan-movements, *e.g.* Pan-Germanism, Pan-Slavism or Pan-Hellenism.

Nationalism is, by definition, a secular concept or idea. Behind it, in Europe at least, lay a formidable array of philosophical speculation about secularism and authority in the state, from the Middle Ages to the Renaissance, the Reformation and the Enlightenment, and all of it supported, distorted and confused by a pre-Christian classical tradition. *Ḳawmiyya*, on the other hand, has not managed to free itself from its Islamic antecedents and foundations because there has been no comparable philosophical, speculative basis to Arab secularism. Elements and manifestations of the latter have, however, struggled through the surface of Arab societies, and have become discernable in the conduct of their public affairs by powerful rulers or chiefs who were able to command the traditionally-perceived personal loyalty of their subjects or followers and had centralised administrations at their disposal.

Even though the concept is arbitrary, and despite its limited scope, one can argue that *ḳawmiyya* in the sense of a feeling of Arabness within the wider Ottoman-Islamic dominion first expressed itself in the rejection of the Ottoman caliphate some seventy-five years ago. It suggested not only that the Arabs were different from the Turks but, more significantly, that they were entitled to have an Arab caliph. This was accompanied by incipient secret organisations among Arab officers in the Ottoman army before and during the Great War, demanding the recognition of Arab rights to decentralisation and local autonomy within the Ottoman empire. These early agitations culminated in the dynastic, separatist revolt led by S̲h̲arīf Ḥusayn of Mecca in the Ḥid̲j̲āz (1916-18) in the First World War. His son Fayṣal's short-lived Arab Kingdom in Damascus (1918-20) constituted the basis of the myth of modern Arab nationalism and a justification of *ḳawmiyya*. The mandate arrangements imposed by Britain and France in the Fertile Crescent, however, transformed the movement for a time into one of the newly-created Arab states demanding a greater measure of and, ultimately, full, independence from, those two European powers.

The unity-variant of *ḳawmiyya* re-emerged after 1936, but remained the preoccupation of Arab nationalists in the Fertile Crescent. A combination of external circumstances in Europe, affecting British and French control in the region, and events in Palestine, provided the impetus for the adumbration of regional schemes of Arab unity (*e.g.* the

Fertile Crescent, and Greater Syria of the Hashimites). At the same time, Christian and Muslim Arab intellectuals sought to define the Arab nation and formulate a nationalist ideology. The writings of Cōstī (Ḳusṭanṭīn) Zurayḳ, Edmund Rabbath, ʿAbd Allāh al-ʿAlāyilī and others were all in this vein. But it was the Second World War and its consequences that accelerated the movement of *ḳawmiyya* and inflated the number of its advocates as well as followers. Wooed by both the Axis powers and Allies on account of the strategic importance of their territories, the Arab countries were encouraged by Britain at one point to strengthen their ties in some form of union. The Arab League, an organisation of sovereign independent Arab states, was the result in 1945.

Whereas the stimulus for *ḳawmiyya* in the First World War was dynastic and non-ideological, in the Second World War and after it became ideological and, purportedly, secular. The leading writer on the question, Sāṭiʿ al-Ḥuṣrī, became the main exponent of a romantic, idealist conception of *ḳawmiyya* in an attempt to exorcise religion from the nationalist idea. Borrowing from Rousseau, Hegel and Mazzini, he promoted the spiritual conception of the nation as a moral and psychological construct, the independent personality of the state as a historical necessity, and nationalism as a pre-existing universal principle borne out by history. He offered nationalism and the sanctity of the "spirit of the nation", the priority of the organic whole that was the nation over the individual, *i.e.* *ḳawmiyya*, as the new faith of the Arab. He proposed loyalty to the Arab Nation as a spiritual and moral obligation for every Arab. In effect, however, Ḥuṣrī superimposed an alien, European conception of the nation on the Islamic *umma*, and made the romantic feeling of *ḳawmiyya* the embodiment of the sanctity of the national personality. Islam was rendered the "national culture" of the Arabs rather than just their religion. It incorporated the real Arab spirit, and at the same time provided a substitute for the old religiously or communally-based identity of the Arab.

Others also wrote in a similar romantic vein in trying to define *ḳawmiyya*. ʿAlāyilī, for instance, emphasised an internal consciousness among the Arabs of their "complete social existence". Al-Bazzāz asserted there was no contradiction between "true nationalism and true religion". In the nineteen-fifties, ʿAbd al-Laṭīf Sharāra called *ḳawmiyya* an emotion. The nation, he argued, is a human not a geographical reality. It is a wider concept than the state, the people or the fatherland. The feeling of being an Arab therefore transcends territorial boundaries, particularly since man is "mind, soul, or spirit more than he is body". Michel ʿAflaḳ, the Christian co-founder of the Baath party, declared *ḳawmiyya* "is love above everything else". Its revolutionary variant is a "psychic current"; and the Arab nation therefore constitutes one political, economic and cultural entity, regardless of its existential divisions.

After 1948, the Arab-Israel conflict radicalised and at the same time divided the movement of *ḳawmiyya*. By 1949, old Arab régimes were being overthrown, mass movements with ideological pretensions like the Baath and Nasserism from Egypt proclaimed the inevitability of *wiḥda*, Arab unity. Subsequent parallel events in Iraq and the Sudan in 1958, in the Yemen in 1962, in South Yemen in 1967 and in Libya in 1969, brought fresh adherents to radical *ḳawmiyya*, which became prominent for its opposition to the West and its projection of the economic and social reform of Arab society. While the rejection of and struggle against the state of Israel in the region provided a common foe for *ḳawmiyya*, the radicalisation of its aims by military régimes in several Arab states purporting a new kind of Arab socialism polarised their rulers. For a decade at least (mid-1950s to the mid-1960s), *ḳawmiyya* was re-defined to exclude conservative, reactionary Arab rulers, régimes and societies.

The practical manifestation of a radical *ḳawmiyya* in this period was greater inter-Arab conflict and a struggle for Arab leadership between its protagonists, Egypt, Iraq and Saudi Arabia. Nevertheless, new and older Arab states enshrined the Islamic-Arab identity of their nations or peoples in their formal constitutions. A period of inter-Arab subversion and civil war (*e.g.* the Lebanon, 1958; the Yemen, 1962-67) heightened the struggle for the leadership of *ḳawmiyya*. All the same, the traditional divisions beneath the sentiment of Arab nationalism persisted in their tribal, ethnic and communal form, as they erupted in the Yemen and South Yemen, Iraq and the Lebanon.

Nasser failed to integrate the Arab nation by propaganda, revolution or force. Likewise, the Baath party failed to achieve unity or socialism in its home territory of Syria, in Iraq and in Jordan. The Arab socialism of both Nasserism and Baathism as the new expression of *ḳawmiyya* failed to unite the disparate and far-flung parts of the Arab nation; its foremost champion, Nasser of Egypt, suffered a humiliating defeat at the hands of the *umma*'s archenemy, Israel, and ended up a totally-dependent client of the communist Soviet Union.

The disappearance of Nasser from the Arab scene and the concatenation of events leading up to the October 1973 war against Israel, together with the emergence to prominence of very rich though otherwise weak oil-producing Arab states, have all given *ḳawmiyya* a new lease of life but with a different emphasis. Gone are the Pan-Arab illusions of the Baath and the Prussian pretentions of an Egyptian leadership. The solidarity of the Arab nation as constituted in several independent states on the basis of mutual interest, the perception of a common economic-political-cultural threat of a common enemy, Israel, and the prospect of an Arab regional economic bloc to rival that of the industrial West, are now the more prominent and vaunted features of *ḳawmiyya*. A concerted policy against the "other", the "outsider", seems to be its practical expression whenever possible. But since the richest of the Arab states, the financiers of this new edition or version of *ḳawmiyya*, are also socially and politically the most traditional, socialism is no longer the current policy of Arab nationalism. Even if it were, it and *ḳawmiyya* are once again the expressions of the solidarity of the *umma*, the Arab-Islamic nation, whose prospects of power, prestige, dignity and glory will vindicate the righteous and virtuous universalism of the Islamic tradition and heritage. The re-fusion of *ʿurūba* (Arabism) and *dīn* (religion) has been made more effective by the infusion of *māl* (wealth). The use of the latter in the struggle against Israel and Imperialism, and for the restoration of the rights of the Palestinians, is now the quintessence of the solidarity of the Arab nation and of *ḳawmiyya*. The struggle, however, between the latest protagonists of this new version of Arab nationalism for leadership and hegemony will continue; the complex economic, social and communal problems will persist. But the sentiment of *ḳawmiyya* in its latest form will be mobilised in the confronta-

tion with alien intruders in the *umma*'s territory, *e.g.* Israel, foreign exploiters of the Arab nation's wealth and those who seek its political subjugation. Internecine struggles which may foreshadow and cause the annihilation of particular groups, as in the case of the Jordanian crushing of the Palestine guerrillas in 1970-71, or the communal clashes in Lebanon in 1958 and 1975-6, or the ethnic conflict between Kurds and Arabs in Iraq, or the tribal-cum-ideological civil wars in the Yemen, South Yemen and ʿUmān, will persist or occur from time to time; distrust between rulers and subjects or between Arab régimes may not disappear, but the sentiment of *ḳawmiyya* is not a doctrine or ideology that relates to the social, economic or political order of the Arab nation, the rights and duties of its citizens, or the relations between governments and their subjects. Rather it is a psychological need of those who still find it difficult to accept the burden of a corporate loyalty to their respective states when other primordial loyalties exist to project a comforting collective difference from the outside world. It has a soothing modernising effect that glosses over the reality of the fundamental distinction and dichotomy in political behaviour of the Muslim versus the non-Muslim. Minorities subscribe readily to it because it affords them the illusion of a secular political formula, whereas the vast majority of Muslim Arabs, as distinguished from the minority of their Westernised élite spokesmen, hardly give it a thought, for the time being at least—or need it.

Modern media and communications have decidedly enhanced the sharing in the sentiment of *ḳawmiyya* among greater numbers of Arabs, especially those living in urban centres. New financial power may well lead to the kind of co-operative economic endeavour—which has so far eluded the Arabs—that may reduce and finally abolish social, economic and political differences between Arab states and societies, thus inducing an organic integrative unity between them. Like Consul Mackereth forty years ago, however, one must still conclude that there is no doubt of the existence of an Arab movement, *i.e.* *ḳawmiyya*, but there is still considerable doubt regarding its potentialities in the directions suggested here.

ii. IN THE MAGHRIB.

In the Maghrib the term *Ḳawmiyya* occurs as a plural of *ḳawmī* (goumi, "goumier"), a member of a *ḳawm* (goum), to mean a contingent of cavalry levied from a tribe (Dozy, *Supplément*, s.v.), a practice continued by the French. In the sense of nationalism, nationality, its use has been affected by the common employment of French as the language of politics. This gives "nationalisme" as a term in place of both *ḳawmiyya* and *waṭaniyya*, whose translation as "patriotisme" tends to be reserved for an earlier, more traditional sentiment (cf. Ch.-A. Julien, Avant-propos to B. Slama, *L'Insurrection de 1864 en Tunisie*, Tunis 1967, ix). On the other hand, in Morocco the nationalist party *al-Ḥaraka al-ḳawmiyya* founded by el-Ouezzani (al-Wazzānī) in 1937 is translated as "Le Mouvement populaire" to maintain the distinction from its rival, *al-Ḥizb al-waṭanī* (or *Ḥizb al-Waṭaniyyīn*), "the 'nationalist' party", founded by Allal el Fassi (ʿAllāl al-Fāsī) (R. Le Tourneau, *Evolution politique de l'Afrique du Nord musulmane, 1920-1961*, Paris 1962, 209-10). The specific distinction achieved here in Arabic, however, is indicative of a more fundamental distinction between the two terms, which might be represented as the familiar distinction between Arab nationalism as the nationalism of a people without a national state, and the nationalism of each Arab country. It must nevertheless be seen in its North African context. In Tunisia and Morocco it has been fairly straightforward: both these countries could claim to exist independently of France. In Algeria on the other hand, the country and the nationality of its peoples were both French. Instead there was discrimination on the grounds of religion. The Senatus Consulte of 14 July 1865 decreed that Algerian Muslims (and, until the Décret Crémieux of 1870, Algerian Jews) should be French subjects and therefore of French nationality, but, because of the religious law under which they lived, not French citizens unless and until they renounced that law for the French civil code. The distinction thus made for the Muslim population on the basis of its Islam became the starting-point not only for a separate treatment but also for an attitude on the part of the European population, which by 1900 considered "nationalisme musulman" the equivalent of "Islamisme" and even of "cléricalisme" (Ch.-R. Ageron, *Les Algériens musulmans et la France, 1871-1919*, Paris 1968, 918-20). That this should be considered nationalism at all was seen by Ferhat Abbas (Farhat ʿAbbās) in the 1930s as an obstacle to the political and economic emancipation of the indigène in a French society (Ch.-A. Julien, *L'Afrique du Nord en marche*, 3rd ed., Paris 1972, 99-100). At the same time, however, it was elevated to the dignity of nationhood under the name of *ḳawmiyya* in the writings of Ben Badis (Ibn Bādīs [*q.v.*]), the leader of the *Salafiyya* in

Algeria between the two world wars, drawing upon the thought of Muḥammad ʿAbduh and the ideas of Arab nationalism represented by S͟hakīb Arslān. For Ben Badis the Muslim population of Algeria was distinguished by its *ḳawmiyya*, its "national identity", based upon Islam but including equally the Arabic language and the Algerian homeland. This gave rise to a *d͟jinsiyya ḳawmiyya*, an "ethnic nationality" to be distinguished from the *d͟jinsiyya siyāsiyya*, the "political nationality" of France (A. Merad, *Le Réformisme musulman en Algérie de 1925 à 1940*, Paris and the Hague 1967, 396-9). The active expression of this national identity was nationalism under the name of *waṭaniyya*, "patriotism", a sentiment never extinct (cf. Ageron, *Les Algériens musulmans*, 920-2), now on a par with the *waṭaniyya*, the nationalism, of Algeria's neighbours. This formula, adopted in principle by Messali Hadjdj, ultimately became that of the FLN (Front de Libération Nationale) (cf., *e.g.* M. M. al-D͟jazāʾirī, *Taʾrīk͟h al-D͟jazāʾir*, Jerusalem n.d., 453), being developed in the sense of the New Left in the French writings of Frantz Fanon (cf., *e.g. L'An cinq de la révolution algérienne*, Paris 1959, trans. *A Dying Colonialism*, London 1970). Since the independence of Morocco, Algeria and Tunisia it has survived into the argument over historical and cultural identity (cf., *e.g.* G. Ayache, *Le sentiment national dans le Maroc au XIX^e siècle*, in *Revue Historique*, ccxl (Oct.-Dec. 1968), 393-410; M. Lacheraf, *L'Algérie, nation et société*, Paris 1965; Y. Lacoste, A. Nouschi and A. Prenant, *L'Algérie, passé et présent*, Paris 1960; M. Sahli, *Décoloniser l'histoire*, Paris 1965; also J. Berque, *Le Maghreb entre deux guerres*, 2nd ed., Paris 1970, 421-48, with references). On the one hand *ḳawmiyya* refers to the Arab nation at large, when it is both the condition and the activity of the people; on the other hand, it is defined with reference to the nation states into which the nation at large is divided. The ambiguity appears in the expression *wād͟jib ḳawmī*, "national duty", employed by R. Bounar (*El-Maghrib el-Arabi*, Algiers 1968, Introduction), for the task of writing a cultural history of Algeria which in the event could only be accomplished with reference to the Mag͟hrib as a whole, the Arabs and Islam. For the adjective *ḳawmī*, the commonest form, the result is a meaning of "national" in the cultural rather than the political sense, in which *waṭanī* is more appropriate (cf., *e.g.* ʿAllāl al-Fāsī, *Ḥadīt͟h al-mag͟hrib fi 'l-mas͟hriḳ*, Cairo, 1956, 199: *(al-)rūḥ (al-)ḳawmiyya*, "(the) national spirit"; *ibid.*, 200: *al-ḥuḳūḳ al-waṭaniyya*, "the nationalist claims"; al-ʿAlawī, *al-Anwār al-ḥasaniyya*, al-Muḥammadiyya 1966, Preface, 3: *al-turāt͟h al-ḳawmī*, "the national heritage"; *al-Ḥabīb Bū Ruḳayba; ḥayātuhu, d͟jihāduhu*, Tunis 1966, 47: *al-ḥaraka al-waṭaniyya*, "the nationalist movement").

iii. In Persia.

Ideas of political nationality, of the territorial and ethnic nation and of nationalism, either as a consciousness, on the part of individuals or groups, of membership in a nation or a desire to forward the strength, liberty or prosperity of a nation, were introduced into Persia in the 19th century as a result of Western European influence. Prior to this there was no precise equivalent in Persian for the terms "nation", "nationality", "nationalism" and "nationalist". Various words were used for "people" and the group or community, but none conveyed exactly the sense of nation. One of the earliest was *umma* (now obsolete). The members of the *umma* had a common government and were found in a more or less defined territory, and between its members there was a certain closeness of contact, community of interest, and a sense that they possessed a distinct identity and common history; but what distinguished them from other communities or nations was not these things but religion. The conception of the people as the *umma* was succeeded by that of the *raʿiyyat*, "the flock", *i.e.* the subjects, and what distinguished them from other "flocks" was the person of their "shepherd" or ruler. *Ḳawm* and *ṭāʾifa* both implied a certain closeness of contact between the members of the group so described—a common language, common interests and a certain degree of common feeling and will—but neither was necessarily found in a more or less defined territory, or united by the idea of being subjects of a common government; both terms sometimes had tribal implications. *Waṭan* in early usage meant simply the locality from which a person came and among the mystics in mediaeval times it was used in the sense of "the heavenly kingdom". (Cf. a passage in the *Ṣafwat al-Ṣafā* of Ibn Bazzāz, completed in or about 759/1358, in which the *S͟hayk͟h* was asked about the phrase in the Traditions *ḥubb al-waṭan min al-īmān*, "Love for the homeland is an article of faith". "The infidel, for example," his questioners said, "loves his country, which is Europe. How, in such case, can 'love for the homeland' be an article of faith?" The *S͟hayk͟h* replied that the word *waṭan* in the phrase quoted from the traditions, referred to a heavenly kingdom not to a geographical area. British Museum, Ms. Add. 11745, p. 289.) In modern times *waṭan* means exclusively fatherland or motherland, in which sense it is synonymous with *mīhan*. *Niz͟hād* merely defined race, not nationality, and in modern times the compound *niz͟hād-parastī* is used in a pejorative sense to mean racialism; *ahl* (and its plural *ahālī*), "people", meant those dwelling in a defined area but not specifically a nation, though *ahliyyat* is used in modern legal language to mean nationality. Lastly there is the term *millat*, which was first used with reference to a religious group or community, and later people, and finally, in the 19th and 20th centuries, came to be used to denote a political nation (cf. *d͟jāmiʿa-i milal*, "League of Nations", and *milal-i muttafiḳ*, "United Nations"). The term, however, is not entirely free from certain ambiguities. In colloquial Persian *millat* also means "the people" (*i.e.* the lower classes); this presumably is connected with the late 19th- and 20th-century use of *millī* to mean "popular", in phrases such as *ḥukūmat-i millī*, "popular government", and *d͟jabha-i millī*, "Popular Front". It also, however, means "private" as opposed to "governmental", but in contemporary Persian *millī kardan* means "to nationalise". The supporters of the Persian constitutional revolution were known as *milliyūn*, "nationalists" (*i.e.* those who supported "popular" government). The term, however, was not generally applied to nationalists outside Persia and is now virtually obsolete. *Milliyyat* was used by Mīrzā Ḥusayn K͟hān Sipahsālār Mus͟hīr al-Dawla in the second half of the 19th century to mean "nationalism", which he alleged had been brought into existence by the French Revolution (see F. Ādamiyyat, *Fikr-i Āzādī*, Tehran 1961, 60), but it did not achieve widespread currency in this sense and normally means nationality.

Although there was no term to express nationality in the early centuries or in mediaeval times, there was a concept which did imply a consciousness of

distinct identity, defined historically and geographically, which can be described by the modern term *īrāniyyat*, "being a Persian". This was associated with and experienced in a sharing of a common cultural and literary background. It did not imply a consciousness of political nationality or a territorial and ethnic nation, although it carried with it the memory of the old Persian empire. This memory, after the decline of the Shuʿūbiyya [*q.v.*], was kept alive by the poets, but in the course of transmission the details became blurred and historical accuracy was lost, legend triumphing over history. The literary tradition expressed in and through New Persian, the emergence of which as a literary language had been one of the achievements of the Shuʿūbiyya movement, in no small measure held together the Persian people during long years of political decay. It constituted a common bond and kept alive their common feeling and pride in their heritage. Linguistic frontiers, however, did not coincide with ethnic frontiers. Arabic continued to hold an immensely important place as the language of religion, and large numbers of those within the geographical frontiers of Persia spoke Turkish, Kurdish, or some local dialect.

Under Muslim government Persia became part of a wider world in which Islam was the bond. Under the ʿAbbāsids the concept of the universal empire was revived, but in a new guise. So far as an identity was recognised, it was the world of Islam. With the fragmentation of the caliphate, the minor dynasties did not foster the rise of national feeling since they were hostile to the centralisation of government. Slave armies, too, were a bar to the growth of national feeling. Even where political organisations had a wider scope, as they did under the Saldjūḳs, Mongols and Tīmūrids, they meant little to their subjects, and the nomadic tradition of their leaders constituted a new obstacle to the development of national feeling. There was thus little opportunity in mediaeval Persia for the development of nationalism based on a more or less defined territory, inhabited by a group of persons in close contact with each other, inspired by the idea of a common government, holding certain interests in common, and possessing a certain degree of common feeling and common characteristics. On the whole, government had been "unrighteous" and so far as aspirations of future good government united the people these were of messianic and universalist not nationalist character. As for common interests, these too, so far as they transcended the craft, the quarter or the tribe, tended to be religious, while as for common characteristics, the reality was that there was more to divide than to unite. First there were ethnic differences, which did not coincide with territorial or provincial boundaries: the dichotomy between Arab and ʿAdjam (non-Arab), which had prevailed in the early centuries had been succeeded by that between Turk and Tādjīk (non-Turk); secondly there were religious and sectarian differences, between Muslims and non-Muslims and between Sunnīs and Shīʿīs; thirdly there was a separation between the settled population and the semi-settled, the rural population and the townspeople, the military classes and the rest. These lines of cleavage, so far as they were not religious, were social and economic, not political. The nearest approach to political difference was, perhaps, to be found in the intellectual field, between those who were influenced by the old Persian theory of state as against those who subscribed to Islamic conceptions. But even in this field the position was not clear-cut. After the Islamic conquest the former ruling classes, so far as they were not wiped out, were converted to Islam and many of them entered the bureaucracy and served the new rulers (a pattern to be repeated after later conquests). The desire to get rid of alien rule was, therefore, if not absent, at least weaker than might otherwise have been the case.

With the rise of the Ṣafawids in the 10th/16th century, Persia emerged for the first time since the Islamic conquest as a territorial state. A sense of separateness from the rest of the Islamic world and of national unity vis-à-vis the Ottoman empire was deliberately fostered by the adoption of Ithnā ʿAsharī Shīʿism as the official religion. The conflict between the two empires was nevertheless largely expressed in terms of religion: in terms of Sunnī-Shīʿī strife rather than of Turko-Persian hostility. What was new was the broad territorial segregation of the two sects, which was not, however, paralleled by a separation of ethnic groups. Under the Ṣafawids, Shīʿism, which had earlier largely been the refuge of the dispossessed and under-privileged, became the banner of Persian nationalism; but since for the Shīʿa the true king was the Hidden Imām, and temporal rulers, so far as they were "unrighteous", were usurpers, this nationalism could not easily be associated with the concept of political nationality. The attitude of the Shīʿa towards the government was thus ambivalent and opposition movements tended to be of a messianic nature. Popular Shīʿism however retained some of its former functions: the Muḥarram plays still offered the people an outlet into which they could project their own sufferings. Although the Ṣafawid period to some extent paved the way for the rise of political nationalism, it was not until the late 19th century that patriotism began to be separated from religious sentiment and national loyalties began to take the place of the older religious loyalties.

By the turn of the 18th century, British progress in India had begun to give rise, in some circles, to apprehension lest British commercial activity in Persia might lead to political domination (cf. Rustam al-Ḥukamā, *Rustam al-Tawārīkh*, ed. Muḥammad Mushīrī, Tehran 1969, 383, 385). At the same time, unfavourable comparisons began to be drawn between conditions in Persia and those in other countries (cf. *ibid.*, 395). By the second decade of the 19th century the danger of foreign domination was clear for all to see, and the intrusion of western European countries and Russia was intuitively felt as a threat to Muslims and the lands of Islam. As in Turkey, modernisation began in response to military pressure. The Russian advance in the war temporarily concluded by the Peace of Gulistān (1813) brought home to the Persian government that the Persian army could not withstand Russian attack unless it was modernised (though none of the subsequent attempts at modernisation were pushed with vigour or persistence). Nationalism, patriotism and modernism in Persia thus became closely interwoven.

Meanwhile, government officials who visited foreign countries as representatives of the government, merchants, and others who travelled abroad began to ask the reasons for Persia's backwardness. Some came to the conclusion that this was due to a lack of justice and orderly administration, and that it was respect for law which guaranteed the modernism and progress of western Europe. As these opinions spread among a wider circle, a movement of protest against corruption and injustice gradually developed. This movement, which took its inspiration from the example of western Europe, had overtones of

patriotism and nationalism, but it was not, in the beginning, anti-foreign, though it was to become so later partly as a result of the events connected with the Tobacco Régie and Nāṣir al-Dīn Shāh's attempts to bolster up the finances of the country by the grant of concessions and the contraction of loans. As the movement became anti-foreign, so its Islamic colouring became more marked—patriotism was still largely a religious sentiment. Nevertheless, so far as it was a protest against bad government and demanded as a remedy administrative reform, it was modernist and its supporters were nationalists in the sense that they aimed at some measure of self-government or government by the people, though they saw this primarily in terms of restrictions on the arbitrary power of the shah and not in the exercise of responsible power by elected representatives of the people.

In 1811 ʿAbbās Mīrzā sent two students to England "to study whatever would be beneficial for him and his country". Five more were sent in 1815 to study engineering, medicine, artillery, mathematics and natural sciences. Two of these attained to high office: one, Mīrzā Djaʿfar Mushīr al-Dawla, who studied engineering, became head of the council of state set up by Nāṣir al-Dīn Shāh, and the other, Mīrzā Muḥammad Ṣāliḥ Shīrāzī, who studied English, French, Latin, natural sciences, history and printing, became official translator to the government and subsequently a minister. He wrote a diary in which he described British parliamentary government and institutions (*Safar-nāma*, ed. Ismāʿīl Rāʾin, Tehran 1969-70) and appears to have had a great admiration for freedom and liberty as he saw it in England. He also visited Russia and Turkey. Writing of the *tanẓīmāt*, he castigates obscurantist *mullās* who opposed them. Abu'l Ḥasan Shīrāzī, who was sent to England by Fatḥ ʿAlī Shāh, wrote in his *Ḥayrat-nāma* of the justice and security prevailing in England, and compared conditions in his own country in unfavourable terms with what he had seen in England. Khusraw Mīrzā, the son of ʿAbbās Mīrzā, who was sent with a mission to Russia in 1829 to apologise for the murder of the Russian envoy Grebaiedov in the previous year by a fanatical mob, wrote in his diary, "It would be a pity if when we see with our own eyes the progress and order which our neighbour has achieved in a short time, we should not think [how we could achieve similar progress], but go about with our eyes closed in foreign parts." (See further, *Fikr-i Āzādī*, *op. cit.*, 21 ff.). Another Persian to describe in his diary British parliamentary institutions was Mīrzā Khānlar Khān Iʿtiṣām al-Mulk, who went as a secretary to the Persian mission in England in 1864-5 (see *Dimukrāsī-i Inglistān* in *Sukhan*, ii/2 (Bahman 1323/1944), 96-104).

It was not, however, until the reign of Nāṣir al-Dīn Shāh that modernism and nationalism began to make strides. The Amīr Niẓām Mīrzā Taḳī Khān Amīr Kabīr, his first *ṣadr-i aʿẓam*, who had visited both Russia and the Ottoman Empire, initiated various military, financial and administrative measures designed to strengthen the power of the central government. He founded the *Dār al-Funūn*, which was the first school to teach modern sciences, in order to train officials for the new army and the new bureaucracy. He also attempted to decrease the power of the religious classes. His reforms proved largely abortive. More important in the spread of modern ideas was Mīrzā Ḥusayn Khān Sipahsālār Mushīr al-Dawla. He studied in France, and served in the Ministry of Foreign Affairs in Bombay, Tiflis, and Istanbul. From 1871 he held various ministries in Tehran including that of *ṣadr-i aʿẓam* for some three years from December 1871. His letters from Turkey discuss European politics, freedom movements in the Ottoman Empire, the spread of education and civilization in Europe, and governmental reform in Persia. He considered an assembly composed of representatives of the people, freedom, the rights of the individual and equality before the law prerequisites for life in the modern world. Writing of the Greek rebellion, whose nationalist nature he recognised, he wrote, "The nationalist principle established by the French empire that every nation should be governed by its own people and not be a prisoner to the government of another people has spread to these parts" (*Fikr-i Āzādī*, *op. cit.*, 60). In another letter he wrote that foreign states measured a nation's progress, education and power (*istiʿdād*) by four things: (i) the existence or otherwise of a well-ordered press carrying full reports of foreign and internal news; (ii) its encouragement of crafts, industries and trade; (iii) the quality of its foreign representation; and (iv) its possession of a powerful, disciplined army equipped with modern weapons able to defend the country against any eventuality (*ibid.*, 69). He believed that the backwardness of a country brought about foreign intervention, and both he and Amīr Kabīr in their advocacy of modernisation were concerned to prevent foreign intervention. But they were in a difficulty: modernisation was, in existing circumstances, hardly possible without foreign capital and expertise. This, indeed, was the justification of the abortive Reuter concession (see Maḥmūd Farhād Muʿtamid, *Sipahsālār-i Aʿẓam*, Tehran 1947, 151 ff.). There was at the same time another and contrary trend, also inspired by a kind of nationalism, which was opposed to modernisation. Many believed that development would involve foreign influence and that as long as the country's resources were not developed Persia would be left to manage her own affairs. The attitude to the spread of communications was also ambivalent because of a fear that it might facilitate external attack.

Among those who were associated, or in contact, with Ḥusayn Khān and who played an important part in fostering the demand for modernisation were Mīrzā Yūsuf Khān Mustashār al-Dawla, Madjd al-Mulk Sīnakī, Malkam Khān, and (through him) Djamāl al-Dīn Afghānī [*q.v.*], and Mīrzā Aḳā Khān Kirmānī. They were concerned both to forward the strength, liberty and prosperity of Persia and to ensure that the people had a greater share in the government of the country. Madjd al-Mulk in his *Risāla-i madjdiyya*, written in 1871-2, attacking the negligence of the shah and the state of the administration, states that the power of great nations was based on the people (ed., Saʿīd Nafīsī, Tehran 1941-2, 11), and demands an assembly to assure the prosperity and order of the kingdom (37). Mustashār al-Dawla, who became chargé d'affaires of the Persian legation in Paris in 1866-7, and also visited London during the three years he spent in Paris, wrote in 1888-9 to Muẓaffar al-Dīn, then *walī ʿahd*, stating that Persia could only escape disaster by the promulgation of reforms and new laws; only this would enable her to regain respect among civilized nations. In his essay *Yak kalima*, which achieved wide circulation, he describes the strong and orderly military administration, prosperity, wealth, industry, education, security and freedom prevailing in France and England. He cites the old

Islamic tag, "No government (*sulṭān*) without wealth (*māl*), no wealth without development (*ʿimārat*), and no development without justice", and asks why Persia was so backward in spite of the fact that Islam was based on justice. His conclusion is that the secret of European progress was the supremacy of the law and that this was lacking in Persia. He then discusses the French constitution and the benefits deriving from it, and finally argues that whereas the *sharīʿa* of Islam had been forgotten by the Muslims in their political conduct, the rights of man guaranteed by the French constitution were, in effect, the very rights which any Muslim should enjoy (Tabrīz 1907, reprinted in Rasht 1909).

In the latter years of the reign of Nāṣir al-Dīn Shāh, disgust at the abuse of power by the ruling class and the obscurantism of sections of the religious classes spread and the reaction to Persia's humiliations at the hands of European powers grew (though this was not to be a major factor in Persian nationalism until after the grant of the constitution). Unfavourable comparisons were increasingly drawn between Persia and Western European states while a small minority questioned the exercise of unfettered power by the shah. Many believed that Western Europe held the secret of progress (though few had any very clear idea of what this might be); they hoped that the adoption of western systems of government would both secure this "secret" and ensure reform and thus enable Persia to resist the encroachment of foreign powers, which the corruption of its government was facilitating. Malkam Khān = Nāẓim al-Dawla, a Persian Armenian from Djulfā (Iṣfahān), educated in Paris and minister in London from 1872 to 1889, was the great exponent of this point of view. His writings, influenced by John Stuart Mill and Mirabeau, became more radical as time passed. In tracts and essays and in the Persian paper *Ḳānūn*, which he founded and edited in London in 1890, he inveighs against internal disorder, corruption and despotism and the external pressure exerted on Persia "from St. Petersburg and Calcutta". The only answer to these evils in his view was technical progress, and administrative and constitutional reform (which he was at pains to show were not contrary to the *sharīʿa*). At first Malkam Khān appears to have believed that reform "from above" was possible. He presented an early essay, *Kitābča-i ghaybī*, probably written between 1859 and 1860 in imitation of the Turkish *tanẓīmāt*, to Mīrzā Djaʿfar Mushīr al-Dawla (who, as stated above, had been one of the first students to be sent abroad by the government) and urged him, as an elder statesman and because of his knowledge of foreign countries, to show it to Nāṣir al-Dīn Shāh and explain the truth to him. He goes on to assert that the Persian state was down-trodden by neighbouring states and afflicted by various miseries, especially corruption. He warns that conditions in the outside world would not remain static: the Indian Mutiny would not go on for ever and Russia would not always remain preoccupied with the injuries she had suffered in Europe: claimants to the Persian provinces would arise. Two waves, one from St. Petersburg and the other from Calcutta, were advancing on Persia. Ministers, Malkam Khān alleges, considered the antiquity of Persia to be a protection against all calamities: however much they were warned that the advancing waves would submerge them, they would say, "we have been thus for 3,000 years and we shall survive this flood also". But, Malkam Khān points out, conditions had changed: Persia could no longer withstand the power of neighbouring states. Europe had made important technical advances of which Persia had no conception and great progress especially in financial administration, while Persia lagged hopelessly behind. He then sets out his ideas for reform based on a separation of legislative and executive powers (*Madjmūʿa-i āthār-i Malkam Khān*, ed. Muḥammad Muḥīṭ Ṭabāṭabāʾī, Tehran 1948-9, 1 ff.).

In another essay, *Dastgāh-i dīwān*, devoted mainly to the need for financial reform, Malkam Khān warns his readers of the fate of Turkey and states that "The Persian government in the face of the encroachment of foreign conquest was in no way different from the Ottoman government. Protection of the Christians was a secondary problem: the essential problem was that the ebullience of European power had made impossible the survival of uncivilised states" (*ibid.*, 74 ff.). In a later essay entitled *Tanẓīm-i lashkar wa madjlis-i idāra yā intiẓām-i lashkar wa madjlis-i tanẓīmāt*, Malkam shows himself to be one of the few writers who realised that reform of one branch of the administration could not be carried out in isolation. He pours scorn on the idea that it would be possible to have a European arsenal without a European tax administration and reiterates the need for a government based on law (*ibid.*, 98 ff.). By the time of the assassination of Nāṣir al-Dīn Shāh the threat to Persian independence was seen by Malkam to be increasingly serious, and he appealed to all, whether Persians, Ādharbāydjānīs, Kurds or Afghāns, to sink their differences and unite to base the rule of the shah on a new unity (*ibid.*, 182 ff.). In an essay entitled *The call to justice*, presented to Muẓaffar al-Dīn in 1905, Malkam Khān again warns of the threat to Persian independence posed by the progressive states of the world and urges the establishment of a legislative assembly, freedom of speech, and freedom of the press. Distinguishing between freedom and licence, he seeks to interpret freedom in terms of the Islamic principle of "enjoining the good and forbidding evil" (*ibid.*, 194 ff.).

Mīrzā Āḳā Khān Kirmānī (1853-87), who spent a great part of his life in Istanbul, was influenced, among others, by Rousseau and Montesquieu. He uncompromisingly rejected Islam and saw Mazdak as the prototype of European socialists, anarchists, nihilists, and communists (*Sih Maktūb*, quoted by F. Ādamiyyat, *Andīshahā-yi Mīrzā Āḳā Khān Kirmānī*, Tehran 1967, 238). Like Malkam Khān he regarded the adoption of Western sciences, industry, and political structures as a fundamental condition to progress. He held that the Persian people must forget their past and lay completely new foundations for their national life if they wished to retain their independence and enjoy power and respect in the world. Pointing to the example of the Caucasus, which had been lost to Russia, India, "which was held prisoner by five thousand English soldiers", and Turkey, "which was forced to submit to the slightest whim of the English ambassador", Mīrzā Āḳā Khān warned that Persia would be made into a colony if she failed to advance in knowledge or to develop her own resources. "Today", he wrote, "we, the subjects of Persia (*raʿiyyat-i Īrān*), are trampled underfoot by internal tyrants and criticised, blamed and despised by foreign governments and civilised peoples. Tomorrow we shall be trampled on by the hoofs of the transport animals of their military forces and captives of their soldiers and armies" (*Ṣad khaṭāba*, quoted by F. Ādamiyyat, *op. cit.*, 229-30). While he was in favour of the adoption of European learning

and technical skills, he condemned the aggression of European powers against other nations (*Hasht bihisht*, quoted by F. Ādamiyyat, *op. cit.*, 231-2). He, like Malkam Khān, aimed at a national awakening and advocated modernisation in order to stem the encroachment both of foreign powers against the national frontiers and of the shah and his government against the freedom of the people. Influenced by earlier writers, especially Djalāl al-Dīn Mīrzā-yi Ḳādjār and Mīrzā Fatḥ ʿAlī Ākhundzāda (Akhundov), who, although he spent the greater part of his life in the Caucasus in the service of the Russian government, was an ardent Persian patriot, the nationalism of Mīrzā Āḳā Khān Kirmānī looks back to pre-Islamic Persia, and tendencies towards anti-Arabism as well as anti-Semitism in general are to be found in his works (see further F. Ādamiyyat, *op. cit.*, 252 ff.).

The themes of Malkam Khān and Mīrzā Āḳā Khān Kirmānī were taken up by others, including Mīrzā Āḳā Furṣat Shīrāzī, who in a series of essays describes freedom, equality and knowledge as the key to progress and attributes the miserable condition of Persia, which he compares unfavourably with India, to ignorance and despotism (*Maḳallāt-i ʿilmī wa siyāsī*, Bombay 1904-5, ii, Tehran 1907-8), Malik al-Mutakallimīn, who emphasises the need to develop Persia's resources and, pointing to the example of Japan, advocates the establishment of factories (see M. Malikzāda, *Zindagānī-i Malik al-Mutakallimīn*, Tehran 1946, 91 ff.), and Persians living in the borderlands such as Mīrzā ʿAbd al-Raḥīm Nadjdjārzāda (Talibov) in his *Masālik al-Muḥsinīn*, and Zayn al-ʿĀbidīn Marāghaʾī in his *Safar-nāma-i Ibrāhīm Beg*. All of these made a significant contribution to the intellectual ferment culminating in the movement for constitutional reform in the early years of the 19th century (on the nature of this movement see further A. K. S. Lambton, *The Persian constitutional revolution of 1905-6*, in *Revolution in the Middle East*, ed. P. J. Vatikiotis, London 1972, 173-84. See also DJAMʿIYYA, Persia and DUSTŪR, Īrān).

Those who prepared the way for the constitutional revolution were drawn largely from the upper ranks of the bureaucracy, the religious classes and the merchants. As the movement spread, it became articulated largely in a demand for "equality" and "liberty", neither of which was defined in legal terms. Both were seen broadly as freedom from tyranny and envisaged by the majority within a temporal framework designed to permit the unhindered operation of the Islamic ethic and the living of the good life in accordance with the sacred law. The underlying intention was to seek to ensure justice and to limit extortion. The shah's neglect of abstract principles of justice was felt to have led to an impoverishment of the people and a growth of foreign influence and intervention in the affairs of the country. Largely for this reason the movement became a nationalist movement in that it was a demand by the people for a greater share in the government of the country and a protest against the placing of the material resources of the country under the control of foreigners (which, in view of the interpretation placed on freedom, was inevitably seen as an attack as much on Islam as on Persia).

There was, however, a paradox: both sides looked to foreigners: the constitutionalists to Britain (though the 1907 convention with Russia was a great surprise and disappointment to them), and the reactionaries to Russia, with the ruling classes of which they felt, perhaps, a greater affinity than with the mass of the Persian people. Although the support which the reactionary party and Muḥammad ʿAlī Mīrzā as *walī ʿahd* and later as shah received from Russia in their attempts to frustrate the efforts of the constitutionalists inevitably gave an anti-Russian aspect to the constitutional movement, it was predominantly a "popular" rather than an anti-foreign movement. Among the *andjumans*, the popular political societies, it developed as a movement of resistance to oppression and a demand for the right of the people to manage their own affairs (see further A. K. S. Lambton, *Secret societies and the Persian revolution of 1905-6*, in *St. Antony's Papers, No. 4, Middle Eastern Affairs No. 1*, London 1958 and *The political rôle of the anjumans 1906-11*, in *St. Antony's Papers, No. 16, Middle Eastern Affairs No. 3*, London 1963). The bond which united them was not a concept of territorial or ethnic nationality or memory of "good" government but rather Islam: the true king was, for them, the Hidden Imām.

With the humiliations suffered by Persia after the suspension of the constitution in 1911 and the disorder prevailing during the Great War, there was a swing away from "popular" nationalism towards nationalism coupled with anti-imperialism and socialism and also "romantic" nationalism. Abu 'l Ḳāsim ʿĀrif (d. 1934), the poet of the constitutional revolution, extolled patriotism and freedom, but Adīb Pīshāwarī (1844-1930), who had been one of the first poets to write in praise of patriotism and nationalism, wrote increasingly against anti-imperialism, while Muḥammad Ibrāhīm Farrukhī (1888-1939) linked patriotism with socialism. In general poets and writers turned increasingly towards a glorification of pre-Islamic Persia. A literary movement to deepen national thought and pride (in stimulating which the writings of orientalists played a considerable part), began in Berlin, where a number of Persians had taken refuge during the 1914-18 war and founded a literary magazine, significantly called *Kāwa* after the legendary blacksmith [see KĀWAH]. ʿIshḳī (1893-1924), Pūr Dāʾūd (1889-1969) and others reminded their readers of the spirit of ancient Persia. Sayyid Muḥammad ʿAlī Djamālzāda (born *circa* 1895), at one time co-editor of *Kāwa* with Sayyid Ḥasan Taḳīzāda (d. 1969), and others wrote essays extolling the Persian past; and Aḥmad Kasrawī (1888-1945) published a large number of political and religious tracts of a nationalist and anti-Islamic nature (see further B. Alavi, *Geschichte und Entwicklung der modernen persischen Literatur*, Berlin 1964).

During the war of 1914-18 and in the years immediately afterwards, there were uprisings of a quasi-nationalist nature led by Mīrzā Kūčik Khān in Gīlān (1915-20), Khiyābānī in Ādharbāydjān (1920), and Muḥammad Taḳī Khān in Khurāsān (1921), but none of them was nationalist in the wider sense or spread to the whole of the country. After the coup d'état in 1921, power was concentrated in the hands of Riḍā Khān, who proceeded to build up the armed forces. By 1925 he had reasserted the authority of the central government over most of the country and on 31 October of that year he assumed the crown. Measures were also taken to restore Persia's position vis-à-vis foreign powers and to limit their intervention in Persian affairs. The capitulations were abolished in 1926 [see IMTIYĀZĀT]. Determined to make Persia a modern state, Riḍā Shāh pressed forward industrial expansion and economic development and extended the scope of government. Requiring more funds to finance these developments, he turned to

the oil industry to satisfy his need. The post-war depression had brought down oil prices and with them royalty payments. In 1932 the Anglo-Persian Oil Company concession was denounced and a new agreement was negotiated in 1933 under which royalty payments were increased. Islam was deliberately weakened, and westernisation forced. The memory of pre-Islamic Persia was fostered. The traditional provincial names were replaced by numbers as a device to efface "the memory of the historic provinces with their persistent traditions of diversity and autonomy" and to create unity and uniformity. An attempt was also made to "purify" Persian of Arabic words and weaken the memory of her cultural debt to the Islamic empires of the past. In the beginning Riḍā S̲h̲āh's nationalism was influenced by the example of Turkey, which he visited in 1934. Later, however, he turned rather to the model of the dictatorial régimes of Western Europe, especially Hitlerite Germany. The new nationalism, which developed during his reign, appealed mainly to the military leaders, who found the ideal of the self-sufficient police state seductive, those intellectuals who provided the personnel of the bureaucracy, the younger generation brought up in the new schools, and those merchants who benefitted from his commercial policy, and was very different from the nationalism of the constitutional period (see further A. K. S. Lambton, *The impact of the West on Persia*, in *International Affairs*, xxxiii/1 (Jan. 1957), 21 ff.).

In 1941 Riḍā S̲h̲āh abdicated as a result of events connected with World War II. In the ensuing years Persia suffered new humiliations. Foreign troops were stationed in the country. Their presence did not technically constitute a military occupation, but Russian troops in the north and north-west prevented orderly administration by the Persian government and did not evacuate the country after the conclusion of the hostilities until recourse was had to the United Nations. There was once more a feeling that national unity was menaced, and coupled with this there was a growing sense of frustration at the failure of successive governments to undertake reform. A feeling of revolt against the "establishment" grew. Various groups, at one extreme the Fidāʾiyyān-i Islām [*q.v.*] and at the other the Tūda Party (who were communist-inspired), were active. Their common desire was for power and control over the sources of national wealth, but their positive policies were less clearly defined, and in any case sometimes in conflict. Finally, under the leadership of Dr. Muṣaddiḳ cohesion was given to the discontent. The movement of protest was focussed on the Anglo-Iranian Oil Company and was transformed into a campaign for liberation from supposed foreign domination. Nationalisation of the oil industry (achieved in 1951) became the immediate goal. With the alliance of Dr. Muṣaddiḳ and the religious leader Sayyid Abu'l Ḳāsim Kās̲h̲ānī, who interpreted the protest movement in terms of Islam, it spread throughout the country as a popular movement for the defence not only of Persia but also of Islam. After the reassertion of the monarchy following the overthrow of Dr. Muṣaddiḳ by a military coup d'état in 1953, "popular" nationalism once more declined to be replaced in due course by a new self-styled "positive" nationalism imposed from above, one of the manifestations of which was the celebration in 1971, after several years of planning, of what was regarded as the 2500th anniversary of the foundation of the Persian monarchy by Cyrus (see further IRAN, History; ḤIZB, Persia; and also J. M. Upton, *The history of modern Iran, an interpretation*, Cambridge Mass. 1960).

iv. IN OTTOMAN TURKEY.

This word was used in Ottoman Turkish to express the new idea of nationalism which originated in Central and Eastern Europe during the 19th century. This new nationalism was not the older patriotism of Western Europe founded in a citizen's loyalty to his country, his state and its mode of government and in which a degree of individual liberty was usually involved. It was anethnic, linguistic, and sometimes cultural nationalism, romantic and subjective in its appeal, and often illiberal. When it reached the Ottoman Empire this brand of nationalism quickly vitalised the independent ambitions of the non-Muslim religious communities (*millets*), and more slowly those of the non-Turkish Muslims.

The Ottoman Turks were not much affected by this new form of nationalism for two interconnected reasons. In the first place, the Turks of the Empire, despite a vigorous flowering of Turkish "national" self-consciousness in the 9th/15th century, had subsequently submerged themselves in Islam and assumed the responsibility for the expansion and maintenance of the Islamic community. The new nationalism could not easily strike a responsive chord amongst them. Secondly, the Ottoman Turks had previously been exposed to Western European patriotism, which had a greater appeal since it did not create ethnic or linguistic impediments to continued Ottoman unity and strength. To express the notion of *patrie* the Ottoman Turks used the words *waṭan* and *millet*. By the mid-19th century, *waṭan*, meaning in former usage one's home, village, town, or region, fully developed the meaning of *patrie*, and was much in use in the Turkish press. The word *millet* was also used to denote the *patrie* of the Ottoman Empire, but with revealing confusion, it was also employed to mean the Islamic community. Not without significance, perhaps, when Turkey did come to regard itself as a nation the word used was not *ḳawm* but *millet*.

A patriotism centred on Ottomanism and Islam served largely to insulate the Turks from the new nationalism of the 19th century and to help preserve the Ottoman position. However, the ground was being prepared for the new conception of nationalism to take root. Interest in the Turks *qua* Turks was aroused in the first place by the publication in London in 1832 of a *Grammar of the Turkish language* by Arthur Lumley Davids (1811-32). It included the history as well as the language of the Turks, and became known in Turkey. Two other foreigners whose work was of very considerable influence were the renowned Hungarian Turcologist, Arminius Vambéry (1832-1913), and the colourful Léon Cahun, whose *Introduction à l'histoire d'Asie* (1896) glorified the role in history of the Turkish nomadic tribes.

A number of factors helped this new interest in Turcology to develop. Hungarian scholars were interested in the possibilities of discovering some common heritage with the Turks as a counterweight to Pan-Slavism. Anglo-Russian rivalry in Central Asia also brought Turkish studies to the fore. Exiles in Turkey after the abortive 1848 revolutions in Europe spread the new nationalist ideas. A later impetus occurred through the advent of politically experienced exiles from Turkish and Tartar areas of Russia at the end of the 19th century. These

influences awoke a slow response among the Turks. It was only as the non-Muslim peoples obtained independence, and when there were national stirrings among the Muslim subjects of the Empire, that a truly Turkish nationalism based on a common race, language and culture became more feasible. Among Ottoman Turks who took up the theme were the historian Aḥmad Wafīḳ Pas͟ha (1823-91) [*q.v.*] and Süleymân Pas͟ha (1838-1932), the first Ottoman historian to write about the pre-Islamic Turks. Attention was also given to the Turkish language: the first modern Turkish grammar appeared in 1851, the *Ḳawāʾid-i ʿOt͟hmāniyya* of Fuʾād and D̲jewdet Pas͟ha [*q.v.*]. The first Turkish turcologist in any real sense was Ned̲jīb ʿĀṣīm (1861-1935).

It was not, however, until the Young Turk period, and with the diminution of the Empire, that a more general interest could be aroused. A Turkish Society (*Türk Derneyi*) was established in 1908 to study Turkish culture in its many aspects. From this initiative shortly emerged a journal, *Türk Yurdu*, ("Turkish Homeland") which began to develop a political Turkism, notably under Akčuraog͟hlu Yūsuf [*q.v.*]. Numerous Turkist societies, *Türk Od̲jaklari*, ("Turkish Hearths") were also founded to study and promote Turkish culture. Closely associated with *Türk Yurdu* was the greatest exponent of Turkish nationalism, Ḍiyāʾ (Ziya) Gökalp [*q.v.*]. In some of his writings he went so far as to envisage the political union of all Turks in a new *Tūrān*, but the international situation, notably the strength of Russia, gave little prospect for the realisation of this Pan-Turkist dream, save for a brief period of confusion in Central Asia following the Russian Revolution of 1917. Nevertheless, Turkish nationalism continued to develop, markedly affected by two factors, firstly the Armenian massacres of 1916, and secondly, the defection of Arab Muslims to the Allied side in the first World War.

By 1918 it was clear, however, that attempts to promote an Ottoman, Pan-Islamic or Turanian unity were either irrelevant or impracticable. Yet some basis for a national unity had to be found if what was left of Turkey in 1918 was to be defended against Allied claims. National feeling was now concentrated on the rescue of the Anatolian homeland from the occupying Christian powers, particularly from the Greeks. Whilst religious feeling was still obviously important in this situation, a new emphasis appeared in Turkish nationalism—the territorial. It had obvious impact: the Turkish peasant's hearth and home, his *waṭan* was at stake. After the War of Liberation the Republic sought to justify this new nationalist attachment by promoting historical enquiries to show that Anatolia was in fact the ancient land of the Turks. This might be interpreted as a return, in a new context, to the less romantic patriotism of earlier European inspiration, but the attachment to the land, to national folk-lore, popular tradition and national solidarity was romantic to a marked degree. For the Atatürkist élite, nationalism was also firmly secularist, as the abolition of the caliphate and the disestablishment of Islam in 1924 testified.

The secular, cultural and territorial nationalism of the Atatürkist period has remained the predominant form of nationalism in Turkey since the Second World War, but it has not been universally accepted. Whilst it is difficult to make clear divisions among the different schools of thought, it may be said that the secular nationalists have divided into two groups. There are those who support the liberal democratic, and strictly territorial, political system as representing the national spirit, and others who would qualify their support by insistence on the need for a greater degree of socialism to allow the full expression of national feeling. This latter group attaches itself to the left-of-centre *Cumhüriyet Halk Partisi* (Republican People's Party). One school of thought has attempted, however, to define nationalism to include Islamic, as well as pre-Islamic, Turkish history. This current of thought has found a ready audience among the new professional, commercial and industrial middle classes, and actual promotion through the *Türk Ocakları*. revived in 1949 after their abolition in 1932. This modification of nationalism has appealed to many members of right-of-centre political parties, notably the former *Demokrat Partisi* (Democrat Party) and the *Adalet Partisi* (Justice Party). Important elements in the Turkish intelligentsia have sought, however, to give greater weight either to Islam or to Turkish nationalism (and to Pan-Turkism) than the usual compromises envisage. An Islamic trend which nevertheless accords a place to nationalism is represented by Necmettin Erbakan's *Millî Selâmet Partisi* (National Salvation Party) which in 1973 won 48 seats in the elections for the 450-member National Assembly. An extreme nationalist party under Alparslan Türkeş, which accords a place to Islam, is the *Milliyetçi Hareket Partisi* (Nationalist Movement Party) which, however, won only 3 seats in the 1973 National Assembly. Territorial nationalism, Islam and Pan-Turkism are not easy to combine. This is evident in the writings of the influential Dr. Riza Nur [*q.v.*] (1879-1942), who advocated *inter alia* a republican form of government, restoration of the caliphate, and the reunion of all Turks under the leadership of those of Anatolia.

A number of nationalist associations have been established recently in Turkey, particularly in the 1960s, partly in response to increased leftist activity. Large general congresses of nationalists were held in 1967 and 1969. One association of particular significance which has emerged is the *Küminizmle Mücadele Derneği* ("Society for Opposing Communism"), which has been active in demonstrations against left-wing groups. Reviews which in recent years have supported secular nationalism include *Varlık* ("Existence"), *Dost* ("Friend"), *Yeni Ufuklar* ("New Horizons") and *Yedi Tepe* ("Seven Hills"). Turkist and Islamic nationalism have been represented *inter alia* by *Türk Kültürü* ("Turkish Culture"), *Türk Birliği* ("Turkish Unity") and *Tohum* ("Seed"). The strength of modern Turkish nationalism is difficult to assess, since every political association claims to be nationalist. Certainly, for many Turks a wholly secular nationalism is not proving to be satisfactory. [See also ḤURRIYYA, ISTIḲLĀL (Independence), ISHTIRĀKIYYA and TŪRĀN.]

v. In Central Asia.

("Central Asia" is here taken to include the Ḳazakh, Özbek, Tādjik, Ḳîrghîz and Turkmen Soviet Socialist Republics).

The European ideas of the nation, national frontiers and national government, which began to spread to Asia and Africa at the turn of the 19th century, have so far had a much smaller impact on the Muslim peoples of Central Asia than on the rest of *Dār al-Islām*. At the time of the Russian conquest, the Central Asians were generally regarded as being both politically and culturally the most backward of all Muslims, and the Tsarist régime did little to change this situation. No plans existed for eventual self-government, or even for local participation in provincial government, and in 1907 the small Central Asian representation in the Russian Duma (parliament) was abolished. Literacy did not exceed 3% and there were no establishments of higher education other than the *madrasas*. The large military garrison was composed of Russian imperial troops; Central Asian Muslims were exempt from conscription in the imperial forces, and there were no Muslim military formations in the Russian-ruled provinces. Conditions in the vassal states of Bukhārā and Khīwa were no more advanced, and in many respects, less so.

Such stirrings of national consciousness as existed were aimed rather at the defence of Islamic culture against Russian encroachment than at self-government and separation from Russia. The nearest thing to a coordinated endeavour was the "Djadīd" movement (from *uṣūl-i djadīd*), which originated among the Tatars of Kazan and the Crimea, but eventually had a considerable vogue in the urban areas of the Turkestan Governorate-General and the Khānate of Bukhārā. Something more closely approaching a nationalist movement began among the small Ḳazakh intelligentsia after the Russian revolution of 1905, but its aims, like those of the Djadīds, were cultural rather than political.

The great Turkestan rebellion of 1916 has been called "a national liberation movement". It was certainly directed against the Russian presence, but it was unco-ordinated and had no specifically political aims. Its ruthless repression by the Tsarist government had the temporary effect of favourably disposing the Muslims to the Revolution of 1917, which they imagined would mean the end of Russian rule; and the hope thus engendered gave rise to several small movements aiming at some kind of independent state or states. Such aspirations were, however, strongly opposed not only by the new Soviet régime, but by the 2-million strong element of Russian settlers who, whether they supported the Revolution or not, were not prepared to hand over the region to Muslim rule. The Djadīds, too, always at loggerheads with the *ʿulamāʾ*, now found themselves equally opposed to the new régime. By 1921, any prospect of an organised national movement with clearly defined political aims had receded, but guerilla Muslim resistance to the Soviet government continued in the shape of the so-called Basmači [*q.v.*] movement. Although violent and widespread, this movement lacked cohesion, competent leadership and the necessary resources, and by 1922 it had virtually collapsed.

By the end of 1920, complete Soviet control over the region was a foregone conclusion, and since the new régime was fundamentally opposed both to Islam and to the idea of nationalism, any chance of the emergence of a Central Asian state or states based on Muslim principles became even more remote than it had been in Tsarist times. The constitution of the so-called Bukhāran Peoples' Republic formed on the overthrow of the khānate in 1920 declared that "no published laws of the Republic may contradict the foundations of Islam", but this constitution was abrogated on the absorption of the republic into the Soviet Union in 1924, and the whole concept of Islam was thus finally removed from the Soviet political fabric. Some Central Asian intellectuals had participated to a limited extent in an attempt to achieve Muslim solidarity made from within the Communist Party by Mīr Sayyid Sulṭān ʿAlī Oghlu (Sultangaliyev), a Tatar Communist from Kazan. But the movement ended with his arrest in 1923 and subsequent disappearance.

As a means of combating nationalism and of solving the "national problem", the Soviet Government adopted a "nationalities policy". As applied to Central Asia this involved the classification as "nations" of the larger Muslim communities, most of whom had not previously thought of themselves as such. In 1924 the former administrative borders were abolished and the whole territory, including that of the erstwhile khānates, was divided into "republics" bearing the names of these "nations". Although described officially as "fully sovereign", they have never been so by any standards recognised elsewhere in the world of Islam, since the overriding authority in all matters relating to policy, justice and, indeed, every human activity rests with the Communist Party of the Soviet Union centred in Moscow. An attempt has been made, so far with only partial success, to remould the cultures of all the Muslim peoples in the region, now numbering about 22 million, on lines described as "national in form and socialist in content". There is much evidence of passive Muslim resistance to many social and cultural institutions of the Soviet régime, but none of any organised or active opposition to it. The facts about the alleged unmasking of a nationalist plot in the Özbek Republic in 1937 have never been established.

It is hard to say how far the Soviet nationalities policy has succeeded or will succeed in the future in excluding or holding in leash the national sentiment which has contributed towards the freeing of so many non-Soviet Muslim communities from foreign or non-Muslim rule. During the past fifty years none of the features characteristic of nationalist movements elsewhere have been present in Central Asia: namely, competent and easily identifiable national leaders with some freedom of speech and action; religious and cultural freedom; aid and encouragement from abroad; native military formations trained in the use of modern weapons; and support from liberal opinion in the metropolitan country. On the other hand, by artificially creating nations and stimulating the growth of those which had previously only existed in embryo, the Nationalities Policy has brought into being organisms which, far from remaining static, seem to be gradually acquiring a real national identity. It can be said that while nationalist movements of the kind which convulsed the Muslim peoples of the Middle East and North Africa are, in the present circumstances, highly improbable, national consciousness and the desire to dispense with alien rule are still very much alive. But what kind of state or states towards the formation of which this national consciousness may be tending is still uncertain.

vi. IN MUSLIM INDIA AND PAKISTAN.

The growth of Muslim nationalism, or Muslim separatism as it is usually called, was one of the most striking developments on the Indian subcontinent under British rule. It stemmed from the Aligarh movement, an educational and political campaign aimed mainly at protecting the power of the Muslim service élite of northern India, which developed around the Muhammadan Anglo-Oriental College founded in 1875 by Sir Syed Ahmed Khan at Aligarh in the United Provinces. In the early 20th century, men associated with this movement made Muslim separatism a significant factor in Indian politics. In 1906 they founded an All-India Muslim League. Then, using the League as their platform, they first persuaded the government to introduce separate electorates (with special weighting to take account of their "political importance") in the Morley-Minto reforms of 1909, and soon afterwards persuaded the Congress, the organisation of Indian nationalist politics, to accept the same principle for the next package of reforms in a pact made at Lucknow in 1916. By this time Muslim separatism would appear to have been an established fact in Indian political life, but it would be quite wrong to see its development from this point to 1947 as an ever-ascending line on a graph, because for the twenty years after 1916 it was a declining force. First, Muslim Leaguers agitated with Congressmen against the government in the Khilāfat non-co-operation movement of 1919-23, then in the 1920s and 1930s many lost interest in League politics altogether: some preferred the class-based politics of the United Provinces' Zamīndār Party or the Punjab Unionist Party, others the Islamic politics of the Khilāfat Party, and yet others the Indian nationalism of the Congress itself. So weak did Muslim separatism become that the Muslim League held no annual sessions between 1933 and 1936. And it was not until the 1937 elections, after the 1935 Government of India Act had considerably extended the franchise and had given Indians virtual autonomy at the provincial level, that Muslims again began to support separatist politics in large numbers. From then on, the Muslim League went from strength to strength till, in part because of the rapid change in circumstances brought about by World War II, in part because of the political failures both of the Congress and of the British, and in part because of both the political skill of Jinnah and its own success as a political organisation, it succeeded in establishing a separate Muslim state on the Indian subcontinent when the British transferred power in 1947.

An important point to note about Muslim separatism is that at no stage did it receive equal support from all Muslims. Their condition and their interests varied greatly in the different parts of India. There were differences of background; some, particularly in northern India, were descended from invaders or adventurers who had come from Arabia, Afghanistan, Persia and Central Asia to make their fortunes from the fabled wealth of Hindustan, but the majority were descended from Hindus who, during the period of Muslim supremacy, had been converted to Islam. There were differences in their level of islamisation; the humble Muslim villager in Bengal or Madras, who spoke the local vernacular and who followed most of the local social and religious customs, had much more in common with his Hindu neighbour than did his co-religionist living in a town in northern India whose culture and whose customs were much more distinctly Islamic. There were also differences in their distribution throughout the subcontinent; in the Punjab and in Bengal (after 1911) Muslims were a majority of the provincial population, but in no other province for most of British rule did their numbers exceed 20%. Finally, there were differences in their economic and political position; traditionally the Muslims of Bengal or Sind or Madras were cultivators with little economic strength and less political power, but the Muslims of north India, in particular those of the United Provinces, were not only wealthy, holding much land and many positions in government service, but were also accustomed to being the dominant political group in the area. These differences dictated a variety of responses to the challenges presented by the modernising tendencies of British rule to their livelihood, their religion and their political power. Indeed, for most Muslims under the British a political stance based on their faith made no sense in the context of local or provincial politics. Muslim separatism found support mainly in the United Provinces. Men from this area founded Aligarh College and the All-India Muslim League. They chiefly organised this League throughout its existence and used it to win Muslims elsewhere in India for their separatist politics. When separatism was strong, it was because it suited their interests; when it was weak, as it was in the 1920s and 1930s, it was because it did not.

Why some Indian Muslims should have organised for politics on a religious basis has been hotly debated. Four main lines of argument have been put forward to explain this phenomenon: that the Muslims were backward in taking advantage of western education, had therefore fallen behind in the competition for jobs and economic advancement, and therefore organised as a community to protect their interests; that the British deliberately divided and ruled, encouraging Muslims from time to time to organise as a separate group in order to strengthen their imperial position; that Indian nationalism was too strongly associated with a frequently aggressive Hindu revivalism to allow Muslims to play a full and unreserved part in it; and that the Muslims had always been a separate community on the Indian subcontinent which fact was expressed in the separatist tendency of their politics. There are grains of truth in all these arguments, but as they stand they are too simple by half.

Of course, the fact that Muslims had some common religious experience must lie at the base of any explanation of why some Muslims organised for politics on a communal basis; but it is not the sole or even the chief cause of why they did so. The threats which British policy in education, in bureaucratic reform and in local self-government levelled at the position of the Muslims in the United Provinces, making them fear that they might become backward, played a part; they lay behind the foundation of Aligarh College and the All-India Muslim League. A Hindu revivalism, which aimed to promote the Nagari script and the Hindi language and to protect the cow, was also important; early responses to the massive changes which government was bringing about in north Indian society were organised by Hindus and Muslims working in concert, but Hindu revivalism in the late 19th century helped increasingly to divert these responses into communal channels. Moreover, throughout its existence the close association of Hindu revivalism with the Congress made it hard for Muslims to join the Indian nationalist movement. This type of revivalism was not restricted to Hindus; it also developed amongst Muslims and helped to harden their consciousness of being Muslim. It found powerful expression in the writings of Ḥālī, S̲h̲iblī and Iḳbāl, and it infused aspects of the movements for a Muslim university, for the preservation of the Turkish K̲h̲ilāfat, and for the establishment of Pakistan. Crucially important was the tendency of the British to see their Indian subjects primarily not as members of different races, nor as speakers of different languages, nor even as representatives of different interests, but as followers of different faiths. They shared out patronage along religious lines, particularly to Muslims in northern India, whom at one time they saw as the greatest threat to the empire and at another as the most important supporters of it. Such perceptions of Indian society and such policies played a vital role in the development of separatism; without them Aligarh College would never have survived its early years and the Muslim League would never have won separate electorates. Crucially important too was the fact that for much of the time the Muslim platform was a particularly rewarding one for Muslim politicians from the United Provinces to adopt; up to the second decade of the 20th century because of the attitudes of the government, and later, in the age of mass agitation and growing electorates, because these politicians had in the *ʿulamāʾ* a tremendously powerful, if double-edged, weapon for mobilising mass support. They introduced the *ʿulamāʾ* into politics in 1918 with the aim of making capital out of the K̲h̲ilāfat issue, but were overwhelmed by the agitation which followed. They introduced the *ʿulamāʾ* again in the campaign for Pakistan, and the *ʿulamāʾ*, this time subordinate to the politicians, played an important part in winning over to the Muslim League Muslims in provinces where they were a majority of the population (sc. Bengal, Sind, North-West Frontier Province and Punjab). Without the support of these Muslims there could be no Pakistan.

Such were the factors which encouraged some Muslims to organise on a communal basis in Indian politics under the British. Such, in sum, were the causes of Muslim nationalism. If, for those who followed, Muslim nationalism was mainly a religious matter, for those who led, it was a matter less of the desirability of separate Muslim political organisation or later of a separate Muslim state in which they could live according to the *S̲h̲arīʿa*, than of the need to ensure that they continued to wield the power in northern India which they had wielded for hundreds of years.

KAWN WA-FASĀD, "generation and corruption". The expression is frequently found in the vocabulary of *falsafa* as the translation of the two Greek words γένεσις and φθορά, and it is also how Aristotle's *De generatione et corruptione* is rendered in Arabic. The references entail an analysis of cosmology, a measure of psychology and some metaphysical developments of the *Falāsifa*. The ideas in question acquired various nuances of meaning, by measure of the system and theory of each *faylasūf*, but they always harked back to the Aristotelian meaning. The term is most frequently met with in the phrase "world of generation and corruption", *ʿālam al-kawn waʾ l-fasād*, as a designation of the sublunary world, which is subject to change; by contrast, the worlds above are free of this. A few quick references are sufficient here: al-Fārābī speaks of the corruptible elements placed within nature, "the corruptible facts" (*al-as̲h̲yāʾ al-mutakawwināt al-fāsida*; see *Commentaire sur le Peri Hermeneias*, ed. W. Kutsch and S. Marrow, Beirut 1971, 75, 191); and Ibn Sīnā, in his treatise on "The branches of the speculative sciences" (*Aḳsām al-ʿulūm al-ʿaḳliyya*) considers a study of *kawn wa-fasād* as one of the objects of "natural science" (see *Tisʿ rasāʾil*, Cairo 1326/1908, 106).

First and foremost *kawn* evokes the idea of exist-

entialisation. This is the principal meaning it acquired in the vocabulary of *ʿilm al-kalām: kawn* is the advent in nature of the existent thing (*kāʾin*, plur. *kāʾināt*), which makes it, for the Muʿtazilī (*e.g.* al-ʿAllāf) as well as for al-Ashʿarī, to some extent synonymous with *wudjūd*. But for the advocates of the (philosophical) atom (*djuzʾ* [*q.v.*]) in particular, an existent thing presupposes a body and subsequently a dimension. Thus *kawn* came to mean the existentialisation of corporal beings and *wudjūd* of all existence, supraperceptible as well as perceptible. For the *Falāsifa*, *kawn* (plur. *akwān*), the customary translation of γένεσις, was more precisely applied to beings subject to growth, without losing its primary meaning of existentialisation, with its reference to the dimension of bodies. According to Ibn Sīnā, for example, *kawn* can either be a synonym for *wudjūd* or can designate a being *in fieri*, depending on the context. M. Jean Jolivet (*L'intellect selon Kindī*, Leiden 1971, 123; cf. *Rasāʾil al-Kindī*, ed. Abū Rīda, Cairo 1369/1950, i, 204) suggests that for Kindī *kawn*, linked to *fasād*, was already defined as substantial change, "changing existence". One of al-Kindī's main texts on the subject is the brief *risāla* on "The efficient proximate cause of generation and corruption" (*al-ʿilla al-fāʿila al-ḳaribiyya li 'l kawn wa 'l-fasād*; *ibid.*, i, 208-13).

Yet there is a noticeable difference between the ideas of al-Kindī and those of his successors. The latter's vision of the world is emanistic; *akwān* are therefore the last necessary effect of *fayḍ*, the productive flow of being, necessarily emanating from the prime Being. For al-Kindī, *kawn*, however much a matter of becoming it may be, depends for its first efficient cause on a free creation *ex nihilo*, thereby being linked with the Ḳurʾānic meaning of *kun fā-yakūn*, (God said) "So be it! and it is so" (Ḳurʾān, II, 117); cf. *Rasāʾil al-Kindī*, i, 373-4. But whether it is a question of the creationism of al-Kindī, or the emanationism of his eastern successors, or the eternity of the world of Ibn Rushd, the idea of becoming, generation, (substantial) change remains linked to *kawn*. Even if *akwān* depend in the last resort (freely or necessarily) on the prime efficient Cause, their coming into being is nevertheless linked to the interaction of secondary causes. By this token, the heavenly bodies, subject to local movement but not to becoming, are not answerable to *kawn*. *Falsafa* vocabulary does not consider them as *akwān*. Therefore, in his *risāla* on "The prostration of distant (heavenly) bodies and their submission to respect for God", al-Kindī (*op. cit.*, i, 253 ff.) faithful to his creationism, affirms the direct creation *ex nihilo* of the Heavenly Bodies because they are not subject to generation and corruption (cf. Jolivet, *op. cit.*, 107).

In fact *kawn*, and its opposite correlative *fasād*, taken as a whole, are the object of the fourth sort of movement which Aristotle calls "substantial movement". Such is the status of the beings composed of matter and form belonging to our sublunary world, which are destined to die, to be transformed, and to reappear in new forms. The word *fasād* belongs to the Ḳurʾānic vocabulary, where it signifies a state that is radically bad, in contrast with good. It can be rendered as (moral) "corruption", occasionally as "état de violence" (tr. D. Masson) or as "scandale" (tr. R. Blachère). Thus in Ḳurʾān, III, 41: "Corruption (or "scandal") has appeared on the land and on the sea because of what men's hands have done". The moral vocabulary of *ʿilm al-kalām* contrasts *ṣāliḥ* with the adjective *fāsid*, whatever is healthy with whatever is corrupt, often using them synonymously with *ḥasan*/*ḳabīḥ*. In law (*fiḳh*), *fasād* signifies the invalidity of a juridical act [see FĀSID]. The cosmology of the *Falāsifa* proceeds from these moral and juridic meanings to a physical one and employs *fasād* to render the Greek φθορά. In this case, the corruption of the compound matter and form depends on an intrinsic coming into being (*kawn*). Therefore *fasād*, like *kawn*, also belongs to the fourth sort of movement, which, says al-Kindī, is "movement which transfers a thing from its own essence (*ʿayn*) to another" (*Rasāʾil*, i, 217; tr. Jolivet, *op. cit.*, 121). This definition, with slight variations, is found in the works of his successors. It is because of its "intrinsic power to decay" (*ḳuwwat fasādihā*), says Ibn Sīnā, that a physical compound decomposes, and this power resides in matter (*e.g. Nadjāt*, Cairo[2] 1357/1938, 188).

The problem of "generation and corruption" was linked to the production of all beings in the sublunary world, and for Ibn Sīnā was especially related to the problem of a separate Intellect which acted as a "giver of forms", *wāhib al-ṣuwar*, as well as to that of "enacting" and "receiving" causes (*ḳābiliyya*). When later *kalām* (*e.g.* al-Ghazālī in *Maḳāṣid* and *Tahāfut*, Fakhr al-Dīn al-Rāzī, al-Īdjī, al-Djurdjānī) set forth and discussed the theses of *falsafa*, they employed the expression *kawn wa-fasād* and the definitions elucidating it.

Bibliography: given in the article. References to the topic in the writings of the *Falāsifa* are very numerous, both in original, systematic expositions and in commentaries on Aristotle. (L. GARDET)

ḲAWS (A.), bow (noun of uncertain gender). The numerous types of bow attested at various times in the Islamic world are designated by expressions which include this word, in a very general sense, together with adjectives (*ḳaws ḥidjāzī*, *fārisī*, etc.) or nouns in annexation to it (*ḳaws al-ḥusbān*, *ḳaws al-ridjl*, etc.). Furthermore, one often finds qualities inherent in the weapon used to designate various types of bow (*al-katūm*, *al-rahīsh*, *al-zawrāʾ*, etc., see below, § 3).

1. *Generalities and origins*

In classical antiquity and the Christian west, gallantry was especially displayed in close combat, so that the short sword and the straight sword were regarded as the noble weapons, as the poet Lucan clearly states: *Ensis habet uires, et gens quaecumque uirorum/bella gerit gladiis* (*Pharsalia*, viii, 385-6). Arms involving the hurling of projectiles (bows, arbalests and slings) were regarded as treacherous arms whose use was left to mercenary soldiers (Cretan archers and slingsmen from the Balearic Islands in the Roman army, Genoese crossbowmen in 14th century France). On the other hand, in the sphere of the martial arts in Islamic lands, the bow held the outstanding place, as the abundance of technical literature devoted to *rimāya* [*q.v.*] shows. The information which we possess is only fragmentary, and comes from studies and published treatises stemming from the latter half of the last century; the principal ones are given below, in chronological order.

Hammer-Purgstall, *Über Bogen und Pfeil*, Vienna 1853 (a work based on the treatise of Muṣṭafā Kānī, which stresses religious and social aspects and leaves unexplored technical considerations); Schwarzlose, *Die Waffen der alten Arabern*, Leipzig 1886 (a lexicographical study devoted to the weapons of the pre-Islamic Arabs and based on a systematic analysis of ancient poetry); Fries, *Das Heereswesen der Araber*, Tübingen 1921 (a study of the Umayyad army,

based on al-Ṭabarī, but with comparatively little information on archers); Hein, *Bogenhandwerk*, in *Isl.*, xiv-xv (1925-6) (a study of archery among the Ottomans made from the points of view of construction and of sporting use, and based on the *Talkhīṣ rasā'il al-rumāt* of Muṣṭafā Kānī); Klopsteg, *Turkish archery*, 1934 (deals with certain developments out of the preceeding study, with more exact technical details); Faris and Elmer, *Arab archery*, Princeton 1945 (the first critical edition of a treatise on archery dating from *ca.* 1500); Zajączkowski published at Warsaw in 1956 a Mamlūk treatise on archery of unknown authorship and included in a treatise on farriery and the care of horses; Boudot-Lamotte, *Contribution à l'étude de l'archerie musulmane*, Damascus 1968 (the section on archery from a treatise on arms composed for Saladin by Marḍī); Latham and Paterson, *Saracen archery*, London 1970 (a treatise by the Mamlūk Ṭaybughā, with commentary and illustrations).

The traditional items of information given in the treatises on *rimāya* generally agree that the origin of the bow goes back to a heavenly gift bestowed on Adam through the intermediacy of the Archangel Gabriel. Adam then used with great profit this divinely-hallowed weapon, with its miraculous character, in order to preserve his crops from birds' depredations, and he passed the weapon on to his descendants, amongst whom Abraham, "father of the Arabs", apparently had a great reputation as an archer. Little is known about the archers of the pre-Islamic period, or about what kind of bow they used (see below, § 3). It seems that certain tribal groups especially favoured this weapon, such as the B. Saʿd of Tamīm, whose skill at shooting was praised by various poets, including al-Ḳulākh b. Ḥazn. The Prophet is said to have been a skilled archer whose mastery of the bow was revealed at the battle of Uḥud, and he had several bows whose names are preserved by tradition. Al-Ṭabarī, ed. Cairo, iii, 184-5, mentions three of these, taken from the B. Ḳaynuqāʿ, sc. *rawḥā'*, *shawḥaṭ* (also called *al-bayḍā'*) and *ṣafrā'*, this last made from *nabʿ* wood. ʿAbd Allāh Efendi (*apud* Hein) numbers the Prophet's bows at six, adding to the three already mentioned *sadād*, *zawrā'* and *katūm*. The existence of these bows is attested, but without precise references, in *LA*, iii, 208. The most famous archer of the period of the Islamic beginnings was undoubtedly, according to tradition, the "Paladin of Islam" Saʿd b. Abī Waḳḳāṣ, whom the Turkish archers' guilds later made their patron. Saʿd distinguished himself at Uḥud with a little group of archers, whose names are preserved in the *K. al-Maghāzī* of al-Wāḳidī.

It is somewhat surprising to note that the word *ḳaws* appears only once in the Ḳur'ān, in *S. al-Nadjm* (LIII, 9), in which it only figures, however, as a measure of distance: *fa-kāna ḳāba ḳawsayni aw adnā* "[the angel] was two bow-lengths off or nearer". *S. al-Anfāl* (VIII, 62) nevertheless implicitly emphasises the essential part assigned to the bow in the fight against the unbelievers: *aʿiddū lahum mā-staṭaʿtum min ḳuwwatin* "prepare against them whatsoever force you are able to gather". The word *ḳuwwa* here is often glossed by the authors of the treatises on archery as "the force of bows". This remarkable restrainedness of the Ḳur'ān is on the other hand amply compensated for by the numerous traditions to be found all through the *ḥadīth* literature. From the main corpora, one may cite: Abū Dāwūd, *Djihād*, 23; al-Bukhārī, *Djihād*, 78, 80; *Anbiyā'*, 16; *Manāḳib*, 4; al-Dārimī, *Djihād*, 14, 23; Ibn Ḥanbal, i, 92, 124, 137, 264, iv, 50, 144, 146, 148, 154, 368, v, 31; Ibn Mādja, *Muḳaddima*, 11; *Tidjārāt*, 67; *Djihād*, 19; Muslim, *Imāra*, 169; *Faḍā'il al-Ṣaḥāba*, 41, 2; al-Nasā'ī, *Djihād*, 26; *Khayl*, 8; al-Tirmidhī, *Djihād*, 11; *Manāḳib*, 26 (see Boudot-Lamotte, *Contribution*, 40-5).

It is unnecessary to point out that these pieces of information contain no precise technical details which would enable us to reconstruct with any sureness the types of bow used at the time of the *maghāzī*. One possibility might be by means of the makers of bows, concerning whom no research has yet been done. One finds many times in Islamic onomastic the *laḳab* of "al-Ḳawwās". According to a piece of information in the *Aghānī*, xiv, 36, al-Djāḥiẓ mentions (*Ḥayawān*, v, 233-5) two famous bow-makers, ʿUṣfūr al-Azdī and Māsikha, the latter having been, according to tradition, the first man to make bows. Ibn Rashīḳ, *ʿUmda*, ii, 222, repeats this information in order to explain the adjectives *ʿuṣfūriyya* and *māsikhiyya* applied to bows. Amongst these uncertainties, one fact seems incontrovertible: that unlike the Persians, amongst whom archery had long been an ancient tradition and was one still living in Islamic times, the ancient Arabs used the bow more for hunting than for warfare. On one hand, archery was little practised from horseback, and on the other, the prevalence of single combats since the time of the *Ayyām al-ʿArab* did not require it [see DJAYSH. i]. Hence it was in Iran, and more precisely, in Khurāsān, where Abū Muslim organised his army, that new techniques, unknown to the Umayyads, were introduced in the domains of siege warfare as in that of archery. These Khurāsānians were themselves progressively replaced under al-Muʿtaṣim by Turks brought from Central Asia, accustomed to fighting on horseback, as al-Djāḥiẓ remarks in his well-known *Risāla fī manāḳib al-Turk wa-ʿāmmmat djund al-khilāfa*, ed. Van Vloten, Leiden 1903. The coming of the Saldjūḳs intensified the employment of the horse-archer, whose astonishing successfulness came from the union, born in Central Asia, of the horse and the bow, whose symbolic forms may well have inspired the graphic shape of the *ṭughras* [*q.v.*]. These horse-archers formed, one need hardly point out, an extremely-mobile light cavalry force which contrasted sharply with the heavily-armed cataphracti which were used at that time in the west.

The counter-crusade begun by Saladin caused a florescence of treatises on *djihād* and *furūsiyya* in which there were treated, for the first time systematically, the techniques pertaining to each branch of weaponry (see Cahen, *Traité*, and on bows, Boudot-Lamotte, *Contribution*). In the Mamlūk period this literature devoted to arms—often didactic in aim and utilising the form of the *urdjūza*—developed considerably, and amongst the topics dealt with were the manufacture and use of weapons, with archery occupying a prominent place (see Latham and Paterson, *Saracen archery*). After Baybars' defeat of the Mongols at ʿAyn Djālūt, there was created the *maydān* or training-ground for horse-archers. The introduction of firearms did not lead to the sudden disappearance of the bow. Indeed, the handling of the arquebus, slow and cumbersome, left the archers with a superiority in the field, at least at the outset; moreover, as Ayalon has noted [see BĀRŪD, iii], "To equip a soldier with an arquebus meant taking away his bow and, what was to the Mamlūk more distasteful, depriving him of his horse, thereby reducing him to the humiliating

status of a foot soldier, compelled either to march or to allow himself to be carried in an ox-cart".

Thus there speedily succeeded to the foot archers of the first Arab *dj̲unds* Persian mounted archers and then Turkish ones, whose participation in Islamic battles only ceased with the dawning of the modern period (the arquebus was introduced among the Mamlūks in 895/1490 under Sultan Ḳā'itbāy, some 125 years later than in Europe; see Ayalon, *loc. cit.*).

2. *The treatises*

The fundamental work, to which most of the authors of treatises on *rimāya* refer, is that called *al-Wāḍiḥ* by a certain Ṭabarī, whom Muṣṭafā Kānī states is "the father of all the books written about the bow". For Kānī, this Ṭabarī had to be the famous historian, but Ahlwardt believed, no doubt correctly (*apud* Ritter, 136), that it must be someone of the same name, whose complete designation was Aḥmad b. ʿAbd Allāh Muḥibb al-Dīn al-Ṭabarī, d. 694/1295.

The intensification of *dj̲ihād* under the Ayyūbids stimulated the development of technical literature on archery. The oldest treatise is by a certain Murḍā, or more likely, Marḍī (see Brockelmann, I, 495), whose *nasab* is only partly known, Ibn ʿAlī b. Marḍī, and his *nisba*, al-Ṭarsūsī, apparently indicating an origin from Ṭarsūs. It was composed for Saladin *ca.* 570/1174 in collaboration with a celebrated arms manufacturer of Alexandria, Ḥasan b. al-Abraḳī, and is called *Tabṣirat arbāb al-albāb fī kayfiyyat al-nadj̲āt fi 'l-ḥurūb min al-aswā' wa-nas̲h̲r iʿlām al-aʿlām fī 'l-ʿudad wa 'l-ālāt al-muʿīna ʿalā liḳā' al-aʿdā'*. Amongst the different weapons studied (see Cahen, *Traité*), bows occupy the favoured place (see Boudot-Lamotte, *Contribution*). Later in time (end of the 8th/14th century) but rich in its subject-matter and enjoying a wide diffusion is a didactic poem in 149 verses and the *radj̲az* metre, accompanied by a technical commentary, attributed to Ṭaybug̲h̲ā al-As̲h̲rafī al-Baklamis̲h̲ī al-Yūnānī and called *K. G̲h̲unyat al-ṭullāb fī maʿrifat ramy al-nus̲h̲s̲h̲āb* (on the different manuscripts of this treatise, in various recensions, see Latham and Paterson, *Saracen archery*, xxxvi-xxxviii). The catalogues of Arabic, Turkish and Persian manuscripts further mention treatises on *rimāya*, so far unedited; but so far as is yet known, none of these is earlier than that of Marḍī or richer in information than that of Ṭaybug̲h̲ā. Accordingly, our information on the teaching of *rimāya* remains fragmentary and limited for the period between the Ayyūbids and the Ottomans. We know little about the master-archers whose teachings are handed down in the treatises, apart from the fact that, on the evidence of their *nisbas*, they stemmed from K̲h̲urāsān and Transoxania. One might conclude that most of them lived in the middle years of the 3rd/9th century, since it was from this date that the ʿAbbāsids started raising large numbers of troops from K̲h̲urāsān and Transoxania. Three great figures are constantly cited, and it seems that their techniques (as will be explained in § 3 below) corresponded to three main technical methods. They are Abū Hās̲h̲im al-Bāwardī (sc. from Abīward), Ṭāhir al-Balk̲h̲ī and Isḥāḳ al-Raffā'. Furthermore, certain techniques are attributed to masters cited more irregularly, sc. Abū ʿAbd Allāh al-Tirmid̲h̲ī, Muḥammad b. al-Ḥasan al-Harawī, Abū 'l-Fatḥ Saʿīd al-Samarḳandī, Muḥammad b. Itārak al-Sarak̲h̲sī, Abu 'l-Ḥasan al-Kāg̲h̲idī, Abū Mūsā al-Ḥarrānī, Ḥayawayh al-Balk̲h̲ī, and Abū Mūsā al-K̲h̲arrāz. For a detailed consideration of these, see J. D. Latham, *The archers of the Middle East: the Turco-Iranian background*, in *Iran*, viii (1970), 97-103.

The treatises show a certain resemblance in their structure, and one can broadly distinguish an introduction made up of traditions, followed or preceeded by considerations on the origin of the bow and lexicographical information; a central core containing an enumeration of the basic principles (*uṣūl*) and secondary ones (*furūʿ*) laid down by the master-archers; whilst the close is often made up of various tactical considerations.

3. *The various types of bow*

The various kinds of bow are described with a great variety of names, often composed of two vocables, under the influence of lexicography; whence the oppositions *ḳaws ḥidj̲āzī/ḳaws fārisī*; *ḳaws al-yad/ḳaws al-ridj̲l*; *filḳ/ḳaḍīb*; etc.

Ḳaws ḥidj̲āzī. The type of bow used by the pre-Islamic Arabs was that of the simple, wooden bow, either short on long, depending on the cross section adopted; there is abundant evidence in the Arabic sources for this. In one passage, Herodotus seems to refer to the Arabs' use of composite, reflex bows: Ἀράβιοι ... τόξα δὲ παλίντονα εἶχον πρὸς δεξιὰ μακρά, in which παλίντονα ("stretched towards the rear") could refer to reflex bows (see Hein, 357). It is quite possible that composite bows were known in parts of Arabia, and Herodotus may have been correct as far as he went; the composite bow was well-known in the Iranian world, and eventually became the standard weapon of the Sasanid archers. The requisite horn may have been imported, if long-horned cattle or goats were not available within the peninsula. But Herodotus is a very early source to cite for the position in Arabia in say the 6th century AD; by that time, as remarked above, the Arab bow was essentially the simple wooden one. The Arabic sources state repeatedly that the Arabs made their bows from *nabʿ* (*Grewia tenax*), which was apparently perfectly suitable for this; to this day, the primitive peoples of Somalia make effective bows, up to a length of almost 2 m., out of *Grewia tenax*. This *nabʿ* was regularly imported into Arabia; Persian caravans loaded with it used to leave al-Madā'in/Ctesiphon via al-Ḥīra and Yamāma for the Yemen (*Ag̲h̲ānī*,[1] xix, 110, 116), and Mount Ḳasr was famous for its *nabʿ*. Further mentioned in the construction of the pre-Islamic Arab bows are *s̲h̲awḥaṭ* or *murrān* (*cornus mas.*) and *nas̲h̲am* (*chadara velutina*).

Ḳaws wāsiṭiyya. Apparently the Arab composite bow. The adjective stems not from the town of Wāsiṭ on the Tigris but must be understood in its proper sense of median, intermediate, probably with reference to the components of this bow (see *Saracen archery*, 10).

Ḳaws al-yad. "Hand-bow", as opposed to the *ḳaws al-ridj̲l* or arbalest (see below).

Between these two comes the *Ḳaws al-bunduḳ* "pellet- or stone-bow", the archetype of the arbalest used solely for shooting birds and already known in the Prophet's time. The projectile used was a ball of hardened clay (*dj̲ulāhiḳ* or *bunduḳ*). However, it should be noted that projectiles like balls or pellets can be shot from a hand bow as well as from a cross-bow, and we know that hand bows were used thus from the time of Tutankhamun onwards, see *JESHO* (1972), 226; it was merely a matter of fitting a suitable pocket on to the string, and such pockets can be seen in Islamic miniature paintings.

Filḳ (also *s̲h̲arīdj̲*). A bow consisting of a single

stave split length-wise and spliced with glue; see *LA*, ii, 306, and al-Thaʿālibī, 372.

Ḳaḍīb. A bow made of a stave all of a piece and unspliced, sc. a self-bow (*ibid*., 372).

Farʿ, *fadjdjāʾ*, *fidjw*, *munfadjā*. All these terms designate self-bows (*LA*, viii, 247, xiv, 355; al-Thaʿālibī, 372; al-Djāḥiẓ, *Bayān*, i, 283).

Katūm, *fāridj*, *furdj*. A bow made from a single stave, hence it does not vibrate when loosed (*LA*, xii, 507; al-Thaʿālibī, 373).

Djaʾsh. A light and weak bow which, contrary to the preceeding one, vibrates when loosed (*LA*, i, 149; al-Thaʿālibī, *loc. cit.*).

ʿĀtiḳa. An old bow whose wood has become red (Ibn Durayd, 37; al-Thaʿālibī, *loc. cit.*).

Rahīsh, *murtahisha*. A bow whose string, at the moment of loosing, strikes the part called the *ṭāʾif*; such a bow, usually slim and light, vibrates when loosed.

Zawrāʾ, *ḳaws munḥaniya*. Probably a bow with a strong bend (*LA*, iv, 334) made from *nasham* wood (*chadara velutina*).

Bāyina. A bow which uses too long an arrow, this being considered a fault because it reduces the draw and consequently makes the shot less powerful.

ʿAtala. Powerful Persian bows which are very curved (thus in the treatises as well as in the lexica).

Arbalests. Ranging from the stone- or pellet-bows mentioned above to the powerful siege machines with winding mechanisms, there existed a whole array of arbalests. Mentioned below are only those which appear most frequently in the treatises on *djihād* and *furūsiyya*. It should be noted at the outset that if the expression *ḳaws al-ridjl* seems to be used for arbalests in general, certain authors give it the more precise sense of "foot-bow" and distinguish it from the *ḳaws al-rikāb* "stirrup-bow" or *arbalista ad unum pedem*, an arbalest with a stirrup for one foot only, just as in the west this last was distinguished from the *arbalista ad duos pedes* (see Payne-Gallwey, *Crossbow*, 60). One may distinguish, in order of increasing complexity:

Ḳaws al-ḥusbān. This is a hand bow adapted to shoot short arrows, and it had therefore an arrow guide but no nut or locking mechanism.

Ḳaws al-ridjl. A cross-bow of any kind, with a stirrup or not; for an illustration of a simple cross-bow, see *Saracen archery*, xxx.

Ḳaws al-rikāb. A cross-bow with a stirrup, in which the foot is placed, see *ibid*., xxxi. A cross-bowman thus armed carries round his waist a strap at whose two extremities are hooks and by means of which he engages the bowstring. Having placed his foot or feet in the stirrup, he straightens up and thereby pulls on the cord which thus reaches the catch (*ḳufl*) of the stock or arrow-guide (*midjrāt*).

Djarkh (< Persian *čarkh* "circle, wheel"). An individual arbalest whose bow is drawn back by means of a wheel (whence its name); by this very long arrows, approaching the length of javelins, could be fired (for an illustration of one type, see *Saracen archery*, 18). The Muslims borrowed from the Mongols the usage of multiple-firing arbalests called *čarkh-kamān*, which the *čarkhandazān* of Hülägü's army used [see ḤIṢĀR. iii. Persia].

Ḳaws al-ziyār. This was no longer a portable arbalest but a siege-engine mounted on a fixed chassis. It was used during the warfare between Saladin and the Crusaders, and corresponds *grosso modo* to the "grand arbalest with a wheel" used in Europe for sieges and described by Viollet le Duc (*Dict. d'architecture*, v, 241-3).

Siege-engines [see ḤIṢĀR], of a more or less static nature, like the stone-hurler or *ʿarrāda* [*q.v.*] and the mangonel or *mandjanīḳ* [*q.v.*] were, according to their importance, set up on mountings or even manufactured on the spot (as did the Ottomans later with their cannons). This necessitated the presence of specialist corps, mainly of carpenters (these last being also used to make supports for the galleries in mine-shafts), as well as the besieging troops. One should also note that certain of these siege-engines could be used to hurl pots full on incendiary naphtha or *naft* [*q.v.*].

4. *The terminology of the components of the bow* (see fig. 1)
Fig. 1.

This terminology presupposes that the bow is held vertically, in position for firing, and this determines the four main "regions" of the bow, sc. the upper part (*raʾs al-ḳaws*) and the lower part (*ridjl al-ḳaws*), from the vertical axis, and on the horizontal axis, the internal face or "belly" (*baṭn al-ḳaws*), facing the archer, and the external face or "back" (*ẓahr al-ḳaws*).

The sources frequently liken the composite bow to the human body, and most parts of it take their name from parts of this last (e.g. *ẓahr*, *baṭn*, *rukba*, *ʿunuḳ*, *ḳabḍa*, *ẓufr*, etc.), thus the arc of the bow has as its centre or focal point the *kabid* (lit. "liver"), and the term *dīmak/daymak* is used for "arrow-pass", sc. the side of the handle continuous with the *wadjh* ("face"), the part facing the archer as he shoots; it derives from Persian *dīma* "cheek".

Once the bow has been strung and held in a recurved position, each of its limbs delimits, together with the bowstring, a sector or "house" (*bayt*). Thus we have, with the upper limb, an "upper house" (*bayt aʿlā*), also called "house of shooting" (*bayt al-ramy*), because the shot is made according to this plan. The lower limb determines the "lower house" (*bayt asfal*) or "house of perpendicularity" (*bayt al-isḳāṭ*), i.e. that which falls away towards the ground. At 3/4 of the way along its length, each limb makes a sharp angle of return, at *ca.* 60°, in the backwards direction; this bend has to be very resistant, since it bears the thrust of the recurved limb. Marḍī calls this part *dustār* (Persian "twisted cord, turban"), i.e. the torus, which corresponds to the Arabic terms *ṭāʾif* "edging, that which skirts the edge" and *ʿunuḳ*. However, Ṭaybughā uses *dustār* in a quite different sense, sc. that of "the working part of the limb", and this gives better sense, see the diagram of the terminology of the bow in *Saracen archery*, 162. Since each "house" has its torus, there is in effect an "upper torus" or "torus of the house of shooting" (*dustār bayt al-ramy*), and a "lower torus" or "torus of the house of perpendicularity (*dustār bayt al-isḳāṭ*). The torus is followed by the rigid, straight end of the limb, the "end-piece" or *siya*, whose extremity has a bone or ivory ferrule, *ghifār/ghifāra* = "cover or cap". In this ferrule there is gouged out the groove or "nock" (*farḍ*), where the loop of the bow-string (*ʿayn al-watar*) fits. When the string is in place, the end-piece appears like the neck of a violin; at its base and just before the bend of the torus, there may be a string-bridge whose function is to keep the bow-string constantly within the plan of the bow. As with the other parts coming in pairs, one speaks of an "upper end-piece" for that of the "house of shooting" (*siya ʿulyā* or *siya bayt al-ramy*) and a "lower end-piece" for that of the "house of perpendicularity" (*siya suflā* or *siya bayt al-iskāṭ*).

5. *Arrow and quivers*

The three main words denoting the arrow seem to convey the following distinctions: *sahm* (arrow made from a reed; but Ṭaybughā, in *Saracen archery*, 24, says that this was of hard, solid wood)—*nabl* (wooden or Arab arrow)—*nushshāb* (Persian arrow). *Sahm* is the most general term if one believes Herodotus, for whom the Arabs as well as the Persians originally used arrows made from reeds (*apud* Hein, 26). According to Ibn al-Tiḳṭaḳā, the Persians called the Arab arrow (generally made from wood) *nabl* (Fries, 53), whilst the word continually used in the accounts of battles fought in the eastern provinces of the Umayyad empire to indicate the Persian arrow is *nushshāb*, of whatever material it may be made (*ibid.*). Leaving aside the divergencies found in certain manuscripts, the constituent elements of a wooden arrow, as they appear in the relevant treatises, are as follows (see fig. 2).

The wood (of the shaft) (*ḳidḥ*), whose forepart (towards the head) is called the *ṣadr* or foreshaft, and whose rear part, of wider section, is the *matn*. The *ṣadr* includes a socket (*ruʿẓ*) meant to take the head. This delicate end of the wood of the shaft is reinforced
Fig. 2.

by a binding of sinews (*djalz* or *riṣāf*). The part of the *matn* which receives the fletchings (*rīsh*) is the section which is somewhat constricted and is called the waist (*ḥaḳw*); it terminates in an enlargement where is made the nock (*fūḳ*) which is meant to be embedded in the nocking-point of the bow-string (*maʿdin al-watar*). The base of the *matn*, which is situated just above the nock, undergoes, at the moment of release, a violent thrust which might tend to break the arrow at this point; hence it has a ligature of sinews (*uṭra* "cuticle") which is the counterpart of that of the upper part of the *ṣadr* (the *djalz* or *riṣāf*). The arrow is, in this way, reinforced at both of the ends of least resistance. The two sides of the nock are called *sharkhā al-fūḳ*. The head (*naṣl* or zudjdj), which may have two edges (*ghirārān*), has a pointed tang (*sinkh*) which is embedded within the *ruʿẓ*.

In the treatises on *rimāya*, quivers are given various, sometimes contradictory names. Thus we find: *djaʿba*, a fairly large, leather quiver having a lid fixed by means of a cord (*mikhdhaf*). There are two Persian terms: *tīrkash*, a quiver made of horse-hair and used by archers from the province of Gīlān, and *nim-ling*, a quiver made of various skins sewn together and analogous to the preceeding one. *Ḳindīl* (< Greek κανδῆλα, see Dozy, *Suppl.*, ii, 410),

a cylindrical quiver in which the arrows are placed with their heads downwards, as opposed to the procedure with the *dja'ba*. Concerning the *kināna*, a quiver made from skins, the lexicographical evidence is somewhat contradictory. *LA*, xiii, 321-2, gives the two senses of quiver made from skin and quiver made from wood, and Ibn Durayd, *Ishtiḳāḳ*, Cairo 1958, 27-8, notes that "if [the quiver] is made from skin, it is called *kināna*, if made from wood, *djafīr*, and if made from two pieces fastened together, *ḳaran*. The term *kināna* comprises all these nuances". *Djafīr*, according to *LA*, iv, 143, "resembles the *kināna*, but is bigger and can hold a large number of arrows. A *ḥadīth* seems to show that this quiver was of purely Arab origin: "Whoever takes an Arab bow and its quiver (*djafīr*), God will keep poverty away from him" (*ibid.*). *Ḳaḍba*, a quiver made from the *nab'* wood (*Grewia tenax*). *Ḳaran*, a quiver made from pieces of leather put together so that the air can circulate through interstices left so that the fletchings of the arrows do not deteriorate. *Wafḍa*, a quiver made from skin entirely, with no wood in its construction (the word originally denotes a shepherd's leather bag). Finally, one should note a metaphorical phrase for "quiver" connected with its capacity, sc. *umm thalāthīn* (al-Suyūṭī, *Muzhir*, Cairo n.d., i, 590). Another pointer to the capacity of certain quivers is provided by al-Wāḳidī, who in his account of the battle of Uḥud notes that an archer called Abū Ṭalḥa spread out in front of the Prophet, as a sign of his faithfulness, the contents of his quiver (*dja'ba*), amounting to 50 arrows (*apud* Fries, 54).

6. *Gauntlets and thumb-rings*

The very strong pressure of the bow-string on the fingers and thumb at the time of the draw necessitates some protection here, provided by a leather gauntlet with the fingers reinforced with horn, bamboo or other hard material and held on the wrist by a thong or strap. According to the technique adopted for locking the bow-string (*'aḳd*), this gauntlet can have 2, 3 or 4 fingers, but is never a complete glove. It may be designated by the arabised Persian word *kushtubān/kishtibān*, a doublet of *angushtvāneh/angushtbāneh* (see Dozy, *Suppl.*, s.v.); however, this is also the normal word for "thumb-guard", "drawing-ring", see J. D. Latham, *Keshtebān: a Persian loan-word in Arabic*, in *JRAS* (1968), 65-7. The modern archer's gauntlet is a copy of this. The so-called "Mongolian" method of taking the bow-string with the thumb requires the use of a thumb-stall, *khati'a* (sometimes, but incorrectly, *khayta'a*). Good archers seem especially to appreciate rings made from hard substances like bone or ivory and corresponding exactly to the shape of their thumb, carefully carved and sometimes decorated with great artistry (see *Arab archery*, 123-4; Hein, in *Isl.* xv, 18-22; Klopsteg, 67-70; Latham and Paterson, *Saracen archery*, pl. 7 A-B).

7. *The phases and principles of shooting*

The act of shooting can be broken down into a certain number of phases, each of which is developed with detail and precision and with reference to the practice of the main master-archers, in the treatises on *rimāya*. It is not possible to enter into detail here (see for this, Latham and Paterson, *Saracen archery*, and Boudot-Lamotte, *Contribution*), and only a brief review of these phases, treated chronologically, is given here.

(a) *Ītār*, act of stringing or bracing the bow. This operation needs special care, as much to avoid damaging the bow as to avoid injury. Certain particularly powerful bows require the intervention of a helper or of special contrivances, bracing mechanisms, such as the *kharkumān* "bracing-board" (from Pers. *khar* + *kumān*?).

(b) *Ḳabḍa*, grasp, sc. the position of the left hand (for a right-handed person) on the grip or handle (*maḳbiḍ*) of the bow. In order to distinguish this technique from that of the *'aḳd* (see below), the authors sometimes call this more precisely *al-ḳabḍa bi 'l-shamāl*.

(c) *'Aḳd* or *ḳafla*, the ock, locking, sc. the position on the bow-string of the fingers of the right hand, and especially that of the thumb in the "Mongolian" technique of locking (*al-'aḳd bi 'l-ibhām 'alā 'l-watar*). In order to achieve a concise and clear exposition of this, the authors of the treatises generally refer to counting by means of the fingers [see ḤISĀB AL-'AḲD]. In effect, the thumb in the locking position and the fingers which, in various manners, come to lock the position in order to ensure a good draw of the string during the whole process of the draw, form a figure which is expressed by the corresponding numeral in the system of digital computation. Three locks seem to be especially favoured, sc. 63, 69 and 83.

(d) *Tafwīḳ*, nocking. This consists of bracing the arrow's nock (*fūḳ*) on the binding of the bow-string. There must be no play there, so that when the archer draws back the arrow, together with the bow-string, he accompanies the latter in its rearwards path to the chosen anchorage-point (see below).

(e) *Madd*, the draw, drawing (also *naz' al-watar*). This consists of bringing the bow-string back towards oneself. This technique has variants in terms of the anchor-point selected, which can be at different levels: eyebrow, ear-lobe, moustache, chin, sternum.

(f) *Naẓar*, aim. This has various techniques according to the corrections which must be made in height and direction.

(g) *Iṭlāḳ* or *iflāt*, the loose, loosing. This is the last and certainly the most important phase of shooting, which demands the archer's entire concentration, an "emptying of the heart" (*takhliya-yi ḳalb*) and a setting-aside of all other thought (*mā siwā*). The master-archers insist in this attitude, which is like that of the supplicant at the time of the *takbīr al-iḥrām*. There seem to be three basic *iṭlāḳs*. In the first, called *mukhtalas* "snatched", the archer draws rapidly and looses immediately without any break in time. In the second, called *sākin* "held", he draws slowly, holding the draw in order to verify that the position of the shot is good and then looses calmly. The third is called *mafrūk* "twisted", and involves a light, partial draw—a brief moment at rest—and then a sudden end to the draw followed immediately by the loose.

Like the religious lawyers or *fuḳahā'*, the authors of the treatises distinguish five *arkān*, sc. the bow, the string, the arrow, the thumb-ring and the archer, and in the manner of *fiḳh*, they divide the phases of shooting which have been surveyed above into *uṣūl* and *furū'*. It is thus possible to draw up the following table from the information of the chief master-archers:

Abū Hāshim—4 *uṣūl*, sc. *ḳabḍa*, *'aḳd*, *madd*, *iṭlāḳ*.

Ṭāhir—to the 4 *uṣūl* given above is added an *aṣl* called *i'timād* which consists of holding firmly in the left hand the grip or handle of the bow whilst the right-hand fingers make a good locking of the string, the two hands exerting equal forces.

Isḥāḳ—*intiṣāb* (position facing the target), *ītār*, *tafwīḳ*, *ḳufla*, *ḳabḍa*, *madd*, *iflāt*, *fatḥa*, together with a *far'*, shooting from beneath a shield (*al-ramy taḥt al-turs*).

Abū Mūsā al-Kharrāz—4 *uṣūl*, sc. *ʿaḳd, ḳabḍa, naẓar, iflāt*, and 6 *furūʿ*, sc. *itār, tafwīḳ*, shooting from beneath a shield, shooting with a breastplate, knowledge of weapons for their use in combination, ways of changing weapons in the course of a battle. He also adds two moral qualities, *khaṣla*: not to shoot at anyone or anything contrary to the will of God, and to show patience.

Muḥammad al-Harawī—7 *uṣūl*, sc. *itār, tafwīḳ, ḳufla, ḳabḍa, madd, naẓar, iflāt*.

Finally, one may note that all these different techniques seem to come down to three main physical types, those of the three Imāms of *rimāya*, sc. Hāshim (tall), Ṭāhir (short and stocky) and Isḥāḳ (medium height).

8. *Training and tactical use*

The preceeding considerations concern shooting mainly on a horizontal plane. The Mamlūks especially developed two forms of practice shooting in a vertical plane, one up into the air (*ramy al-ḳabaḳ*) and one downwards (*ḳighadj*). The archer familiar with these techniques could use his weapon to maximum advantage in the various circumstances arising during battle.

Ramy al-ḳabaḳ "shooting at a gourd" (Tkish. *ḳabaḳ* "gourd"). A pole approximately 25 feet high was erected in the *maydān*, with a gourd or other spherical or oval object at its end, which the mounted archer must reach when his galloping horse passed by the pole. Little is known about the origins of this shooting exercise, which must have come from Central Asia and Turkmen practice. This exercise was very popular under the Mamlūks, and reached its apogee between 658/1260 and 694/1295 in the sultanates of Baybars I, Ḳalāʾūn and al-Ashraf Khalīl, often giving rise to splendid festivities. A description is given in the Mamlūk historians Ibn Taghrībirdī, *Nudjūm*, viii, 6, and al-Maḳrīzī, *Khiṭaṭ*, iii, 180. On *ramy al-ḳabaḳ*, see especially Latham and Paterson, *Saracen archery*, 77-8, 172, and Hassanein Rabie, *The training of the Mamlūk Fāris*, in *War, technology and society in the Middle East*, ed. V. J. Parry and M. E. Yapp, London 1975, 153-63.

Ḳighadj (< Tkish. *kiğaç* "slope, incline"; the faulty transliteration of J. T. Reinaud *kycadj* gives the word as it must have appeared after the passage of Tkish. *ğ* to Ar. *ḳ*). In Ṭaybughā (*Saracen archery*, 78-9, 172-3) this term denotes either an exercise in which the archer, shooting parallel with his left thigh, shoots at a ground target, or else any kind of downwards shot made from horseback. According to Morier, *Second journey through Persia*, London 1818, 169, the word denoted shooting rearwards by a group of cavalrymen at full galop.

In open country, the archers whose function was to break, from a distance, the charge of the enemy were normally placed in the front rank. (Crossbowmen were also used for this aim, but with varying effect. If the arbalest gave an advantage of greater precision and a more powerful shot, it had serious disadvantages: heaviness, cumbersomeness and above all, a distinctly slower frequency of shooting, since a good crossbowman could only with great difficulty let off two bolts in the time during which an archer could shoot off twelve arrows. Hence the crossbow was primarily used for the defence or attacking of fortresses.) In the second rank came infantrymen sheltered behind shields and provided with weapons for cut-and-thrust in close combat (lances, swords). In the third rank were placed detachments of cavalry meant for hurling in at decisive moments [see ḤARB. ii. The caliphate]. The Turks, and then the Mongols, gave pride of place on the battle field to cavalrymen armed with short and very powerful reflexed, composite bows. The tactic of these horse-archers consisted of drowning the enemy under a hail of arrows whilst one or both of the wings moved round to envelope the enemy's wings or rear [see ḤARB. iv. Persia].

The "Scythian" method of shooting over the shoulder. This was a tactic stemming from the nomadic peoples of Central Asia, who were trained from childhood in riding and archery. The tactic must have been adopted, as Rostovtseff showed (see Bibl.), by the Scythians of the 8th-2nd centuries BC, and then passed to the Tatars; it made a vivid
Fig. 3.

impression on classical authors, in whom the expression "Parthian shot" became a synonym for treachery (on the Scythians' tactics, see Herodotus, iv, 120; Xenophon, Anabasis, iii, 3, 10). This archer avoided close combat by making a series of attacks and retreats which had a definitely demoralising effect on the enemy. Greek and Latin authors often refer to this, and especially significant in this connection is the verse of Propertius, iv, 3, 65-6, describing "the cunningly-contructed bow which lets fly against the fleeing cruppers", *plumbea cum tortae sparguntur pondera fundae/Subdolus et uersiis increpat arcus equis.*

It is moreover the concept of nomadic steppe cavalrymen which is at the bottom of mediaeval representations of Centaurs galloping along and shooting arrows behind them; see on this Z. Kadar, *L'influence des peuples cavaliers sur la formation des representations medievales des Centaures*, in *Acta Archaeologica*, ii/4 (Budapest 1952), 307-18.

This method of shooting, more "Scythian" than "Parthian", considering its ultimate origin, recurs in Turco-Mongol military traditions and is perfectly illustrated in the famous 15th century miniature of the Top Kapu Saray, 2163 Istanbul (see fig. 3). Its persistence over the course of centuries is remarkable, and Sulimirski (see Bibl.) has seen a last vestige of it during the modern period (long after firearms had toppled the bow from its primacy) in the rearwards shooting practiced—on horseback and with pistols—by the Cossacks of the 19th century and up to the time of the Polish-Bolshevik warfare of 1920.

(A. Boudot-Lamotte)

ḲAWS ḲUZAḤ, the Arabic term for the rainbow, formed from *ḳaws* "bow" (*Ḳws* in the inscriptions of Jordan; *Ḳawsh* in the inscriptions of Tiglath-Pileser, Esarhaddon and Assurbanipal; *Ḳūsu* in Babylonian inscriptions of the time of Darius and Artaxerxes I; *Ḳūsu*, *Ḳūshu*, *Ḳishi*, *Ḳūshi*, in the Old Testament; *Kos*/*Kōs*/Κοξε, amongst the Nabataeans; *Ḳaws*, *Ḳays*, in Arabia), an Edomite deity known during the first millennium and later venerated by the Nabataeans (cf. Vriezen, *The Edomitic deity Qaus*, 330 ff.). He was a war-god, symbolised by the bow, just as Adad berqu, god of the tempest, was symbolised by lightning (D. van Buren, *Symbols of the gods in Mesopotamian art*, 1945, 67), and as Dhu 'l-Khalaṣa, the archer-god of the Arabian pantheon, was symbolised by arrows (see T. Fahd, *Le panthéon de l'Arabie centrale avant l'hégire*, 61 ff.).

After the manner of Dhu 'l-Sharā which eclipsed him, Ḳaws acquired other prerogatives, those of most of the gods of the desert regions, such as the protection of the vegetation by ensuring rain, a prerogative symbolised by the rainbow. Hence in the nomadic milieu, the name Ḳaws was followed by *ḳuzaḥ* in order to define his speciality. *Ḳuzaḥ*, pl. of *ḳuzḥa*, "a coloured band of yellow, red and green" (Yāḳūt, iv, 86 ll. 3-4; *TA*, ii, 209, l. 11 from foot) denotes the successive appearance of bands of colour in the rainbow. As the divine symbol became substituted in general usage for the divine name whose attributes it was eventually to determine, *ḳuzaḥ* sometimes came to designate the god himself. Hence is attributed to Muḥammad the saying "Do not say Ḳaws Ḳuzaḥ, because Ḳuzaḥ is the name of a demon (*shayṭān*), but say Ḳaws Allāh" (Yāḳūt, iv, 85-6), and Djāḥiẓ adds, "just as one says the House of Allāh, the pilgrims of Allāh and the lion of Allāh" (*Ḥayawān*, ii, 28-9); here, the symbol is taking the place of that which was originally symbolised. This is confirmed by the fact that this *shayṭān* (a term applied to the pagan idols) became, in Islamic cosmological tradition, the angel in charge of the rainbow (Yāḳūt, iv, 86 l. 4).

Furthermore, Ḳuzaḥ, the abridged form of Ḳaws Ḳuzaḥ, still denotes at Muzdalifa the pick placed at the right of the *imām* when he occupies the place reserved for him for the Pilgrimage ceremonies; before Islam, this designated, in the same spot, the pyre where the sacred fire of Muzdalifa was kindled (cf. Fahd, *op. cit.*, 10). When considered together with Ḳaws Ḳuzaḥ, this fire could have been one of rogation or *istisḳā'* [*q.v.*].

In short, Ḳaws Ḳuzaḥ is the Arabic variation of the name of a divinity whose importance is attested by a number of theophoric names found among the peoples moving round the region between Central Arabia and the Jordan, such as Ḳawsh-malaku and Ḳawsh-gabri, two kings of Edom in the times of Tiglath-Pileser III (744-27 B.C.) and Esarhaddon (680-69 B.C.); *Ḳwsbr*, *Ḳwsmlk*, amongst the people of Liḥyān; *Slmtḳs* amongst the Minaeans, *Ḳwsʿnl*, *Ḳwsny*, *Pgʿḳws*, in the inscriptions of Tell Khulayfa (7th century B.C.); Ḳusudjadaʿ, Ḳusudjahabi, Barḳusu, in the Babylonian period; and Kosdaros, Kosnatanos, Kosmalachos, Kosbanos, etc. in the Hellenistic period.

The absence of such theophoric names composed with Ḳaws in Arab onomastic is striking and unusual, given the fact that there exist names compounded with Ḳays, such as Imru' al-Ḳays and ʿAbd al-Ḳays (explained in *Ḥamāsa*, ed. Freytag, i, 85, and Baṭalyūsī, *Sharḥ dīwān Imri' al-Ḳays*, Cairo 1308, 3, as being connected with an idol called al-Ḳays, on analogy with the type of theophoric names fairly common in Arab onomastic).

Should one then conclude that Ḳaws and Ḳays are two forms of the same name? With Wellhausen, *Reste*², 67, and G. Ryckmans, *Les religions arabes préislamiques*², 206, 226, and against Nöldeke, in *ZDMG*, xl (1887), 714, and *ERE*, i (1908), 660-1, A. Fischer, *EI*¹ art. ḳais, A. Grohmann, *Die Araber*, 1963, 85, and M. Hofner, in *Wörterbuch der Mythologie. Die alten Kultur. I. Vordere Orient*, ed. Haussig, 460-1, we maintain that Ḳaws and Ḳays denote one and the same god (cf. Fahd, *op. cit.*, 136-40).

This god is Ḳaws and not Ḳays, for the following reasons: (1) the absence of the name Ḳays from the Arab pantheon as described by Ibn al-Kalbī in his *Kitāb al-Aṣnām*, the source of all writings on the question; (2) the absence of theophoric names composed with Ḳays in the inscriptions gathered in Arabia and in the vast region traversed by Arabs to the north of the peninsula (cf. Lankester Harding, *An index and concordance of pre-Islamic Arabian names and inscriptions*, 921, in which only theophoric names with Ḳaws are attested); (3) the isolated position of the two theophoric names composed with Ḳays in comparison with the large number of those composed with Ḳaws; and (4) the existence in

Minaean of a theophoric name *Ḳysmnwt* (cf. Jamme, in *Oriens antiquus*, vi, 181-2, text no. 1211), in which *ḳays* occupies the place of *imruʾ* and of *ʿabd* and not that of a divine name.

Should one therefore deduce from this transformation of Ḳaws into Ḳays, in the kingdom of Kinda, an attempt to appropriate the ancient Edomite deity by the powerful tribal confederation of the Ḳaysīs?

(T. FAHD)

Independently of *ḳaws ḳuzaḥ*, other expressions are used in Arabic to denote the rainbow: *Ḳaws Allāh, Ḳ. Rasūl Allāh, Ḳ. al-samāʾ, Ḳ. al-g̲h̲amām, K. al-muzn, ʿalāʾim al-samāʾ, Ḳ. Ḳaziʿ*. The words *ḳusṭān* (dust), *ḳusṭānī, ḳusṭalānī* and *ḳusṭalaniyya* have a quite different origin. Muslim scholars include the rainbow among the *āt̲h̲ār al-ʿulwiyya*, the superior phenomena. The rainbow is usually opposite the spectator, while the sun is at his back and there is a dark cloud or wall behind drops of water; the drops may be in a cloud or formed at springs, water-wheels, in turbulent rivers where spray is formed, in the steam of baths or in water which is ejected from the mouth in a spray (see *Beitr. V*). Frequent reference is made to a description by Ibn Sīnā (see E. Wiedemann and M. Horten, in Bibl., among others) who was on the top of a very high hill at the foot of which lay a vast bank of mist; the sun was above the hill and Ibn Sīnā saw a rainbow on the mist below him.

Numerous descriptions of rainbows occur in literature, *e.g.*, in the *Ḥamāsa* (F. Tuch, *ZDMG*, iii, 200 ff.), also by the Ḥamdānid Sayf al-Dawla and by the poet al-Waʾwāʾ (see F. Dieterici, *Mutanabbī und Saif al-Daula aus der Edelperle des T̲h̲aʿālibī dargestellt*, Leipzig 1847, 129, 175).

The more or less strictly scientific studies of the rainbow are also numerous. Ḥād̲j̲d̲j̲ī K̲h̲alīfa (iv, No. 9,640) quotes a special *ʿIlm Ḳaws Ḳuzaḥ* concerning which he deals with all questions that can arise. According to him, "it investigates how the rainbow is formed, the reason why it is formed and why it is circular; further the reason for the difference in its colours, why it appears after rain at the end of a day and why it is often seen by day but only rarely at night by moonlight. It further investigates the astrological significance (*al-aḥkām*) of its appearance". Descriptions on similar lines are found, for example, in the works of al-Ḳazwīnī (*ʿAd̲j̲āʾib al-Mak̲h̲lūḳāt*, ed. Wüstenfeld, 98; *Kosmographie*, tr. Ethé, 201); in the *Rasāʾil Ik̲h̲wān al-Ṣafāʾ*, Bombay 1305, ii, 52 ff. (cf. F. Dieterici, *Die Naturanschauung der Araber*, Berlin 1861, 87); also by al-Ḳarāfī in his *Kitāb al-Istibṣār fīmā tudrikuhu 'l-abṣār*; and in the *Risāla fī Ḳaws Ḳuzaḥ* of al-Tuḳātī (see Berlin Catalogue by Ahlwardt, No. 5691); two anonymous works have been published by Cheikho (*al-Machriq*, xv (1912), 736-44). A considerable section in a meteorological work (Ahlwardt, Berlin Catalogue, No. 6054), and no doubt many other passages, deal with our phenomenon. The most important and most comprehensive work, however, is from the pen of Ibn Sīnā in his *S̲h̲ifāʾ* (see *Bibl.*).

The descriptions of the rainbow are in general very accurate. Not only the simple rainbow but also the double and even triple are described. The first is said to be produced by the sun's rays themselves, the second by the rays shining through the rays from the first and the third by the rays from the first two; the bows therefore are successively weaker. It is emphasised that the rainbow is not always composed of the same colours, a phenomenon which has been fully investigated by M. Pernter. It is also mentioned that the rainbow is particularly beautiful when the sun is on the horizon.

The older treatment of the theory of the rainbow goes back to Aristotle, with whose meteorological works the Arabs were acquainted. T̲h̲ābit b. Ḳurra is said to have translated a commentary by At̲h̲āfrūdīṭus = Epaphroditos (?) on Aristotle's essay on the rainbow (Ibn al-Ḳifṭī, 59). Aristotle is followed by Ibn Sīnā, Ibn al-Hayt̲h̲am, al-Ḳarāfī etc., although in many details they make additions and corrections to his views. It is always assumed that the rainbow is produced by beams of light or visual rays which are regularly reflected on the raindrops, on very minute reflecting surfaces. Kamāl al-Dīn al-Fārisī [*q.v.*] gave a brilliant exposition of the correct explanation, as far as was possible in the general state of knowledge in his day, when the dispersion of light was unknown. Like us he says that the light is once or twice reflected in the interior of the globule of water and then radiates out from it; thus we have the main and secondary rainbow. He also endeavours to investigate the cause of the colours although, of course, not satisfactorily. By experiments he proves the correctness of his results, which are on a much higher level than those of Theodoricus of Freiburg (about 1300).

From *ḳuzaḥ* comes a word *taḳāzīḥ*, meaning "showing the colours of the rainbow" or briefly, "the colours of the rainbow". It is defined by Kamāl al-Dīn as "different graduated colours in the region between blue, green, yellow, red, smoke-coloured white, that is, as regards sensual perception".

The rainbow is also given an astrological significance according to the zodiacal sign in which it appears. In the Ram it means plague and death (Ahlwardt, Berlin Catalogue, No. 5906, *al-Ḳawl ʿalā ṭūl Ḳaws Ḳuzaḥ*). In another manuscript, (No. 5915, 1) it is said that in September a rainbow indicates great tyranny and oppression.

ĶAWṢARA or ĶŪSIRA, Italian island, now called Pantelleria, situated 64 miles/100 km. from Sicily and 55 miles/76 km. from the Tunisian town of Kelibia (Clypea); it is volcanic in structure, lacking any fresh water and culminating in a height of 2,600 ft./836 m. The area is 83 km²., and the population 10,000. The name Ķawṣara (vocalised thus by Yāķūt —who suggests an Arabic etymology, "date basket" —and in most of the sources) is actually of Greek origin, being a deformation of Cossyra, more easily discerned in the form attested and favoured by Bakrī, sc. Ķūsira. It must have been generally pronounced Ķūṣra, then Arabised in the written texts, by assimilation to an Arab form, as Ķawṣara.

Lacking any great strategic or economic value, Ķawṣara figures little in the historical sources, and only a few items of information on it can be found in the Arabic sources. At the time of the invasion of Ifrīķiya in 27/647-8 by ʿAbd Allāh b. Saʿd b. Abī Sarḥ [*q.v.*], the inhabitants of Djazīrat Sharīk (Cape Bon) gathered at Clypea and took refuge temporarily on Ķawṣara. Half-a-century later, in *ca.* 81/700, ʿAbd al-Malik b. Ķaṭan—who ended up as governor of Spain—devastated the island, probably operating from Egypt as his base. Ķawṣara doubtless subsequently suffered further from attacks by the Muslim fleets which began to rove the Mediterranean. In 221/836 it was still in Byzantine hands, and served as a base for their fleet, operating against the Aghlabids, involved after 212/827 with the conquest of Sicily. It is unknown exactly when the Aghlabids took it, but it was apparently in their possession by 250/864, and after this date, the island became completely arabised and islamised, forming part of Ifrīķiya till the Almohad period.

It was inevitably involved in the fighting between the Normans of Sicily and the Zīrids. It was in the waters of Ķawṣara that the fleet of 400 ships fitted out by al-Muʿizz b. Bādīs (407-54/1016-62) to assist the Muslims of Sicily was wrecked in Dhu 'l-Ķaʿda 416/January 1026. It was also there that the fleets of Pisa and Genoa, who were preparing to attack Ifrīķiya, concentrated in 480/1087-8. The island's Muslims warned Tamīm (454-501/1062-1108) by carrier pigeon of the danger threatening him. In 517/1123 the Norman fleet, en route for Mahdiyya, sacked and laid waste Ķawṣara, and massacred its inhabitants. Finally, in 543/1148-9, the Sicilian fleet, under George of Antioch, occupied the island before going on to seize the Zīrid capital.

The island was then apparently recovered by the Almohads who freed Ifrīķiya from the Christian presence and unified the Maghrib, but this was not for long. By the terms of the treaty of 15 Djumādā II 618/5 August 1221 made with the Emperor Frederick II, the Almohad governor of Tunis ceded Ķawṣara to Sicily, on condition that the Muslims of the island might enjoy administrative and legal autonomy and that half of the taxation levied on them should go to Ifrīķiya (Mas-Latrie, *Traités*..., Paris 1866, 153-5). From this time onwards, Ķawṣara shared the destiny of Sicily, and was thus for some time dependent on the crown of Aragon; it probably received from the Catalans its new name of Pantelleria. However, the rulers of Tunis did not totally give up the idea of regaining it. A curious treaty made in 1403 laid down the ways in which the ruler of Aragon might take control of Djerba, whilst the ruler of Tunis might get Ķawṣara; but this arrangement was never put into effect.

The people of Ķawṣara long remained Muslim. Yāķūt (d. 626/1228) states that in the 7th/13th century they comprised Wahbī Ibāḍīs (originally from Djerba?), whose austere way of life was perfectly adapted to the isolation and meagre resources of the island. The new Christian rulers did all they could to keep them. Thus one finds Alfonso of Aragon complaining to the Sultan of Tunis in 1438 that certain Ḥafṣid officials were encouraging them to emigrate. His envoy demanded the return of the emigrants, and even the planting of new Ifrīķiyans in the island. The date of the spreading of Christianity is unknown. Fazello, cited in Amari, *Storia*, iii, 895, tells us that at the beginning of the 10th/16th century Christians and Muslims wore the same garments and spoke the same language. According to Bonnet, a Provençal merchant enslaved at Tunis, whence he had managed to escape, this language was in 1670 (the year in which he took refuge in Ķawṣara) the same as that spoken in Malta. It must therefore have been an Arabic already much transformed.

The island's resources have always been fairly slight. Its woods provided wood of excellent quality, and wild goats are said to have been hunted. In mid-17th century, according to Bonnet, "the island's trade consists entirely of wine, charcoal and wood which the people export to Sicily and Malta" (P. Grandchamp, *Un marchand provençal*..., 14).

KAWTHWAR, a word used only once in the Ķur'ān (CVIII, 1: "Yes, we have given you *al-kawthar*"); the short Sūra CVIII is given the name *surāt al-kawthar*. The word comes from the root K-TH-R "to be abundant" in the *fawʿal* formation, which is not rare (*e.g. nawfal*: other examples in Brockelmann, *Grundriss der vergleichenden Grammatik*, i, 34). The *kawthar* which occurs in ancient

poetry (see quotations in Ibn Hishām, ed. Wüstenfeld, 261, and Nöldeke-Schwally, *Geschichte des Qorāns*, i, 92) means "abundance". Some ancient writers of *tafsīr* interpret *kawthar* in Ḳur'ān, CVIII, 1 as "abundant goodness" (*al-khayr al-kathīr*; cf. Ibn Hishām, *op. cit.*; al-Ṭabarī, *Tafsīr*, xxx, 180-1).

This etymological meaning, however, although it did not totally disappear, gave way to a traditional interpretation. According to this the Prophet himself regarded *al-kawthar* as the proper name of a river in Paradise (cf. Ibn Hishām, 261 *in fine*, and specially al-Ṭabarī, *Tafsīr*, xxx, 179)., or as a pond which was shown to him at the time of his ascension to the Throne of God, and which was designated for him (al-Ṭabarī, *ibid.*, 180; cf. A. J. Wensinck, *The Muslim Creed*, Cambridge 1932, 231). This last explanation is considered most credible by al-Ṭabarī; *al-kawthar* was, then, becoming something almost synonymous with *ḥawḍ* [*q.v.*], "the Prophet's pool", at which believers quench their thirst when entering Paradise. Its existence is affirmed in several "professions of faith". But more frequently *al-kawthar* will be the river which feeds the pool. According to a subsequent idea (cf. *Aḥwāl al-kiyāma*, ed. Wolff, 107), all the rivers of Paradise flow into the *ḥawḍ al-kawthar*, also called *nahr Muḥammad*, as specially belonging to the Prophet.

The most ancient Sūras already mention "the spring" (*ʿayn*), "the living spring" (*ʿayn jāriya*) which waters Paradise (LXXVII, 41; LXXXVIII, 12 and *passim*); the Medinan Sūras describe in more detail the "rivers" (*al-anhār*). In XLVII, 15, for example: "There will be rivers there, the water of which is incorruptible, rivers of milk which never sour, rivers of wine sweet for those who drink of them, rivers of clear honey". This description suggests the rivers of Paradise of Judaeo-Christian eschatology, flowing with oil, milk, wine and honey. It is of note that oil is replaced by "incorruptible water" (*ghayr āsin*), so precious in the deserts of Arabia (cf. J. Horovitz, *Das koranische Paradies*, 9). *Ḥadīths* and *tafsīrs* delight in describing *al-kawthar* on this same model. But taking into consideration the root meaning of "abundance", *al-kawthar*, the "river of the Prophet" presents itself as the quintessence of the rivers of Paradise. In certain versions quoted by the *Tafsīr* of al-Ṭabarī it is said: "Its waters are whiter than the snow and sweeter than honey", or, "And its waters are of wine". Surpassing the Ḳur'ānic description are others endowing it with "banks of gold" or a bed of "rubies and pearls" with a perfume "more penetrating than musk" (cf. Soubhi El-Saleh, *La vie future selon le Coran*, Paris 1972, 36 and ref.). Rationalising or modern *tafsīrs* easily lend a metaphoric sense to these details.

Bibliography: given in the article. The principal traditional references to *al-kawthar* are (cf. Soubḥi El-Saleh, *op. cit.*, 36, n. 6 and Annexe I): Bukhārī, viii, *Riḳāḳ*, 119; *Musnad* of Ibn Ḥanbal, ii, 112; Tirmidhī, ii, *Tafsīr*, to CVIII, 240; Ibn Mādja, *Zuhd*, 307; later, Baghawī, *Maṣābiḥ al-Sunna*, ii, *Ḥawḍ*, 145; Ibn Ḳayyim al-Djawziyya, *Ḥādī l-arwāḥ ilā bilād al-afraḥ*, 131, etc.

(J. Horovitz - L. Gardet)

ḲAWUḲLU, Turkish "the man with the *Ḳavuḳ*", a character of the Turkish *Orta oyunu* theatre.

Turkish *ḳavuḳ* indicates a rather high, variously-shaped cap, with a headband, *ṣarïḳ*, wound round it (Ağakay, *Türkçe sözlük: sarık sarılan başlık*). Such caps of varying shape and colour according to rank were worn by officers of the Janissaries (cf. Maḥmūd Shewket, *ʿOthmānlï teshkīlāt ve ḳiyāfet-i ʿaskeriyyesi*, Istanbul 1325, i, 29 ff.). Other professions too had their own special *ḳavuḳ*, there were *wezīr*, *mollā*, *kātib* and *pashalïḳ ḳavughu*, some with specific names: *kallāvī*, *khorasānī*, *müdjewweze*, *selīmī*, *ʿörf* (cf. Emin Cenkmen, *Osmanlı sarayı ve kiyafetleri*, Istanbul 1948). In official language, even an Arabic plural *ḳawāwiḳ* was formed. However, the popular mind conceived of the Ḳawuḳ wearer in a different fashion: *kavuk büyük ama altında efendi yok*, "an imposing cap but no gentleman underneath it"; *kavuk sallamak*, "to wave one's cap", *i.e.*, "to say yes and amen to everything"; *kavukçu* or *dalkavuk*, "coaxer or wheedler"; *kavuk giydirmek*, "to put on a cap", *i.e.*, "to impose upon someone".

A special *ḳawuḳlu* appears as one of the two main characters of the Turkish popular theatre *Orta oyunu* [*q.v.*]. Such theatres had existed previously, but so far as we know, the term *Orta oyunu* occurs for the first time in 1833. The heyday of the *Orta* theatre was towards the end of the 19th century; it then became known in Europe through Kúnos's descriptions. The hero of the comic play was the *Ḳawuḳlu*, just like Ḳaragöz [*q.v.*] in the shadow-plays. The other main character, Peshekār, was a kind of theatre-director, corresponding somewhat to Ḥadjīvād in the shadow-play. The *Ḳawuḳlu*'s dress, including a caftan (*djübbe*) and trousers (*shalvār*) was red, even the cap (see the plates in Kúnos and Gerçek's publications). Often appearing as a pedlar, artisan or servant, the *Ḳawuḳlu* was a clown whose comedy lay in his misunderstanding the words of the other actors, his mindless execution of orders, which he twisted and exaggerated, his immoderate bragging, slyness and ready wit, and his imitation (*taḳlīd*) of foreign voices and dialects, especially those of the non-Turks in the Ottoman Empire. Dextrous juggling was also part of his performance. Only the main lines of the action were known; the *Ḳawuḳlu* had to improvise all the jokes, so that his performance was a demanding one. About 40 titles of plays, some identical with those of the shadow-play, are known, and 25 names of famous *Ḳawuḳlu*s have come down to us. Special mention should be made of Ḥamdī (d. 1911), ʿAbdī (= ʿAbd al-Razzāḳ, d. 1914), Kel Ḥasan (d. 1929) and Nāshiṭ (1889-1938) (see Gövsa, *Türk meşhurları ansiklopedisi*, with plates). Performances by these and other *Ḳawuḳlu*s are still remembered by the populace. Ḥamdī, when asked by Kúnos where he had learnt his art, answered significantly that his uncle and comrades had been his teachers. In origin, the *Orta* theatre was probably influenced by foreign elements; Bombaci has suggested influences from Jews, Greeks and perhaps Gipsies.

During the Reform period, this type of theatre met with serious competition from the European theatre, and many modernists wanted to forbid it outright. At the time when modern-type stages were set up, Ḥamdī made an attempt with the so-called *suflörlü oyunlar*, but without real success. Kel Ḥasan was more fortunate and died a rich man. In recent times, the *Orta* theatre has almost completely disappeared and endeavours to revive it are only occasionally heard of.

ḲĀWURD B. ČAGHRĪ BEG DĀWŪD, called also Ḳara Arslan Beg on his coins and by authors like Mīrkhʷand, the founder of a line of virtually independent Saldjūḳ amīrs in Kirmān which endured for some 140 years until the irruption into the province of Oghuz from Khurāsān.

The origins of Saldjūḳ rule in Kirmān are obscure: there are discrepancies in the accounts of the sources, and the opening pages of Muḥammad b. Ibrāhīm's local history of Kirmān are missing. Kirmān had been recovered by the Būyids after the Ghaznavid occupation of 422-5/1031-4 (on which see E. Merçil, *Gazneliler'in Kirman hâkimiyeti (1031-1034)*, in *Tarih Dergisi*, no. 24 (1970), 35-44) and formed part of the amīrate in southern Persia of ʿImād al-Dīn Abū Kālīdjār Marzubān. After the collapse of Ghaznavid power in Khurāsān, Saldjūḳ bands began raiding southwards through Ḳūhistān and Ṭabas to Kirmān. A raid on the chief town, Bardasīr or Kirmān, was repulsed by Abū Kālīdjar's vizier Muhadhdhib al-Dawla Hibatallāh al-Fasawī in 434/1042-3 (Ibn al-Athīr, ix, 349); whether Ḳāwurd or Ibrāhīm Ināl was the leader of this foray is unclear. However, shortly before the Būyid amīr's death in 440/1048-9, the rebellious Daylamī commander in Bardasīr, Bahrām b. Lashkarsitān, delivered the capital into Ḳāwurd's hands, and Būyid rule was thus ended (Ibn al-Athīr, ix, 349-50; Muḥammad b. Ibrāhīm, 2-3).

Ḳāwurd now began a reign of over a quarter-century in his apanage, acknowledging the supreme suzerainty of Ṭoghrīl Beg and then, somewhat grudgingly, that of his own brother Alp Arslan. Muḥammad b. Ibrāhīm gives considerable information about his internal policy. Over the ensuing years, he proved himself an energetic and capable ruler in Kirmān. He behaved as an almost independent prince, with such insignia of royalty as the ceremonial parasol or *čatr*, the use of his own *ṭughrā* or official emblem on documents (incorporating the Saldjūḳ bow and arrow motif), and the adoption of honorific titles such as ʿImād al-Dawla, found on his coins together with his *ṭughrā*. Like the Saldjūḳs in other parts of Persia, he took care to win over the Persian official and religious classes, assigning them administrative and judicial positions and marrying several of his daughters to local ʿAlids. He retained in his service many of the local Daylamī soldiers, but his reputation also attracted to Kirmān considerable numbers of Turkmens, to whom land grants or *iḳṭāʿ*s were assigned. He established a high degree of public security, taking draconian measures against those notorious brigands, the Kūfičīs or Ḳufṣ [*q.v.*], and was active in the charitable and public works expected of the wise Perso-Islamic ruler. He built caravanserais and baths, set up markers on roads through the desert, and built guard posts at strategic points (Muḥammad b. Ibrāhīm, 10). One of his guard towers, still standing on the road from Bam to Sīstān at a point between Fahradj and Gurg, was identified as such by Sir Percy Sykes, *Ten thousand miles in Persia or eight years in Iran* (London 1902), 418. He maintained a high standard of coinage, according to Muḥammad b. Ibrāhīm, 4, a piece of information confirmed by his extant coins, comprising dīnārs and dirhams, and minted at Bardasīr, Djīruft and Shīrāz (see on these, C. Alptekin, *Şelcuklu paraları*, in *Selçuklu araştırmaları dergisi*, iii (Ankara 1971), 440, 554-60); and the transit trade across Kirmān to Sīstān, India and the Persian Gulf was also encouraged.

With regard to external policy, Ḳāwurd mounted an expedition across the Gulf from Hormuz and seized the former Būyid dependency of ʿUmān; he sent a force under one of his sons to Sīstān; and he came, together with Alp Arslan, to succour Ṭoghrīl during the Turkmen rebellion of 451/1059 led by Ibrāhīm Ināl. The situation in Fārs, where the last Būyids were clinging to the vestiges of power, was his special concern. In 454/1062 he marched against the Shabānkāraʾī Kurdish leader Faḍlūya, defeating the latter and bringing about the final crumbling of Būyid rule in Shīrāz, though it was several years before Faḍlūya's defiance was completely crushed and Faḍlūya himself killed by Alp Arslan's forces in 461/1069.

Ḳāwurd had recognized Alp Arslan's succession to their father Čaghrī Beg as Saldjūḳ ruler in the east, and in 456/1064 he recognised him as supreme sultan after Alp Arslan had appeared in Kirmān. Ḳāwurd was nevertheless restless under this subordination to his brother; he withdrew his allegiance from Alp Arslan in 459/1067 and only restored it when the latter came again with an army. On Alp Arslan's death in 465/1072 he determined on a definite bid for power, basing his claim to overlordship in the Saldjūḳ family on his long experience as a ruler and commander, combined with his rights under the old Turkish principle of seniorate, the succession right of a senior, capable male member of the ruling family or clan, as against the young Malik Shāh's claim to succeed his father. The armies of Ḳāwurd and Malik Shāh met near Hamadhān in Djumādā I 466/January 1074 (thus in Ḥusaynī; in Bundārī and Ibn al-Athīr, in Shaʿbān/April). Many of the more traditionalist Turkmen elements in Alp Arslan's old army inclined to Ḳāwurd's side, and Ḳāwurd counted on wholesale defections; but Malik Shāh's slave commanders and his Kurdish and Arab contingents held firm, and Ḳāwurd was defeated and captured. Malik Shāh was inclined towards mercy for his uncle, who at one point offered to retire to ʿUmān; it seems to have been the vizier Niẓām al-Mulk who connived at Ḳāwurd's execution by strangling, or, according to some accounts, by poisoning (the fullest account of Ḳāwurd's rebellion and death is in Ḥusaynī, 56-8; see also Bundārī, 48, Rāwandī, 126-7, and Ibn al-Athīr, x, 53-4). Malik Shāh nevertheless preferred to leave the relatively isolated province of Kirmān as an autonomous unit, and restored it to Ḳāwurd's son Rukn al-Dawla Sulṭān Shāh within a few months.

Bibliography: the salient events of Ḳāwurd's career are to be found in the general sources on Saldjūḳ history, sc. Ḥusaynī's *Akhbār al-dawla al-saldjūḳiyya*, Bundārī's *Zubdat al-nuṣra*, Rāwandī's *Rāḥat al-ṣudūr*, Ẓahīr al-Dīn Nīshāpūrī's *Saldjūḳnāma*, Ibn al-Athīr, Barhebraeus, etc. Muḥammad b. Ibrāhīm's *Taʾrīkh-i Saldjūḳiyyān-i Kirmān*, ed. Houtsma in *Recueil de textes relatifs à l'histoire des Seljoucides*, i, Leiden 1886, ed. M. Bāstānī Pārīzī, Tehran 1964, cf. Houtsma, *Zur Geschichte der Selǵuqen von Kermân*, in *ZDMG*, xxxix (1885), 362-402, is supremely important as a special history of the dynasty. Information from the local histories of Kirmān is given in the text and notes of Muḥammad Bastānī-Pārīzī's edition of Aḥmad ʿAlī Khān Wazīrī's *Taʾrīkh-i Kirmān*

(*Sālāriyya*), Tehran 1340/1961. Of secondary literature, see Sykes, *A history of Persia*, London 1915, ii, 102, and Bosworth, in *Cambridge history of Iran*, v, ch. 1. For Ḳāwurd's coins, see the monograph of Alptekin mentioned above.

(C. E. Bosworth)

KĀWŪS, Banū, an Iranian dynasty which reigned in the districts of Rūyān and Rustamdār, the coastal plain and the mountainous interior respectively, of the western parts of the Caspian province of Māzandarān [*q.v.*] in the second half of the 9th/15th century and in the 10th/16th century. The dynasty was in fact one of the two branches into which the ancient line of the Bādūspānids [*q.v.*], whose genealogy went back to Sāsānid times, split in the middle years of the 9th/15th century.

The Bādūspānids had been confined to the fortress of Nūr by the Caspian campaigns of Tīmūr in 794/1392, but the amīr Kayūmarth b. Bīsutūn (807-57/1404-53) later regained control of Rūyān, where he forcibly introduced amongst the previously Sunnī population there the Shīʿī faith which he had acquired during exile in Shīrāz. On his death after a 50 years' reign, his eldest surviving son Kāwūs (857-71/1453-67) seized power, but had to agree to a partition of the Bādūspānid territories with his brother Iskandar. Kāwūs kept Nūr and other parts of the piedmont of Rustamdār, whilst Iskandar received the mountainous inland districts of Kudjūr and Lāridjān. The two lines continued in parallel down to the Ṣafawid conquest. The adhesion of the Banū Kāwūs to the Shīʿī traditions of much of the Caspian region was strengthened by Kāwūs's own marriage to a daughter of one of the Sayyids of Āmul and by later alliances with the family of Marʿashī Sayyids.

The history of this petty dynasty is largely one of local warfare against rival potentates in Māzandarān, often with help from neighbouring rulers in Gīlān; thus in 910/1504-5 Bīsutūn b. Djihāngīr b. Kāwūs (904-13/1498-9 to 1507) succeeded in taking over all Rustamdār and Kudjūr, with the exception of the fortress of Kudjūr itself, from the fraternal branch of the Banū Iskandar. The line of the Banū Kāwūs expired through a combination of internecine strife in Māzandarān and of outside intervention by the Ṣafawid Shāh ʿAbbās I, determined now to assert the central government's authority in the Caspian provinces. After bringing Gīlān under control, the shah charged Farhād Khān in 1596/1004 with the subjugation of all the princelings of Māzandarān. Bahman b. Kayūmarth of the Banū Iskandar, at this time master in Lāridjān and Āmul, was removed and his death procured by a rival, after which his territories were granted to one of the shah's Ḳizilbāsh amīrs. Djihāngīr b. ʿAzīz of the Banū Kāwūs was besieged in Kudjūr, captured and executed, and his territories granted to the *Ḳūrči-Bāshī* Allāh-Ḳulī Beg. Both these lines of Bādūspānid epigoni were thus extinguished.

(C. E. Bosworth)

ḲAWWĀS (A.), occasionally also *Ḳawwāṣ* (*e.g.* in the Arabian Nights), in modern Turkish *kavas*, properly bowman (from *ḳaws* "bow"), came to denote in general "musketeer" and finally also "policeman-soldier", especially the one in the service of highly-placed Turkish officials and foreign ambassadors. From this term is derived the French "cawas" and the German "Kawasse". In Turkey the *Ḳawwās* were, until 1826, chosen among the Janissaries (*Yeñi čeri* [*q.v.*]) and were called *yasaḳčī*. Their function was to protect foreign embassies and consulates and to escort diplomats leaving their residences, whether officially or unofficially; it was their duty to assure the latter unimpeded passage. In the Capitulations [see imtiyāzāt] it was laid down (for France in 1740) that foreign diplomats were entitled to choose their own *Ḳawwās*; the Turkish government could not impose anyone on them (see T. Xavier Bianchi, *Nouveau guide de la conversation*, Paris 1852, 273 f.; G. Noradounghian, *Recueil*, i, 1897, 289, § 45). According to an agreement of 23 Ṣafar 1280/9 Aug. 1863, the *Ḳawwās* were four in number for consulates-general and consulates in the capitals of the *vilāyets*, three for other consulates, and two for vice-consulates and consular agents. The governor of the *vilāyet* was informed of their nomination (Aristarchi Bey, *Législation ottomane*, Istanbul 1883-8, iv, 15 ff.).

In Turkey, the office of the *Ḳawwās* was abolished by the Treaty of Lausanne in 1923. However, the term *Ḳawwās*, or a similar expression, is still current in colloquial usage, both in Turkey and in other Islamic states also, to denote the servants and guards of foreign embassies.

Bibliography: given in the article, but see also the *Description de l'Égypte*, Paris 1822.

(Cl. Huart - [B. Spuler])

KAYA [see Ketkhudā].

ḲAYALİḲ, a mediaeval town in the region of the present-day Kopal in Southern Kazakhstan, identified by A. N. Bernshtam with the hill-fort Dungina 18 km. S.W. of Taldî Kurgan. It is first mentioned as the headquarters of the Ḳarluḳ chieftain Arslan Khān, who submitted to Čingiz-Khān in the spring of 607/1211. Ḳayalîḳ was originally included in the territory assigned by Čingiz-Khān to his eldest son Djuči [*q.v.*]; it was afterwards nominally part of the Čaghatay Khānate though administered, like the whole agricultural zone from Ūyghūristān westwards to Khʷārazm, by Masʿūd Beg [*q.v.*]. The Great Khān Möngke, upon his accession, ordered Ḳaydu [*q.v.*] to reside in the Ḳayalîḳ region, which Pelliot sees as evidence that it belonged to the apanage of the line of Ögedey, and in fact we are told by Waṣṣāf that it lay on the frontier between Ḳaydu's territory and that of the Čaghatay Khān Duʾa. William of Rubruck spent 12 days in Ḳayalîḳ (which he calls Cailac) in Ramaḍān-Shawwāl 651/November 1253. He describes it as a large town with a busy market; it had three Buddhist temples. According to Waṣṣāf the last battle between Ḳaydu and the Great Khān's forces was fought at a place a few days distant from Ḳayalîḳ. This appears to be the last mention of the town, which does not figure in the campaigns of Tīmūr. We must assume that

like Balāsāghun [*q.v.*] it was destroyed at some time during the first half of the 8th/14th century.

Smirnova, Moscow-Leningrad 1952; Waṣṣāf, Bombay ed.; *The Journey of William of Rubruck to the Eastern Parts of the World*, 1253-55, *as narrated by himself*, tr. and ed. W. W. Rockhill, London 1900; V.V. Barthold, *Four Studies on the History of Central Asia*, i, Leiden 1956; P. Pelliot, *Notes on Marco Polo*, i, Paris 1959, s.v. Caidu. (J. A. BOYLE)

KAYĀNIDS, Iranian dynasty, for the most part mythical, which owes its name to the title of *kavi* (see *Gr. I. Ph.*, ii, index s.v.) > Pahlavi *kay* (pl. *kayān*, or in Arabic, *akyān*) born by several persons cited, with some variants, in both the religious and the national tradition. A. Christensen has devoted to the dynasty a monograph, *Les Kayanides*, Copenhagen 1931, to which reference should be made for all the problems raised in regard to ancient Iran.

The main source for all the Islamic historians and writers concerned with the dynasty is the *Kitāb Siyar mulūk al-ʿAdjam*, the Arabic translation made by Ibn al-Muḳaffaʿ [*q.v.*] of the *Khudāy-nāma*, but the earliest Arabic authors give only somewhat confused information on the more or less mythical rulers who preceded the Sāsānids, leading one to think that they must have used other sources, especially oral ones (see, *e.g.*, Ibn Ḳutayba, *Maʿārif*, 652 ff.). Ibn al-Kalbī, cited in al-Masʿūdī, *Murūdj*, ii, 133-4 = § 558, even considers that the Kayānids were the first kings on the earth. Al-Masʿūdī himself, without instancing the Pīshdādids [*q.v.*], to whom he erroneously gives the name of Khudāhān (ii, 237 = § 659) in fact makes the Kayānids the second dynasty, to be followed by that of the Arsacids (Ashkān [see MULŪK AL-ṬAWĀʾIF]) and finally that of the Sāsānids [*q.v.*]. Al-Ṭabarī before him, and then the later historians and writers, all follow the same classification without mentioning the Achaemenids as such. Firdawsī, for his part, devotes *ca.* 27,000 distichs to the Kayānids.

In the religious tradition, a dozen personages bear the title of Kay, but the dynasty proper comprises, according to Islamic authors:

KAY ḲUBĀD (Kavi Kavāta), the founder. The religious tradition (Christensen, *op. cit.*, 70-1) gives no information on his ancestors and confines itself to retailing the legend of the adoption by Uzāv (Arabic, Zaww/Zāb), the last Pīshdādid king, of a newly-born child abandoned on the waters. The national tradition (Christensen, 107-8) is unaware of this story and provided a genealogy making Kay Ḳubād a descendant of Manūshčihr and, through the false reading of the presumed name of his father, the son of Zaww/Zāb himself. After this latter's death, Rustam [*q.v.*] was deputed to search out Kay Ḳubād, who was found in a palace in the Alburz Mountains. His reign was filled with prosperity, but was partly devoted to defending Iran against the Turanians (see al-Ṭabarī, i, 533-5, 597; Balʿamī-Zotenberg, i, 407; al-Dīnawarī, *Ṭiwāl*, 14; al-Thaʿālibī, *Hist. des rois de Perse*, 150-2; al-Bīrūnī, *Chronology*, 104; Ibn al-Balkhī, *Fārs-nāma*, 14; Firdawsī, *Shāh-nāma*, ed. and tr. Mohl, index).

His successors were KAY KĀʾŪS [*q.v.*], in whose reign there took place the epic fights between Siyāwush and Afrāsiyāb [*q.v.*], and then KAY KHUSRAW [*q.v.*], who took vengeance on Afrāsiyāb. There then followed:

(KAY) LUHRĀSB (Lōrāsp), descendant of a brother of Kay Kāʾūs. He founded or enlarged the town of Balkh [*q.v.*], and it is said to have been he who sent against Palestine Nebuchadnezzar (Bukht-Naṣṣar [*q.v.*]), who destroyed Jerusalem, dispersed the Jews and carried them off into captivity (however, Ibn Ḳutayba, *Maʿārif*, 652, places these events in the reign of Bahman, contemporary of Moses). Luhrāsb was killed by the Turks who came to besiege him (see Christensen, 117-18 and index; al-Ṭabarī, i, 620; al-Masʿūdī, ii, 121-3 = §§ 544-6; al-Dīnawarī, 26; al-Maḳdisī, *al-Badʾ wa'l-taʾrīkh*, iii, 149; al-Thaʿālibī, 244; Ḥamza al-Iṣfahānī, 36; Firdawsī, iv, 279-357). His son and successor

BISHTĀSB (Kavi Vishtāspa, Vishtāsp, Bishtāsf, Kushtāsb, Hystaspes) quarrelled with his father, so went to Rūm, where he married the king's daughter and accomplished various exploits before returning home, where his father passed on to him the crown. He had reigned for 30 years when Zoroaster [see ZARĀDUSHT] converted him to his new religion. He had to face an attack from the Turks who finally carried off his two daughters, but his son Isfandiyār (Spandyādh) rescued them, provoking however Bishtāsb's jealousy over his exploits, so that he sent his son to his death in charging him to attack Rustam, who was judged to have become too independent. Although legend dwells at length on this personage, Christensen considered him to be "une figure entièrement historique" (see *Les Kayanides*, 119-24 and index; al-Ṭabarī, i, 416, 645-9, 675-8, 691, 813, 869, 1053; al-Masʿūdī, ii, 123-7 = §§ 547-50; Ḥamza al-Iṣfahānī, 36-7, al-Thaʿālibī, 255-377; Ibn al-Balkhī, 48-52; al-Bīrūnī, *op. cit.*, 105; al-Maḳdisī, *op. cit.*, iii, 149 ff.; Firdawsī, iv, 359-751). The throne then passed to his grandson

BAHMAN (Vahman, son of Isfandiyār, who was also called later Ardashīr or Kay Ardashīr in order to make him the ancestor of the Sāsānid dynasty. The history of his reign is influenced by outside traditions. Al-Masʿūdī asserts that the return of the Jews to Jerusalem took place during his reign, and according to Dīnawarī, Bahman had a Jewish wife who converted him for a while to Judaism; despite this, he is considered to have strengthened the Zoroastrian faith. He was a great builder, and was also a warrior-king who killed Rustam and avenged his father (see Christensen, index; al-Ṭabarī, i, 649-54; al-Masʿūdī, ii, 127-9 = §§ 550-2; Ḥamza al-Iṣfahānī, 37; al-Bīrūnī, *op. cit.*, 105, 111; Balʿamī-Zotenberg, i, 500-1; Ibn al-Balkhī, 52 ff.; al-Thaʿālibī, 379 ff.; Firdawsī, v, 7-19). Bahman is represented as the father and the spouse of

HUMĀY [*q.v.*], who gave him a son,

DĀRĀ/DĀRĀB [*q.v.*]. Darius I, whose successor was

DĀRĀ/DĀRĀB II. In this fashion, the national tradition bridges the gap which separates the reign of Bishtāsb from Alexander's conquests, with the Achaemenids being mixed up with other lists of rulers. Humāy, also called Čihrāzād, is mixed up with a daughter of Bishtāsb, and it was for a Humāy that the kernel of the *Thousand and one nights* was put together [see ALF LAYLA WA-LAYLA], a point which poses difficult problems. The descendants of Bahman form a fairly confused mélange; another son is attributed to him, Sāsān, who was set aside from the succession, but the Sāsānid dynasty is attached to him by a forged genealogy and the legitimacy of the line thereby assured.

Bibliography: Given in the text. (ED.)

AL-**KAYD,** name of a fictitious star, defined in the *Mafātīḥ al-ʿulūm* (ed. van Vloten, Leiden 1895, 229) as *nadjm naḥis fi 'l-samāʾ lā yurā wa-lahū ḥisāb maʿlūm yustakhradju bihī mawdiʿuhū*, "an ill-

omened invisible star in the heavens, having a known ephemeris from which its position can be derived". It is not mentioned in *LA* and *TA*. Although occurring in at least one oriental text printed in Europe (*Anonymus Persa de Siglis Arabum et Persarum*, ed. and tr. J. Gravius, London 1648), it seems to have escaped the attention of historians of astronomy, and was rediscovered independently by Hartner (1939) and Kennedy (1957); see Ruska-Hartner [1, 206], Hartner [1], and Kennedy [1].

The earliest mention of al-Kayd so far known is found in Ibn Hibintā's *al-Mug͟hnī* (Suter, No. 31), written in 214/829 (Bayr. Staatsbibl., Munich, Cod. ar. 852, fols. 67v. and 71v.), where five of al-Kayd's six companions (see below) are also listed. According to this work, al-Kayd is "one of the stars with a tail; it appears once every hundred years and travels retrogradely, like the lunar nodes, through the zodiac, making one sign in 12 years". Its position is found in the following way: "Subtract 90 from the number of complete (Persian) years which have elapsed since the epoch of the Yazdagird era (17 June, 632). From the remainder subtract in turn the highest multiple of 144 which it contains. Multiply the second remainder by 360 and divide the product by 144. The result will give the longitude of al-Kayd measured backward from the first point of Aries. Subtract it from 360° to obtain the longitude as usually expressed" (Kennedy [1, p. 45]). Thus al-Kayd has a *retrograde* motion of $2^1/_2°$ per Persian year. It passed through the vernal point at the beginning (1st Farvardīn) of the years of the Yazdagird era 91 (25 May 722), 235 (19 April 866), 379 (14 March 1010), 523 (6 Feb. 1154), 667 (1 Jan. 1298), etc. This rule is corroborated by a number of other manuscripts containing references to al-Kayd and tables of its motion. Others, however, are based on slightly divergent parameters. In the case of tables computed for the Islamic calendar, the divergencies, which concern the initial longitude in year 91 of the Yazdagird era as well as the mean motion, might be due to errors of computation, but since there are tables expressed in the Yazdagird calendar which are based on a deviating initial longitude, it is evident that various traditions concerning the motion of al-Kayd must have been in existence. Thus Mīram Čelebī's table in his *Commentary on the tables of Ulug Beg* (Aya Sofya Ms. 2697, fol. 241v.) gives the longitude of al-Kayd on the first day of A.Y. 655 as 29°52′47″, while according to the rule it should be 30° straight (cf. Hartner 1, Pl. 5 and p. 21, where the last passage, caused by misreading 600 for 655, is to be cancelled]), which implies that al-Kayd passed through the vernal point some 17 days before the beginning of A.Y. 91, on Asfendarmed 14 of A.Y. 90.

Kennedy [1, 50] gives a list of al-Kayd's yearly and daily motions as well as of its longitude at A.Y. 91 according to various Islamic authors. Now the table of S͟hihāb al-Dīn al-Kūm-Rīs͟hī's *K. al-lumʿa fī ḥall al-kawākib al-sabʿa*, apparently copied from Ibn al-S͟hāṭir, to whom the author refers, operates with the same yearly motion of -2; 29, 59, 18° (sexagesimal fractions) and the same initial longitude as Ibn Yūnis' *Ḥākimī zīd͟j*, which proves that this value for the yearly motion, corresponding to a complete revolution of al-Kayd in 144 Persian years, 4 days, has a long tradition. Accepting that this was not accidental, Hartner [1, 14] has shown that al-Kayd passed through the point of summer solstice on 8 November 324 B.C., a day very close to the one accepted by numerous Islamic authors (al-Farg͟hanī, Ḥabas͟h, al-Masʿūdī, al-Bīrūnī, Ibn Yūnis, Kūs͟hyār al-D͟jīlī) as the beginning of the era of the death of Alexander the Great: Thoth 1, 425 of the era Nabonassar = 12 November 324 B.C. (Alexander actually died on 13 June 323 B.C.); this era, also called *Aera Philippi Arrhidaei*, operates with vague years of 365 days, as does the era of Yazdagird. Certain particulars of the Islamic version of the Romance of Alexander seem to confirm this hypothesis of an actual connexion. Here above all the figure of K͟haḍir [*q.v.*] has to be mentioned, which has a striking similarity with the Indian demon Rāhu. Both are put to death after having sipped from the fountain of life (in India the *amrta* drink), but both survive because immortalised by the drink. K͟haḍir, having become a maleficent demon, is fettered with heavy chains to the bottom of the sea, while Rāhu's head, severed from his body, and his tail, now called Ketu, become the intransigent enemies of the luminaries. In astrology [see D͟JAWZAHAR] those two parts of the eclipse monster are identified with the lunar nodes. As these nodes behave like planets, making a (retrograde) revolution along the ecliptic in the course of 18.6 years, they are treated as such, with their exaltations (ὑψώματα, *as͟hrāf*) in Gemini and Sagittarius, and figure in horoscopes as maleficent stars; see Hartner 2, pp. 120-134.

According to another Indian tradition, however, Ketu takes the shape of a comet (*dhūmaketu*, "smoke-ketu") appearing at irregular intervals as a threat to the superior world and to mankind. Obviously, it is this manifestation of Ketu from which the Arabic al-Kayd was derived, semantically as well as etymologically. This is also attested by the fact that the only information to be drawn from Islamic authors is that al-Kayd is of Indian origin. At a time not yet definable on the basis of our present knowledge, the irregular cometary Ketu was incorporated into the system of astrology and, for this purpose, had to be regularised by ascribing to it planetary qualities and a uniform motion, retrograde along the ecliptic, in accordance with its closest relatives, the nodes of the lunar orbit. Thus the Indian Ketu found its way twice into Hellenistic astrology. The reasons for attributing to the pseudoplanet Ketu-Kayd a revolution of 144 vague years (precise or approximate) are unknown. A. Sachs (see Neugebauer [1, 211]) has identified a comet (*zal-lum-mu-ú*) with a revolution of half this period, 72 years, in the cuneiform text TU 11 (rev. 27), written in Uruk during the Seleucid period, which, as Neugebauer says with due precaution, comes somewhat close to the period of Halley's comet, 76 years, so that it could have been "taken as a prototype and its period modified to 72 because of some unknown astrological speculation. But all this is sheer guesswork." This is true indeed, but another possibility cannot be excluded, that different comets appearing accidentally at an interval of around 144 years were regarded as identical, *i.e.*, periodically recurring, as for instance the following, chosen at random from the Chinese annals (see Ho Peng Yoke [1]): 233 B.C., 87 B.C., A.D. 55, A.D. 200, A.D. 343.

The recollection of the cometary origin of al-Kayd is clearly alive for Islamic authors, as is shown by the fact that al-Kayd is often listed together with six companions called *kawākib d͟hawāt al-ad͟hnāb*, "stars with tails", travelling the ecliptic retrogradely with the same velocity, and thus at a constant distance from al-Kayd. According to the best extant manuscripts, among which the *zīd͟j* of D͟jamāl al-Dīn Abu'l-Ḳāsim b. Maḥfūẓ (Paris, Bib. Nat. 2486,

fol. 99 f.) ranks foremost, their names are as follows: D͟hu'l-d͟hu'āba, "The one with a tuft", Liḥyān, "Beard", Sar-i-mūs͟h (arabicised Sarmūs͟h), "Head of the mouse", G͟haṭīṭ, "Death-rattle", G͟harīm (misspelled ʿAẓīm in Ms. 2486), "Adversary", and Kalāb, "Hydrophobic delirium". They all illustrate at the same time the cometary character and the frightening danger of these fictitious celestial objects.

Contrary to what might be expected, these seven tailed stars follow each other at very irregular distances. When al-Kayd passes through the vernal point (longitude 0°), Sarmūs͟h stands at *ca.* 60°, G͟harīm at *ca.* 214°, G͟haṭīṭ at *ca.* 265°, while the remaining three stand extremely close together: D͟hu'l-d͟hu'āba, at 160°1′, Kalāb, at 162°34′, and Liḥyān, at 162°43′. As is seen, the two last are only 9′ apart (less than one-third of the moon's apparent diameter). It seems justified to assume that this reflects the memory of a large comet with a head stretching over a relatively vast area, such as Halley's or the great comet of 1811.

There are numerous variants of these names due either to misreading or to substitution; of the latter, two are of interest: Ṭayfūr, which Kennedy [1, p. 44] doubtless is right in equating with the Greek comet Typhon (Bouché-Leclarcq [1, p. 359]), and Nayzak (Persian, "spear"), which is used otherwise to denote all kinds of unexpected celestial phenomena, such as comets, meteors, and also the supernova of A.D. 1006 (see Goldstein [1], and Nallino [1, Vol. ii, p. XIII, 8], who has no other reference either to al-Kayd or to his companions. The Persian name Sar-i-mūs͟h is clearly reminiscent of the Pahlavi Mūs-parīk, which together with the dark sun (Mitr-î tamî) and the dark moon (Mâh-ī tamî) plays a preponderant rôle in the *Bundahišn*, ch. v, A (Anklesaria [1], 54-65), where they appear as antagonists of the luminaries. It seems that the idea of dark counter-planets adumbrated there was later extended to a heptad of such, viz. al-Kayd and his companions, each of whom was considered the dark adversary of one of the visible planets. Neugebauer [1] has shown that al-Kayd also occurs in Byzantine literature. where it is called ἀΐτ. The tables refer to Yazdagird years and operate with a motion of $-2^1/_2°$ and an initial longitude at A.Y. 91 of 0°. Hartner identified al-Kayd in the Horoscope of Bantay Srei (near Ankor Tom, Cambodia), valid for the date 28 April 1295, see Beer [1, 207 f.].

Finally, a misunderstanding of a passage in which al-Kayd is mentioned (the Astronomical Aphorisms of Cardano, who borrowed it from the Latin translation of Abū Saʿīd S͟hād͟hān's *Mud͟hākara*; the Arabic original (Ms. Ankara, Ismail Saib 199) was identified by F. Sezgin, see of this fols. 15b, 16a, 20b, 21a) gave rise to Tycho Brahe's great discovery that comets are not generated in the sphere of fire, as postulated by Aristotle, but are celestial bodies, and that, consequently, the millenary dogma of the existence of ethereal spheres is untenable (Hartner [3]).

(W. HARTNER)

ḲAYDU, the son of Ḳas͟hi, the fifth son of the Great K͟hān Ögedey, was born according to D͟jamāl al-Ḳars͟hī *ca.* 633/1235-6. The statement, still sometimes repeated, that he took part in the campaigns in Eastern Europe in 637-8/1240-1 is due to a confusion with his uncle, Ḳadan. Upon the accession of the Great K͟hān Möngke, he was ordered to reside in the region of Ḳayalīḳ [*q.v.*]. Upon the election of Ḳubilay [*q.v.*] to the K͟hānate, he took the part of the latter's brother Arīg͟h Böke in the civil wars that followed. When Arīg͟h Böke surrendered to the Great K͟hān, Ḳaydu continued the struggle, remaining in open or latent hostility to Ḳubilay and his successor Temür Öld͟jeytü throughout the remainder of his life. He opposed Burāḳ [*q.v.*], Ḳubilay's nominee to the Čag͟hatay K͟hānate [*q.v.*] but they afterwards reached an agreement with each other and for thirty years the Houses of Ögedey and Čag͟hatay worked in harmony under the leadership of Ḳaydu. The accounts of his death are contradictory. He appears to have been wounded in a battle with the Great K͟hān's forces and to have died shortly afterwards. His death occurred, according to Kās͟hānī, in Rad͟jab 702/February-March 1303, at a place called Ḳulan Bas͟hī in the vicinity of Ḳaraḳorum.

ḲAYG͟HUSUZ ABDĀL (? - 818/? - 1415), Turkish mystic poet and writer of the 8th-9th/14th-15th centuries, generally considered the founder of the Bektas͟hi Darwīs͟h literature. The little which is known about his life is half legendary and based on traditional writings of the order. Aḥmed Sirrī Baba, the only author who gives exact dates for his life, does not mention his sources (*al-Risāla al-aḥmadiyya fī ta'rīk͟h al-ṭarīḳa al-bektāshīyya*, Cairo 1352, quoted by A. Gölpınarlı, *Türk Tasavvuf Şiiri Antolojisi*, Istanbul 1972, 174). Ḳayg͟husuz seems to have been a disciple (*murīd*) of Abdāl Mūsā (whose shrine is in Elmali near Antalya), a follower of Ḥād͟jd͟jī Bektās͟h of K͟hurāsān (d. 660/1270), the patron of the Bektas͟hīyya, who himself was a

disciple of Bābā Isḥāḳ, the leader of the famous religio-social Bābāʾī revolt of 638/1240 against the Saldjūḳs. Kayghusuz spent several years in Egypt, at the beginning of the 9th/15th century, where, according to tradition, he founded the Bektāshī convent, which became one of the most important centres of the order. His ideological formation can be traced to Bābāʾī and Bektāshī influences and his literary personality, particularly in language and style, owes much to Yūnus Emre, the great mystic poet of 7th-8th/13th-14th centuries, who also seems to have been exposed to the influence of the heterodox Bābāʾī movement [*q.v.*].

Subtle irony, satirical humour and a strong *joie de vivre* characterize Ḳayghusuz' poetry, and his fluent, vivid, powerful prose created popular mystic works (*Risāle-i Ḳayghusuz, Kitāb-i Maghlata, Kitāb-i Dilgüshā* or *Budalā-nāme*) which are among the masterpieces of early Ottoman Turkish literature. Ḳayghusuz' works have not been edited. Lithographic editions are not reliable. His poems are frequently confused with those of Ḳayghusuz Vizeli ʿAlāʾ al-Dīn, a 10th/16th century popular mystic poet of the Malāmatīyya order. For comparatively reliable Ms. texts of Ḳayghusuz Abdāl see the *medjmūʿa*, Nuru Osmaniye, no. 4904; Ankara General Library, Ms. nos. 169, 824 and 867, and Istanbul Belediye Library, Cevdet section Ms. no. 216. For selections, see Bibliography.

KAYGİLİ, ʿOTHMĀN DJEMĀL (modern Turkish OSMAN CEMAL KAYGILI), Turkish novelist, short story writer and humorous essayist (1890-1945). He was born in an Istanbul suburb outside the city walls, the son of a local grocer. He lost his parents at an early age and, after finishing the neighbourhood high school, he was trained as an army clerk and worked in various departments of the General Staff (1906-13). Following the assassination of the grand vizier Maḥmūd Shewket Pasha in June 1913, he was arrested together with many "suspects" of the opposition and banished to Sinop on the Black Sea, where he wrote his long short-story *Čuvaldji Sheykhiniñ Khalefi* (published later in *Alay*, 5, February 1920). Some of his fellow-exiles, particularly Refīḳ Khālid Karay [*q.v.*], who was already a celebrity, encouraged him and induced him to become a professional writer. Released from Sinop, he continued to serve, during World War I, as an army clerk in various military units in Anatolia. Following a serious illness he returned to Istanbul in 1917 and was discharged because of disability in 1918 at the age of 28. He devoted the rest of his life to his literary work, making his living by odd jobs and later by teaching in various schools. He died in Istanbul in 1945.

ʿOthmān Djemāl Kaygīlī began his career as a humorous writer and from 1920 onwards contributed to a great number of dailies (*e.g. Ṣabāḥ, Iḳdām, Akshām, Waḳit, Ačīḳsöz*, etc.) and periodicals, particularly *Alay, Aydede, Aḳbaba* and his own shortlived *Āyīne* (*Ayna*, 1921-23). Most of these writings, including some short stories and novels and his memoirs (*Akşamcılar* serialized in *Açıksöz* 1936-37), have not been published in book form.

Kaygılı belongs to the school of Turkish writers and novelists who, during the last decades of the 19th and early 20th centuries, produced works which were inspired by the technique and style of traditional Turkish folk literature and popular story-tellers, and were addressed to and enjoyed by larger audiences than the works of the élitist writers of the same period. Kaygılı adopts on the one hand the informal technique, free and easy style and familiar digressions of Aḥmed Midḥat, with his sympathy and understanding for the way of life of simple folk, and on the other follows Ḥüseyn Raḥmī Gürpinar and partly Aḥmed Rāsim, in their concentration on observing and describing Istanbul lower and lower-middle class life in the suburbs. He himself belonged to this world and spent most of his life in its midst. He is, however, a less brilliant and more limited and modest successor of his outstanding masters. But his emphasis on details of Istanbul folklore and the study of certain types (particularly gypsies, refugees from the Balkans (*muhacirs*), street children, popular singers and musicians, etc.) characterise his work, which contains invaluable documentary material for Istanbul suburban life for the period between the two World Wars.

Kaygılı's main published works are: 1) *Eshḳiyā Güzeli*, Istanbul 1925 (collection of short stories); 2) *Sandalım Geliyor Varda!* (two long short-stories), Istanbul 1938; 3) *Çingeneler* (a novel on the life of gypsies outside Istanbul city walls, considered his best work), Istanbul 1939 and 1943; and 4) *Aygır Fatma* (a sentimental love story), Istanbul 1944. He wrote several plays, in which he himself acted, produced puppet plays and tried to revive the Karagöz and Orta Oyunu theatres. (*qq. v.*). His only published play is *Üfürükçü* ("The Curer by Breathing"), Istanbul 1935. His remarkable contributions to research into Istanbul folklore have been published in articles or serialised in various Istanbul dailies. Only his studies on Istanbul slang (*Istanbul Argosu Lügati*, Istanbul 1936) and on the coffee-houses where popular poets-singers performed (*Istanbul Semai Kahveleri ve Meydan Şairleri*, Istanbul 1937), have been published in book form.

(F. Iz)

ḲĀYĪ, one of the Oghuz tribes to which, as claimed by some Turkish chroniclers, the Ottoman dynasty belongs. The Ḳāyī were considered as the noblest of the Oghuz tribes. The high prestige which they enjoyed seems to have rested on the fact that most of the rulers or *yabghus* of the Oghuz people living along the Syr Daryā (Sayḥūn = Jaxartes) during the period between the 9th and 11th centuries were from this tribe. Some of the names of these kings are mentioned in the chapter of *Djāmiʿ al-tawārīkh* dealing with the legendary history of the Oghuz Turks. However, the Ḳāyī tribe appears to have played a major rôle in the conquest and settlement of Anatolia, and consequently there are more place-names in Anatolia called after this tribe than any other tribe. What is really remarkable, however, is that in addition to the abundance of such place-names, there were in Turkey large Ḳāyī organizations living a tribal existence in the Denizli, Menteshe

and Konya regions in the 10th/16th century. Furthermore, there were smaller Ķāyī branches in the *sandjaķ*s of Ḥamīd (Isparta-Burdur), Ankara, Saru Khan, Kara Ḥiṣār (Afyon) and Sis (Kozan) in the 10th/16th century.

A small branch of the Ķāyī who had not emigrated to the west was left behind among the Transcaspian Turkomans, but these people surprised some European travellers when they told them that the Ottoman dynasty had originated from their tribe. The earliest chronicler to claim that the Ottoman dynasty belonged to the Ķāyī tribe was Yāzīdji-oghlu ʿAlī, who wrote his work during the reign of Murād II (824-55/1421-51). Although this claim can be questioned, it has some probability. The use of the Ķāyī emblem as the official emblem of the Ottomans begins with the reign of Murād II. The Ķāyī emblem is seen on coins struck during his reign, as well as on the weapons belonging to his successors; many weapons on display in the Topkapı Museum bear this emblem, and such emblems are quite similar to those given in *e.g.*, *Djāmiʿ al-tawārīkh*. Through its connection with the Ķāyī, the son of Gün Khān, the eldest son and successor of Oghuz Khān, the Ottoman dynasty considered itself superior in nobility to other Turkoman dynasties, and to the sons of Čingiz Khān.

KAY KĀʾŪS, mythical second king of the line of Kayānids [*q.v.*] whose name contains twice over the royal title *kay* (Kay Ūs > Kāʾūs). His history has been delineated by A. Christensen from the Iranian religious tradition and from the national tradition echoed by the later Muslim historians (*Les Kayanides*, Copenhagen 1931, 73-90, 108-14). This Islamic historical tradition makes him the son of Kay Abīwēh > Abīh (except for Balʿamī, Firdawsī and al-Thaʿālibī, who make him the son of Kay Kubād [*q.v.*]). He was a warrior-king who, according to Firdawsī, led a campaign into Māzandarān, which was inhabited by demons and protected by the white *dīw* (*dīw-i sefīd*), who caused a hail of stones to come down on the royal army during the night. Rustam son of Zāl [*q.v.*] set out to deliver the king from imprisonment, and on his way became the hero of seven adventures which have become celebrated in poetry; the white *dīw* was overcome in his sleep and the blood from his heart restored their sight to the king and his army.

This ruler protected his country, and was clement towards the weak but severe against the powerful. He enjoyed the divine favour and the *dīw*s were subject to him. Hence when he rose up against heaven, the *dīw*s built for him a palace and a high tower in the Alburz Mountains, from which he and his troops went up, partly by their own efforts, partly by a magical machine, and partly in a sort of conveyance borne by eagles and vultures in front of which were dangled pieces of meat fixed on lance-points. The divine favour was consequently withdrawn from him and he fell to the ground; he himself was preserved alive, but his army perished.

In the course of a war launched against the Yemen, Kay Kāʾūs had married the daughter of the king of Yemen, Suʿdā (whose name was Iranised to Sūdābeh, although she is also considered as the daughter of Afrāsiyāb [*q.v.*]). The advances of this woman had been repelled by Kay Kāʾūs's son Siyāwush [*q.v.*], but she now spread calumnies against him in the king's presence; he had to flee for refuge with Afrāsiyāb, but the latter finally killed him. Kay Kāʾūs is said to have reigned 50 years; he was stripped of the throne by Kay Khusraw [*q.v.*] and imprisoned till his death.

KAYKĀʾŪS, name of two Saldjūķid sultans of Rūm (Asia Minor).

Kaykāʾūs i. Succeeding his father Kaykhusraw I [*q.v.*] after the battle in which the latter perished (608/1211), he at first had to rid himself of the rivalry of his brothers Kayferīdūn and Kayķubādh [*q.v.*]. After that he had no further internal difficulties. His reign is particularly marked by the combination of a policy of peace towards the Greeks of Nicaea with interventions on the southern, northern and eastern frontiers. In the south, where Kaykhusraw had taken Anṭāliya, he tried to combine interventions against the Armenians of Cilicia, carried out in favour of the Latin prince Bohemund IV of Antioch and his ally al-Ẓāhir of Aleppo, with trade treaties with the Cypriots and the Venetians. In the north, the great success of his reign was the acquisition of Sinop, a new maritime outlet, this time for the Black Sea; this port had the advantage of not belonging clearly either to Nicaea or Trebizond. There he collected a fleet, to be directed especially against the Crimea. But when Kaykāʾūs, after the death of al-Ẓāhir in 613/1216, tried to conquer Aleppo on behalf of his vassal of Samosata, the exiled Ayyūbid al-Afḍal [*q.v.*], he was defeated by the Ayyūbid of Mesopotamia al-Ashraf [*q.v.*]. He tried to take revenge by organising an anti-Ayyūbid coalition with the help of Luʾluʾ [*q.v.*], the ruler of al-Mawṣil, but he died before this project could be realized (618/end of 1220). He had kept up good relations with Bahramshāh of Erzindjān and al-Mughīth of Erzurum, his neighbours in Asia Minor, and also with the caliph al-Nāṣir [*q.v.*] whom he conciliated by adhering to his reformed *futuwwa* [*q.v.*]. He may also have encouraged the expansion of literature written in Persian, which was then beginning in his territories, and showed an interest in Ṣūfism in the person of Ibn ʿArabī [*q.v.*]. The same period is by and large the one in which began the real development of cities, architecture, mosques, *madrasa*s, caravanserais, etc., a list of which cannot however be given here.

Kaykaʾūs ii, ʿIzz al-dīn, son and one of the successors of Kaykhusraw II, who had left three minor sons: the eldest, ʿIzz al-Dīn, son of a Greek woman; the second, Rukn al-Dīn Kilidj Arslān, son of a Turkish woman, and the youngest who was ailing, ʿAlāʾ al-Dīn, son of a Georgian woman. For several years the high dignitaries, in particularly the freedman Karatay, who exercised the real power, tried to maintain a kind of condominium of the three brothers, and then of the two remaining after the suspicious death of the youngest during a mission to the Mongols. But when ʿIzz al-Dīn and Rukn al-Dīn had attained their majority, this policy

proved to be impossible. In fact, the opposition of the two princes was based on the attitudes which they represented and on the milieus which supported them. Rukn al-Dīn, who exercised his prerogatives in the eastern part of Asia Minor, relied upon the Mongols with whom he was in contact, and upon their trusted official at his court, the *Parwāna* Muʿīn al-Dīn Sulaymān [*q.v.*]. ʿIzz al-Dīn, who reigned in western Asia Minor and was allied with his Greek family and the Turkmen groups on the frontier, adopted the latter's anti-Mongol attitude. A series of complicated episodes marks this struggle: at the death of Karatay (652/1254), Rukn al-Dīn revolted at Kayseri and was taken prisoner, but two years later the Mongols invaded again Anatolia under the command of Baydju. This invasion was in a way more dangerous than the one of 641/1243, because its aim was the very settlement of a part of the Mongols in Asia Minor, by which their exactions would consequently increase. ʿIzz al-Dīn, defeated in a battle in which had taken part Michael Paleologus, then exiled at Nicaea (see below), fled to Greek territory, while Rukn al-Dīn was proclaimed sultan at Kayseri. But when he left to pay homage to the supreme Khān, ʿIzz al-Dīn re-appeared at Ḳonya (655/1257). The Khān Möngke, who wanted their common collaboration or at least peace between them in view of the organizing of his campaign against the caliph, re-established the partition of dominions and the two brothers took part in the campaign of the Il-Khān Hülegü in Syria in 658/1260. But when the latter had left, they started their struggle again. ʿIzz al-Dīn, menaced by the Mongols, had to flee, this time for good, to Constantinople, which his old friend Paleologus had reconquered from the Latins. But this flight turned out unlucky for him. The new Emperor, desirous to turn all his forces against the Latins and the Mongols of Russia, tried to make peace with the Mongols of Iran and Asia Minor, who in turn had just broken off relations with those of Russia. Imprisoned on the northern borders of the Byzantine state, ʿIzz al-Dīn was freed by a Mongol raid, but he was only able to withdraw to the Crimea, from where he could observe the events in Asia Minor. Without having tried to recover his throne, he died there in 678/1279-80. A certain number of Turks who had followed him remained in Dobrudja, where they still carry his name, deformed into the Gagauzes [see DOBRUDJA]. In Asia Minor his popularity among the Turkmens was attested by revolts made in his name and by the support which his sons were to find there later on. It is certainly not by chance either that the great Turkmen epic of the *Dānishmend-nāme* was in its first form dedicated to him.

Bibliography: Anticipating the article SALDJŪḲIDS, the essential bibliography relative to the 7th/13th century before 1243 and to the period of the Saldjūḳid-Mongol condominium is given here. For a larger, descriptive bibliography, see Cl. Cahen, *Pre-Ottoman Turkey*, London 1968, 427-40.

a. *From the end of the 6th/12th century to 1243.*

Muslim Anatolian sources were only written down during the second period (in Persian), but go back to the first. The most important is Ibn Bībī, *al-Awāmir al-ʿAlāʾiyya*, facs. edn. of the unique ms. by Adnan Erzi, Ankara 1956, critical edn. started by the same and Necati Lugal,—Vol. i, the only one published, 1957; a somewhat abridged version was published in 1902 by M. Th. Houtsma in *Recueil de textes relatifs à l'histoire des Saldjukides*, iv; German tr. of this, with additions from the original, by H. Duda, *Die Seltschuchengeschichte des Ibn Bibi*, 1959. For this period see also in second place the anonymous *Tarih-i âl-i Selcuk*, facs. edn. with Turkish tr. by Nafiz Uzluk, 1952.

The Arab sources are those of the Ayyūbid period; see AYYŪBIDS. Important for the present purpose is the *Zubda* of Kamāl al-Dīn b. al-ʿAdīm of Aleppo, ed. Sāmī Dahān, iii, and the *Taʾrīkh Manṣūrī* of Muḥammad b. Naẓīf al-Hamawī, facs. edn. by P. Gryaznevitch, Moscow 1960 (unpubl. German tr. at the University of Vienna).

Use should also be made of the Christian sources in Armenian, Syriac, Greek, Georgian and occasionally even Latin. The Armenian sources include those of Armenia proper and those of Cilicia. For the period under consideration only the latter are really important, the main being the *Historien Royal* (perhaps = Sempad the Constable, ed. Akelian 1956, partial English tr. by S. Der Nersessian, complete French tr. by G. Dédéyan, doctoral thesis, Sorbonne, Paris 1972 (to be published). The Georgian sources have been sufficiently collected in M. F. Brosset, *Histoire de la Géorgie*, 2 vols., i, 1849. The contributions of the Byzantine sources (above all Nicetas Akropolites, Pachymeros) have conveniently been gathered in B. Lehmann, *Die Nachrichten des ... über die Seltschuken*, 1939.

Important is the *Chronography* of Bar Hebraeus [see IBN AL-ʿIBRĪ] in Syriac (which is better than the Arabic version), ed. and tr. E. W. Budge, 1932. An anonymous Syriac chronicle reaching the year 1235 has been published by J. B. Chabot in the *Corpus Scriptorum Orientalium*; a translation of the part dealing with this period is still awaited.

Of special interest for the transition between the two periods are the lengthy extracts from the Latin missionary Simon de St. Quentin in Vincent de Beauvais' *Speculum Historiale*, recently grouped and translated by J. Richard under the title *Histoire des Tartares*, 1966.

The majority of the inscriptions which have been published in various publications have been brought together, with a bibliography, in *RCEA*; many coins have been described in S. Lane-Poole, *Catalogue of the oriental coins in the British Museum*, viii, and in Ahmed Tevhid, *Catalogue des anciennes monnaies islamiques du musée d'Istanbul*, iv, 1904. Acts of *waḳfs* of various periods of the 7th/13th century have been published, especially by Osman Turan in *Belleten* (1947-8). For archaeology, see articles on the various cities.

Modern general works: *İA*; Cl. Cahen, see above and *Le commerce anatolien au XIII^e^ siècle*, in *Mélanges .... Louis Halphen*, 1951; Osman Turan, *Selcuklular zamaninda Türkiye*, 1971.

b. *From 1243 to the beginning of the 8th/14th century.*

To Ibn Bībī (extending to 1280) and to the anonymous *Taʾrikh* can now be added Karīm al-Dīn Mahmūd Aḳsarāy, *Musāmeret ül-akhbār*, ed. Osman Turan, 1947 (German analysis by Fikret Işiltan, 1943). Among the many Arabic sources of the period of the first Mamlūks, special attention should be given to Baybars al-Manṣūrī (unpublished) for the middle of the 7th/13th century and to the *Life of Baybars* of ʿIzz al-Dīn b. Shaddād. The second part of the latter, the only one to be found so far, is still unpublished but a Turkish translation was published by Şarafuddin Yaltkaya (*Baypars Tarihi*, Istanbul 1941); the first part is extensively used

by various authors, especially by Yunīnī, ed. Hyderabad 1954-5. Several Armenian authors from Greater Armenia mention the Mongols of eastern Asia Minor, but only the *Historien Royal* pays attention to Anatolia proper. The Greek historians to be consulted are again Pachymeros and Nicephoros Gregoras, ed. with Latin tr. in the Bonn *Corpus*.

To the recent general bibliography can now be added Faruk Sümer, *Anadoluda Mogollar*, in *Selçuklu araştırmaları dergisi*, i (1969-70), 1-147; Necat Kaymaz *Pervâne Mu'înü'din Süleyman*, 1970; S. Vryonis, *The decline of medieval Hellenism in Asia Minor and the process of Islamization in the XIth-XVth century*, Berkeley and Los Angeles 1971.

(CL. CAHEN)

KAY KĀ'ŪS B. ISKANDAR, prince of the Ziyārid dynasty in Persia and author of a well-known "Mirror for Princes" in Persian, the *Ḳābūsnāma*.

'Unṣur al-Ma'ālī Kay Kā'ūs was the penultimate ruler of the line of Ziyārids [*q.v.*] who ruled in the Caspian provinces of Ṭabaristān or Māzandarān and Gurgān in the 4th/10th and 5th/11th centuries. His main claim to fame lies in the *Ḳābūs-nāma*, written in 475/1082-3, when the author was 63 years old, for his favourite son and intended successor, Gīlān-Shāh. The little that we know of his life must be gleaned from historical sources like Ibn Isfandiyār's *Ta'rīkh-i Ṭabaristān* and from the *Ḳābūs-nāma* itself. We know that he spent eight years as a boon-companion of the Ghaznavid Sulṭān Mawdūd b. Mas'ūd (reigned 433-40/1041-8), accompanying him to India, and some time also with the Shaddādid Amīr Abū 'l-Aswār Shāwur (413-49/1022-57) in Transcaucasia, and that he succeeded to the throne in 441/1049-50. Ziyārid power was, however, gradually restricted by the rising supremacy of the Saldjūḳs in the eastern Iranian world, and the Saldjūḳs exercised a virtual suzerainty over Ziyārid lands. Kay Kā'ūs died a few years after the *Ḳābūs-nāma* was written and was succeeded by Gīlān-Shāh, but the latter was overthrown by the Ismā'īlīs of Alamūt in *ca.* 483/1090.

The *Ḳābūs-nāma* is an early specimen of the Persian *andarz-nāma* genre, *i.e.*, it gives counsel for rulers. It speaks of duty to God and the necessity for ethical behaviour, but in fact recognises expediency as the most practical basis for government. The title derives from Kay Kā'ūs's grandfather, the celebrated Ḳābūs b. Wushmagīr [*q.v.*], whom the author clearly admired for his ruthlessness. The book's introduction and 44 chapters range over the topics of kingship, leadership in battle, and administration, but much space is also allotted to more mundane and intimate matters such as the buying of horses and slaves and the regulation of marital and family life. The Persian prose style is simple and direct, and the whole work is plentifully interspersed with aphorisms, historical anecdotes and verse quatrains (mostly by the author himself).

The work has always remained popular, as the numerous extant manuscripts attest. At least three Ottoman Turkish translations were made, the earliest being done for Sulṭān Murād II (824-55/1421-51), and manuscripts of these are quite common also.

Bibliography: Concerning the alleged *manuscript* of the *Ḳābūs-nāma* dating from 483/1090, around which a considerable literature grew up, see the summing up of M. Minovi, *Qābūs-nāma'nin yeni nüshasi hakkında*, in *Şarkiyat Mecmuası*, ii (1958), 105-30. The *Ottoman Turkish versions* that have survived are: (a) the translation by Merdjimek Aḥmed b. Ilyās, dated 835/1431, ed. Kazan 1298/1880-1, Istanbul 1944; (b) the translation by Naẓmīzāde Muṣṭafā, dated 1117/1705 (cf. Ch. Rieu, *Catalogue of the Turkish Manuscripts in the British Museum*, London 1888, 116-17). The earliest rendering into a Western language, the German translation by H. F. von Diez (Berlin 1811), which was based on the Turkish versions, had a great influence on the Oriental studies of W. F. von Goethe (cf. *Noten und Abhandlungen zu besserem Verständnis des West-östlichen Divans*, ed. Wiesbaden 1948, 286-92). *Translations* from the Persian original were made by A. Querry (Paris 1886, Fr.), P. B. Vachha (Bombay 1916, Eng.), R. Levy (London 1951, Eng.), E. E. Bertel's (Moscow 1953, Russ.) and Amīn 'Abd al-Madjīd Badawī (Cairo 1378/1958, Ar.). The best *edition* of the text of the *Ḳābūs-nāma* available at present was published by Ghulām-Ḥusayn Yūsufī, Tehran 1345 *sh.*/1967 with elaborate notes and a bibliography. Older editions which are still of some importance are those by Riḍā-ḳulī Khān Hidāyat (Tehran 1285/1868-9), S. Nafīsī (Tehran 1312 *sh.*, 1342 *sh.*[2]), R. Levy (London 1951) and A. 'A. Badawī (Tehran 1335 *sh.*/1956). *Studies*: Ethé, in *Grundriss der iranischen Philologie*, ii, 347, 349; Browne, *LHP*, ii, 276-87 (extensive analysis); A. 'A. Badawī, *Baḥth dar barā-yi Ḳābūs-nāma*, Tehran 1335/1956; Malik al-Shu'arā' Bahār, *Sabk-shināsī*[2], Tehran 1337/1958, ii, 113-22; A. J. Arberry, *Classical Persian literature*, London 1958, 76; A. Bausani, *Storia della letteratura persiana*, Milan 1960, 790-3; J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 221, 426-8, with bibliography of texts, translations and studies; Dhabīḥ Allāh Ṣafā, *Nathr-i fārsī az āghāz tā 'ahd-i Niẓām al-Mulk-i Ṭūsī*, Tehran 1347/1968, 281-5. Dh. Ṣafā, *Ta'rīkh-i adabiyyāt dar Īrān*, ii, Tehran 1339 *sh.*[3], 898-902; G. Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 100-3.

(C. E. BOSWORTH)

KAY KHUSRAW, the third mythical ruler of the Iranian dynasty of the Kayānids [*q.v.*], corresponding to Kavi Haosrovah of the religious tradition (see A. Christensen, *Les Kayanides*, Copenhagen 1931, 90-2 and index). He is reckoned as the son of Siyāwush/Siyāwakhsh [*q.v.*] and the grandson, through his mother, of Afrāsiyāb [*q.v.*], and according to the national tradition (Christensen, 114-17) was born after his father's death and was brought up amongst the mountain shepherds of Ḳalū near Bāmiyān, in ignorance of his illustrious origin. This, however, showed itself early; at the age of seven he could use a bow and arrows, and at ten he had no fear of any tiger or lion. Gūdarz, an Iranian nobleman who was descended from the blacksmith Kāwī [*q.v.*] saw in a dream that the heir to the throne was living in the territory of Turan, and he sent his own son Gēw (Wīw) in search of him; this last discovered him and brought him and his mother back to Iran, not without surmounting a host of dangers.

He then found himself in competition with his uncle Burzfarrah/Farīburz, but obtained the throne of his grandfather Kay Kā'ūs [*q.v.*] by seizing, according to Firdawsī, the fortress of Bahmandīz near Ardabīl [*q.v.*], the place where he then erected the sacred fire of Ādhur-Gushasp (according to Ḥamza al-Iṣfahānī, Kay Khusraw killed a dragon called Kūshīd and built in this place a fire-temple Kūshīd for Gushāsp).

A journey through his empire demonstrated to

him the devastations caused by the Turanians, and he swore to undertake a war of retaliation against them. With the help of all the nobility, he launched various expeditions, of which the first ones, despite the prowess of Gūdarz, failed because of the cowardice of Burzfarrah/Farīburz. The second ones, however, were crowned with success. Kay Khusraw fitted out four armies, the main one of which was given to Gūdarz, who secured a decisive victory over Turan, whilst the other ones surrounded the enemy; Afrāsiyāb himself took to flight, but was overtaken and killed by Kay Khusraw, who thereby avenged the death of his father.

After Afrāsiyāb's death, peace reigned and the king soon retired from power, handing on the crown to Luhrāsb. He set forth on a great journey and disappeared mysteriously after having washed himself in a spring, whilst a group of his companions perished in a snow storm.

KAYKHUSRAW, name of three Saldjūḳid sultans of Rum.

Kaykhusraw i, son and one of the successors of Kilidj Arslān II [*q.v.*]. When the latter, at the age of about seventy, decided *ca.* 583/1187 to divide his territories among his ten sons, a brother and a nephew, Ghiyāth al-Dīn Kaykhusraw got Sozopolis or Uluborlu, on the borders of the Byzantine territory, perhaps because he was the son of a Byzantine mother. He thus came in contact with Greek Christians on one side, with groups of Turkmen frontier warriors (*udj*) who were pushing forward in that direction on the other. When jealousy arose among the brothers and one of them, Ḳuṭb al-Dīn, laid hands on their old father, the latter appealed to Kaykhusraw, who restored him to his throne in Ḳonya. But after Kilidj Arslān had died (588/1192), Kaykhusraw proved incapable of having his supremacy recognised by his brothers. Some of them even began to conquer for themselves parts of the other's heritage. Rukn al-Dīn, heir to Kuṭb al-Dīn who had died in 593/1197, reconquered Ḳonya and restored to his own profit the unity of the paternal heritage, while Kaykhusraw withdrew to his original base near the Byzantine feudal lord Maurozomos. However, when Rukn al-Dīn directed his policy towards conquests to the east of Anatolia, certain Turkmens became discontented. With their help Kaykhusraw, after the death of Rukn al-Dīn, who left only a minor son, reconquered, this time definitely, the whole of the reunified state of Rūm (601/1205). Kaykhusraw had locally intervened in various directions in the quarrels which were then devastating the Byzantine Empire. In 1204 the Latins had captured Constantinople and a limited Greek kingdom under Theodore Lascaris had come into existence in Asia Minor with Nicaea as its capital. Lascaris was on bad terms with Maurozomos, whom Kaykhusraw first took with him to Ḳonya but for whom he later obtained the cities of Khunas and Laodicea (the later Denizli) that were contested between the two states. Maurozomos is probably the personage whom Ibn Bībī calls the "Comnenos *amīr*", who for twenty-five years played an important part in the Saldjūḳid state.

Lascaris and Kaykhusraw both had a common interest in peace, but the latter's attention, in opposition to his predecessor's, was no less attracted to the interest the Saldjūḳid state might have in expansion in western Asia Minor. He tried to expand his territory at the expense of the remains of the Byzantine Empire, which had no defenders left between Nicaea and Trebizond or Armeno-Cilicia. If he could not secure again a foothold on the Black Sea at Samsun, recently occupied temporarily by the Turkmens, he obtained on the other hand a very important success by acquiring, on the southern coast of Anatolia, Anṭāliya, which was the first real maritime outlet the Saldjūḳid state had ever possessed. Shortly afterwards, however, the relations between Kaykhusraw and Lascaris again became strained. The Latin or Greek enemies of the latter, together with the indiscipline of the Turkmen, frontier warriors had undoubtedly something to do with this development. In 608/1211 the two rulers were opponents in a battle near Antioch of the Meander; Kaykhusraw remained victorious, but was killed under obscure circumstances. There was never more to be any considerable war between the two states.

Kaykhusraw, who had received from his father a name derived from Iranian mythology, gave analogous names to his two sons, sc. Kaykāʾūs and Kayḳubād. In his time interest in Persian literature was growing, and since the Saldjūḳids of Iran had disappeared, their Anatolian relatives had become the representatives of the former's Iranian tradition. Hence when the Persian author Rāwandī wrote the history of the Iranian Saldjūḳids, he dedicated his work to Kaykhusraw.

Bibliography: see kaykāʾūs.

Kaykhusraw ii, son and successor (in 634/1237) of Kayḳubād [*q.v.*].

The very power of his father was at the root of some of the difficulties that manifested themselves under his reign. Together with the Mongol invasion that took place in his days, they led to the catastrophe from which the Saldjūḳid state was never to recover.

He was not the successor-designate of Kayḳubād, who for political reasons had chosen as such one of the two sons he had had by his Ayyūbid wife. But Kaykhusraw II was the eldest son and the only one already to possess real power. His "usurpation" resulted in a series of executions which accentuated the anti-aristocratic policy of Kayḳubād. Not only his half-brothers and their mother were strangled, but many *amīrs* and high dignitaries were put to death and the Khwārazmians who had settled in Asia Minor were forced to flee. Even Saʿd al-Dīn Köpek, his counsellor in all this, was done away with. This policy, in order to be acceptable, had to be accompanied by military successes. Like his father at the end of his reign, Kaykhusraw II tried above all to drive away his Ayyūbid rivals from his south-eastern frontiers and perhaps to build up a bulwark in the east against the Mongols.

The death of the two powerful Ayyūbids al-Kāmil and al-Ashraf favoured him. Allying himself with the many enemies of al-Kāmil's son al-Ṣāliḥ, who attacked the latter in Mesopotamia and Syria, Kaykhusraw II succeeded in taking possession (639/1241) of Āmid, the strategic key to the upper basin of the Tigris. He married a Georgian princess and, with the obligation of military help, obtained a certain suzerainty over the Ayyūbids of Aleppo, the Armenians of Cilicia, the "Empire" of Trebizond

and even to a small extent over that of Nicaea (while negotiating with the Latins of Constantinople about a marriage), Friar Simon of St. Quentin, a missionary who was staying in Rūm at that time, where he was well received by the sultan, never tires of giving high praise to the latter's richness and power.

However, signs of interior weakness appeared among the decimated aristocratic groups and even more among the Turkmens. From the very beginning, there had been differences of attitude between the officials of the régime who were urbanised, islamicised and semi-iranicised, and the semi-nomad Turkmens who were much closer to their ancestral traditions than to the exigencies of a civilized state. Their number and problems had increased by the drive of the Khwārazmians and Mongols. They were ripe for propaganda, which normally took a religious form, such as the *bābāʾī* [*q.v.*] movement which kept the best Saldjūḳid troops occupied for three years in central Asia Minor before being ostensibly crushed by the interventions of Frankish mercenaries. The real root of the problem remained, however, untouched.

Shortly afterwards there appeared on the frontiers of Rūm the first real Mongol army ever to be seen there, under the command of Baydjū.

In the winter of 1243-4, helped by treacheries previously prepared, the Mongols captured Erzurūm and in spring they started conquering Asia Minor proper. As a matter of great urgency, Kaykhusraw II asked his Muslim and Christian neighbours, reconciled by the common dangers, for reinforcements of all possible means. The impatience of some and the panic of others induced Kaykhusraw II to face the Mongols without waiting for all these contingents to arrive, but with an already very heterogenous army. He was utterly defeated (6 Muḥarram 641/26 June 1243) by the Mongols at Köse Dagh, between Erzindjān and Sivas. A few days later they took Sivas and Kayseri. The sultan, having hastily collected his treasures, fled at once to Anṭāliya in western Anatolia. In a certain way, he momentarily outlived his power, his vizier Muhadhdhab al-Dīn having succeeded in concluding an agreement of protection with the Mongols. In fact, however, the large tribute which was promised and the loss of prestige of the sovereign prepared the way for the ruin of the state. Turkmen revolts broke out on the frontiers and it was of little consequence that Kaykhusraw II, with the help of an Armenian rebel, was able to take some revenge on king Hethum of Cilicia for having handed over the queen-mother of Rūm to the Mongols. He died in winter 1245-6, about forty years old, leaving behind only sons who were minors.

Bibliography: see KAYKĀʾŪS.

KAYKHUSRAW III, one of the sultans who reigned in name only over Asia Minor under the effective tutelage of the Mongols or their lieutenants.

Brought to the throne at an age between two and five (663/1265?) by the *Parwāna* Muʿīn al-Dīn Sulaymān [*q.v.*] after the murder of his father Rukn al-Dīn Kilidj Arslān, he always remained a puppet, first in the hands of Muʿīn al-Dīn, and after the latter's death (1277), in the hands of vizier Fakhr al-Dīn ʿAlī. At his majority, he put himself personally under the protection of the Mongol Īl-Khān Abaḳa. But when one of his cousins, Masʿūd, son of ʿIzz al-Dīn Kaykāʾūs, disembarked in Asia Minor from the Crimea, Abaḳa granted Kaykhusraw, at least theoretically, suzerainty over the Ḳarāmānid territory. After the death of Abaḳa, Kaykhusraw III compromised himself in the revolt of Kangirtāy against the new Īl-Khān Aḥmad. The latter, whose policy was totally opposite to that of his predecessor, then conferred the sultanate on Masʿūd and ordered Kaykhusraw to be strangled (1284). The unfortunate sultan's widow and minor sons, however, soon obtained the western half of the former sultanate from Aḥmad's successor Arghun, but the only result was that Masʿūd ordered them in in their turn to be put to death (1285).

Bibliography: see KAYKĀʾŪS.

(CL. CAHEN)

KAYḲUBĀD, name of three Saldjūḳid sultans of Rūm.

KAYḲUBĀD I, ʿALĀʾ AL-DĪN was the most distinguished of the Saldjūḳid sultans of Rūm, to whom many later sovereigns would connect themselves. Removed from power by his brother and predecessor Kaykāʾūs I [*q.v.*], he succeeded him in 618/1220. His foreign policy made his dynasty one of the most powerful of his time. In the south he expanded his power, from the very beginning of his reign, over a great part of the Cilician Taurus, where he settled Turkmens. He enlarged his maritime frontiers, in particular by conquering Kalon-Oros, renamed ʿAlāʾiyya, which he made his winter residence and the place of safe keeping for his treasury. On the Black Sea, he disputed the domination of Trebizond and organised, under the command of *amīr* Čupan of Kastamonu, the memorable maritime expedition which assured a Saldjūḳid protectorate over the Crimean harbour of Sughdāḳ. In the east, taking profit from rivalry among the Ayyūbids, he annexed with the help of one of them, al-Ashraf, the Arṭukid possessions on the right bank of the Middle Euphrates. Forging ahead of the reinforcements requested by Dāwūd-Shāh, the Mangudjaḳid of Erzindjān, he annexed the latter's principality and made it an apanage for his eldest son Kaykhusraw [*q.v.*]. If it had not been for the invasion of the Khwārazmians, the Saldjūḳid principality of Erzurūm would have undergone immediately the same fate.

The Khwārazmians had conquered for their prince Djalāl al-Dīn Mangubirtī [see DJALĀL AL-DĪN KHWĀRAZM-SHĀH] an ill-defined empire in Iran and Georgia. But further to the west they were continuously in search of a refuge against the growing Mongol pressure.

They had just taken Akhlāṭ, the key to Asia Minor, from al-Ashraf and were now about to attack the whole region. Kayḳubād, who had not been dissatisfied at seeing his rivals weakened, urgently summoned to his aid both his former enemies and his friends. The main contingent, consisting of various Syrian troops, was brought to him by al-Ashraf. After hard fighting the Khwārazmians were crushed at Yasi-Čumen, to the west of Erzindjān. The principality of Erzurūm was taken away from its prince, Djahān-Shāh, who had taken the side of Djalāl al-Dīn. Under the pretext that a Mongol raid had taken place through the territory of the Georgians, Kayḳubād took away from them several frontier fortresses (thence, in order to restore peace, the wedding-project of Kayḳubād with the Georgian heiress [see KAYKHUSRAW]), and occupied in his turn the ruined Akhlāṭ, in which al-Ashraf had lost interest. The territory of the Turks now reached in the west the frontiers of the 11th century Byzantine Empire. On the other hand, with Djalāl al-Dīn having died and with his troops fleeing before the Mongols, Kayḳubād thought that he could realise a

profitable operation for the defence of his enlarged territories by settling the Khʷārazmians there.

But the Ayyūbids, favoured by the defeat of the Khʷārazmians, had intensified their grasp on Upper Mesopotamia and the two ambitious powers were from now on facing each other without any buffer-state left. Al-Kāmil, the suzerain of the Ayyūbids, to whom the Syrians had given the impression that he could obtain an easy conquest, invaded Asia Minor but was defeated (631/1233) because contingents who were opposed to the expedition served him badly in the mountain passes of the Taurus. Kayḳubād was then able to set out on a policy of penetration into the upper Tigris region. He was lucky to die (634/1237) before the Mongols had sent into Asia Minor more than reconnaissance raids which were of no consequence. The disaster which his successor was to experience made Kayḳubād in the eyes of posterity the last of the really great sovereigns of his dynasty; he had in practice been the most powerful.

We are not as well-informed about his internal policy, but may surely characterise it amongst other things by his inflexible will to keep the great *amīrs* of the régime within obedience. His reign is marked by many construction projects, including ramparts, caravanserais, mosques and *madrasas*; excavations are gradually revealing his palaces of Ḳubādābād and Kayḳubādiyya [see KAYḲUBĀDIYYA]. The sultan himself is said to have been a gifted personality, equally endowed physically and intellectually.

Bibliography: see KAYKĀʾŪS, to which should be added H. Gottschalk, *al-Malik al-Kāmil*, Wiesbaden 1950; idem, *Der Bericht des Ibn Nazīf über die Schlacht von Yasičimen*, in *WZKM*, vi (1960), 55-67.

KAYḲUBĀD II, one of the sons of Kaykhusraw I [see KAYKĀʾŪS II].

KAYḲUBĀD III, one of the sons of ʿIzz al-Dīn Kaykāʾus II, who from the Crimea tried in 1282 to reconquer the throne of his father in Asia Minor. He had to take refuge in Cilicia, but reappeared in 1297 and, with the support of the Īl-Khān Ghāzān, occupied the nominal sultanate of Rūm until the Mongol ruler put him to death in 702/1303.

Bibliography: see KAYKĀʾŪS. (CL. CAHEN)

KAYḲUBĀD, MUʿIZZ AL-DĪN, Sulṭān of Dihlī (686-9/1287-90) grandson of Ghiyāth al-Dīn Balban [*q.v.*], whom he succeeded. His father Bughrā Khān was Balban's younger son, absent in Bengal at the time of his death. Kayḳubād's maternal grandfather was Sulṭān Nāṣir al-Dīn Maḥmūd (644-65/1246-67). Kayḳobād had been strictly educated under Balban's supervision, but after his accession at the age of 17 or 18 embarked on a career of unbridled licentiousness. In matters of state he fell under the influence of Malik Niẓām al-Dīn, *amīr-i dād*, nephew and son-in-law of the *kotwāl* of Dihlī.

In 687/1288 Kayḳubād set out from Dihlī eastwards to encounter his father, Nāṣir al-Dīn Bughrā, who had assumed sovereignty in Bengal. The meeting, which took place on the banks of the Ghāghra, proved amicable; it is commemorated in detail by Amīr Khusraw Dihlawī's *Mathnawī Ḳirān al-Saʿdayn*. The historian Baranī attributes to the father on this occasion lengthy counsels which, if they did not effect a lasting improvement in the young Sulṭān's morals, persuaded him to remove by poison his minister Niẓām al-Dīn. This occurred some months after his return to Dihlī.

The disinclination of the Sulṭān to rule brought forward at his court factions based on racial groupings among the *amīrs* and *maliks* of his court. Probably early in the reign, a Mongol invasion brought about a massacre of the *Naw-Musalmān* (converted Mongol) *amīrs*. After the death of Niẓām al-Dīn, the contest for power was between the old-established Turkish *maliks* and the Khaldjī faction led by the *ʿĀriḍ al-mamālik* Djalāl al-Dīn Fīrūz (Sulṭān 689-95/1290-6). Kayḳubād fell ill, with a paralysis thought to have been brought on by his excesses, and the Turkish *maliks* set his infant son Shams al-Dīn Kayumarth upon the throne; but Djalāl al-Dīn Fīrūz Khaldjī gained possession of the young Sulṭān and the capital, and was shortly afterwards to ascend the throne. Meanwhile, Kayḳubād, starved for three days, was attacked by the son(s) of a Turkish *malik* whom he had put to death, wrapped in a rug, beaten and thrown into the river Jamunā to drown.

KAYḲUBĀDIYYA, a palace built by the Rūm Saldjūḳ ruler ʿAlāʾ al-Dīn Kayḳubād I (616-34/1219-37) in the years between 1224-26, *ca.* 4 miles northwest of Kayseri. The place is now called Kiybad Çiftliği, at the foot of the Kiybad Dağ; nearby is the plain of Mashhad (Mashhadiyya), where reviews of the troops took place. The road Kayseri-Boğazköprü, on which the palace was situated, was in use from pre-Roman times down to the Ottoman domination. Situated northeast of Konya in the heart of the Rūm Saldjūḳ territory, Kayḳubādiyya was one of the favourite residences of ʿAlāʾ al-Dīn Kayḳubād I. He stayed there quite often, received at Kayḳubādiyya the submission of Malik al-Dīn Dāwūdshāh, the lord of Erzindjan, in 625/1228, and died in this palace in 634/1237. His son and successor Ghiyāth al-Dīn Kaykhusraw ascended the throne at Kayḳubādiyya. The palace belongs to the series of foundations and monuments erected by ʿAlāʾ al-Dīn Kayḳubād I, one of the most brilliant Rūm Saldjūḳ rulers, at Konya, Alanya (ʿAlāʾiyya), Ḳubādābād, Sivas and Erzindjan. Excavations of the site were undertaken in 1964.

ḲAYL is recorded by Nashwān b. Saʿīd (*Die auf Südarabien bezüglichen Angaben Našwān's im Šams al-ʿulūm*, ed. A. Ahmad, Leiden-London 1916, 89) as a title of pre-Islamic Yemeni "kings". It is well

attested in Sabaean-language inscriptions from around the beginning of the Christian era onwards; the form *ḳayl*, however, seems to be mainly characteristic of the 5th-6th centuries A.D., while earlier it appears mostly as *qwl*, plural *ʾqwl* (and Nas̲h̲wān himself says that *ḳayl* derives from *ḳayyil* and is a derivative of the root with median *w*). Inscriptional evidence shows that the *ḳayl* was in fact subordinate to the *malik* "king". In Sabaean social organisation of the relevant period, the grouping called a *s̲h̲aʿb* [cf. ḲATABĀN] was constituted of a number of clans, one of which occupied a dominating position, with other clans subordinate to it. The dominant clan was the hereditary stock from which the leader of the whole *s̲h̲aʿb* was drawn: as Ibn K̲h̲aldūn says (*Muḳaddima*, ed. Quatremère, i, 240, tr. Rosenthal, i, 270), "leadership over any group always passes from one individual to another within a single stock" (*fī manbitin wāḥidin*); the dominant clan was the *manbit* to which was restricted the potentiality of furnishing the leadership (*riʾāsa*) over the whole group. This leader was the *ḳayl*. In warfare, the members of the subordinate clans fought under the immediate command of the *ḳayl* of their *s̲h̲aʿb*, though he himself was under the orders of the king as commander-in-chief.

KAYL [see MAKĀYĪL].

KAY-LUHRĀSB [see KAYĀNIDS].

KAYMAK [see KĪMĀK].

ḲAYN, from the Arabic root *ḳ y n* which has the basic meaning of "to adorn, embellish", comes by extension to denote artisan, workman (*ṣāniʿ*), although current usage reserves it above all for blacksmith (*LA*, s.v. *ḳyn*). It does not occur in the Ḳurʾān; on the other hand, it occurs in many *ḥadīt̲h̲*s, generally in its particular sense of "ironsmith". The feminine *ḳayna* means "singing girl". However, since the men working at this trade usually belonged to the lowest stratum of the population, *ḳayn* became a deprecatory term applied to slaves. In the satirical poems of D̲j̲arīr, his antagonist al-Farazdaḳ is sometimes called *ibn al-ḳayn* (*Ag̲h̲ānī*, Beirut 1956, xix, 37, 41, 84), and this was regarded in the desert as such an insult that al-Ak̲h̲ṭal, intending to eulogise Simāk al-Asadī, satirised him involuntarily by mentioning that one of his ancestors had been a blacksmith.

This unfavourable view of the *ṣāniʿ* has continued to be current amongst the Bedouins (H. Wahba, *D̲j̲azīrat al-ʿArab fī 'l-ḳarn al-ʿis̲h̲rīn*; R. al-ʿUzayzī, *Ḳāmūs al-ʿādat ... al-urdunniyya*. Amman 1973-4, ii, 177). They consider the artisan as an outsider, even if he and his family have lived amongst them from time immemorial; he can never be integrated into the tribe, and no Arab nomad, of however low birth, would consider marriage links with him (R. Montagne, *Vie sociale et politique de l'Arabie du Nord*, in *REI* (1932), 74).

The *ḥaddādīn* (pl. of *ḥaddād* "blacksmith") are often originally oasis dwellers (Montagne, *op. cit.*), and sometimes belong to outcast tribes like the Nawār (A. Jaussen, *Coutumes des Arabes au pays de Moab*, 104 n. 2) or the Ṣulaba. They form a separate caste (Doughty, *Arabia deserta*, index s.v. *Ṣâny*), and consider themselves as unrelated, *banū ʿamm* (A. Musil, *The manners and customs of the Rwala Bedouins*, New York 1928, 281). Their lowly status protects them from the consequences of raids, and they accordingly enjoy an almost total immunity here. During an attack on a clan in which they have chosen to reside, they stay apart from the fighting, doing nothing to defend either themselves or their goods, because of the right of protection which they enjoy. If goods of theirs are carried off by mistake, they can be confident of recovering them rapidly. In each clan they have in practice a brother (*ak̲h̲*), the blacksmith of the group, who has the duty of restoring any goods seized by mistake (Musil, *op. cit.*, 281-2).

It is worthy of note that *ḳayn* in Sabaean is free of any pejorative sense such as is found in North Arabia. It seems to be agreed that its meaning here is "the one who arranges something", which is in accord with the etymology in Arabic. It would therefore appear to be used for a high official, superintendent or minister, whose duties are concerned with religion and the sacred. There is a sense of this supernatural aspect in the Ḳurʾān when it says "We sent down iron, in which there is violent force and also benefits for the people" (LVII, 25), and it attributes the invention and manufacture of mailed coats to David, after receiving instruction from God Himself (XXXIV, 10-11, XXI, 80).

The divine origin of iron is confirmed in several *ḥadīt̲h̲*s. Thus according to Ibn ʿUmar, "God brought down to earth four elements: iron, fire, water and salt" (al-Tabarsī, *Mad̲j̲maʿ al-bayān fī tafsīr al-Ḳurʾān*, Beirut 1961, xxiii, 157). More explicitly, Ibn ʿAbbās says, "The hammer, the anvil and tongs came down with Adam". In another tradition, five tools are said to have come down from Paradise with Adam, the anvil, tongs, the needle, the hammer and the whetstone (al-Ṭabarī, *D̲j̲āmiʿ al-bayān*, xxvii, 122; Alūsī, *Bulūg̲h̲ al-ʿarab*, iii, 400). Finally, in the *ḥadīt̲h̲* concerning the general prohibition of cutting down plants in the Meccan *ḥaram*, an exception is made for the *id̲h̲k̲h̲ir*, a fragrant plant used to decorate houses and tombs, but also used by blacksmiths (al-Buk̲h̲ārī, *Ṣaḥīḥ*, ii, *K. al-d̲j̲anāʾiz*, 80-1; *LA*. s.v. *ḳyn*; Gaudefroy-Demombynes, *Le pèlerinage à La Mekke*, 8-9).

The *ḳayn*'s position is thus ambivalent. Although an object of scorn, at the same time he enjoys certain privileges associated with sacred personages. As in the so-called primitive societies, amongst the desert Arabs the smith is a being apart. According to the Rwala beliefs, God created the first smith at the same time as the first Bedouin (Musil, *op. cit.*, 281). The taboos surrounding him are not solely explicable by mere contempt for mechanical activity; another factor must be taken into consideration: the superstitious fear of being contaminated by the impurity of the artisan-magician, of coming into contact with this formidable power, the secret of whose divinity he holds, and which made the Sabaean *ḳayn* an intermediary between man and the sacred.

Was the blacksmith's art taught to the Arabs of the North by those of the South, as alleged by the chroniclers (al-Balād̲h̲urī, *Ansāb al-as̲h̲rāf*, i, Cairo 1959, 467)? This hypothesis may be acceptable in that in Yemen today, the blacksmith is not regarded with any particular disfavour, the most despised class being that of the *ʿanāḍīl* (barber, butcher, cupper, etc.).

AL-ḲAYN or BANŪ 'L-ḲAYN, often contracted

to Bal-Ḳayn (cf. Bal-Ḥārith, etc.), the name of one or more Arab tribes. The best known is part of the tribal group of Ḳuḍāʿa, and al-Ḳayn is here interpreted as the nickname of al-Nuʿmān b. Djasr, so that the tribe is known as al-Ḳayn b. Djasr. The word *ḳayn* means "worker in iron", "smith", or possibly "slave", and is used as a term of contempt in the *Naḳāʾid Djarīr wa'l-Farazdaḳ*. There is no evidence, however, of any connexion of Bal-Ḳayn b. Djasr with smiths. They act as a normal Bedouin tribe, and indeed are specially proud of their achievements (cf. verse in Ibn Khallikān-de Slane, i, 40). Among the tribes against whom they fought were the Kalb (Abū Tammām, *Ḥamasa*, ed. Freytag, i, 77; Yāḳūt, iii, 241, iv, 49; Ibn Saʿd, iii/2, 27 f.; Ibn al-Athīr, *Usd al-Ghāba*, ii, 224; Ibn Ḥadjar, *Iṣāba*, ii, 45), Bahrāʾ (Balādhurī, *Futūḥ*, 283), Ghaṭafān (*Aghānī*[1], ii, 194). The names of various places in their tribal grounds are known (see Yāḳūt, Index of tribes). One (Thadjr) is between Wādi 'l-Ḳurā and Taymāʾ; most of the others appear to be further north. Among neighbouring tribes were the Kalb, Balī and ʿUdhra. Some of the tribe may have been friendly with Muḥammad, since at the expedition of Dhāt al-Salāsil in 8/629 the Muslims hoped for help from them (Wāḳidī, ed. Marsden Jones, ii, 770 f.); but a contingent of Bal-Ḳayn fought against the Muslims at Muʾta about the same time, and also at the Yarmūk and perhaps Fiḥl (Ibn Hishām, 792; Ṭabarī, i, 1611, 2347). There is no record of their having sent a deputation to make an alliance with Muḥammad, and so the report of Sayf b. ʿUmar (Ṭabarī, i, 1872) that they had an *ʿāmil* and that some joined in the Ridda presumably refers only to a small section. The majority probably became Muslims after the conquest of Syria.

In the Second Civil War (*fitna* of Ibn al-Zubayr) they supported Marwān (Ṭabarī, ii, 478; Masʿūdī, *Tanbī*, 308), but a little later ʿAbd al-Mālik decided against them in a dispute with the Kalb about a place called Ḳurāḳir (Yāḳūt, iv, 49). There was a contingent of 600 of them in the Umayyad army sent against the Khāridjī rebel Bahlūl in 119/737 (Ṭabarī, ii, 1623; Ibn al-Athīr, v, 156). The last that is heard of them is as being involved in intertribal fighting in Damascus in 176/792 (Ibn al-Athīr, vi, 87 f.).

Two brothers from the Bal-Ḳayn, Mālik and ʿAḳīl, are said to have been the boon-companions of Djadhīma al-Abrash of Ḥīra [*q.v.*] and were noted for being inseparable (Ibn Khallikān-de Slane, iii, 653; *Mufaḍḍaliyyāt*, i, 535, 2, poem 67, 21). The best-known member of the tribe was the poet Abū 'l-Ṭamaḥān, who in pre-Islamic times had been friendly with Muḥammad's uncle al-Zubayr b. ʿAbd-al-Muṭṭalib and also with ʿAbd Allāh b. Djudʿān (Ibn Ḳutayba, *Shiʿr*, 229 f.; Ibn Khallikān-de Slane, i, 40; Caussin de Perceval, i, 131, ii, 232).

Al-Ḳalḳashandī (*Nihāyat al-arab fi ansāb al-ʿarab*, Cairo 1959, 71) has two tribes called Banū 'l-Ḳayn. Besides the one described above there is a part of Asad (b. Khuzayma); but it is possible that there is confusion with Asad, the great-grandfather of al-Ḳayn b. Djasr, since little is recorded of this tribe except the name. A group of Bal-Ḳayn, perhaps actually smiths, were found at the mines of Banū Sulaym at Farān and may have been part of the Balī (Yāḳūt, iii, 865). The suggestion has been made that the Bal-Ḳayn are descended from the Kenites of the Old Testament, *e.g.*, by Th. Nöldeke, *ZDMG*, xli, 181, but there is no convincing evidence to support this.

Bibliography: given in the article.

(W. Montgomery Watt)

ḲAYNA, pl. *ḳaynāt* or *ḳiyān* "female singing slave".

The Arab lexicographers do not completely agree on the primitive meaning of the term (see *LA*, *TA*, etc. s.v.), the real origin of which is unknown to them. They tend to apply it in the first place to a female slave (*ama*, *djāriya*), charged in general with various tasks; secondly, and more specifically, to the female singer who had a servile status (*ama* or *djāriya mughanniya*). Some lexicographers are inclined to connect *ḳayna* with a Vth form *taḳayyana* "to embellish oneself" (al-Washshāʾ, *Muwashshā*, 164, uses the expression *al-imāʾ al-mutaḳayyināt* in a sense close to *al-mutaẓarrifāt* "the elegant, the refined ladies"), others want to see it as the feminine form of *ḳayn* "workman", more specifically "smith" and to give it the primitive meaning of "working woman" or "woman hairdresser". Nāṣir al-Dīn al-Asad (*al-Ḳiyān wa 'l-ghināʾ fi 'l-ʿaṣr al-djāhilī*, Cairo [2]1968, 15-24) has devoted a thorough study to this term. Starting from a biliteral **ḳn*, he points out the semantic affinity of the "radicals" *ḳyn*, *ḳnn*, *ḳny*, and remarks the existence of cognate words in various Semitic languages. He sees a phonetic and semantic relation between χρίνω and *cano* on one side, and *ḳayna* on the other, and concludes that these are loanwords from Arabic. We shall limit ourselves here to underline the rightness of these connections, without being decisive about the direction of a possible borrowing and without following P. Anastase (*al-Iklīl*, viii, 165) who considers *ḳayna* to be a derivative of χαίνω or *cano*, while considering at the same time the Arabic *ghannā* "to sing" to be the origin of either verbs. What can be stated with near certainty is that the Assyrian *ḳinītu* has very probably become Arabic *ḳayna* [see Ghināʾ]. At an early period also other words are attested to indicate the female singer: *karīna* (Ibn Khurradādhbih, *Kitāb al-lahw wa 'l-malāhī*, ed. I. A. Khalifé, Beirut 1969, 20), *musmiʿa* (which is perhaps Islamic, *ibid*, 17), *dādjina* and *muddjina* (Asad, *op. cit.*, 27), *ṣadūḥ* and *ṣādiḥa* (ibid., 28) and finally *djarāda* "locust".

According to a well-founded tradition, the first female singers among the Arabs are reported to have been two slaves called al-*Djarādatān*[1] or *Djarādatā ʿĀd*. They are even given individual names the spellings of which take all the form CCāC (al-Ṭabarī, i, 234-6; see al-Masʿūdī, *Murūdj*, ed. Pellat, index). The name of the mythical person to whom they allegedly have belonged is also known: Muʿāwiya b. Bakr al-ʿImlaḳī. The continuity of the tradition is assured by the affirmation that the inhabitants of Yathrib inherited the use of *ḳiyān* from the ʿĀdites who had disappeared from history, (Ibn Khurradādhbih, *op. cit.*, 20). The sources also attest female singing-slaves in the future Medina at the end of the Djāhiliyya (*e.g. Aghānī*, ed. Beirut, xv, 34, about Uḥayḥa b. al-Djulāḥ). Mecca, which had remained outside the alleged ʿĀdite influence, is said to have known music and singing thanks to al-Ḥārith b. Kalada on his return from al-Ḥīra (see al-Masʿūdī, *Murūdj*, index, s.v.; Asad, *op. cit.*, 115, 116, 118, 131, discusses this tradition). This detail confirms the origin of the *ḳayna* as proposed above, the more so because the sources report many traditions on the *ḳiyān* of the Naṣrids, as they do on those of the Ghassānids. According to Ibn Khurradādhbih (*op. cit.*, 36), Djabala b. al-Ayham al-Ghassānī [*q.v.*] is said to have had ten *ḳiyān*, five of whom, apparently Byzantine, sang in *rūmiyya*.

In Arabia, outside the main towns, some *ḳiyān*

were living among the Bedouins, if the poets are to be believed, whose works can, however, not be credited with perfect authenticity.

As far as can be judged, the female slave singers may have been divided into two main categories, the rôle of one group, owned by a town or Bedouin person of standing, was to entertain their master, alone or in the company of guests, without prejudice to other relations they could have with him. The other group, quite inferior in rank, were attached to taverns or followed wandering wine-merchants, and one can easily imagine that they could give themselves to a form of prostitution. The poets (*e.g.* Tarafa, vv. 49-52 of the *Muʿallaḳa*; al-Aʿs͟hā, in *Rawāʾiʿ*, no. 31, 26-7; Labīd, v. 61 of the *Muʿallaḳa*) associate these women with drinking-bouts, and describe them so as not to leave any doubt about their marginal activities. Nāṣir al-Dīn al-Asad (*op. cit.*, 163-253) has thoroughly studied the influence exercised by these two pre-Islamic groups of *ḳiyān* on the social and literary fields, and more particularly on al-Aʿs͟hā.

From the period shortly preceeding Islam, we have detailed information on some *ḳiyān*, in particular on two new "locusts", the D͟jarādatān[1] of ʿAbd Allāh b. D͟judʿān [*q.v.*] who was engaged in the slave-trade in both sexes. Shortly afterwards, female slave-singers apparently served in Mecca as instruments of propaganda against the Prophet who had migrated to Medina, namely Fartanā and Ḳarība/Ḳurayba, who were owned by ʿAbd Allāh b. K͟haṭal (see al-D͟jāhiz, *Tarbīʿ*, index, s.v. Fartanā; *Sīra*, ii, 410; *Nasab Ḳurays͟h*, 442-3; Asad, *op. cit.*, 86-7). They are said to have been sentenced to death by Muḥammad after the conquest of Mecca for having propagated satirical songs against him (the traditions diverge however on the actuality of their punishment). Another *ḳayna*, Sāra by name (see Asad, *op. cit.*, 88), and owned by ʿAmr b. Abī Ṣayfī (*Nasab Ḳurays͟h*, 90-1), was sent to the Ḳurays͟h by Ḥāṭib b. Abī Baltaʿa to announce the Prophet's intention to seize Mecca (*Sīra*, ii, 398, 410, 411). Sentenced to death, she escaped momentarily the supreme penalty. A list of ancient *ḳiyān* can be found in chapter xiv of the *Ḥāwī 'l-funūn wa-salwat al-maḥzūn* of Ibn al-Ṭaḥḥān, an author of the 5th/11th century (ms. *Dār al-kutub* no. 539, Fine Arts) published by Asad, *op. cit.*, 269-72.

At the same period there existed certainly many other anonymous *ḳiyān* who were engaged in their usual activity. These slaves were surely of non-Arabic origin (*e.g.* the *ḳayna* of Ḥassān b. T͟hābit was called Sīrīn, Ibn K͟hurradād͟hbih, *op. cit.*, 36). Thus there were probably white slaves among them, but the majority must have been black or half-caste. If some were perhaps still singing in a foreign language, like those of D͟jabala b. al-Ayham, the others had been brought up in an Arab environment and knew perfectly well the language of the poets whose works they interpreted. The absence of reliable documents prevents however any decisive affirmation.

The information becomes less unreliable when in the 1st/7th century the development of music and singing [see G͟HINĀʾ] in the holy cities of the Ḥid͟jāz brought about a zeal for collecting traditions which we know, to be sure, only from later sources. On the other hand, however acute the later juridical disputations on the admissibility of these two pursuits, they in fact paradoxically developed, in spite of some attempts to stem their spread, in Mecca and especially in Medina, where one would have expected stronger puritanical feeling. This problem is further connected with those of love-poetry [see G͟HAZAL] and humour [see AL-D͟JIDD WAʾL-HAZL].

While the prohibition of wine must have entailed the disappearance of a great part of the female singers of the lower reaches of the profession, real schools can be seen growing around musicians and singers who were instructing pupils of both sexes. Among the females, free and freed women appeared, but mainly slaves, whose masters considered that sort of education to be a means of increasing the commercial value. In order to be chosen among the young slaves, whose number was now increasing, due to the conquests, the future *ḳiyān* had of course to be beautiful and to have a melodious voice, but to be at a premium on the market they also needed talent and skill, *i.e.* a fairly advanced musical education and intellectual culture. From the 1st/7th century onwards the famous stories of *ḳiyān*, bought at huge prices (thousands of *dīnārs* are mentioned), have been adopted into *adab*-literature, often with somewhat embellished details. Sallāma [*q.v.*] and Ḥabāba [*q.v.*] belong to them, but several others could be mentioned. Isḥāḳ al-Mawsilī pretends (Ag͟hānī, v, 156) that the singers who had thus been educated, were originally black (*sūd*) or "yellow" (*ṣufr*), *i.e.*, white women, and hints that they did not stand out for their beauty. For, he says, his father Ibrāhīm was the first to consider the physical qualities of the *ḳiyān* important, in view of the increase of their value in the eyes of those interested. This information is belied by traditions going back to the 1st/7th century.

ʿAzza [*q.v.*] and D͟jamīla [*q.v.*] gave concerts in honour of personalities of Medina, and the latter was surrounded by a considerable number of *ḳiyān* who constituted the choir. It was under the direction of these two artists, famous in the history of the Arabs, that the great singers of the 1st/7th century were formed [see G͟HINĀʾ]. Out of these one needs only to mention Maʿbad [*q.v.*], who in his turn taught *ḳiyān*, both female musicians and singers, who were very much in demand. The best pupils of the Medinese school easily found buyers in ʿIrāḳ, particularly in Baṣra where a new school, competing with the one of Medina, was quickly to come into existence and which produced some of the most famous female singers of the court at Bag͟hdād. There were formed Bad͟hl (*Ag͟hānī*, ed. Beirut, xvii, 32-7), *ḳayna* of al-Hādī and al-Amīn, ʿArīb (*Ag͟hānī*, xxi, 58-102) whose career reached from the reign of al-Maʾmūn to that of al-Mutawakkil, Mutayyam al-Hās͟himiyya (*Ag͟hānī*, vii, 280-93) and S͟hāriya (*Ag͟hānī*, xv, 320-8) who was adopted by Ibrāhīm b. al-Mahdī and whose biography Ibn al-Muʿtazz did not judge himself unworthy to write. Al-D͟jāḥiẓ (*Rasāʾil*, ed. Hārūn, ii, 288-90), gives a detailed list of Baṣran *ḳiyān*, whom he prefers to the Kūfan. From that time onwards it is not always easy to make a distinction between the slaves who had become famous for having given birth to caliphs (those born from a mother who was a free woman are very few), those who had distinguished themselves as poets (like ʿInān [*q.v.*] or Faḍl) and the singers proper who could at the same time share the caliph's couch or that of a very high personality, compose verses, sing their own or those of other poets and play a musical instrument (like Maḥbūba). In fact, many *ḳiyān* were capable of writing short poems and of improvising occasional pieces; competing in this field with the court poets, they rivalled them in virtuosity, especially in the classical game of the

idjāza [*q.v.*]. In an unpublished thesis (*Recherches sur la poésie des qiyān*, Paris-Sorbonne 1970), A. Chirane has brought forward the name of more than a hundred *ḳiyān* to whom verses are attributed, without counting several dozens of anonymous poetesses, whose preserved works represent only a tiny part of the compositions and improvisations. In general, this kind of poetry cannot be called exemplary, but is has the merit of being spontaneous and unusually refreshing. Love (*ʿishḳ* [*q.v.*]) is largely celebrated, while amorous reproofs (*ʿitāb*) and lamentations over forced separations also abound. On the other hand, one finds eulogies of high-ranking personalities, elegies on the death of the master and pieces in which the *ḳiyān*, far away from their native land, express their nostalgia. Wine and descriptions find their place also, next to epigrams which were held in high esteem in these refined milieux.

These women had received a thorough education. They had to give proof of talent and vast knowledge of Arabic language and poetry. We are told that al-Rashīd, before taking a decision, instructed al-Aṣmaʿī to examine one of them; she answered her examiner with such assurance that she "seemed to read the answers from a book" (al-Anbārī, *Nuzha*, ed. ʿA. ʿĀmir, 72-3). It was due to the erudition of another *ḳayna*, pupil of the grammarian al-Māzinī, that the latter had the honour to be admitted to the court (see Pellat, *Milieu*, 250). These slaves knew a great number of verses by heart, which was in itself normal; some, however, although everything in their daily life removed them from religion, were well-versed in the traditional sciences and had studied the Ḳurʾān, as suggested by the story of a *ḳāriʾa* related by al-Masʿūdī (v, 428-31 = § 2184-5), who gives a beautiful example of *ṭarab* [*q.v.*]. Besides, it is known that the Holy Book was chanted and that the *ḳirāʾa bi 'l-alḥān*, favoured by the development of singing at Medina (see M. Talbi, in *Arabica*, v/2, 1958, 183-90), spread afterwards to other areas of the Muslim world, in spite of the hostility of the *fuḳahāʾ* (see, *e.g.*, M. Talbi, *Emirat aghlabide*, 307).

Thanks to the school founded by Ibrāhīm al-Mawṣilī [*q.v.*] and developed by his son Isḥāḳ, himself formed by a *ḳayna* called ʿAtīḳa, Baghdād tended at the beginning of the 3rd/9th century to secure pre-eminence over Baṣra, which had not in fact succeeded in putting an end to the monopoly which the school of Medina had possessed in the formation of the *ḳiyān*. Indeed, still in the 3rd/9th century ʿAbd al-Raḥmān II summoned to Cordoba the so-called "Medinese women" Faḍl, ʿIlm and Ḳalam, while the last-mentioned, a native of Navarre, had only been sent to the Ḥidjāz to round off her education there (see H. Pérès, *Poésie andalouse*, 40-1; E. Lévi-Provençal, *Hist. Esp. Mus.*, i, 267-8). The Umayyad *amīr*, who took them as concubines, caused a special pavilion to be constructed for them inside his palace where they conducted a real orchestra. In the early 3rd/9th century, the Aghlabid *amīr* Ziyādat Allāh (201-23/817-38) sent to Baghdād a messenger entrusted with purchasing *ḳiyān* for 30,000 *dīnār*s (Ibn ʿAsākir, *Taʾrīkh Dimashḳ*, v, 396; cf. Ḥ. Ḥ. ʿAbd al-Wahhāb, *Waraḳāt*, ii, 195). At the end of the century, in spite of the prohibition issued in the meantime by al-Muhtadī (see al-Masʿūdī, *Murūdj*, viii, 2 = § 3111) it was from Baghdād that the "king" of Seville, Ibrāhīm b. al-Ḥadjdjādj (286-98/899-911) ordered the purchase of Ḳamar, who contributed to the diffusion of ʿIraḳī poetry which she knew perfectly well (H. Pérès, *op. cit.*, 41). She was one of those who expressed in verses their regret for having left their native land.

One or several *ḳiyān* of this category were often offered to the caliph (like Maḥbūba, a gift of ʿAbd Allāh b. Ṭāhir to al-Mutawakkil; see al-Masʿūdī, ed. Pellat, index). But it also happened that the ruler made his choice himself. Having heard Ḳalam al-Ṣāliḥiyya singing during a private session, al-Wāthiḳ expressed the wish to buy her, but her owner required a prohibitive price together with an official document appointing him to the government of Egypt. This incident was at the origin of al-Djāḥiẓ' *Tarbīʿ* (see ed. Pellat, Introd.).

At the other extremity of the social scale of the *ḳiyān*, there were also cabaret singers in ʿIrāḳ (curiously enough, Bashshār, *Dīwān*, i, 136, describes as *bikr* a *ḳayna* singing among drinkers), but it is hard to know whether they are the singers who are celebrated (or criticised) by the poets in the verses quoted, *e.g.* by al-Washahāʾ (*op. cit.*, 119-28), or whether the latter are inspired by more distinguished *ḳiyān*, whose existence is attested with certainty. To be sure, there came into existence, first at Baṣra, then in other cities as far away as Cordoba, the very profitable profession of *ḳayyān* or *muḳayyin*, the germ of which had already existed much earlier. It consisted in acquiring young slaves fit to become *ḳiyān*, in forming them under strict rules and in hiring out on various circumstances their services to private persons. The *ḳayyān* organised also musical sessions in the hope that such a passion would arise among the guests that they would not hesitate to pay the most exorbitant prices in order to obtain the object of their ardour. In particular, there is mentioned the case of a certain ʿUmar (or al-Faḍl) b. ʿAbd al-Malik al-Baṣrī, Abu 'l-Naḍīr/Abu 'l-Baṣīr (al-Ṣūlī, *Awrāḳ*, i, 8-10; *Aghānī*, xi, 267-74) who was at the same time a minor poet, a singer and a *muḳayyin*. His memory is kept alive thanks to the sharp criticisms addressed to him by Abān al-Lāḥiḳī (al-Sūlī, *op. cit.*, i, 9; *Aghānī*, xxiii, 24; Rifāʿī, *ʿAṣr al-Maʾmūn*, ii, 317). Other names are also known, for they appear in the beginning of al-Djāḥiz's *Kitāb al-Ḳiyān* (ed. Finkel, *Three Essays*, 53-75; ed. Hārūn, *Rasāʾil*, ii, 139-82; tr. Pellat, in *Arabica*, x/2 (1963), 121-47). In this small masterpiece, the author describes the *ḳayna*-type whom he shows exerting herself to seduce the well-to-do visitors and whose moral portrait he describes with great fineness. Thus we gain an insight into the rôle the *ḳiyān* were playing towards the members of the aristocracy and the bourgeoisie: adroitly they were provoking *ʿishḳ* while the wives of these men, kept in seclusion and generally uneducated, were quite incapable of exercising such an irresistible appeal. The *Kitāb al-Ḳiyān*, unique in Arab literature, was plagiarised with a certain talent by al-Washshāʾ, whose *Muwashshā* contains also a choice of verses illustrating in particular the ravages caused by the *ḳiyān* in the hearts of the enamoured (119-28). This treatise, composed for the benefit of the refined milieux (*ẓurafāʾ*), gives also an accurate description (*ibid.*, 164) of the clothes of the *imāʾ mutaḳayyināt*, who dressed in vividly-coloured robes made of dyed material, while the free women wore only natural fabrics. There are also many details on the customs of those milieux, on the phrases written on the footwear, on the forehead, on the palm of the hand, etc. (*ibid.*, 236 ff.).

The monographs devoted to the *ḳiyān* and cited for instance by Ibn al-Nadīm and Yāḳūt were

probably far from having the same literary value as the works of al-Djāḥiẓ and al-Washshā', for they were likely to contain exclusively anecdotes and verses in the same way as the *Kitāb al-Aghānī*, the notices of which have been usefully gathered together by F. al-ʿAmrūsī, *al-Djawārī 'l-mughanniyāt*, Cairo 1945. The following titles have been brought to light: K. *Ḳiyān al-Ḥidjāz* and *K. al-Ḳiyān* of Isḥāḳ b. Ibrāhīm al-Mawṣilī (*Fihrist*, 202; *Udabā'*, vi, 56); *K. al-Ḳiyān* of Yūnus al-Mughannī (*Fihrist*, 207); *K. al-Ḳaynāt* of al-Madā'inī (*Udabā'*, xiv, 133); *Ashʿār al-djawārī* of al-Mufadjdjaʿ (*Fihrist*, 123; *Udabā'*, xvii, 194); *K. Ḳiyān al-Ḥidjāz* and *K. Ḳiyān Makka* of Sulaymān b. Ayyūn (*Fihrist*, 212; *Udabā'*, xi); *K. Akhbār al-ḳiyān* of Abū 'l-Faradj himself (*Udabā'*, xiii, 99; Brockelmann, S I, 226). To this list of works which do not seem to have been preserved, should be added, apart from the chapter of Ibn al-Ṭaḥḥān mentioned above, anthologies like the *Ṭabaḳāt* of Ibn al-Muʿtazz, the *Murūdj* of al-Masʿūdī or the *Nafḥ al-ṭīb* of al-Maḳḳarī, the sections on the *ḳiyān* in encyclopaedias like the *ʿIḳd* of Ibn ʿAbd Rabbih (iv, 127-38), the *Mustaṭraf* of al-Ibshīhī (ii, 211-7), the *Nihāyat al-Arab* of al-Nuwayrī (v, passim), works relating to women (*e.g.* Ibn Ḳayyim al-Djawziyya, *Akhbār al-nisā'*, ed. N. Riḍā, Beirut 1964, or the study of ʿU. R. Kaḥḥāla, *K. Aʿlām al-nisā'*, Damascus 1379/1959), or also those devoted to poetesses but which have also been lost. Useful information can finally be found in: *Nisā' al-khulafā'*, attributed to Ibn al-Sāʿī (ed. M. Djawād, Cairo n.d.), and in *al-Mustaẓraf min akhbār al-djawārī* of al-Suyūṭī (ed. Ṣ. al-Munadjdjid, Beirut 1963).

Even if some *ḳiyān* are still mentioned occasionally after the 4th/10th century but then almost always anonymously, the tradition, judging from the sources available, is essentially based on those of the first centuries of the *hidjra* who acquired a lasting celebrity. After Medina and Baṣra, Baghdād was the centre of the Muslim world in this respect. Al-Tawḥīdī (*Imtāʿ*, ii, 183) counts 460 slave (and 120 free) female singers at al-Karkh [*q.v.*], giving the names of about 20 of them and citing the pieces of poetry they would sing. The *ḳiyān* celebrated by al-Azdī (*Ḥikāyat Abī l-Ḳāsim*, 70 ff.) were also from Baghdād. He describes, like al-Tawḥīdī (*ibid.*), scenes of *ṭarab*, *i.e.* of that delirious joy to which persons who are otherwise self-controlled and conscious of their dignity have often surrendered themselves. Thus Baghdād supplied the most appreciated female slave singers (see in particular the history of the Fāṭimid Tamīm al-Muʿizz (d. 368/978) in Mez, *Renaissance*, Eng. tr. 401), whatever their land of origin may have been. The passage of Ibn Buṭlān (d. 454/1062) brought forward by Mez (*op. cit.*, tr. 161; text in *Risāla fī shirā' al-raḳīḳ wa-taḳlīb al-ʿabīd*, ed. Hārūn, Cairo 1954, 374; taken up again by al-Saḳaṭī, *Ḥisba*, 50, Spanish tr. by Chalmeta in *al-Andalus*, xxxiii/2 (1968), 375 and note 8) refers probably to the *ḳiyān*, for it is said there that the ideal slave is the Berber woman who from the age of nine spends three years at Medina, three at Mecca and then nine in ʿIrāḳ where she learns *adab*.

It is also known that shortly after the conquest of the Maghrib, *ḳiyān* were trained on the spot, while exchanges took place with the Orient (M. Talbi, *Emirat aghlabide*, 35). Much later, the existence of female slave-singers is still attested in Ifrīḳiya (R. Brunschvig, *Ḥafṣides*, ii, 412; cf. Leo Africanus, *Description de l'Afrique*, 388), but it is possible that some came from the Orient or from Spain. It was in any case a Berber woman who, having been offered to al-Muʿtamid by Yūsuf b. Tāshfīn, met with a tragic end because of a blunder she had perpetrated (H. Pérès, *op. cit.*, 13). She had undoubtedly been trained in Morocco, but since the arrival of Ziryāb [*q.v.*], who possessed *ḳiyān* himself, Cordoba had become an important training-centre. Thus henceforth the aristocracy and bourgeoisie did not need to address themselves to Baghdād, from where the import of *ḳiyān* became exceptional (see E. Lévi-Provençal, *op. cit.*, iii, 316). We even have an eloquent evidence of Ibn al-Kattānī (H. Pérès, *op. cit.*, 383-5; in the 2nd ed. he corrects this to al-Kinānī; E. Lévi-Provençal, *op. cit.*, iii, 317), a physician employed by al-Manṣūr and al-Muẓaffar (see al-Ḍabbī, *Bughya*, no. 81; Boustany, *DM*, iii, 477) who died in 420/1030. He taught his slaves logic, philosophy, geometry, music, astronomy, astrology, grammar, prosody, *adab* and calligraphy, and then sold them at a very high price (in one case for 3,000 *dīnārs*). The Andalusian *ḳiyān* played also conjuring tricks and even executed exercises of skill with weapons, and formed orchestras called *sitāra* after the name of the curtain which in the Orient separated in theory the caliph from the singers and musicians (Mez, *op. cit.*, 479). After the fall of the Umayyads in Spain, the *Mulūk al-ṭawā'if* in their turn disputed among themselves for the most talented singers. The coming of the Almoravids and Almohads did not put an end to their activities, but from the 6th/12th century onwards, Seville had robbed Cordoba of the monopoly it had enjoyed before. A reliable evidence of this is to be found in a text of al-Tīfāshī (d. 651/1253), *Mutʿat al-asmāʿ fī ʿilm al-samāʿ*, quoted by Ḥ. Ḥ. ʿAbd al-Wahhāb in his *Waraḳāt*, ii, 231-2, where is given a detailed account of the training of the Sevillian female singers who were sold in North Africa. In the north of the peninsula the *ḳiyān* served to a certain extent as a link between Muslims and Christians, who both kept them in their entourages. Some still sang in Arabic, and Ibn Bassām describes in this respect moving scenes (see H. Pérès, *op. cit.*, 386-7). On another plane, the Andalusian *ḳiyān* are probably no strangers to the insertion of Romance words in the *khardja* of the *muwashshaḥāt* and to the structure itself of these pieces [see MUWASHSHAḤ and ZADJAL].

Since the abolition of slavery, *ḳiyān* proper are no more met with, but those who in the Middle Ages formed troupes survive at present in the free female singers who in Morocco are called *shīkhāt* (sing. *shīkha*, f. of *shīkh* = *shaykh*). They form companies and participate in family feasts or solemn ceremonies. In Fās "their very diversified repertoire included Andalusian songs, poems in colloquial language and even Algerian songs" (R. Le Tourneau, *Fès avant le protectorat*, Casablanca 1949, 561). The *ghennāyāt*, of inferior rank, sometimes even composed small poems for family feasts (E. Aubin, *Le Maroc*, Paris 1912, 345-51).

We are, however, very far from the *ḳayna* of the classical period, who played a much larger rôle, even to such a degree that any history of Arabo-Islamic civilization cannot omit to recognize it. Not only, as S. Jargy (*La musique arabe*, coll. "Que sais-je?", no. 1436, Paris 1971, 39-40) has remarked, was "there at the origin of every career of the great singers in Islam a *qayna* whose pupil he was", but on the literary plane the *ḳiyān* also contributed to the development of the so-called "modernist" (*muḥdath*) poetry, both by their own compositions, the value of which was by their very nature quite varied, and by their function as inspirers of the poets. At the zenith of ʿAbbāsid civilisation some of

them kept real literary salons where the participants, while listening to music and songs, vied in wit and improvisation. Countless are the poets who, inspired by *ḳiyān*, celebrated their seduction or complained of their cruelty. In this respect almost all great names of *muḥdath* poetry should be cited, whatever may be the opinion of Ibn Ḳutayba who, in the introduction of the *Adab al-kātib*, fulminates against the secretaries of the administration whose ideal it was to recite "trashy verses" in praise of a *ḳayna* (see G. Lecomte, in *Mélanges Massignon*, iii, 51).

M. al-Ḥawfī, *al-Mar'a fī 'l-shiʿr al-djāhilī*, Cairo 1954, 438-65; the histories of Arabian music mentioned in the *Bibliography* of the article GHINĀ; H. G. Farmer, *The sources of Arabian music*, Leiden 1965; ʿĪsā Sāba, *al-Mughanniyāt fī 'l-adab al-ʿArabī*, Beirut 1954; D. Boustany, *Ibn ar-Rūmī*, Beirut 1967, 56-61 and bibliography; ʿAbd al-Karīm al-ʿAllāf, *Ḳiyān Baghdād fī 'l-ʿaṣr al-ʿAbbāsī wa-'l ʿUthmānī wa-'l-akhīr*, Baghdad 1969 (not seen); J.-C. Vadet, *L'esprit courtois en Orient*, Paris 1968, 241-6; J. E. Bencheikh, *Les voies d'une création*, 214-6 (doctoral thesis, Sorbonne 1972, forthcoming); S. D. Goitein, *Slaves and slavegirls in the Cairo Geniza records*, in *Arabica*, ix/1 (1962), 1-20.

In the *Thousand and One Nights*, *ḳiyān* are quoted in the 334th, 383rd, 436th and 896th nights. On the status of slaves, see ʿABD; on their position in society, B. Lewis, *Race and color in Islam*, New York-London 1971, and bibliography; see also ʿĀLIMA.

(CH. PELLAT)

ḲAYNUḲĀʿ, BANŪ, one of the three main Jewish tribes of Yathrib. The name differs from the usual forms of Arabic proper names but has nothing Hebrew about it. Nothing certain is known regarding their immigration into Yathrib. They possessed no land there but lived by trading. That their known personal names are for the most part Arabic says as little regarding their origin as the occurrence of Biblical names among them; but there seem to be no valid reasons for doubting their Jewish origin.

In Yathrib they lived in the south-west part of the town, near the *Muṣallā* and close to the bridge over the Wādī Buṭḥān, where they occupied two of the strongholds (*āṭām*) characteristic of Yathrib. They were goldsmiths, among other trades; Bukhārī (*Farḍ al-Khums*. 1, *Maghāzī*, 12) incidentally mentions a goldsmith of the Ḳaynuḳāʿ. On their expulsion they left behind them arms and tools, which were divided among the Muslims after Muḥammad had received (for the first time) his fifth share. The number of their fully equipped fighting men varies between 400 and 750 in references to it.

After the dominating power in the old Yathrib had passed from the Jews to the Banū Ḳayla, the Ḳaynuḳāʿ were allied to the Khazradj [*q.v.*]. In Muḥammad's settlement of the relations between believers and other sections of the community they are not mentioned, any more than are the Naḍīr [*q.v.*] and the Ḳurayẓa [*q.v.*]. From this we may infer (with Watt, *Muhammad at Medina*, 226 f.) that the document in its present form belongs to the period after the elimination of the Ḳurayẓa (end of 5/April 627).

After the battle of Badr (Ramaḍān 2/March 624) Muḥammad's relations with the Jews of Medina became troubled. The Jews as a body had adopted an unfriendly attitude to the Prophet. From the religious point of view they became inconvenient; and from the political angle, as a powerful foreign body within the newly converted town, they were a great danger. When Muḥammad felt his position strengthened by the battle of Badr, he must soon have determined on expelling his enemies. The Ḳaynuḳāʿ, as they lived in the city itself, were the first he wished to be rid of. Regarded in this light, his attack on the Ḳaynuḳāʿ (in all probability as early as Shawwāl 2/April 624) is sufficiently explained. Special reasons for the attack given by Muslim writers have no more than anecdotal value. Sometimes this reason is said to have been a jest that a Muslim made to a Jewish woman, sometimes the Ḳaynuḳāʿ are said to have behaved with particular arrogance. Sūra III, 12 f. is said to refer to these incidents; according to Wāḳidī (177) and Ibn Sa'd (ii/1, 19) Sūra VIII, 58, does too. Sūra III, 13, refers to the victory at Badr as an example and warning, and VIII, 58, speaks of vengeance against people from whom treachery is feared.

After 14 days' siege, the Ḳaynuḳāʿ surrendered without striking a blow; the men were bound and seemed to have feared the worst. The energetic intervention of ʿAbd Allāh b. Ubayy [*q.v.*], chief of the Khazradj and leader of the Munāfiḳūn, however, brought an improvement of their lot. They left first for the Jewish colonies in the Wādī 'l-Ḳurā, north of Medina, and from there to Adhriʿāt in Syria.

The Banū Ḳaynuḳāʿ did not, however, emigrate to the last man. A few members of the tribe embraced Islam, perhaps more from opportunism than from conviction, and these could remain at Medina. Ibn Hishām/Ibn Isḥāḳ gives a list of 30 Ḳaynuḳāʿ adversaries of the Prophet (351 f.). This may refer to the time before the expulsion, but five or six of the names in the list reappear in Wāḳidī's report on Ibn Ubayy's funeral (in 9/631) among those hypocrites "from Banū Ḳaynuḳāʿ and others" who pressed forward to the bier (1058 f., Wellhausen, 415). Another member of the Ḳaynuḳāʿ, ʿAbd Allāh (originally al-Ḥuṣayn) ibn Salām [*q.v.*], "their *ḥabr* and most learned man", whose name concludes the list of Ibn Isḥāḳ, became a convinced Muslim, immediately after Muḥammad's arrival at Medina, as is commonly related; according to another version thought by Horovitz more credible, he was converted in 8 A.H., two years before Muḥammad's death (Ibn Ḥadjar, *Iṣāba*, ii, Calcutta 1893, 780-2).

(A. J. WENSINCK-R. PARET)

AL-ḲAYRAWĀN, a town in central Tunisia, 156 km. from Tunis and 57 km. from Sousse. It is situated at an altitude of 60 m. and is the chief town of a governorate of 336,000 inhabitants which stretches over an area of 680,000 hectares. Its population of 34,000 inhabitants in 1956 had become

47,000 during the census of 3rd May 1966, and then 56,000 in 1972. Temperatures vary considerably, ranging from a few degrees below zero in winter to 40° C and over in summer. The sirocco blows there for an average of 21 days *per annum*. The rainfall varies from an average of 250 mm. or 300 mm. in the town and its surrounding area to 500 mm. and over in the regions west of the governorate. It changes considerably from one year to another, ranging from drought to catastrophic floods; the flood in 1969 was particularly devastating. Work is soon to begin on the damming of the Wadi Zéroud, which will store 80,000,000 cubic metres of water, and also on that of the Wadi Merguellil, for which plans are even more advanced. This is bound to avoid these dangerous floods and it will increase the irrigable area, which at present extends to 14,000 hectares, but of which only 8,000 are actually cultivated.

Al-Ḳayrawān is essentially involved with agricultural pursuits and the efforts of the last two decades have resulted in a considerable development of arboriculture. In 1972 there were 3,500,000 olive trees, and 3,800,000 almond trees were counted in the governorate; in third place came apricot trees. The areas sown with cereal crops vary much from year to year according to the promise of autumn rains. From 58,000 hectares in 1968 they rose to 200,000 in 1972; they were only 75,000 hectares in 1956, but they had reached 225,000 in 1959. The livestock in 1972 amounted to 260,000 sheep, 14,000 cattle, 20,000 goats and 11,000 camels. The industrial sector is still embryonic, but has a group of about ten small enterprises (dyeing, spinning, woodwork, confectionery and food preservation) which emply about 1,000 people; it seems unlikely that these will be greatly expanded.

By contrast, the artisan sector continues to occupy the first place in the town's activities. Working with wood, copper and alfa, the production of jewellery, lanterns and sieves, as well as the traditional dyeing and weaving, brings employment to 1,200 craftsmen. But what makes al-Ḳayrawān's reputation is the handproduced "long-wool" carpets. Recently the National Office of Craft Industry has been created, and it has been notable for allowing newly-qualified female workers into its workshops. It has modernised the designs to a certain extent without changing the family and essentially feminine character of the craftwork. In 1972 4,500 home-craftsmen (*saddāya*) were counted. The production of carpets rose from 56,000 m² in 1962 to 130,000 m² in 1972, and it is likely to develop further. Yet all these enterprises do not succeed in assuring full employment, because of the high birthrate. A third of the active male population is underemployed or on short-time working.

The actual town of al-Ḳayrawān is composed of the native quarter, with its narrow winding streets and souks, which roughly preserve the general appearance given to them in the 18th century. This native quarter is still surrounded by it crenellated ramparts, which are built of solid brick. They are flanked at intervals by round buttresses and measure a little over 3 km. In the east and the north-east the suburbs of Gueblia, Djeblia and Zlass. In the South, between Bāb al-Djallādīn (Skinners' Gate), which since independence has been renamed Bāb al-Shuhadā' (Martyrs' Gate) and which leads to the native quarter, and the Railway Station, the modern town is situated; here are found the administrative services, the banks, the hotels, etc. A working class district, *Sīdī Saḥnūn*, has been built in the east and another, a group of 400 villas belonging to the more prosperous classes, is called *al-Manṣūra*.

One of the principal monuments of the town, apart from the Great Mosque, is the Djāmiʿ thalāthat bībān, the Mosque of the Three Doors, the façade of which is a beautiful example of Aghlabid architecture. It was founded in 252/866 by the Andalusian Muḥammad b. Khayrūn al-Maʿāfirī, but was altered in the 9th/15th century. There is also the Aghlabid cistern at the Tunis Gate; the Zāwiya of Sīdī ʿAbīd al-Gharyānī of the 8th/14th century; the Zāwiya of Sīdī al-Ṣāḥib, which was first of all a simple and very old mausoleum covering the tomb of a Companion of the Prophet, Abū Zamʿa al-Balawī, and on the site of which the Murādid bey Ḥammūda erected the present building in the 11th/17th century; and the Zāwiya of Sīdī ʿUmar ʿAbāda, built in the 19th century.

i. Foundation

All the Arab invasions, which culminated in the conquest of Byzacena, were initially careful to avoid the coastal route. The invaders penetrated into the country by the region of Ḳasṭīliya [*q.v.*], from where they attempted to reach the centre and the north. Avoiding the shore on the east, which was dangerous for conquering forces who were not yet adequately experienced in seamanship, and the mountains on the west, which were well suited for ambushes and surprise attacks, they had no alternative but to use the corridor which ended naturally in the region of Ḳammūniya, that is, the corridor of al-Ḳayrawān. This town, which was first of all a military base, owed its origin to the strategy dictated by the relief of the country and from the fighting tactics of the invaders. Traditionally its foundation is attributed to ʿUḳba b. Nāfiʿ, but in fact it took place by easy stages and several military leaders contributed to it.

The battle of Sufetula (27/647-8) had practically delivered Byzacena to ʿAbd Allāh b. Saʿd b. Abī Sarḥ, the Byzantines being driven back behind their second line of fortification defending the Proconsularium. It is neither impossible nor improbable that the conquerors pushed their raids on this occasion right into the region of al-Ḳayrawān, for they had to evacuate the country when they were charged a heavy tribute. Ibn Nādjī (*Maʿālim*, Tunis 1320/1902, i, 30) points out that at al-Ḳayrawān there is a mosque dedicated to Ibn Abī Sarḥ which in some way commemorates his sea journey.

Later, events begin to take shape when Muʿāwiya b. Ḥudaydj led three campaigns in succession to Ifrīḳiya, in 34/654-5, 41/661-2, and 45/665. Three times, in fact, he made use of the same route as his predecessor and ended in the region of Ḳammūniya or al-Ḳayrawān, where he set up his camp. In 34/654-5 Ibn ʿAbd al-Ḥakam declares that Ibn Ḥudaydj "seized several fortresses and took considerable booty. He set up a garrison camp (*ḳayrawān*) near al-Ḳarn" (*Futūḥ*, partially ed. and tr. by A. Gateau, Algiers 1948, 57). He reappears still established at Ḳarn in 41/661-2 (Ibn ʿIdhārī, *Bayān*, ed. Colin and Lévi-Provençal, Leiden 1948, i, 15). Finally, in 45/665 he reappears yet again at Ḳarn (al-Mālikī, *Riyāḍ*, ed. Ḥ. Muʾnis, Cairo 1951, i, 17-18; Ibn ʿIdhārī, *Bayān*, i, 16; Ibn Nādji, *Maʿālim*, i, 39-40). In this connection al-Mālikī notes: "Ibn Ḥudaydj had laid the foundations of a town at al-Ḳarn (*ikhtaṭṭa madīnatan ʿind al-Ḳarn*) before ʿUkba had founded (*taʾsīs*) al-Ḳayrawān and he settled there during the period that he spent in Ifrīḳiya". Ibn Nādjī states for his part that "on his return to Ḳammūniya, Ibn Ḥudaydj built dwellings in the region of al-Ḳarn

to which he gave the name of Ḳayrawān, when the site of [the actual] Ḳayrawān was not yet either inhabited or urbanised (*g̲h̲ayr maskūn wa-lā maʿmūr*; *Maʿālim*, i, 41). The site named al-Ḳarn ("hill, peak") by Ibn Ḥudayd̲j̲ owes its name to its relief. It probably refers to the hill 171 m. high which is called today Baṭn al-Ḳarn and which is situated in a tourist region 12 km. north-west of the actual town of al-Ḳayrawān on the road to D̲j̲alūla (M. Solignac, *Recherches sur les installations hydrauliques*, in *AIEO* x, (1952), 12, n. 10).

The primary reason for the foundation of al-Ḳayrawān was its elevated position, which gave it protection from surprise attacks and floods. The Ḳayrawān founded by Ibn Ḥudayd̲j̲ did not maintain its rôle as capital of Ifrīḳiya but it was never destroyed again; however, when it ceased to be the capital it no longer bore the name of al-Ḳarn. In 124/742 the K̲h̲ārid̲j̲ī ʿUkās̲h̲a was beaten there by Ḥanẓala b. Ṣafwān, governor of Ifrīḳiya. Al-Ḳarn is mentioned again at the end of the 2nd/beginning of the 8th century (Abū 'l-ʿArab, *Ṭabaḳāt*, ed. Ben Cheneb, Paris 1915, 67; al-Mālikī, *Riyāḍ*, i, 18). Afterwards all trace of it disappears. Neither al-Bakrī nor al-Idrīsī cite it, and for Yāḳūt (*Buldān*, Beirut 1957, iv, 333) al-Ḳarn was no more than a mountain in Ifrīḳiya.

In 50/670 the founder of the Umayyad dynasty, Muʿāwiya, while keeping Ibn Ḥudayd̲j̲ as the governor of Egypt, took Ifrīḳiya from him and entrusted it to ʿUḳba b. Nāfiʿ. On rejoining his post he "was not very satisfied with Ḳayrawān which was built before his time by Muʿāwiya b. Ḥudayd̲j̲" (Ibn ʿAbd al-Ḥakam, *Futūḥ*, 65). The sources, (Ibn ʿAbd al-Ḥakam, *Futūḥ*, 64-6; al-Mālikī, *Riyāḍ*, i, 6-7, 19; Ibn ʿId̲h̲ārī, *Bayān*, i, 19-20; Ibn Nād̲j̲ī, *Maʿālim*, i, 7-9), however, tell us forcefully the details (verging on the miraculous) of how ʿUḳba b. Nāfiʿ, followed by his most illustrious companions, including a large number of the *Ṣaḥāba*, was left to search for a new site. His choice fell on part of a plain which was then covered with vegetation, the haunt of reptiles and wild beasts. There the new Ḳayrawān was founded. ʿUḳba immediately donated two institutions indispensable for its spiritual and temporal progress, sc. a mosque and a government house (*dār al-imāra*), built opposite each other. He spent the five years of his first governorship watching over this building without undertaking any other expedition.

Abū 'l-Muhād̲j̲ir Dīnār who succeeded him "greatly disliked the idea of settling where ʿUḳba b. Nāfiʿ had built" (Ibn ʿAbd al-Ḥakam, *Futūḥ*, 68/69). We are told (Ibn ʿId̲h̲ārī, *Bayān*, i, 22; Ibn Nād̲j̲ī, *Maʿālim*, i, 42-3) that he set fire to the foundations of his predecessor and moved the capital two miles further along the road to Tunis, to a region inhabited by the Berbers. The new capital, of which the remains have recently been located, received the name Takirwan (Ibn Nād̲j̲ī, *Maʿālim*, i, 43). The choice of this Berber-sounding name as well as the town's position were all part of a government programme begun by Abū' l-Muhād̲j̲īr to encourage a policy of rapprochement with the indigenous leaders. This policy did not please the caliphate. ʿUḳba took the road to Ifrīḳiya again in 62/682, and his first action was to move the capital back to the site which he had already previously chosen. Thereafter, al-Ḳayrawān did not change its location any more.

Everything proves that this place had formerly been occupied by a Roman or Byzantine town which, like many others in the period of the Muslim conquest, had fallen into ruins. The first buildings erected by the Arabs certainly profited from the re-use of building materials which had been found abandoned on site. These various materials of greater or lesser importance can still be seen, not only in the monuments but also in modest dwellings. During recent restoration work (1969-72), much more has been discovered, including some items in the foundations of the Great Mosque. Not far from al-Ḳayrawān in the north is a place called al-Aṣnām (al-Tīd̲j̲ānī, *Riḥla*, Tunis 1958, 118; Ibn ʿId̲h̲ārī, *Bayān*, i, 58-9) which undoubtedly owes its name ("the Idols") to the great number of statues which the conquerors encountered. Furthermore, al-Bakrī (*Masālik*, ed. de Slane, Paris 1965 22/52-3) declares that the Place of the Mint (*Sūḳ al-Darb*) was occupied by a church in antiquity. The sources elsewhere plainly affirm that al-Ḳayrawān was raised on the ruins of an ancient town named Ḳūniya or Ḳamūniya (Ibn ʿAbd al-Ḥakam, *Futūḥ*, 58, 74; al-Mālikī, *Riyāḍ*, i, 12, 18, 19, 21; al-Bakrī, *Masālik*, 75; Yāḳūt, *Buldān*, iv, 399, 415, Ibn Nād̲j̲ī, *Maʿālim*, i, 39-41). There is no reason at all to doubt their suggestions, which are amply borne out by other archaeological evidence.

There remains the question of the choice of the site. No-one suggests that this choice was unfortunate, but why should this unfavourable part of the steppe have been chosen for the economic development of a great capital? Ibn K̲h̲aldūn sets the tone of the debate when he says he believes that the Arabs are poor town planners. To support his opinion he cites the examples of Baṣra, Kūfa and of al-Ḳayrawān as badly chosen sites (*Muḳaddima*, 647). Modern authors share this view (J. Despois, *Kairouan. Origine et évolution d'une ancienne capitale musulmane*, in *Annales de Géog.*, xxxix (1930), 161; P. Sebag, *Kairouan*, Zürich 1963, 16). In fact, the site of al-Ḳayrawān was not so badly chosen as one might think. It should be remembered that an ancient town had prospered there because, when the town was founded the site was not as steppe-like as it subsequently became. Although there was no sudden change of climate, settlers accomplished a considerable transformation. Ibn ʿId̲h̲ārī (*Bayān*, i, 20) states that ʿUḳba, to build the city, gave the order to deforest the area (*an yaḳṭaʿū al-s̲h̲ad̲j̲ar*). In the 4th/10th century al-Bakrī reveals elsewhere (*Masālik*, 26/61) that the forest of olive-trees at al-Ḳayrawān was sufficient by itself to furnish the town with all the wood it needed without suffering the least damage. The soil was certainly rich, thanks to the "fertilising silt" of the Merguellil and the Zéroud wadis, according to J. Despois (*loc. cit.*).

All therefore that really needed to be done was to solve the problem of a water supply, which had been solved once by the Romans and was later solved again by the Arabs. A few miles south of the site chosen for the foundation of al-Ḳayrawān they found a hydraulic construction system which they named Ḳaṣr al-Māʾ ("the Water Castle"). This system was fed from an aqueduct which gathered the waters of the Mams, 33 km. to the west, and today called Hans̲h̲īr Dwīmīs (M. Solignac, *op. cit.*, 19-21, 126-61). ʿUḳba stopped there (Ibn ʿAbd al-Ḥakam, *Futūḥ*, 68/69, on his return to Damascus in 55/675, and afterwards the place became an assembly point for caravans heading for the east (Abū 'l-ʿArab, *Ṭabaḳāt*, 25; al-Mālikī, *Riyāḍ*, i, 30, 69-70; Ibn Nād̲j̲ī, *Maʿālim*, i, 52, 147; Ibn ʿId̲h̲ārī, *Bayān*, i, 32, 44, 259). The Arabs lifted the region out of its ruined state and gave it back prosperity by pursuing

and extending the irrigation policy of their predecessors. The wells and cisterns with which (almost without exception) all the mosques and houses were provided (Ibn Nādjī, *Maʿālim*, i, 13, 25; al-Bakrī, *Masālik*, 23/53), made an appreciable contribution to the great works for which the Aghlabids are justly famed. Hence until the middle of the 5th/11th century, all the geographers boast of the fertility of that region. In all, the area chosen for the foundation of al-Kayrawān, apart from the strategic advantages it offered, was amenable to development and to the provision of an economic infrastructure necessary for the development of a large town. Only human error made this region into a steppe.

ii. History

Scarcely was al-Kayrawān founded when it had to be evacuated. The disaster of Tahūda to the south of Biskra cost the life of its chief founder ʿUkba b. Nāfiʿ, and all his companions were killed to the last man. This marked the beginning of the exodus towards the east. The conqueror was the Berber Kusayla [*q.v.*], and he took up residence in the town, which had not been abandoned by all its Arab-Muslim population, and made it the capital of his short-lived kingdom (64-9/684-9). Zuhayr b. Kays al-Balawī, and especially Ḥassān b. al-Nuʿmān came back later to recover it.

Four decades of peace then passed before the capital of the Maghrib was seriously threatened by the Berbers. In 124/742 it was about to be submerged by waves of Khāridjīs, but it was saved *in extremis* by the two unexpected victories of al-Karn and al-Aṣnām. Fortune failed it in 140/757-8 when the Warfadjūma Khāridjīs, of Ṣufrī tendencies, seized it with the complicity of certain of its inhabitants, and for more than a year held it under their domination. They massacred in particular the Kurashi elements of the population, who were the Arab aristocracy. It was liberated in Ṣafar of the following year (June-July 758) by the Ibāḍī Abū ʾl -Khaṭṭāb working from Tripoli. He left there as governor ʿAbd al-Raḥmān b. Rustam, the future founder of the kingdom of Tāhart. But this was not for long; in Djumādā I 144/August 761, Muḥammad b. al-Ashʿath came to bring it back into the bosom of the east, and he proceeded to fortify it under directions from the caliph al-Manṣūr. For the first time he provided it with a surrounding wall, which was begun in Dhu l-Kaʿda 144/February 762 and finished in Radjab 146/September-October 763.

But these measures, which were imposed after the events just reviewed, did not save al-Kayrawān from trouble. In 154/771 it was besieged by a coalition of Ṣufrī and Ibāḍī Berbers. Its inhabitants were reduced to eating "their beasts of burden, their dogs and their cats" (Ibn ʿIdhārī, *Bayān*, i, 76). Resistance was in vain; the town was stormed after its gates had been set on fire and a breach made in its walls. This was the last ordeal to which the Khāridjīs subjected it. Yazīd b. Ḥātim al-Muhallabī (155-71/772-88) was despatched from the east with impressive resources, and came to take it in hand again and to put an end to the convulsions of Khāridjism in Ifrīkiya.

But there arose another danger, that of the *djund*. Al-Kayrawān became the gambling-stake of the rebel military leaders. In 194/810 Ibrāhīm I (184-96/800-12), in order to punish it for having treated with the army rebels, had the ramparts taken down and removed its gates. But it was guilty of the same offence again. In the meantime the gates had been put back, and in 209/824 the inhabitants opened them to Manṣūr al-Tunbudhī. This time their punishment was a draconian one and Ziyādat Allāh I (201-23/817-38) "razed the walls of the town until he had made them level with the ground", (Ibn ʿIdhārī, *Bayān*, i, 100). His successors were able to reign quite peaceably until the Shīʿī propaganda extended to Ifrīkiya. The citadel of Sunnism did not support its sovereigns when they were in danger, but adopted towards them a passive or even hostile attitude. The last of the Aghlabids left his capital secretly at night, and the commander of his armies had to follow him under a hail of stones.

The reign of the Fāṭimids accentuated the differences between the city of Sīdī ʿUkba and the power henceforth to be indisputably exercised by heretics. On 20th Shaʿbān 299/11th April 912, the storm broke. A rabble set the over-arrogant Kutāma against the exasperated tradesmen, and several hundred prisoners were taken (Ibn ʿIdhārī, *Bayān*, i, 166; Ibn al-Athīr, *Kāmil*, Beirut ed. 1966, viii, 53). ʿUbayd Allāh was able to calm men's minds, but it did not prevent the people of al-Kayrawān from supporting the insurrection of the Khāridjī Abū Yazīd al-Nukkārī (332-6/943-7). They were deceived by him, and finally abandoned him, but it did not exempt them from punishment. Al-Mansūr, once the rebel had been defeated and killed, seized a group of them and had them tortured and executed.

The reign of the Zīrids before the rejection of the Shīʿī heresy, was no more readily accepted. The very arrival of al-Muʿizz (407-54/1016-62), when he carried out his first official visit to al-Kayrawān, was greeted by an attempt on his life and by a dreadful uprising (15 Muḥarram 407/24th June 1016). The people of al-Kayrawān massacred indiscriminately all whom they suspected of being Shīʿī. The bodies of the victims were burned and buildings set on fire at will. The disturbances spread as far as al-Manṣūriyya, which in turn was sacked and pillaged. Despite the efforts of the authorities to restore calm, a fresh riot broke out several months later on the occasion of the ceremonies of ʿĪd al-Fiṭr (1 Shawwāl 407/3 March 1017) presided over by al-Muʿizz. Again blood flowed freely, and this time the reaction of the authorities was brutal. Al-Kayrawān was delivered into the hands of the troops of al-Manṣūriyya. Not a single shop escaped being pillaged and they set fire to the main business thoroughfares (*kibār al-aswāk*). This was but the prelude to greater woes. The Banū Hilāl, although they did not devastate every town of Ifrīkiya, nevertheless made a complete ruin of what remained of the grandeur of al-Kayrawān. The town was besieged from 446/1054 onwards and it was abandoned to them by al-Muʿizz, who retreated to al-Mahdiyya in 449/1057.

After that it is little heard of. Unlike Kābis, Kafṣa, Tūzir, al-Mahdiyya, Sūsa or Safākis, al-Kayrawān caused no concern to the Ḥafṣids. No local dynasty seized power there under their reign. The nomad Arabs of the region, meanwhile, played a certain rôle on the political stage. They attempted, a little late, to oppose ʿAbd al-Muʾmin b. ʿAlī, the founder of the Almohad dynasty and already master of the whole of Ifrīkiya. They were hewn to pieces, and their leader the Riyāḥid Muḥriz b. Ziyād was defeated (556/1161, Ibn Khaldūn, *ʿIbar*, vi, 494). In 582/1186-7 the Almohad al-Manṣūr, who had come from Morocco to suppress the danger of the Banū Ghāniya, moved from Tunis towards al-Kayrawān where he set up camp before taking the offensive in the direction of al-Ḥāmma, thus making good the first losses sustained by his army (Ibn Khaldūn,

ʿIbar, vi, 510). Some years later Yaḥyā b. Ghāniya seized the town, and with it, all Ifrīḳiya. His success was as resounding as it was short-lived. Al-Ḳayrawān quickly returned to Almohad and then Ḥafṣid administration. In 669/1270 the landing of Louis IX at Carthage threw the whole country into a state of turmoil. The holy city founded by Sīdī ʿUḳba vibrated with enthusiasm for *djihād*; al-Mustanṣir, thinking that Tunis was under too great a threat, even intended to move his government there (Ibn Khaldūn, *ʿIbar*, vi, 670). But the epidemic which put an end to the conflict robbed him of this honour. Several years later it again had the opportunity of playing a definite political rôle by favouring the accession of "the impostor", Ibn Abī ʿUmāra (681-3/1283-4), to the throne. In bestowing on him the *bayʿa* it assured him, we are told (Ibn Khaldūn, *ʿIbar*, vi, 691), of the support of Safāḳis of Sūsa and of al-Mahdiyya.

Its name again comes into prominence in the course of the struggle of the Sultan Abū Yaḥyā Abū Bakr against Abū Darba (718-24/1318-24). But the most important event occurred in Muḥarram 749/April 1348. Abū 'l-Ḥasan al-Marīnī, who had just occupied Ifrīḳiya, was beaten by the nomadic Arabs near al-Ḳayrawān, where he was later hemmed in (Ibn Khaldūn, *ʿIbar*, vi, 564, 814-6, 819). He was in fact able to get free and reach Tunis again, but this defeat was a sure mark of his decline and gave rise to the evacuation of the country.

After this al-Ḳayrawān did not achieve notice until the end of the reign of the Ḥafṣids, which closed in the shadow of discredit. So it was without difficulty that Khayr al-Dīn Barbarossa, already the master of Algiers, stormed Tunis (18th August 1534), proclaimed the downfall of the dynasty and among other things placed a garrison at al-Ḳayrawān. The following year (14th July 1535), Charles V reinstated Mawlāy al-Ḥasan on his throne under a special Spanish protectorate, but the whole of the south of the country escaped him. At that time al-Ḳayrawān became the capital of an independent principality governed by a marabout, Sīdī ʿArafa, of the tribe of the Shābbiyya. In 1542 Mawlāy al-Ḥasan tried to recover it but he was forsaken by his troops. So the Shābbiyya remained in power until the intervention of the *raʾīs* Dragut who, working outwards from Tripoli, came, routed them and occupied the town (3rd January 1558), leaving Ḥaydar Pasha there as governor. In 1574 the latter joined his forces with those at Tripoli to support Sinān Pasha, who came at the head of an imposing fleet to end once and for all the Ḥafṣid dynasty and Spanish domination (Ibn Abī Ḍiyāf, *Itḥāf*, Tunis 1963, ii, 18-21, places these events in 981/1573). Tunisia was then organised as a Turkish *pashalik* with Ḥaydar Pasha, the former governor of al-Ḳayrawān, at its head (Ibn Abī Ḍiyāf, *Itḥāf*, ii, 27).

The reign of the Murādids accentuated the decline of al-Ḳayrawān. Ḥammūda Pasha showed some interest in the town, for in 1631 he came to rout the Awlād Saʿīd from the region and he set up a garrison of spahis (*ūdjak*) in the place. But soon there was civil war between ʿAlī Bey and his brother Muḥammad. Al-Ḳayrawān took the side of the latter, and after the settlement of 1678, which divided the country between the two pretenders, it became the seat of its own government (Ibn Abī Ḍiyāf, *Itḥāf*, ii, 55). Later it turned hostile towards Murād Bey Abū Bālā (1699-1702), hence he besieged it and imposed a severe collective fine upon it. Then it was delivered up to the pillaging of Khalīl, bey of Tripoli, in return for his alliance against Algiers. The following year, in 1701, the order was given to the inhabitants to proceed with the destruction of their own town except for the mosques and the *zāwiya*s, which were the only buildings spared (Ibn Abī Ḍiyāf, *Itḥāf*, ii, 76). The tyrant was however assassinated, which allowed his successor, Ibrāhīm al-Sharīf, to repair the damage, and the inhabitants of al-Ḳayrawān were authorised in 1703 to resettle their town and to rebuild its ruins (Ibn Abī Ḍiyāf, *Itḥāf*, ii, 81).

Later, the inhabitants benefitted from the benevolence of the founder of the Ḥusaynid dynasty, Ḥusayn b. ʿAlī (1705-35), who paid particular attention to the restoration of the mosques; they were faithful to him to the very end. It was in al-Ḳayrawān that he found refuge, and was then besieged for five years by his nephew ʿAlī Pasha. In the end he was captured and beheaded (13th May 1740). At the same time forty of the notables of al-Ḳayrawān were hanged and the wall surrounding the town was dismantled (Ibn Abī Ḍiyāf, *Itḥāf*, ii, 112-8). Afterwards Muḥammad al-Rashīd (1756-9), son of Ḥusayn b. ʿAlī, arrived and seized for himself the benefits of power, and received recognition by the children of the founder of the dynasty. Its city wall was rebuilt, tax exemptions were granted to it, and the life-style of its inhabitants was visibly improved.

The reign of Ḥusayn II was, however, less favourable. During this period a heavy fine was imposed on the town which completely ruined its inhabitants; they were reduced to selling their goods and chattels to be free from it. Also in 1864 it was one of the most active hotbeds of the uprising led by ʿAlī b. Ghadhāhum. It was within its bounds that the Zlās of the region, led by al-Subūʿī b. Muḥammad al-Subūʿī, held a conference with the Banū Zīd, the Hamāma, and the Frashīsh. But it was a conference from which no concrete action emerged. Later, in 1881, just when the French protectorate of Tunisia was being established, al-Ḳayrawān again achieved honourable status; it became one of the most active centres for the call to resistance. From the 15th to the 20th June 1881 a conference in the Great Mosque brought together the representatives of the various tribes and made a decision to intervene at the side of the Pasha of Tripoli. When this intervention produced no result, and any isolated army action was thought worthless, the town was finally occupied without resistance on 26th October 1881. Only the Zlās continued limited operations for some time.

iii. Historical geography

According to the vows of its founder, al-Ḳayrawān was supposed to "perpetuate the glory of Islam to the end of time" (Ibn ʿIdhārī, *Bayān*, i, 19; Abū 'l-ʿArab, *Ṭabaḳāt*, 8). To a certain extent it has fulfilled this mission. It is still a holy and venerated town, but over the centuries it has lost its rôle of a great metropolis. As described above, it has known both the peak of splendour and the depths of disaster.

ʿUḳba had begun his work by marking out the site for the Great Mosque and the Government House (*dār al-imāra*). The space around and within a perimeter of 13,600 cubits, about 7.5 km. (Ibn ʿIdhārī, *Bayān*, i, 21), must have been apportioned out by tribes as it was in Baṣra and Kūfa which were founded in similar conditions. But there is no precise information on this matter, only a few indications. We learn, for example (al-Bakrī, *Masālik*, 23), that the Fihr, the Ḳurashī clan of the founder of the town, had settled to the north of the Great

Mosque at the time of Hi<u>sh</u>ām b. ʿAbd al-Malik (105-25/724-43). Again, in the 3rd/9th century, the districts had preserved distinct ethnic or denominational characteristics. This is indicated by Ḥārat Yaḥṣub (ʿIyāḍ, *Madārik*, partial edition by M. Talbi under the title *Biographies Aghlabides ...*, Tunis 1968, 71), Raḥbat al-Ḳura<u>sh</u>iyyīn (ʿIyāḍ, *Madārik*, 369), Darb al-Fir<u>sh</u>ā<u>sh</u> (ʿIyāḍ, *Madārik*, 359), and a Sūḳ al-Yahūd (ʿIyāḍ, *Madārik*, 359).

From the outset, al-Ḳayrawān was built in stone, thanks to the re-used building materials which were found on the site. Its perimeter indicates that it was planned as a large city designed to group together all the Arabs of Ifrīḳiya, primarily the warriors who would often then be followed by their families. Its initial population could hardly have fallen below 50,000.

Like Baṣra and Kūfa, originally it had no defensive wall and it remained an open city for nearly a century. The vicissitudes of history forced it, as we have seen, to be enclosed, from 144/762 onwards behind ramparts ten cubits thick (al-Bakrī, *Masālik*, 24). The reign of Yazīd b. Ḥātim al-Muhallabī (155-71/722-88) was particularly beneficial to it. It was he who organised the town souks and specified the type of activity within them. (Ibn ʿI<u>dh</u>ārī, *Bayān*, i, 78). He was a person of some prestige and attracted to himself poets and men of science. Al-Ḳayrawān was itself in process of becoming one of the most important centres of Muslim civilisation.

The town reached its zenith in the 3rd/9th century when it became the capital of an independent kingdom. A fortified chief residence for the prince, al-ʿAbbāsiyya [*q.v.*] was built nearby (184/800). Another, more luxurious and spacious, Raḳḳāda, followed (263/877). The city had become too important, and began to disturb the authorities. It no longer needed to be defended, but it was necessary to take precautions against it, so it was deprived of its ramparts in the circumstances already described.

What were its dimensions then? Al-Bakrī (*Masālik*, 25-6) tells us that the main street (*al-Simāṭ*), which ran along the east side of the Great Mosque, measured, from the Abū 'l-Rabīʿ in the south to the Tunis Gate in the north, two and a third miles, that is (allowing 1,600 m. to the mile in al-Bakrī) a little less than 4 km. It can be assumed that the town had the same dimension in the opposite direction. Such an area assumes a population of several hundred thousand people. This estimation is confirmed by other evidence. Again according to al-Bakrī, the town numbered 48 *ḥammāms*, and a count was taken once on the occasion of the feast of *al-ʿA<u>sh</u>ūrāʾ* of 950 oxen slaughtered for the needs of the inhabitants, which represents a minimum of 200 tons of meat. Even if this is an exaggeration, it indicates a not inconsiderable size. Al-Yaʿḳūbī, who wrote in the second half of the 3rd/9th century, says for his part, that one rubbed shoulders with all kinds of people: Arabs from Ḳuray<u>sh</u>, from Muḍar, from Rabīʿa, from Ḳaḥṭān and from other tribes too; Persians from <u>Kh</u>urāsān; finally, Berbers from Rūm (Latins) and still others (*Les Pays*, tr. G. Wiet, Cairo 1937, 210). Alongside the Muslim majority there were also to be found Jews and Christians. Al-Faḍl b. Rawḥ (177-8/793-4) had authorised the building of a church there (Pseudo-Ibn al-Raḳīḳ, *Taʾrī<u>kh</u> ...*, ed. M. al-Kaâbi, Tunis 1968, 185). In the middle of the 3rd/9th century, the church in al-Ḳayrawān had several heads (ʿIyāḍ, *Madārik*, 132), and epigraphy shows us that until the 5th/11th century, Christians there had kept the use of Latin in their funerary inscriptions.

Because of all these people, the water system organised from the reign of Hi<u>sh</u>ām b. ʿAbd al-Malik (105-25/724-43) onwards was no longer sufficient (al-Bakrī, *Masālik*, 26). The population had certainly continued to grow under the A<u>gh</u>labids, which explains the construction of new water reservoirs to meet the growing needs. The immense cistern built at the Tunis Gate by Abū Ibrāhīm Aḥmad (242-9/856-63), the remains of which may still be admired, was the most grandiose construction among the fourteen similar works.

The Great Mosque, the oldest and most prestigious religious building of the Muslim West, also followed the pattern of expansion and assumed a new aspect. It was in the 3rd/9th century that it took on its present form and proportions, except for a few details. It was Ḥassān b. al-Nuʿmān [*q.v.*] who had renovated it. Afterwards it was enlarged towards the north and probably provided with the present minaret in the reign of Hi<u>sh</u>ām b. ʿAbd al-Malik. Yazīd b. Ḥātim reconstructed it in 157/774. In the end, Ziyādat Allāh I had it completely demolished, but probably kept the minaret and had it reconstructed (221/836), having regard for the outline, drawn up by ʿUḳba b. Nāfiʿ, of the wall of the *ḳibla*, even though it was badly orientated, having a deviation of 31° towards the south. Abū Ibrāhīm Aḥmad enlarged it and embellished it again (248/862-3). From this moment onwards, the work of its restoration and decoration changed nothing of its general appearance. The Zīrid al-Muʿizz b. Bādīs (407-74/1016-62) endowed it with the present *maḳṣūra* replacing that of the A<u>gh</u>labids and making it into a library. Other restoration and decoration were carried out under the Ḥafṣids and in the 17th, 18th and 19th centuries. The last restoration dates from 1970-2.

The development of the town favoured its intellectual advance. In the 3rd/9th century al-Ḳayrawān became one of the principal cultural centres of Islam. "Mālik (d. 179/795) considered it, together with Kūfa and al-Madīna as one of the three great capitals of the Muslim sciences" (Ibn Nā<u>dj</u>ī, *Maʿālim*, ii, 38). Well before al-Ṭabarī, Yaḥyā b. Sallām al-Baṣrī (124-200/741-815) was writing there and taught his *Tafsīr* which has been partially preserved (two mss. at Tunis BN 7447, and collection of H. H. Abdul-Wahab); this was the first great monument of Muslim exegesis. Asad b. al-Furat (*ca.* 142-213/759-828), after following the lectures of Mālik, of the Ḥanafī Muḥammad b. al-Ḥasan and a host of other oriental masters, entrusted to his Asadiyya a personal synthesis of the different teachings he had received and made many disciples who continued his tradition. His attempt would have led to a specifically al-Ḳayrawān school of *fiḳh* if only his prestige had not been eclipsed by that of Saḥnūn (*ca.* 160-240/777-854), who was undoubtedly the grand master of the epoch. His monumental *Mudawwana*, which conveys to us the teaching of Mālik according to the version of Ibn al-Ḳāsim, became the breviary of the men of al-Ḳayrawān. Students from all quarters flocked to his lectures, including some from Muslim Spain, where no less than 57 students were authorised to spread his teaching. Philological activity has left us no great work, but it was sufficiently important for Abū Bakr al-Zubayrī to devote a special chapter to it in his *Ṭabaḳāt al-naḥwiyyīn wa'l-lu<u>gh</u>awiyyīn* (Cairo 1954, 254-72). Medicine was well represented by Ziyād b. <u>Kh</u>alfūn, Isḥāk b. ʿImrān and Isḥāk b. Sulaymān (al-Bakrī, *Masālik*, 24; Ibn Abī Uṣaybiʿa, *ʿUyūn al-anbāʾ*, ed. and tr. A. Noureddine and H.

Jahier, Algiers 1958, 2-9). Their works, translated into Latin by Constantine the African in the 5th/11th century, were taught in Salerno.

The reign of the Shīʿī Fāṭimids was certainly not favourable to this citadel of Sunnism. The triumphant Kutāma claimed the right of sacking this opulent city as a reward for their effort. In actual fact, it suffered little. Despite the construction of a rival city, Ṣabra al-Manṣūriyya (336/947-8) near it, towards which commercial activity tended to shift, it maintained its prosperity and was able to triumph over certain natural disasters: an earthquake (299/911-2); a fire in the souks (13th Dhū 'l-Ḥidjdja 306/17th May 919); a flood (308/920-1); famine and an epidemic (317/929). The positive statements of two contemporaries, Ibn Ḥawḳal (*Ṣūrat al-arḍ*, Beirut n.d., 94) and al-Muḳaddasī (*Aḥsan al-taḳāsīm*, ed: and partial tr. Ch. Pellat, Algiers 1950, 14-7), agree that the reliability of the water supply was actually better assured. The Fāṭimid al-Muʿizz had actually had "a system of canals constructed which came down from the mountain and filled the reservoirs after crossing his palace at Ṣabra" (*ibid.*, 15). The town was at that time crossed by 15 main thoroughfares (*darb*), the names of which have been partly preserved (*ibid.*, 17) and its area had grown even larger, "a boundary of a little less than three miles", according to al-Muḳaddasī (*ibid.*, 15) (on the basis of 1900 m. to the mile in al-Muḳaddasī, about 5.5 km.). It is evident that its population had considerably increased, and this was the peak of its expansion.

From that point onwards, an era of stagnation began for al-Ḳayrawān as for the rest of Ifrīḳiya, which was followed by inexorable decline. There were several bursts of revival which just enabled it to keep a foot on the ladder of a country definitely in decline, but they could not retrieve for it its former glory. The transfer of the caliphate to Cairo (361/972) came as a severe blow to Ifrīḳiya. The reserves of precious metal followed the Fāṭimids to Egypt and al-Ḳayrawān lost for ever its rôle as a capital. The first Zīrids hardly ever lived there, but exhausted themselves with the interminable battles in the central and more distant Maghrib. Although it was prosperous at the beginning of their reign, it was brought under severe pressure to satisfy the demands of the master of Egypt. The vice-regent ʿAbd Allāh al-Kātib extracted no less than 400,000 *dīnārs* in 366/976-7 from 600 of the leading citizens; some of them had to pay as much as 10,000 *dīnārs* each (Ibn ʿIdhārī, *Bayān*, i, 230); this brought ruin for many.

Some decades later in 395/1004-5 the town experienced famine and a dreadful epidemic, concerning which Ibn ʿIdhārī (*Bayān*, i, 256-7), following Ibn al-Raḳīḳ, has preserved an interesting description. Each day they buried their dead by hundreds in common graves; the dwellings were empty and the services, the ovens, *ḥammāms* etc. were paralysed. The city was depopulated and a helter-skelter flight of refugees sought shelter far away, even as far as Sicily. Some years later, in 405/1014-5, the merchants were again forced to transfer their trade to Ṣabra. The Ṣanhādja were also involved. Everything seemed to have conspired to stifle the Sunnī capital which, struck by so many misfortunes, saw its prosperity fade and its population dwindle. The perimeter of the city-wall, linked by a corridor to Ṣabra (which al-Muʿizz built in great haste when he was hard-pressed in 444/1052-3) did not exceed 22,000 cubits or *ca.* 10.5 km. (al-Bakrī, *Masālik*, 25). Thus the city had returned almost to the proportions of the earliest nucleus as delineated by ʿUḳba b. Nāfiʿ.

If the information gathered from our sources is correct, as seems probable, it must be accepted that it was reduced to a third of the area reached at its zenith. This means that on the brink of all the misfortunes which awaited, it was already no more than a shadow of itself. The culture there had, however, always maintained a certain lustre. The Mālikī *faḳīhs* Ibn Abī Zayd al-Ḳayrawānī (d. 386/996) and al-Ḳābisī (d. 403/1012) the Ashʿarī al-Ḳālānisī (d. 359 or 361/969-71), the physician Ibn al-Djazzār (d. *ca.* 395/1004), the historian Ibn al-Raḳīḳ (d. after 418/1028), the astrologer Ibn Abī al-Ridjāl (d. *ca.* 426/1034-5), whose *K. al-Bāriʿ fī aḥkām al-nudjūm* was translated into Castilian, Latin, Hebrew and ancient Portuguese, the poets Ibn al-Rashīḳ (d. 456/1064) and Ibn Sharaf (d. 460/1067), and still others, had brilliantly continued the traditions of their predecessors. But they were the last glowing torches of a town whose socio-economic infrastructure had crumbled and against which the sword was drawn. The final blow was struck by the Banū Hilāl, who, on 1st Ramaḍān 449/1st November 1057, two days after al-Muʿizz had left Ṣabra to take refuge in al-Mahdiyya, set about pillaging it and devastating it. Ibn Rashīḳ in a moving elegy (*Dīwān*, Beirut n.d., 204-12) uttered the funeral eulogy for the battered city.

The middle of the 5th/11th century was the chief turning point in the history not only of al-Ḳayrawān but of all Ifrīḳiya. It was the end of an era which was altogether quite a splendid one and the beginning of another much less brilliant. Town and city life clearly receded before the pastoral and nomadic influences, and the effect of the Bedouin on the country was a scourge which persisted until the 19th century. In this new general atmosphere of decadence, al-Ḳayrawān changed from being a great metropolis into a poor town of the steppes. It was deserted by what remained of its inhabitants and continued to diminish. Ten years after the blow from the Banū Hilāl, there was a makeshift wall encircling the Great Mosque and what remained of the western quarter. This wall, which assumed approximately the outline of the present day wall, was a little longer than 3 km. Al-Idrīsī notes (*Nuzha*, partial ed. H. Pérès, Algiers 1957, 80) that when he was writing (that is, in the middle of the 6th/12th century just before the Almohad conquest) al-Ḳayrawān was only a ruin (*aṭlāl dārisa wa-āthār ṭāmisa*), that what remained of it was incompletely surrounded by earthen ramparts, and that it was in the hands of Arab nomads who levied taxes on a poor and wretched population. As for Raḳḳāda and Ṣabra, they simply disappeared completely. It was the nadir of its fortunes.

The reign of the Almohads, and especially that of the Ḥafṣids, brought back to it a relative peace and allowed the town to rise a little from its ruined state. In the 7th/13th century private enterprise gave it better ramparts. With the rise of the Marabout movement it also began to fill with *zāwiyas* (Ibn Nādjī, *Maʿālim*, iv, 227). But the population, mostly composed of urbanised bedouin elements, was henceforth much less refined. Yāḳūt (d. 626/1228) wrote: "Today all one sees are worthless bumpkins (*ṣuʿlūk*)". (*Buldān*, Beirut 1957, iv, 420). The impression received by al-ʿAbdarī (*al-Riḥla al-Maghribiyya*, ed. M. al-Fāsī, Rabat 1968, 64, 66, 82), who went there on pilgrimage in 688/1289, was not much better.

In fact, a new life at a much more modest level had begun for al-Ḳayrawān. In a general context of constant regression it was able to preserve a certain status, but without any measure of its past grandeur. Even so, it was respectable enough among the other towns of the kingdom and adapted itself to its new economic rôle, that of being a market town and commercial centre for the Bedouin. Its souks, although very much reduced, with their goods carried off towards the west, continued to offer indispensable products: leather, cloth and metal. It received in exchange the products of pastoral activity. Leo Africanus who visited it in 1516, that is at the end of the Ḥafṣid period, describes it in this way: "At present only poor workmen are to be seen there, for the most part tanners of sheepskins and goatskins. They sell all their leather garments in the towns of Numidia where there is no European cloth" (*Description de l'Afrique*, tr. A. Epaulard, Paris 1956, ii, 398). Later on, particularly at the beginning of the reign of the Ḥusaynids, al-Ḳayrawān recovered and gained second place in the country. Al-Wazīr al-Sarrādj (d. 1149/1736-7) noted at the beginning of the 18th century: "At this moment, after Tunis, no larger town than al-Ḳayrawān is known in all of Ifrīḳiya. Among its inhabitants are the best scholars, the most skilful people and the most astute business men" (*Ḥulal*, ed. M. H. al-Hīla, Tunis 1970, i, 244). The impression is confirmed by J. A. Peysonnel, who wrote: "al-Ḳayrawān is one of the largest towns in the kingdom. It is situated on a brackish plain, half a league in circumference, is very well populated and very commercial. It has been ruined several times but was well repaired under the Bey Hassem ben Aly ... Much woollen cloth was made there, burnouses, sufficielis, and other materials special to the country ..." (*Relation d'une voyage sur les côtes de Barbarie, fait par l'ordre du roi en 1724 and 1725*, ed. M. Dureau de la Malle, Paris 1838, i, 113; see also i, 160). L. R. Desfontaines, who visited al-Ḳayrawān in January 1784, for his part, notes that it was "the biggest in the kingdom after Tunis; it was even better built and cleaner than the latter ... The trade of al-Ḳayrawān consists principally of animal skins which the inhabitants know how to put to different uses. Here are made bridles, saddles and shoes according to the fashion of the land. They also made woollen cloths called barakan. The people there have a happier life than anywhere else, being exempt from taxes in recompense for the services which they rendered to the grandfather of the present Bey" (*Fragments d'un voyage dans les régences de Tunis et d'Alger fait de 1783 à 1786*, ed. M. Dureau de la Malle, Paris 1838, ii, 61). V. Guérin, who spent three days there from 18th to 20th August 1861, thinks also that it was, with barely 12,000 inhabitants, "after Tunis one of the most highly populated towns of the regency". (*Voyage Archéologique dans la Régence de Tunis*, Paris 1862, ii, 334). It came before Sfax, which scarcely numbered more than 10,000 inhabitants, and before Sousse, Monastir and Mahdiyya, whose populations did not exceed 5,000 or 8,000. It was, however, situated "in a real desert, almost entirely deprived of trees and even of bushes" (V. Guérin, *Voyage* ... ii, 326). All told, the city founded by Sīdī ʿUḳba, despite the ruining of its hinterland, showed, at least until the days of the protectorate, that despite everything it was more viable than other centres which were apparently better situated.

Its religious prestige was certainly not irrelevant to its survival. With "about 50 zaouïas and 20 mosques" (V. Guérin, *Voyage* ... ii, 328), it was indubitably in the middle of the 19th century the spiritual capital of the country. It was then considered to be a holy town and in principle forbidden to non-Muslims. Today it has no such sacred character, and tourists have free access to its sanctuaries. As for its population, the city of Sīdī ʿUḳba occupies only the fifth place in the country, but is also the chef-lieu of the most under-developed governorate of the country. It still, however, maintains a certain aura of sanctity and attracts the most illustrious visitors. And when the point of the unification of the countries of the Maghrib is brought up, there are those who find that "the capital of this federation of independent states ought to be Kayrawan, the spiritual capital of the Moslems since many centuries and thus appropriate to symbolise the return to the glory of the past of the World of the Islam" (*La Presse*, a Tunisian daily, of 21 Sept. 1973).

Bibliography: There are too many sources for one to note them all, and the most important of them have been mentioned in the text. *Studies*: Apart from those mentioned in the text: T. AL-**ḲAYRAWĀNĪ**. [see IBN ABĪ ZAYD AL-ḲAYRAWĀNĪ].

AL-**ḲAYS** [see ḲAWS ḲUZAḤ].

ḲAYS, DJABAL, also known by the Persian name Kīs̲h̲, one of the most important of the commercially-relevant islands in the Persian Gulf (*Baḥr ʿUmān*), especially following the ruin of Sīrāf. The island was some four *farsak̲h̲*s from the coast opposite the port of Huzū, and was four *farsak̲h̲*s in circumference; it contained a residence of the ruler of ʿUmān, and was characterised by garden areas and splendid constructions. Water was supplied by means of wells, and by rain water which was collected in cisterns. Ḳays was famous for its pearl fisheries, as were also the surrounding islands. Yāḳūt indicates that its ruler was held in great respect owing to the size of his fleet, and he seems to have exercised a monopoly over various commercial concerns. Some intellectual activity was also observed.

Bibliography: G. le Strange, *The Lands of the Eastern Caliphate*, 257, citing relevant bibliography; also Yāḳūt, *Buldān*, ed. Wüstenfeld, iv, 215-6. (J. LASSNER)

ḲAYS B. **ʿĀṢIM** B. SINĀN B. K̲H̲ĀLID B. MINḲAR B. ʿUBAYD B. MUḲĀʿIS, ABŪ ʿALĪ (according to other versions: ABŪ ṬALḤA or ABŪ ḲABĪṢA), a muk̲h̲aḍram chief of the Banū Muḳāʿis and leader of his tribe. Tribal tradition emphasised his generosity, care for people under his protection, mildness and leniency. Al-Aḥnaf b. Ḳays reported the story, recorded in the compilations of *adab*, of how Ḳays b. ʿĀṣim received calmly the news about the murder of his son and magnanimously pardoned the murderer who was brought fettered into his presence. A poet of Sulaym, ʿAbbās b. Mirdās, praised his noble behaviour towards his *djār*. He is counted among the magnanimous ones (*ḥulamāʾ*) and the nobles of the *Djahiliyya* who abstained from drinking wine. His re-introduction of the practice of burying alive female infants is connected with a story of a woman of his family who, when captured in a raid on the tribe, preferred to remain with her captor and refused to return to her tribe. In order to prevent the recurrence of such an ignominy he decided to bury his daughters alive; verses 8-9 of Sūra LXXXI are said to have been revealed in connexion with this practice of Ḳays b. ʿĀṣim.

Ḳays is recorded as a leader of his tribe in the stories of the battles which took place in the first decade of the 7th century. He was victorious in all of his battles, except that of Abraḳ al-Kibrīt where he was captured with his mother and two of his sisters. In the battle of al-Sitār he is said to have killed Ḳatāda b. Salama al-Ḥanafī; if this report is true, Ḳatāda must have been a very old man when Ḳays killed him, as he had already been a tribal leader during the Expedition of the Elephant and had been warned by Ṭarafa of the advancing troops of Abraha (see Muḥammad b. Ḥabīb, *al-Munammaḳ*, ed. K̲h̲ursheed Aḥmad Fariq, Hyderabad 1383/1964, 69). The attack on the ʿAbd Ḳays at Djuwāt̲h̲a, in which Ḳays distinguished himself, seems to have been led by al-Ahtam. The attack on the Lahāzim (see W. Caskel, *Ǧamharat an-Nasab*, Leiden 1966, ii, 26-27) at Nibādj-T̲h̲aytal was a joint action undertaken by Ḳays at the head of the Muḳāʿis and Salāma b. Ẓarib, chief of the Adjārib (see Caskel, *op. cit.*, 144). His rapid action and his effective tactics assured them of victory. In the battle of al-Kulāb II (where the tribal units of Tamīm gathered after the slaughter of al-Mus̲h̲aḳḳar) Ḳays became the leader of the troops of Saʿd and by his energetic action and bravery helped to win the battle; the Tamīm attacked by allied Yamanī tribes took spoils and captives. It was at this battle, which took place at the beginning of the second decade of the 7th century, that Ḳays clashed with al-Ahtam. The animosity between these two leaders and the rancour between Ḳays and al-Zibriḳān b. Badr are echoed in the recorded verses of *hidjāʾ* and in the stories about the deputation of Tamīm to the Prophet. A *mat̲h̲al* story reports the part played by Zayd al-K̲h̲ayl (who left his tribe for some time and dwelt in the camp of Ḳays) in repelling an attack of the ʿIdjl against the Muḳāʿis; Ḳays denied Zayd's meritorious deed and because of this gained the epithet "the liar".

Tamīmī tradition stresses the role of Ḳays in the deputation of Tamīm to the Prophet, emphasising that the Prophet was impressed by him and named him "the chief of the nomad people" (*sayyid ahl al-wabar*). A spurious tradition records a conversation between the Prophet and Ḳays, in which Ḳays told the Prophet that the first man who applied *radjaz* in driving camels (*ḥidāʾ*) was the ancestor of the Prophet, Muḍar; the first man who received information about the appearance of a Prophet named Muḥammad was Sufyān b. Mudjās̲h̲iʿ al-Dārimī, who accordingly named his new born son Muḥammad. It is apparent that the tendency of this tradition is to stress the Prophet's link with Muḍar and Tamīm. The alleged sincerity of Ḳays' belief is indicated in a story of his divorce of his beloved wife from the Banū Ḥanīfa, because she refused to embrace Islam. The Prophet exhorted Ḳays to donate some of his flocks to the poor and needy, and is said to have forbidden tribal alliances to be formed in Islam. The Prophet appointed Ḳays tax collector of the Muḳāʿis and the Buṭūn (see Caskel, *op. cit.*, 230).

After the death of the Prophet, Ḳays seems to have wavered in his loyalty to Medina. He doubted the stability of the Medina establishment and preferred to divide the taxes collected for Medina among his tribe. This he apparently did according to some kind of agreement with al-Zibriḳān; when al-Zibriḳān later hurried to Abū Bakr with the taxes levied from his tribal units, Ḳays felt himself deceived and accused al-Zibriḳān of treacherous behaviour. Both leaders showed no hostility towards Medina at the beginning of the *ridda*: they escorted ʿAmr b. al-ʿĀṣ in their territories when he was on his way from ʿUmān to Medina; they took a neutral stand towards Medina while waiting to see whether Medina would stand fast against the tribal revolts.

Ḳays further aided Sadjāḥ, but no war action of his on her behalf is recorded. After the revolt of the Banū Ḥanīfa was crushed, Ḳays joined al-ʿAlāʾ al-Ḥaḍramī when he was on his way to al-Baḥrayn, but even then he simply escorted him through the territories of the Saʿd; only later did he decide to fight on his side. He fought bravely, and is credited with the killing of al-Ḥuṭam and Abdjar b. Budjayr.

Ḳays settled in al-Baṣra. He is said to have had 33 sons and many daughters. Ṭalaba b. Ḳays was known for his generosity; Muḳātil b. Ṭalaba was in the deputation of the nobles of Tamīm and ʿĀmir b.

Ṣaʿṣaʿa sent by Ibrāhīm b. ʿArabī to ʿAbd al-Malik. Mayya, the daughter of Muḳātil b. Ṭalaba, was the beloved of Dhū 'l-Rumma.

According to Ibn Kathīr, Ḳays died in 47/667. He enjoined his sons not to reveal his place of burial, because he feared the Banū Bakr b. Wā'il, whom he had fought and who hated him. Following the example of the Prophet, he gave orders to refrain from lamentations at his funeral. He was eulogised by ʿAbda b. al-Ṭabīb in his famous elegy in which he said "The death of Ḳays was not the death of one man: it was [as if] the edifice of a people had fallen down".

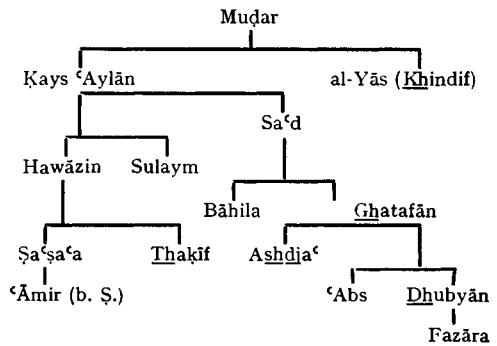
ḲAYS ʿAYLĀN, one of the two subdivisions of Muḍar, which along with Rabīʿa was reckoned as constituting the sons of ʿAdnān, the so-called Northern Arabs [see DJAZĪRAT AL-ʿARAB]. The other subdivision of Muḍar was Khindif or al-Yās. ʿAylān is sometimes said to be the father of Ḳays, but it is more likely that the double name means "Ḳays (owner) of ʿAylān" (sc. a horse, dog or slave). The following is an abbreviated genealogical table:

- Muḍar
  - Ḳays ʿAylān
    - Hawāzin
      - Ṣaʿṣaʿa
        - ʿĀmir (b. Ṣ.)
      - Thaḳīf
    - Sulaym
    - Saʿd
      - Bāhila
      - Ghaṭafān
        - Ashdjaʿ
        - ʿAbs
        - Dhubyān
          - Fazāra
  - al-Yās (Khindif)


Ḳays ʿAylān does not appear to have functioned as a unit before Islam, and in the accounts of "the days of the Arabs" only the individual tribes are named. In Umayyad times, however, the alleged genealogies became a convenient basis for bringing together groups of clans so as to constitute something like a political party. This process began when small contingents from different tribes were lodged together in the cities of the empire; for Baṣra cf. C. Pellat, *Le milieu baṣrien*, Paris 1953, 23 and *passim*. Eventually, but probably not until after the death of Muʿāwiya in 60/680, two main groups are found to be taking shape. One is known as Kalb or Yemen or the Southern Arabs, while the other is Ḳays ʿAylān or simply Ḳays, less often Muḍar. Because Muʿāwiya had relied on Kalb, and his son Yazīd I had a Kalbī mother, many Ḳaysīs supported Ibn al-Zubayr. While at first other groups are mentioned, such as Rabīʿa, gradually the polarity of Ḳays and Yemen came to dominate Umayyad politics. Nineteenth-century historians spoke of this as if it were primarily a continuing and expanding tribal feud, based on such facts as the great loss of life at the battle of Mard̲j̲ Rāhiṭ in 684; and it was the inability of the Umayyad rulers to reconcile the two groups which eventually led to their collapse. Recently, M. A. Shaban (*Islamic History, A.D. 600-750/A.H. 132*, Cambridge 1971) has forcefully argued that the Ḳays came to be identified with the expansionist policy followed by ʿAbd-al-Malik and al-Ḥad̲j̲d̲j̲ād̲j̲, while the Yemen stood for stable frontiers and the assimilation of non-Arabs. He sees the reigns of Sulaymān and ʿUmar II as an attempt to reverse the policy of expansion, and likewise that of Yazīd III. In these reigns, Ḳaysīs were replaced by Yemenīs, but the successors of ʿUmar II and Yazīd III turned back to the Ḳaysīs, and the disintegration of Umayyad rule proceeded. A point in favour of Shaban's view is that after the establishment of the ʿAbbāsids little is heard of the hostility between Ḳays and Yemen.

Hadi, *The Role of the Arab Tribes in the East under the Umayyads* (University of Edinburgh Ph. D. thesis, 1973; to be published in Arabic).

(W. Montgomery Watt)

Ḳays and Yaman in the Ottoman period.

The reader will find under Kalb b. Wabāra some information on the rivalry of the North and South Arabs (represented respectively by Ḳays and Kalb) before and after the birth of Islam, and especially in Spain. In the course of the centuries, this hostility diminished considerably, but there was a resurgence of it, in a somewhat artificial way, in the course of the factional conflicts in Lebanon and Palestine during the Ottoman period.

In the course of the struggle for power among dominant families, coalitions were formed which used the names of Ḳays and Yaman to denote the political identification of the rival camps. This division preserved a kinship connotation, and kinship—real or imagined, original or adopted—was a legitimate reason for schisms and wars in Arab society. The political character of the Ḳays-Yaman conflict in Lebanon and Palestine during the Ottoman period is revealed through two crucial facts: (a) many adherents of each of these parties (and even some of their leading families, such as the Abū G̲h̲ōs̲h̲ family in Palestine) were not Arabs at all, but Circassians, Turkmens, or Kurds; (b) families of allegedly Arab origin changed sides with little regard to actual descent, such as the ʿAlam al-Dīn family in Lebanon (S̲h̲idyāḳ, i, 129), or a family split in two parts supporting opposing factions. Only powerful clans which managed to maintain their position for a long period were consistent in their factional adherence.

During the Mamlūk period, the Yaman faction in Lebanon was led by the ʿAlam al-Dīn family, in opposition to the ruling Buḥturs who were considered Ḳays. The latter faction supported the Maʿns when they succeeded the Buḥturs in 922/1516. In 993/1585 a Yaman conspiracy against the Maʿnī Amīr Ḳorḳmaz almost succeeded, but his son Fak̲h̲r al-Dīn II re-established Ḳays supremacy.

A second short tenure of power of the Yaman ʿAlam al-Dīn family occurred after the downfall of Fak̲h̲r al-Dīn II in 1042/1633. This resulted in a great massacre and in civil war, but from 1045/1635 to the end of the century the Ḳays Maʿns had the upper hand. Under the S̲h̲ihābs, the successors of the Maʿns, the Yaman party, with Ottoman support, succeeded in gaining power once more for a short time in 1121/1709, but in a fierce battle at the village of ʿAyn Dārā, which took place in 1123/1711, the Yaman forces were utterly routed and their leaders, the ʿAlam al-Dīn family, were slaughtered to a man. Thus Yaman power in Lebanon was completely crushed, and the Yaman Druzes who survived were expelled from Lebanon and sought refuge in the Ḥawrān, with the exception of the Arslāns, who were allowed to retain the lower G̲h̲arb, which was a part of their original *muḳāṭaʿa*. New political divisions emerging in the Lebanon after the battle of ʿAyn Dārā no longer adopted the nomenclature of Ḳays and Yaman; from then onwards, the factions were called after their leading families.

In Palestine, the division into Ḳays and Yaman is of long standing. According to al-Nimr (i, 59) the Mamlūk Sultan al-Nāṣir Muḥammad b. Ḳalāʾūn (1293-1340) allocated the north of D̲j̲abal Nābulus to the Yaman faction and the south to Ḳays. In the 10th/16th century again, the population of various regions of Palestine was divided into these two factions, and fighting frequently erupted (U. Heyd, *Ottoman documents on Palestine 1552-1615*, Oxford 1960, 85-6). In the 18th and 19th centuries factional wars under the banner of Ḳays and Yaman were fought primarily in the Nābulus and Jerusalem areas. The D̲j̲abal Nābulus witnessed an open fight between the Ṭūḳān and the Nimr families between 1794 and 1823, and perpetual conflict, including incessant armed clashes, between the ʿAbd al-Hādīs and the Ṭūḳāns in the 1840s and 1850s. Throughout this period the rival camps, townsmen, *fallāḥīn* and Bedouin, were identified with the Ḳays and Yaman factions, and even families whose descent was unclear felt the need to adhere to one of them. Thus the Ṭūḳans, at the start of their rule, declared their affiliation to Yaman (*aʿlanū yamaniyyatahum*) in order to win support from the *s̲h̲ayk̲h̲*s of the *nāḥiya*s (al-Nimr, ii, 415-16). At the same time, the Judaean hills were also the scene of clashes between *fallāḥīn* divided into Ḳays, led by the Samḥān family, the Laḥḥāms, the ʿAmrs, and the Barg̲h̲ūt̲h̲īs, and Yaman, led by the Abū G̲h̲ōs̲h̲ clan. Most of the inhabitants of Christian Bethlehem were Yaman, while those of Christian Bayt Jālā, as well as the

Muslims of the Hebron area, were Ḳays. The adherence of the Bedouins to one faction or another was determined mainly by the affiliation of the neighbouring *fallāḥīn* or by internal division among the Bedouins themselves.

However, factional ties between the Djabal Nābulus and the Judaean hills were minimal, and in the principal engagements the parties of one region were not assisted by their counterparts from the other region. Inter-regional ties between members of the same faction were found primarily on the fringes of the two regions, and more on the Ḳays than on the Yaman side. Moreover, there were differences between the two areas. The Nābulus notables led the factional war and took an active part in it, and fighting sometimes even occurred in the city. The town quarters were split along factional lines and city-dwellers joined in the village skirmishes. As against this, Jerusalem was never the scene of fighting in the factional wars, and the city notables neither led the fighting nor did they play an active part in it. Yet when there was a weak Pasha, Jerusalem's notables were able to turn the factional strife to their own advantage, and the leading rural families of both camps had their allies in the *madjlis* of the town. In general, only when a strong Pasha ruled an area was there a truce in the factional strife. However, both in Palestine and in Lebanon, the Ottomans used to support one faction (often the weaker one) against the other in order to further their own political aims. With the growing centralisation of Ottoman rule during the second half of the 19th century, factional wars in Palestine gradually subsided, although identification with Ḳays or Yaman and some of the customs connected with this division persisted among part of the rural population.

The faction was usually referred to as a *ṣaff*, but also as an *ʿiṣāba*, *farīḳ*, *ṭāʾifa*, or *ḥizb*. Affiliation to a faction was termed *naʿra*, *ʿaṣabiyya*, *shahwa*, or *niḥla*. A member of the same faction was called *ṣāḥib* and an enemy *ḳawmānī*; a one-day battle was a *ḥarāba*, and if it lasted longer than one day, it was called a *kawn*. The head of the faction used to make an annual tour of villages loyal to him (*yaḳṭaʿ ʿaṣ-ṣufūf*). These visits served as points of time in their chronology.

Each faction had its colour—Ḳays red, and Yaman white—which distinguished its flag and its members' clothes, women's veils and especially the bride's canopy or veil. A Ḳays bride was forbidden to move into Yaman territory dressed in red: she was obliged either to conceal her red clothing with white or to change her clothes and veil at the border. Intermarriage between the two factions was not unusual, and many legends about fights resulting from this custom are told (on terminology and customs see especially al-Nimr, ii, 430-2, but also numerous other sources).

(G. Baer and M. Hoexter)

ḲAYS B. AL-KHAṬĪM B. ʿADĪ is, together with Ḥassān b. Thābit [*q.v.*] the most important poet of Yathrib. He was a member of the B. Ẓafar (Ibn al-Kalbī-Caskel, Tab. 181) of the Aws [*q.v.*], whom he defended both by words and by the sword in contests with the Khazradj [*q.v.*]. Apart from some late and very dubious pieces of information, very little is known of his life, but it is known that he exacted vengeance for the murders of his father and grandfather, and this gave him a great reputation amongst posterity; these actions were, however, later subject to all sorts of legendary accretions and motifs which sometimes recall the legend of Cyrus and form a parallel to the story of Perzival (see Singer, *Arab. und europ. Poesie im Mittelalter*, in *Abh. Pr. Ak. Wiss.*, phil.-hist. Kl., xiii (1918), p. 7 of the reprint). In regard to the active part which he took in the political and military activities of his tribe, we have constant reference in his *Dīwān* to a whole series of *ayyām* of the Aws, but he did not take part, apparently on account of a wound received previously, in the decisive battle of Buʿāth [*q.v.*], so much celebrated in later song. He was treacherously murdered some time before the *hidjra*, and tradition relates that he was avenged even before he himself had breathed his last gasp.

Ḳays was involved in polemics with almost all the Khazradjī poets of his time, notably with Ḥassān b. Thābit and ʿAbd Allāh b. Rawāḥa, who both survived him by a considerable period of time. Although he was still alive at the time when the Prophet began his preaching, his *Dīwān* shows no traces of a knowledge of it, and all the later sources describing a meeting between him and the Prophet seem to be pure invention.

The oldest manuscript of his *Dīwān*, dated 419/1028, is the Top Kapu Saray one, and forms an appendix to the *Dīwān* of Ḥassān b. Thābit. The recension of the poems goes back to Ibn al-Sikkīt, but the definitive editor of the *Dīwān* seems to have been al-Sukkarī. What has survived is clearly only a fragment of the original. It was published by T. Kowalski, *Der Dīwān des Ḳais b. al-Ḫaṭīm*, Leipzig 1914; by I. Sāmarrāʾī and A. Maṭlūb, Baghdad 1381/1962; and by Nāṣir al-Dīn al-Asad, Cairo 1381/1962.

Ḳays is reckoned amongst the authors of the *mudhahhabāt* chosen by Abū Zayd al-Ḳurashī who, in his *Djamhara* (123), places him in the fourth *ṭabaḳa*; but Ibn Sallām (*Ṭabaḳāt*, 190) does not go along with those who would place Ḳays above Ḥassān. His poetry, both in his *ghazals* and also in his *fakhr* poems and his *ḥikam*, reveals the two sides of life, the sedentary and the nomadic, which was characteristic of the oasis dwellers in his time. His descriptions of war and portraits of women are celebrated. What is typical of real Bedouin life, sc. the description of the riding camel, the ride through the desert and the chase, are almost entirely lacking in his poems. One might say that if Ḳays was highly esteemed by later generations, it was more for his chivalric character than for his poetic gifts. His poetry is nevertheless a very important source for our knowledge of conditions in Yathrib just before

the coming of Islam and for certain customs there, in particular, those concerning the blood-feud.

Bibliography: The sources are given in the introductions to the various editions of the *Dīwān*. There should be noted, in particular, Abū Tammām, *Ḥamāsa*, index; Buḥturī, *Ḥamāsa*, index; Marzubānī, *Muʿdjam*, 321; Ḥassān, *Dīwān*, ed. Barḳūḳī, 121-3 (cf. W. N. ʿArafat's edn., London 1971, index); *Aghānī*, ed. Beirut, iii, 3-26; Ibn Shuhayd, *Zawābiʿ*, ed. K. Bustānī, 128-31; *Iṣāba*, no. 7348; Samhūdī, *Wafāʾ al-wafāʾ bi-akhbār al-Muṣṭafā*, Cairo 1374; Baghdādī, *Khizāna*, ed. Būlāḳ, iii, 168; Abkaryūs, 251-3; Nöldeke, in *ZA*, xxix, 205-16; Rescher, *Abriss*, i, 70-1; R. Blachère, *Hist. de la litt. arabe*, 310-11; Brockelmann, S I, 56; F. F. Bustānī, *Dāʾirat al-maʿārif*, iii, 20-2.

(T. KOWALSKI*)

KAYSĀN, ABŪ ʿAMRA, a *mawlā* [*v.q.*] of ʿUrayna, who belonged to the Badjīla, was one of the prominent *Mawālī* in Kūfa during the revolt of al-Mukhtār b. Abī ʿUbayd al-Thaḳafī [*q.v.*]. Little is known about his early life; the first important information is that prior to the revolt of al-Mukhtār he was known to be a Shīʿī sympathiser. Kaysān also was among the notables of the Shīʿa and the influential men of al-Mukhtār's followers who were sent to Ibrāhīm b. al-Ashtar to win his support for al-Mukhtār. When al-Mukhtār seized Kūfa, he appointed Kaysān as leader of his personal guard (*ʿalā ḥarasihi*). This was possibly because he trusted him more than the others and because he was the most influential of his *Mawālī* supporters. Kaysān's high standing among the *Mawālī* is reflected in the fact that when they became aware that al-Mukhtār was trying to reconcile the *Ashrāf* they communicated their resentment to Kaysān, their chief.

As leader of al-Mukhtār's personal guard, Kaysān played an important role in punishing those *Ashrāf* who were responsible for the killing of al-Ḥusayn, among them ʿUmar b. Saʿd b. Abī Waḳḳāṣ and Shamir b. Dhu'l-Djawshan. His activities in this respect gave rise to a common Kūfan saying applied to anyone deprived of his wealth, "Abū ʿAmra has visited him" (*zārahu Abū ʿAmra*) or "Abū ʿAmra entered his house" (*dakhala Abū ʿAmra baytahu*). He was also described as "more wicked than Iblīs". This, however, seems to be an outcome of the historical tradition, to which we owe our information, and which grew up in Kūfa, especially in the milieu of the *Ashrāf*, and therefore is anti-*mawālī*. According to Ibn Ḥazm and Nashwān al-Ḥimyarī, the Kaysāniyya were the followers of al-Mukhtār and Kaysān Abū ʿAmra.

In the battle of al-Madhār (about the middle of 67/686), the *Mawālī* in al-Mukhtār's army were commanded by Kaysān. It seems probable that he was killed in this battle, for nothing more is heard of him.

(A. A. DIXON)

KAYSĀNIYYA (more rarely Mukhtāriyya) is the name applied by the heresiographers to those supporters of al-Mukhtār [*q.v.*] recognising Muḥammad b. al-Ḥanafiyya [*q.v.*] as their *imām* and as the Mahdī [*q.v.*]. The name is derived from Abū ʿAmra Kaysān [*q.v.*], chief of the guard and leader of the *mawālī* under al-Mukhtār. Its choice, made probably by the opponents of the movement, may reflect the importance they attributed to the *mawlā* element in it. Actually, many supporters of the movement, among them some of the most radical, were Arabs, especially from Yamanī tribes, and there is no evidence that they generally looked to Kaysān as their leader during the lifetime of al-Mukhtār. It is possible, however, that Kaysān survived the latter and became the chief of the movement after his death. He is reported to have been more extreme than al-Mukhtār, charging the caliphs preceding ʿAlī with infidelity, while al-Mukhtār condemned only ʿAlī's opponents in the battles of the Camel and at Ṣiffīn. He asserted that the angel Djibrāʾīl transmitted divine revelations to al-Mukhtār, who could hear, but not see, him. He is also reported to have claimed that Muḥammad b. al-Ḥanafiyya was appointed by ʿAlī as his executor (*waṣī*), thus excluding his brothers al-Ḥasan and al-Ḥusayn from the imāmate. This doctrine, however, was more likely formulated only later in opposition to Imāmī and Zaydī denials of the rights of Ibn al-Ḥanafiyya and, in any case, conflicted with the common view of the Kaysāniyya upholding the consecutive imāmate of the three sons of ʿAlī. Kaysān's rôle was apparently soon generally forgotten, for the name Kaysāniyya was also explained as deriving from the surname Kaysān which al-Mukhtār allegedly was given by ʿAlī, or from the name of a *mawlā* of ʿAlī killed at Ṣiffīn from whom, it was claimed, al-Mukhtār had received his ideas.

In the accounts of the chroniclers the sectarian supporters of al-Mukhtār are most often pejoratively called Sabaʾiyya [see ʿABD ALLĀH B. SABAʾ] to denote their Shīʿī extremism. They are condemned in particular for their worship of a wooden chair, variously described as a relic of ʿAlī or an intentional imitation of the ark of the covenant of the Jews, in which several Yamanī clans were most active. They are also frequently called Khashabiyya [*q.v.*] after the wooden clubs widely used by them as a weapon [see KĀFIRKŪB].

In a wider sense Kaysāniyya is used by the heresiographers as a collective name for all the sects which evolved out of the movement of al-Mukhtār and traced the imāmate through Muḥammad b. al-Ḥanafiyya. The accounts about these groups are confused and sometimes contradictory. The main developments can be summarised as follows:
